Overview Report: Financial Action Task Force

I. Scope of Overview Report

1. This overview report describes the Financial Action Task Force ("**FATF**") and attaches documents created by the FATF and/or FATF-style regional bodies ("**FSRBs**").

II. The FATF and FSRBs

2. The FATF is an independent international body established at the initiative of the G7 in 1989.[1] The FATF currently comprises 37 member-jurisdictions[2] and two regional organizations,[3] representing most major financial centres in all parts of the globe, including Canada,[4] one of the 16 founding members of the FATF.[5]

3. There are also 32 international and regional organizations which are Associate Members or Observers of the FATF and participate in its work.[6] Among these are nine FSRBs, each with their own membership. The nine FSRBs include:[7]

4. The objectives of the FATF, as articulated in its open-ended mandate, approved on April 12, 2019, "are to protect financial systems and the broader economy from threats of money laundering and the financing of terrorism and proliferation, thereby strengthening financial sector integrity and contributing to safety and security.[17]

5. The mandate identifies the FATF's "functions and tasks" as follows:[18]

a. Identifying and analysing money laundering, terrorist financing and other threats to the integrity of the financial system, including the methods and trends involved; examining the impact of measures designed to combat misuse of the international financial system; supporting national, regional and global threat and risk assessments;

b. Developing and refining the international standards for combating money laundering and the financing of terrorism and proliferation (the FATF Recommendations) to ensure that they are up-to-date and effective;

c. Assessing and monitoring its Members, through 'peer reviews' ('mutual evaluations') and follow-up processes, to determine the degree of technical compliance, implementation and effectiveness of systems to combat money laundering and the financing of terrorism and proliferation; refining the standard assessment methodology and common procedures for conducting mutual evaluations and evaluation follow-up;

d. Identifying and engaging with high-risk, non-co-operative jurisdictions and those with strategic deficiencies in their national regimes, and co-ordinating action to protect the integrity of the financial system against the threat posed by them;

e. Promoting full and effective implementation of the FATF Recommendations by all countries through the global network of FATF-style regional bodies (FSRBs) and international organisations; ensuring a clear understanding of the FATF standards and consistent application of mutual evaluation and follow-up processes throughout the FATF global network and strengthening the capacity of the FSRBs to assess and monitor their member countries, including through standards training and outreach;

[17] Financial Action Task Force, "Mandate" (12 April 2019) <http://www.fatf-gafi.org/media/fatf/content/images/FATF-Ministerial-Declaration-Mandate.pdf> at 5.
[18] Financial Action Task Force, "Mandate" (12 April 2019) <http://www.fatf-gafi.org/media/fatf/content/images/FATF-Ministerial-Declaration-Mandate.pdf> at 5-6.

f. Responding as necessary to significant new and emerging threats and risks to the integrity of the financial system consistent with the needs identified by the international community, including the United Nations Security Council, the G20 and the FATF itself; preparing guidance as needed to facilitate implementation of relevant international obligations in a manner compatible with the FATF standards (e.g. continuing work on money laundering, terrorist financing, including new and emerging trends, and other misuse of the financial system relating to corruption);

g. Assisting jurisdictions in implementing financial provisions of the United Nations Security Council resolutions on terrorism and non-proliferation, assessing the degree of implementation and the effectiveness of these measures in accordance with the FATF mutual evaluation and follow-up process, and preparing guidance as needed to facilitate implementation of relevant international obligations in a manner compatible with the FATF standards;

h. Maintaining engagement with other international organisations and bodies, in particular the United Nations, to increase the outreach of the activities and objectives of the FATF;

i. Engaging and consulting with the private sector and civil society on matters related to the overall work of the FATF, through the annual consultative forum and other methods for maintaining regular contact to foster transparency and dialogue towards more effective implementation of the FATF standards;

j. Undertaking any new tasks agreed by its Members in the course of its activities and within the framework of this Mandate; and taking on these new tasks only where it has a particular additional contribution to make while avoiding duplication of existing efforts elsewhere.

6. The FATF is comprised of the following internal structures:[19]

a. The Plenary;
b. The President, assisted by a Vice-President;
c. The Steering Group; and
d. The Secretariat.

[19] Financial Action Task Force, “Mandate” (12 April 2019) <http://www.fatf-gafi.org/media/fatf/content/images/FATF-Ministerial-Declaration-Mandate.pdf> at 7.

7. The role of each of these structures is addressed in detail in the FATF mandate.[20]

8. Operationally, the FATF is organized and divided among five working groups with the following responsibilities:[21]

a. ***Evaluation and compliance group*** – assessing and monitoring members, through 'peer reviews' and follow-up processes to determine the effectiveness of a country's measures to combat money laundering and the financing of terrorism and proliferation, and their technical compliance with the FATF Recommendations.[22]

b. ***Policy development group*** – developing and refining the international standards for combating money laundering and the financing of terrorism and proliferation (the FATF Recommendations).

c. ***Risk, Trends and Methods group*** – identifying and analyzing money laundering, terrorist financing and other threats to the integrity of the financial system.

d. ***International Cooperation and Review group*** – identifying and engaging with high-risk and non-cooperative jurisdictions and those with strategic deficiencies in their national regimes.

e. ***Global network coordination group*** – promoting full and effective implementation of the FATF Recommendations by all countries through the global network of FSRBs and international organizations.

9. Canada is a member of the APG. The objective of the APG is to ensure the adoption, implementation and enforcement of internationally accepted anti-money laundering and counter-terrorist financing FATF standards.[23]

10. The APG assists countries and territories of the region in: enacting laws to deal with proceeds of crime, mutual legal assistance, confiscation, forfeiture and extradition;

providing guidance in setting up systems for reporting and investigating suspicious transactions; and helping in the establishment of financial intelligence units. The APG also ensures that regional factors are taken into account in the implementation of anti-money laundering measures.[24] It identifies its five "primary functions" as follows:[25]

a. **Mutual evaluations:** The APG assesses the levels of compliance by its member jurisdictions with the global AML/CFT standards through a mutual evaluation (peer review) programme.

b. **Technical assistance and training**: The APG Secretariat coordinates bi-lateral and donor-agency technical assistance and training in the Asia/Pacific region for its member jurisdictions in order to improve compliance with the global standards;

c. **Typologies research**: Research and analysis into money laundering and terrorist financing methods and trends is a key function of the APG to assist policy and law makers as well as law enforcement agencies and the general public to identify and respond to new and emerging trends, methods, risks and vulnerabilities;

d. **Global engagement**: The APG contributes to international AML/CFT policy development and actively engages with the global network of FSRBs. The APG also participates in a number of FATF working groups and in its plenary meetings; and

e. **Private sector engagement**: Private sector engagement is critical to the APG's overall objectives. The APG actively engages with financial and non-financial institutions, NPOs, training centres and universities in the Asia-Pacific to better inform the general public and specialists about global issues relating to money laundering, terrorist financing and proliferation financing.

11. Canada is also a Cooperating and Supporting Nation ("**COSUN**") of the CFATF along with France, Mexico, the Netherlands, Spain, the United Kingdom and the United States of America. COSUNs are "countries or territories that are not members or observers of the CFATF and which have expressed support for the objectives of the

CFATF and have been approved by the [CFATF] Council of Ministers. COSUNs make such contributions to the work and/or resources of the CFATF as are permitted by their respective national laws and policies."[26]

III. The FATF 40 Recommendations

12. In April 1990, the FATF issued a report containing a set of *Forty Recommendations*, intended to provide a comprehensive plan of action to fight money laundering.[27]

13. The original 1990 recommendations are attached as Appendix 'A'.

14. In 1991, the FATF began monitoring its members' implementation of the *Forty Recommendations* through a self-assessment process.[28]

15. In 1996, the FATF approved revisions to the *Forty Recommendations* issued in 1990. The revisions were intended to reflect evolving money laundering trends and techniques, and to broaden the scope of the recommendations to encompass the proceeds of predicate offences other than drug offences.[29]

16. The 1996 revised recommendations are attached as Appendix 'B'.

17. In October 2001, following the terrorist attacks of September 11, 2001, the FATF issued *Eight Special Recommendations* to address the issue of terrorist financing.[30] In

[29] Financial Action Task Force, *Financial Action Task Force on Money Laundering: Annual Report 1995-1996* (Paris: FATF, 1996) at 3 <https://www.fatf-gafi.org/media/fatf/documents/reports/1995%201996%20ENG.pdf>; Financial Action Task Force, *The Forty Recommendations* (Paris: FATF, 1996).
[30] Financial Action Task Force, "History of the FATF" (2019) online: *FATF* <https://www.fatf-gafi.org/about/historyofthefatf/>.

October 2004 the FATF published a *Ninth Special Recommendation* aimed at "cash couriers."[31]

18. The nine special recommendations (updated to February 2008) are attached as Appendix 'C'.

19. In June 2003, the continued evolution of money laundering techniques led the FATF to undertake a comprehensive revision of the FATF standards.[32] The *Revised Forty Recommendations* applied not only to money laundering but also to terrorist financing, and when combined with the Eight Special Recommendations, they provided a set of enhanced measures intended to help countries prevent terrorism.[33]

20. The 2003 revised recommendations (updated to October 2004) are attached as Appendix 'D'.

21. In February 2012, the FATF completed a review of its standards and approved a further revision of the Recommendations. This revision was intended to strengthen global safeguards and further protect the integrity of the financial system by providing governments with stronger tools to take action against financial crime. The Recommendations were expanded to deal with new threats such as the financing and proliferation of weapons of mass destruction, and to be clearer on transparency and tougher on corruption. The nine Special Recommendations on terrorist financing were integrated with the measures against money laundering.[34]

22. The 2012 recommendations (updated to June 2019)[35] are attached as Appendix 'E'.

[35] The Recommendations have been subject to occasional revisions since 2012. See Financial Action Task Force, *The FATF Recommendations* (Paris: FATF, 2019) <https://www.fatf-gafi.org/publications/fatfrecommendations/documents/fatf-recommendations.html# UPDATESl>.

23. The FATF identified the adoption of a "risk-based" approach as central to the effective implementation of the 2012 recommendations:[36]

> At the core of today's Recommendations is the risk-based approach, which ensure that countries, as well as private sector, identify, assess and understand the risks they are exposed to and focus their resources on areas where the risks are highest. Given each country's unique risk situation, the FATF Recommendations provide countries a level of flexibility to determine which actions they need to take to address the particular money laundering and terrorist financing risks they face.[37]

24. The current version (June 2019) of the *Revised FATF Recommendations* includes Interpretive Notes for some but not all of the Recommendations.[38] The FATF has published the interpretive notes alongside the current version of the recommendations. The interpretive notes can be found in Appendix 'E'.

25. Those recommendations for which one or more interpretive notes have been issued include:[39]

a. Recommendation 1;
b. Recommendation 3;
c. Recommendation 4;

IV. Mutual Evaluation Process

26. In 1991, the year following its creation, the FATF established a self-assessment process in which countries reported to the FATF on steps taken to implement the recommendations.[40] In September 1991, the FATF undertook its first mutual evaluations in which teams of expert examiners from FATF member countries conducted reviews of implementation of the recommendations.[41] The FATF currently describes mutual evaluations as follows:[42]

> FATF mutual evaluations are in-depth country reports analysing the implementation and effectiveness of measures to combat money laundering and terrorist financing. Mutual evaluations are peer reviews, where members from different countries assess another country. A mutual evaluation report provides an in-depth description and analysis of a country's system for preventing criminal abuse of the financial system as well as focused recommendations to the country to further strengthen its system.

[40] FATF (2019), Financial Action Task Force – 30 years, FATF, Paris <https://www.fatf-gafi.org/media/fatf/documents/brochuresannualreports/FATF30-(1989-2019).pdf> at 10.
[41] FATF (2019), Financial Action Task Force – 30 years, FATF, Paris <https://www.fatf-gafi.org/media/fatf/documents/brochuresannualreports/FATF30-(1989-2019).pdf> at 10.
[42] Financial Action Task Force, "Mutual Evaluations" (2019) online: *FATF* < https://www.fatf-gafi.org/publications/mutualevaluations/more/more-about-mutual-evaluations.html?hf=10&b=0&s=desc(fatf_releasedate)>.

27. Following the adoption of the revised recommendations in 2012, the FATF issued the methodology for the 4th round of mutual evaluations.[43] The methodology contemplates a technical compliance assessment (as conducted in previous rounds) as well as an assessment of effectiveness. Effectiveness assessments are being conducted for the first time in the 4th round of evaluations. These assessments are described as follows:[44]

> The technical compliance assessment addresses the specific requirements of the FATF Recommendations, principally as they relate to the relevant legal and institutional framework of the country, and the powers and procedures of the competent authorities. These represent the fundamental building blocks of an AML/CFT system.
>
> The effectiveness assessment differs fundamentally from the assessment of technical compliance. It seeks to assess the adequacy of the implementation of the FATF Recommendations, and identifies the extent to which a country achieves a defined set of outcomes that are central to a robust AML/CFT system. The focus of the effectiveness assessment is therefore on the extent to which the legal and institutional framework is producing the expected results.

28. The mutual evaluation process and the results of recent evaluations of Canada are set out in the appendices identified below.

A. Documents Associated with the FATF Mutual Evaluation Process

29. The following documents, associated with the FATF mutual evaluation process, are attached as appendices to this overview report:

a. Appendix F:

   FATF, *Methodology for Assessing Technical Compliance with the FATF Recommendations and the Effectiveness of AML/CFT Systems* (Paris: FATF, 2019).

[43] Financial Action Task Force, *Methodology for Assessing Compliance with the FATF Recommendations and the Effectiveness of AML/CFT Systems* (Paris: FATF, 2019) < https://www.fatf-gafi.org/media/fatf/documents/methodology/FATF%20Methodology%2022%20Feb%202013.pdf>.
[44] Financial Action Task Force, *Methodology for Assessing Compliance with the FATF Recommendations and the Effectiveness of AML/CFT Systems* (Paris: FATF, 2019) < https://www.fatf-gafi.org/media/fatf/documents/methodology/FATF%20Methodology%2022%20Feb%202013.pdf> at 5.

b. Appendix G:

FATF, *Procedures for the FATF Fourth Round of AML/CFT Mutual Evaluations* (Paris: FATF, 2019).

c. Appendix H:

FATF, *Consolidated Processes and Procedures for Mutual Evaluations and Follow-Up: "Universal Procedures"* (Paris: FATF, 2019).

d. Appendix I:

FATF, *Consolidated Table of Assessment Ratings* (Paris: FATF, 2020).

V. Mutual Evaluations of Canada

30. The following documents relate to mutual evaluations of Canada.

a. Appendix J:

FATF, *Financial Action Task Force on Money Laundering: Annual Report 1992-1993* (Paris: FATF, 1993).

b. Appendix K:

FATF, *Financial Action Task Force on Money Laundering: Annual Report 1997-1998* (Paris: FATF, 1998).

c. Appendix L:

FATF, *Third Mutual Evaluation on Anti-Money Laundering and Combating the Financing of Terrorism: Canada* (Paris: FATF, 2008).

d. Appendix M:

FATF, *6th Follow-Up Report: Mutual Evaluation of Canada* (Paris: FATF, 2014).

e. Appendix N:

FATF, *Anti-Money Laundering and Counter-Terrorist Financing Measures – Canada, Fourth Round Mutual Evaluation Report* (Paris: FATF, 2016).

B. FATF Typology, Guidance and Best Practices Papers

31. The following typology, guidance and best practice documents have been created by the FATF and/or FSRBs:

a. Appendix O:

   APG & FATF, *FATF Report: Vulnerabilities of Casinos and Gaming Sector* (Paris: FATF, 2009).

b. Appendix P:

   FATF, *Money Laundering & Terrorist Financing Through the Real Estate Sector* (Paris: FATF, 2007).

c. Appendix Q:

   FATF, *Professional Money Laundering* (Paris: FATF, 2018).

d. Appendix R:

   FATF, *FATF Report: Money Laundering and Terrorist Financing Vulnerabilities of Legal Professionals* (Paris: FATF, 2013).

e. Appendix S:

   FATF, *Guidance for a Risk-Based Approach: Accounting Profession* (Paris: FATF, 2019).

f. Appendix T:

   FATF, *Guidance for a Risk-Based Approach: Legal Professionals* (Paris: FATF, 2019).

g. Appendix U:

   FATF, *Concealment of Beneficial Ownership* (Paris: FATF, 2018).

h. Appendix V:

   CFATF & FATF, *FATF Report: Money Laundering Using Trust and Company Service Providers* (Paris: FATF, 2010).

i. Appendix W:

FATF, *The Misuse of Corporate Vehicles, Including Trust and Company Service Providers* (Paris: FATF, 2006).

j. Appendix X:

FATF, *Best Practices on Beneficial Ownership for Legal Persons* (Paris: FATF, 2019).

k. Appendix Y:

FATF, *Guidance for a Risk-Based Approach: Securities Sector* (Paris: FATF, 2018).

l. Appendix Z:

APG, *APG Typology Report on Trade Based Money Laundering* (Paris: FATF, 2012).

m. Appendix AA:

FATF, *FATF Report: Virtual Currencies Key Definitions and Potential AML/CFT Risk* (Paris: FATF, 2014).

n. Appendix BB:

FATF, *FATF Report: The Role of Hawala and other Similar Service Providers in Money Laundering and Terrorist Financing* (Paris: FATF, 2013).

o. Appendix CC:

FATF, *Report on New Payment Methods* (Paris: FATF, 2005).

p. Appendix DD:

FATF, *FATF Report: Money Laundering Using New Payment Methods* (Paris: FATF, 2010).

q. Appendix EE:

FATF, *FATF Report: Money Laundering through Money Remittance and Currency Exchange Providers* (Paris: FATF, 2010).

r. Appendix FF:

FATF, *FATF Report: Money Laundering and Terrorist Financing in the Securities Sector* (Paris: FATF, 2009).

s. Appendix GG:

Financial Action Task Force, *The Forty Recommendations of the Financial Action Task Force on Money Laundering* (Paris: FATF, 1990)

THE FORTY RECOMMENDATIONS OF THE

FINANCIAL ACTION TASK FORCE ON MONEY LAUNDERING

1990

A. GENERAL FRAMEWORK OF THE RECOMMENDATIONS

1. Each country should, without further delay, take steps to fully implement the Vienna Convention, and proceed to ratify it.

2. Financial institution secrecy laws should be conceived so as not to inhibit implementation of the recommendations of this group.

3. An effective money laundering enforcement program should include increased multilateral cooperation and mutual legal assistance in money laundering investigations and prosecutions and extradition in money laundering cases, where possible.

B. IMPROVEMENT OF NATIONAL LEGAL SYSTEMS TO COMBAT MONEY LAUNDERING

Definition of the Criminal Offense of Money Laundering

4. Each country should take such measures as may be necessary, including legislative ones, to enable it to criminalize drug money laundering as set forth in the Vienna Convention.

5. Each country should consider extending the offense of drug money laundering to any other crimes for which there is a link to narcotics; an alternative approach is to criminalize money laundering based on all serious offenses, and/or on all offenses that generate a significant amount of proceeds, or on certain serious offenses.

6. As provided in the Vienna Convention, the offense of money laundering should apply at least to knowing money laundering activity, including the concept that knowledge may be inferred from objective factual circumstances.

7. Where possible, corporations themselves - not only their employees - should be subject to criminal liability.

Provisional Measures and Confiscation

8. Countries should adopt measures similar to those set forth in the Vienna Convention, as may be necessary, including legislative ones, to enable their competent authorities to confiscate property laundered, proceeds from, instrumentalities used in or intended for use in the commission of any money laundering offense, or property of corresponding value.

Such measures should include the authority to : 1) identify, trace and evaluate property which is subject to confiscation; 2) carry out provisional measures, such as freezing and seizing, to prevent any dealing, transfer or disposal of such property; and 3) take any appropriate investigative measures.

In addition to confiscation and criminal sanctions, countries also should consider monetary and civil penalties, and/or proceedings including civil proceedings, to void contracts entered by parties, where parties knew or should have known that as a result of the contract, the State would be prejudiced in its ability to recover financial claims, e.g. through confiscation or collection of fines and penalties.

C. ENHANCEMENT OF THE ROLE OF THE FINANCIAL SYSTEM

Scope of the Following Recommendations

9. Recommendations 12 to 29 of this paper should apply not only to banks, but also to non-bank financial institutions.

10. The appropriate national authorities should take steps to ensure that these Recommendations are implemented on as broad a front as is practically possible.

11. A working group should further examine the possibility of establishing a common minimal list of non-bank financial institutions and other professions dealing with cash subject to these Recommendations.

Customer Identification and Record-keeping Rules

12. Financial institutions should not keep anonymous accounts or accounts in obviously fictitious names: they should be required (by law, by regulations, by agreements between supervisory authorities and financial institutions or by self-regulatory agreements among financial institutions) to identify, on the basis of an official or other reliable identifying document, and record the identity of their clients, either occasional or usual, when establishing business relations or conducting transactions (in particular opening of accounts or passbooks, entering into fiduciary transactions, renting of safe deposit boxes, performing large cash transactions).

13. Financial institutions should take reasonable measures to obtain information about the true identity of the persons on whose behalf an account is opened or a transaction conducted if there are any doubts as to whether these clients or customers are not acting on their own behalf, in particular, in the case of domiciliary companies (i.e. institutions, corporations, foundations, trusts, etc. that do not conduct any commercial or manufacturing business or any other form of commercial operation in the country where their registered office is located).

14. Financial institutions should maintain, for at least five years, all necessary records on transactions, both domestic or international, to enable them to comply swiftly with information requests from the competent authorities. Such records must be sufficient to permit reconstruction of individual transactions (including the amounts and types of currency involved if any) so as to provide, if necessary, evidence for prosecution of criminal behaviour.

Financial institutions should keep records on customer identification (e.g. copies or records of official identification documents like passports, identity cards, driving licenses or similar documents), account files and business correspondence for at least five years after the account is closed.

These documents should be available to domestic competent authorities in the context of relevant criminal prosecutions and investigations.

Increased Diligence of Financial Institutions

15. Financial institutions should pay special attention to all complex, unusual large transactions, and all unusual patterns of transactions, which have no apparent economic or visible lawful purpose. The background and purpose of such transactions should, as far as possible, be examined, the findings established in writing, and be available to help supervisors, auditors and law enforcement agencies.

16. If financial institutions suspect that funds stem from a criminal activity, they should be permitted or required to report promptly their suspicions to the competent authorities. Accordingly, there should be legal provisions to protect financial institutions and their employees from criminal or civil liability for breach of any restriction on disclosure of information imposed by contract or by any legislative, regulatory or administrative provision, if they report in good faith, in disclosing suspected criminal activity to the competent authorities, even if they did not know precisely what the underlying criminal activity was, and regardless of whether illegal activity actually occurred.

17. Financial institutions, their directors and employees, should not, or, where appropriate, should not be allowed to, warn their customers when information relating to them is being reported to the competent authorities.

18. In the case of a mandatory reporting system, or in the case of a voluntary reporting system where appropriate, financial institutions reporting their suspicions should comply with instructions from the competent authorities.

19. When a financial institution develops suspicions about the operations of a customer, and when no obligation of reporting these suspicious exists, makes no report to the competent authorities, it should deny assistance to this customer, sever relations with him and close his accounts.

20. Financial institutions should develop programs against money laundering. These programs should include, as a minimum :

(a) the development of internal policies, procedures and controls, including the designation of compliance officers at management level, and adequate screening procedures to ensure high standards when hiring employees;

(b) an ongoing employee training programme;

(c) an audit function to test the system.

Measures to Cope with the Problem of Countries with No or Insufficient Anti-Money Laundering Measures

21. Financial institutions should give special attention to business relations and transactions with persons, including companies and financial institutions, from countries which do not or insufficiently apply these Recommendations. Whenever these transactions have no apparent economic or visible lawful purpose, their background and purpose should, as far as possible, be examined, the findings established in writing, and be available to help supervisors, auditors and law enforcement agencies.

22. Financial institutions should ensure that the principles mentioned above are also applied to branches and majority owned subsidiaries located abroad, especially in countries which do not or insufficiently apply these Recommendations, to the extent that local applicable laws and regulations permit. When local applicable laws and regulations prohibit this implementation, competent authorities in the country of the mother institution should be informed by the financial institutions that they cannot apply these Recommendations.

Other Measures to Avoid Currency Laundering

23. The feasibility of measures to detect or monitor cash at the border should be studied, subject to strict safeguards to ensure proper use of information and without impeding in any way the freedom of capital movements.

24. Countries should consider the feasibility and utility of a system where banks and other financial institutions and intermediaries would report all domestic and international currency transactions above a fixed amount, to a national central agency with a computerised data base, available to competent authorities for use in money laundering cases, subject to strict safeguards to ensure proper use of the information.

25. Countries should further encourage in general the development of modern and secure techniques of money management, including increased use of checks, payment cards, direct deposit of salary checks, and book entry recording of securities, as a means to encourage the replacement of cash transfers.

Implementation, and Role of Regulatory and other Administrative Authorities

26. The competent authorities supervising banks or other financial institutions or intermediaries, or other competent authorities, should ensure that the supervised institutions have adequate programs to guard against money laundering. These authorities should cooperate and lend expertise spontaneously or on request with other domestic judicial or law enforcement authorities in money laundering investigations and prosecutions.

27. Competent authorities should be designated to ensure an effective implementation of all these Recommendations, through administrative supervision and regulation, in other professions dealing with cash as defined by each country.

28. The competent authorities should establish guidelines which will assist financial institutions in detecting suspicious patterns of behaviour by their customers. It is understood that such guidelines must develop over time, and will never be exhaustive. It is further understood that such guidelines will primarily serve as an educational tool for financial institutions' personnel.

29. The competent authorities regulating or supervising financial institutions should take the necessary legal or regulatory measures to guard against control or acquisition of a significant participation in financial institutions by criminals or their confederates.

D. STRENGTHENING OF INTERNATIONAL COOPERATION

Administrative Cooperation

(a) Exchange of general information

30. National administrations should consider recording, at least in the aggregate, international flows of cash in whatever currency, so that estimates can be made of cash flows and reflows from various sources abroad, when this is combined with central bank information. Such information should be made available to the IMF and BIS to facilitate international studies.

31. International competent authorities, perhaps Interpol and the Customs Cooperation Council, should be given responsibility for gathering and disseminating information to competent authorities about the latest developments in money laundering and money laundering techniques.

Central banks and bank regulators could do the same on their network. National authorities in various spheres, in consultation with trade associations, could then disseminate this to financial institutions in individual countries.

(b) Exchange of information relating to suspicious transactions

32. Each country should make efforts to improve a spontaneous or "upon request" international information exchange relating to suspicious transactions, persons and corporations involved in those transactions between competent authorities. Strict safeguards should be established to ensure that this exchange of information is consistent with national and international provisions on privacy and data protection.

Cooperation Between Legal Authorities

(a) Basis and means for cooperation in confiscation, mutual assistance and extradition

33. Countries should try to ensure, on a bilateral or multilateral basis, that different knowledge standards in national definitions - i.e. different standards concerning the intentional element of the infraction - do not affect the ability or willingness of countries to provide each other with mutual legal assistance.

34. International cooperation should be supported by a network of bilateral and multilateral agreements and arrangements based on generally shared legal concepts with the aim of providing practical measures to affect the widest possible range of mutual assistance.

35. Countries should encourage international conventions such as the draft Convention of the Council of Europe on Confiscation of the Proceeds from Offenses.

(b) Focus of improved mutual assistance on money laundering issues

36. Co-operative investigations among appropriate competent authorities of countries should be encouraged.

37. There should be procedures for mutual assistance in criminal matters regarding the use of compulsory measures including the production of records by financial institutions and other persons, the search of persons and premises, seizure and obtaining of evidence for use in money laundering investigations and prosecutions and in related actions in foreign jurisdictions.

38. There should be authority to take expeditious action in response to requests by foreign countries to identify, freeze, seize and confiscate proceeds or other property of corresponding value to such proceeds, based on money laundering or the crimes underlying the laundering activity. There should also be arrangements for coordinating seizure and confiscation proceedings which may include the sharing of confiscated assets.

39. To avoid conflicts of jurisdiction, consideration should be given to devising and applying mechanisms for determining the best venue for prosecution of defendants in the interests of justice in cases that are subject to prosecution in more than one country. Similarly, there should be arrangements for coordinating seizure and confiscation proceedings which may include the sharing of confiscated assets.

40. Countries should have procedures in place to extradite, where possible, individuals charged with a money laundering offense or related offenses. With respect to its national legal system, each

country should recognise money laundering as an extraditable offense. Subject to their legal frameworks, countries may consider simplifying extradition by allowing direct transmission of extradition requests between appropriate ministries, extraditing persons based only on warrants of arrests or judgments, extraditing their nationals, and/or introducing a simplified extradition of consenting persons who waive formal extradition proceedings.

Appendix B:

Financial Action Task Force, *The Forty Recommendations* (Paris: FATF, 1996)

Financial Action Task Force on Money Laundering

Groupe d'action financière sur le blanchiment de capitaux

The Forty Recommendations

Introduction

The Financial Action Task Force on Money Laundering (FATF) is an inter-governmental body whose purpose is the development and promotion of policies to combat money laundering -- the processing of criminal proceeds in order to disguise their illegal origin. These policies aim to prevent such proceeds from being utilised in future criminal activities and from affecting legitimate economic activities.

The FATF currently consists of 29 countries[1] and two international organisations[2]. Its membership includes the major financial centre countries of Europe, North and South America, and Asia. It is a multi-disciplinary body - as is essential in dealing with money laundering - bringing together the policy-making power of legal, financial and law enforcement experts.

This need to cover all relevant aspects of the fight against money laundering is reflected in the scope of the forty FATF Recommendations -- the measures which the Task Force have agreed to implement and which all countries are encouraged to adopt. The Recommendations were originally drawn up in 1990. In 1996 the forty Recommendations were revised to take into account the experience gained over the last six years and to reflect the changes which have occurred in the money laundering problem.[3]

These forty Recommendations set out the basic framework for anti-money laundering efforts and they are designed to be of universal application. They cover the criminal justice system and law enforcement; the financial system and its regulation, and international co-operation.

It was recognised from the outset of the FATF that countries have diverse legal and financial systems and so all cannot take identical measures. The Recommendations are therefore the principles for action in this field, for countries to implement according to their particular circumstances and constitutional frameworks allowing countries a measure of flexibility rather than prescribing every detail. The measures are not particularly complex or difficult, provided there is the political will to act. Nor do they compromise the freedom to engage in legitimate transactions or threaten economic development.

FATF countries are clearly committed to accept the discipline of being subjected to multilateral surveillance and peer review. All member countries have their implementation of the forty Recommendations monitored through a two-pronged approach: an annual self-assessment exercise and the more detailed mutual evaluation process under which each member country is subject to an on-site examination. In addition, the FATF carries out cross-country reviews of measures taken to implement particular Recommendations.

These measures are essential for the creation of an effective anti-money laundering framework.

---

[1] Reference in this document to "countries" should be taken to apply equally to "territories" or "jurisdictions". The twenty-nine FATF member countries and governments are: Argentina; Australia; Austria; Belgium; Brazil; Canada; Denmark; Finland; France; Germany; Greece; Hong Kong, China; Iceland; Ireland; Italy; Japan; Luxembourg; Mexico; the Kingdom of the Netherlands; New Zealand; Norway; Portugal; Singapore; Spain; Sweden; Switzerland; Turkey; the United Kingdom; and the United States.

[2] The two international organisations are: the European Commission and the Gulf Cooperation Council.

[3] During the period 1990 to 1995, the FATF also elaborated various Interpretative Notes which are designed to clarify the application of specific Recommendations. Some of these Interpretative Notes have been updated in the Stocktaking Review to reflect changes in the Recommendations. The FATF adopted a new Interpretative Note relating to Recommendation 15 on 2 July 1999.

THE FORTY RECOMMENDATIONS

A. GENERAL FRAMEWORK OF THE RECOMMENDATIONS

1. Each country should take immediate steps to ratify and to implement fully, the 1988 United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances (the Vienna Convention).

2. Financial institution secrecy laws should be conceived so as not to inhibit implementation of these recommendations.

3. An effective money laundering enforcement program should include increased multilateral co-operation and mutual legal assistance in money laundering investigations and prosecutions and extradition in money laundering cases, where possible.

B. ROLE OF NATIONAL LEGAL SYSTEMS IN COMBATING MONEY LAUNDERING

Scope of the Criminal Offence of Money Laundering

4. Each country should take such measures as may be necessary, including legislative ones, to enable it to criminalise money laundering as set forth in the Vienna Convention. Each country should extend the offence of drug money laundering to one based on serious offences. Each country would determine which serious crimes would be designated as money laundering predicate offences.

5. As provided in the Vienna Convention, the offence of money laundering should apply at least to knowing money laundering activity, including the concept that knowledge may be inferred from objective factual circumstances.

6. Where possible, corporations themselves - not only their employees - should be subject to criminal liability.

Provisional Measures and Confiscation

7. Countries should adopt measures similar to those set forth in the Vienna Convention, as may be necessary, including legislative ones, to enable their competent authorities to confiscate property laundered, proceeds from, instrumentalities used in or intended for use in the commission of any money laundering offence, or property of corresponding value, without prejudicing the rights of bona fide third parties.

   Such measures should include the authority to : (1) identify, trace and evaluate property which is subject to confiscation; (2) carry out provisional measures, such as freezing and seizing, to prevent any dealing, transfer or disposal of such property; and (3) take any appropriate investigative measures.

   In addition to confiscation and criminal sanctions, countries also should consider monetary and civil penalties, and/or proceedings including civil proceedings, to void contracts entered into by parties, where parties knew or should have known that as a result of the contract, the State would be

prejudiced in its ability to recover financial claims, e.g. through confiscation or collection of fines and penalties.

C. ROLE OF THE FINANCIAL SYSTEM IN COMBATING MONEY LAUNDERING

8. Recommendations 10 to 29 should apply not only to banks, but also to non-bank financial institutions. Even for those non-bank financial institutions which are not subject to a formal prudential supervisory regime in all countries, for example bureaux de change, governments should ensure that these institutions are subject to the same anti-money laundering laws or regulations as all other financial institutions and that these laws or regulations are implemented effectively.

9. The appropriate national authorities should consider applying Recommendations 10 to 21 and 23 to the conduct of financial activities as a commercial undertaking by businesses or professions which are not financial institutions, where such conduct is allowed or not prohibited. Financial activities include, but are not limited to, those listed in the attached annex. It is left to each country to decide whether special situations should be defined where the application of anti-money laundering measures is not necessary, for example, when a financial activity is carried out on an occasional or limited basis.

Customer Identification and Record-keeping Rules

10. Financial institutions should not keep anonymous accounts or accounts in obviously fictitious names: they should be required (by law, by regulations, by agreements between supervisory authorities and financial institutions or by self-regulatory agreements among financial institutions) to identify, on the basis of an official or other reliable identifying document, and record the identity of their clients, either occasional or usual, when establishing business relations or conducting transactions (in particular opening of accounts or passbooks, entering into fiduciary transactions, renting of safe deposit boxes, performing large cash transactions).

    In order to fulfil identification requirements concerning legal entities, financial institutions should, when necessary, take measures:

    (i) to verify the legal existence and structure of the customer by obtaining either from a public register or from the customer or both, proof of incorporation, including information concerning the customer's name, legal form, address, directors and provisions regulating the power to bind the entity.

    (ii) to verify that any person purporting to act on behalf of the customer is so authorised and identify that person.

11. Financial institutions should take reasonable measures to obtain information about the true identity of the persons on whose behalf an account is opened or a transaction conducted if there are any doubts as to whether these clients or customers are acting on their own behalf, for example, in the case of domiciliary companies (i.e. institutions, corporations, foundations, trusts, etc. that do not conduct any commercial or manufacturing business or any other form of commercial operation in the country where their registered office is located).

12. Financial institutions should maintain, for at least five years, all necessary records on transactions, both domestic or international, to enable them to comply swiftly with information requests from the competent authorities. Such records must be sufficient to permit reconstruction of individual transactions (including the amounts and types of currency involved if any) so as to provide, if necessary, evidence for prosecution of criminal behaviour.

Financial institutions should keep records on customer identification (e.g. copies or records of official identification documents like passports, identity cards, driving licenses or similar documents), account files and business correspondence for at least five years after the account is closed.

These documents should be available to domestic competent authorities in the context of relevant criminal prosecutions and investigations.

13. Countries should pay special attention to money laundering threats inherent in new or developing technologies that might favour anonymity, and take measures, if needed, to prevent their use in money laundering schemes.

Increased Diligence of Financial Institutions

14. Financial institutions should pay special attention to all complex, unusual large transactions, and all unusual patterns of transactions, which have no apparent economic or visible lawful purpose. The background and purpose of such transactions should, as far as possible, be examined, the findings established in writing, and be available to help supervisors, auditors and law enforcement agencies.

15. If financial institutions suspect that funds stem from a criminal activity, they should be required to report promptly their suspicions to the competent authorities.

16. Financial institutions, their directors, officers and employees should be protected by legal provisions from criminal or civil liability for breach of any restriction on disclosure of information imposed by contract or by any legislative, regulatory or administrative provision, if they report their suspicions in good faith to the competent authorities, even if they did not know precisely what the underlying criminal activity was, and regardless of whether illegal activity actually occurred.

17. Financial institutions, their directors, officers and employees, should not, or, where appropriate, should not be allowed to, warn their customers when information relating to them is being reported to the competent authorities.

18. Financial institutions reporting their suspicions should comply with instructions from the competent authorities.

19. Financial institutions should develop programs against money laundering. These programs should include, as a minimum :

    (i) the development of internal policies, procedures and controls, including the designation of compliance officers at management level, and adequate screening procedures to ensure high standards when hiring employees;

    (ii) an ongoing employee training programme;

    (iii) an audit function to test the system.

Measures to Cope with the Problem of Countries with No or Insufficient Anti-Money Laundering Measures

20. Financial institutions should ensure that the principles mentioned above are also applied to branches and majority owned subsidiaries located abroad, especially in countries which do not or insufficiently apply these Recommendations, to the extent that local applicable laws and regulations permit. When local applicable laws and regulations prohibit this implementation, competent authorities in the

country of the mother institution should be informed by the financial institutions that they cannot apply these Recommendations.

21. Financial institutions should give special attention to business relations and transactions with persons, including companies and financial institutions, from countries which do not or insufficiently apply these Recommendations. Whenever these transactions have no apparent economic or visible lawful purpose, their background and purpose should, as far as possible, be examined, the findings established in writing, and be available to help supervisors, auditors and law enforcement agencies.

Other Measures to Avoid Money Laundering

22. Countries should consider implementing feasible measures to detect or monitor the physical cross-border transportation of cash and bearer negotiable instruments, subject to strict safeguards to ensure proper use of information and without impeding in any way the freedom of capital movements.

23. Countries should consider the feasibility and utility of a system where banks and other financial institutions and intermediaries would report all domestic and international currency transactions above a fixed amount, to a national central agency with a computerised data base, available to competent authorities for use in money laundering cases, subject to strict safeguards to ensure proper use of the information.

24. Countries should further encourage in general the development of modern and secure techniques of money management, including increased use of checks, payment cards, direct deposit of salary checks, and book entry recording of securities, as a means to encourage the replacement of cash transfers.

25. Countries should take notice of the potential for abuse of shell corporations by money launderers and should consider whether additional measures are required to prevent unlawful use of such entities.

Implementation, and Role of Regulatory and other Administrative Authorities

26. The competent authorities supervising banks or other financial institutions or intermediaries, or other competent authorities, should ensure that the supervised institutions have adequate programs to guard against money laundering. These authorities should co-operate and lend expertise spontaneously or on request with other domestic judicial or law enforcement authorities in money laundering investigations and prosecutions.

27. Competent authorities should be designated to ensure an effective implementation of all these Recommendations, through administrative supervision and regulation, in other professions dealing with cash as defined by each country.

28. The competent authorities should establish guidelines which will assist financial institutions in detecting suspicious patterns of behaviour by their customers. It is understood that such guidelines must develop over time, and will never be exhaustive. It is further understood that such guidelines will primarily serve as an educational tool for financial institutions' personnel.

29. The competent authorities regulating or supervising financial institutions should take the necessary legal or regulatory measures to guard against control or acquisition of a significant participation in financial institutions by criminals or their confederates.

D. STRENGTHENING OF INTERNATIONAL CO-OPERATION

Administrative Co-operation

Exchange of general information

30. National administrations should consider recording, at least in the aggregate, international flows of cash in whatever currency, so that estimates can be made of cash flows and reflows from various sources abroad, when this is combined with central bank information. Such information should be made available to the International Monetary Fund and the Bank for International Settlements to facilitate international studies.

31. International competent authorities, perhaps Interpol and the World Customs Organisation, should be given responsibility for gathering and disseminating information to competent authorities about the latest developments in money laundering and money laundering techniques. Central banks and bank regulators could do the same on their network. National authorities in various spheres, in consultation with trade associations, could then disseminate this to financial institutions in individual countries.

Exchange of information relating to suspicious transactions

32. Each country should make efforts to improve a spontaneous or "upon request" international information exchange relating to suspicious transactions, persons and corporations involved in those transactions between competent authorities. Strict safeguards should be established to ensure that this exchange of information is consistent with national and international provisions on privacy and data protection.

Other forms of Co-operation

Basis and means for co-operation in confiscation, mutual assistance and extradition

33. Countries should try to ensure, on a bilateral or multilateral basis, that different knowledge standards in national definitions - i.e. different standards concerning the intentional element of the infraction - do not affect the ability or willingness of countries to provide each other with mutual legal assistance.

34. International co-operation should be supported by a network of bilateral and multilateral agreements and arrangements based on generally shared legal concepts with the aim of providing practical measures to affect the widest possible range of mutual assistance.

35. Countries should be encouraged to ratify and implement relevant international conventions on money laundering such as the 1990 Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime.

Focus of improved mutual assistance on money laundering issues

36. Co-operative investigations among countries' appropriate competent authorities should be encouraged. One valid and effective investigative technique in this respect is controlled delivery related to assets known or suspected to be the proceeds of crime. Countries are encouraged to support this technique, where possible.

37. There should be procedures for mutual assistance in criminal matters regarding the use of compulsory measures including the production of records by financial institutions and other persons, the search of

persons and premises, seizure and obtaining of evidence for use in money laundering investigations and prosecutions and in related actions in foreign jurisdictions.

38. There should be authority to take expeditious action in response to requests by foreign countries to identify, freeze, seize and confiscate proceeds or other property of corresponding value to such proceeds, based on money laundering or the crimes underlying the laundering activity. There should also be arrangements for co-ordinating seizure and confiscation proceedings which may include the sharing of confiscated assets.

39. To avoid conflicts of jurisdiction, consideration should be given to devising and applying mechanisms for determining the best venue for prosecution of defendants in the interests of justice in cases that are subject to prosecution in more than one country. Similarly, there should be arrangements for co-ordinating seizure and confiscation proceedings which may include the sharing of confiscated assets.

40. Countries should have procedures in place to extradite, where possible, individuals charged with a money laundering offence or related offences. With respect to its national legal system, each country should recognise money laundering as an extraditable offence. Subject to their legal frameworks, countries may consider simplifying extradition by allowing direct transmission of extradition requests between appropriate ministries, extraditing persons based only on warrants of arrests or judgements, extraditing their nationals, and/or introducing a simplified extradition of consenting persons who waive formal extradition proceedings.

Annex to Recommendation 9: List of Financial Activities undertaken by business or professions which are not financial institutions

1. Acceptance of deposits and other repayable funds from the public.
2. Lending.*
3. Financial leasing.
4. Money transmission services.
5. Issuing and managing means of payment (e.g. credit and debit cards, cheques, traveller's cheques and bankers' drafts...).
6. Financial guarantees and commitments.
7. Trading for account of customers (spot, forward, swaps, futures, options...) in:
   (a) money market instruments (cheques, bills, CDs, etc.) ;
   (b) foreign exchange;
   (c) exchange, interest rate and index instruments;
   (d) transferable securities;
   (e) commodity futures trading.
8. Participation in securities issues and the provision of financial services related to such issues.
9. Individual and collective portfolio management.
10. Safekeeping and administration of cash or liquid securities on behalf of clients.
11. Life insurance and other investment related insurance.
12. Money changing.

* Including inter alia:
— consumer credit,
— mortgage credit,
— factoring, with or without recourse,
— finance of commercial transactions (including forfaiting).

INTERPRETATIVE NOTES[1] TO THE FORTY RECOMMENDATIONS

[1] During the period 1990 to 1995, the FATF elaborated various Interpretative Notes which are designed to clarify the application of specific Recommendations. Some of these Interpretative Notes have been updated in the Stocktaking Review to reflect changes in the Recommendations. The FATF adopted a new Interpretative Note relating to Recommendation 15 on 2 July 1999.

INTERPRETATIVE NOTES

Recommendation 4

Countries should consider introducing an offence of money laundering based on all serious offences and/or on all offences that generate a significant amount of proceeds.

Recommendation 8

The FATF Recommendations should be applied in particular to life insurance and other investment products offered by insurance companies, whereas Recommendation 29 applies to the whole of the insurance sector.

Recommendations 8 and 9 (Bureaux de Change)

Introduction

Bureaux de change are an important link in the money laundering chain since it is difficult to trace the origin of the money once it has been exchanged. Typologies exercises conducted by the FATF have indicated increasing use of bureaux de change in laundering operations. Hence it is important that there should be effective counter-measures in this area. This Interpretative Note clarifies the application of FATF Recommendations concerning the financial sector in relation to bureaux de change and, where appropriate, sets out options for their implementation.

Definition of Bureaux de Change

For the purpose of this Note, bureaux de change are defined as institutions which carry out retail foreign exchange operations (in cash, by cheque or credit card). Money changing operations which are conducted only as an ancillary to the main activity of a business have already been covered in Recommendation 9. Such operations are therefore excluded from the scope of this Note.

Necessary Counter-Measures Applicable to Bureaux de Change

To counter the use of bureaux de change for money laundering purposes, the relevant authorities should take measures to know the existence of all natural and legal persons who, in a professional capacity, perform foreign exchange transactions.

As a minimum requirement, FATF members should have an effective system whereby the bureaux de change are known or declared to the relevant authorities (whether regulatory or law enforcement). One method by which this could be achieved would be a requirement on bureaux de change to submit to a designated authority, a simple declaration containing adequate information on the institution itself and its management. The authority could either issue a receipt or give a tacit authorisation: failure to voice an objection being considered as approval.

FATF members could also consider the introduction of a formal authorisation procedure. Those wishing to establish bureaux de change would have to submit an application to a designated authority empowered to grant authorisation on a case-by-case basis. The request for authorisation would need to contain such information as laid down by the authorities but should at least provide details of the applicant institution and its management. Authorisation would be granted, subject to the bureau de change meeting the specified conditions relating to its management and the shareholders, including the application of a "fit and proper test".

Another option which could be considered would be a combination of declaration and authorisation procedures. Bureaux de change would have to notify their existence to a designated authority but would not need to be authorised before they could start business. It would be open to the authority to apply a 'fit and proper' test to the management of bureaux de change after the bureau had commenced its activity, and to prohibit the bureau de change from continuing its business, if appropriate.

Where bureaux are required to submit a declaration of activity or an application for registration, the designated authority (which could be either a public body or a self-regulatory organisation) could be empowered to publish the list of registered bureaux de change. As a minimum, it should maintain a (computerised) file of bureaux de change. There should also be powers to take action against bureaux de change conducting business without having made a declaration of activity or having been registered.

As envisaged under FATF Recommendations 8 and 9, bureaux de change should be subject to the same anti-money laundering regulations as any other financial institution. The FATF Recommendations on financial matters should therefore be applied to bureaux de change. Of particular importance are those on identification requirements, suspicious transactions reporting, due diligence and record-keeping.

To ensure effective implementation of anti-money laundering requirements by bureaux de change, compliance monitoring mechanisms should be established and maintained. Where there is a registration authority for bureaux de change or a body which receives declarations of activity by bureaux de change, it could carry out this function. But the monitoring could also be done by other designated authorities (whether directly or through the agency of third parties such as private audit firms). Appropriate steps would need to be taken against bureaux de change which failed to comply with the anti-laundering requirements.

The bureaux de change sector tends to be an unstructured one without (unlike banks) national representative bodies which can act as a channel of communication with the authorities. Hence it is important that FATF members should establish effective means to ensure that bureaux de change are aware of their anti-money laundering responsibilities and to relay information, such as guidelines on suspicious transactions, to the profession. In this respect it would be useful to encourage the development of professional associations.

Recommendations 11, 15 through 18

Whenever it is necessary in order to know the true identity of the customer and to ensure that legal entities cannot be used by natural persons as a method of operating in reality anonymous accounts, financial institutions should, if the information is not otherwise available through public registers or other reliable sources, request information - and update that information - from the customer concerning principal owners and beneficiaries. If the customer does not have such information, the financial institution should request information from the customer on whoever has actual control.

If adequate information is not obtainable, financial institutions should give special attention to business relations and transactions with the customer.

If, based on information supplied from the customer or from other sources, the financial institution has reason to believe that the customer's account is being utilised in money laundering transactions, the financial institution must comply with the relevant legislation, regulations, directives or agreements concerning reporting of suspicious transactions or termination of business with such customers.

Recommendation 11

A bank or other financial institution should know the identity of its own customers, even if these are represented by lawyers, in order to detect and prevent suspicious transactions as well as to enable it to comply swiftly to information or seizure requests by the competent authorities. Accordingly Recommendation 11 also applies to the situation where an attorney is acting as an intermediary for financial services.

Recommendation 14

(a) In the interpretation of this requirement, special attention is required not only to transactions between financial institutions and their clients, but also to transactions and/or shipments especially of currency and equivalent instruments between financial institutions themselves or even to transactions within financial groups. As the wording of Recommendation 14 suggests that indeed "all" transactions are covered, it must be read to incorporate these interbank transactions.

(b) The word "transactions" should be understood to refer to the insurance product itself, the premium payment and the benefits.

Recommendation 15[2]

In implementing Recommendation 15, suspicious transactions should be reported by financial institutions regardless of whether they are also thought to involve tax matters. Countries should take into account that, in order to deter financial institutions from reporting a suspicious transaction, money launderers may seek to state *inter alia* that their transactions relate to tax matters.

Recommendation 22

(a) To facilitate detection and monitoring of cash transactions, without impeding in any way the freedom of capital movements, members could consider the feasibility of subjecting all cross-border transfers, above a given threshold, to verification, administrative monitoring, declaration or record keeping requirements.

(b) If a country discovers an unusual international shipment of currency, monetary instruments, precious metals, or gems, etc., it should consider notifying, as appropriate, the Customs Service or other competent authorities of the countries from which the shipment originated and/or to which it is destined, and should co-operate with a view toward establishing the source, destination, and purpose of such shipment and toward the taking of appropriate action.

Recommendation 26

In respect of this requirement, it should be noted that it would be useful to actively detect money laundering if the competent authorities make relevant statistical information available to the investigative authorities, especially if this information contains specific indicators of money laundering activity. For instance, if the competent authorities' statistics show an imbalance between the development of the financial services industry in a certain geographical area within a country and the development of the local economy, this imbalance might be indicative of money laundering activity in the region. Another example would be manifest changes in domestic currency flows without an apparent legitimate economic cause. However, prudent analysis of these statistical data is warranted, especially as there is not necessarily a direct relationship between financial flows and economic activity (e.g. the financial flows in an international financial centre with a high proportion

[2] The FATF adopted this Interpretative Note on 2 July 1999.

of investment management services provided for foreign customers or a large interbank market not linked with local economic activity).

Recommendation 29

Recommendation 29 should not be read as to require the introduction of a system of regular review of licensing of controlling interests in financial institutions merely for anti-money laundering purposes, but as to stress the desirability of suitability review for controlling shareholders in financial institutions (banks and non-banks in particular) from a FATF point of view. Hence, where shareholder suitability (or "fit and proper") tests exist, the attention of supervisors should be drawn to their relevance for anti-money laundering purposes.

Recommendation 33

Subject to principles of domestic law, countries should endeavour to ensure that differences in the national definitions of the money laundering offences -- e.g., different standards concerning the intentional element of the infraction, differences in the predicate offences, differences with regard to charging the perpetrator of the underlying offence with money laundering -- do not affect the ability or willingness of countries to provide each other with mutual legal assistance.

Recommendation 36 (Controlled delivery)

The controlled delivery of funds known or suspected to be the proceeds of crime is a valid and effective law enforcement technique for obtaining information and evidence in particular on international money laundering operations. In certain countries, controlled delivery techniques may also include the monitoring of funds. It can be of great value in pursuing particular criminal investigations and can also help in obtaining more general intelligence on money laundering activities. The use of these techniques should be strongly encouraged. The appropriate steps should therefore be taken so that no obstacles exist in legal systems preventing the use of controlled delivery techniques, subject to any legal requisites, including judicial authorisation for the conduct of such operations. The FATF welcomes and supports the undertakings by the World Customs Organisation and Interpol to encourage their members to take all appropriate steps to further the use of these techniques.

Recommendation 38

(a) Each country shall consider, when possible, establishing an asset forfeiture fund in its respective country into which all or a portion of confiscated property will be deposited for law enforcement, health, education, or other appropriate purposes.

(b) Each country should consider, when possible, taking such measures as may be necessary to enable it to share among or between other countries confiscated property, in particular, when confiscation is directly or indirectly a result of co-ordinated law enforcement actions.

Deferred Arrest and Seizure

Countries should consider taking measures, including legislative ones, at the national level, to allow their competent authorities investigating money laundering cases to postpone or waive the arrest of suspected persons and/or the seizure of the money for the purpose of identifying persons involved in such activities or for evidence gathering. Without such measures the use of procedures such as controlled deliveries and undercover operations are precluded.

FATF Standards

FATF IX Special Recommendations

October 2001
(incorporating all subsequent amendments until February 2008)

The FATF revised the 40 and the IX Recommendations. The revision of the FATF Recommendation was adopted and published in February 2012. See www.fatf-gafi.org/recommendations for the 2012 FATF Recommendations.

FATF Special Recommendations on Terrorist Financing

Recognising the vital importance of taking action to combat the financing of terrorism, the FATF has agreed these Recommendations, which, when combined with the FATF Forty Recommendations on money laundering, set out the basic framework to detect, prevent and suppress the financing of terrorism and terrorist acts.

I. Ratification and implementation of UN instruments

Each country should take immediate steps to ratify and to implement fully the 1999 United Nations International Convention for the Suppression of the Financing of Terrorism.

Countries should also immediately implement the United Nations resolutions relating to the prevention and suppression of the financing of terrorist acts, particularly United Nations Security Council Resolution 1373.

II. Criminalising the financing of terrorism and associated money laundering

Each country should criminalise the financing of terrorism, terrorist acts and terrorist organisations. Countries should ensure that such offences are designated as money laundering predicate offences.

III. Freezing and confiscating terrorist assets

Each country should implement measures to freeze without delay funds or other assets of terrorists, those who finance terrorism and terrorist organisations in accordance with the United Nations resolutions relating to the prevention and suppression of the financing of terrorist acts.

Each country should also adopt and implement measures, including legislative ones, which would enable the competent authorities to seize and confiscate property that is the proceeds of, or used in, or intended or allocated for use in, the financing of terrorism, terrorist acts or terrorist organisations.

IV. Reporting suspicious transactions related to terrorism

If financial institutions, or other businesses or entities subject to anti-money laundering obligations, suspect or have reasonable grounds to suspect that funds are linked or related to, or are to be used for terrorism, terrorist acts or by terrorist organisations, they should be required to report promptly their suspicions to the competent authorities.

V. International Co-operation

Each country should afford another country, on the basis of a treaty, arrangement or other mechanism for mutual legal assistance or information exchange, the greatest possible measure of assistance in connection with criminal, civil enforcement, and administrative investigations, inquiries and proceedings relating to the financing of terrorism, terrorist acts and terrorist organisations.

Countries should also take all possible measures to ensure that they do not provide safe havens for individuals charged with the financing of terrorism, terrorist acts or terrorist organisations, and should have procedures in place to extradite, where possible, such individuals.

VI. Alternative Remittance

Each country should take measures to ensure that persons or legal entities, including agents, that provide a service for the transmission of money or value, including transmission through an informal money or value transfer system or network, should be licensed or registered and subject to all the FATF Recommendations that apply to banks and non-bank financial institutions. Each country should ensure that persons or legal entities that carry out this service illegally are subject to administrative, civil or criminal sanctions.

VII. Wire transfers

Countries should take measures to require financial institutions, including money remitters, to include accurate and meaningful originator information (name, address and account number) on funds transfers and related messages that are sent, and the information should remain with the transfer or related message through the payment chain.

Countries should take measures to ensure that financial institutions, including money remitters, conduct enhanced scrutiny of and monitor for suspicious activity funds transfers which do not contain complete originator information (name, address and account number).

VIII. Non-profit organisations

Countries should review the adequacy of laws and regulations that relate to entities that can be abused for the financing of terrorism. Non-profit organisations are particularly vulnerable, and countries should ensure that they cannot be misused:

(i) by terrorist organisations posing as legitimate entities;

(ii) to exploit legitimate entities as conduits for terrorist financing, including for the purpose of escaping asset freezing measures; and

(iii) to conceal or obscure the clandestine diversion of funds intended for legitimate purposes to terrorist organisations.

IX. Cash Couriers

Countries should have measures in place to detect the physical cross-border transportation of currency and bearer negotiable instruments, including a declaration system or other disclosure obligation.

Countries should ensure that their competent authorities have the legal authority to stop or restrain currency or bearer negotiable instruments that are suspected to be related to terrorist financing or money laundering, or that are falsely declared or disclosed.

Countries should ensure that effective, proportionate and dissuasive sanctions are available to deal with persons who make false declaration(s) or disclosure(s). In cases where the currency or bearer negotiable instruments are related to terrorist financing or money laundering, countries should also adopt measures, including legislative ones consistent with Recommendation 3 and Special Recommendation III, which would enable the confiscation of such currency or instruments.

Interpretative Notes

Interpretative Note to

Special Recommendation II: Criminalising the financing of terrorism and associated money laundering

Objective

1. Special Recommendation II (SR II) was developed with the objective of ensuring that countries have the legal capacity to prosecute and apply criminal sanctions to persons that finance terrorism. Given the close connection between international terrorism and inter alia money laundering, another objective of SR II is to emphasise this link by obligating countries to include terrorist financing offences as predicate offences for money laundering. The basis for criminalising terrorist financing should be the United Nations International Convention for the Suppression of the Financing of Terrorism, 1999.[1]

Definitions

2. For the purposes of SR II and this Interpretative Note, the following definitions apply:

a) The term funds refers to assets of every kind, whether tangible or intangible, movable or immovable, however acquired, and legal documents or instruments in any form, including electronic or digital, evidencing title to, or interest in, such assets, including, but not limited to, bank credits, travellers cheques, bank cheques, money orders, shares, securities, bonds, drafts, letters of credit.

b) The term terrorist refers to any natural person who: (i) commits, or attempts to commit, terrorist acts by any means, directly or indirectly, unlawfully and wilfully; (ii) participates as an accomplice in terrorist acts; (iii) organises or directs others to commit terrorist acts; or (iv) contributes to the commission of terrorist acts by a group of persons acting with a common purpose where the contribution is made intentionally and with the aim of furthering the terrorist act or with the knowledge of the intention of the group to commit a terrorist act.

[1] Although the UN Convention had not yet come into force at the time that SR II was originally issued in October 2001 – and thus is not cited in the SR itself – the intent of the FATF has been from the issuance of SR II to reiterate and reinforce the criminalisation standard as set forth in the Convention (in particular, Article 2). The Convention came into force in April 2003.

c) The term terrorist act includes:

i) An act which constitutes an offence within the scope of, and as defined in one of the following treaties: Convention for the Suppression of Unlawful Seizure of Aircraft (1970), Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation (1971), Convention on the Prevention and Punishment of Crimes against Internationally Protected Persons, including Diplomatic Agents (1973), International Convention against the Taking of Hostages (1979), Convention on the Physical Protection of Nuclear Material (1980), Protocol for the Suppression of Unlawful Acts of Violence at Airports Serving International Civil Aviation, supplementary to the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation (1988), Convention for the Suppression of Unlawful Acts against the Safety of Maritime Navigation (1988), Protocol for the Suppression of Unlawful Acts against the Safety of Fixed Platforms located on the Continental Shelf (1988), and the International Convention for the Suppression of Terrorist Bombings (1997); and

ii) Any other act intended to cause death or serious bodily injury to a civilian, or to any other person not taking an active part in the hostilities in a situation of armed conflict, when the purpose of such act, by its nature or context, is to intimidate a population, or to compel a Government or an international organisation to do or to abstain from doing any act.

d) The term terrorist financing includes the financing of terrorist acts, and of terrorists and terrorist organisations.

e) The term terrorist organisation refers to any group of terrorists that: (i) commits, or attempts to commit, terrorist acts by any means, directly or indirectly, unlawfully and wilfully; (ii) participates as an accomplice in terrorist acts; (iii) organises or directs others to commit terrorist acts; or (iv) contributes to the commission of terrorist acts by a group of persons acting with a common purpose where the contribution is made intentionally and with the aim of furthering the terrorist act or with the knowledge of the intention of the group to commit a terrorist act.

Characteristics of the Terrorist Financing Offence

3. Terrorist financing offences should extend to any person who wilfully provides or collects funds by any means, directly or indirectly, with the unlawful intention that they should be used or in the knowledge that they are to be used, in full or in part: (a) to carry out a terrorist act(s); (b) by a terrorist organisation; or (c) by an individual terrorist.

4. Criminalising terrorist financing solely on the basis of aiding and abetting, attempt, or conspiracy does not comply with this Recommendation.

5. Terrorist financing offences should extend to any funds whether from a legitimate or illegitimate source.

6. Terrorist financing offences should not require that the funds: (a) were actually used to carry out or attempt a terrorist act(s); or (b) be linked to a specific terrorist act(s).

7. It should also be an offence to attempt to commit the offence of terrorist financing.

8. It should also be an offence to engage in any of the following types of conduct:

a) Participating as an accomplice in an offence as set forth in paragraphs 3 or 7 of this Interpretative Note;

b) Organising or directing others to commit an offence as set forth in paragraphs 3 or 7 of this Interpretative Note;

c) Contributing to the commission of one or more offence(s) as set forth in paragraphs 3 or 7 of this Interpretative Note by a group of persons acting with a common purpose. Such contribution shall be intentional and shall either: (i) be made with the aim of furthering the criminal activity or criminal purpose of the group, where such activity or purpose involves the commission of a terrorist financing offence; or (ii) be made in the knowledge of the intention of the group to commit a terrorist financing offence.

9. Terrorist financing offences should be predicate offences for money laundering.

10. Terrorist financing offences should apply, regardless of whether the person alleged to have committed the offence(s) is in the same country or a different country from the one in which the terrorist(s)/terrorist organisation(s) is located or the terrorist act(s) occurred/will occur.

11. The law should permit the intentional element of the terrorist financing offence to be inferred from objective factual circumstances.

12. Criminal liability for terrorist financing should extend to legal persons. Where that is not possible (*i.e.* due to fundamental principles of domestic law), civil or administrative liability should apply.

13. Making legal persons subject to criminal liability for terrorist financing should not preclude the possibility of parallel criminal, civil or administrative proceedings in countries in which more than one form of liability is available.

14. Natural and legal persons should be subject to effective, proportionate and dissuasive criminal, civil or administrative sanctions for terrorist financing.

Interpretative Note to

Special Recommendation III: Freezing and Confiscating Terrorist Assets

Objectives

1. FATF Special Recommendation III consists of two obligations. The first requires jurisdictions to implement measures that will freeze or, if appropriate, seize terrorist-related funds or other assets without delay in accordance with relevant United Nations resolutions. The second obligation of Special Recommendation III is to have measures in place that permit a jurisdiction to seize or confiscate terrorist funds or other assets on the basis of an order or mechanism issued by a competent authority or a court.

2. The objective of the first requirement is to freeze terrorist-related funds or other assets based on reasonable grounds, or a reasonable basis, to suspect or believe that such funds or other assets could be used to finance terrorist activity. The objective of the second requirement is to deprive terrorists of these funds or other assets if and when links have been adequately established between the funds or other assets and terrorists or terrorist activity. The intent of the first objective is preventative, while the intent of the second objective is mainly preventative and punitive. Both requirements are necessary to deprive terrorists and terrorist networks of the means to conduct future terrorist activity and maintain their infrastructure and operations.

Scope

3. Special Recommendation III is intended, with regard to its first requirement, to complement the obligations in the context of the United Nations Security Council (UNSC) resolutions relating to the prevention and suppression of the financing of terrorist acts—S/RES/1267(1999) and its successor resolutions,[1] S/RES/1373(2001) and any prospective resolutions related to the freezing, or if appropriate seizure, of terrorist assets. It should be stressed that none of the obligations in Special Recommendation III is intended to replace other measures or obligations that may already be in place for dealing with funds or other assets in the context of a criminal, civil or administrative investigation or proceeding.[2] The focus of Special Recommendation III instead is on the preventative measures that

[1] When issued, S/RES/1267(1999) had a time limit of one year. A series of resolutions have been issued by the United Nations Security Council (UNSC) to extend and further refine provisions of S/RES/1267(1999). By successor resolutions are meant those resolutions that extend and are directly related to the original resolution S/RES/1267(1999). At the time of issue of this Interpretative Note, these resolutions included S/RES/1333(2000), S/RES/1363(2001), S/RES/1390(2002) and S/RES/1455(2003). In this Interpretative Note, the term S/RES/1267(1999) refers to S/RES/1267(1999) and its successor resolutions.

[2] For instance, both the *UN Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances (1988)* and *UN Convention against Transnational Organised Crime (2000)* contain obligations regarding freezing, seizure and confiscation in the context of combating transnational crime. Those obligations exist separately and apart from obligations that are set forth in S/RES/1267(1999), S/RES/1373(2001) and Special Recommendation III.

are necessary and unique in the context of stopping the flow or use of funds or other assets to terrorist groups.

4. S/RES/1267(1999) and S/RES/1373(2001) differ in the persons and entities whose funds or other assets are to be frozen, the authorities responsible for making these designations, and the effect of these designations.

5. S/RES/1267(1999) and its successor resolutions obligate jurisdictions to freeze without delay the funds or other assets owned or controlled by Al-Qaida, the Taliban, Usama bin Laden, or persons and entities associated with them as designated by the United Nations Al-Qaida and Taliban Sanctions Committee established pursuant to United Nations Security Council Resolution 1267 (the Al-Qaida and Taliban Sanctions Committee), including funds derived from funds or other assets owned or controlled, directly or indirectly, by them or by persons acting on their behalf or at their direction, and ensure that neither these nor any other funds or other assets are made available, directly or indirectly, for such persons' benefit, by their nationals or by any person within their territory. The Al-Qaida and Taliban Sanctions Committee is the authority responsible for designating the persons and entities that should have their funds or other assets frozen under S/RES/1267(1999). All jurisdictions that are members of the United Nations are obligated by S/RES/1267(1999) to freeze the assets of persons and entities so designated by the Al-Qaida and Taliban Sanctions Committee.[3]

6. S/RES/1373(2001) obligates jurisdictions[4] to freeze without delay the funds or other assets of persons who commit, or attempt to commit, terrorist acts or participate in or facilitate the commission of terrorist acts; of entities owned or controlled directly or indirectly by such persons; and of persons and entities acting on behalf of, or at the direction of such persons and entities, including funds or other assets derived or generated from property owned or controlled, directly or indirectly, by such persons and associated persons and entities. Each individual jurisdiction has the authority to designate the persons and entities that should have their funds or other assets frozen. Additionally, to ensure that effective co-operation is developed among jurisdictions, jurisdictions should examine and give effect to, if appropriate, the actions initiated under the freezing mechanisms of other jurisdictions. When (i) a specific notification or communication is sent and (ii) the jurisdiction receiving the request is satisfied, according to applicable legal principles, that a requested designation is supported by reasonable grounds, or a reasonable basis, to suspect or believe that the proposed designee is a terrorist, one who finances terrorism or a terrorist organisation, the jurisdiction receiving the request must ensure that the funds or other assets of the designated person are frozen without delay.

Definitions

7. For the purposes of Special Recommendation III and this Interpretive Note, the following definitions apply:

a) The term *freeze* means to prohibit the transfer, conversion, disposition or movement of funds or other assets on the basis of, and for the duration of the validity of, an action initiated by a competent authority or a court under a freezing mechanism. The frozen funds or other assets

[3] When the UNSC acts under Chapter VII of the UN Charter, the resolutions it issues are mandatory for all UN members.

[4] The UNSC was acting under Chapter VII of the UN Charter in issuing S/RES/1373(2001) (see previous footnote).

remain the property of the person(s) or entity(ies) that held an interest in the specified funds or other assets at the time of the freezing and may continue to be administered by the financial institution or other arrangements designated by such person(s) or entity(ies) prior to the initiation of an action under a freezing mechanism.

b) The term *seize* means to prohibit the transfer, conversion, disposition or movement of funds or other assets on the basis of an action initiated by a competent authority or a court under a freezing mechanism. However, unlike a freezing action, a seizure is effected by a mechanism that allows the competent authority or court to take control of specified funds or other assets. The seized funds or other assets remain the property of the person(s) or entity(ies) that held an interest in the specified funds or other assets at the time of the seizure, although the competent authority or court will often take over possession, administration or management of the seized funds or other assets.

c) The term *confiscate*, which includes forfeiture where applicable, means the permanent deprivation of funds or other assets by order of a competent authority or a court. Confiscation or forfeiture takes place through a judicial or administrative procedure that transfers the ownership of specified funds or other assets to be transferred to the State. In this case, the person(s) or entity(ies) that held an interest in the specified funds or other assets at the time of the confiscation or forfeiture loses all rights, in principle, to the confiscated or forfeited funds or other assets.[5]

d) The term *funds or other assets* means financial assets, property of every kind, whether tangible or intangible, movable or immovable, however acquired, and legal documents or instruments in any form, including electronic or digital, evidencing title to, or interest in, such funds or other assets, including, but not limited to, bank credits, travellers cheques, bank cheques, money orders, shares, securities, bonds, drafts, or letters of credit, and any interest, dividends or other income on or value accruing from or generated by such funds or other assets.

e) The term *terrorist* refers to any natural person who: (i) commits, or attempts to commit, terrorist acts[6] by any means, directly or indirectly, unlawfully and wilfully; (ii) participates as an accomplice in terrorist acts or terrorist financing; (iii) organises or directs others to commit terrorist acts or terrorist financing; or (iv) contributes to the commission of terrorist acts or terrorist financing by a group of persons acting with a common purpose where the

[5] Confiscation or forfeiture orders are usually linked to a criminal conviction or a court decision whereby the confiscated or forfeited property is determined to have been derived from or intended for use in a violation of the law.

[6] A *terrorist act* includes an act which constitutes an offence within the scope of, and as defined in one of the following treaties: Convention for the Suppression of Unlawful Seizure of Aircraft, Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation, Convention on the Prevention and Punishment of Crimes against Internationally Protected Persons, including Diplomatic Agents, International Convention against the Taking of Hostages, Convention on the Physical Protection of Nuclear Material, Protocol for the Suppression of Unlawful Acts of Violence at Airports Serving International Civil Aviation, supplementary to the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation, Convention for the Suppression of Unlawful Acts against the Safety of Maritime Navigation, Protocol for the Suppression of Unlawful Acts against the Safety of Fixed Platforms located on the Continental Shelf, International Convention for the Suppression of Terrorist Bombings, and the International Convention for the Suppression of the Financing of Terrorism (1999).

contribution is made intentionally and with the aim of furthering the terrorist act or terrorist financing or with the knowledge of the intention of the group to commit a terrorist act or terrorist financing.

f) The phrase *those who finance terrorism* refers to any person, group, undertaking or other entity that provides or collects, by any means, directly or indirectly, funds or other assets that may be used, in full or in part, to facilitate the commission of terrorist acts, or to any persons or entities acting on behalf of, or at the direction of such persons, groups, undertakings or other entities. This includes those who provide or collect funds or other assets with the intention that they should be used or in the knowledge that they are to be used, in full or in part, in order to carry out terrorist acts.

g) The term *terrorist organisation* refers to any legal person, group, undertaking or other entity owned or controlled directly or indirectly by a terrorist(s).

h) The term *designated persons* refers to those persons or entities designated by the Al-Qaida and Taliban Sanctions Committee pursuant to S/RES/1267(1999) or those persons or entities designated and accepted, as appropriate, by jurisdictions pursuant to S/RES/1373(2001).

    i) The phrase *without delay*, for the purposes of S/RES/1267(1999), means, ideally, within a matter of hours of a designation by the Al-Qaida and Taliban Sanctions Committee. For the purposes of S/RES/1373(2001), the phrase *without delay* means upon having reasonable grounds, or a reasonable basis, to suspect or believe that a person or entity is a terrorist, one who finances terrorism or a terrorist organisation. The phrase without delay should be interpreted in the context of the need to prevent the flight or dissipation of terrorist-linked funds or other assets, and the need for global, concerted action to interdict and disrupt their flow swiftly.

Freezing without delay terrorist-related funds or other assets

8. In order to fulfil the preventive intent of Special Recommendation III, jurisdictions should establish the necessary authority and adopt the following standards and procedures to freeze the funds or other assets of terrorists, those who finance terrorism and terrorist organisations in accordance with both S/RES/1267(1999) and S/RES/1373(2001):

a) **Authority to freeze, unfreeze and prohibit dealing in funds or other assets of designated persons.** Jurisdictions should prohibit by enforceable means the transfer, conversion, disposition or movement of funds or other assets. Options for providing the authority to freeze and unfreeze terrorist funds or other assets include:

    i) empowering or designating a competent authority or a court to issue, administer and enforce freezing and unfreezing actions under relevant mechanisms, or

    ii) enacting legislation that places responsibility for freezing the funds or other assets of designated persons publicly identified by a competent authority or a court on the person or entity holding the funds or other assets and subjecting them to sanctions for non-compliance.

    The authority to freeze and unfreeze funds or other assets should also extend to funds or other assets derived or generated from funds or other assets owned or

controlled directly or indirectly by such terrorists, those who finance terrorism, or terrorist organisations.

Whatever option is chosen there should be clearly identifiable competent authorities responsible for enforcing the measures.

The competent authorities shall ensure that their nationals or any persons and entities within their territories are prohibited from making any funds or other assets, economic resources or financial or other related services available, directly or indirectly, wholly or jointly, for the benefit of: designated persons, terrorists; those who finance terrorism; terrorist organisations; entities owned or controlled, directly or indirectly, by such persons or entities; and persons and entities acting on behalf of or at the direction of such persons or entities.

b) **Freezing procedures.** Jurisdictions should develop and implement procedures to freeze the funds or other assets specified in paragraph (c) below without delay and without giving prior notice to the persons or entities concerned. Persons or entities holding such funds or other assets should be required by law to freeze them and should furthermore be subject to sanctions for non-compliance with this requirement. Any delay between the official receipt of information provided in support of a designation and the actual freezing of the funds or other assets of designated persons undermines the effectiveness of designation by affording designated persons time to remove funds or other assets from identifiable accounts and places. Consequently, these procedures must ensure (i) the prompt determination whether reasonable grounds or a reasonable basis exists to initiate an action under a freezing mechanism and (ii) the subsequent freezing of funds or other assets without delay upon determination that such grounds or basis for freezing exist. Jurisdictions should develop efficient and effective systems for communicating actions taken under their freezing mechanisms to the financial sector immediately upon taking such action. As well, they should provide clear guidance, particularly financial institutions and other persons or entities that may be holding targeted funds or other assets on obligations in taking action under freezing mechanisms.

c) **Funds or other assets to be frozen or, if appropriate, seized.** Under Special Recommendation III, funds or other assets to be frozen include those subject to freezing under S/RES/1267(1999) and S/RES/1373(2001). Such funds or other assets would also include those wholly or jointly owned or controlled, directly or indirectly, by designated persons. In accordance with their obligations under the United Nations International Convention for the Suppression of the Financing of Terrorism (1999) (the Terrorist Financing Convention (1999)), jurisdictions should be able to freeze or, if appropriate, seize any funds or other assets that they identify, detect, and verify, in accordance with applicable legal principles, as being used by, allocated for, or being made available to terrorists, those who finance terrorists or terrorist organisations. Freezing or seizing under the Terrorist Financing Convention (1999) may be conducted by freezing or seizing in the context of a criminal investigation or proceeding. Freezing action taken under Special Recommendation III shall be without prejudice to the rights of third parties acting in good faith.

d) **De-listing and unfreezing procedures.** Jurisdictions should develop and implement publicly known procedures to consider de-listing requests upon satisfaction of certain criteria consistent with international obligations and applicable legal principles, and to unfreeze the funds or other assets of de-listed persons or entities in a timely manner. For persons and entities designated under S/RES/1267(1999), such procedures and criteria should be in

accordance with procedures adopted by the Al-Qaida and Taliban Sanctions Committee under S/RES/1267(1999).

e) **Unfreezing upon verification of identity.** For persons or entities with the same or similar name as designated persons, who are inadvertently affected by a freezing mechanism, jurisdictions should develop and implement publicly known procedures to unfreeze the funds or other assets of such persons or entities in a timely manner upon verification that the person or entity involved is not a designated person.

f) **Providing access to frozen funds or other assets in certain circumstances.** Where jurisdictions have determined that funds or other assets, which are otherwise subject to freezing pursuant to the obligations under S/RES/1267(1999), are necessary for basic expenses; for the payment of certain types of fees, expenses and service charges, or for extraordinary expenses,[7] jurisdictions should authorise access to such funds or other assets in accordance with the procedures set out in S/RES/1452(2002) and subject to approval of the Al-Qaida and Taliban Sanctions Committee. On the same grounds, jurisdictions may authorise access to funds or other assets, if freezing measures are applied pursuant to S/RES/1373(2001).

g) **Remedies.** Jurisdictions should provide for a mechanism through which a person or an entity that is the target of a freezing mechanism in the context of terrorist financing can challenge that measure with a view to having it reviewed by a competent authority or a court.

h) **Sanctions.** Jurisdictions should adopt appropriate measures to monitor effectively the compliance with relevant legislation, rules or regulations governing freezing mechanisms by financial institutions and other persons or entities that may be holding funds or other assets as indicated in paragraph 8(c) above. Failure to comply with such legislation, rules or regulations should be subject to civil, administrative or criminal sanctions.

Seizure and Confiscation

9. Consistent with FATF Recommendation 3, jurisdictions should adopt measures similar to those set forth in Article V of the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances (1988), Articles 12 to 14 of the United Nations Convention on Transnational Organised Crime (2000), and Article 8 of the Terrorist Financing Convention (1999), including legislative measures, to enable their courts or competent authorities to seize and confiscate terrorist funds or other assets.

[7] See Article 1, S/RES/1452(2002) for the specific types of expenses that are covered.

Interpretative Note to

Special Recommendation VI: Alternative Remittance

General

1. Money or value transfer systems have shown themselves vulnerable to misuse for money laundering and terrorist financing purposes. The objective of Special Recommendation VI is to increase the transparency of payment flows by ensuring that jurisdictions impose consistent anti-money laundering and counter-terrorist financing measures on all forms of money/value transfer systems, particularly those traditionally operating outside the conventional financial sector and not currently subject to the FATF Recommendations. This Recommendation and Interpretative Note underscore the need to bring all money or value transfer services, whether formal or informal, within the ambit of certain minimum legal and regulatory requirements in accordance with the relevant FATF Recommendations.

2. Special Recommendation VI consists of three core elements:

a) Jurisdictions should require licensing or registration of persons (natural or legal) that provide money/value transfer services, including through informal systems;

b) Jurisdictions should ensure that money/value transmission services, including informal systems (as described in paragraph 5 below), are subject to applicable FATF Forty Recommendations (2003) (in particular, Recommendations 4-16 and 21-25)[1] and the Eight Special Recommendations (in particular SR VII); and

c) Jurisdictions should be able to impose sanctions on money/value transfer services, including informal systems, that operate without a license or registration and that fail to comply with relevant FATF Recommendations.

Scope and Application

3. For the purposes of this Recommendation, the following definitions are used.

4. *Money or value transfer service* refers to a financial service that accepts cash, cheques, other monetary instruments or other stores of value in one location and pays a corresponding sum in cash or other form to a beneficiary in another location by means of a communication, message, transfer or through a clearing network to which the money/value transfer service belongs. Transactions performed by such services can involve one or more intermediaries and a third party final payment.

5. A money or value transfer service may be provided by persons (natural or legal) formally through the regulated financial system or informally through non-bank financial institutions or other

[1] When this Interpretative Note was originally issued, these references were to the 1996 FATF Forty Recommendations. Subsequent to the publication of the revised FATF Forty Recommendations in June 2003, this text was updated accordingly. All references are now to the 2003 FATF Forty Recommendations.

business entities or any other mechanism either through the regulated financial system (for example, use of bank accounts) or through a network or mechanism that operates outside the regulated system. In some jurisdictions, informal systems are frequently referred to as *alternative remittance services* or underground (or parallel) banking systems. Often these systems have ties to particular geographic regions and are therefore described using a variety of specific terms. Some examples of these terms include *hawala, hundi, fei-chien,* and the *black market peso exchange*.[2]

6. Licensing means a requirement to obtain permission from a designated competent authority in order to operate a money/value transfer service legally.

7. Registration in this Recommendation means a requirement to register with or declare to a designated competent authority the existence of a money/value transfer service in order for the business to operate legally.

8. The obligation of licensing or registration applies to agents. At a minimum, the principal business must maintain a current list of agents which must be made available to the designated competent authority. An agent is any person who provides money or value transfer service under the direction of or by contract with a legally registered or licensed remitter (for example, licensees, franchisees, concessionaires).

Applicability of Special Recommendation VI

9. Special Recommendation VI should apply to all persons (natural or legal), which conduct for or on behalf of another person (natural or legal) the types of activity described in paragraphs 4 and 5 above as a primary or substantial part of their business or when such activity is undertaken on a regular or recurring basis, including as an ancillary part of a separate business enterprise.

10. Jurisdictions need not impose a separate licensing / registration system or designate another competent authority in respect to persons (natural or legal) already licensed or registered as financial institutions (as defined by the FATF Forty Recommendations (2003)) within a particular jurisdiction, which under such license or registration are permitted to perform activities indicated in paragraphs 4 and 5 above and which are already subject to the full range of applicable obligations under the FATF Forty Recommendations (2003) (in particular, Recommendations 4-16 and 21-25) and the Eight Special Recommendations (in particular SR VII).

Licensing or Registration and Compliance

11. Jurisdictions should designate an authority to grant licences and/or carry out registration and ensure that the requirement is observed. There should be an authority responsible for ensuring compliance by money/value transfer services with the FATF Recommendations (including the Eight Special Recommendations). There should also be effective systems in place for monitoring and ensuring such compliance. This interpretation of Special Recommendation VI (i.e., the need for designation of competent authorities) is consistent with FATF Recommendation 23.

[2] The inclusion of these examples does not suggest that such systems are legal in any particular jurisdiction.

Sanctions

12. Persons providing money/value transfer services without a license or registration should be subject to appropriate administrative, civil or criminal sanctions.[3] Licensed or registered money/value transfer services which fail to comply fully with the relevant measures called for in the FATF Forty Recommendations (2003) or the Eight Special Recommendations should also be subject to appropriate sanctions.

[3] Jurisdictions may authorise temporary or provisional operation of money / value transfer services that are already in existence at the time of implementing this Special Recommendation to permit such services to obtain a license or to register.

Revised[1] Interpretative Note to

Special Recommendation VII: Wire Transfers[2]

Objective

1. Special Recommendation VII (SR VII) was developed with the objective of preventing terrorists and other criminals from having unfettered access to wire transfers for moving their funds and for detecting such misuse when it occurs. Specifically, it aims to ensure that basic information on the originator of wire transfers is immediately available (1) to appropriate law enforcement and/or prosecutorial authorities to assist them in detecting, investigating, prosecuting terrorists or other criminals and tracing the assets of terrorists or other criminals, (2) to financial intelligence units for analysing suspicious or unusual activity and disseminating it as necessary, and (3) to beneficiary financial institutions to facilitate the identification and reporting of suspicious transactions. Due to the potential terrorist financing threat posed by small wire transfers, countries should aim for the ability to trace all wire transfers and should minimise thresholds taking into account the risk of driving transactions underground. It is not the intention of the FATF to impose rigid standards or to mandate a single operating process that would negatively affect the payment system. The FATF will continue to monitor the impact of Special Recommendation VII and conduct an assessment of its operation within three years of full implementation.

Definitions

2. For the purposes of this interpretative note, the following definitions apply.

a) The terms *wire transfer* and *funds transfer* refer to any transaction carried out on behalf of an originator person (both natural and legal) through a financial institution by electronic means with a view to making an amount of money available to a beneficiary person at another financial institution. The originator and the beneficiary may be the same person.

b) *Cross-border transfer* means any wire transfer where the originator and beneficiary institutions are located in different countries. This term also refers to any chain of wire transfers that has at least one cross-border element.

c) *Domestic transfer* means any wire transfer where the originator and beneficiary institutions are located in the same country. This term therefore refers to any chain of wire transfers that takes place entirely within the borders of a single country, even though the system used to

[1] This revision of the Interpretative Note to Special Recommendation VII was issued on 29 February 2008.

[2] It is recognised that countries will need time to make relevant legislative or regulatory changes and to allow financial institutions to make necessary adaptations to their systems and procedures. This period should not extend beyond December 2006.

effect the wire transfer may be located in another country. The term also refers to any chain of wire transfers that takes place entirely within the borders of the European Union[3].

d) The term *financial institution* is as defined by the FATF Forty Recommendations (2003).[4] The term does not apply to any persons or entities that provide financial institutions solely with message or other support systems for transmitting funds[5].

e) The *originator* is the account holder, or where there is no account, the person (natural or legal) that places the order with the financial institution to perform the wire transfer.

Scope

3. SR VII applies, under the conditions set out below, to cross-border and domestic transfers between financial institutions.

Cross-border wire transfers

4. Cross-border wire transfers should be accompanied by accurate and meaningful originator information. However, countries may adopt a *de minimus* threshold (no higher than USD or EUR 1 000). For cross-border transfers below this threshold:

a) Countries are not obligated to require ordering financial institutions to identify, verify record, or transmit originator information.

b) Countries may nevertheless require that incoming cross-border wire transfers contain full and accurate originator information.

5. Information accompanying qualifying cross-border wire transfers[6] must always contain the name of the originator and where an account exists, the number of that account. In the absence of an account, a unique reference number must be included.

---

[3] Having regard to the fact that:

The European Union constitutes an autonomous entity with its own sovereign rights and a legal order independent of the Member States, to which both the Member States themselves and their nationals are subject, within the European Union's areas of competence;

The European Union has enacted legislation binding upon its Member States, subject to control by a court of justice, which provides for the integration of payment services within an internal market in accordance with the principles of the free movement of capital and free provision of services; and

This legislation notably provides for the implementation of Special Recommendation VII as a single jurisdiction and requires that full information on the payer is made readily available, where appropriate upon request, to the beneficiary financial institution and relevant competent authorities. It is further noted that the European internal market and corresponding legal framework is extended to the members of the European Economic Area.

[4] When this Interpretative Note was originally issued, these references were to the 1996 FATF Forty Recommendations. Subsequent to the publication of the revised FATF Forty Recommendations in June 2003, this text was updated accordingly. All references are now to the 2003 FATF Forty Recommendations.

[5] However, these systems do have a role in providing the necessary means for the financial institutions to fulfil their obligations under SR VII and, in particular, in preserving the integrity of the information transmitted with a wire transfer.

6. Information accompanying qualifying wire transfers should also contain the address of the originator. However, countries may permit financial institutions to substitute the address with a national identity number, customer identification number, or date and place of birth.

7. Where several individual transfers from a single originator are bundled in a batch file for transmission to beneficiaries in another country, they shall be exempted from including full originator information, provided they include the originator's account number or unique reference number (as described in paragraph 8), and the batch file contains full originator information that is fully traceable within the recipient country.

Domestic wire transfers

8. Information accompanying domestic wire transfers must also include originator information as indicated for cross-border wire transfers, unless full originator information can be made available to the beneficiary financial institution and appropriate authorities by other means. In this latter case, financial institutions need only include the account number or a unique identifier provided that this number or identifier will permit the transaction to be traced back to the originator.

9. The information must be made available by the ordering financial institution within three business days of receiving the request either from the beneficiary financial institution or from appropriate authorities. Law enforcement authorities should be able to compel immediate production of such information.

Exemptions from SR VII

10. SR VII is not intended to cover the following types of payments:

a) Any transfer that flows from a transaction carried out using a credit or debit card so long as the credit or debit card number accompanies all transfers flowing from the transaction. However, when credit or debit cards are used as a payment system to effect a money transfer, they are covered by SR VII, and the necessary information should be included in the message.

b) Financial institution-to-financial institution transfers and settlements where both the originator person and the beneficiary person are financial institutions acting on their own behalf.

Role of ordering, intermediary and beneficiary financial institutions

Ordering financial institution

11. The ordering financial institution must ensure that qualifying wire transfers contain complete originator information. The ordering financial institution must also verify this information for accuracy and maintain this information in accordance with the standards set out in the FATF Forty Recommendations (2003)[7].

[6] Throughout this Interpretative Note, the phrase "qualifying cross-border wire transfers" means those cross-border wire transfers above any applicable threshold as described in paragraph 4.

[7] See note 4.

Intermediary financial institution

12. For both cross-border and domestic wire transfers, financial institutions processing an intermediary element of such chains of wire transfers must ensure that all originator information that accompanies a wire transfer is retained with the transfer.

13. Where technical limitations prevent the full originator information accompanying a cross-border wire transfer from remaining with a related domestic wire transfer (during the necessary time to adapt payment systems), a record must be kept for five years by the receiving intermediary financial institution of all the information received from the ordering financial institution.

Beneficiary financial institution

14. Beneficiary financial institutions should have effective risk-based procedures in place to identify wire transfers lacking complete originator information. The lack of complete originator information may be considered as a factor in assessing whether a wire transfer or related transactions are suspicious and, as appropriate, whether they are thus required to be reported to the financial intelligence unit or other competent authorities. In some cases, the beneficiary financial institution should consider restricting or even terminating its business relationship with financial institutions that fail to meet SRVII standards.

Enforcement mechanisms for financial institutions that do not comply with wire transfer rules and regulations

15. Countries should adopt appropriate measures to monitor effectively the compliance of financial institutions with rules and regulations governing wire transfers. Financial institutions that fail to comply with such rules and regulations should be subject to civil, administrative or criminal sanctions.

Interpretative Note to

Special Recommendation VIII: Non-Profit Organisations

Introduction

1. Non-profit organisations (NPOs) play a vital role in the world economy and in many national economies and social systems. Their efforts complement the activity of the governmental and business sectors in providing essential services, comfort and hope to those in need around the world. The ongoing international campaign against terrorist financing has unfortunately demonstrated however that terrorists and terrorist organisations exploit the NPO sector to raise and move funds, provide logistical support, encourage terrorist recruitment or otherwise support terrorist organisations and operations. This misuse not only facilitates terrorist activity but also undermines donor confidence and jeopardises the very integrity of NPOs. Therefore, protecting the NPO sector from terrorist abuse is both a critical component of the global fight against terrorism and a necessary step to preserve the integrity of NPOs.

2. NPOs may be vulnerable to abuse by terrorists for a variety of reasons. NPOs enjoy the public trust, have access to considerable sources of funds, and are often cash-intensive. Furthermore, some NPOs have a global presence that provides a framework for national and international operations and financial transactions, often within or near those areas that are most exposed to terrorist activity. Depending on the legal form of the NPO and the country, NPOs may often be subject to little or no governmental oversight (for example, registration, record keeping, reporting and monitoring), or few formalities may be required for their creation (for example, there may be no skills or starting capital required, no background checks necessary for employees). Terrorist organisations have taken advantage of these characteristics of NPOs to infiltrate the sector and misuse NPO funds and operations to cover for or support terrorist activity.

Objectives and General Principles

3. The objective of Special Recommendation VIII (SR VIII) is to ensure that NPOs are not misused by terrorist organisations: (i) to pose as legitimate entities; (ii) to exploit legitimate entities as conduits for terrorist financing, including for the purpose of escaping asset freezing measures; or (iii) to conceal or obscure the clandestine diversion of funds intended for legitimate purposes but diverted for terrorist purposes. In this Interpretative Note, the approach taken to achieve this objective is based on the following general principles:

a) Past and ongoing abuse of the NPO sector by terrorists and terrorist organisations requires countries to adopt measures both: (i) to protect the sector against such abuse, and (ii) to identify and take effective action against those NPOs that either are exploited by or actively support terrorists or terrorist organizations.

b) Measures adopted by countries to protect the NPO sector from terrorist abuse should not disrupt or discourage legitimate charitable activities. Rather, such measures should promote transparency and engender greater confidence in the sector, across the donor community and

with the general public that charitable funds and services reach intended legitimate beneficiaries. Systems that promote achieving a high degree of transparency, integrity and public confidence in the management and functioning of all NPOs are integral to ensuring the sector cannot be misused for terrorist financing.

c) Measures adopted by countries to identify and take effective action against NPOs that either are exploited by or actively support terrorists or terrorist organisations should aim to prevent and prosecute as appropriate terrorist financing and other forms of terrorist support. Where NPOs suspected of or implicated in terrorist financing or other forms of terrorist support are identified, the first priority of countries must be to investigate and halt such terrorist financing or support. Actions taken for this purpose should to the extent reasonably possible avoid any negative impact on innocent and legitimate beneficiaries of charitable activity. However, this interest cannot excuse the need to undertake immediate and effective actions to advance the immediate interest of halting terrorist financing or other forms of terrorist support provided by NPOs.

d) Developing co-operative relationships among the public, private and NPO sector is critical to raising awareness and fostering capabilities to combat terrorist abuse within the sector. Countries should encourage the development of academic research on and information sharing in the NPO sector to address terrorist financing related issues.

e) A targeted approach in dealing with the terrorist threat to the NPO sector is essential given the diversity within individual national sectors, the differing degrees to which parts of each sector may be vulnerable to misuse by terrorists, the need to ensure that legitimate charitable activity continues to flourish and the limited resources and authorities available to combat terrorist financing in each jurisdiction.

f) Flexibility in developing a national response to terrorist financing in the NPO sector is also essential in order to allow it to evolve over time as it faces the changing nature of the terrorist financing threat.

Definitions

4. For the purposes of SR VIII and this interpretative note, the following definitions apply:

a) The term *non-profit organisation* or *NPO* refers to a legal entity or organisation that primarily engages in raising or disbursing funds for purposes such as charitable, religious, cultural, educational, social or fraternal purposes, or for the carrying out of other types of "good works".

b) The terms *FIU*, *legal arrangement and legal person* are as defined by the FATF Forty Recommendations (2003) (*the FATF Recommendations*).

c) The term *funds* is as defined by the Interpretative Note to FATF Special Recommendation II.

d) The terms *freezing*, *terrorist* and *terrorist organisation* are as defined by the Interpretative Note to FATF Special Recommendation III.

e) The term *appropriate authorities* refers to competent authorities, self-regulatory bodies, accrediting institutions and other administrative authorities.

f) The term *beneficiaries* refers to those natural persons, or groups of natural persons who receive charitable, humanitarian or other types of assistance through the services of the NPO.

Measures

5. Countries should undertake domestic reviews of their NPO sector or have the capacity to obtain timely information on its activities, size and other relevant features. In undertaking these assessments, countries should use all available sources of information in order to identify features and types of NPOs, which by virtue of their activities or characteristics, are at risk of being misused for terrorist financing.[1] Countries should also periodically reassess the sector by reviewing new information on the sector's potential vulnerabilities to terrorist activities.

6. There is a diverse range of approaches in identifying, preventing and combating terrorist misuse of NPOs. An effective approach, however, is one that involves all four of the following elements: (a) Outreach to the sector, (b) Supervision or monitoring, (c) Effective investigation and information gathering and (d) Effective mechanisms for international co-operation. The following measures represent specific actions that countries should take with respect to each of these elements in order to protect their NPO sector from terrorist financing abuse.

a. Outreach to the NPO sector concerning terrorist financing issues

(i) Countries should have clear policies to promote transparency, integrity and public confidence in the administration and management of all NPOs.

(ii) Countries should encourage or undertake outreach programmes to raise awareness in the NPO sector about the vulnerabilities of NPOs to terrorist abuse and terrorist financing risks, and the measures that NPOs can take to protect themselves against such abuse.

(iii) Countries should work with the NPO sector to develop and refine best practices to address terrorist financing risks and vulnerabilities and thus protect the sector from terrorist abuse.[2]

(iv) Countries should encourage NPOs to conduct transactions via regulated financial channels, wherever feasible, keeping in mind the varying capacities of financial sectors in different countries and in different areas of urgent charitable and humanitarian concerns.

b. Supervision or monitoring of the NPO sector

Countries should take steps to promote effective supervision or monitoring of their NPO sector. In practice, countries should be able to demonstrate that the following standards apply to NPOs which account for (1) a significant portion of the financial resources under control of the sector; and (2) a substantial share of the sector's international activities.

(i) NPOs should maintain information on: (1) the purpose and objectives of their stated activities; and (2) the identity of the person(s) who own, control or direct their activities, including senior officers, board members and trustees. This information should be publicly available either directly from the NPO or through appropriate authorities.

[1] For example, such information could be provided by regulators, tax authorities, FIUs, donor organisations or law enforcement and intelligence authorities.

[2] The FATF's *Combating the Abuse of Non-Profit Organisations: International Best Practices* provides a useful reference document for such exercises.

(ii) NPOs should issue annual financial statements that provide detailed breakdowns of incomes and expenditures.

(iii) NPOs should be licensed or registered. This information should be available to competent authorities.[3]

(iv) NPOs should have appropriate controls in place to ensure that all funds are fully accounted for and are spent in a manner that is consistent with the purpose and objectives of the NPO's stated activities.

(v) NPOs should follow a "know your beneficiaries and associate NPOs[4]" rule, which means that the NPO should make best efforts to confirm the identity, credentials and good standing of their beneficiaries and associate NPOs. NPOs should also undertake best efforts to document the identity of their significant donors and to respect donor confidentiality.

(vi) NPOs should maintain, for a period of at least five years, and make available to appropriate authorities, records of domestic and international transactions that are sufficiently detailed to verify that funds have been spent in a manner consistent with the purpose and objectives of the organisation. This also applies to information mentioned in paragraphs (i) and (ii) above.

(vii) Appropriate authorities should monitor the compliance of NPOs with applicable rules and regulations.[5] Appropriate authorities should be able to properly sanction relevant violations by NPOs or persons acting on behalf of these NPOs.[6]

c. Effective information gathering and investigation

(i) Countries should ensure effective co-operation, co-ordination and information sharing to the extent possible among all levels of appropriate authorities or organisations that hold relevant information on NPOs.

(ii) Countries should have investigative expertise and capability to examine those NPOs suspected of either being exploited by or actively supporting terrorist activity or terrorist organisations.

(iii) Countries should ensure that full access to information on the administration and management of a particular NPO (including financial and programmatic information) may be obtained during the course of an investigation.

[3] Specific licensing or registration requirements for counter terrorist financing purposes are not necessary. For example, in some countries, NPOs are already registered with tax authorities and monitored in the context of qualifying for favourable tax treatment (such as tax credits or tax exemptions).

[4] The term *associate NPOs* includes foreign branches of international NPOs.

[5] In this context, rules and regulations may include rules and standards applied by self regulatory bodies and accrediting institutions.

[6] The range of such sanctions might include freezing of accounts, removal of trustees, fines, de-certification, de-licensing and de-registration. This should not preclude parallel civil, administrative or criminal proceedings with respect to NPOs or persons acting on their behalf where appropriate.

(iv) Countries should establish appropriate mechanisms to ensure that when there is suspicion or reasonable grounds to suspect that a particular NPO: (1) is a front for fundraising by a terrorist organisation; (2) is being exploited as a conduit for terrorist financing, including for the purpose of escaping asset freezing measures; or (3) is concealing or obscuring the clandestine diversion of funds intended for legitimate purposes, but redirected for the benefit of terrorists or terrorist organisations, this information is promptly shared with all relevant competent authorities in order to take preventative or investigative action.

d. Effective capacity to respond to international requests for information about an NPO of concern

Consistent with Special Recommendation V, countries should identify appropriate points of contact and procedures to respond to international requests for information regarding particular NPOs suspected of terrorist financing or other forms of terrorist support.

Interpretative Note to

Special Recommendation IX: Cash Couriers

Objectives

1. FATF Special Recommendation IX was developed with the objective of ensuring that terrorists and other criminals cannot finance their activities or launder the proceeds of their crimes through the physical cross-border transportation of currency and bearer negotiable instruments. Specifically, it aims to ensure that countries have measures 1) to detect the physical cross-border transportation of currency and bearer negotiable instruments, 2) to stop or restrain currency and bearer negotiable instruments that are suspected to be related to terrorist financing or money laundering, 3) to stop or restrain currency or bearer negotiable instruments that are falsely declared or disclosed, 4) to apply appropriate sanctions for making a false declaration or disclosure, and 5) to enable confiscation of currency or bearer negotiable instruments that are related to terrorist financing or money laundering. Countries should implement Special Recommendation IX subject to strict safeguards to ensure proper use of information and without restricting either: (i) trade payments between countries for goods and services; or (ii) the freedom of capital movements in any way.

Definitions

2. For the purposes of Special Recommendation IX and this Interpretative Note, the following definitions apply.

3. The term *bearer negotiable instruments* includes monetary instruments in bearer form such as: travellers cheques; negotiable instruments (including cheques, promissory notes and money orders) that are either in bearer form, endorsed without restriction, made out to a fictitious payee, or otherwise in such form that title thereto passes upon delivery; incomplete instruments (including cheques, promissory notes and money orders) signed, but with the payee's name omitted.[1]

4. The term *currency* refers to banknotes and coins that are in circulation as a medium of exchange.

5. The term *physical cross-border transportation* refers to any in-bound or out-bound physical transportation of currency or bearer negotiable instruments from one country to another country. The term includes the following modes of transportation: (1) physical transportation by a natural person,

[1] For the purposes of this Interpretative Note, gold, precious metals and precious stones are not included despite their high liquidity and use in certain situations as a means of exchange or transmitting value. These items may be otherwise covered under customs laws and regulations. If a country discovers an unusual cross-border movement of gold, precious metals or precious stones, it should consider notifying, as appropriate, the Customs Service or other competent authorities of the countries from which these items originated and/or to which they are destined, and should co-operate with a view toward establishing the source, destination, and purpose of the movement of such items and toward the taking of appropriate action.

or in that person's accompanying luggage or vehicle; (2) shipment of currency through containerised cargo or (3) the mailing of currency or bearer negotiable instruments by a natural or legal person.

6. The term *false declaration* refers to a misrepresentation of the value of currency or bearer negotiable instruments being transported, or a misrepresentation of other relevant data which is asked for in the declaration or otherwise requested by the authorities. This includes failing to make a declaration as required.

7. The term *false disclosure* refers to a misrepresentation of the value of currency or bearer negotiable instruments being transported, or a misrepresentation of other relevant data which is asked for in the disclosure or otherwise requested by the authorities. This includes failing to make a disclosure as required.

8. When the term *related to terrorist financing or money laundering* is used to describe currency or bearer negotiable instruments, it refers to currency or bearer negotiable instruments that are: (i) the proceeds of, or used in, or intended or allocated for use in, the financing of terrorism, terrorist acts or terrorist organisations; or (ii) laundered, proceeds from money laundering or predicate offences, or instrumentalities used in or intended for use in the commission of these offences.

The types of systems that may be implemented to address the issue of cash couriers

9. Countries may meet their obligations under Special Recommendation IX and this Interpretative Note by implementing one of the following types of systems; however, countries do not have to use the same type of system for incoming and outgoing cross-border transportation of currency or bearer negotiable instruments:

a) Declaration system: The key characteristics of a declaration system are as follows. All persons making a physical cross-border transportation of currency or bearer negotiable instruments, which are of a value exceeding a pre-set, maximum threshold of EUR/USD 15,000, are required to submit a truthful declaration to the designated competent authorities. Countries that implement a declaration system should ensure that the pre-set threshold is sufficiently low to meet the objectives of Special Recommendation IX.

b) Disclosure system: The key characteristics of a disclosure system are as follows. All persons making a physical cross-border transportation of currency or bearer negotiable instruments are required to make a truthful disclosure to the designated competent authorities upon request. Countries that implement a disclosure system should ensure that the designated competent authorities can make their inquiries on a targeted basis, based on intelligence or suspicion, or on a random basis.

Additional elements applicable to both systems

10. Whichever system is implemented, countries should ensure that their system incorporates the following elements:

a) The declaration/disclosure system should apply to both incoming and outgoing transportation of currency and bearer negotiable instruments.

b) Upon discovery of a false declaration/disclosure of currency or bearer negotiable instruments or a failure to declare/disclose them, designated competent authorities should have the authority to request and obtain further information from the carrier with regard to the origin of the currency or bearer negotiable instruments and their intended use.

c) Information obtained through the declaration/disclosure process should be available to the financial intelligence unit (FIU) either through a system whereby the FIU is notified about suspicious cross-border transportation incidents or by making the declaration/disclosure information directly available to the FIU in some other way.

d) At the domestic level, countries should ensure that there is adequate co-ordination among customs, immigration and other related authorities on issues related to the implementation of Special Recommendation IX.

e) In the following two cases, competent authorities should be able to stop or restrain cash or bearer negotiable instruments for a reasonable time in order to ascertain whether evidence of money laundering or terrorist financing may be found: (i) where there is a suspicion of money laundering or terrorist financing; or (ii) where there is a false declaration or false disclosure.

f) The declaration/disclosure system should allow for the greatest possible measure of international co-operation and assistance in accordance with Special Recommendation V and Recommendations 35 to 40. To facilitate such co-operation, in instances when: (i) a declaration or disclosure which exceeds the maximum threshold of EUR/USD 15,000 is made, or (ii) where there is a false declaration or false disclosure, or (iii) where there is a suspicion of money laundering or terrorist financing, this information shall be retained for use by the appropriate authorities. At a minimum, this information will cover: (i) the amount of currency or bearer negotiable instruments declared / disclosed or otherwise detected; and (ii) the identification data of the bearer(s).

Sanctions

11. Persons who make a false declaration or disclosure should be subject to effective, proportionate and dissuasive sanctions, whether criminal civil or administrative. Persons who are carrying out a physical cross-border transportation of currency or bearer negotiable instruments that are related to terrorist financing or money laundering should also be subject to effective, proportionate and dissuasive sanctions, whether criminal, civil or administrative, and should be subject to measures, including legislative ones consistent with Recommendation 3 and Special Recommendation III, which would enable the confiscation of such currency or bearer negotiable instruments.

Financial Action Task Force Groupe d'action financière

FATF Standards

FATF 40 Recommendations

October 2003
(incorporating all subsequent amendments until October 2004)

The FATF revised the 40 and the IX Recommendations. The revision of the FATF Recommendation was adopted and published in February 2012. See www.fatf-gafi.org/recommendations for the 2012 FATF Recommendations.

INTRODUCTION

Money laundering methods and techniques change in response to developing counter-measures. In recent years, the Financial Action Task Force (FATF) [1] has noted increasingly sophisticated combinations of techniques, such as the increased use of legal persons to disguise the true ownership and control of illegal proceeds, and an increased use of professionals to provide advice and assistance in laundering criminal funds. These factors, combined with the experience gained through the FATF's Non-Cooperative Countries and Territories process, and a number of national and international initiatives, led the FATF to review and revise the Forty Recommendations into a new comprehensive framework for combating money laundering and terrorist financing. The FATF now calls upon all countries to take the necessary steps to bring their national systems for combating money laundering and terrorist financing into compliance with the new FATF Recommendations, and to effectively implement these measures.

The review process for revising the Forty Recommendations was an extensive one, open to FATF members, non-members, observers, financial and other affected sectors and interested parties. This consultation process provided a wide range of input, all of which was considered in the review process.

The revised Forty Recommendations now apply not only to money laundering but also to terrorist financing, and when combined with the Eight Special Recommendations on Terrorist Financing provide an enhanced, comprehensive and consistent framework of measures for combating money laundering and terrorist financing. The FATF recognises that countries have diverse legal and financial systems and so all cannot take identical measures to achieve the common objective, especially over matters of detail. The Recommendations therefore set minimum standards for action for countries to implement the detail according to their particular circumstances and constitutional frameworks. The Recommendations cover all the measures that national systems should have in place within their criminal justice and regulatory systems; the preventive measures to be taken by financial institutions and certain other businesses and professions; and international co-operation.

The original FATF Forty Recommendations were drawn up in 1990 as an initiative to combat the misuse of financial systems by persons laundering drug money. In 1996 the Recommendations were revised for the first time to reflect evolving money laundering typologies. The 1996 Forty Recommendations have been endorsed by more than 130 countries and are the international anti-money laundering standard.

In October 2001 the FATF expanded its mandate to deal with the issue of the financing of terrorism, and took the important step of creating the Eight Special Recommendations on Terrorist Financing. These Recommendations contain a set of measures aimed at combating the funding of terrorist acts and terrorist organisations, and are complementary to the Forty Recommendations[2].

A key element in the fight against money laundering and the financing of terrorism is the need for countries systems to be monitored and evaluated, with respect to these international standards. The mutual evaluations conducted by the FATF and FATF-style regional bodies, as well as the assessments conducted by the IMF and World Bank, are a vital mechanism for ensuring that the FATF Recommendations are effectively implemented by all countries.

[1] The FATF is an inter-governmental body which sets standards, and develops and promotes policies to combat money laundering and terrorist financing. It currently has 36 members: 34 countries and governments and two international organisations; and more than 20 observers: five FATF-style regional bodies and more than 15 other international organisations or bodies. A list of all members and observers can be found on the FATF website at www.fatf-gafi.org.

[2] The FATF Forty and Eight Special Recommendations have been recognised by the International Monetary Fund and the World Bank as the international standards for combating money laundering and the financing of terrorism.

THE FORTY RECOMMENDATIONS

A. LEGAL SYSTEMS

Scope of the criminal offence of money laundering

1. Countries should criminalise money laundering on the basis of the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances, 1988 (the Vienna Convention) and the United Nations Convention against Transnational Organized Crime, 2000 (the Palermo Convention).

Countries should apply the crime of money laundering to all serious offences, with a view to including the widest range of predicate offences. Predicate offences may be described by reference to all offences, or to a threshold linked either to a category of serious offences or to the penalty of imprisonment applicable to the predicate offence (threshold approach), or to a list of predicate offences, or a combination of these approaches.

Where countries apply a threshold approach, predicate offences should at a minimum comprise all offences that fall within the category of serious offences under their national law or should include offences which are punishable by a maximum penalty of more than one year's imprisonment or for those countries that have a minimum threshold for offences in their legal system, predicate offences should comprise all offences, which are punished by a minimum penalty of more than six months imprisonment.

Whichever approach is adopted, each country should at a minimum include a range of offences within each of the designated categories of offences[3].

Predicate offences for money laundering should extend to conduct that occurred in another country, which constitutes an offence in that country, and which would have constituted a predicate offence had it occurred domestically. Countries may provide that the only prerequisite is that the conduct would have constituted a predicate offence had it occurred domestically.

Countries may provide that the offence of money laundering does not apply to persons who committed the predicate offence, where this is required by fundamental principles of their domestic law.

2. Countries should ensure that:

a) The intent and knowledge required to prove the offence of money laundering is consistent with the standards set forth in the Vienna and Palermo Conventions, including the concept that such mental state may be inferred from objective factual circumstances.

[3] See the definition of "designated categories of offences" in the Glossary.

b) Criminal liability, and, where that is not possible, civil or administrative liability, should apply to legal persons. This should not preclude parallel criminal, civil or administrative proceedings with respect to legal persons in countries in which such forms of liability are available. Legal persons should be subject to effective, proportionate and dissuasive sanctions. Such measures should be without prejudice to the criminal liability of individuals.

Provisonal measures and confiscation

3. Countries should adopt measures similar to those set forth in the Vienna and Palermo Conventions, including legislative measures, to enable their competent authorities to confiscate property laundered, proceeds from money laundering or predicate offences, instrumentalities used in or intended for use in the commission of these offences, or property of corresponding value, without prejudicing the rights of bona fide third parties.

Such measures should include the authority to: (a) identify, trace and evaluate property which is subject to confiscation; (b) carry out provisional measures, such as freezing and seizing, to prevent any dealing, transfer or disposal of such property; (c) take steps that will prevent or void actions that prejudice the State's ability to recover property that is subject to confiscation; and (d) take any appropriate investigative measures.

Countries may consider adopting measures that allow such proceeds or instrumentalities to be confiscated without requiring a criminal conviction, or which require an offender to demonstrate the lawful origin of the property alleged to be liable to confiscation, to the extent that such a requirement is consistent with the principles of their domestic law.

B. MEASURES TO BE TAKEN BY FINANCIAL INSTITUTIONS AND NON-FINANCIAL BUSINESSES AND PROFESSIONS TO PREVENT MONEY LAUNDERING AND TERRORIST FINANCING

4. Countries should ensure that financial institution secrecy laws do not inhibit implementation of the FATF Recommendations.

Customer due diligence and record-keeping

5.* Financial institutions should not keep anonymous accounts or accounts in obviously fictitious names.

Financial institutions should undertake customer due diligence measures, including identifying and verifying the identity of their customers, when:

- establishing business relations;
- carrying out occasional transactions: (i) above the applicable designated threshold; or (ii) that are wire transfers in the circumstances covered by the Interpretative Note to Special Recommendation VII;
- there is a suspicion of money laundering or terrorist financing; or
- the financial institution has doubts about the veracity or adequacy of previously obtained customer identification data.

The customer due diligence (CDD) measures to be taken are as follows:

a) Identifying the customer and verifying that customer's identity using reliable, independent source documents, data or information[4].

b) Identifying the beneficial owner, and taking reasonable measures to verify the identity of the beneficial owner such that the financial institution is satisfied that it knows who the beneficial owner is. For legal persons and arrangements this should include financial institutions taking reasonable measures to understand the ownership and control structure of the customer.

c) Obtaining information on the purpose and intended nature of the business relationship.

d) Conducting ongoing due diligence on the business relationship and scrutiny of transactions undertaken throughout the course of that relationship to ensure that the transactions being conducted are consistent with the institution's knowledge of the customer, their business and risk profile, including, where necessary, the source of funds.

Financial institutions should apply each of the CDD measures under (a) to (d) above, but may determine the extent of such measures on a risk sensitive basis depending on the type of customer, business relationship or transaction. The measures that are taken should be consistent with any guidelines issued by competent authorities. For higher risk categories, financial institutions should perform enhanced due diligence. In certain circumstances, where there are low risks, countries may decide that financial institutions can apply reduced or simplified measures.

Financial institutions should verify the identity of the customer and beneficial owner before or during the course of establishing a business relationship or conducting transactions for occasional customers. Countries may permit financial institutions to complete the verification as soon as reasonably practicable following the establishment of the relationship, where the money laundering risks are effectively managed and where this is essential not to interrupt the normal conduct of business.

Where the financial institution is unable to comply with paragraphs (a) to (c) above, it should not open the account, commence business relations or perform the transaction; or should terminate the business relationship; and should consider making a suspicious transactions report in relation to the customer.

These requirements should apply to all new customers, though financial institutions should also apply this Recommendation to existing customers on the basis of materiality and risk, and should conduct due diligence on such existing relationships at appropriate times.

6.* Financial institutions should, in relation to politically exposed persons, in addition to performing normal due diligence measures:

a) Have appropriate risk management systems to determine whether the customer is a politically exposed person.

[4] Reliable, independent source documents, data or information will hereafter be referred to as "identification data".

* Recommendations marked with an asterisk should be read in conjunction with their Interpretative Note.

b) Obtain senior management approval for establishing business relationships with such customers.

c) Take reasonable measures to establish the source of wealth and source of funds.

d) Conduct enhanced ongoing monitoring of the business relationship.

7. Financial institutions should, in relation to cross-border correspondent banking and other similar relationships, in addition to performing normal due diligence measures:

a) Gather sufficient information about a respondent institution to understand fully the nature of the respondent's business and to determine from publicly available information the reputation of the institution and the quality of supervision, including whether it has been subject to a money laundering or terrorist financing investigation or regulatory action.

b) Assess the respondent institution's anti-money laundering and terrorist financing controls.

c) Obtain approval from senior management before establishing new correspondent relationships.

d) Document the respective responsibilities of each institution.

e) With respect to "payable-through accounts", be satisfied that the respondent bank has verified the identity of and performed on-going due diligence on the customers having direct access to accounts of the correspondent and that it is able to provide relevant customer identification data upon request to the correspondent bank.

8. Financial institutions should pay special attention to any money laundering threats that may arise from new or developing technologies that might favour anonymity, and take measures, if needed, to prevent their use in money laundering schemes. In particular, financial institutions should have policies and procedures in place to address any specific risks associated with non-face to face business relationships or transactions.

9.* Countries may permit financial institutions to rely on intermediaries or other third parties to perform elements (a) – (c) of the CDD process or to introduce business, provided that the criteria set out below are met. Where such reliance is permitted, the ultimate responsibility for customer identification and verification remains with the financial institution relying on the third party.

The criteria that should be met are as follows:

a) A financial institution relying upon a third party should immediately obtain the necessary information concerning elements (a) – (c) of the CDD process. Financial institutions should take adequate steps to satisfy themselves that copies of identification data and other relevant documentation relating to the CDD requirements will be made available from the third party upon request without delay.

b) The financial institution should satisfy itself that the third party is regulated and supervised for, and has measures in place to comply with CDD requirements in line with Recommendations 5 and 10.

It is left to each country to determine in which countries the third party that meets the conditions can be based, having regard to information available on countries that do not or do not adequately apply the FATF Recommendations.

10.* Financial institutions should maintain, for at least five years, all necessary records on transactions, both domestic or international, to enable them to comply swiftly with information requests from the competent authorities. Such records must be sufficient to permit reconstruction of individual transactions (including the amounts and types of currency involved if any) so as to provide, if necessary, evidence for prosecution of criminal activity.

Financial institutions should keep records on the identification data obtained through the customer due diligence process (e.g. copies or records of official identification documents like passports, identity cards, driving licenses or similar documents), account files and business correspondence for at least five years after the business relationship is ended.

The identification data and transaction records should be available to domestic competent authorities upon appropriate authority.

11.* Financial institutions should pay special attention to all complex, unusual large transactions, and all unusual patterns of transactions, which have no apparent economic or visible lawful purpose. The background and purpose of such transactions should, as far as possible, be examined, the findings established in writing, and be available to help competent authorities and auditors.

12.* The customer due diligence and record-keeping requirements set out in Recommendations 5, 6, and 8 to 11 apply to designated non-financial businesses and professions in the following situations:

a) Casinos – when customers engage in financial transactions equal to or above the applicable designated threshold.

b) Real estate agents - when they are involved in transactions for their client concerning the buying and selling of real estate.

c) Dealers in precious metals and dealers in precious stones - when they engage in any cash transaction with a customer equal to or above the applicable designated threshold.

d) Lawyers, notaries, other independent legal professionals and accountants when they prepare for or carry out transactions for their client concerning the following activities:

- buying and selling of real estate;
- managing of client money, securities or other assets;
- management of bank, savings or securities accounts;
- organisation of contributions for the creation, operation or management of companies;
- creation, operation or management of legal persons or arrangements, and buying and selling of business entities.

e) Trust and company service providers when they prepare for or carry out transactions for a client concerning the activities listed in the definition in the Glossary.

Reporting of suspicious transactions and compliance

13.* If a financial institution suspects or has reasonable grounds to suspect that funds are the proceeds of a criminal activity, or are related to terrorist financing, it should be required, directly by law or regulation, to report promptly its suspicions to the financial intelligence unit (FIU).

14.* Financial institutions, their directors, officers and employees should be:

a) Protected by legal provisions from criminal and civil liability for breach of any restriction on disclosure of information imposed by contract or by any legislative, regulatory or administrative provision, if they report their suspicions in good faith to the FIU, even if they did not know precisely what the underlying criminal activity was, and regardless of whether illegal activity actually occurred.

b) Prohibited by law from disclosing the fact that a suspicious transaction report (STR) or related information is being reported to the FIU.

15.* Financial institutions should develop programmes against money laundering and terrorist financing. These programmes should include:

a) The development of internal policies, procedures and controls, including appropriate compliance management arrangements, and adequate screening procedures to ensure high standards when hiring employees.

b) An ongoing employee training programme.

c) An audit function to test the system.

16.* The requirements set out in Recommendations 13 to 15, and 21 apply to all designated non-financial businesses and professions, subject to the following qualifications:

a) Lawyers, notaries, other independent legal professionals and accountants should be required to report suspicious transactions when, on behalf of or for a client, they engage in a financial transaction in relation to the activities described in Recommendation 12(d). Countries are strongly encouraged to extend the reporting requirement to the rest of the professional activities of accountants, including auditing.

b) Dealers in precious metals and dealers in precious stones should be required to report suspicious transactions when they engage in any cash transaction with a customer equal to or above the applicable designated threshold.

c) Trust and company service providers should be required to report suspicious transactions for a client when, on behalf of or for a client, they engage in a transaction in relation to the activities referred to Recommendation 12(e).

Lawyers, notaries, other independent legal professionals, and accountants acting as independent legal professionals, are not required to report their suspicions if the relevant information was obtained in circumstances where they are subject to professional secrecy or legal professional privilege.

Other measures to deter money laundering and terrorist financing

17. Countries should ensure that effective, proportionate and dissuasive sanctions, whether criminal, civil or administrative, are available to deal with natural or legal persons covered by these Recommendations that fail to comply with anti-money laundering or terrorist financing requirements.

18. Countries should not approve the establishment or accept the continued operation of shell banks. Financial institutions should refuse to enter into, or continue, a correspondent banking relationship with shell banks. Financial institutions should also guard against establishing relations with respondent foreign financial institutions that permit their accounts to be used by shell banks.

19. Countries should consider the feasibility and utility of a system where banks and other financial institutions and intermediaries would report all domestic and international currency transactions above a fixed amount, to a national central agency with a computerised data base, available to competent authorities for use in money laundering or terrorist financing cases, subject to strict safeguards to ensure proper use of the information.

20. Countries should consider applying the FATF Recommendations to businesses and professions, other than designated non-financial businesses and professions, that pose a money laundering or terrorist financing risk.

Countries should further encourage the development of modern and secure techniques of money management that are less vulnerable to money laundering.

Measures to be taken with respect to countries that do not or insufficiently comply with the FATF Recommendations

21. Financial institutions should give special attention to business relationships and transactions with persons, including companies and financial institutions, from countries which do not or insufficiently apply the FATF Recommendations. Whenever these transactions have no apparent economic or visible lawful purpose, their background and purpose should, as far as possible, be examined, the findings established in writing, and be available to help competent authorities. Where such a country continues not to apply or insufficiently applies the FATF Recommendations, countries should be able to apply appropriate countermeasures.

22. Financial institutions should ensure that the principles applicable to financial institutions, which are mentioned above are also applied to branches and majority owned subsidiaries located abroad, especially in countries which do not or insufficiently apply the FATF Recommendations, to the extent that local applicable laws and regulations permit. When local applicable laws and regulations prohibit this implementation, competent authorities in the country of the parent institution should be informed by the financial institutions that they cannot apply the FATF Recommendations.

Regulation and supervision

23.* Countries should ensure that financial institutions are subject to adequate regulation and supervision and are effectively implementing the FATF Recommendations. Competent

authorities should take the necessary legal or regulatory measures to prevent criminals or their associates from holding or being the beneficial owner of a significant or controlling interest or holding a management function in a financial institution.

For financial institutions subject to the Core Principles, the regulatory and supervisory measures that apply for prudential purposes and which are also relevant to money laundering, should apply in a similar manner for anti-money laundering and terrorist financing purposes.

Other financial institutions should be licensed or registered and appropriately regulated, and subject to supervision or oversight for anti-money laundering purposes, having regard to the risk of money laundering or terrorist financing in that sector. At a minimum, businesses providing a service of money or value transfer, or of money or currency changing should be licensed or registered, and subject to effective systems for monitoring and ensuring compliance with national requirements to combat money laundering and terrorist financing.

24. Designated non-financial businesses and professions should be subject to regulatory and supervisory measures as set out below.

a) Casinos should be subject to a comprehensive regulatory and supervisory regime that ensures that they have effectively implemented the necessary anti-money laundering and terrorist-financing measures. At a minimum:

- casinos should be licensed;
- competent authorities should take the necessary legal or regulatory measures to prevent criminals or their associates from holding or being the beneficial owner of a significant or controlling interest, holding a management function in, or being an operator of a casino
- competent authorities should ensure that casinos are effectively supervised for compliance with requirements to combat money laundering and terrorist financing.

b) Countries should ensure that the other categories of designated non-financial businesses and professions are subject to effective systems for monitoring and ensuring their compliance with requirements to combat money laundering and terrorist financing. This should be performed on a risk-sensitive basis. This may be performed by a government authority or by an appropriate self-regulatory organisation, provided that such an organisation can ensure that its members comply with their obligations to combat money laundering and terrorist financing.

25.* The competent authorities should establish guidelines, and provide feedback which will assist financial institutions and designated non-financial businesses and professions in applying national measures to combat money laundering and terrorist financing, and in particular, in detecting and reporting suspicious transactions.

C. INSTITUTIONAL AND OTHER MEASURES NECESSARY IN SYSTEMS FOR COMBATING MONEY LAUNDERING AND TERRORIST FINANCING

Competent authorities, their powers and resources

26.* Countries should establish a FIU that serves as a national centre for the receiving (and, as permitted, requesting), analysis and dissemination of STR and other information regarding

potential money laundering or terrorist financing. The FIU should have access, directly or indirectly, on a timely basis to the financial, administrative and law enforcement information that it requires to properly undertake its functions, including the analysis of STR.

27.* Countries should ensure that designated law enforcement authorities have responsibility for money laundering and terrorist financing investigations. Countries are encouraged to support and develop, as far as possible, special investigative techniques suitable for the investigation of money laundering, such as controlled delivery, undercover operations and other relevant techniques. Countries are also encouraged to use other effective mechanisms such as the use of permanent or temporary groups specialised in asset investigation, and co-operative investigations with appropriate competent authorities in other countries.

28. When conducting investigations of money laundering and underlying predicate offences, competent authorities should be able to obtain documents and information for use in those investigations, and in prosecutions and related actions. This should include powers to use compulsory measures for the production of records held by financial institutions and other persons, for the search of persons and premises, and for the seizure and obtaining of evidence.

29. Supervisors should have adequate powers to monitor and ensure compliance by financial institutions with requirements to combat money laundering and terrorist financing, including the authority to conduct inspections. They should be authorised to compel production of any information from financial institutions that is relevant to monitoring such compliance, and to impose adequate administrative sanctions for failure to comply with such requirements.

30. Countries should provide their competent authorities involved in combating money laundering and terrorist financing with adequate financial, human and technical resources. Countries should have in place processes to ensure that the staff of those authorities are of high integrity.

31. Countries should ensure that policy makers, the FIU, law enforcement and supervisors have effective mechanisms in place which enable them to co-operate, and where appropriate co-ordinate domestically with each other concerning the development and implementation of policies and activities to combat money laundering and terrorist financing.

32. Countries should ensure that their competent authorities can review the effectiveness of their systems to combat money laundering and terrorist financing systems by maintaining comprehensive statistics on matters relevant to the effectiveness and efficiency of such systems. This should include statistics on the STR received and disseminated; on money laundering and terrorist financing investigations, prosecutions and convictions; on property frozen, seized and confiscated; and on mutual legal assistance or other international requests for co-operation.

Transparency of legal persons and arrangements

33. Countries should take measures to prevent the unlawful use of legal persons by money launderers. Countries should ensure that there is adequate, accurate and timely information on the beneficial ownership and control of legal persons that can be obtained or accessed in a timely fashion by competent authorities. In particular, countries that have legal persons that are able to issue bearer shares should take appropriate measures to ensure that they are not misused for money laundering and be able to demonstrate the adequacy of those measures.

Countries could consider measures to facilitate access to beneficial ownership and control information to financial institutions undertaking the requirements set out in Recommendation 5.

34. Countries should take measures to prevent the unlawful use of legal arrangements by money launderers. In particular, countries should ensure that there is adequate, accurate and timely information on express trusts, including information on the settlor, trustee and beneficiaries, that can be obtained or accessed in a timely fashion by competent authorities. Countries could consider measures to facilitate access to beneficial ownership and control information to financial institutions undertaking the requirements set out in Recommendation 5.

D. INTERNATIONAL CO-OPERATION

35. Countries should take immediate steps to become party to and implement fully the Vienna Convention, the Palermo Convention, and the 1999 United Nations International Convention for the Suppression of the Financing of Terrorism. Countries are also encouraged to ratify and implement other relevant international conventions, such as the 1990 Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime and the 2002 Inter-American Convention against Terrorism.

Mutual legal assistance and extradition

36. Countries should rapidly, constructively and effectively provide the widest possible range of mutual legal assistance in relation to money laundering and terrorist financing investigations, prosecutions, and related proceedings. In particular, countries should:

a) Not prohibit or place unreasonable or unduly restrictive conditions on the provision of mutual legal assistance.

b) Ensure that they have clear and efficient processes for the execution of mutual legal assistance requests.

c) Not refuse to execute a request for mutual legal assistance on the sole ground that the offence is also considered to involve fiscal matters.

d) Not refuse to execute a request for mutual legal assistance on the grounds that laws require financial institutions to maintain secrecy or confidentiality.

Countries should ensure that the powers of their competent authorities required under Recommendation 28 are also available for use in response to requests for mutual legal assistance, and if consistent with their domestic framework, in response to direct requests from foreign judicial or law enforcement authorities to domestic counterparts.

To avoid conflicts of jurisdiction, consideration should be given to devising and applying mechanisms for determining the best venue for prosecution of defendants in the interests of justice in cases that are subject to prosecution in more than one country.

37. Countries should, to the greatest extent possible, render mutual legal assistance notwithstanding the absence of dual criminality.

Where dual criminality is required for mutual legal assistance or extradition, that requirement should be deemed to be satisfied regardless of whether both countries place the offence within

the same category of offence or denominate the offence by the same terminology, provided that both countries criminalise the conduct underlying the offence.

38.* There should be authority to take expeditious action in response to requests by foreign countries to identify, freeze, seize and confiscate property laundered, proceeds from money laundering or predicate offences, instrumentalities used in or intended for use in the commission of these offences, or property of corresponding value. There should also be arrangements for co-ordinating seizure and confiscation proceedings, which may include the sharing of confiscated assets.

39. Countries should recognise money laundering as an extraditable offence. Each country should either extradite its own nationals, or where a country does not do so solely on the grounds of nationality, that country should, at the request of the country seeking extradition, submit the case without undue delay to its competent authorities for the purpose of prosecution of the offences set forth in the request. Those authorities should take their decision and conduct their proceedings in the same manner as in the case of any other offence of a serious nature under the domestic law of that country. The countries concerned should cooperate with each other, in particular on procedural and evidentiary aspects, to ensure the efficiency of such prosecutions.

Subject to their legal frameworks, countries may consider simplifying extradition by allowing direct transmission of extradition requests between appropriate ministries, extraditing persons based only on warrants of arrests or judgements, and/or introducing a simplified extradition of consenting persons who waive formal extradition proceedings.

Other forms of co-operation

40.* Countries should ensure that their competent authorities provide the widest possible range of international co-operation to their foreign counterparts. There should be clear and effective gateways to facilitate the prompt and constructive exchange directly between counterparts, either spontaneously or upon request, of information relating to both money laundering and the underlying predicate offences. Exchanges should be permitted without unduly restrictive conditions. In particular:

a) Competent authorities should not refuse a request for assistance on the sole ground that the request is also considered to involve fiscal matters.

b) Countries should not invoke laws that require financial institutions to maintain secrecy or confidentiality as a ground for refusing to provide co-operation.

c) Competent authorities should be able to conduct inquiries; and where possible, investigations; on behalf of foreign counterparts.

Where the ability to obtain information sought by a foreign competent authority is not within the mandate of its counterpart, countries are also encouraged to permit a prompt and constructive exchange of information with non-counterparts. Co-operation with foreign authorities other than counterparts could occur directly or indirectly. When uncertain about the appropriate avenue to follow, competent authorities should first contact their foreign counterparts for assistance.

Countries should establish controls and safeguards to ensure that information exchanged by competent authorities is used only in an authorised manner, consistent with their obligations concerning privacy and data protection.

GLOSSARY

In these Recommendations the following abbreviations and references are used:

"**Beneficial owner**" refers to the natural person(s) who ultimately owns or controls a customer and/or the person on whose behalf a transaction is being conducted. It also incorporates those persons who exercise ultimate effective control over a legal person or arrangement.

"**Core Principles**" refers to the Core Principles for Effective Banking Supervision issued by the Basel Committee on Banking Supervision, the Objectives and Principles for Securities Regulation issued by the International Organization of Securities Commissions, and the Insurance Supervisory Principles issued by the International Association of Insurance Supervisors.

"**Designated categories of offences**" means:

- participation in an organised criminal group and racketeering;
- terrorism, including terrorist financing;
- trafficking in human beings and migrant smuggling;
- sexual exploitation, including sexual exploitation of children;
- illicit trafficking in narcotic drugs and psychotropic substances;
- illicit arms trafficking;
- illicit trafficking in stolen and other goods;
- corruption and bribery;
- fraud;
- counterfeiting currency;
- counterfeiting and piracy of products;
- environmental crime;
- murder, grievous bodily injury;
- kidnapping, illegal restraint and hostage-taking;
- robbery or theft;
- smuggling;
- extortion;
- forgery;
- piracy; and
- insider trading and market manipulation.

When deciding on the range of offences to be covered as predicate offences under each of the categories listed above, each country may decide, in accordance with its domestic law, how it will define those offences and the nature of any particular elements of those offences that make them serious offences.

"**Designated non-financial businesses and professions**" means:

a) Casinos (which also includes internet casinos).

b) Real estate agents.

c) Dealers in precious metals.

d) Dealers in precious stones.

e) Lawyers, notaries, other independent legal professionals and accountants – this refers to sole practitioners, partners or employed professionals within professional firms. It is not meant to refer to 'internal' professionals that are employees of other types of businesses, nor to professionals working for government agencies, who may already be subject to measures that would combat money laundering.

f) Trust and Company Service Providers refers to all persons or businesses that are not covered elsewhere under these Recommendations, and which as a business, provide any of the following services to third parties:

- acting as a formation agent of legal persons;
- acting as (or arranging for another person to act as) a director or secretary of a company, a partner of a partnership, or a similar position in relation to other legal persons;
- providing a registered office; business address or accommodation, correspondence or administrative address for a company, a partnership or any other legal person or arrangement;
- acting as (or arranging for another person to act as) a trustee of an express trust;
- acting as (or arranging for another person to act as) a nominee shareholder for another person.

"**Designated threshold**" refers to the amount set out in the Interpretative Notes.

"**Financial institutions**" means any person or entity who conducts as a business one or more of the following activities or operations for or on behalf of a customer:

1. Acceptance of deposits and other repayable funds from the public.[5]
2. Lending.[6]
3. Financial leasing.[7]
4. The transfer of money or value.[8]
5. Issuing and managing means of payment (e.g. credit and debit cards, cheques, traveller's cheques, money orders and bankers' drafts, electronic money).
6. Financial guarantees and commitments.
7. Trading in:

   (a) money market instruments (cheques, bills, CDs, derivatives etc.);

   (b) foreign exchange;

[5] This also captures private banking.

[6] This includes inter alia: consumer credit; mortgage credit; factoring, with or without recourse; and finance of commercial transactions (including forfaiting).

[7] This does not extend to financial leasing arrangements in relation to consumer products.

[8] This applies to financial activity in both the formal or informal sector *e.g.* alternative remittance activity. See the Interpretative Note to Special Recommendation VI. It does not apply to any natural or legal person that provides financial institutions solely with message or other support systems for transmitting funds. See the Interpretative Note to Special Recommendation VII.

(c) exchange, interest rate and index instruments;

(d) transferable securities;

(e) commodity futures trading.

8. Participation in securities issues and the provision of financial services related to such issues.
9. Individual and collective portfolio management.
10. Safekeeping and administration of cash or liquid securities on behalf of other persons.
11. Otherwise investing, administering or managing funds or money on behalf of other persons.
12. Underwriting and placement of life insurance and other investment related insurance[9].
13. Money and currency changing.

When a financial activity is carried out by a person or entity on an occasional or very limited basis (having regard to quantitative and absolute criteria) such that there is little risk of money laundering activity occurring, a country may decide that the application of anti-money laundering measures is not necessary, either fully or partially.

In strictly limited and justified circumstances, and based on a proven low risk of money laundering, a country may decide not to apply some or all of the Forty Recommendations to some of the financial activities stated above.

"**FIU**" means financial intelligence unit.

"**Legal arrangements**" refers to express trusts or other similar legal arrangements.

"**Legal persons**" refers to bodies corporate, foundations, anstalt, partnerships, or associations, or any similar bodies that can establish a permanent customer relationship with a financial institution or otherwise own property.

"**Payable-through accounts**" refers to correspondent accounts that are used directly by third parties to transact business on their own behalf.

"**Politically Exposed Persons**" (PEPs) are individuals who are or have been entrusted with prominent public functions in a foreign country, for example Heads of State or of government, senior politicians, senior government, judicial or military officials, senior executives of state owned corporations, important political party officials. Business relationships with family members or close associates of PEPs involve reputational risks similar to those with PEPs themselves. The definition is not intended to cover middle ranking or more junior individuals in the foregoing categories.

"**Shell bank**" means a bank incorporated in a jurisdiction in which it has no physical presence and which is unaffiliated with a regulated financial group.

"**STR**" refers to suspicious transaction reports.

"**Supervisors**" refers to the designated competent authorities responsible for ensuring compliance by financial institutions with requirements to combat money laundering and terrorist financing.

"**the FATF Recommendations**" refers to these Recommendations and to the FATF Special Recommendations on Terrorist Financing.

[9] This applies both to insurance undertakings and to insurance intermediaries (agents and brokers).

INTERPRETATIVE NOTES

General

1. Reference in this document to "countries" should be taken to apply equally to "territories" or "jurisdictions".

2. Recommendations 5-16 and 21-22 state that financial institutions or designated non-financial businesses and professions should take certain actions. These references require countries to take measures that will oblige financial institutions or designated non-financial businesses and professions to comply with each Recommendation. The basic obligations under Recommendations 5, 10 and 13 should be set out in law or regulation, while more detailed elements in those Recommendations, as well as obligations under other Recommendations, could be required either by law or regulation or by other enforceable means issued by a competent authority.

3. Where reference is made to a financial institution being satisfied as to a matter, that institution must be able to justify its assessment to competent authorities.

4. To comply with Recommendations 12 and 16, countries do not need to issue laws or regulations that relate exclusively to lawyers, notaries, accountants and the other designated non-financial businesses and professions so long as these businesses or professions are included in laws or regulations covering the underlying activities.

5. The Interpretative Notes that apply to financial institutions are also relevant to designated non-financial businesses and professions, where applicable.

Recommendations 5, 12 and 16

The designated thresholds for transactions (under Recommendations 5 and 12) are as follows:

- Financial institutions (for occasional customers under Recommendation 5) - USD/EUR 15 000.
- Casinos, including internet casinos (under Recommendation 12) - USD/EUR 3 000
- For dealers in precious metals and dealers in precious stones when engaged in any cash transaction (under Recommendations 12 and 16) - USD/EUR 15 000.

Financial transactions above a designated threshold include situations where the transaction is carried out in a single operation or in several operations that appear to be linked.

Recommendation 5

Customer due diligence and tipping off

1. If, during the establishment or course of the customer relationship, or when conducting occasional transactions, a financial institution suspects that transactions relate to money laundering or terrorist financing, then the institution should:

   a) Normally seek to identify and verify the identity of the customer and the beneficial owner, whether permanent or occasional, and irrespective of any exemption or any designated threshold that might otherwise apply.

   b) Make a STR to the FIU in accordance with Recommendation 13.

2. Recommendation 14 prohibits financial institutions, their directors, officers and employees from disclosing the fact that an STR or related information is being reported to the FIU. A risk exists that customers could be unintentionally tipped off when the financial institution is seeking to perform its customer due diligence (CDD) obligations in these circumstances. The customer's awareness of a possible STR or investigation could compromise future efforts to investigate the suspected money laundering or terrorist financing operation.

3. Therefore, if financial institutions form a suspicion that transactions relate to money laundering or terrorist financing, they should take into account the risk of tipping off when performing the customer due diligence process. If the institution reasonably believes that performing the CDD process will tip-off the customer or potential customer, it may choose not to pursue that process, and should file an STR. Institutions should ensure that their employees are aware of and sensitive to these issues when conducting CDD.

CDD for legal persons and arrangements

4. When performing elements (a) and (b) of the CDD process in relation to legal persons or arrangements, financial institutions should:

   a) Verify that any person purporting to act on behalf of the customer is so authorised, and identify that person.

   b) Identify the customer and verify its identity - the types of measures that would be normally needed to satisfactorily perform this function would require obtaining proof of incorporation or similar evidence of the legal status of the legal person or arrangement, as well as information concerning the customer's name, the names of trustees, legal form, address, directors, and provisions regulating the power to bind the legal person or arrangement.

   c) Identify the beneficial owners, including forming an understanding of the ownership and control structure, and take reasonable measures to verify the identity of such persons. The types of measures that would be normally needed to satisfactorily perform this function would require identifying the natural persons with a controlling interest and identifying the natural persons who comprise the mind and management of the legal person or arrangement. Where the customer or the owner of the controlling interest is a public company that is subject to regulatory disclosure requirements, it is not necessary to seek to identify and verify the identity of any shareholder of that company.

The relevant information or data may be obtained from a public register, from the customer or from other reliable sources.

Reliance on identification and verification already performed

5. The CDD measures set out in Recommendation 5 do not imply that financial institutions have to repeatedly identify and verify the identity of each customer every time that a customer conducts a transaction. An institution is entitled to rely on the identification and verification steps that it has already undertaken unless it has doubts about the veracity of that information. Examples of situations that might lead an institution to have such doubts could be where there is a suspicion of money laundering in relation to that customer, or where there is a material change in the way that the customer's account is operated which is not consistent with the customer's business profile.

Timing of verification

6. Examples of the types of circumstances where it would be permissible for verification to be completed after the establishment of the business relationship, because it would be essential not to interrupt the normal conduct of business include:

   - Non face-to-face business.
   - Securities transactions. In the securities industry, companies and intermediaries may be required to perform transactions very rapidly, according to the market conditions at the time the customer is contacting them, and the performance of the transaction may be required before verification of identity is completed.
   - Life insurance business. In relation to life insurance business, countries may permit the identification and verification of the beneficiary under the policy to take place after having established the business relationship with the policyholder. However, in all such cases, identification and verification should occur at or before the time of payout or the time where the beneficiary intends to exercise vested rights under the policy.

7. Financial institutions will also need to adopt risk management procedures with respect to the conditions under which a customer may utilise the business relationship prior to verification. These procedures should include a set of measures such as a limitation of the number, types and/or amount of transactions that can be performed and the monitoring of large or complex transactions being carried out outside of expected norms for that type of relationship. Financial institutions should refer to the Basel CDD paper[10] (section 2.2.6.) for specific guidance on examples of risk management measures for non-face to face business.

Requirement to identify existing customers

8. The principles set out in the Basel CDD paper concerning the identification of existing customers should serve as guidance when applying customer due diligence processes to institutions engaged in banking activity, and could apply to other financial institutions where relevant.

[10] "Basel CDD paper" refers to the guidance paper on Customer Due Diligence for Banks issued by the Basel Committee on Banking Supervision in October 2001.

Simplified or reduced CDD measures

9. The general rule is that customers must be subject to the full range of CDD measures, including the requirement to identify the beneficial owner. Nevertheless there are circumstances where the risk of money laundering or terrorist financing is lower, where information on the identity of the customer and the beneficial owner of a customer is publicly available, or where adequate checks and controls exist elsewhere in national systems. In such circumstances it could be reasonable for a country to allow its financial institutions to apply simplified or reduced CDD measures when identifying and verifying the identity of the customer and the beneficial owner.

10. Examples of customers where simplified or reduced CDD measures could apply are:

- Financial institutions – where they are subject to requirements to combat money laundering and terrorist financing consistent with the FATF Recommendations and are supervised for compliance with those controls.
- Public companies that are subject to regulatory disclosure requirements.
- Government administrations or enterprises.

11. Simplified or reduced CDD measures could also apply to the beneficial owners of pooled accounts held by designated non financial businesses or professions provided that those businesses or professions are subject to requirements to combat money laundering and terrorist financing consistent with the FATF Recommendations and are subject to effective systems for monitoring and ensuring their compliance with those requirements. Banks should also refer to the Basel CDD paper (section 2.2.4.), which provides specific guidance concerning situations where an account holding institution may rely on a customer that is a professional financial intermediary to perform the customer due diligence on his or its own customers (*i.e.* the beneficial owners of the bank account). Where relevant, the CDD Paper could also provide guidance in relation to similar accounts held by other types of financial institutions.

12. Simplified CDD or reduced measures could also be acceptable for various types of products or transactions such as (examples only):

- Life insurance policies where the annual premium is no more than USD/EUR 1 000 or a single premium of no more than USD/EUR 2 500.
- Insurance policies for pension schemes if there is no surrender clause and the policy cannot be used as collateral.
- A pension, superannuation or similar scheme that provides retirement benefits to employees, where contributions are made by way of deduction from wages and the scheme rules do not permit the assignment of a member's interest under the scheme.

13. Countries could also decide whether financial institutions could apply these simplified measures only to customers in its own jurisdiction or allow them to do for customers from any other jurisdiction that the original country is satisfied is in compliance with and has effectively implemented the FATF Recommendations.

Simplified CDD measures are not acceptable whenever there is suspicion of money laundering or terrorist financing or specific higher risk scenarios apply.

Recommendation 6

Countries are encouraged to extend the requirements of Recommendation 6 to individuals who hold prominent public functions in their own country.

Recommendation 9

This Recommendation does not apply to outsourcing or agency relationships.

This Recommendation also does not apply to relationships, accounts or transactions between financial institutions for their clients. Those relationships are addressed by Recommendations 5 and 7.

Recommendations 10 and 11

In relation to insurance business, the word "transactions" should be understood to refer to the insurance product itself, the premium payment and the benefits.

Recommendation 13

1. The reference to criminal activity in Recommendation 13 refers to:

   a) all criminal acts that would constitute a predicate offence for money laundering in the jurisdiction; or

   b) at a minimum to those offences that would constitute a predicate offence as required by Recommendation 1.

   Countries are strongly encouraged to adopt alternative (a). All suspicious transactions, including attempted transactions, should be reported regardless of the amount of the transaction.

2. In implementing Recommendation 13, suspicious transactions should be reported by financial institutions regardless of whether they are also thought to involve tax matters. Countries should take into account that, in order to deter financial institutions from reporting a suspicious transaction, money launderers may seek to state *inter alia* that their transactions relate to tax matters.

Recommendation 14 (tipping off)

Where lawyers, notaries, other independent legal professionals and accountants acting as independent legal professionals seek to dissuade a client from engaging in illegal activity, this does not amount to tipping off.

Recommendation 15

The type and extent of measures to be taken for each of the requirements set out in the Recommendation should be appropriate having regard to the risk of money laundering and terrorist financing and the size of the business.

For financial institutions, compliance management arrangements should include the appointment of a compliance officer at the management level.

Recommendation 16

1. It is for each jurisdiction to determine the matters that would fall under legal professional privilege or professional secrecy. This would normally cover information lawyers, notaries or other independent legal professionals receive from or obtain through one of their clients: (a) in the course of ascertaining the legal position of their client, or (b) in performing their task of defending or representing that client in, or concerning judicial, administrative, arbitration or mediation proceedings. Where accountants are subject to the same obligations of secrecy or privilege, then they are also not required to report suspicious transactions.

2. Countries may allow lawyers, notaries, other independent legal professionals and accountants to send their STR to their appropriate self-regulatory organisations, provided that there are appropriate forms of co-operation between these organisations and the FIU.

Recommendation 23

Recommendation 23 should not be read as to require the introduction of a system of regular review of licensing of controlling interests in financial institutions merely for anti-money laundering purposes, but as to stress the desirability of suitability review for controlling shareholders in financial institutions (banks and non-banks in particular) from a FATF point of view. Hence, where shareholder suitability (or "fit and proper") tests exist, the attention of supervisors should be drawn to their relevance for anti-money laundering purposes.

Recommendation 25

When considering the feedback that should be provided, countries should have regard to the FATF Best Practice Guidelines on Providing Feedback to Reporting Financial Institutions and Other Persons.

Recommendation 26

Where a country has created an FIU, it should consider applying for membership in the Egmont Group. Countries should have regard to the Egmont Group Statement of Purpose, and its Principles for Information Exchange Between Financial Intelligence Units for Money Laundering Cases. These documents set out important guidance concerning the role and functions of FIUs, and the mechanisms for exchanging information between FIU.

Recommendation 27

Countries should consider taking measures, including legislative ones, at the national level, to allow their competent authorities investigating money laundering cases to postpone or waive the arrest of suspected persons and/or the seizure of the money for the purpose of identifying persons involved in such activities or for evidence gathering. Without such measures the use of procedures such as controlled deliveries and undercover operations are precluded.

Recommendation 38

Countries should consider:

a) Establishing an asset forfeiture fund in its respective country into which all or a portion of confiscated property will be deposited for law enforcement, health, education, or other appropriate purposes.

b) Taking such measures as may be necessary to enable it to share among or between other countries confiscated property, in particular, when confiscation is directly or indirectly a result of co-ordinated law enforcement actions.

Recommendation 40

1. For the purposes of this Recommendation:

   - "Counterparts" refers to authorities that exercise similar responsibilities and functions.
   - "Competent authority" refers to all administrative and law enforcement authorities concerned with combating money laundering and terrorist financing, including the FIU and supervisors.

2. Depending on the type of competent authority involved and the nature and purpose of the co-operation, different channels can be appropriate for the exchange of information. Examples of mechanisms or channels that are used to exchange information include: bilateral or multilateral agreements or arrangements, memoranda of understanding, exchanges on the basis of reciprocity, or through appropriate international or regional organisations. However, this Recommendation is not intended to cover co-operation in relation to mutual legal assistance or extradition.

3. The reference to indirect exchange of information with foreign authorities other than counterparts covers the situation where the requested information passes from the foreign authority through one or more domestic or foreign authorities before being received by the requesting authority. The competent authority that requests the information should always make it clear for what purpose and on whose behalf the request is made.

4. FIUs should be able to make inquiries on behalf of foreign counterparts where this could be relevant to an analysis of financial transactions. At a minimum, inquiries should include:

   - Searching its own databases, which would include information related to suspicious transaction reports.
   - Searching other databases to which it may have direct or indirect access, including law enforcement databases, public databases, administrative databases and commercially available databases.

   Where permitted to do so, FIUs should also contact other competent authorities and financial institutions in order to obtain relevant information.

Version as adopted on 15 February 2012.

INTRODUCTION

The Financial Action Task Force (FATF) is an inter-governmental body established in 1989 by the Ministers of its Member jurisdictions. The mandate of the FATF is to set standards and to promote effective implementation of legal, regulatory and operational measures for combating money laundering, terrorist financing and the financing of proliferation, and other related threats to the integrity of the international financial system. In collaboration with other international stakeholders, the FATF also works to identify national-level vulnerabilities with the aim of protecting the international financial system from misuse.

The FATF Recommendations set out a comprehensive and consistent framework of measures which countries should implement in order to combat money laundering and terrorist financing, as well as the financing of proliferation of weapons of mass destruction. Countries have diverse legal, administrative and operational frameworks and different financial systems, and so cannot all take identical measures to counter these threats. The FATF Recommendations, therefore, set an international standard, which countries should implement through measures adapted to their particular circumstances. The FATF Recommendations set out the essential measures that countries should have in place to:

- identify the risks, and develop policies and domestic coordination;
- pursue money laundering, terrorist financing and the financing of proliferation;
- apply preventive measures for the financial sector and other designated sectors;
- establish powers and responsibilities for the competent authorities (e.g., investigative, law enforcement and supervisory authorities) and other institutional measures;
- enhance the transparency and availability of beneficial ownership information of legal persons and arrangements; and
- facilitate international cooperation.

The original FATF Forty Recommendations were drawn up in 1990 as an initiative to combat the misuse of financial systems by persons laundering drug money. In 1996 the Recommendations were revised for the first time to reflect evolving money laundering trends and techniques, and to broaden their scope well beyond drug-money laundering. In October 2001 the FATF expanded its mandate to deal with the issue of the funding of terrorist acts and terrorist organisations, and took the important step of creating the Eight (later expanded to Nine) Special Recommendations on Terrorist Financing. The FATF Recommendations were revised a second time in 2003, and these, together with the Special Recommendations, have been endorsed by over 180 countries, and are universally recognised as the international standard for anti-money laundering and countering the financing of terrorism (AML/CFT).

Following the conclusion of the third round of mutual evaluations of its members, the FATF has reviewed and updated the FATF Recommendations, in close co-operation with the FATF-Style Regional Bodies (FSRBs) and the observer organisations, including the International Monetary Fund, the World Bank and the United Nations. The revisions address new and emerging threats, clarify and strengthen many of the existing obligations, while maintaining the necessary stability and rigour in the Recommendations.

The FATF Standards have also been revised to strengthen the requirements for higher risk situations, and to allow countries to take a more focused approach in areas where high risks remain or implementation could be enhanced. Countries should first identify, assess and understand the risks of money laundering and terrorist finance that they face, and then adopt appropriate measures to mitigate the risk. The risk-based approach allows countries, within the framework of the FATF requirements, to adopt a more flexible set of measures, in order to target their resources more effectively and apply preventive measures that are commensurate to the nature of risks, in order to focus their efforts in the most effective way.

Combating terrorist financing is a very significant challenge. An effective AML/CFT system, in general, is important for addressing terrorist financing, and most measures previously focused on terrorist financing are now integrated throughout the Recommendations, therefore obviating the need for the Special Recommendations. However, there are some Recommendations that are unique to terrorist financing, which are set out in Section C of the FATF Recommendations. These are: Recommendation 5 (the criminalisation of terrorist financing); Recommendation 6 (targeted financial sanctions related to terrorism & terrorist financing); and Recommendation 8 (measures to prevent the misuse of non-profit organisations). The proliferation of weapons of mass destruction is also a significant security concern, and in 2008 the FATF's mandate was expanded to include dealing with the financing of proliferation of weapons of mass destruction. To combat this threat, the FATF has adopted a new Recommendation (Recommendation 7) aimed at ensuring consistent and effective implementation of targeted financial sanctions when these are called for by the UN Security Council.

The FATF Standards comprise the Recommendations themselves and their Interpretive Notes, together with the applicable definitions in the Glossary. The measures set out in the FATF Standards should be implemented by all members of the FATF and the FSRBs, and their implementation is assessed rigorously through Mutual Evaluation processes, and through the assessment processes of the International Monetary Fund and the World Bank – on the basis of the FATF's common assessment methodology. Some Interpretive Notes and definitions in the glossary include examples which illustrate how the requirements could be applied. These examples are not mandatory elements of the FATF Standards, and are included for guidance only. The examples are not intended to be comprehensive, and although they are considered to be helpful indicators, they may not be relevant in all circumstances.

The FATF also produces Guidance, Best Practice Papers, and other advice to assist countries with the implementation of the FATF standards. These other documents are not mandatory for assessing compliance with the Standards, but countries may find it valuable to have regard to them when considering how best to implement the FATF Standards. A list of current FATF Guidance and Best

Practice Papers, which are available on the FATF website, is included as an annex to the Recommendations.

The FATF is committed to maintaining a close and constructive dialogue with the private sector, civil society and other interested parties, as important partners in ensuring the integrity of the financial system. The revision of the Recommendations has involved extensive consultation, and has benefited from comments and suggestions from these stakeholders. Going forward and in accordance with its mandate, the FATF will continue to consider changes to the standards, as appropriate, in light of new information regarding emerging threats and vulnerabilities to the global financial system.

The FATF calls upon all countries to implement effective measures to bring their national systems for combating money laundering, terrorist financing and the financing of proliferation into compliance with the revised FATF Recommendations.

THE FATF RECOMMENDATIONS

A. AML/CFT POLICIES AND COORDINATION

1. Assessing risks and applying a risk-based approach *

Countries should identify, assess, and understand the money laundering and terrorist financing risks for the country, and should take action, including designating an authority or mechanism to coordinate actions to assess risks, and apply resources, aimed at ensuring the risks are mitigated effectively. Based on that assessment, countries should apply a risk-based approach (RBA) to ensure that measures to prevent or mitigate money laundering and terrorist financing are commensurate with the risks identified. This approach should be an essential foundation to efficient allocation of resources across the anti-money laundering and countering the financing of terrorism (AML/CFT) regime and the implementation of risk-based measures throughout the FATF Recommendations. Where countries identify higher risks, they should ensure that their AML/CFT regime adequately addresses such risks. Where countries identify lower risks, they may decide to allow simplified measures for some of the FATF Recommendations under certain conditions.

Countries should require financial institutions and designated non-financial businesses and professions (DNFBPs) to identify, assess and take effective action to mitigate their money laundering and terrorist financing risks.

2. National cooperation and coordination

Countries should have national AML/CFT policies, informed by the risks identified, which should be regularly reviewed, and should designate an authority or have a coordination or other mechanism that is responsible for such policies.

Countries should ensure that policy-makers, the financial intelligence unit (FIU), law enforcement authorities, supervisors and other relevant competent authorities, at the policy-making and operational levels, have effective mechanisms in place which enable them to cooperate, and, where appropriate, coordinate and exchange information domestically with each other concerning the development and implementation of policies and activities to combat money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction. This should include cooperation and coordination between relevant authorities to ensure the compatibility of AML/CFT requirements with Data Protection and Privacy rules and other similar provisions (e.g. data security/localisation).

B. MONEY LAUNDERING AND CONFISCATION

3. Money laundering offence *

Countries should criminalise money laundering on the basis of the Vienna Convention and the Palermo Convention. Countries should apply the crime of money laundering to all serious offences, with a view to including the widest range of predicate offences.

4. Confiscation and provisional measures *

Countries should adopt measures similar to those set forth in the Vienna Convention, the Palermo Convention, and the Terrorist Financing Convention, including legislative measures, to enable their competent authorities to freeze or seize and confiscate the following, without prejudicing the rights of *bona fide* third parties: (a) property laundered, (b) proceeds from, or instrumentalities used in or intended for use in money laundering or predicate offences, (c) property that is the proceeds of, or used in, or intended or allocated for use in, the financing of terrorism, terrorist acts or terrorist organisations, or (d) property of corresponding value.

Such measures should include the authority to: (a) identify, trace and evaluate property that is subject to confiscation; (b) carry out provisional measures, such as freezing and seizing, to prevent any dealing, transfer or disposal of such property; (c) take steps that will prevent or void actions that prejudice the country's ability to freeze or seize or recover property that is subject to confiscation; and (d) take any appropriate investigative measures.

Countries should consider adopting measures that allow such proceeds or instrumentalities to be confiscated without requiring a criminal conviction (non-conviction based confiscation), or which require an offender to demonstrate the lawful origin of the property alleged to be liable to confiscation, to the extent that such a requirement is consistent with the principles of their domestic law.

C. TERRORIST FINANCING AND FINANCING OF PROLIFERATION

5. Terrorist financing offence *

Countries should criminalise terrorist financing on the basis of the Terrorist Financing Convention, and should criminalise not only the financing of terrorist acts but also the financing of terrorist organisations and individual terrorists even in the absence of a link to a specific terrorist act or acts. Countries should ensure that such offences are designated as money laundering predicate offences.

6. Targeted financial sanctions related to terrorism and terrorist financing *

Countries should implement targeted financial sanctions regimes to comply with United Nations Security Council resolutions relating to the prevention and suppression of terrorism and terrorist financing. The resolutions require countries to freeze without delay the funds or other assets of, and to ensure that no funds or other assets are made available, directly or indirectly, to or for the benefit of, any person or entity either (i) designated by, or under the authority of, the United Nations Security Council under Chapter VII of the Charter of the United Nations, including in accordance with resolution 1267 (1999) and its successor resolutions; or (ii) designated by that country pursuant to resolution 1373 (2001).

7. Targeted financial sanctions related to proliferation *

Countries should implement targeted financial sanctions to comply with United Nations Security Council resolutions relating to the prevention, suppression and disruption of proliferation of weapons of mass destruction and its financing. These resolutions require countries to freeze without delay the funds or other assets of, and to ensure that no funds and other assets are made available, directly or indirectly, to or for the benefit of, any person or entity designated by, or under the authority of, the United Nations Security Council under Chapter VII of the Charter of the United Nations.

8. Non-profit organisations *

Countries should review the adequacy of laws and regulations that relate to non-profit organisations which the country has identified as being vulnerable to terrorist financing abuse. Countries should apply focused and proportionate measures, in line with the risk-based approach, to such non-profit organisations to protect them from terrorist financing abuse, including:

(a) by terrorist organisations posing as legitimate entities;

(b) by exploiting legitimate entities as conduits for terrorist financing, including for the purpose of escaping asset-freezing measures; and

(c) by concealing or obscuring the clandestine diversion of funds intended for legitimate purposes to terrorist organisations.

D. PREVENTIVE MEASURES

9. Financial institution secrecy laws

Countries should ensure that financial institution secrecy laws do not inhibit implementation of the FATF Recommendations.

CUSTOMER DUE DILIGENCE AND RECORD-KEEPING

10. Customer due diligence *

Financial institutions should be prohibited from keeping anonymous accounts or accounts in obviously fictitious names.

Financial institutions should be required to undertake customer due diligence (CDD) measures when:

(i) establishing business relations;

(ii) carrying out occasional transactions: (i) above the applicable designated threshold (USD/EUR 15,000); or (ii) that are wire transfers in the circumstances covered by the Interpretive Note to Recommendation 16;

(iii) there is a suspicion of money laundering or terrorist financing; or

(iv) the financial institution has doubts about the veracity or adequacy of previously obtained customer identification data.

The principle that financial institutions should conduct CDD should be set out in law. Each country may determine how it imposes specific CDD obligations, either through law or enforceable means.

The CDD measures to be taken are as follows:

(a) Identifying the customer and verifying that customer's identity using reliable, independent source documents, data or information.

(b) Identifying the beneficial owner, and taking reasonable measures to verify the identity of the beneficial owner, such that the financial institution is satisfied that it knows who the beneficial owner is. For legal persons and arrangements this should include financial institutions understanding the ownership and control structure of the customer.

(c) Understanding and, as appropriate, obtaining information on the purpose and intended nature of the business relationship.

(d) Conducting ongoing due diligence on the business relationship and scrutiny of transactions undertaken throughout the course of that relationship to ensure that the transactions being conducted are consistent with the institution's knowledge of the customer, their business and risk profile, including, where necessary, the source of funds.

Financial institutions should be required to apply each of the CDD measures under (a) to (d) above, but should determine the extent of such measures using a risk-based approach (RBA) in accordance with the Interpretive Notes to this Recommendation and to Recommendation 1.

Financial institutions should be required to verify the identity of the customer and beneficial owner before or during the course of establishing a business relationship or conducting transactions for occasional customers. Countries may permit financial institutions to complete the verification as soon as reasonably practicable following the establishment of the relationship, where the money laundering and terrorist financing risks are effectively managed and where this is essential not to interrupt the normal conduct of business.

Where the financial institution is unable to comply with the applicable requirements under paragraphs (a) to (d) above (subject to appropriate modification of the extent of the measures on a risk-based approach), it should be required not to open the account, commence business relations or perform the transaction; or should be required to terminate the business relationship; and should consider making a suspicious transactions report in relation to the customer.

These requirements should apply to all new customers, although financial institutions should also apply this Recommendation to existing customers on the basis of materiality and risk, and should conduct due diligence on such existing relationships at appropriate times.

11. Record-keeping

Financial institutions should be required to maintain, for at least five years, all necessary records on transactions, both domestic and international, to enable them to comply swiftly with information requests from the competent authorities. Such records must be sufficient to permit reconstruction of individual transactions (including the amounts and types of currency involved, if any) so as to provide, if necessary, evidence for prosecution of criminal activity.

Financial institutions should be required to keep all records obtained through CDD measures (e.g. copies or records of official identification documents like passports, identity cards, driving licences or similar documents), account files and business correspondence, including the results of any analysis undertaken (e.g. inquiries to establish the background and purpose of complex, unusual large transactions), for at least five years after the business relationship is ended, or after the date of the occasional transaction.

Financial institutions should be required by law to maintain records on transactions and information obtained through the CDD measures.

The CDD information and the transaction records should be available to domestic competent authorities upon appropriate authority.

ADDITIONAL MEASURES FOR SPECIFIC CUSTOMERS AND ACTIVITIES

12. Politically exposed persons *

Financial institutions should be required, in relation to foreign politically exposed persons (PEPs) (whether as customer or beneficial owner), in addition to performing normal customer due diligence measures, to:

(a) have appropriate risk-management systems to determine whether the customer or the beneficial owner is a politically exposed person;

(b) obtain senior management approval for establishing (or continuing, for existing customers) such business relationships;

(c) take reasonable measures to establish the source of wealth and source of funds; and

(d) conduct enhanced ongoing monitoring of the business relationship.

Financial institutions should be required to take reasonable measures to determine whether a customer or beneficial owner is a domestic PEP or a person who is or has been entrusted with a prominent function by an international organisation. In cases of a higher risk business relationship with such persons, financial institutions should be required to apply the measures referred to in paragraphs (b), (c) and (d).

The requirements for all types of PEP should also apply to family members or close associates of such PEPs.

13. Correspondent banking *

Financial institutions should be required, in relation to cross-border correspondent banking and other similar relationships, in addition to performing normal customer due diligence measures, to:

(a) gather sufficient information about a respondent institution to understand fully the nature of the respondent's business and to determine from publicly available information the reputation of the institution and the quality of supervision, including whether it has been subject to a money laundering or terrorist financing investigation or regulatory action;

(b) assess the respondent institution's AML/CFT controls;

(c) obtain approval from senior management before establishing new correspondent relationships;

(d) clearly understand the respective responsibilities of each institution; and

(e) with respect to "payable-through accounts", be satisfied that the respondent bank has conducted CDD on the customers having direct access to accounts of the correspondent bank, and that it is able to provide relevant CDD information upon request to the correspondent bank.

Financial institutions should be prohibited from entering into, or continuing, a correspondent banking relationship with shell banks. Financial institutions should be required to satisfy themselves that respondent institutions do not permit their accounts to be used by shell banks.

14. Money or value transfer services *

Countries should take measures to ensure that natural or legal persons that provide money or value transfer services (MVTS) are licensed or registered, and subject to effective systems for monitoring and ensuring compliance with the relevant measures called for in the FATF Recommendations. Countries should take action to identify natural or legal persons that carry out MVTS without a license or registration, and to apply appropriate sanctions.

Any natural or legal person working as an agent should also be licensed or registered by a competent authority, or the MVTS provider should maintain a current list of its agents accessible by competent authorities in the countries in which the MVTS provider and its agents operate. Countries should take measures to ensure that MVTS providers that use agents include them in their AML/CFT programmes and monitor them for compliance with these programmes.

15. New technologies

Countries and financial institutions should identify and assess the money laundering or terrorist financing risks that may arise in relation to (a) the development of new products and new business practices, including new delivery mechanisms, and (b) the use of new or developing technologies for both new and pre-existing products. In the case of financial institutions, such a risk assessment should take place prior to the launch of the new products, business practices or the use of new or developing technologies. They should take appropriate measures to manage and mitigate those risks.

To manage and mitigate the risks emerging from virtual assets, countries should ensure that virtual asset service providers are regulated for AML/CFT purposes, and licensed or registered and subject to effective systems for monitoring and ensuring compliance with the relevant measures called for in the FATF Recommendations.

16. Wire transfers *

Countries should ensure that financial institutions include required and accurate originator information, and required beneficiary information, on wire transfers and related messages, and that the information remains with the wire transfer or related message throughout the payment chain.

Countries should ensure that financial institutions monitor wire transfers for the purpose of detecting those which lack required originator and/or beneficiary information, and take appropriate measures.

Countries should ensure that, in the context of processing wire transfers, financial institutions take freezing action and should prohibit conducting transactions with designated persons and entities, as per the obligations set out in the relevant United Nations Security Council resolutions, such as resolution 1267 (1999) and its successor resolutions, and resolution 1373(2001), relating to the prevention and suppression of terrorism and terrorist financing.

RELIANCE, CONTROLS AND FINANCIAL GROUPS

17. Reliance on third parties *

Countries may permit financial institutions to rely on third parties to perform elements (a)-(c) of the CDD measures set out in Recommendation 10 or to introduce business, provided that the criteria set out below are met. Where such reliance is permitted, the ultimate responsibility for CDD measures remains with the financial institution relying on the third party.

The criteria that should be met are as follows:

(a) A financial institution relying upon a third party should immediately obtain the necessary information concerning elements (a)-(c) of the CDD measures set out in Recommendation 10.

(b) Financial institutions should take adequate steps to satisfy themselves that copies of identification data and other relevant documentation relating to the CDD requirements will be made available from the third party upon request without delay.

(c) The financial institution should satisfy itself that the third party is regulated, supervised or monitored for, and has measures in place for compliance with, CDD and record-keeping requirements in line with Recommendations 10 and 11.

(d) When determining in which countries the third party that meets the conditions can be based, countries should have regard to information available on the level of country risk.

When a financial institution relies on a third party that is part of the same financial group, and (i) that group applies CDD and record-keeping requirements, in line with Recommendations 10, 11 and 12, and programmes against money laundering and terrorist financing, in accordance with Recommendation 18; and (ii) where the effective implementation of those CDD and record-keeping requirements and AML/CFT programmes is supervised at a group level by a competent authority, then relevant competent authorities may consider that the financial institution applies measures under (b) and (c) above through its group programme, and may decide that (d) is not a necessary precondition to reliance when higher country risk is adequately mitigated by the group AML/CFT policies.

18. Internal controls and foreign branches and subsidiaries *

Financial institutions should be required to implement programmes against money laundering and terrorist financing. Financial groups should be required to implement group-

wide programmes against money laundering and terrorist financing, including policies and procedures for sharing information within the group for AML/CFT purposes.

Financial institutions should be required to ensure that their foreign branches and majority-owned subsidiaries apply AML/CFT measures consistent with the home country requirements implementing the FATF Recommendations through the financial groups' programmes against money laundering and terrorist financing.

19. Higher-risk countries *

Financial institutions should be required to apply enhanced due diligence measures to business relationships and transactions with natural and legal persons, and financial institutions, from countries for which this is called for by the FATF. The type of enhanced due diligence measures applied should be effective and proportionate to the risks.

Countries should be able to apply appropriate countermeasures when called upon to do so by the FATF. Countries should also be able to apply countermeasures independently of any call by the FATF to do so. Such countermeasures should be effective and proportionate to the risks.

REPORTING OF SUSPICIOUS TRANSACTIONS

20. Reporting of suspicious transactions *

If a financial institution suspects or has reasonable grounds to suspect that funds are the proceeds of a criminal activity, or are related to terrorist financing, it should be required, by law, to report promptly its suspicions to the financial intelligence unit (FIU).

21. Tipping-off and confidentiality

Financial institutions, their directors, officers and employees should be:

(a) protected by law from criminal and civil liability for breach of any restriction on disclosure of information imposed by contract or by any legislative, regulatory or administrative provision, if they report their suspicions in good faith to the FIU, even if they did not know precisely what the underlying criminal activity was, and regardless of whether illegal activity actually occurred; and

(b) prohibited by law from disclosing ("tipping-off") the fact that a suspicious transaction report (STR) or related information is being filed with the FIU. These provisions are not intended to inhibit information sharing under Recommendation 18.

DESIGNATED NON-FINANCIAL BUSINESSES AND PROFESSIONS

22. DNFBPs: customer due diligence *

The customer due diligence and record-keeping requirements set out in Recommendations 10, 11, 12, 15, and 17, apply to designated non-financial businesses and professions (DNFBPs) in the following situations:

(a) Casinos – when customers engage in financial transactions equal to or above the applicable designated threshold.

(b) Real estate agents – when they are involved in transactions for their client concerning the buying and selling of real estate.

(c) Dealers in precious metals and dealers in precious stones – when they engage in any cash transaction with a customer equal to or above the applicable designated threshold.

(d) Lawyers, notaries, other independent legal professionals and accountants – when they prepare for or carry out transactions for their client concerning the following activities:

- buying and selling of real estate;
- managing of client money, securities or other assets;
- management of bank, savings or securities accounts;
- organisation of contributions for the creation, operation or management of companies;
- creation, operation or management of legal persons or arrangements, and buying and selling of business entities.

(e) Trust and company service providers – when they prepare for or carry out transactions for a client concerning the following activities:

- acting as a formation agent of legal persons;
- acting as (or arranging for another person to act as) a director or secretary of a company, a partner of a partnership, or a similar position in relation to other legal persons;
- providing a registered office, business address or accommodation, correspondence or administrative address for a company, a partnership or any other legal person or arrangement;
- acting as (or arranging for another person to act as) a trustee of an express trust or performing the equivalent function for another form of legal arrangement;
- acting as (or arranging for another person to act as) a nominee shareholder for another person.

23. DNFBPs: Other measures *

The requirements set out in Recommendations 18 to 21 apply to all designated non-financial businesses and professions, subject to the following qualifications:

(a) Lawyers, notaries, other independent legal professionals and accountants should be required to report suspicious transactions when, on behalf of or for a client, they engage in a financial transaction in relation to the activities described in paragraph (d)

of Recommendation 22. Countries are strongly encouraged to extend the reporting requirement to the rest of the professional activities of accountants, including auditing.

(b) Dealers in precious metals and dealers in precious stones should be required to report suspicious transactions when they engage in any cash transaction with a customer equal to or above the applicable designated threshold.

(c) Trust and company service providers should be required to report suspicious transactions for a client when, on behalf of or for a client, they engage in a transaction in relation to the activities referred to in paragraph (e) of Recommendation 22.

E. TRANSPARENCY AND BENEFICIAL OWNERSHIP OF LEGAL PERSONS AND ARRANGEMENTS

24. Transparency and beneficial ownership of legal persons *

Countries should take measures to prevent the misuse of legal persons for money laundering or terrorist financing. Countries should ensure that there is adequate, accurate and timely information on the beneficial ownership and control of legal persons that can be obtained or accessed in a timely fashion by competent authorities. In particular, countries that have legal persons that are able to issue bearer shares or bearer share warrants, or which allow nominee shareholders or nominee directors, should take effective measures to ensure that they are not misused for money laundering or terrorist financing. Countries should consider measures to facilitate access to beneficial ownership and control information by financial institutions and DNFBPs undertaking the requirements set out in Recommendations 10 and 22.

25. Transparency and beneficial ownership of legal arrangements *

Countries should take measures to prevent the misuse of legal arrangements for money laundering or terrorist financing. In particular, countries should ensure that there is adequate, accurate and timely information on express trusts, including information on the settlor, trustee and beneficiaries, that can be obtained or accessed in a timely fashion by competent authorities. Countries should consider measures to facilitate access to beneficial ownership and control information by financial institutions and DNFBPs undertaking the requirements set out in Recommendations 10 and 22.

F. POWERS AND RESPONSIBILITIES OF COMPETENT AUTHORITIES, AND OTHER INSTITUTIONAL MEASURES

REGULATION AND SUPERVISION

26. Regulation and supervision of financial institutions *

Countries should ensure that financial institutions are subject to adequate regulation and supervision and are effectively implementing the FATF Recommendations. Competent authorities or financial supervisors should take the necessary legal or regulatory measures to prevent criminals or their associates from holding, or being the beneficial owner of, a significant or controlling interest, or holding a management function in, a financial institution. Countries should not approve the establishment, or continued operation, of shell banks.

For financial institutions subject to the Core Principles, the regulatory and supervisory measures that apply for prudential purposes, and which are also relevant to money laundering and terrorist financing, should apply in a similar manner for AML/CFT purposes. This should include applying consolidated group supervision for AML/CFT purposes.

Other financial institutions should be licensed or registered and adequately regulated, and subject to supervision or monitoring for AML/CFT purposes, having regard to the risk of money laundering or terrorist financing in that sector. At a minimum, where financial institutions provide a service of money or value transfer, or of money or currency changing, they should be licensed or registered, and subject to effective systems for monitoring and ensuring compliance with national AML/CFT requirements.

27. Powers of supervisors

Supervisors should have adequate powers to supervise or monitor, and ensure compliance by, financial institutions with requirements to combat money laundering and terrorist financing, including the authority to conduct inspections. They should be authorised to compel production of any information from financial institutions that is relevant to monitoring such compliance, and to impose sanctions, in line with Recommendation 35, for failure to comply with such requirements. Supervisors should have powers to impose a range of disciplinary and financial sanctions, including the power to withdraw, restrict or suspend the financial institution's license, where applicable.

28. Regulation and supervision of DNFBPs *

Designated non-financial businesses and professions should be subject to regulatory and supervisory measures as set out below.

(a) Casinos should be subject to a comprehensive regulatory and supervisory regime that ensures that they have effectively implemented the necessary AML/CFT measures. At a minimum:

- casinos should be licensed;

- competent authorities should take the necessary legal or regulatory measures to prevent criminals or their associates from holding, or being the beneficial owner of, a significant or controlling interest, holding a management function in, or being an operator of, a casino; and
- competent authorities should ensure that casinos are effectively supervised for compliance with AML/CFT requirements.

(b) Countries should ensure that the other categories of DNFBPs are subject to effective systems for monitoring and ensuring compliance with AML/CFT requirements. This should be performed on a risk-sensitive basis. This may be performed by (a) a supervisor or (b) by an appropriate self-regulatory body (SRB), provided that such a body can ensure that its members comply with their obligations to combat money laundering and terrorist financing.

The supervisor or SRB should also (a) take the necessary measures to prevent criminals or their associates from being professionally accredited, or holding or being the beneficial owner of a significant or controlling interest or holding a management function, e.g. through evaluating persons on the basis of a "fit and proper" test; and (b) have effective, proportionate, and dissuasive sanctions in line with Recommendation 35 available to deal with failure to comply with AML/CFT requirements.

OPERATIONAL AND LAW ENFORCEMENT

29. Financial intelligence units *

Countries should establish a financial intelligence unit (FIU) that serves as a national centre for the receipt and analysis of: (a) suspicious transaction reports; and (b) other information relevant to money laundering, associated predicate offences and terrorist financing, and for the dissemination of the results of that analysis. The FIU should be able to obtain additional information from reporting entities, and should have access on a timely basis to the financial, administrative and law enforcement information that it requires to undertake its functions properly.

30. Responsibilities of law enforcement and investigative authorities *

Countries should ensure that designated law enforcement authorities have responsibility for money laundering and terrorist financing investigations within the framework of national AML/CFT policies. At least in all cases related to major proceeds-generating offences, these designated law enforcement authorities should develop a pro-active parallel financial investigation when pursuing money laundering, associated predicate offences and terrorist financing. This should include cases where the associated predicate offence occurs outside their jurisdictions. Countries should ensure that competent authorities have responsibility for expeditiously identifying, tracing and initiating actions to freeze and seize property that is, or may become, subject to confiscation, or is suspected of being proceeds of crime. Countries should also make use, when necessary, of permanent or temporary multi-disciplinary groups specialised in financial or asset investigations. Countries should ensure that, when necessary,

cooperative investigations with appropriate competent authorities in other countries take place.

31. Powers of law enforcement and investigative authorities

When conducting investigations of money laundering, associated predicate offences and terrorist financing, competent authorities should be able to obtain access to all necessary documents and information for use in those investigations, and in prosecutions and related actions. This should include powers to use compulsory measures for the production of records held by financial institutions, DNFBPs and other natural or legal persons, for the search of persons and premises, for taking witness statements, and for the seizure and obtaining of evidence.

Countries should ensure that competent authorities conducting investigations are able to use a wide range of investigative techniques suitable for the investigation of money laundering, associated predicate offences and terrorist financing. These investigative techniques include: undercover operations, intercepting communications, accessing computer systems and controlled delivery. In addition, countries should have effective mechanisms in place to identify, in a timely manner, whether natural or legal persons hold or control accounts. They should also have mechanisms to ensure that competent authorities have a process to identify assets without prior notification to the owner. When conducting investigations of money laundering, associated predicate offences and terrorist financing, competent authorities should be able to ask for all relevant information held by the FIU.

32. Cash couriers *

Countries should have measures in place to detect the physical cross-border transportation of currency and bearer negotiable instruments, including through a declaration system and/or disclosure system.

Countries should ensure that their competent authorities have the legal authority to stop or restrain currency or bearer negotiable instruments that are suspected to be related to terrorist financing, money laundering or predicate offences, or that are falsely declared or disclosed.

Countries should ensure that effective, proportionate and dissuasive sanctions are available to deal with persons who make false declaration(s) or disclosure(s). In cases where the currency or bearer negotiable instruments are related to terrorist financing, money laundering or predicate offences, countries should also adopt measures, including legislative ones consistent with Recommendation 4, which would enable the confiscation of such currency or instruments.

GENERAL REQUIREMENTS

33. Statistics

Countries should maintain comprehensive statistics on matters relevant to the effectiveness and efficiency of their AML/CFT systems. This should include statistics on the STRs received and disseminated; on money laundering and terrorist financing investigations, prosecutions and convictions; on property frozen, seized and confiscated; and on mutual legal assistance or other international requests for cooperation.

34. Guidance and feedback

The competent authorities, supervisors and SRBs should establish guidelines, and provide feedback, which will assist financial institutions and designated non-financial businesses and professions in applying national measures to combat money laundering and terrorist financing, and, in particular, in detecting and reporting suspicious transactions.

SANCTIONS

35. Sanctions

Countries should ensure that there is a range of effective, proportionate and dissuasive sanctions, whether criminal, civil or administrative, available to deal with natural or legal persons covered by Recommendations 6, and 8 to 23, that fail to comply with AML/CFT requirements. Sanctions should be applicable not only to financial institutions and DNFBPs, but also to their directors and senior management.

G. INTERNATIONAL COOPERATION

36. International instruments

Countries should take immediate steps to become party to and implement fully the Vienna Convention, 1988; the Palermo Convention, 2000; the United Nations Convention against Corruption, 2003; and the Terrorist Financing Convention, 1999. Where applicable, countries are also encouraged to ratify and implement other relevant international conventions, such as the Council of Europe Convention on Cybercrime, 2001; the Inter-American Convention against Terrorism, 2002; and the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime and on the Financing of Terrorism, 2005.

37. Mutual legal assistance

Countries should rapidly, constructively and effectively provide the widest possible range of mutual legal assistance in relation to money laundering, associated predicate offences and terrorist financing investigations, prosecutions, and related proceedings. Countries should have an adequate legal basis for providing assistance and, where appropriate, should have in place treaties, arrangements or other mechanisms to enhance cooperation. In particular, countries should:

(a) Not prohibit, or place unreasonable or unduly restrictive conditions on, the provision of mutual legal assistance.

(b) Ensure that they have clear and efficient processes for the timely prioritisation and execution of mutual legal assistance requests. Countries should use a central authority, or another established official mechanism, for effective transmission and execution of requests. To monitor progress on requests, a case management system should be maintained.

(c) Not refuse to execute a request for mutual legal assistance on the sole ground that the offence is also considered to involve fiscal matters.

(d) Not refuse to execute a request for mutual legal assistance on the grounds that laws require financial institutions or DNFBPs to maintain secrecy or confidentiality (except where the relevant information that is sought is held in circumstances where legal professional privilege or legal professional secrecy applies).

(e) Maintain the confidentiality of mutual legal assistance requests they receive and the information contained in them, subject to fundamental principles of domestic law, in order to protect the integrity of the investigation or inquiry. If the requested country cannot comply with the requirement of confidentiality, it should promptly inform the requesting country.

Countries should render mutual legal assistance, notwithstanding the absence of dual criminality, if the assistance does not involve coercive actions. Countries should consider adopting such measures as may be necessary to enable them to provide a wide scope of assistance in the absence of dual criminality.

Where dual criminality is required for mutual legal assistance, that requirement should be deemed to be satisfied regardless of whether both countries place the offence within the same category of offence, or denominate the offence by the same terminology, provided that both countries criminalise the conduct underlying the offence.

Countries should ensure that, of the powers and investigative techniques required under Recommendation 31, and any other powers and investigative techniques available to their competent authorities:

(a) all those relating to the production, search and seizure of information, documents or evidence (including financial records) from financial institutions or other persons, and the taking of witness statements; and

(b) a broad range of other powers and investigative techniques;

are also available for use in response to requests for mutual legal assistance, and, if consistent with their domestic framework, in response to direct requests from foreign judicial or law enforcement authorities to domestic counterparts.

To avoid conflicts of jurisdiction, consideration should be given to devising and applying mechanisms for determining the best venue for prosecution of defendants in the interests of justice in cases that are subject to prosecution in more than one country.

Countries should, when making mutual legal assistance requests, make best efforts to provide complete factual and legal information that will allow for timely and efficient execution of requests, including any need for urgency, and should send requests using expeditious means. Countries should, before sending requests, make best efforts to ascertain the legal requirements and formalities to obtain assistance.

The authorities responsible for mutual legal assistance (e.g. a Central Authority) should be provided with adequate financial, human and technical resources. Countries should have in place processes to ensure that the staff of such authorities maintain high professional standards, including standards concerning confidentiality, and should be of high integrity and be appropriately skilled.

38. Mutual legal assistance: freezing and confiscation *

Countries should ensure that they have the authority to take expeditious action in response to requests by foreign countries to identify, freeze, seize and confiscate property laundered; proceeds from money laundering, predicate offences and terrorist financing; instrumentalities used in, or intended for use in, the commission of these offences; or property of corresponding value. This authority should include being able to respond to requests made on the basis of non-conviction-based confiscation proceedings and related provisional measures, unless this is inconsistent with fundamental principles of their domestic law. Countries should also have effective mechanisms for managing such property, instrumentalities or property of corresponding value, and arrangements for coordinating seizure and confiscation proceedings, which should include the sharing of confiscated assets.

39. Extradition

Countries should constructively and effectively execute extradition requests in relation to money laundering and terrorist financing, without undue delay. Countries should also take all possible measures to ensure that they do not provide safe havens for individuals charged with the financing of terrorism, terrorist acts or terrorist organisations. In particular, countries should:

(a) ensure money laundering and terrorist financing are extraditable offences;

(b) ensure that they have clear and efficient processes for the timely execution of extradition requests including prioritisation where appropriate. To monitor progress of requests a case management system should be maintained;

(c) not place unreasonable or unduly restrictive conditions on the execution of requests; and

(d) ensure they have an adequate legal framework for extradition.

Each country should either extradite its own nationals, or, where a country does not do so solely on the grounds of nationality, that country should, at the request of the country seeking extradition, submit the case, without undue delay, to its competent authorities for the purpose of prosecution of the offences set forth in the request. Those authorities should take their decision and conduct their proceedings in the same manner as in the case of any other offence of a serious nature under the domestic law of that country. The countries concerned should cooperate with each other, in particular on procedural and evidentiary aspects, to ensure the efficiency of such prosecutions.

Where dual criminality is required for extradition, that requirement should be deemed to be satisfied regardless of whether both countries place the offence within the same category of offence, or denominate the offence by the same terminology, provided that both countries criminalise the conduct underlying the offence.

Consistent with fundamental principles of domestic law, countries should have simplified extradition mechanisms, such as allowing direct transmission of requests for provisional arrests between appropriate authorities, extraditing persons based only on warrants of arrests or judgments, or introducing a simplified extradition of consenting persons who waive formal extradition proceedings. The authorities responsible for extradition should be provided with adequate financial, human and technical resources. Countries should have in place processes to ensure that the staff of such authorities maintain high professional standards, including standards concerning confidentiality, and should be of high integrity and be appropriately skilled.

40. Other forms of international cooperation *

Countries should ensure that their competent authorities can rapidly, constructively and effectively provide the widest range of international cooperation in relation to money laundering, associated predicate offences and terrorist financing. Countries should do so both spontaneously and upon request, and there should be a lawful basis for providing

cooperation. Countries should authorise their competent authorities to use the most efficient means to cooperate. Should a competent authority need bilateral or multilateral agreements or arrangements, such as a Memorandum of Understanding (MOU), these should be negotiated and signed in a timely way with the widest range of foreign counterparts.

Competent authorities should use clear channels or mechanisms for the effective transmission and execution of requests for information or other types of assistance. Competent authorities should have clear and efficient processes for the prioritisation and timely execution of requests, and for safeguarding the information received.

INTERPRETIVE NOTES TO THE FATF RECOMMENDATIONS

INTERPRETIVE NOTE TO RECOMMENDATION 1 (ASSESSING RISKS AND APPLYING A RISK-BASED APPROACH)

1. The risk-based approach (RBA) is an effective way to combat money laundering and terrorist financing. In determining how the RBA should be implemented in a sector, countries should consider the capacity and anti-money laundering/countering the financing of terrorism (AML/CFT) experience of the relevant sector. Countries should understand that the discretion afforded, and responsibility imposed on, financial institutions and designated non-financial bodies and professions (DNFBPs) by the RBA is more appropriate in sectors with greater AML/CFT capacity and experience. This should not exempt financial institutions and DNFBPs from the requirement to apply enhanced measures when they identify higher risk scenarios. By adopting a risk-based approach, competent authorities, financial institutions and DNFBPs should be able to ensure that measures to prevent or mitigate money laundering and terrorist financing are commensurate with the risks identified, and would enable them to make decisions on how to allocate their own resources in the most effective way.

2. In implementing a RBA, financial institutions and DNFBPs should have in place processes to identify, assess, monitor, manage and mitigate money laundering and terrorist financing risks. The general principle of a RBA is that, where there are higher risks, countries should require financial institutions and DNFBPs to take enhanced measures to manage and mitigate those risks; and that, correspondingly, where the risks are lower, simplified measures may be permitted. Simplified measures should not be permitted whenever there is a suspicion of money laundering or terrorist financing. Specific Recommendations set out more precisely how this general principle applies to particular requirements. Countries may also, in strictly limited circumstances and where there is a proven low risk of money laundering and terrorist financing, decide not to apply certain Recommendations to a particular type of financial institution or activity, or DNFBP (see below). Equally, if countries determine through their risk assessments that there are types of institutions, activities, businesses or professions that are at risk of abuse from money laundering and terrorist financing, and which do not fall under the definition of financial institution or DNFBP, they should consider applying AML/CFT requirements to such sectors.

A. Obligations and decisions for countries

3. **Assessing risk** - Countries[1] should take appropriate steps to identify and assess the money laundering and terrorist financing risks for the country, on an ongoing basis and in order to: (i) inform potential changes to the country's AML/CFT regime, including changes to laws, regulations and other measures; (ii) assist in the allocation and prioritisation of AML/CFT resources by competent authorities; and (iii) make information available for AML/CFT risk assessments conducted by financial institutions and DNFBPs. Countries should keep the assessments up-to-date, and should have mechanisms to provide appropriate information on the results to all relevant competent authorities and self-regulatory bodies (SRBs), financial institutions and DNFBPs.

4. **Higher risk** - Where countries identify higher risks, they should ensure that their AML/CFT regime addresses these higher risks, and, without prejudice to any other measures taken by countries to mitigate these higher risks, either prescribe that financial institutions and DNFBPs take enhanced measures to manage and mitigate the risks, or ensure that this information is incorporated into risk assessments carried out by financial institutions and DNFBPs, in order to manage and mitigate risks appropriately. Where the FATF Recommendations identify higher risk activities for which enhanced or specific measures are required, all such measures must be applied, although the extent of such measures may vary according to the specific level of risk.

5. **Lower risk** - Countries may decide to allow simplified measures for some of the FATF Recommendations requiring financial institutions or DNFBPs to take certain actions, provided that a lower risk has been identified, and this is consistent with the country's assessment of its money laundering and terrorist financing risks, as referred to in paragraph 3.

   Independent of any decision to specify certain lower risk categories in line with the previous paragraph, countries may also allow financial institutions and DNFBPs to apply simplified customer due diligence (CDD) measures, provided that the requirements set out in section B below ("Obligations and decisions for financial institutions and DNFBPs"), and in paragraph 7 below, are met.

6. **Exemptions** - Countries may decide not to apply some of the FATF Recommendations requiring financial institutions or DNFBPs to take certain actions, provided:

   (a) there is a proven low risk of money laundering and terrorist financing; this occurs in strictly limited and justified circumstances; and it relates to a particular type of financial institution or activity, or DNFBP; or

   (b) a financial activity (other than the transferring of money or value) is carried out by a natural or legal person on an occasional or very limited basis (having regard to quantitative and absolute criteria), such that there is low risk of money laundering and terrorist financing.

[1] Where appropriate, AML/CFT risk assessments at a supra-national level should be taken into account when considering whether this obligation is satisfied.

While the information gathered may vary according to the level of risk, the requirements of Recommendation 11 to retain information should apply to whatever information is gathered.

7. **Supervision and monitoring of risk** - Supervisors (or SRBs for relevant DNFBPs sectors) should ensure that financial institutions and DNFBPs are effectively implementing the obligations set out below. When carrying out this function, supervisors and SRBs should, as and when required in accordance with the Interpretive Notes to Recommendations 26 and 28, review the money laundering and terrorist financing risk profiles and risk assessments prepared by financial institutions and DNFBPs, and take the result of this review into consideration.

B. Obligations and decisions for financial institutions and DNFBPs

8. **Assessing risk** - Financial institutions and DNFBPs should be required to take appropriate steps to identify and assess their money laundering and terrorist financing risks (for customers, countries or geographic areas; and products, services, transactions or delivery channels). They should document those assessments in order to be able to demonstrate their basis, keep these assessments up to date, and have appropriate mechanisms to provide risk assessment information to competent authorities and SRBs. The nature and extent of any assessment of money laundering and terrorist financing risks should be appropriate to the nature and size of the business. Financial institutions and DNFBPs should always understand their money laundering and terrorist financing risks, but competent authorities or SRBs may determine that individual documented risk assessments are not required, if the specific risks inherent to the sector are clearly identified and understood.

9. **Risk management and mitigation** - Financial institutions and DNFBPs should be required to have policies, controls and procedures that enable them to manage and mitigate effectively the risks that have been identified (either by the country or by the financial institution or DNFBP). They should be required to monitor the implementation of those controls and to enhance them, if necessary. The policies, controls and procedures should be approved by senior management, and the measures taken to manage and mitigate the risks (whether higher or lower) should be consistent with national requirements and with guidance from competent authorities and SRBs.

10. **Higher risk** - Where higher risks are identified financial institutions and DNFBPs should be required to take enhanced measures to manage and mitigate the risks.

11. **Lower risk** - Where lower risks are identified, countries may allow financial institutions and DNFBPs to take simplified measures to manage and mitigate those risks.

12. When assessing risk, financial institutions and DNFBPs should consider all the relevant risk factors before determining what is the level of overall risk and the appropriate level of mitigation to be applied. Financial institutions and DNFBPs may differentiate the extent of measures, depending on the type and level of risk for the various risk factors (e.g. in a particular situation, they could apply normal CDD for customer acceptance measures, but enhanced CDD for ongoing monitoring, or vice versa).

INTERPRETIVE NOTE TO RECOMMENDATION 3 (MONEY LAUNDERING OFFENCE)

1. Countries should criminalise money laundering on the basis of the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances, 1988 (the Vienna Convention) and the United Nations Convention against Transnational Organized Crime, 2000 (the Palermo Convention).

2. Countries should apply the crime of money laundering to all serious offences, with a view to including the widest range of predicate offences. Predicate offences may be described by reference to all offences; or to a threshold linked either to a category of serious offences; or to the penalty of imprisonment applicable to the predicate offence (threshold approach); or to a list of predicate offences; or a combination of these approaches.

3. Where countries apply a threshold approach, predicate offences should, at a minimum, comprise all offences that fall within the category of serious offences under their national law, or should include offences that are punishable by a maximum penalty of more than one year's imprisonment, or, for those countries that have a minimum threshold for offences in their legal system, predicate offences should comprise all offences that are punished by a minimum penalty of more than six months imprisonment.

4. Whichever approach is adopted, each country should, at a minimum, include a range of offences within each of the designated categories of offences. The offence of money laundering should extend to any type of property, regardless of its value, that directly or indirectly represents the proceeds of crime. When proving that property is the proceeds of crime, it should not be necessary that a person be convicted of a predicate offence.

5. Predicate offences for money laundering should extend to conduct that occurred in another country, which constitutes an offence in that country, and which would have constituted a predicate offence had it occurred domestically. Countries may provide that the only prerequisite is that the conduct would have constituted a predicate offence, had it occurred domestically.

6. Countries may provide that the offence of money laundering does not apply to persons who committed the predicate offence, where this is required by fundamental principles of their domestic law.

7. Countries should ensure that:

   (a) The intent and knowledge required to prove the offence of money laundering may be inferred from objective factual circumstances.

   (b) Effective, proportionate and dissuasive criminal sanctions should apply to natural persons convicted of money laundering.

   (c) Criminal liability and sanctions, and, where that is not possible (due to fundamental principles of domestic law), civil or administrative liability and sanctions, should apply to legal persons. This should not preclude parallel criminal, civil or administrative proceedings with respect to legal persons in countries in which more than one form of

liability is available. Such measures should be without prejudice to the criminal liability of natural persons. All sanctions should be effective, proportionate and dissuasive.

(d) There should be appropriate ancillary offences to the offence of money laundering, including participation in, association with or conspiracy to commit, attempt, aiding and abetting, facilitating, and counselling the commission, unless this is not permitted by fundamental principles of domestic law.

INTERPRETIVE NOTE TO RECOMMENDATIONS 4 AND 38 (CONFISCATION AND PROVISIONAL MEASURES)

Countries should establish mechanisms that will enable their competent authorities to effectively manage and, when necessary, dispose of, property that is frozen or seized, or has been confiscated. These mechanisms should be applicable both in the context of domestic proceedings, and pursuant to requests by foreign countries.

INTERPRETIVE NOTE TO RECOMMENDATION 5 (TERRORIST FINANCING OFFENCE)

A. Objectives

1. Recommendation 5 was developed with the objective of ensuring that countries have the legal capacity to prosecute and apply criminal sanctions to persons that finance terrorism. Given the close connection between international terrorism and, *inter alia*, money laundering, another objective of Recommendation 5 is to emphasise this link by obligating countries to include terrorist financing offences as predicate offences for money laundering.

B. Characteristics of the terrorist financing offence

2. Terrorist financing offences should extend to any person who wilfully provides or collects funds or other assets by any means, directly or indirectly, with the unlawful intention that they should be used, or in the knowledge that they are to be used, in full or in part: (a) to carry out a terrorist act(s); (b) by a terrorist organisation; or (c) by an individual terrorist.

3. Terrorist financing includes financing the travel of individuals who travel to a State other than their States of residence or nationality for the purpose of the perpetration, planning, or preparation of, or participation in, terrorist acts or the providing or receiving of terrorist training.

4. Criminalising terrorist financing solely on the basis of aiding and abetting, attempt, or conspiracy is not sufficient to comply with this Recommendation.

5. Terrorist financing offences should extend to any funds or other assets, whether from a legitimate or illegitimate source.

6. Terrorist financing offences should not require that the funds or other assets: (a) were actually used to carry out or attempt a terrorist act(s); or (b) be linked to a specific terrorist act(s).

7. Countries should ensure that the intent and knowledge required to prove the offence of terrorist financing may be inferred from objective factual circumstances.

8. Effective, proportionate and dissuasive criminal sanctions should apply to natural persons convicted of terrorist financing.

9. Criminal liability and sanctions, and, where that is not possible (due to fundamental principles of domestic law), civil or administrative liability and sanctions, should apply to legal persons. This should not preclude parallel criminal, civil or administrative proceedings with respect to legal persons in countries in which more than one form of liability is available. Such measures should be without prejudice to the criminal liability of natural persons. All sanctions should be effective, proportionate and dissuasive.

10. It should also be an offence to attempt to commit the offence of terrorist financing.

11. It should also be an offence to engage in any of the following types of conduct:

    (a) Participating as an accomplice in an offence, as set forth in paragraphs 2 or 9 of this Interpretive Note;

(b) Organising or directing others to commit an offence, as set forth in paragraphs 2 or 9 of this Interpretive Note;

(c) Contributing to the commission of one or more offence(s), as set forth in paragraphs 2 or 9 of this Interpretive Note, by a group of persons acting with a common purpose. Such contribution shall be intentional and shall either: (i) be made with the aim of furthering the criminal activity or criminal purpose of the group, where such activity or purpose involves the commission of a terrorist financing offence; or (ii) be made in the knowledge of the intention of the group to commit a terrorist financing offence.

12. Terrorist financing offences should apply, regardless of whether the person alleged to have committed the offence(s) is in the same country or a different country from the one in which the terrorist(s)/terrorist organisation(s) is located or the terrorist act(s) occurred/will occur.

INTERPRETIVE NOTE TO RECOMMENDATION 6 (TARGETED FINANCIAL SANCTIONS RELATED TO TERRORISM AND TERRORIST FINANCING)

A. OBJECTIVE

1. Recommendation 6 requires each country to implement targeted financial sanctions to comply with the United Nations Security Council resolutions that require countries to freeze, without delay, the funds or other assets, and to ensure that no funds and other assets are made available to or for the benefit of: (i) any person[2] or entity designated by the United Nations Security Council (the Security Council) under Chapter VII of the Charter of the United Nations, as required by Security Council resolution 1267 (1999) and its successor resolutions[3]; or (ii) any person or entity designated by that country pursuant to Security Council resolution 1373 (2001).

2. It should be stressed that none of the obligations in Recommendation 6 is intended to replace other measures or obligations that may already be in place for dealing with funds or other assets in the context of a criminal, civil or administrative investigation or proceeding, as is required by Recommendation 4 (confiscation and provisional measures)[4]. Measures under Recommendation 6 may complement criminal proceedings against a designated person or entity, and be adopted by a competent authority or a court, but are not conditional upon the existence of such proceedings. Instead, the focus of Recommendation 6 is on the preventive measures that are necessary and unique in the context of stopping the flow of funds or other assets to terrorist groups; and the use of funds or other assets by terrorist groups. In determining the limits of, or fostering widespread support for, an effective counter-terrorist financing regime, countries must also respect human rights, respect the rule of law, and recognise the rights of innocent third parties.

---

2 Natural or legal person.

3 Recommendation 6 is applicable to all current and future successor resolutions to resolution 1267(1999) and any future UNSCRs which impose targeted financial sanctions in the terrorist financing context. At the time of issuance of this Interpretive Note, (February 2012), the successor resolutions to resolution 1267 (1999) are resolutions: 1333 (2000), 1363 (2001), 1390 (2002), 1452 (2002), 1455 (2003), 1526 (2004), 1617 (2005), 1730 (2006), 1735 (2006), 1822 (2008), 1904 (2009), 1988 (2011), and 1989 (2011).

4 Based on requirements set, for instance, in the *United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances (1988)(the Vienna Convention)* and the *United Nations Convention against Transnational Organised Crime (2000) (the Palermo Convention),* which contain obligations regarding freezing, seizure and confiscation in the context of combating transnational crime. Additionally, the *International Convention for the Suppression of the Financing of Terrorism (1999)(the Terrorist Financing Convention)* contains obligations regarding freezing, seizure and confiscation in the context of combating terrorist financing. Those obligations exist separately and apart from the obligations set forth in Recommendation 6 and the United Nations Security Council Resolutions related to terrorist financing.

B. IDENTIFYING AND DESIGNATING PERSONS AND ENTITIES FINANCING OR SUPPORTING TERRORIST ACTIVITIES

3. For resolution 1267 (1999) and its successor resolutions, designations relating to Al-Qaida are made by the 1267 Committee, and designations pertaining to the Taliban and related threats to Afghanistan are made by the 1988 Committee, with both Committees acting under the authority of Chapter VII of the Charter of the United Nations. For resolution 1373 (2001), designations are made, at the national or supranational level, by a country or countries acting on their own motion, or at the request of another country, if the country receiving the request is satisfied, according to applicable legal principles, that a requested designation is supported by reasonable grounds, or a reasonable basis, to suspect or believe that the proposed designee meets the criteria for designation in resolution 1373 (2001), as set forth in Section E.

4. Countries need to have the authority, and effective procedures or mechanisms, to identify and initiate proposals for designations of persons and entities targeted by resolution 1267 (1999) and its successor resolutions, consistent with the obligations set out in those Security Council resolutions[5]. Such authority and procedures or mechanisms are essential to propose persons and entities to the Security Council for designation in accordance with Security Council list-based programmes, pursuant to those Security Council resolutions. Countries also need to have the authority and effective procedures or mechanisms to identify and initiate designations of persons and entities pursuant to S/RES/1373 (2001), consistent with the obligations set out in that Security Council resolution. Such authority and procedures or mechanisms are essential to identify persons and entities who meet the criteria identified in resolution 1373 (2001), described in Section E. A country's regime to implement resolution 1267 (1999) and its successor resolutions, and resolution 1373 (2001), should include the following necessary elements:

   (a) Countries should identify a competent authority or a court as having responsibility for:

      (i) proposing to the 1267 Committee, for designation as appropriate, persons or entities that meet the specific criteria for designation, as set forth in Security Council resolution 1989 (2011) (on Al-Qaida) and related resolutions, if that authority decides to do so and believes that it has sufficient evidence to support the designation criteria;

      (ii) proposing to the 1988 Committee, for designation as appropriate, persons or entities that meet the specific criteria for designation, as set forth in Security Council resolution 1988 (2011) (on the Taliban and those associated with the Taliban in constituting a threat to the peace, stability and security of Afghanistan) and related resolutions, if that authority decides to do so and believes that it has sufficient evidence to support the designation criteria; and

[5] The relevant Security Council resolutions do not require countries to identify persons or entities and submit these to the relevant United Nations Committees, but to have the authority and effective procedures and mechanisms in place to be able to do so.

(iii) designating persons or entities that meet the specific criteria for designation, as set forth in resolution 1373 (2001), as put forward either on the country's own motion or, after examining and giving effect to, if appropriate, the request of another country, if the country receiving the request is satisfied, according to applicable legal principles, that a requested designation is supported by reasonable grounds, or a reasonable basis, to suspect or believe that the proposed designee meets the criteria for designation in resolution 1373 (2001), as set forth in Section E.

(b) Countries should have a mechanism(s) for identifying targets for designation, based on the designation criteria set out in resolution 1988 (2011) and resolution 1989 (2011) and related resolutions, and resolution 1373 (2001) (see Section E for the specific designation criteria of relevant Security Council resolutions). This includes having authority and effective procedures or mechanisms to examine and give effect to, if appropriate, the actions initiated under the freezing mechanisms of other countries pursuant to resolution 1373 (2001). To ensure that effective cooperation is developed among countries, countries should ensure that, when receiving a request, they make a prompt determination whether they are satisfied, according to applicable (supra-) national principles, that the request is supported by reasonable grounds, or a reasonable basis, to suspect or believe that the proposed designee meets the criteria for designation in resolution 1373 (2011), as set forth in Section E.

(c) The competent authority(ies) should have appropriate legal authorities and procedures or mechanisms to collect or solicit as much information as possible from all relevant sources to identify persons and entities that, based on reasonable grounds, or a reasonable basis to suspect or believe, meet the criteria for designation in the relevant Security Council resolutions.

(d) When deciding whether or not to make a (proposal for) designation, countries should apply an evidentiary standard of proof of "reasonable grounds" or "reasonable basis". For designations under resolutions 1373 (2001), the competent authority of each country will apply the legal standard of its own legal system regarding the kind and quantum of evidence for the determination that "reasonable grounds" or "reasonable basis" exist for a decision to designate a person or entity, and thus initiate an action under a freezing mechanism. This is the case irrespective of whether the proposed designation is being put forward on the relevant country's own motion or at the request of another country. Such (proposals for) designations should not be conditional upon the existence of a criminal proceeding.

(e) When proposing names to the 1267 Committee for inclusion on the Al-Qaida Sanctions List, pursuant to resolution 1267 (1999) and its successor resolutions, countries should:

(i) follow the procedures and standard forms for listing, as adopted by the 1267 Committee;

(ii) provide as much relevant information as possible on the proposed name, in particular, sufficient identifying information to allow for the accurate and positive identification of individuals, groups, undertakings, and entities, and to the extent possible, the information required by Interpol to issue a Special Notice;

(iii) provide a statement of case which contains as much detail as possible on the basis for the listing, including: specific information supporting a determination that the person or entity meets the relevant criteria for designation (see Section E for the specific designation criteria of relevant Security Council resolutions); the nature of the information; supporting information or documents that can be provided; and details of any connection between the proposed designee and any currently designated person or entity. This statement of case should be releasable, upon request, except for the parts a Member State identifies as being confidential to the 1267 Committee; and

(iv) specify whether their status as a designating state may be made known.

(f) When proposing names to the 1988 Committee for inclusion on the Taliban Sanctions List, pursuant to resolution 1988 (2011) and its successor resolutions, countries should:

(i) follow the procedures for listing, as adopted by the 1988 Committee;

(ii) provide as much relevant information as possible on the proposed name, in particular, sufficient identifying information to allow for the accurate and positive identification of individuals, groups, undertakings, and entities, and to the extent possible, the information required by Interpol to issue a Special Notice; and

(iii) provide a statement of case which contains as much detail as possible on the basis for the listing, including: specific information supporting a determination that the person or entity meets the relevant designation (see Section E for the specific designation criteria of relevant Security Council resolutions); the nature of the information; supporting information or documents that can be provided; and details of any connection between the proposed designee and any currently designated person or entity. This statement of case should be releasable, upon request, except for the parts a Member State identifies as being confidential to the 1988 Committee.

(g) When requesting another country to give effect to the actions initiated under the freezing mechanisms that have been implemented pursuant to resolution 1373 (2001), the initiating country should provide as much detail as possible on: the proposed name, in particular, sufficient identifying information to allow for the accurate and positive identification of persons and entities; and specific information supporting a determination that the person or entity meets the relevant criteria for designation (see Section E for the specific designation criteria of relevant Security Council resolutions).

(h) Countries should have procedures to be able to operate ex parte against a person or entity who has been identified and whose (proposal for) designation is being considered.

C. FREEZING AND PROHIBITING DEALING IN FUNDS OR OTHER ASSETS OF DESIGNATED PERSONS AND ENTITIES

5. There is an obligation for countries to implement targeted financial sanctions without delay against persons and entities designated by the 1267 Committee and 1988 Committee (in the case of resolution 1267 (1999) and its successor resolutions), when these Committees are acting under the authority of Chapter VII of the Charter of the United Nations. For resolution 1373 (2001), the obligation for countries to take freezing action and prohibit the dealing in funds or other assets of designated persons and entities, without delay, is triggered by a designation at the (supra-)national level, as put forward either on the country's own motion or at the request of another country, if the country receiving the request is satisfied, according to applicable legal principles, that a requested designation is supported by reasonable grounds, or a reasonable basis, to suspect or believe that the proposed designee meets the criteria for designation in resolution 1373 (2001), as set forth in Section E.

6. Countries should establish the necessary legal authority and identify domestic competent authorities responsible for implementing and enforcing targeted financial sanctions, in accordance with the following standards and procedures:

(a) Countries[6] should require all natural and legal persons within the country to freeze, without delay and without prior notice, the funds or other assets of designated persons and entities. This obligation should extend to: all funds or other assets that are owned or controlled by the designated person or entity, and not just those that can be tied to a particular terrorist act, plot or threat; those funds or other assets that are wholly or jointly owned or controlled, directly or indirectly, by designated persons or entities; and the funds or other assets derived or generated from funds or other assets owned or controlled directly or indirectly by designated persons or entities, as well as funds or other assets of persons and entities acting on behalf of, or at the direction of, designated persons or entities.

(b) Countries should prohibit their nationals, or any persons and entities within their jurisdiction, from making any funds or other assets, economic resources, or financial or other related services, available, directly or indirectly, wholly or jointly, for the benefit of designated persons and entities; entities owned or controlled, directly or indirectly, by designated persons or entities; and persons and entities acting on behalf of, or at the direction of, designated persons or entities, unless licensed, authorised or

[6] In the case of the European Union (EU), which is a supra-national jurisdiction under Recommendation 6, the EU law applies as follows. The assets of designated persons and entities are frozen by the EU regulations and their amendments. EU member states may have to take additional measures to implement the freeze, and all natural and legal persons within the EU have to respect the freeze and not make funds available to designated persons and entities.

otherwise notified in accordance with the relevant Security Council resolutions (see Section E below).

(c) Countries should have mechanisms for communicating designations to the financial sector and the DNFBPs immediately upon taking such action, and providing clear guidance, particularly to financial institutions and other persons or entities, including DNFBPs, that may be holding targeted funds or other assets, on their obligations in taking action under freezing mechanisms.

(d) Countries should require financial institutions and DNFBPs[7] to report to competent authorities any assets frozen or actions taken in compliance with the prohibition requirements of the relevant Security Council resolutions, including attempted transactions, and ensure that such information is effectively utilised by the competent authorities.

(e) Countries should adopt effective measures which protect the rights of *bona fide* third parties acting in good faith when implementing the obligations under Recommendation 6.

D. DE-LISTING, UNFREEZING AND PROVIDING ACCESS TO FROZEN FUNDS OR OTHER ASSETS

7. Countries should develop and implement publicly known procedures to submit de-listing requests to the Security Council in the case of persons and entities designated pursuant to resolution 1267(1999) and its successor resolutions that, in the view of the country, do not or no longer meet the criteria for designation. In the event that the 1267 Committee or 1988 Committee has de-listed a person or entity, the obligation to freeze no longer exists. In the case of de-listing requests related to Al-Qaida, such procedures and criteria should be in accordance with procedures adopted by the 1267 Committee under Security Council resolutions 1730 (2006), 1735 (2006), 1822 (2008), 1904 (2009), 1989 (2011), and any successor resolutions. In the case of de-listing requests related to the Taliban and related threats to the peace, security and stability of Afghanistan, such procedures and criteria should be in accordance with procedures adopted by the 1988 Committee under Security Council resolutions 1730 (2006), 1735 (2006), 1822 (2008), 1904 (2009), 1988 (2011), and any successor resolutions.

8. For persons and entities designated pursuant to resolution 1373 (2001), countries should have appropriate legal authorities and procedures or mechanisms to delist and unfreeze the funds or other assets of persons and entities that no longer meet the criteria for designation. Countries should also have procedures in place to allow, upon request, review of the designation decision before a court or other independent competent authority.

9. For persons or entities with the same or similar name as designated persons or entities, who are inadvertently affected by a freezing mechanism (i.e. a false positive), countries should develop and implement publicly known procedures to unfreeze the funds or other assets of

[7] Security Council resolutions apply to all natural and legal persons within the country.

such persons or entities in a timely manner, upon verification that the person or entity involved is not a designated person or entity.

10. Where countries have determined that funds or other assets of persons and entities designated by the Security Council, or one of its relevant sanctions committees, are necessary for basic expenses, for the payment of certain types of fees, expenses and service charges, or for extraordinary expenses, countries should authorise access to such funds or other assets in accordance with the procedures set out in Security Council resolution 1452 (2002) and any successor resolutions. On the same grounds, countries should authorise access to funds or other assets, if freezing measures are applied to persons and entities designated by a (supra-)national country pursuant to resolution 1373 (2001) and as set out in resolution 1963 (2010).

11. Countries should provide for a mechanism through which a designated person or entity can challenge their designation, with a view to having it reviewed by a competent authority or a court. With respect to designations on the Al-Qaida Sanctions List, countries should inform designated persons and entities of the availability of the United Nations Office of the Ombudsperson, pursuant to resolution 1904 (2009), to accept de-listing petitions.

12. Countries should have mechanisms for communicating de-listings and unfreezings to the financial sector and the DNFBPs immediately upon taking such action, and providing adequate guidance, particularly to financial institutions and other persons or entities, including DNFBPs, that may be holding targeted funds or other assets, on their obligations to respect a de-listing or unfreezing action.

E. UNITED NATIONS DESIGNATION CRITERIA

13. The criteria for designation as specified in the relevant United Nations Security Council resolutions are:

(a) **Security Council resolutions 1267 (1999), 1989 (2011) and their successor resolutions**[8]:

(i) any person or entity participating in the financing, planning, facilitating, preparing, or perpetrating of acts or activities by, in conjunction with, under the name of, on behalf of, or in support of; supplying, selling or transferring arms and related materiel to; recruiting for; or otherwise supporting acts or activities of Al-Qaida, or any cell, affiliate, splinter group or derivative thereof[9]; or

[8] Recommendation 6 is applicable to all current and future successor resolutions to resolution 1267(1999). At the time of issuance of this Interpretive Note, (February 2012) , the successor resolutions to resolution 1267 (1999) are: resolutions 1333 (2000), 1367 (2001), 1390 (2002), 1455 (2003), 1526 (2004), 1617 (2005), 1735 (2006), 1822 (2008), 1904 (2009), 1988 (2011), and 1989 (2011).

[9] OP2 of resolution 1617 (2005) further defines the criteria for being "associated with" Al-Qaida or Usama bin Laden.

(ii) any undertaking owned or controlled, directly or indirectly, by any person or entity designated under subsection 13(a)(i), or by persons acting on their behalf or at their direction.

(b) **Security Council resolutions 1267 (1999), 1988 (2011) and their successor resolutions**:

(i) any person or entity participating in the financing, planning, facilitating, preparing, or perpetrating of acts or activities by, in conjunction with, under the name of, on behalf of, or in support of; supplying, selling or transferring arms and related materiel to; recruiting for; or otherwise supporting acts or activities of those designated and other individuals, groups, undertakings and entities associated with the Taliban in constituting a threat to the peace, stability and security of Afghanistan; or

(ii) any undertaking owned or controlled, directly or indirectly, by any person or entity designated under subsection 13(b)(i) of this subparagraph, or by persons acting on their behalf or at their direction.

(c) **Security Council resolution 1373 (2001)**:

(i) any person or entity who commits or attempts to commit terrorist acts, or who participates in or facilitates the commission of terrorist acts;

(ii) any entity owned or controlled, directly or indirectly, by any person or entity designated under subsection 13(c) (i) of this subparagraph; or

(iii) any person or entity acting on behalf of, or at the direction of, any person or entity designated under subsection 13(c) (i) of this subparagraph.

INTERPRETIVE NOTE TO RECOMMENDATION 7 (TARGETED FINANCIAL SANCTIONS RELATED TO PROLIFERATION)

A. OBJECTIVE

1. Recommendation 7 requires countries to implement targeted financial sanctions[10] to comply with United Nations Security Council resolutions that require countries to freeze, without delay, the funds or other assets of, and to ensure that no funds and other assets are made available to, and for the benefit of, any person[11] or entity designated by the United Nations Security Council under Chapter VII of the Charter of the United Nations, pursuant to Security Council resolutions that relate to the prevention and disruption of the financing of proliferation of weapons of mass destruction.[12]

2. It should be stressed that none of the requirements in Recommendation 7 is intended to replace other measures or obligations that may already be in place for dealing with funds or other assets in the context of a criminal, civil or administrative investigation or proceeding, as is required by international treaties or Security Council resolutions relating to weapons of mass destruction non-proliferation.[13] The focus of Recommendation 7 is on preventive measures that are necessary and unique in the context of stopping the flow of funds or other assets to proliferators or proliferation; and the use of funds or other assets by proliferators or proliferation, as required by the United Nations Security Council (the Security Council).

---

10 Recommendation 7 is focused on targeted financial sanctions. These include the specific restrictions set out in Security Council resolution 2231 (2015) (see Annex B paragraphs 6(c) and (d)). However, it should be noted that the relevant United Nations Security Council Resolutions are much broader and prescribe other types of sanctions (such as travel bans) and other types of financial provisions (such as activity-based financial prohibitions, category-based sanctions and vigilance measures). With respect to targeted financial sanctions related to the financing of proliferation of weapons of mass destruction and other types of financial provisions, the FATF has issued non-binding guidance, which jurisdictions are encouraged to consider in their implementation of the relevant UNSCRs.

11 Natural or legal person.

12 Recommendation 7 is applicable to all current Security Council resolutions applying targeted financial sanctions relating to the financing of proliferation of weapons of mass destruction, any future successor resolutions, and any future Security Council resolutions which impose targeted financial sanctions in the context of the financing of proliferation of weapons of mass destruction. At the time of issuance of this Interpretive Note (June 2017), the Security Council resolutions applying targeted financial sanctions relating to the financing of proliferation of weapons of mass destruction are: resolutions 1718 (2006), 1874 (2009), 2087 (2013), 2094 (2013), 2270 (2016), 2321 (2016) and 2356 (2017). Resolution 2231 (2015), endorsing the Joint Comprehensive Plan of Action, terminated all provisions of resolutions relating to Iran and proliferation financing, including 1737 (2006), 1747 (2007), 1803 (2008) and 1929 (2010), but established specific restrictions including targeted financial sanctions. This lifts sanctions as part of a step by step approach with reciprocal commitments endorsed by the Security Council. Implementation day of the JCPOA was on 16 January 2016.

13 Based on requirements set, for instance, in the *Nuclear Non-Proliferation Treaty*, the *Biological and Toxin Weapons Convention*, the *Chemical Weapons Convention*, and Security Council resolutions 1540 (2004) and 2235 (2016). Those obligations exist separately and apart from the obligations set forth in Recommendation 7 and its interpretive note.

B. DESIGNATIONS

3. Designations are made by the Security Council in annexes to the relevant resolutions, or by the Security Council Committees established pursuant to these resolutions. There is no specific obligation upon United Nations Member States to submit proposals for designations to the Security Council or the relevant Security Council Committee(s). However, in practice, the Security Council or the relevant Committee(s) primarily depends upon requests for designation by Member States. Security Council resolution 1718 (2006) provides that the relevant Committee shall promulgate guidelines as may be necessary to facilitate the implementation of the measures imposed by this resolution and its successor resolutions. Resolution 2231 (2015) provides that the Security Council shall make the necessary practical arrangements to undertake directly tasks related to the implementation of the resolution.

4. Countries could consider establishing the authority and effective procedures or mechanisms to propose persons and entities to the Security Council for designation in accordance with relevant Security Council resolutions which impose targeted financial sanctions in the context of the financing of proliferation of weapons of mass destruction. In this regard, countries could consider the following elements:

   (a) identifying a competent authority(ies), either executive or judicial, as having responsibility for:

      (i) proposing to the 1718 Sanctions Committee, for designation as appropriate, persons or entities that meet the specific criteria for designation as set forth in resolution 1718 (2006) and its successor resolutions[14], if that authority decides to do so and believes that it has sufficient evidence to support the designation criteria (see Section E for the specific designation criteria associated with relevant Security Council resolutions); and

      (ii) proposing to the Security Council, for designation as appropriate, persons or entities that meet the criteria for designation as set forth in resolution 2231 (2015) and any future successor resolutions, if that authority decides to do so and believes that it has sufficient evidence to support the designation criteria (see Section E for the specific designation criteria associated with relevant Security Council resolutions).

   (b) having a mechanism(s) for identifying targets for designation, based on the designation criteria set out in resolutions 1718 (2006), 2231 (2015), and their successor and any future successor resolutions (see Section E for the specific designation criteria of relevant Security Council resolutions). Such procedures should ensure the determination, according to applicable (supra-)national principles, whether reasonable grounds or a reasonable basis exists to propose a designation.

[14] Recommendation 7 is applicable to all current and future successor resolutions to resolution 1718 (2006). At the time of issuance of this Interpretive Note (June 2017), the successor resolutions to resolution 1718 (2006) are: resolution 1874 (2009), resolution 2087 (2013), resolution 2094 (2013), resolution 2270 (2016), resolution 2321 (2016) and resolution 2356 (2017).

(c) having appropriate legal authority, and procedures or mechanisms, to collect or solicit as much information as possible from all relevant sources to identify persons and entities that, based on reasonable grounds, or a reasonable basis to suspect or believe, meet the criteria for designation in the relevant Security Council resolutions.

(d) when deciding whether or not to propose a designation, taking into account the criteria in Section E of this interpretive note. For proposals of designations, the competent authority of each country will apply the legal standard of its own legal system, taking into consideration human rights, respect for the rule of law, and in recognition of the rights of innocent third parties.

(e) when proposing names to the 1718 Sanctions Committee, pursuant to resolution 1718 (2006) and its successor resolutions, or to the Security Council, pursuant to resolution 2231 (2015) and any future successor resolutions, providing as much detail as possible on:

(i) the proposed name, in particular, sufficient identifying information to allow for the accurate and positive identification of persons and entities; and

(ii) specific information supporting a determination that the person or entity meets the relevant criteria for designation (see Section E for the specific designation criteria of relevant Security Council resolutions).

(f) having procedures to be able, where necessary, to operate ex parte against a person or entity who has been identified and whose proposal for designation is being considered.

C. FREEZING AND PROHIBITING DEALING IN FUNDS OR OTHER ASSETS OF DESIGNATED PERSONS AND ENTITIES

5. There is an obligation for countries to implement targeted financial sanctions without delay against persons and entities designated:

(a) in the case of resolution 1718 (2006) and its successor resolutions, by the Security Council in annexes to the relevant resolutions, or by the 1718 Sanctions Committee of the Security Council[15]; and

(b) in the case of resolution 2231 (2015) and any future successor resolutions by the Security Council,

when acting under the authority of Chapter VII of the Charter of the United Nations.

15 As noted in resolution 2270 (2016) (OP32) this also applies to entities of the Government of the Democratic People's Republic of Korea or the Worker's Party of Korea that countries determine are associated with the DPRK's nuclear or ballistic missile programmes or other activities prohibited by resolution 1718 (2006) and successor resolutions.

6. Countries should establish the necessary legal authority and identify competent domestic authorities responsible for implementing and enforcing targeted financial sanctions, in accordance with the following standards and procedures:

(a) Countries[16] should require all natural and legal persons within the country to freeze, without delay and without prior notice, the funds or other assets of designated persons and entities. This obligation should extend to: all funds or other assets that are owned or controlled by the designated person or entity, and not just those that can be tied to a particular act, plot or threat of proliferation; those funds or other assets that are wholly or jointly owned or controlled, directly or indirectly, by designated persons or entities; and the funds or other assets derived or generated from funds or other assets owned or controlled directly or indirectly by designated persons or entities, as well as funds or other assets of persons and entities acting on behalf of, or at the direction of designated persons or entities.

(b) Countries should ensure that any funds or other assets are prevented from being made available by their nationals or by any persons or entities within their territories, to or for the benefit of designated persons or entities unless licensed, authorised or otherwise notified in accordance with the relevant Security Council resolutions (see Section E below).

(c) Countries should have mechanisms for communicating designations to financial institutions and DNFBPs immediately upon taking such action, and providing clear guidance, particularly to financial institutions and other persons or entities, including DNFBPs, that may be holding targeted funds or other assets, on their obligations in taking action under freezing mechanisms.

(d) Countries should require financial institutions and DNFBPs[17] to report to competent authorities any assets frozen or actions taken in compliance with the prohibition requirements of the relevant Security Council resolutions, including attempted transactions, and ensure that such information is effectively utilised by competent authorities.

(e) Countries should adopt effective measures which protect the rights of bona fide third parties acting in good faith when implementing the obligations under Recommendation 7.

(f) Countries should adopt appropriate measures for monitoring, and ensuring compliance by, financial institutions and DNFBPs with the relevant laws or

16 In the case of the European Union (EU), which is considered a supra-national jurisdiction under Recommendation 7 by the FATF, the assets of designated persons and entities are frozen under EU Common Foreign and Security Policy (CFSP) Council decisions and Council regulations (as amended). EU member states may have to take additional measures to implement the freeze, and all natural and legal persons within the EU have to respect the freeze and not make funds available to designated persons and entities.

17 Security Council resolutions apply to all natural and legal persons within the country.

enforceable means governing the obligations under Recommendation 7. Failure to comply with such laws, or enforceable means should be subject to civil, administrative or criminal sanctions.

D. DE-LISTING, UNFREEZING AND PROVIDING ACCESS TO FROZEN FUNDS OR OTHER ASSETS

7. Countries should develop and implement publicly known procedures to submit de-listing requests to the Security Council in the case of designated persons and entities, that, in the view of the country, do not or no longer meet the criteria for designation. Once the Security Council or the relevant Sanctions Committee has de-listed the person or entity, the obligation to freeze no longer exists. In the case of resolution 1718 (2006) and its successor resolutions, such procedures and criteria should be in accordance with any applicable guidelines or procedures adopted by the Security Council pursuant to resolution 1730 (2006) and any successor resolutions, including those of the Focal Point mechanism established under that resolution. Countries should enable listed persons and entities to petition a request for delisting at the Focal Point for de-listing established pursuant to resolution 1730 (2006), or should inform designated persons or entities to petition the Focal Point directly.

8. For persons or entities with the same or similar name as designated persons or entities, who are inadvertently affected by a freezing mechanism (i.e., a false positive), countries should develop and implement publicly known procedures to unfreeze the funds or other assets of such persons or entities in a timely manner, upon verification that the person or entity involved is not a designated person or entity.

9. Where countries have determined that the exemption conditions set out in resolution 1718(2006) and resolution 2231 (2015) are met, countries should authorise access to funds or other assets in accordance with the procedures set out therein.

10. Countries should permit the addition to the accounts frozen pursuant to resolution 1718 (2006) or resolution 2231 (2015) of interests or other earnings due on those accounts or payments due under contracts, agreements or obligations that arose prior to the date on which those accounts became subject to the provisions of this resolution, provided that any such interest, other earnings and payments continue to be subject to these provisions and are frozen.

11. Freezing action taken pursuant to resolution 1737 (2006) and continued by resolution 2231 (2015), or taken pursuant to resolution 2231 (2015), shall not prevent a designated person or entity from making any payment due under a contract entered into prior to the listing of such person or entity, provided that:

    (a) the relevant countries have determined that the contract is not related to any of the prohibited items, materials, equipment, goods, technologies, assistance, training, financial assistance, investment, brokering or services referred to in resolution 2231 (2015) and any future successor resolutions;

    (b) the relevant countries have determined that the payment is not directly or indirectly received by a person or entity subject to the measures in paragraph 6 of Annex B to resolution 2231 (2015); and

(c) the relevant countries have submitted prior notification to the Security Council of the intention to make or receive such payments or to authorise, where appropriate, the unfreezing of funds, other financial assets or economic resources for this purpose, ten working days prior to such authorisation.[18]

12. Countries should have mechanisms for communicating de-listings and unfreezings to the financial sector and the DNFBPs immediately upon taking such action, and providing adequate guidance, particularly to financial institutions and other persons or entities, including DNFBPs, that may be holding targeted funds or other assets, on their obligations to respect a de-listing or unfreezing action.

E. UNITED NATIONS DESIGNATION CRITERIA

13. The criteria for designation as specified in the relevant United Nations Security Council resolutions are:

(a) **On DPRK - Resolutions 1718 (2006), 2087 (2013), 2094 (2013) and 2270 (2016)**:

(i) any person or entity engaged in the Democratic People's Republic of Korea (DPRK)'s nuclear-related, other WMD-related and ballistic missile-related programmes;

(ii) any person or entity providing support for DPRK's nuclear-related, other WMD-related and ballistic missile-related programmes, including through illicit means;

(iii) any person or entity acting on behalf of or at the direction of any person or entity designated under subsection 13(a)(i) or subsection 13(a)(ii)[19];

(iv) any legal person or entity owned or controlled, directly or indirectly, by any person or entity designated under subsection 13(a)(i) or subsection 13(a)(ii)[20];

(v) any person or entity that has assisted in the evasion of sanctions or in violating the provisions of resolutions 1718 (2006) and 1874 (2009);

(vi) any person or entity that has contributed to DPRK's prohibited programmes, activities prohibited by the DPRK-related resolutions, or to the evasion of provisions; or

---

18 In cases where the designated person or entity is a financial institution, jurisdictions should consider the FATF guidance issued as an annex to *The Implementation of Financial Provisions of United Nations Security Council Resolutions to Counter the Proliferation of Weapons of Mass Destruction, adopted in June 2013.*

19 The funds or assets of these persons or entities are frozen regardless of whether they are specifically identified by the Committee. Further, resolution 2270 (2016) OP23 expanded the scope of targeted financial sanctions obligations under resolution 1718 (2006), by applying these to the Ocean Maritime Management Company vessels specified in Annex III of resolution 2270 (2016).

20 Ibid.

(vii) any entity of the Government of the DPRK or the Worker's Party of Korea, or person or entity acting on their behalf or at their direction, or by any entity owned or controlled by them, that countries determine are associated with the DPRK's nuclear or ballistic missile programmes or other activities prohibited by resolution 1718 (2006) and successor resolutions.

(b) **On Iran - Resolution 2231 (2015)**:

(i) any person or entity having engaged in, directly associated with or provided support for Iran's proliferation sensitive nuclear activities contrary to Iran's commitments in the Joint Comprehensive Plan of Action (JCPOA) or the development of nuclear weapon delivery systems, including through the involvement in procurement of prohibited items, goods, equipment, materials and technology specified in Annex B to resolution 2231 (2015);

(ii) any person or entity assisting designated persons or entities in evading or acting inconsistently with the JCPOA or resolution 2231 (2015); and

(iii) any person or entity acting on behalf or at a direction of any person or entity in subsection 13(b)(i), subsection 13(b)(ii) and/or subsection 13(b)(iii), or by any entities owned or controlled by them.

INTERPRETIVE NOTE TO RECOMMENDATION 8 (NON-PROFIT ORGANISATIONS)

A. INTRODUCTION

1. Given the variety of legal forms that non-profit organisations (NPOs) can have, depending on the country, the FATF has adopted a functional definition of NPO. This definition is based on those activities and characteristics of an organisation which put it at risk of terrorist financing abuse, rather than on the simple fact that it is operating on a non-profit basis. For the purposes of this Recommendation, NPO refers to a legal person or arrangement or organisation that primarily engages in raising or disbursing funds for purposes such as charitable, religious, cultural, educational, social or fraternal purposes, or for the carrying out of other types of "good works". Without prejudice to Recommendation 1, this Recommendation only applies to those NPOs which fall within the FATF definition of an NPO. It does not apply to the entire universe of NPOs.

2. NPOs play a vital role in the world economy and in many national economies and social systems. Their efforts complement the activity of the governmental and business sectors in providing essential services, comfort and hope to those in need around the world. The FATF recognises the vital importance of NPOs in providing these important charitable services, as well as the difficulty of providing assistance to those in need, often in high risk areas and conflict zones, and applauds the efforts of NPOs to meet such needs. The FATF also recognises the intent and efforts to date of NPOs to promote transparency within their operations and to prevent terrorist financing abuse, including through the development of programmes aimed at discouraging radicalisation and violent extremism. The ongoing international campaign against terrorist financing has identified cases in which terrorists and terrorist organisations exploit some NPOs in the sector to raise and move funds, provide logistical support, encourage terrorist recruitment, or otherwise support terrorist organisations and operations. As well, there have been cases where terrorists create sham charities or engage in fraudulent fundraising for these purposes. This misuse not only facilitates terrorist activity, but also undermines donor confidence and jeopardises the very integrity of NPOs. Therefore, protecting NPOs from terrorist financing abuse is both a critical component of the global fight against terrorism and a necessary step to preserve the integrity of NPOs and the donor community. Measures to protect NPOs from potential terrorist financing abuse should be targeted and in line with the risk-based approach. It is also important for such measures to be implemented in a manner which respects countries' obligations under the Charter of the United Nations and international human rights law.

3. Some NPOs may be vulnerable to terrorist financing abuse by terrorists for a variety of reasons. NPOs enjoy the public trust, have access to considerable sources of funds, and are often cash-intensive. Furthermore, some NPOs have a global presence that provides a framework for national and international operations and financial transactions, often within or near those areas that are most exposed to terrorist activity. In some cases, terrorist organisations have taken advantage of these and other characteristics to infiltrate some NPOs and misuse funds and operations to cover for, or support, terrorist activity.

B. OBJECTIVES AND GENERAL PRINCIPLES

4. The objective of Recommendation 8 is to ensure that NPOs are not misused by terrorist organisations: (i) to pose as legitimate entities; (ii) to exploit legitimate entities as conduits for terrorist financing, including for the purpose of escaping asset freezing measures; or (iii) to conceal or obscure the clandestine diversion of funds intended for legitimate purposes, but diverted for terrorist purposes. In this Interpretive Note, the approach taken to achieve this objective is based on the following general principles:

   (a) A risk-based approach applying focused measures in dealing with identified threats of terrorist financing abuse to NPOs is essential given the diversity within individual national sectors, the differing degrees to which parts of each sector may be vulnerable to terrorist financing abuse, the need to ensure that legitimate charitable activity continues to flourish, and the limited resources and authorities available to combat terrorist financing in each country.

   (b) Flexibility in developing a national response to terrorist financing abuse of NPOs is essential, in order to allow it to evolve over time as it faces the changing nature of the terrorist financing threat.

   (c) Past and ongoing terrorist financing abuse of NPOs requires countries to adopt effective and proportionate measures, which should be commensurate to the risks identified through a risk-based approach.

   (d) Focused measures adopted by countries to protect NPOs from terrorist financing abuse should not disrupt or discourage legitimate charitable activities. Rather, such measures should promote accountability and engender greater confidence among NPOs, across the donor community and with the general public, that charitable funds and services reach intended legitimate beneficiaries. Systems that promote achieving a high degree of accountability, integrity and public confidence in the management and functioning of NPOs are integral to ensuring they cannot be abused for terrorist financing.

   (e) Countries are required to identify and take effective and proportionate action against NPOs that either are exploited by, or knowingly supporting, terrorists or terrorist organisations taking into account the specifics of the case. Countries should aim to prevent and prosecute, as appropriate, terrorist financing and other forms of terrorist support. Where NPOs suspected of, or implicated in, terrorist financing or other forms of terrorist support are identified, the first priority of countries must be to investigate and halt such terrorist financing or support. Actions taken for this purpose should, to the extent reasonably possible, minimise negative impact on innocent and legitimate beneficiaries of charitable activity. However, this interest cannot excuse the need to undertake immediate and effective actions to advance the immediate interest of halting terrorist financing or other forms of terrorist support provided by NPOs.

   (f) Developing cooperative relationships among the public and private sectors and with NPOs is critical to understanding NPOs' risks and risk mitigation strategies, raising awareness, increasing effectiveness and fostering capabilities to combat terrorist

financing abuse within NPOs. Countries should encourage the development of academic research on, and information-sharing in, NPOs to address terrorist financing related issues.

C. MEASURES

5. Without prejudice to the requirements of Recommendation 1, since not all NPOs are inherently high risk (and some may represent little or no risk at all), countries should identify which subset of organisations fall within the FATF definition of NPO. In undertaking this exercise, countries should use all relevant sources of information in order to identify features and types of NPOs, which, by virtue of their activities or characteristics, are likely to be at risk of terrorist financing abuse.[21] It is also crucial to identify the nature of threats posed by terrorist entities to the NPOs which are at risk as well as how terrorist actors abuse those NPOs. Countries should review the adequacy of measures, including laws and regulations, that relate to the subset of the NPO sector that may be abused for terrorism financing support in order to be able to take proportionate and effective actions to address the risks identified. These exercises could take a variety of forms and may or may not be a written product. Countries should also periodically reassess the sector by reviewing new information on the sector's potential vulnerabilities to terrorist activities to ensure effective implementation of measures.

6. There is a diverse range of approaches in identifying, preventing and combating terrorist financing abuse of NPOs. An effective approach should involve all four of the following elements: (a) sustained outreach, (b) targeted risk-based supervision or monitoring, (c) effective investigation and information gathering and (d) effective mechanisms for international cooperation. The following measures represent examples of specific actions that countries should take with respect to each of these elements, in order to protect NPOs from potential terrorist financing abuse.

   (a) Sustained outreach concerning terrorist financing issues

      (i) Countries should have clear policies to promote accountability, integrity and public confidence in the administration and management of NPOs.

      (ii) Countries should encourage and undertake outreach and educational programmes to raise and deepen awareness among NPOs as well as the donor community about the potential vulnerabilities of NPOs to terrorist financing abuse and terrorist financing risks, and the measures that NPOs can take to protect themselves against such abuse.

      (iii) Countries should work with NPOs to develop and refine best practices to address terrorist financing risks and vulnerabilities and thus protect them from terrorist financing abuse.

[21] For example, such information could be provided by regulators, tax authorities, FIUs, donor organisations or law enforcement and intelligence authorities.

(iv) Countries should encourage NPOs to conduct transactions via regulated financial channels, wherever feasible, keeping in mind the varying capacities of financial sectors in different countries and in different areas of urgent charitable and humanitarian concerns.

(b) Targeted risk-based supervision or monitoring of NPOs

Countries should take steps to promote effective supervision or monitoring. A "one-size-fits-all" approach would be inconsistent with the proper implementation of a risk-based approach as stipulated under Recommendation 1 of the FATF Standards. In practice, countries should be able to demonstrate that risk-based measures apply to NPOs at risk of terrorist financing abuse. It is also possible that existing regulatory or other measures may already sufficiently address the current terrorist financing risk to the NPOs in a jurisdiction, although terrorist financing risks to the sector should be periodically reviewed. Appropriate authorities should monitor the compliance of NPOs with the requirements of this Recommendation, including the risk-based measures being applied to them.[22] Appropriate authorities should be able to apply effective, proportionate and dissuasive sanctions for violations by NPOs or persons acting on behalf of these NPOs.[23] The following are some examples of measures that could be applied to NPOs, in whole or in part, depending on the risks identified:

(i) NPOs could be required to license or register. This information should be available to competent authorities and encouraged to be available to the public.[24]

(ii) NPOs could be required to maintain information on: (1) the purpose and objectives of their stated activities; and (2) the identity of the person(s) who own, control or direct their activities, including senior officers, board members and trustees. This information could be publicly available either directly from the NPO or through appropriate authorities.

(iii) NPOs could be required to issue annual financial statements that provide detailed breakdowns of incomes and expenditures.

(iv) NPOs could be required to have appropriate controls in place to ensure that all funds are fully accounted for, and are spent in a manner that is consistent with the purpose and objectives of the NPO's stated activities.

(v) NPOs could be required to take reasonable measures to confirm the identity, credentials and good standing of beneficiaries[25] and associate NPOs and that

22 In this context, rules and regulations may include rules and standards applied by self-regulatory organisations and accrediting institutions.

23 The range of such sanctions might include freezing of accounts, removal of trustees, fines, de-certification, de-licensing and de-registration. This should not preclude parallel civil, administrative or criminal proceedings with respect to NPOs or persons acting on their behalf where appropriate.

24 Specific licensing or registration requirements for counter terrorist financing purposes are not necessary. For example, in some countries, NPOs are already registered with tax authorities and monitored in the context of qualifying for favourable tax treatment (such as tax credits or tax exemptions).

they are not involved with and/or using the charitable funds to support terrorists or terrorist organisations[26]. However, NPOs should not be required to conduct customer due diligence. NPOs could be required to take reasonable measures to document the identity of their significant donors and to respect donor confidentiality. The ultimate objective of this requirement is to prevent charitable funds from being used to finance and support terrorists and terrorist organisations.

(vi) NPOs could be required to maintain, for a period of at least five years, records of domestic and international transactions that are sufficiently detailed to verify that funds have been received and spent in a manner consistent with the purpose and objectives of the organisation, and could be required to make these available to competent authorities upon appropriate authority. This also applies to information mentioned in paragraphs (ii) and (iii) above. Where appropriate, records of charitable activities and financial operations by NPOs could also be made available to the public.

(c) Effective information gathering and investigation

(i) Countries should ensure effective cooperation, coordination and information-sharing to the extent possible among all levels of appropriate authorities or organisations that hold relevant information on NPOs.

(ii) Countries should have investigative expertise and capability to examine those NPOs suspected of either being exploited by, or actively supporting, terrorist activity or terrorist organisations.

(iii) Countries should ensure that full access to information on the administration and management of a particular NPO (including financial and programmatic information) may be obtained during the course of an investigation.

(iv) Countries should establish appropriate mechanisms to ensure that, when there is suspicion or reasonable grounds to suspect that a particular NPO: (1) is involved in terrorist financing abuse and/or is a front for fundraising by a terrorist organisation; (2) is being exploited as a conduit for terrorist financing, including for the purpose of escaping asset freezing measures, or other forms of terrorist support; or (3) is concealing or obscuring the clandestine diversion of funds intended for legitimate purposes, but redirected for the benefit of terrorists or terrorist organisations, that this information is promptly shared with relevant competent authorities, in order to take preventive or investigative action.

---

25 The term beneficiaries refers to those natural persons, or groups of natural persons who receive charitable, humanitarian or other types of assistance through the services of the NPO.

26 This does not mean that NPOs are expected to identify each specific individual, as such a requirement would not always be possible and would, in some instances, impede the ability of NPOs to provide much-needed services

(d) Effective capacity to respond to international requests for information about an NPO of concern. Consistent with Recommendations on international cooperation, countries should identify appropriate points of contact and procedures to respond to international requests for information regarding particular NPOs suspected of terrorist financing or involvement in other forms of terrorist support.

D. RESOURCES FOR SUPERVISION, MONITORING, AND INVESTIGATION

7. Countries should provide their appropriate authorities, which are responsible for supervision, monitoring and investigation of their NPO sector, with adequate financial, human and technical resources.

Glossary of specific terms used in this Recommendation	
Appropriate authorities	refers to competent authorities, including regulators, tax authorities, FIUs, law enforcement, intelligence authorities, accrediting institutions, and potentially self-regulatory organisations in some jurisdictions.
Associate NPOs	includes foreign branches of international NPOs, and NPOs with which partnerships have been arranged.
Beneficiaries	refers to those natural persons, or groups of natural persons who receive charitable, humanitarian or other types of assistance through the services of the NPO.
Non-profit organisation or NPO	refers to a legal person or arrangement or organisation that primarily engages in raising or disbursing funds for purposes such as charitable, religious, cultural, educational, social or fraternal purposes, or for the carrying out of other types of "good works".
Terrorist financing abuse	refers to the exploitation by terrorists and terrorist organisations of NPOs to raise or move funds, provide logistical support, encourage or facilitate terrorist recruitment, or otherwise support terrorists or terrorist organisations and operations.

INTERPRETIVE NOTE TO RECOMMENDATION 10 (CUSTOMER DUE DILIGENCE)

A. CUSTOMER DUE DILIGENCE AND TIPPING-OFF

1. If, during the establishment or course of the customer relationship, or when conducting occasional transactions, a financial institution suspects that transactions relate to money laundering or terrorist financing, then the institution should:

   (a) normally seek to identify and verify the identity[27] of the customer and the beneficial owner, whether permanent or occasional, and irrespective of any exemption or any designated threshold that might otherwise apply; and

   (b) make a suspicious transaction report (STR) to the financial intelligence unit (FIU), in accordance with Recommendation 20.

2. Recommendation 21 prohibits financial institutions, their directors, officers and employees from disclosing the fact that an STR or related information is being reported to the FIU. A risk exists that customers could be unintentionally tipped off when the financial institution is seeking to perform its customer due diligence (CDD) obligations in these circumstances. The customer's awareness of a possible STR or investigation could compromise future efforts to investigate the suspected money laundering or terrorist financing operation.

3. Therefore, if financial institutions form a suspicion that transactions relate to money laundering or terrorist financing, they should take into account the risk of tipping-off when performing the CDD process. If the institution reasonably believes that performing the CDD process will tip-off the customer or potential customer, it may choose not to pursue that process, and should file an STR. Institutions should ensure that their employees are aware of, and sensitive to, these issues when conducting CDD.

B. CDD – PERSONS ACTING ON BEHALF OF A CUSTOMER

4. When performing elements (a) and (b) of the CDD measures specified under Recommendation 10, financial institutions should also be required to verify that any person purporting to act on behalf of the customer is so authorised, and should identify and verify the identity of that person.

C. CDD FOR LEGAL PERSONS AND ARRANGEMENTS

5. When performing CDD measures in relation to customers that are legal persons or legal arrangements[28], financial institutions should be required to identify and verify the identity of

---

27 Reliable, independent source documents, data or information will hereafter be referred to as "identification data."

28 In these Recommendations references to legal arrangements such as trusts (or other similar arrangements) being the customer of a financial institution or DNFBP or carrying out a transaction, refers to situations where a natural or legal person that is the trustee establishes the business relationship or carries out the transaction on the behalf of the beneficiaries or according to the terms of the trust. The normal CDD requirements for customers that are natural or legal persons would continue

the customer, and understand the nature of its business, and its ownership and control structure. The purpose of the requirements set out in (a) and (b) below, regarding the identification and verification of the customer and the beneficial owner, is twofold: first, to prevent the unlawful use of legal persons and arrangements, by gaining a sufficient understanding of the customer to be able to properly assess the potential money laundering and terrorist financing risks associated with the business relationship; and, second, to take appropriate steps to mitigate the risks. As two aspects of one process, these requirements are likely to interact and complement each other naturally. In this context, financial institutions should be required to:

(a) Identify the customer and verify its identity. The type of information that would normally be needed to perform this function would be:

  (i) Name, legal form and proof of existence – verification could be obtained, for example, through a certificate of incorporation, a certificate of good standing, a partnership agreement, a deed of trust, or other documentation from a reliable independent source proving the name, form and current existence of the customer.

  (ii) The powers that regulate and bind the legal person or arrangement (e.g. the memorandum and articles of association of a company), as well as the names of the relevant persons having a senior management position in the legal person or arrangement (e.g. senior managing directors in a company, trustee(s) of a trust).

  (iii) The address of the registered office, and, if different, a principal place of business.

(b) Identify the beneficial owners of the customer and take reasonable measures[29] to verify the identity of such persons, through the following information:

  (i) For legal persons[30]:

    (i.i) The identity of the natural persons (if any – as ownership interests can be so diversified that there are no natural persons (whether acting alone or together) exercising control of the legal person or arrangement through ownership) who ultimately have a controlling ownership interest[31] in a legal person; and

---

to apply, including paragraph 4 of INR.10, but the additional requirements regarding the trust and the beneficial owners of the trust (as defined) would also apply.

29 In determining the reasonableness of the identity verification measures, regard should be had to the money laundering and terrorist financing risks posed by the customer and the business relationship.

30 Measures (i.i) to (i.iii) are not alternative options, but are cascading measures, with each to be used where the previous measure has been applied and has not identified a beneficial owner.

31 A controlling ownership interest depends on the ownership structure of the company. It may be based on a threshold, e.g. any person owning more than a certain percentage of the company (e.g. 25%).

(i.ii) to the extent that there is doubt under (i.i) as to whether the person(s) with the controlling ownership interest are the beneficial owner(s) or where no natural person exerts control through ownership interests, the identity of the natural persons (if any) exercising control of the legal person or arrangement through other means.

(i.iii) Where no natural person is identified under (i.i) or (i.ii) above, financial institutions should identify and take reasonable measures to verify the identity of the relevant natural person who holds the position of senior managing official.

(ii) For legal arrangements:

(ii.i) Trusts – the identity of the settlor, the trustee(s), the protector (if any), the beneficiaries or class of beneficiaries[32], and any other natural person exercising ultimate effective control over the trust (including through a chain of control/ownership);

(ii.ii) Other types of legal arrangements – the identity of persons in equivalent or similar positions.

Where the customer or the owner of the controlling interest is a company listed on a stock exchange and subject to disclosure requirements (either by stock exchange rules or through law or enforceable means) which impose requirements to ensure adequate transparency of beneficial ownership, or is a majority-owned subsidiary of such a company, it is not necessary to identify and verify the identity of any shareholder or beneficial owner of such companies.

The relevant identification data may be obtained from a public register, from the customer or from other reliable sources.

D. CDD FOR BENEFICIARIES OF LIFE INSURANCE POLICIES

6. For life or other investment-related insurance business, financial institutions should, in addition to the CDD measures required for the customer and the beneficial owner, conduct the following CDD measures on the beneficiary(ies) of life insurance and other investment related insurance policies, as soon as the beneficiary(ies) are identified/designated:

(a) For beneficiary(ies) that are identified as specifically named natural or legal persons or legal arrangements – taking the name of the person;

(b) For beneficiary(ies) that are designated by characteristics or by class (e.g. spouse or children at the time that the insured event occurs) or by other means (e.g. under a will) – obtaining sufficient information concerning the beneficiary to satisfy the

[32] For beneficiary(ies) of trusts that are designated by characteristics or by class, financial institutions should obtain sufficient information concerning the beneficiary to satisfy the financial institution that it will be able to establish the identity of the beneficiary at the time of the payout or when the beneficiary intends to exercise vested rights.

financial institution that it will be able to establish the identity of the beneficiary at the time of the payout.

The information collected under (a) and/or (b) should be recorded and maintained in accordance with the provisions of Recommendation 11.

7. For both the cases referred to in 6(a) and (b) above, the verification of the identity of the beneficiary(ies) should occur at the time of the payout.

8. The beneficiary of a life insurance policy should be included as a relevant risk factor by the financial institution in determining whether enhanced CDD measures are applicable. If the financial institution determines that a beneficiary who is a legal person or a legal arrangement presents a higher risk, then the enhanced CDD measures should include reasonable measures to identify and verify the identity of the beneficial owner of the beneficiary, at the time of payout.

9. Where a financial institution is unable to comply with paragraphs 6 to 8 above, it should consider making a suspicious transaction report.

E. RELIANCE ON IDENTIFICATION AND VERIFICATION ALREADY PERFORMED

10. The CDD measures set out in Recommendation 10 do not imply that financial institutions have to repeatedly identify and verify the identity of each customer every time that a customer conducts a transaction. An institution is entitled to rely on the identification and verification steps that it has already undertaken, unless it has doubts about the veracity of that information. Examples of situations that might lead an institution to have such doubts could be where there is a suspicion of money laundering in relation to that customer, or where there is a material change in the way that the customer's account is operated, which is not consistent with the customer's business profile.

F. TIMING OF VERIFICATION

11. Examples of the types of circumstances (in addition to those referred to above for beneficiaries of life insurance policies) where it would be permissible for verification to be completed after the establishment of the business relationship, because it would be essential not to interrupt the normal conduct of business, include:

- Non face-to-face business.
- Securities transactions. In the securities industry, companies and intermediaries may be required to perform transactions very rapidly, according to the market conditions at the time the customer is contacting them, and the performance of the transaction may be required before verification of identity is completed.

12. Financial institutions will also need to adopt risk management procedures with respect to the conditions under which a customer may utilise the business relationship prior to verification. These procedures should include a set of measures, such as a limitation of the number, types and/or amount of transactions that can be performed and the monitoring of large or complex transactions being carried out outside the expected norms for that type of relationship.

G. EXISTING CUSTOMERS

13. Financial institutions should be required to apply CDD measures to existing customers[33] on the basis of materiality and risk, and to conduct due diligence on such existing relationships at appropriate times, taking into account whether and when CDD measures have previously been undertaken and the adequacy of data obtained.

H. RISK BASED APPROACH[34]

14. The examples below are not mandatory elements of the FATF Standards, and are included for guidance only. The examples are not intended to be comprehensive, and although they are considered to be helpful indicators, they may not be relevant in all circumstances.

Higher risks

15. There are circumstances where the risk of money laundering or terrorist financing is higher, and enhanced CDD measures have to be taken. When assessing the money laundering and terrorist financing risks relating to types of customers, countries or geographic areas, and particular products, services, transactions or delivery channels, examples of potentially higher-risk situations (in addition to those set out in Recommendations 12 to 16) include the following:

(a) Customer risk factors:

- The business relationship is conducted in unusual circumstances (e.g. significant unexplained geographic distance between the financial institution and the customer).
- Non-resident customers.
- Legal persons or arrangements that are personal asset-holding vehicles.
- Companies that have nominee shareholders or shares in bearer form.
- Business that are cash-intensive.
- The ownership structure of the company appears unusual or excessively complex given the nature of the company's business.

(b) Country or geographic risk factors:[35]

- Countries identified by credible sources, such as mutual evaluation or detailed assessment reports or published follow-up reports, as not having adequate AML/CFT systems.

---

33 Existing customers as at the date that the national requirements are brought into force.

34 The RBA does not apply to the circumstances when CDD should be required but may be used to determine the extent of such measures.

35 Under Recommendation 19 it is mandatory for countries to require financial institutions to apply enhanced due diligence when the FATF calls for such measures to be introduced.

- Countries subject to sanctions, embargos or similar measures issued by, for example, the United Nations.
- Countries identified by credible sources as having significant levels of corruption or other criminal activity.
- Countries or geographic areas identified by credible sources as providing funding or support for terrorist activities, or that have designated terrorist organisations operating within their country.

(c) Product, service, transaction or delivery channel risk factors:

- Private banking.
- Anonymous transactions (which may include cash).
- Non-face-to-face business relationships or transactions.
- Payment received from unknown or un-associated third parties

Lower risks

16. There are circumstances where the risk of money laundering or terrorist financing may be lower. In such circumstances, and provided there has been an adequate analysis of the risk by the country or by the financial institution, it could be reasonable for a country to allow its financial institutions to apply simplified CDD measures.

17. When assessing the money laundering and terrorist financing risks relating to types of customers, countries or geographic areas, and particular products, services, transactions or delivery channels, examples of potentially lower risk situations include the following:

(a) Customer risk factors:

- Financial institutions and DNFBPs – where they are subject to requirements to combat money laundering and terrorist financing consistent with the FATF Recommendations, have effectively implemented those requirements, and are effectively supervised or monitored in accordance with the Recommendations to ensure compliance with those requirements.
- Public companies listed on a stock exchange and subject to disclosure requirements (either by stock exchange rules or through law or enforceable means), which impose requirements to ensure adequate transparency of beneficial ownership.
- Public administrations or enterprises.

(b) Product, service, transaction or delivery channel risk factors:

- Life insurance policies where the premium is low (e.g. an annual premium of less than USD/EUR 1,000 or a single premium of less than USD/EUR 2,500).
- Insurance policies for pension schemes if there is no early surrender option and the policy cannot be used as collateral.

- A pension, superannuation or similar scheme that provides retirement benefits to employees, where contributions are made by way of deduction from wages, and the scheme rules do not permit the assignment of a member's interest under the scheme.
- Financial products or services that provide appropriately defined and limited services to certain types of customers, so as to increase access for financial inclusion purposes.

(c) Country risk factors:

- Countries identified by credible sources, such as mutual evaluation or detailed assessment reports, as having effective AML/CFT systems.
- Countries identified by credible sources as having a low level of corruption or other criminal activity.

In making a risk assessment, countries or financial institutions could, when appropriate, also take into account possible variations in money laundering and terrorist financing risk between different regions or areas within a country.

18. Having a lower money laundering and terrorist financing risk for identification and verification purposes does not automatically mean that the same customer is lower risk for all types of CDD measures, in particular for ongoing monitoring of transactions.

Risk variables

19. When assessing the money laundering and terrorist financing risks relating to types of customers, countries or geographic areas, and particular products, services, transactions or delivery channels risk, a financial institution should take into account risk variables relating to those risk categories. These variables, either singly or in combination, may increase or decrease the potential risk posed, thus impacting the appropriate level of CDD measures. Examples of such variables include:

- The purpose of an account or relationship.
- The level of assets to be deposited by a customer or the size of transactions undertaken.
- The regularity or duration of the business relationship.

Enhanced CDD measures

20. Financial institutions should examine, as far as reasonably possible, the background and purpose of all complex, unusual large transactions, and all unusual patterns of transactions, which have no apparent economic or lawful purpose. Where the risks of money laundering or terrorist financing are higher, financial institutions should be required to conduct enhanced CDD measures, consistent with the risks identified. In particular, they should increase the degree and nature of monitoring of the business relationship, in order to determine whether those transactions or activities appear unusual or suspicious. Examples of enhanced CDD measures that could be applied for higher-risk business relationships include:

- Obtaining additional information on the customer (e.g. occupation, volume of assets, information available through public databases, internet, etc.), and updating more regularly the identification data of customer and beneficial owner.
- Obtaining additional information on the intended nature of the business relationship.
- Obtaining information on the source of funds or source of wealth of the customer.
- Obtaining information on the reasons for intended or performed transactions.
- Obtaining the approval of senior management to commence or continue the business relationship.
- Conducting enhanced monitoring of the business relationship, by increasing the number and timing of controls applied, and selecting patterns of transactions that need further examination.
- Requiring the first payment to be carried out through an account in the customer's name with a bank subject to similar CDD standards.

Simplified CDD measures

21. Where the risks of money laundering or terrorist financing are lower, financial institutions could be allowed to conduct simplified CDD measures, which should take into account the nature of the lower risk. The simplified measures should be commensurate with the lower risk factors (e.g. the simplified measures could relate only to customer acceptance measures or to aspects of ongoing monitoring). Examples of possible measures are:

    - Verifying the identity of the customer and the beneficial owner after the establishment of the business relationship (e.g. if account transactions rise above a defined monetary threshold).
    - Reducing the frequency of customer identification updates.
    - Reducing the degree of on-going monitoring and scrutinising transactions, based on a reasonable monetary threshold.
    - Not collecting specific information or carrying out specific measures to understand the purpose and intended nature of the business relationship, but inferring the purpose and nature from the type of transactions or business relationship established.

    Simplified CDD measures are not acceptable whenever there is a suspicion of money laundering or terrorist financing, or where specific higher-risk scenarios apply.

Thresholds

22. The designated threshold for occasional transactions under Recommendation 10 is USD/EUR 15,000. Financial transactions above the designated threshold include situations where the transaction is carried out in a single operation or in several operations that appear to be linked.

Ongoing due diligence

23. Financial institutions should be required to ensure that documents, data or information collected under the CDD process is kept up-to-date and relevant by undertaking reviews of existing records, particularly for higher-risk categories of customers.

INTERPRETIVE NOTE TO RECOMMENDATION 12 (POLITICALLY EXPOSED PERSONS)

Financial institutions should take reasonable measures to determine whether the beneficiaries of a life insurance policy and/or, where required, the beneficial owner of the beneficiary are politically exposed persons. This should occur at the latest at the time of the payout. Where there are higher risks identified, in addition to performing normal CDD measures, financial institutions should be required to:

a) inform senior management before the payout of the policy proceeds; and

b) conduct enhanced scrutiny on the whole business relationship with the policyholder, and consider making a suspicious transaction report.

INTERPRETIVE NOTE TO RECOMMENDATION 13 (CORRESPONDENT BANKING)

The similar relationships to which financial institutions should apply criteria (a) to (e) include, for example those established for securities transactions or funds transfers, whether for the cross-border financial institution as principal or for its customers.

The term *payable-through accounts* refers to correspondent accounts that are used directly by third parties to transact business on their own behalf.

INTERPRETIVE NOTE TO RECOMMENDATION 14 (MONEY OR VALUE TRANSFER SERVICES)

A country need not impose a separate licensing or registration system with respect to natural or legal persons already licensed or registered as financial institutions (as defined by the FATF Recommendations) within that country, which, under such license or registration, are permitted to perform money or value transfer services, and which are already subject to the full range of applicable obligations under the FATF Recommendations.

INTERPRETIVE NOTE TO RECOMMENDATION 15

1. For the purposes of applying the FATF Recommendations, countries should consider virtual assets as "property," "proceeds," "funds," "funds or other assets," or other "corresponding value." Countries should apply the relevant measures under the FATF Recommendations to virtual assets and virtual asset service providers (VASPs)

2. In accordance with Recommendation 1, countries should identify, assess, and understand the money laundering and terrorist financing risks emerging from virtual asset activities and the activities or operations of VASPs. Based on that assessment, countries should apply a risk-based approach to ensure that measures to prevent or mitigate money laundering and terrorist financing are commensurate with the risks identified. Countries should require VASPs to identify, assess, and take effective action to mitigate their money laundering and terrorist financing risks.

3. VASPs should be required to be licensed or registered. At a minimum, VASPs should be required to be licensed or registered in the jurisdiction(s) where they are created[36]. In cases where the VASP is a natural person, they should be required to be licensed or registered in the jurisdiction where their place of business is located. Jurisdictions may also require VASPs that offer products and/or services to customers in, or conduct operations from, their jurisdiction to be licensed or registered in this jurisdiction. Competent authorities should take the necessary legal or regulatory measures to prevent criminals or their associates from holding, or being the beneficial owner of, a significant or controlling interest, or holding a management function in, a VASP. Countries should take action to identify natural or legal persons that carry out VASP activities without the requisite license or registration, and apply appropriate sanctions.

4. A country need not impose a separate licensing or registration system with respect to natural or legal persons already licensed or registered as financial institutions (as defined by the FATF Recommendations) within that country, which, under such license or registration, are permitted to perform VASP activities and which are already subject to the full range of applicable obligations under the FATF Recommendations.

5. Countries should ensure that VASPs are subject to adequate regulation and supervision or monitoring for AML/CFT and are effectively implementing the relevant FATF Recommendations, to mitigate money laundering and terrorist financing risks emerging from virtual assets. VASPs should be subject to effective systems for monitoring and ensuring compliance with national AML/CFT requirements. VASPs should be supervised or monitored by a competent authority (not a SRB), which should conduct risk- based supervision or monitoring. Supervisors should have adequate powers to supervise or monitor and ensure compliance by VASPs with requirements to combat money laundering and terrorist financing including the authority to conduct inspections, compel the production of information, and impose sanctions. Supervisors should have powers to impose a range of disciplinary and financial sanctions, including the power to withdraw, restrict or suspend the VASP's license or registration, where applicable.

[36] References to creating a legal person include incorporation of companies or any other mechanism that is used.

6. Countries should ensure that there is a range of effective, proportionate and dissuasive sanctions, whether criminal, civil or administrative, available to deal with VASPs that fail to comply with AML/CFT requirements, in line with Recommendation 35. Sanctions should be applicable not only to VASPs, but also to their directors and senior management.

7. With respect to the preventive measures, the requirements set out in Recommendations 10 to 21 apply to VASPs, subject to the following qualifications:

(a) R. 10 – The occasional transactions designated threshold above which VASPs are required to conduct CDD is USD/EUR 1 000.
(b) R. 16 – Countries should ensure that originating VASPs obtain and hold required and accurate originator information and required beneficiary information[37] on virtual asset transfers, submit[38] the above information to the beneficiary VASP or financial institution (if any) immediately and securely, and make it available on request to appropriate authorities. Countries should ensure that beneficiary VASPs obtain and hold required originator information and required and accurate beneficiary information on virtual asset transfers and make it available on request to appropriate authorities. Other requirements of R. 16 (including monitoring of the availability of information, and taking freezing action and prohibiting transactions with designated persons and entities) apply on the same basis as set out in R. 16. The same obligations apply to financial institutions when sending or receiving virtual asset transfers on behalf of a customer.

8. Countries should rapidly, constructively, and effectively provide the widest possible range of international cooperation in relation to money laundering, predicate offences, and terrorist financing relating to virtual assets, on the basis set out in Recommendations 37 to 40. In particular, supervisors of VASPs should exchange information promptly and constructively with their foreign counterparts, regardless of the supervisors' nature or status and differences in the nomenclature or status of VASPs.

[37] As defined in INR. 16, paragraph 6, or the equivalent information in a virtual asset context.

[38] The information can be submitted either directly or indirectly. It is not necessary for this information to be attached directly to the virtual asset transfers.

INTERPRETIVE NOTE TO RECOMMENDATION 16 (WIRE TRANSFERS)

A. OBJECTIVE

1. Recommendation 16 was developed with the objective of preventing terrorists and other criminals from having unfettered access to wire transfers for moving their funds, and for detecting such misuse when it occurs. Specifically, it aims to ensure that basic information on the originator and beneficiary of wire transfers is immediately available:

   (a) to appropriate law enforcement and/or prosecutorial authorities to assist them in detecting, investigating, and prosecuting terrorists or other criminals, and tracing their assets;

   (b) to financial intelligence units for analysing suspicious or unusual activity, and disseminating it as necessary, and

   (c) to ordering, intermediary and beneficiary financial institutions to facilitate the identification and reporting of suspicious transactions, and to implement the requirements to take freezing action and comply with prohibitions from conducting transactions with designated persons and entities, as per the obligations set out in the relevant United Nations Security Council resolutions, such as resolution 1267 (1999) and its successor resolutions, and resolution 1373 (2001) relating to the prevention and suppression of terrorism and terrorist financing.

2. To accomplish these objectives, countries should have the ability to trace all wire transfers. Due to the potential terrorist financing threat posed by small wire transfers, countries should minimise thresholds taking into account the risk of driving transactions underground and the importance of financial inclusion. It is not the intention of the FATF to impose rigid standards or to mandate a single operating process that would negatively affect the payment system.

B. SCOPE

3. Recommendation 16 applies to cross-border wire transfers and domestic wire transfers , including serial payments, and cover payments.

4. Recommendation 16 is not intended to cover the following types of payments:

   (a) Any transfer that flows from a transaction carried out using a credit or debit or prepaid card for the purchase of goods or services, so long as the credit or debit or prepaid card number accompanies all transfers flowing from the transaction. However, when a credit or debit or prepaid card is used as a payment system to effect a person-to-person wire transfer, the transaction is covered by Recommendation 16, and the necessary information should be included in the message.

   (b) Financial institution-to-financial institution transfers and settlements, where both the originator person and the beneficiary person are financial institutions acting on their own behalf.

5. Countries may adopt a *de minimis* threshold for cross-border wire transfers (no higher than USD/EUR 1,000), below which the following requirements should apply:

   (a) Countries should ensure that financial institutions include with such transfers: (i) the name of the originator; (ii) the name of the beneficiary; and (iii) an account number for each, or a unique transaction reference number. Such information need not be verified for accuracy, unless there is a suspicion of money laundering or terrorist financing, in which case, the financial institution should verify the information pertaining to its customer.

   (b) Countries may, nevertheless, require that incoming cross-border wire transfers below the threshold contain required and accurate originator information.

C. CROSS-BORDER QUALIFYING WIRE TRANSFERS

6. Information accompanying all qualifying wire transfers should always contain:

   (a) the name of the originator;

   (b) the originator account number where such an account is used to process the transaction;

   (c) the originator's address, or national identity number, or customer identification number[39], or date and place of birth;

   (d) the name of the beneficiary; and

   (e) the beneficiary account number where such an account is used to process the transaction.

7. In the absence of an account, a unique transaction reference number should be included which permits traceability of the transaction.

8. Where several individual cross-border wire transfers from a single originator are bundled in a batch file for transmission to beneficiaries, they may be exempted from the requirements of paragraph 6 in respect of originator information, provided that they include the originator's account number or unique transaction reference number (as described in paragraph 7 above), and the batch file contains required and accurate originator information, and full beneficiary information, that is fully traceable within the beneficiary country.

D. DOMESTIC WIRE TRANSFERS

9. Information accompanying domestic wire transfers should also include originator information as indicated for cross-border wire transfers, unless this information can be made available to the beneficiary financial institution and appropriate authorities by other means. In this latter

[39] The customer identification number refers to a number which uniquely identifies the originator to the originating financial institution and is a different number from the unique transaction reference number referred to in paragraph 7. The customer identification number must refer to a record held by the originating financial institution which contains at least one of the following: the customer address, a national identity number, or a date and place of birth.

case, the ordering financial institution need only include the account number or a unique transaction reference number, provided that this number or identifier will permit the transaction to be traced back to the originator or the beneficiary.

10. The information should be made available by the ordering financial institution within three business days of receiving the request either from the beneficiary financial institution or from appropriate competent authorities. Law enforcement authorities should be able to compel immediate production of such information.

E. RESPONSIBILITIES OF ORDERING, INTERMEDIARY AND BENEFICIARY FINANCIAL INSTITUTIONS

Ordering financial institution

11. The ordering financial institution should ensure that qualifying wire transfers contain required and accurate originator information, and required beneficiary information.

12. The ordering financial institution should ensure that cross-border wire transfers below any applicable threshold contain the name of the originator and the name of the beneficiary and an account number for each, or a unique transaction reference number.

13. The ordering financial institution should maintain all originator and beneficiary information collected, in accordance with Recommendation 11.

14. The ordering financial institution should not be allowed to execute the wire transfer if it does not comply with the requirements specified above.

Intermediary financial institution

15. For cross-border wire transfers, financial institutions processing an intermediary element of such chains of wire transfers should ensure that all originator and beneficiary information that accompanies a wire transfer is retained with it

16. Where technical limitations prevent the required originator or beneficiary information accompanying a cross-border wire transfer from remaining with a related domestic wire transfer, a record should be kept, for at least five years, by the receiving intermediary financial institution of all the information received from the ordering financial institution or another intermediary financial institution.

17. An intermediary financial institution should take reasonable measures to identify cross-border wire transfers that lack required originator information or required beneficiary information. Such measures should be consistent with straight-through processing.

18. An intermediary financial institution should have effective risk-based policies and procedures for determining: (i) when to execute, reject, or suspend a wire transfer lacking required originator or required beneficiary information; and (ii) the appropriate follow-up action.

Beneficiary financial institution

19. A beneficiary financial institution should take reasonable measures to identify cross-border wire transfers that lack required originator or required beneficiary information. Such measures may include post-event monitoring or real-time monitoring where feasible.

20. For qualifying wire transfers, a beneficiary financial institution should verify the identity of the beneficiary, if the identity has not been previously verified, and maintain this information in accordance with Recommendation 11.

21. A beneficiary financial institution should have effective risk-based policies and procedures for determining: (i) when to execute, reject, or suspend a wire transfer lacking required originator or required beneficiary information; and (ii) the appropriate follow-up action.

F. MONEY OR VALUE TRANSFER SERVICE OPERATORS

22. Money or value transfer service (MVTS) providers should be required to comply with all of the relevant requirements of Recommendation 16 in the countries in which they operate, directly or through their agents. In the case of a MVTS provider that controls both the ordering and the beneficiary side of a wire transfer, the MVTS provider:

    (a) should take into account all the information from both the ordering and beneficiary sides in order to determine whether an STR has to be filed; and

    (b) should file an STR in any country affected by the suspicious wire transfer, and make relevant transaction information available to the Financial Intelligence Unit.

Glossary of specific terms used in this Recommendation	
Accurate	is used to describe information that has been verified for accuracy.
Batch transfer	is a transfer comprised of a number of individual wire transfers that are being sent to the same financial institutions, but may/may not be ultimately intended for different persons.
Beneficiary	refers to the natural or legal person or legal arrangement who is identified by the originator as the receiver of the requested wire transfer.
Beneficiary Financial Institution	refers to the financial institution which receives the wire transfer from the ordering financial institution directly or through an intermediary financial institution and makes the funds available to the beneficiary.
Cover Payment	refers to a wire transfer that combines a payment message sent directly by the ordering financial institution to the beneficiary financial institution with the routing of the funding instruction (the cover) from the ordering financial institution to the beneficiary financial institution

Glossary of specific terms used in this Recommendation

	through one or more intermediary financial institutions.
Cross-border wire transfer	refers to any *wire transfer* where the ordering financial institution and beneficiary financial institution are located in different countries. This term also refers to any chain of *wire transfer* in which at least one of the financial institutions involved is located in a different country.
Domestic wire transfers	refers to any *wire transfer* where the ordering financial institution and beneficiary financial institution are located in the same country. This term therefore refers to any chain of *wire transfer* that takes place entirely within the borders of a single country, even though the system used to transfer the payment message may be located in another country. The term also refers to any chain of *wire transfer* that takes place entirely within the borders of the European Economic Area (EEA)[40].
Intermediary financial institution	refers to a financial institution in a serial or cover payment chain that receives and transmits a wire transfer on behalf of the ordering financial institution and the beneficiary financial institution, or another intermediary financial institution.
Ordering financial institution	refers to the financial institution which initiates the wire transfer and transfers the funds upon receiving the request for a wire transfer on behalf of the originator.
Originator	refers to the account holder who allows the wire transfer from that account, or where there is no account, the natural or legal person that places the order with the ordering financial institution to perform the wire transfer.
Qualifying wire transfers	means a cross-border wire transfer above any applicable threshold as described in paragraph 5 of the Interpretive Note to Recommendation 16.
Required	is used to describe a situation in which all elements of required information are present. Subparagraphs 6(a), 6(b) and 6(c) set out the *required originator information.* Subparagraphs 6(d) and 6(e) set out the *required beneficiary information.*

40 An entity may petition the FATF to be designated as a supra-national jurisdiction for the purposes of and limited to an assessment of Recommendation 16 compliance.

Glossary of specific terms used in this Recommendation	
Serial Payment	refers to a direct sequential chain of payment where the wire transfer and accompanying payment message travel together from the ordering financial institution to the beneficiary financial institution directly or through one or more intermediary financial institutions (e.g. correspondent banks).
Straight-through processing	refers to payment transactions that are conducted electronically without the need for manual intervention.
Unique transaction reference number	refers to a combination of letters, numbers or symbols, determined by the payment service provider, in accordance with the protocols of the payment and settlement system or messaging system used for the wire transfer.
Wire transfer	refers to any transaction carried out on behalf of an originator through a financial institution by electronic means with a view to making an amount of funds available to a beneficiary person at a beneficiary financial institution, irrespective of whether the originator and the beneficiary are the same person.[41]

[41] It is understood that the settlement of wire transfers may happen under a net settlement arrangement. This interpretive note refers to information which must be included in instructions sent from an originating financial institution to a beneficiary financial institution, including through any intermediary financial institution, to enable disbursement of the funds to the recipient. Any net settlement between the financial institutions may be exempt under paragraph 4(b).

INTERPRETIVE NOTE TO RECOMMENDATION 17 (RELIANCE ON THIRD PARTIES)

1. This Recommendation does not apply to outsourcing or agency relationships. In a third-party reliance scenario, the third party should be subject to CDD and record-keeping requirements in line with Recommendations 10 and 11, and be regulated, supervised or monitored. The third party will usually have an existing business relationship with the customer, which is independent from the relationship to be formed by the customer with the relying institution, and would apply its own procedures to perform the CDD measures. This can be contrasted with an outsourcing/agency scenario, in which the outsourced entity applies the CDD measures on behalf of the delegating financial institution, in accordance with its procedures, and is subject to the delegating financial institution's control of the effective implementation of those procedures by the outsourced entity.

2. For the purposes of Recommendation 17, the term *relevant competent authorities* means (i) the home authority, that should be involved for the understanding of group policies and controls at group-wide level, and (ii) the host authorities, that should be involved for the branches/subsidiaries.

3. The term *third parties* means financial institutions or DNFBPs that are supervised or monitored and that meet the requirements under Recommendation 17.

INTERPRETIVE NOTE TO RECOMMENDATION 18 (INTERNAL CONTROLS AND FOREIGN BRANCHES AND SUBSIDIARIES)

1. Financial institutions' programmes against money laundering and terrorist financing should include:

   (a) the development of internal policies, procedures and controls, including appropriate compliance management arrangements, and adequate screening procedures to ensure high standards when hiring employees;

   (b) an ongoing employee training programme; and

   (c) an independent audit function to test the system.

2. The type and extent of measures to be taken should be appropriate having regard to the risk of money laundering and terrorist financing and the size of the business.

3. Compliance management arrangements should include the appointment of a compliance officer at the management level.

4. Financial groups' programmes against money laundering and terrorist financing should be applicable to all branches and majority-owned subsidiaries of the financial group. These programmes should include measures under (a) to (c) above, and should be appropriate to the business of the branches and majority-owned subsidiaries. Such programmes should be implemented effectively at the level of branches and majority-owned subsidiaries. These programmes should include policies and procedures for sharing information required for the purposes of CDD and money laundering and terrorist financing risk management. Group-level compliance, audit, and/or AML/CFT functions should be provided with customer, account, and transaction information from branches and subsidiaries when necessary for AML/CFT purposes. This should include information and analysis of transactions or activities which appear unusual (if such analysis was done); and could include an STR, its underlying information, or the fact that an STR has been submitted. Similarly, branches and subsidiaries should receive such information from these group-level functions when relevant and appropriate to risk management. Adequate safeguards on the confidentiality and use of information exchanged should be in place, including to prevent tipping-off. Countries may determine the scope and extent of this information sharing, based on the sensitivity of the information, and its relevance to AML/CFT risk management.

5. In the case of their foreign operations, where the minimum AML/CFT requirements of the host country are less strict than those of the home country, financial institutions should be required to ensure that their branches and majority-owned subsidiaries in host countries implement the requirements of the home country, to the extent that host country laws and regulations permit. If the host country does not permit the proper implementation of the measures above, financial groups should apply appropriate additional measures to manage the money laundering and terrorist financing risks, and inform their home supervisors. If the additional measures are not sufficient, competent authorities in the home country should consider additional supervisory actions, including placing additional controls on the financial

group, including, as appropriate, requesting the financial group to close down its operations in the host country.

INTERPRETIVE NOTE TO RECOMMENDATION 19 (HIGHER-RISK COUNTRIES)

1. The enhanced due diligence measures that could be undertaken by financial institutions include those measures set out in paragraph 20 of the Interpretive Note to Recommendation 10, and any other measures that have a similar effect in mitigating risks.

2. Examples of the countermeasures that could be undertaken by countries include the following, and any other measures that have a similar effect in mitigating risks:

   (a) Requiring financial institutions to apply specific elements of enhanced due diligence.

   (b) Introducing enhanced relevant reporting mechanisms or systematic reporting of financial transactions.

   (c) Refusing the establishment of subsidiaries or branches or representative offices of financial institutions from the country concerned, or otherwise taking into account the fact that the relevant financial institution is from a country that does not have adequate AML/CFT systems.

   (d) Prohibiting financial institutions from establishing branches or representative offices in the country concerned, or otherwise taking into account the fact that the relevant branch or representative office would be in a country that does not have adequate AML/CFT systems.

   (e) Limiting business relationships or financial transactions with the identified country or persons in that country.

   (f) Prohibiting financial institutions from relying on third parties located in the country concerned to conduct elements of the CDD process.

   (g) Requiring financial institutions to review and amend, or if necessary terminate, correspondent relationships with financial institutions in the country concerned.

   (h) Requiring increased supervisory examination and/or external audit requirements for branches and subsidiaries of financial institutions based in the country concerned.

   (i) Requiring increased external audit requirements for financial groups with respect to any of their branches and subsidiaries located in the country concerned.

   There should be effective measures in place to ensure that financial institutions are advised of concerns about weaknesses in the AML/CFT systems of other countries

INTERPRETIVE NOTE TO RECOMMENDATION 20 (REPORTING OF SUSPICIOUS TRANSACTIONS)

1. The reference to criminal activity in Recommendation 20 refers to all criminal acts that would constitute a predicate offence for money laundering or, at a minimum, to those offences that would constitute a predicate offence, as required by Recommendation 3. Countries are strongly encouraged to adopt the first of these alternatives.
2. The reference to terrorist financing in Recommendation 20 refers to: the financing of terrorist acts and also terrorist organisations or individual terrorists, even in the absence of a link to a specific terrorist act or acts.
3. All suspicious transactions, including attempted transactions, should be reported regardless of the amount of the transaction.
4. The reporting requirement should be a direct mandatory obligation, and any indirect or implicit obligation to report suspicious transactions, whether by reason of possible prosecution for a money laundering or terrorist financing offence or otherwise (so called "indirect reporting"), is not acceptable.

INTERPRETIVE NOTE TO RECOMMENDATIONS 22 AND 23 (DNFBPS)

1. The designated thresholds for transactions are as follows:

   - Casinos (under Recommendation 22) - USD/EUR 3,000
   - For dealers in precious metals and dealers in precious stones when engaged in any cash transaction (under Recommendations 22 and 23) - USD/EUR 15,000.

   Financial transactions above a designated threshold include situations where the transaction is carried out in a single operation or in several operations that appear to be linked.

2. The Interpretive Notes that apply to financial institutions are also relevant to DNFBPs, where applicable. To comply with Recommendations 22 and 23, countries do not need to issue laws or enforceable means that relate exclusively to lawyers, notaries, accountants and the other designated non-financial businesses and professions, so long as these businesses or professions are included in laws or enforceable means covering the underlying activities.

INTERPRETIVE NOTE TO RECOMMENDATION 22 (DNFBPS – CUSTOMER DUE DILIGENCE)

1. Real estate agents should comply with the requirements of Recommendation 10 with respect to both the purchasers and vendors of the property.

2. Casinos should implement Recommendation 10, including identifying and verifying the identity of customers, when their customers engage in financial transactions equal to or above USD/EUR 3,000. Conducting customer identification at the entry to a casino could be, but is not necessarily, sufficient. Countries must require casinos to ensure that they are able to link customer due diligence information for a particular customer to the transactions that the customer conducts in the casino.

INTERPRETIVE NOTE TO RECOMMENDATION 23 (DNFBPS – OTHER MEASURES)

1. Lawyers, notaries, other independent legal professionals, and accountants acting as independent legal professionals, are not required to report suspicious transactions if the relevant information was obtained in circumstances where they are subject to professional secrecy or legal professional privilege.

2. It is for each country to determine the matters that would fall under legal professional privilege or professional secrecy. This would normally cover information lawyers, notaries or other independent legal professionals receive from or obtain through one of their clients: (a) in the course of ascertaining the legal position of their client, or (b) in performing their task of defending or representing that client in, or concerning judicial, administrative, arbitration or mediation proceedings.

3. Countries may allow lawyers, notaries, other independent legal professionals and accountants to send their STR to their appropriate self-regulatory organisations, provided that there are appropriate forms of cooperation between these organisations and the FIU.

4. Where lawyers, notaries, other independent legal professionals and accountants acting as independent legal professionals seek to dissuade a client from engaging in illegal activity, this does not amount to tipping-off.

INTERPRETIVE NOTE TO RECOMMENDATION 24 (TRANSPARENCY AND BENEFICIAL OWNERSHIP OF LEGAL PERSONS)

1. Competent authorities should be able to obtain, or have access in a timely fashion to, adequate, accurate and current information on the beneficial ownership and control of companies and other legal persons (beneficial ownership information[42]) that are created[43] in the country. Countries may choose the mechanisms they rely on to achieve this objective, although they should also comply with the minimum requirements set out below. It is also very likely that countries will need to utilise a combination of mechanisms to achieve the objective.

2. As part of the process of ensuring that there is adequate transparency regarding legal persons, countries should have mechanisms that:

   (a) identify and describe the different types, forms and basic features of legal persons in the country.

   (b) identify and describe the processes for: (i) the creation of those legal persons; and (ii) the obtaining and recording of basic and beneficial ownership information;

   (c) make the above information publicly available; and

   (d) assess the money laundering and terrorist financing risks associated with different types of legal persons created in the country.

A. BASIC INFORMATION

3. In order to determine who the beneficial owners of a company are, competent authorities will require certain basic information about the company, which, at a minimum, would include information about the legal ownership and control structure of the company. This would include information about the status and powers of the company, its shareholders and its directors.

4. All companies created in a country should be registered in a company registry.[44] Whichever combination of mechanisms is used to obtain and record beneficial ownership information (see section B), there is a set of basic information on a company that needs to be obtained and recorded by the company[45] as a necessary prerequisite. The minimum basic information to be obtained and recorded by a company should be:

---

42 Beneficial ownership information for legal persons is the information referred to in the interpretive note to Recommendation 10, paragraph 5(b)(i). Controlling shareholders as referred to in, paragraph 5(b)(i) of the interpretive note to Recommendation 10 may be based on a threshold, e.g. any persons owning more than a certain percentage of the company (e.g. 25%).

43 References to creating a legal person, include incorporation of companies or any other mechanism that is used.

44 "Company registry" refers to a register in the country of companies incorporated or licensed in that country and normally maintained by or for the incorporating authority. It does not refer to information held by or for the company itself.

45 The information can be recorded by the company itself or by a third person under the company's responsibility.

(a) company name, proof of incorporation, legal form and status, the address of the registered office, basic regulating powers (e.g. memorandum & articles of association), a list of directors; and

(b) a register of its shareholders or members, containing the names of the shareholders and members and number of shares held by each shareholder[46] and categories of shares (including the nature of the associated voting rights).

5. The company registry should record all the basic information set out in paragraph 4(a) above.

6. The company should maintain the basic information set out in paragraph 4(b) within the country, either at its registered office or at another location notified to the company registry. However, if the company or company registry holds beneficial ownership information within the country, then the register of shareholders need not be in the country, provided that the company can provide this information promptly on request.

B. BENEFICIAL OWNERSHIP INFORMATION

7. Countries should ensure that either: (a) information on the beneficial ownership of a company is obtained by that company and available at a specified location in their country; or (b) there are mechanisms in place so that the beneficial ownership of a company can be determined in a timely manner by a competent authority.

8. In order to meet the requirements in paragraph 7, countries should use one or more of the following mechanisms:

(a) Requiring companies or company registries to obtain and hold up-to-date information on the companies' beneficial ownership;

(b) Requiring companies to take reasonable measures[47] to obtain and hold up-to-date information on the companies' beneficial ownership;

(c) Using existing information, including: (i) information obtained by financial institutions and/or DNFBPs, in accordance with Recommendations 10 and 22[48]; (ii) information held by other competent authorities on the legal and beneficial ownership of companies (e.g. company registries, tax authorities or financial or other regulators); (iii) information held by the company as required above in Section A; and (iv) available information on companies listed on a stock exchange, where disclosure requirements (either by stock exchange rules or through law or enforceable means) impose requirements to ensure adequate transparency of beneficial ownership.

46 This is applicable to the nominal owner of all registered shares.

47 Measures taken should be proportionate to the level of risk or complexity induced by the ownership structure of the company or the nature of the controlling shareholders.

48 Countries should be able to determine in a timely manner whether a company has an account with a financial institution within the country.

9. Regardless of which of the above mechanisms are used, countries should ensure that companies cooperate with competent authorities to the fullest extent possible in determining the beneficial owner. This should include:

   (a) Requiring that one or more natural persons resident in the country is authorised by the company[49], and accountable to competent authorities, for providing all basic information and available beneficial ownership information, and giving further assistance to the authorities; and/or

   (b) Requiring that a DNFBP in the country is authorised by the company, and accountable to competent authorities, for providing all basic information and available beneficial ownership information, and giving further assistance to the authorities; and/or

   (c) Other comparable measures, specifically identified by the country, which can effectively ensure cooperation.

10. All the persons, authorities and entities mentioned above, and the company itself (or its administrators, liquidators or other persons involved in the dissolution of the company), should maintain the information and records referred to for at least five years after the date on which the company is dissolved or otherwise ceases to exist, or five years after the date on which the company ceases to be a customer of the professional intermediary or the financial institution.

C. TIMELY ACCESS TO CURRENT AND ACCURATE INFORMATION

11. Countries should have mechanisms that ensure that basic information, including information provided to the company registry, is accurate and updated on a timely basis. Countries should require that any available information referred to in paragraph 7 is accurate and is kept as current and up-to-date as possible, and the information should be updated within a reasonable period following any change.

12. Competent authorities, and in particular law enforcement authorities, should have all the powers necessary to be able to obtain timely access to the basic and beneficial ownership information held by the relevant parties.

13. Countries should require their company registry to facilitate timely access by financial institutions, DNFBPs and other countries' competent authorities to the public information they hold, and, at a minimum to the information referred to in paragraph 4(a) above. Countries should also consider facilitating timely access by financial institutions and DNFBPs to information referred to in paragraph 4(b) above.

D. OBSTACLES TO TRANSPARENCY

14. Countries should take measures to prevent the misuse of bearer shares and bearer share warrants, for example by applying one or more of the following mechanisms: (a) prohibiting

[49] Members of the company's board or senior management may not require specific authorisation by the company.

them; (b) converting them into registered shares or share warrants (for example through dematerialisation); (c) immobilising them by requiring them to be held with a regulated financial institution or professional intermediary; or (d) requiring shareholders with a controlling interest to notify the company, and the company to record their identity.

15. Countries should take measures to prevent the misuse of nominee shares and nominee directors, for example by applying one or more of the following mechanisms: (a) requiring nominee shareholders and directors to disclose the identity of their nominator to the company and to any relevant registry, and for this information to be included in the relevant register; or (b) requiring nominee shareholders and directors to be licensed, for their nominee status to be recorded in company registries, and for them to maintain information identifying their nominator, and make this information available to the competent authorities upon request.

E. OTHER LEGAL PERSONS

16. In relation to foundations, Anstalt, and limited liability partnerships, countries should take similar measures and impose similar requirements, as those required for companies, taking into account their different forms and structures.

17. As regards other types of legal persons, countries should take into account the different forms and structures of those other legal persons, and the levels of money laundering and terrorist financing risks associated with each type of legal person, with a view to achieving appropriate levels of transparency. At a minimum, countries should ensure that similar types of basic information should be recorded and kept accurate and current by such legal persons, and that such information is accessible in a timely way by competent authorities. Countries should review the money laundering and terrorist financing risks associated with such other legal persons, and, based on the level of risk, determine the measures that should be taken to ensure that competent authorities have timely access to adequate, accurate and current beneficial ownership information for such legal persons.

F. LIABILITY AND SANCTIONS

18. There should be a clearly stated responsibility to comply with the requirements in this Interpretive Note, as well as liability and effective, proportionate and dissuasive sanctions, as appropriate for any legal or natural person that fails to properly comply with the requirements.

G. INTERNATIONAL COOPERATION

19. Countries should rapidly, constructively and effectively provide international cooperation in relation to basic and beneficial ownership information, on the basis set out in Recommendations 37 and 40. This should include (a) facilitating access by foreign competent authorities to basic information held by company registries; (b) exchanging information on shareholders; and (c) using their powers, in accordance with their domestic law, to obtain beneficial ownership information on behalf of foreign counterparts. Countries should monitor

the quality of assistance they receive from other countries in response to requests for basic and beneficial ownership information or requests for assistance in locating beneficial owners residing abroad.

INTERPRETIVE NOTE TO RECOMMENDATION 25 (TRANSPARENCY AND BENEFICIAL OWNERSHIP OF LEGAL ARRANGEMENTS)

1. Countries should require trustees of any express trust governed under their law to obtain and hold adequate, accurate, and current beneficial ownership information regarding the trust. This should include information on the identity of the settlor, the trustee(s), the protector (if any), the beneficiaries or class of beneficiaries, and any other natural person exercising ultimate effective control over the trust. Countries should also require trustees of any trust governed under their law to hold basic information on other regulated agents of, and service providers to, the trust, including investment advisors or managers, accountants, and tax advisors.

2. All countries should take measures to ensure that trustees disclose their status to financial institutions and DNFBPs when, as a trustee, forming a business relationship or carrying out an occasional transaction above the threshold. Trustees should not be prevented by law or enforceable means from providing competent authorities with any information relating to the trust[50]; or from providing financial institutions and DNFBPs, upon request, with information on the beneficial ownership and the assets of the trust to be held or managed under the terms of the business relationship.

3. Countries are encouraged to ensure that other relevant authorities, persons and entities hold information on all trusts with which they have a relationship. Potential sources of information on trusts, trustees, and trust assets are:

   (a) Registries (e.g. a central registry of trusts or trust assets), or asset registries for land, property, vehicles, shares or other assets.

   (b) Other competent authorities that hold information on trusts and trustees (e.g. tax authorities which collect information on assets and income relating to trusts).

   (c) Other agents and service providers to the trust, including investment advisors or managers, lawyers, or trust and company service providers.

4. Competent authorities, and in particular law enforcement authorities, should have all the powers necessary to obtain timely access to the information held by trustees and other parties, in particular information held by financial institutions and DNFBPs on: (a) the beneficial ownership; (b) the residence of the trustee; and (c) any assets held or managed by the financial institution or DNFBP, in relation to any trustees with which they have a business relationship, or for which they undertake an occasional transaction.

5. Professional trustees should be required to maintain the information referred to in paragraph 1 for at least five years after their involvement with the trust ceases. Countries are encouraged to require non-professional trustees and the other authorities, persons and entities mentioned in paragraph 3 above to maintain the information for at least five years.

---

50 Domestic competent authorities or the relevant competent authorities of another country pursuant to an appropriate international cooperation request.

6. Countries should require that any information held pursuant to paragraph 1 above should be kept accurate and be as current and up-to-date as possible, and the information should be updated within a reasonable period following any change.

7. Countries should consider measures to facilitate access to any information on trusts that is held by the other authorities, persons and entities referred to in paragraph 3, by financial institutions and DNFBPs undertaking the requirements set out in Recommendations 10 and 22.

8. In the context of this Recommendation, countries are not required to give legal recognition to trusts. Countries need not include the requirements of paragraphs 1, 2 and 6 in legislation, provided that appropriate obligations to such effect exist for trustees (e.g. through common law or case law).

Other Legal Arrangements

9. As regards other types of legal arrangement with a similar structure or function, countries should take similar measures to those required for trusts, with a view to achieving similar levels of transparency. At a minimum, countries should ensure that information similar to that specified above in respect of trusts should be recorded and kept accurate and current, and that such information is accessible in a timely way by competent authorities.

International Cooperation

10. Countries should rapidly, constructively and effectively provide international cooperation in relation to information, including beneficial ownership information, on trusts and other legal arrangements on the basis set out in Recommendations 37 and 40. This should include (a) facilitating access by foreign competent authorities to any information held by registries or other domestic authorities; (b) exchanging domestically available information on the trusts or other legal arrangement; and (c) using their competent authorities' powers, in accordance with domestic law, in order to obtain beneficial ownership information on behalf of foreign counterparts.

Liability and Sanctions

11. Countries should ensure that there are clear responsibilities to comply with the requirements in this Interpretive Note; and that trustees are either legally liable for any failure to perform the duties relevant to meeting the obligations in paragraphs 1, 2, 6 and (where applicable) 5; or that there are effective, proportionate and dissuasive sanctions, whether criminal, civil or administrative, for failing to comply.[51] Countries should ensure that there are effective, proportionate and dissuasive sanctions, whether criminal, civil or administrative, for failing to

[51] This does not affect the requirements for effective, proportionate, and dissuasive sanctions for failure to comply with requirements elsewhere in the Recommendations.

grant to competent authorities timely access to information regarding the trust referred to in paragraphs 1 and 5.

INTERPRETIVE NOTE TO RECOMMENDATION 26 (REGULATION AND SUPERVISION OF FINANCIAL INSTITUTIONS)

Risk-based approach to Supervision

1. Risk-based approach to supervision refers to: (a) the general process by which a supervisor, according to its understanding of risks, allocates its resources to AML/CFT supervision; and (b) the specific process of supervising institutions that apply an AML/CFT risk-based approach.

2. Adopting a risk-based approach to supervising financial institutions' AML/CFT systems and controls allows supervisory authorities to shift resources to those areas that are perceived to present higher risk. As a result, supervisory authorities can use their resources more effectively. This means that supervisors: (a) should have a clear understanding of the money laundering and terrorist financing risks present in a country; and (b) should have on-site and off-site access to all relevant information on the specific domestic and international risks associated with customers, products and services of the supervised institutions, including the quality of the compliance function of the financial institution or group (or groups, when applicable for Core Principles institutions). The frequency and intensity of on-site and off-site AML/CFT supervision of financial institutions/groups should be based on the money laundering and terrorist financing risks, and the policies, internal controls and procedures associated with the institution/group, as identified by the supervisor's assessment of the institution/group's risk profile, and on the money laundering and terrorist financing risks present in the country.

3. The assessment of the money laundering and terrorist financing risk profile of a financial institution/group, including the risks of non-compliance, should be reviewed both periodically and when there are major events or developments in the management and operations of the financial institution/group, in accordance with the country's established practices for ongoing supervision. This assessment should not be static: it will change depending on how circumstances develop and how threats evolve.

4. AML/CFT supervision of financial institutions/groups that apply a risk-based approach should take into account the degree of discretion allowed under the RBA to the financial institution/group, and encompass, in an appropriate manner, a review of the risk assessments underlying this discretion, and of the adequacy and implementation of its policies, internal controls and procedures.

5. These principles should apply to all financial institutions/groups. To ensure effective AML/CFT supervision, supervisors should take into consideration the characteristics of the financial institutions/groups, in particular the diversity and number of financial institutions, and the degree of discretion allowed to them under the RBA.

Resources of supervisors

6. Countries should ensure that financial supervisors have adequate financial, human and technical resources. These supervisors should have sufficient operational independence and

autonomy to ensure freedom from undue influence or interference. Countries should have in place processes to ensure that the staff of these authorities maintain high professional standards, including standards concerning confidentiality, and should be of high integrity and be appropriately skilled.

INTERPRETIVE NOTE TO RECOMMENDATION 28 (REGULATION AND SUPERVISION OF DNFBPS)

1. Risk-based approach to supervision refers to: (a) the general process by which a supervisor or SRB, according to its understanding of risks, allocates its resources to AML/CFT supervision; and (b) the specific process of supervising or monitoring DNFBPs that apply an AML/CFT risk-based approach.

2. Supervisors or SRBs should determine the frequency and intensity of their supervisory or monitoring actions on DNFBPs on the basis of their understanding of the money laundering and terrorist financing risks, and taking into consideration the characteristics of the DNFBPs, in particular their diversity and number, in order to ensure effective AML/CFT supervision or monitoring. This means having a clear understanding of the money laundering and terrorist financing risks: (a) present in the country; and (b) associated with the type of DNFBP and their customers, products and services.

3. Supervisors or SRBs assessing the adequacy of the AML/CFT internal controls, policies and procedures of DNFBPs should properly take into account the money laundering and terrorist financing risk profile of those DNFBPs, and the degree of discretion allowed to them under the RBA.

4. Supervisors or SRBs should have adequate powers to perform their functions (including powers to monitor and sanction), and adequate financial, human and technical resources. Countries should have in place processes to ensure that the staff of those authorities maintain high professional standards, including standards concerning confidentiality, and should be of high integrity and be appropriately skilled.

INTERPRETIVE NOTE TO RECOMMENDATION 29 (FINANCIAL INTELLIGENCE UNITS)

A. GENERAL

1. This note explains the core mandate and functions of a financial intelligence unit (FIU) and provides further clarity on the obligations contained in the standard. The FIU is part of, and plays a central role in, a country's AML/CFT operational network, and provides support to the work of other competent authorities. Considering that there are different FIU models, Recommendation 29 does not prejudge a country's choice for a particular model, and applies equally to all of them.

B. FUNCTIONS

(a) Receipt

2. The FIU serves as the central agency for the receipt of disclosures filed by reporting entities. At a minimum, this information should include suspicious transaction reports, as required by Recommendation 20 and 23, and it should include other information as required by national legislation (such as cash transaction reports, wire transfers reports and other threshold-based declarations/disclosures).

(b) Analysis

3. FIU analysis should add value to the information received and held by the FIU. While all the information should be considered, the analysis may focus either on each single disclosure received or on appropriate selected information, depending on the type and volume of the disclosures received, and on the expected use after dissemination. FIUs should be encouraged to use analytical software to process information more efficiently and assist in establishing relevant links. However, such tools cannot fully replace the human judgement element of analysis. FIUs should conduct the following types of analysis:

- Operational analysis uses available and obtainable information to identify specific targets (e.g. persons, assets, criminal networks and associations), to follow the trail of particular activities or transactions, and to determine links between those targets and possible proceeds of crime, money laundering, predicate offences or terrorist financing.
- Strategic analysis uses available and obtainable information, including data that may be provided by other competent authorities, to identify money laundering and terrorist financing related trends and patterns. This information is then also used by the FIU or other state entities in order to determine money laundering and terrorist financing related threats and vulnerabilities. Strategic analysis may also help establish policies and goals for the FIU, or more broadly for other entities within the AML/CFT regime.

(c) Dissemination

4. The FIU should be able to disseminate, spontaneously and upon request, information and the results of its analysis to relevant competent authorities. Dedicated, secure and protected channels should be used for the dissemination.

- **Spontaneous dissemination**: The FIU should be able to disseminate information and the results of its analysis to competent authorities when there are grounds to suspect money laundering, predicate offences or terrorist financing. Based on the FIU's analysis, the dissemination of information should be selective and allow the recipient authorities to focus on relevant cases/information.
- **Dissemination upon request:** The FIU should be able to respond to information requests from competent authorities pursuant to Recommendation 31. When the FIU receives such a request from a competent authority, the decision on conducting analysis and/or dissemination of information to the requesting authority should remain with the FIU.

C. ACCESS TO INFORMATION

(a) Obtaining Additional Information from Reporting Entities

5. In addition to the information that entities report to the FIU (under the receipt function), the FIU should be able to obtain and use additional information from reporting entities as needed to perform its analysis properly. The information that the FIU should be permitted to obtain could include information that reporting entities are required to maintain pursuant to the relevant FATF Recommendations (Recommendations 10, 11 and 22).

(b) Access to Information from other sources

6. In order to conduct proper analysis, the FIU should have access to the widest possible range of financial, administrative and law enforcement information. This should include information from open or public sources, as well as relevant information collected and/or maintained by, or on behalf of, other authorities and, where appropriate, commercially held data.

D. INFORMATION SECURITY AND CONFIDENTIALITY

7. Information received, processed, held or disseminated by the FIU must be securely protected, exchanged and used only in accordance with agreed procedures, policies and applicable laws and regulations. An FIU must, therefore, have rules in place governing the security and confidentiality of such information, including procedures for handling, storage, dissemination, and protection of, as well as access to such information. The FIU should ensure that its staff members have the necessary security clearance levels and understanding of their responsibilities in handling and disseminating sensitive and confidential information. The FIU should ensure that there is limited access to its facilities and information, including information technology systems.

E. OPERATIONAL INDEPENDENCE

8. The FIU should be operationally independent and autonomous, meaning that the FIU should have the authority and capacity to carry out its functions freely, including the autonomous decision to analyse, request and/or disseminate specific information. In all cases, this means that the FIU has the independent right to forward or disseminate information to competent authorities.

9. An FIU may be established as part of an existing authority. When a FIU is located within the existing structure of another authority, the FIU's core functions should be distinct from those of the other authority.

10. The FIU should be provided with adequate financial, human and technical resources, in a manner that secures its autonomy and independence and allows it to conduct its mandate effectively. Countries should have in place processes to ensure that the staff of the FIU maintain high professional standards, including standards concerning confidentiality, and should be of high integrity and be appropriately skilled.

11. The FIU should also be able to make arrangements or engage independently with other domestic competent authorities or foreign counterparts on the exchange of information.

F. UNDUE INFLUENCE OR INTERFERENCE

12. The FIU should be able to obtain and deploy the resources needed to carry out its functions, on an individual or routine basis, free from any undue political, government or industry influence or interference, which might compromise its operational independence.

G. EGMONT GROUP

13. Countries should ensure that the FIU has regard to the Egmont Group Statement of Purpose and its Principles for Information Exchange Between Financial Intelligence Units for Money Laundering and Terrorism Financing Cases (these documents set out important guidance concerning the role and functions of FIUs, and the mechanisms for exchanging information between FIUs). The FIU should apply for membership in the Egmont Group.

H. LARGE CASH TRANSACTION REPORTING

14. Countries should consider the feasibility and utility of a system where financial institutions and DNFBPs would report all domestic and international currency transactions above a fixed amount.

INTERPRETIVE NOTE TO RECOMMENDATION 30 (RESPONSIBILITIES OF LAW ENFORCEMENT AND INVESTIGATIVE AUTHORITIES)

1. There should be designated law enforcement authorities that have responsibility for ensuring that money laundering, predicate offences and terrorist financing are properly investigated through the conduct of a financial investigation. Countries should also designate one or more competent authorities to identify, trace, and initiate freezing and seizing of property that is, or may become, subject to confiscation.

2. A 'financial investigation' means an enquiry into the financial affairs related to a criminal activity, with a view to:

   - identifying the extent of criminal networks and/or the scale of criminality;
   - identifying and tracing the proceeds of crime, terrorist funds or any other assets that are, or may become, subject to confiscation; and
   - developing evidence which can be used in criminal proceedings.

3. A 'parallel financial investigation' refers to conducting a financial investigation alongside, or in the context of, a (traditional) criminal investigation into money laundering, terrorist financing and/or predicate offence(s). Law enforcement investigators of predicate offences should either be authorised to pursue the investigation of any related money laundering and terrorist financing offences during a parallel investigation, or be able to refer the case to another agency to follow up with such investigations.

4. Countries should consider taking measures, including legislative ones, at the national level, to allow their competent authorities investigating money laundering and terrorist financing cases to postpone or waive the arrest of suspected persons and/or the seizure of the money, for the purpose of identifying persons involved in such activities or for evidence gathering. Without such measures the use of procedures such as controlled deliveries and undercover operations are precluded.

5. Recommendation 30 also applies to those competent authorities, which are not law enforcement authorities, *per se*, but which have the responsibility for pursuing financial investigations of predicate offences, to the extent that these competent authorities are exercising functions covered under Recommendation 30.

6. Anti-corruption enforcement authorities with enforcement powers may be designated to investigate money laundering and terrorist financing offences arising from, or related to, corruption offences under Recommendation 30, and these authorities should also have sufficient powers to identify, trace, and initiate freezing and seizing of assets.

7. The range of law enforcement agencies and other competent authorities mentioned above should be taken into account when countries make use of multi-disciplinary groups in financial investigations.

8. Law enforcement authorities and prosecutorial authorities should have adequate financial, human and technical resources. Countries should have in place processes to ensure that the

staff of these authorities maintain high professional standards, including standards concerning confidentiality, and should be of high integrity and be appropriately skilled.

INTERPRETIVE NOTE TO RECOMMENDATION 32 (CASH COURIERS)

A. OBJECTIVES

1. Recommendation 32 was developed with the objective of ensuring that terrorists and other criminals cannot finance their activities or launder the proceeds of their crimes through the physical cross-border transportation of currency and bearer negotiable instruments. Specifically, it aims to ensure that countries have measures to: (a) detect the physical cross-border transportation of currency and bearer negotiable instruments; (b) stop or restrain currency and bearer negotiable instruments that are suspected to be related to terrorist financing or money laundering; (c) stop or restrain currency or bearer negotiable instruments that are falsely declared or disclosed; (d) apply appropriate sanctions for making a false declaration or disclosure; and (e) enable confiscation of currency or bearer negotiable instruments that are related to terrorist financing or money laundering.

B. THE TYPES OF SYSTEMS THAT MAY BE IMPLEMENTED TO ADDRESS THE ISSUE OF CASH COURIERS

2. Countries may meet their obligations under Recommendation 32 and this Interpretive Note by implementing one of the following types of systems. However, countries do not have to use the same type of system for incoming and outgoing cross-border transportation of currency or bearer negotiable instruments:

Declaration system

3. All persons making a physical cross-border transportation of currency or bearer negotiable instruments (BNIs), which are of a value exceeding a pre-set, maximum threshold of USD/EUR 15,000, are required to submit a truthful declaration to the designated competent authorities. Countries may opt from among the following three different types of declaration system: (i) a written declaration system for all travellers; (ii) a written declaration system for those travellers carrying an amount of currency or BNIs above a threshold; and (iii) an oral declaration system. These three systems are described below in their pure form. However, it is not uncommon for countries to opt for a mixed system.

(a) *Written declaration system for all travellers*: In this system, all travellers are required to complete a written declaration before entering the country. This would include questions contained on common or customs declaration forms. In practice, travellers have to make a declaration whether or not they are carrying currency or BNIs (e.g. ticking a “yes” or “no” box).

(b) *Written declaration system for travellers carrying amounts above a threshold:* In this system, all travellers carrying an amount of currency or BNIs above a pre-set designated threshold are required to complete a written declaration form. In practice, the traveller is not required to fill out any forms if they are not carrying currency or BNIs over the designated threshold.

(c) *Oral declaration system for all travellers:* In this system, all travellers are required to orally declare if they carry an amount of currency or BNIs above a prescribed threshold. Usually, this is done at customs entry points by requiring travellers to choose between the "red channel" (goods to declare) and the "green channel" (nothing to declare). The choice of channel that the traveller makes is considered to be the oral declaration. In practice, travellers do not declare in writing, but are required to actively report to a customs official.

Disclosure system

4. Countries may opt for a system whereby travellers are required to provide the authorities with appropriate information upon request. In such systems, there is no requirement for travellers to make an upfront written or oral declaration. In practice, travellers need to be required to give a truthful answer to competent authorities upon request.

C. ADDITIONAL ELEMENTS APPLICABLE TO BOTH SYSTEMS

5. Whichever system is implemented, countries should ensure that their system incorporates the following elements:

(a) The declaration/disclosure system should apply to both incoming and outgoing transportation of currency and BNIs.

(b) Upon discovery of a false declaration/disclosure of currency or bearer negotiable instruments or a failure to declare/disclose them, designated competent authorities should have the authority to request and obtain further information from the carrier with regard to the origin of the currency or BNIs and their intended use.

(c) Information obtained through the declaration/disclosure process should be available to the FIU, either through a system whereby the FIU is notified about suspicious cross-border transportation incidents, or by making the declaration/disclosure information directly available to the FIU in some other way.

(d) At the domestic level, countries should ensure that there is adequate coordination among customs, immigration and other related authorities on issues related to the implementation of Recommendation 32.

(e) In the following two cases, competent authorities should be able to stop or restrain cash or BNIs for a reasonable time, in order to ascertain whether evidence of money laundering or terrorist financing may be found: (i) where there is a suspicion of money laundering or terrorist financing; or (ii) where there is a false declaration or false disclosure.

(f) The declaration/disclosure system should allow for the greatest possible measure of international cooperation and assistance in accordance with Recommendations 36 to 40. To facilitate such cooperation, in instances when: (i) a declaration or disclosure which exceeds the maximum threshold of USD/EUR 15,000 is made; or (ii) where there is a false declaration or false disclosure; or (iii) where there is a suspicion of

money laundering or terrorist financing, this information shall be retained for use by competent authorities. At a minimum, this information will cover: (i) the amount of currency or BNIs declared, disclosed or otherwise detected; and (ii) the identification data of the bearer(s).

(g) Countries should implement Recommendation 32 subject to strict safeguards to ensure proper use of information and without restricting either: (i) trade payments between countries for goods and services; or (ii) the freedom of capital movements, in any way.

D. SANCTIONS

6. Persons who make a false declaration or disclosure should be subject to effective, proportionate and dissuasive sanctions, whether criminal civil or administrative. Persons who are carrying out a physical cross-border transportation of currency or BNIs that is related to terrorist financing, money laundering or predicate offences should also be subject to effective, proportionate and dissuasive sanctions, whether criminal, civil or administrative, and should be subject to measures, consistent with Recommendation 4, which would enable the confiscation of such currency or BNIs.

7. Authorities responsible for implementation of Recommendation 32 should have adequate financial, human and technical resources. Countries should have in place processes to ensure that the staff of these authorities maintain high professional standards, including standards concerning confidentiality, and should be of high integrity and be appropriately skilled.

E. GOLD, PRECIOUS METALS AND PRECIOUS STONES

8. For the purposes of Recommendation 32, gold, precious metals and precious stones are not included, despite their high liquidity and use in certain situations as a means of exchange or transmitting value. These items may be otherwise covered under customs laws and regulations. If a country discovers an unusual cross-border movement of gold, precious metals or precious stones, it should consider notifying, as appropriate, the Customs Service or other competent authorities of the countries from which these items originated and/or to which they are destined, and should cooperate with a view toward establishing the source, destination, and purpose of the movement of such items, and toward the taking of appropriate action.

Glossary of specific terms used in this Recommendation

False declaration	refers to a misrepresentation of the value of currency or BNIs being transported, or a misrepresentation of other relevant data which is required for submission in the declaration or otherwise requested by the authorities. This includes failing to make a declaration as required.
False disclosure	refers to a misrepresentation of the value of currency or BNIs being transported, or a misrepresentation of other relevant data which is

Glossary of specific terms used in this Recommendation

	asked for upon request in the disclosure or otherwise requested by the authorities. This includes failing to make a disclosure as required.
Physical cross-border transportation	refers to any in-bound or out-bound physical transportation of currency or BNIs from one country to another country. The term includes the following modes of transportation: (1) physical transportation by a natural person, or in that person's accompanying luggage or vehicle; (2) shipment of currency or BNIs through containerised cargo or (3) the mailing of currency or BNIs by a natural or legal person.
Related to terrorist financing or money laundering	when used to describe currency or BNIs, refers to currency or BNIs that are: (i) the proceeds of, or used in, or intended or allocated for use in, the financing of terrorism, terrorist acts or terrorist organisations; or (ii) laundered, proceeds from money laundering or predicate offences, or instrumentalities used in or intended for use in the commission of these offences.

INTERPRETIVE NOTE TO RECOMMENDATION 38 (MUTUAL LEGAL ASSISTANCE: FREEZING AND CONFISCATION)

1. Countries should consider establishing an asset forfeiture fund into which all, or a portion of, confiscated property will be deposited for law enforcement, health, education, or other appropriate purposes. Countries should take such measures as may be necessary to enable them to share among or between other countries confiscated property, in particular, when confiscation is directly or indirectly a result of coordinated law enforcement actions.

2. With regard to requests for cooperation made on the basis of non-conviction based confiscation proceedings, countries need not have the authority to act on the basis of all such requests, but should be able to do so, at a minimum in circumstances when a perpetrator is unavailable by reason of death, flight, absence, or the perpetrator is unknown.

INTERPRETIVE NOTE TO RECOMMENDATION 40 (OTHER FORMS OF INTERNATIONAL COOPERATION)

A. PRINCIPLES APPLICABLE TO ALL FORMS OF INTERNATIONAL COOPERATION

Obligations on requesting authorities

1. When making requests for cooperation, competent authorities should make their best efforts to provide complete factual and, as appropriate, legal information, including indicating any need for urgency, to enable a timely and efficient execution of the request, as well as the foreseen use of the information requested. Upon request, requesting competent authorities should provide feedback to the requested competent authority on the use and usefulness of the information obtained.

Unduly restrictive measures

2. Countries should not prohibit or place unreasonable or unduly restrictive conditions on the provision of exchange of information or assistance. In particular competent authorities should not refuse a request for assistance on the grounds that:

   (a) the request is also considered to involve fiscal matters; and/or

   (b) laws require financial institutions or DNFBPs (except where the relevant information that is sought is held in circumstances where legal privilege or legal professional secrecy applies) to maintain secrecy or confidentiality; and/or

   (c) there is an inquiry, investigation or proceeding underway in the requested country, unless the assistance would impede that inquiry, investigation or proceeding; and/or

   (d) the nature or status (civil, administrative, law enforcement, etc.) of the requesting counterpart authority is different from that of its foreign counterpart.

Safeguards on information exchanged

3. Exchanged information should be used only for the purpose for which the information was sought or provided. Any dissemination of the information to other authorities or third parties, or any use of this information for administrative, investigative, prosecutorial or judicial purposes, beyond those originally approved, should be subject to prior authorisation by the requested competent authority.

4. Competent authorities should maintain appropriate confidentiality for any request for cooperation and the information exchanged, in order to protect the integrity of the investigation or inquiry[52], consistent with both parties' obligations concerning privacy and data protection. At a minimum, competent authorities should protect exchanged information in the same manner as they would protect similar information received from domestic sources. Countries should establish controls and safeguards to ensure that information exchanged by competent authorities is used only in the manner authorised. Exchange of

[52] Information may be disclosed if such disclosure is required to carry out the request for cooperation.

information should take place in a secure way, and through reliable channels or mechanisms. Requested competent authorities may, as appropriate, refuse to provide information if the requesting competent authority cannot protect the information effectively.

Power to search for information

5. Competent authorities should be able to conduct inquiries on behalf of a foreign counterpart, and exchange with their foreign counterparts all information that would be obtainable by them if such inquiries were being carried out domestically.

B. PRINCIPLES APPLICABLE TO SPECIFIC FORMS OF INTERNATIONAL COOPERATION

6. The general principles above should apply to all forms of exchange of information between counterparts or non-counterparts, subject to the paragraphs set out below.

Exchange of information between FIUs

7. FIUs should exchange information with foreign FIUs, regardless of their respective status; be it of an administrative, law enforcement, judicial or other nature. To this end, FIUs should have an adequate legal basis for providing cooperation on money laundering, associated predicate offences and terrorist financing.

8. When making a request for cooperation, FIUs should make their best efforts to provide complete factual, and, as appropriate, legal information, including the description of the case being analysed and the potential link to the requested country. Upon request and whenever possible, FIUs should provide feedback to their foreign counterparts on the use of the information provided, as well as on the outcome of the analysis conducted, based on the information provided.

9. FIUs should have the power to exchange:

   (a) all information required to be accessible or obtainable directly or indirectly by the FIU under the FATF Recommendations, in particular under Recommendation 29; and

   (b) any other information which they have the power to obtain or access, directly or indirectly, at the domestic level, subject to the principle of reciprocity.

Exchange of information between financial supervisors[53]

10. Financial supervisors should cooperate with their foreign counterparts, regardless of their respective nature or status. Efficient cooperation between financial supervisors aims at facilitating effective AML/CFT supervision of financial institutions. To this end, financial supervisors should have an adequate legal basis for providing cooperation, consistent with the applicable international standards for supervision, in particular with respect to the exchange of supervisory information related to or relevant for AML/CFT purposes.

---

53 This refers to financial supervisors which are competent authorities.

11. Financial supervisors should be able to exchange with foreign counterparts information domestically available to them, including information held by financial institutions, and in a manner proportionate to their respective needs. Financial supervisors should be able to exchange the following types of information when relevant for AML/CFT purposes, in particular with other relevant supervisors that have a shared responsibility for financial institutions operating in the same group:

    (a) Regulatory information, such as information on the domestic regulatory system, and general information on the financial sectors.

    (b) Prudential information, in particular for Core Principle Supervisors, such as information on the financial institution's business activities, beneficial ownership, management, and fit and properness.

    (c) AML/CFT information, such as internal AML/CFT procedures and policies of financial institutions, customer due diligence information, customer files, samples of accounts and transaction information.

12. Financial supervisors should be able to conduct inquiries on behalf of foreign counterparts, and, as appropriate, to authorise or facilitate the ability of foreign counterparts to conduct inquiries themselves in the country, in order to facilitate effective group supervision.

13. Any dissemination of information exchanged or use of that information for supervisory and non- supervisory purposes, should be subject to prior authorisation by the requested financial supervisor, unless the requesting financial supervisor is under a legal obligation to disclose or report the information. In such cases, at a minimum, the requesting financial supervisor should promptly inform the requested authority of this obligation. The prior authorisation includes any deemed prior authorisation under a Memorandum of Understanding or the Multi-lateral Memorandum of Understanding issued by a core principles standard-setter applied to information exchanged under a Memorandum of Understanding or the Multi-lateral Memorandum of Understanding.

Exchange of information between law enforcement authorities

14. Law enforcement authorities should be able to exchange domestically available information with foreign counterparts for intelligence or investigative purposes relating to money laundering, associated predicate offences or terrorist financing, including the identification and tracing of the proceeds and instrumentalities of crime.

15. Law enforcement authorities should also be able to use their powers, including any investigative techniques available in accordance with their domestic law, to conduct inquiries and obtain information on behalf of foreign counterparts. The regimes or practices in place governing such law enforcement cooperation, such as the agreements between Interpol, Europol or Eurojust and individual countries, should govern any restrictions on use imposed by the requested law enforcement authority.

16. Law enforcement authorities should be able to form joint investigative teams to conduct cooperative investigations, and, when necessary, countries should establish bilateral or

multilateral arrangements to enable such joint investigations. Countries are encouraged to join and support existing AML/CFT law enforcement networks, and develop bi-lateral contacts with foreign law enforcement agencies, including placing liaison officers abroad, in order to facilitate timely and effective cooperation.

Exchange of information between non-counterparts

17. Countries should permit their competent authorities to exchange information indirectly with non-counterparts, applying the relevant principles above. Indirect exchange of information refers to the requested information passing from the requested authority through one or more domestic or foreign authorities before being received by the requesting authority. Such an exchange of information and its use may be subject to the authorisation of one or more competent authorities of the requested country. The competent authority that requests the information should always make it clear for what purpose and on whose behalf the request is made.

18. Countries are also encouraged to permit a prompt and constructive exchange of information directly with non-counterparts.

LEGAL BASIS OF REQUIREMENTS ON FINANCIAL INSTITUTIONS AND DNFBPS

1. All requirements for financial institutions or DNFBPs should be introduced either (a) in law (see the specific requirements in Recommendations 10, 11 and 20 in this regard), or (b) for all other cases, in law or enforceable means (the country has discretion).

2. In Recommendations 10, 11 and 20, the term "*law*" refers to any legislation issued or approved through a Parliamentary process or other equivalent means provided for under the country's constitutional framework, which imposes mandatory requirements with sanctions for non-compliance. The sanctions for non-compliance should be effective, proportionate and dissuasive (see Recommendation 35). The notion of law also encompasses judicial decisions that impose relevant requirements, and which are binding and authoritative in all parts of the country.

3. The term "*Enforceable means*" refers to regulations, guidelines, instructions or other documents or mechanisms that set out enforceable AML/CFT requirements in mandatory language with sanctions for non-compliance, and which are issued or approved by a competent authority. The sanctions for non-compliance should be effective, proportionate and dissuasive (see Recommendation 35).

4. In considering whether a document or mechanism has requirements that amount to *enforceable means*, the following factors should be taken into account:

   (a) There must be a document or mechanism that sets out or underpins requirements addressing the issues in the FATF Recommendations, and providing clearly stated requirements which are understood as such. For example:

      (i) if particular measures use the word *shall* or *must*, this should be considered mandatory;

      (ii) if they use *should*, this could be mandatory if both the regulator and the regulated institutions demonstrate that the actions are directly or indirectly required and are being implemented; language such as measures *are encouraged*, *are recommended* or institutions *should consider* is less likely to be regarded as mandatory. In any case where weaker language is used, there is a presumption that the language is not mandatory (unless the country can demonstrate otherwise).

   (b) The document/mechanism must be issued or approved by a competent authority.

   (c) There must be sanctions for non-compliance (sanctions need not be in the same document that imposes or underpins the requirement, and can be in another document, provided that there are clear links between the requirement and the available sanctions), which should be effective, proportionate and dissuasive. This involves consideration of the following issues:

      (i) there should be an adequate range of effective, proportionate and dissuasive sanctions available if persons fail to comply with their obligations;

(ii) the sanctions should be directly or indirectly applicable for a failure to comply with an AML/CFT requirement. If non-compliance with an AML/CFT requirement does not have a sanction directly attached to it, then the use of sanctions for violation of broader requirements, such as not having proper systems and controls or not operating in a safe and sound manner, is satisfactory provided that, at a minimum, a failure to meet one or more AML/CFT requirements could be (and has been as appropriate) adequately sanctioned without a need to prove additional prudential failures unrelated to AML/CFT; and

(iii) whether there is satisfactory evidence that effective, proportionate and dissuasive sanctions have been applied in practice.

5. In all cases it should be apparent that financial institutions and DNFBPs understand that sanctions would be applied for non-compliance and what those sanctions could be.

GENERAL GLOSSARY

Terms	Definitions
Accounts	References to "accounts" should be read as including other similar business relationships between financial institutions and their customers.
Accurate	Please refer to the IN to Recommendation 16.
Agent	For the purposes of Recommendations 14 and 16, *agent* means any natural or legal person providing MVTS on behalf of an MVTS provider, whether by contract with or under the direction of the MVTS provider.
Appropriate authorities	Please refer to the IN to Recommendation 8.
Associate NPOs	Please refer to the IN to Recommendation 8.
Batch transfer	Please refer to the IN to Recommendation 16.
Bearer negotiable instruments	*Bearer negotiable instruments (BNIs)* includes monetary instruments in bearer form such as: traveller's cheques; negotiable instruments (including cheques, promissory notes and money orders) that are either in bearer form, endorsed without restriction, made out to a fictitious payee, or otherwise in such form that title thereto passes upon delivery; incomplete instruments (including cheques, promissory notes and money orders) signed, but with the payee's name omitted.
Bearer shares	*Bearer shares* refers to negotiable instruments that accord ownership in a legal person to the person who possesses the bearer share certificate.
Beneficial owner	*Beneficial owner* refers to the natural person(s) who ultimately[54] owns or controls a customer[55] and/or the natural person on whose behalf a transaction is being conducted. It also includes those persons who exercise ultimate effective control over a legal person or arrangement.
Beneficiaries	Please refer to the IN to Recommendation 8.
Beneficiary	The meaning of the term *beneficiary* in the FATF Recommendations depends on the context: ■ In trust law, a beneficiary is the person or persons who are entitled to the benefit of any trust arrangement. A beneficiary can be a natural or legal person or arrangement. All trusts (other than charitable or

54 Reference to "ultimately owns or controls" and "ultimate effective control" refer to situations in which ownership/control is exercised through a chain of ownership or by means of control other than direct control.

55 This definition should also apply to beneficial owner of a beneficiary under a life or other investment linked insurance policy.

Terms	Definitions
	statutory permitted non-charitable trusts) are required to have ascertainable beneficiaries. While trusts must always have some ultimately ascertainable beneficiary, trusts may have no defined existing beneficiaries but only objects of a power until some person becomes entitled as beneficiary to income or capital on the expiry of a defined period, known as the accumulation period. This period is normally co-extensive with the trust perpetuity period which is usually referred to in the trust deed as the trust period. ■ In the context of life insurance or another investment linked insurance policy, a beneficiary is the natural or legal person, or a legal arrangement, or category of persons, who will be paid the policy proceeds when/if an insured event occurs, which is covered by the policy. Please also refer to the Interpretive Notes to Recommendation 16.
Beneficiary Financial Institution	Please refer to the IN to Recommendation 16.
Competent authorities	*Competent authorities* refers to all public authorities[56] with designated responsibilities for combating money laundering and/or terrorist financing. In particular, this includes the FIU; the authorities that have the function of investigating and/or prosecuting money laundering, associated predicate offences and terrorist financing, and seizing/freezing and confiscating criminal assets; authorities receiving reports on cross-border transportation of currency & BNIs; and authorities that have AML/CFT supervisory or monitoring responsibilities aimed at ensuring compliance by financial institutions and DNFBPs with AML/CFT requirements. SRBs are not to be regarded as a competent authorities.
Confiscation	The term *confiscation,* which includes forfeiture where applicable, means the permanent deprivation of funds or other assets by order of a competent authority or a court. Confiscation or forfeiture takes place through a judicial or administrative procedure that transfers the ownership of specified funds or other assets to be transferred to the State. In this case, the person(s) or entity(ies) that held an interest in the specified funds or other assets at the time of the confiscation or forfeiture loses all rights, in principle, to the confiscated or forfeited funds or other assets. Confiscation or forfeiture orders are usually linked to a criminal conviction or a court decision whereby the confiscated or

[56] This includes financial supervisors established as independent non-governmental authorities with statutory powers.

Terms	Definitions
	forfeited property is determined to have been derived from or intended for use in a violation of the law.
Core Principles	*Core Principles* refers to the Core Principles for Effective Banking Supervision issued by the Basel Committee on Banking Supervision, the Objectives and Principles for Securities Regulation issued by the International Organization of Securities Commissions, and the Insurance Supervisory Principles issued by the International Association of Insurance Supervisors.
Correspondent banking	*Correspondent banking* is the provision of banking services by one bank (the "correspondent bank") to another bank (the "respondent bank"). Large international banks typically act as correspondents for thousands of other banks around the world. Respondent banks may be provided with a wide range of services, including cash management (e.g. interest-bearing accounts in a variety of currencies), international wire transfers, cheque clearing, payable-through accounts and foreign exchange services.
Country	All references in the FATF Recommendations to *country* or *countries* apply equally to territories or jurisdictions.
Cover Payment	Please refer to the IN. to Recommendation 16.
Criminal activity	*Criminal activity* refers to: (a) all criminal acts that would constitute a predicate offence for money laundering in the country; or (b) at a minimum to those offences that would constitute a predicate offence as required by Recommendation 3.
Cross-border Wire Transfer	Please refer to the IN to Recommendation 16.
Currency	*Currency* refers to banknotes and coins that are in circulation as a medium of exchange.
Designated categories of offences	*Designated categories of offences* means: ■ participation in an organised criminal group and racketeering; ■ terrorism, including terrorist financing; ■ trafficking in human beings and migrant smuggling; ■ sexual exploitation, including sexual exploitation of children; ■ illicit trafficking in narcotic drugs and psychotropic substances; ■ illicit arms trafficking; ■ illicit trafficking in stolen and other goods;

Terms	Definitions
	■ corruption and bribery; ■ fraud; ■ counterfeiting currency; ■ counterfeiting and piracy of products; ■ environmental crime; ■ murder, grievous bodily injury; ■ kidnapping, illegal restraint and hostage-taking; ■ robbery or theft; ■ smuggling; (including in relation to customs and excise duties and taxes); ■ tax crimes (related to direct taxes and indirect taxes); ■ extortion; ■ forgery; ■ piracy; and ■ insider trading and market manipulation. When deciding on the range of offences to be covered as predicate offences under each of the categories listed above, each country may decide, in accordance with its domestic law, how it will define those offences and the nature of any particular elements of those offences that make them serious offences.
Designated non-financial businesses and professions	*Designated non-financial businesses and professions* means: a) Casinos[57] b) Real estate agents. c) Dealers in precious metals. d) Dealers in precious stones. e) Lawyers, notaries, other independent legal professionals and accountants – this refers to sole practitioners, partners or employed professionals within professional firms. It is not meant to refer to 'internal' professionals that are employees of other types of businesses,

[57] References to *Casinos* throughout the FATF Standards include internet- and ship-based casinos.

Terms	Definitions
	nor to professionals working for government agencies, who may already be subject to AML/CFT measures. f) Trust and Company Service Providers refers to all persons or businesses that are not covered elsewhere under these Recommendations, and which as a business, provide any of the following services to third parties: ■ acting as a formation agent of legal persons; ■ acting as (or arranging for another person to act as) a director or secretary of a company, a partner of a partnership, or a similar position in relation to other legal persons; ■ providing a registered office; business address or accommodation, correspondence or administrative address for a company, a partnership or any other legal person or arrangement; ■ acting as (or arranging for another person to act as) a trustee of an express trust or performing the equivalent function for another form of legal arrangement; ■ acting as (or arranging for another person to act as) a nominee shareholder for another person.
Designated person or entity	The term designated person or entity refers to: (i) individual, groups, undertakings and entities designated by the Committee of the Security Council established pursuant to resolution 1267 (1999) (the 1267 Committee), as being individuals associated with Al-Qaida, or entities and other groups and undertakings associated with Al-Qaida; (ii) individuals, groups, undertakings and entities designated by the Committee of the Security Council established pursuant to resolution 1988 (2011) (the 1988 Committee), as being associated with the Taliban in constituting a threat to the peace, stability and security of Afghanistan, or entities and other groups and undertakings associated with the Taliban; (iii) any natural or legal person or entity designated by jurisdictions or a supra-national jurisdiction pursuant to Security Council resolution 1373 (2001); (iv) any individual, natural or legal person or entity designated for the application of targeted financial sanctions pursuant to Security Council

Terms	Definitions
	resolution 1718 (2006) and any future successor resolutions by the Security Council in annexes to the relevant resolutions, or by the Security Council Committee established pursuant to resolution 1718 (2006) (the 1718 Sanctions Committee) pursuant to Security Council resolution 1718 (2006); and (v) any natural or legal person or entity designated for the application of targeted financial sanctions pursuant to Security Council resolution 2231 (2015) and any future successor resolutions by the Security Council.
Designation	The term *designation* refers to the identification of a person[58], individual or entity that is subject to targeted financial sanctions pursuant to: ■ United Nations Security Council resolution 1267 (1999) and its successor resolutions; ■ Security Council resolution 1373 (2001), including the determination that the relevant sanctions will be applied to the person or entity and the public communication of that determination; ■ Security Council resolution 1718 (2006) and any future successor resolutions; ■ Security Council resolution 2231 (2015) and any future successor resolutions; and ■ any future Security Council resolutions which impose targeted financial sanctions in the context of the financing of proliferation of weapons of mass destruction. As far as Security Council resolution 2231 (2015) and any future successor resolutions are concerned, references to "designations" apply equally to "listing".
Domestic Wire Transfer	Please refer to the IN to Recommendation 16.
Enforceable means	Please refer to the Note on the Legal Basis of requirements on Financial Institutions and DNFBPs.
Ex Parte	The term *ex parte* means proceeding without prior notification and participation of the affected party.
Express trust	*Express trust* refers to a trust clearly created by the settlor, usually in the form of a document e.g. a written deed of trust. They are to be contrasted with trusts

58 Natural or legal.

Terms	Definitions
	which come into being through the operation of the law and which do not result from the clear intent or decision of a settlor to create a trust or similar legal arrangements (e.g. constructive trust).
False declaration	Please refer to the IN to Recommendation 32.
False disclosure	Please refer to the IN to Recommendation 32.
Financial group	*Financial group* means a group that consists of a parent company or of any other type of legal person exercising control and coordinating functions over the rest of the group for the application of group supervision under the Core Principles, together with branches and/or subsidiaries that are subject to AML/CFT policies and procedures at the group level.
Financial institutions	*Financial institutions* means any natural or legal person who conducts as a business one or more of the following activities or operations for or on behalf of a customer: 1. Acceptance of deposits and other repayable funds from the public.[59] 2. Lending.[60] 3. Financial leasing.[61] 4. Money or value transfer services.[62] 5. Issuing and managing means of payment (e.g. credit and debit cards, cheques, traveller's cheques, money orders and bankers' drafts, electronic money). 6. Financial guarantees and commitments. 7. Trading in: (a) money market instruments (cheques, bills, certificates of deposit, derivatives etc.); (b) foreign exchange; (c) exchange, interest rate and index instruments; (d) transferable securities; (e) commodity futures trading.

59 This also captures private banking.

60 This includes *inter alia*: consumer credit; mortgage credit; factoring, with or without recourse; and finance of commercial transactions (including forfeiting).

61 This does not extend to financial leasing arrangements in relation to consumer products.

62 It does not apply to any natural or legal person that provides financial institutions solely with message or other support systems for transmitting funds. See the Interpretive Note to Recommendation 16.

Terms	Definitions
	8. Participation in securities issues and the provision of financial services related to such issues. 9. Individual and collective portfolio management. 10. Safekeeping and administration of cash or liquid securities on behalf of other persons. 11. Otherwise investing, administering or managing funds or money on behalf of other persons. 12. Underwriting and placement of life insurance and other investment related insurance[63]. 13. Money and currency changing.
Foreign counterparts	Foreign counterparts refers to foreign competent authorities that exercise similar responsibilities and functions in relation to the cooperation which is sought, even where such foreign competent authorities have a different nature or status (e.g. depending on the country, AML/CFT supervision of certain financial sectors may be performed by a supervisor that also has prudential supervisory responsibilities or by a supervisory unit of the FIU).
Freeze	In the context of confiscation and provisional measures (e.g., Recommendations 4, 32 and 38), the term freeze means to prohibit the transfer, conversion, disposition or movement of any property, equipment or other instrumentalities on the basis of, and for the duration of the validity of, an action initiated by a competent authority or a court under a freezing mechanism, or until a forfeiture or confiscation determination is made by a competent authority. For the purposes of Recommendations 6 and 7 on the implementation of targeted financial sanctions, the term freeze means to prohibit the transfer, conversion, disposition or movement of any funds or other assets that are owned or controlled by designated persons or entities on the basis of, and for the duration of the validity of, an action initiated by the United Nations Security Council or in accordance with applicable Security Council resolutions by a competent authority or a court. In all cases, the frozen property, equipment, instrumentalities, funds or other assets remain the property of the natural or legal person(s) that held an interest in them at the time of the freezing and may continue to be administered by third parties, or through other arrangements established by such natural or legal person(s) prior to the initiation of an action under a freezing mechanism, or in accordance with other national provisions. As part of the implementation of a freeze, countries may decide to take control of the property, equipment, instrumentalities, or funds or other assets as a means to protect against flight.

63 This applies both to insurance undertakings and to insurance intermediaries (agents and brokers).

Terms	Definitions
Fundamental principles of domestic law	This refers to the basic legal principles upon which national legal systems are based and which provide a framework within which national laws are made and powers are exercised. These fundamental principles are normally contained or expressed within a national Constitution or similar document, or through decisions of the highest level of court having the power to make binding interpretations or determinations of national law. Although it will vary from country to country, some examples of such fundamental principles include rights of due process, the presumption of innocence, and a person's right to effective protection by the courts.
Funds	The term *funds* refers to assets of every kind, whether corporeal or incorporeal, tangible or intangible, movable or immovable, however acquired, and legal documents or instruments in any form, including electronic or digital, evidencing title to, or interest in, such assets.
Funds or other assets	The term *funds or other assets* means any assets, including, but not limited to, financial assets, economic resources (including oil and other natural resources), property of every kind, whether tangible or intangible, movable or immovable, however acquired, and legal documents or instruments in any form, including electronic or digital, evidencing title to, or interest in, such funds or other assets, including, but not limited to, bank credits, travellers cheques, bank cheques, money orders, shares, securities, bonds, drafts, or letters of credit, and any interest, dividends or other income on or value accruing from or generated by such funds or other assets, and any other assets which potentially may be used to obtain funds, goods or services.
Identification data	The term *identification data* refers to reliable, independent source documents, data or information.
Intermediary financial institution	Please refer to the IN to Recommendation 16.
International organisations	International organisations are entities established by formal political agreements between their member States that have the status of international treaties; their existence is recognised by law in their member countries; and they are not treated as resident institutional units of the countries in which they are located. Examples of international organisations include the United Nations and affiliated international organisations such as the International Maritime Organisation; regional international organisations such as the Council of Europe, institutions of the European Union, the Organization for Security and Co-operation in Europe and the Organization of American States; military international organisations such as the North Atlantic Treaty Organization, and economic organisations such as the World Trade Organisation or the Association of Southeast Asian Nations, etc.

Terms	Definitions
Law	Please refer to the Note on the Legal Basis of requirements on Financial Institutions and DNFBPs.
Legal arrangements	*Legal arrangements* refers to express trusts or other similar legal arrangements. Examples of other similar arrangements (for AML/CFT purposes) include fiducie, treuhand and fideicomiso.
Legal persons	*Legal persons* refers to any entities other than natural persons that can establish a permanent customer relationship with a financial institution or otherwise own property. This can include companies, bodies corporate, foundations, anstalt, partnerships, or associations and other relevantly similar entities.
Money laundering offence	References (except in Recommendation 3) to a *money laundering offence* refer not only to the primary offence or offences, but also to ancillary offences.
Money or value transfer service	*Money or value transfer services (MVTS)* refers to financial services that involve the acceptance of cash, cheques, other monetary instruments or other stores of value and the payment of a corresponding sum in cash or other form to a beneficiary by means of a communication, message, transfer, or through a clearing network to which the MVTS provider belongs. Transactions performed by such services can involve one or more intermediaries and a final payment to a third party, and may include any new payment methods. Sometimes these services have ties to particular geographic regions and are described using a variety of specific terms, including *hawala*, *hundi*, and *fei-chen*.
Non-conviction based confiscation	*Non-conviction based confiscation* means confiscation through judicial procedures related to a criminal offence for which a criminal conviction is not required.
Non-profit organisations	Please refer to the IN to Recommendation 8.
Originator	Please refer to the IN to Recommendation 16.
Ordering financial institution	Please refer to the IN to Recommendation 16.
Payable-through accounts	Please refer to the IN to Recommendation 13.
Physical cross-border transportation	Please refer to the IN. to Recommendation 32.

Terms	Definitions
Politically Exposed Persons (PEPs)	*Foreign PEPs* are individuals who are or have been entrusted with prominent public functions by a foreign country, for example Heads of State or of government, senior politicians, senior government, judicial or military officials, senior executives of state owned corporations, important political party officials. *Domestic PEPs* are individuals who are or have been entrusted domestically with prominent public functions, for example Heads of State or of government, senior politicians, senior government, judicial or military officials, senior executives of state owned corporations, important political party officials. *Persons who are or have been entrusted with a prominent function by an international organisation* refers to members of senior management, i.e. directors, deputy directors and members of the board or equivalent functions. The definition of PEPs is not intended to cover middle ranking or more junior individuals in the foregoing categories.
Proceeds	*Proceeds* refers to any property derived from or obtained, directly or indirectly, through the commission of an offence.
Property	*Property* means assets of every kind, whether corporeal or incorporeal, moveable or immoveable, tangible or intangible, and legal documents or instruments evidencing title to, or interest in such assets.
Qualifying wire transfers	Please refer to the IN to Recommendation 16.
Reasonable measures	The term *Reasonable Measures* means: appropriate measures which are commensurate with the money laundering or terrorist financing risks.
Related to terrorist financing or money laundering	Please refer to the IN. to Recommendation 32.
Required	Please refer to the IN to Recommendation 16.
Risk	All references to *risk* refer to the risk of money laundering and/or terrorist financing. This term should be read in conjunction with the Interpretive Note to Recommendation 1.
Satisfied	Where reference is made to a financial institution being *satisfied* as to a matter, that institution must be able to justify its assessment to competent authorities.
Seize	The term *seize* means to prohibit the transfer, conversion, disposition or movement of property on the basis of an action initiated by a competent

Terms	Definitions
	authority or a court under a freezing mechanism. However, unlike a freezing action, a seizure is effected by a mechanism that allows the competent authority or court to take control of specified property. The seized property remains the property of the natural or legal person(s) that holds an interest in the specified property at the time of the seizure, although the competent authority or court will often take over possession, administration or management of the seized property.
Self-regulatory body (SRB)	A SRB is a body that represents a profession (e.g. lawyers, notaries, other independent legal professionals or accountants), and which is made up of members from the profession, has a role in regulating the persons that are qualified to enter and who practise in the profession, and also performs certain supervisory or monitoring type functions. Such bodies should enforce rules to ensure that high ethical and moral standards are maintained by those practising the profession.
Serial Payment	Please refer to the IN. to Recommendation 16.
Settlor	*Settlors* are natural or legal persons who transfer ownership of their assets to trustees by means of a trust deed or similar arrangement.
Shell bank	*Shell bank* means a bank that has no physical presence in the country in which it is incorporated and licensed, and which is unaffiliated with a regulated financial group that is subject to effective consolidated supervision. *Physical presence* means meaningful mind and management located within a country. The existence simply of a local agent or low level staff does not constitute physical presence.
Should	For the purposes of assessing compliance with the FATF Recommendations, the word *should* has the same meaning as *must.*
Straight-through processing	Please refer to the IN. to Recommendation 16.
Supervisors	*Supervisors* refers to the designated competent authorities or non-public bodies with responsibilities aimed at ensuring compliance by financial institutions ("*financial supervisors*" [64]) and/or DNFBPs with requirements to combat money laundering and terrorist financing. Non-public bodies (which could include certain types of SRBs) should have the power to supervise and sanction financial institutions or DNFBPs in relation to the AML/CFT requirements. These non-public bodies should also be empowered by law to exercise the functions they perform, and be supervised by a competent authority in relation to such functions.

64 Including Core Principles supervisors who carry out supervisory functions that are related to the implementation of the FATF Recommendations.

Terms	Definitions
Targeted financial sanctions	The term *targeted financial sanctions* means both asset freezing and prohibitions to prevent funds or other assets from being made available, directly or indirectly, for the benefit of designated persons and entities.
Terrorist	The term *terrorist* refers to any natural person who: (i) commits, or attempts to commit, terrorist acts by any means, directly or indirectly, unlawfully and wilfully; (ii) participates as an accomplice in terrorist acts ; (iii) organises or directs others to commit terrorist acts ; or (iv) contributes to the commission of terrorist acts by a group of persons acting with a common purpose where the contribution is made intentionally and with the aim of furthering the terrorist act or with the knowledge of the intention of the group to commit a terrorist act.
Terrorist act	A *terrorist act* includes: (a) an act which constitutes an offence within the scope of, and as defined in one of the following treaties: (i) Convention for the Suppression of Unlawful Seizure of Aircraft (1970); (ii) Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation (1971); (iii) Convention on the Prevention and Punishment of Crimes against Internationally Protected Persons, including Diplomatic Agents (1973); (iv) International Convention against the Taking of Hostages (1979); (v) Convention on the Physical Protection of Nuclear Material (1980); (vi) Protocol for the Suppression of Unlawful Acts of Violence at Airports Serving International Civil Aviation, supplementary to the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation (1988); (vii) Convention for the Suppression of Unlawful Acts against the Safety of Maritime Navigation (2005); (viii) Protocol for the Suppression of Unlawful Acts against the Safety of Fixed Platforms located on the Continental Shelf (2005); (ix) International Convention for the Suppression of Terrorist Bombings (1997); and (x) International Convention for the Suppression of the Financing of Terrorism (1999). (b) any other act intended to cause death or serious bodily injury to a civilian, or to any other person not taking an active part in the hostilities in a situation of armed conflict, when the purpose of such act, by its nature or context, is to intimidate a population, or to compel a Government or an international organisation to do or to abstain from doing any act.
Terrorist financing	*Terrorist financing* is the financing of terrorist acts, and of terrorists and terrorist organisations.
Terrorist financing abuse	Please refer to the IN to Recommendation 8.
Terrorist financing offence	References (except in Recommendation 4) to a *terrorist financing offence* refer not only to the primary offence or offences, but also to ancillary offences.

Terms	Definitions
Terrorist organisation	The term *terrorist organisation* refers to any group of terrorists that: (i) commits, or attempts to commit, terrorist acts by any means, directly or indirectly, unlawfully and wilfully; (ii) participates as an accomplice in terrorist acts; (iii) organises or directs others to commit terrorist acts; or (iv) contributes to the commission of terrorist acts by a group of persons acting with a common purpose where the contribution is made intentionally and with the aim of furthering the terrorist act or with the knowledge of the intention of the group to commit a terrorist act.
Third parties	For the purposes of Recommendations 6 and 7, the term *third parties* includes, but is not limited to, financial institutions and DNFBPs. Please also refer to the IN to Recommendation 17.
Trustee	The terms *trust* and *trustee* should be understood as described in and consistent with Article 2 of the *Hague Convention on the law applicable to trusts and their recognition*[65]. Trustees may be professional (e.g. depending on the jurisdiction, a lawyer or trust company) if they are paid to act as a trustee in the course of their business, or non-professional (e.g. a person acting without reward on behalf of family).
Unique transaction reference number	Please refer to the IN. to Recommendation 16.
Virtual Asset	A virtual asset is a digital representation of value that can be digitally traded, or transferred, and can be used for payment or investment purposes. Virtual assets do not include digital representations of fiat currencies, securities and other financial assets that are already covered elsewhere in the FATF Recommendations.

65 Article 2 of the Hague Convention reads as follows:

For the purposes of this Convention, the term "trust" refers to the legal relationships created – inter-vivos or on death - by a person, the settlor, when assets have been placed under the control of a trustee for the benefit of a beneficiary or for a specified purpose.

A trust has the following characteristics -

a) the assets constitute a separate fund and are not a part of the trustee's own estate;

b) title to the trust assets stands in the name of the trustee or in the name of another person on behalf of the trustee;

c) the trustee has the power and the duty, in respect of which he is accountable, to manage, employ or dispose of the assets in accordance with the terms of the trust and the special duties imposed upon him by law.

The reservation by the settlor of certain rights and powers, and the fact that the trustee may himself have rights as a beneficiary, are not necessarily inconsistent with the existence of a trust.

Terms	Definitions
Virtual Asset Service Providers	Virtual asset service provider means any natural or legal person who is not covered elsewhere under the Recommendations, and as a business conducts one or more of the following activities or operations for or on behalf of another natural or legal person: i. exchange between virtual assets and fiat currencies; ii. exchange between one or more forms of virtual assets; iii. transfer[66] of virtual assets; iv. safekeeping and/or administration of virtual assets or instruments enabling control over virtual assets; and v. participation in and provision of financial services related to an issuer's offer and/or sale of a virtual asset.
Without delay	The phrase without delay means, ideally, within a matter of hours of a designation by the United Nations Security Council or its relevant Sanctions Committee (e.g. the 1267 Committee, the 1988 Committee, the 1718 Sanctions Committee). For the purposes of S/RES/1373(2001), the phrase without delay means upon having reasonable grounds, or a reasonable basis, to suspect or believe that a person or entity is a terrorist, one who finances terrorism or a terrorist organisation. In both cases, the phrase without delay should be interpreted in the context of the need to prevent the flight or dissipation of funds or other assets which are linked to terrorists, terrorist organisations, those who finance terrorism, and to the financing of proliferation of weapons of mass destruction, and the need for global, concerted action to interdict and disrupt their flow swiftly.

66 In this context of virtual assets, *transfer* means to conduct a transaction on behalf of another natural or legal person that moves a virtual asset from one virtual asset address or account to another.

ANNEX I: FATF GUIDANCE DOCUMENTS

The FATF has published a large body of Guidance and Best Practices papers which can be found at: www.fatf-gafi.org/documents/guidance/.

ANNEX II: INFORMATION ON UPDATES MADE TO THE FATF RECOMMENDATIONS

The following amendments have been made to the FATF Recommendations since the text was adopted in February 2012.

Date	Type of amendments	Sections subject to amendments
Feb 2013	Alignment of the Standards between R.37 and R.40	■ R.37(d) – page 27 Insertion of the reference that DNFBP secrecy or confidentiality laws should not affect the provision of mutual legal assistance, except where the relevant information that is sought is held in circumstances where legal professional privilege or legal professional secrecy applies.
Oct 2015	Revision of the Interpretive Note to R. 5 to address the foreign terrorist fighters threat	■ INR.5 (B.3) – page 37 Insertion of B.3 to incorporate the relevant element of UNSCR 2178 which addresses the threat posed by foreign terrorist fighters. This clarifies that Recommendation 5 requires countries to criminalise financing the travel of individuals who travel to a State other than their States of residence or nationality for the purpose of the perpetration, planning, or preparation of, or participation in, terrorist acts or the providing or receiving of terrorist training. Existing B.3-11 became B.4-12.
Jun 2016	Revision of R. 8 and the Interpretive Note to R. 8	■ R.8 and INR.8 – pages 13 and 54-59 Revision of the standard on non-profit organisation (NPO) to clarify the subset of NPOs which should be made subject to supervision and monitoring. This brings INR.8 into line with the FATF Typologies Report on Risk of Terrorist Abuse of NPOs (June 2014) and the FATF Best Practices on Combatting the Abuse of NPOs (June 2015) which clarify that not all NPOs are high risk and intended to be addressed by R.8, and better align the implementation of R.8/INR.8 with the risk-based approach.

Date	Type of amendments	Sections subject to amendments
Oct 2016	Revision of the Interpretive Note to R. 5 and the Glossary definition of 'Funds or other assets'	■ INR. 5 and Glossary – pages 37 and 121 Revision of the INR.5 to replace "*funds*" with "*funds or other assets*" throughout INR.5, in order to have the same scope as R.6. Revision of the Glossary definition of "*funds or other assets*" by adding references to oil and other natural resources, and to other assets which may potentially be used to obtain funds.
Jun 2017	Revision of the Interpretive Note to R.7 and the Glossary definitions of "Designated person or entity", "Designation" and "Without delay"	■ INR. 7 and Glossary – pages 45-51, 114-115 and 123 Revision of the INR.7 and consequential revisions of the Glossary definitions of *"Designated person or entity"*, *"Designation"* and *"Without delay"* to bring the text in line with the requirements of recent United Nations Security Council Resolutions and to clarify the implementation of targeted financial sanctions relating to proliferation financing.
Nov 2017	Revision of the Interpretive Note to Recommendation 18	■ INR.18 – page 77 Revision of INR.18 to clarify the requirements on sharing of information related to unusual or suspicious transactions within financial groups. It also includes providing this information to branches and subsidiaries when necessary for AML/CFT risk management.
Nov 2017	Revision of Recommendation 21	■ R. 21 – page 17 Revision of R. 21 to clarify the interaction of these requirements with tipping-off provisions.
Feb 2018	Revision of Recommendation 2	■ R. 2 – page 9 Revision of R. 2 to ensure compatibility of AML/CFT requirements and data protection and privacy rules, and to promote domestic inter-agency information sharing among competent authorities.

Date	Type of amendments	Sections subject to amendments
Oct 2018	Revision of Recommendation 15 and addition of two new definitions in the Glossary	■ R. 15 and Glossary – pages 15 and 126-127 Revision of R.15 and addition of new definitions "virtual asset" and "virtual asset service provider" in order to clarify how AML/CFT requirements apply in the context of virtual assets.
June 2019	Addition of Interpretive Note to R. 15	■ INR. 15 – page 70-71 Insertion of a new interpretive note that sets out the application of the FATF Standards to virtual asset activities and service providers.

FATF, *Methodology for Assessing Technical Compliance with the FATF Recommendations and the Effectiveness of AML/CFT Systems* (Paris: FATF, 2019).

Methodology

FOR ASSESSING TECHNICAL COMPLIANCE WITH THE FATF RECOMMENDATIONS AND THE EFFECTIVENESS OF AML/CFT SYSTEMS

Updated October 2019

The Financial Action Task Force (FATF) is an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction. The FATF Recommendations are recognised as the global anti-money laundering (AML) and counter-terrorist financing (CFT) standard.

INTRODUCTION

1. This document provides the basis for undertaking assessments of technical compliance with the revised FATF Recommendations, adopted in February 2012, and for reviewing the level of effectiveness of a country's Anti-Money Laundering / Countering the Financing of Terrorism (AML/CFT) system. It consists of three sections. This first section is an introduction, giving an overview of the assessment Methodology[1], its background, and how it will be used in evaluations/assessments. The second section sets out the criteria for assessing technical compliance with each of the FATF Recommendations. The third section sets out the outcomes, indicators, data and other factors used to assess the effectiveness of the implementation of the FATF Recommendations. The processes and procedures for Mutual Evaluations are set out in a separate document.

2. For its 4th round of mutual evaluations, the FATF has adopted complementary approaches for assessing technical compliance with the FATF Recommendations, and for assessing whether and how the AML/CFT system is effective. Therefore, the Methodology comprises two components:

- The technical compliance assessment addresses the specific requirements of the FATF Recommendations, principally as they relate to the relevant legal and institutional framework of the country, and the powers and procedures of the competent authorities. These represent the fundamental building blocks of an AML/CFT system.
- The effectiveness assessment differs fundamentally from the assessment of technical compliance. It seeks to assess the adequacy of the implementation of the FATF Recommendations, and identifies the extent to which a country achieves a defined set of outcomes that are central to a robust AML/CFT system. The focus of the effectiveness assessment is therefore on the extent to which the legal and institutional framework is producing the expected results.

3. Together, the assessments of both technical compliance and effectiveness will present an integrated analysis of the extent to which the country is compliant with the FATF Standards and how successful it is in maintaining a strong AML/CFT system, as required by the FATF Recommendations.

4. This Methodology is designed to assist assessors when they are conducting an assessment of a country's compliance with the international AML/CFT standards. It reflects the requirements set out in the FATF Recommendations and Interpretive Notes, which constitute the international standard to combat money laundering and the financing of terrorism and proliferation, but does not amend or override them. It will assist assessors in identifying the systems and mechanisms developed by countries with diverse legal, regulatory and financial frameworks in order to implement effective AML/CFT systems; and is also useful for countries that are reviewing their own systems, including in

[1] The terms "assessment", "evaluation" and their derivatives are used throughout this document, and refer to both mutual evaluations undertaken by the FATF and FSRBs and third-party assessments (*i.e.* assessments undertaken by the IMF and World Bank).

relation to technical assistance needs. This Methodology is also informed by the experience of the FATF, the FATF-style regional bodies (FSRBs), the International Monetary Fund and the World Bank in conducting assessments of compliance with earlier versions of the FATF Recommendations.

RISK AND CONTEXT

5. The starting point for every assessment is the assessors' initial understanding of the country's risks and context, in the widest sense, and elements which contribute to them. This includes:

- the nature and extent of the money laundering and terrorist financing risks ;
- the circumstances of the country, which affect the *materiality* of different Recommendations (*e.g.,* the makeup of its economy and its financial sector);
- *structural elements* which underpin the AML/CFT system; and
- *other contextual factors* which could influence the way AML/CFT measures are implemented and how effective they are.

6. The ML/TF *risks* are critically relevant to evaluating technical compliance with Recommendation 1 and the risk-based elements of other Recommendations, and to assess effectiveness. Assessors should consider the nature and extent of the money laundering and terrorist financing risk factors to the country at the outset of the assessment, and throughout the assessment process. Relevant factors can include the level and type of proceeds-generating crime in the country; the terrorist groups active or raising funds in the country; exposure to cross-border flows of criminal or illicit assets.

7. Assessors should use the country's own assessment(s) of its risks as an initial basis for understanding the risks, but should not uncritically accept a country's risk assessment as correct, and need not follow all its conclusions. Assessors should also note the guidance in paragraph 16, below on how to evaluate risk assessments in the context of Recommendation 1 and Immediate Outcome 1. There may be cases where assessors cannot conclude that the country's assessment is reasonable, or where the country's assessment is insufficient or non-existent. In such situations, they should consult closely with the national authorities to try to reach a common understanding of what are the key risks within the jurisdiction. If there is no agreement, or if they cannot conclude that the country's assessment is reasonable, then assessors should clearly explain any differences of understanding, and their reasoning on these, in the Mutual Evaluation Report (MER); and should use their understanding of the risks as a basis for assessing the other risk-based elements (e.g. risk-based supervision).

8. Assessors should also consider issues of *materiality*, including, for example, the relative importance of different parts of the financial sector and different DNFBPs; the size, integration and make-up of the financial sector; the relative importance of different types of financial products or institutions; the amount of business which is domestic or cross-border; the extent to which the economy is cash-based; and estimates of the size of the informal sector and/or shadow economy. Assessors should also be aware of population size, the country's level of development, geographical factors, and trading or cultural links. Assessors should consider the relative importance of different sectors and issues in the assessment of both technical compliance and of effectiveness. The most important and relevant issues to the country should be given more weight when determining ratings

for technical compliance, and more attention should be given to the most important areas when assessing effectiveness, as set out below.

9. An effective AML/CFT system normally requires certain *structural elements* to be in place, for example: political stability; a high-level commitment to address AML/CFT issues; stable institutions with accountability, integrity, and transparency; the rule of law; and a capable, independent and efficient judicial system. The lack of such structural elements, or significant weaknesses and shortcomings in the general framework, may significantly hinder the implementation of an effective AML/CFT framework; and, where assessors identify a lack of compliance or effectiveness, missing structural elements may be a reason for this and should be identified in the MER, where relevant.

10. *Other contextual factors* that might significantly influence the effectiveness of a country's AML/CFT measures include the maturity and sophistication of the regulatory and supervisory regime in the country; the level of corruption and the impact of measures to combat corruption; or the level of financial exclusion. Such factors may affect the ML/FT risks and increase or reduce the effectiveness of AML/CFT measures.

11. Assessors should consider the contextual factors above, including the risks, issues of materiality, structural elements, and other contextual factors, to reach a general understanding of the context in which the country's AML/CFT system operates. These factors may influence which issues assessors consider to be material or higher-risk, and consequently will help assessors determine where to focus their attention in the course of an assessment. Some particularly relevant contextual factors are noted in the context of individual immediate outcomes addressed in the effectiveness component of this Methodology. Assessors should be cautious regarding the information used when considering how these risk and contextual factors might affect a country's evaluation, particularly in cases where they materially affect the conclusions. Assessors should take the country's views into account, but should review them critically, and should also refer to other credible or reliable sources of information (e.g. from international institutions or major authoritative publications), preferably using multiple sources. Based on these elements the assessors should make their own judgement of the context in which the country's AML/CFT system operates, and should make this analysis clear and explicit in the MER.

12. Risk, materiality, and structural or contextual factors may in some cases explain why a country is compliant or non-compliant, or why a country's level of effectiveness is higher or lower than might be expected, on the basis of the country's level of technical compliance. These factors may be an important part of the explanation why the country is performing well or poorly, and an important element of assessors' recommendations about how effectiveness can be improved. Ratings of both technical compliance and effectiveness are judged on a universal standard applied to all countries. An unfavourable context (*e.g.,* where there are missing structural elements), may undermine compliance and effectiveness. However, risks and materiality, and structural or other contextual factors should not be an excuse for poor or uneven implementation of the FATF standards. Assessors should make clear in the MER which factors they have taken into account; why and how they have done so, and the information sources used when considering them.

GENERAL INTERPRETATION AND GUIDANCE

13. A full set of definitions from the FATF Recommendations are included in the Glossary which accompanies the Recommendations. Assessors should also take note of the following guidance on other points of general interpretation, which is important to ensure consistency of approach.

14. **Financial Institutions** –Assessors should have a thorough understanding of the types of entities that engage in the financial activities referred to in the glossary definition of *financial institutions*. It is important to note that such activities may be undertaken by institutions with different generic names (*e.g.,* "bank") in different countries, and that assessors should focus on the activity, not the names attached to the institutions.

15. **VASPs and virtual assets** - Assessors should also have a thorough understanding of the financial institutions, DNFBPs and VASPs that engage in covered activities under the Glossary definition of *virtual asset service provider*. In particular, assessors should note that the requirements of the FATF Standards relating to virtual assets and associated providers are applied by Recommendation 15 ("New Technologies"). INR.15 explicitly confirms that the FATF Definitions of *property, proceeds, funds, funds or other assets* or *other corresponding value* in the Glossary include Virtual Assets. Assessors should bear this in mind when assessing any Recommendations (for technical compliance) or related Immediate Outcomes (for effectiveness) using those terms.[2] See the Note to Assessors in R.15 for more detailed guidance.

16. **Evaluating the country's Assessment of risk** – Assessors are not expected to conduct an independent risk assessment of their own when assessing Recommendation1 and Immediate Outcome 1, but on the other hand should not necessarily accept a country's risk assessment as correct. In reviewing the country's risk assessment, assessors should consider the rigour of the processes and procedures employed; and the internal consistency of the assessment (*i.e.* whether the conclusions are reasonable given the information and analysis used). Assessors should focus on high-level issues, not fine details, and should take a common-sense approach to whether the results are reasonable. Where relevant and appropriate, assessors should also consider other credible or reliable sources of information on the country's risks, in order to identify whether there might be any material differences that should be explored further. Where the assessment team considers the country's assessment of the risks to be reasonable the risk-based elements of the Methodology could be considered on the basis of it.

17. When assessing Recommendation 1, assessors should concentrate their analysis on the following elements: (1) processes and mechanisms in place to produce and coordinate the risk assessment(s); (2) the reasonableness of the risk assessment(s); and, (3) the alignment of risk-based measures with the risks identified (*e.g.,* exemptions, higher or lower risks situations).

---

[2] The terms property, proceeds, funds, funds or other assets and/or corresponding value are used in R.3 (criteria 3.4 and 3.5), R.4 (criteria 4.1, 4.2 and 4.4), R.5 (criteria 5.2, 5.3 and 5.4), R.6 (criteria 6.5, 6.6 and 6.7), R.7 (criteria 7.2, 7.4 and 7.5), R.8 (criteria 8.1 and 8.5), R.10 (criteria 10.7), R.12 (criterion 12.1), R.20 (criterion 20.1), R.29 (criterion 29.4), R.30 (criteria 30.2, 30.3 and 30.5), R.33 (criterion 33.1), R.38 (criteria 38.1, 38.3 and 38.4) and R.40 (criterion 40.17). The words virtual assets need not appear or be explicitly included in legislation referring or defining those terms, provided that there is nothing on the face of the legislation or in case law that would preclude virtual assets from falling within the definition of these terms.

18. When assessing Immediate Outcome 1, assessors, based on their views of the reasonableness of the assessment(s) of risks, should focus on how well the competent authorities use their understanding of the risks in practice to inform policy development and activities to mitigate the risks.

19. **Risk-based requirements** - For each Recommendation where financial institutions and Designated Non-Financial Businesses or Professions (DNFBPs) should be required to take certain actions, assessors should normally assess compliance on the basis that all financial institutions and DNFBPs should have to meet all the specified requirements. However, an important consideration underlying the FATF Recommendations is the degree of risk of money laundering or terrorist financing for particular types of institutions, businesses or professions, or for particular customers, products, transactions, or countries. A country may, therefore, take risk into account in the application of the Recommendations (*e.g.,* in the application of simplified measures), and assessors will need to take the risks, and the flexibility allowed by the risk-based approach, into account when determining whether there are deficiencies in a country's preventive measures, and their importance. Where the FATF Recommendations identify higher risk activities for which enhanced or specific measures are required, all such measures must be applied, although the extent of such measures may vary according to the specific level of risk.

20. **Exemptions for low-risk situations** – Where there is a low risk of money laundering and terrorist financing, countries may decide not to apply some of the Recommendations requiring financial institutions and DNFBPs to take certain actions. In such cases, countries should provide assessors with the evidence and analysis which was the basis for the decision not to apply the Recommendations.

21. **Requirements for financial institutions, DNFBPs, VASPs and countries** - The FATF Recommendations state that financial institutions, DNFBPs and VASPs "*should*" or "*should be required to*" take certain actions, or that countries "*should ensure*" that certain actions are taken by financial institutions, DNFBPs, VASPs or other entities or persons. In order to use one consistent phrase, the relevant criteria in this Methodology use the phrase "*Financial institutions (DNFBPs and VASPs) should be required*".

22. **Law or enforceable means** – The note on the *Legal basis of requirements on financial institutions, DNFBPs and VASPs* (at the end of the Interpretive Notes to the FATF Recommendations) sets out the required legal basis for enacting the relevant requirements. Assessors should consider whether the mechanisms used to implement a given requirement qualify as an *enforceable means* on the basis set out in that note. Assessors should be aware that Recommendations 10, 11, and 20 contain requirements which must be set out in law, while other requirements may be set out in either law or enforceable means. It is possible that types of documents or measures which are not considered to be enforceable means may nevertheless help contribute to effectiveness, and may, therefore, be considered in the context of effectiveness analysis, without counting towards meeting requirements of technical compliance (*e.g.,* voluntary codes of conduct issued by private sector bodies or non-binding guidance by a supervisory authority).

23. **Assessment for DNFBPs** – Under Recommendations 22, 23 and 28 (and specific elements of Recommendations 6 and 7), DNFBPs and the relevant supervisory (or self-regulatory) bodies are required to take certain actions. Technical compliance with these requirements should only be

assessed under these specific Recommendations and should not be carried forward into other Recommendations relating to financial institutions. However, the assessment of effectiveness should take account of both financial institutions and DNFBPs when examining the relevant outcomes.

24. **Financing of Proliferation** – The requirements of the FATF Standard relating to the financing of proliferation are limited to Recommendation 7 ("Targeted Financial Sanctions"), Recommendation 15 ("New Technologies") and Recommendation 2 ("National Co-operation and Co-ordination"). In the context of the effectiveness assessment, all requirements relating to the financing of proliferation are included within Outcome 11, except those on national co-operation and co-ordination, which are included in Immediate Outcome 1. Issues relating to the financing of proliferation should be considered in those places only, and not in other parts of the assessment.

25. **National, supra-national and sub-national measures** - In some countries, AML/CFT issues are addressed not just at the level of the national government, but also at state/province or local levels. When assessments are being conducted, appropriate steps should be taken to ensure that AML/CFT measures at the state/provincial level are also adequately considered. Equally, assessors should take into account and refer to supra-national laws or regulations that apply to a country. Annex I sets out the specific Recommendations that may be assessed on a supra-national basis.

26. **Financial Supervision** – Laws and enforceable means that impose preventive AML/CFT requirements upon the banking, insurance, and securities sectors should be implemented and enforced through the supervisory process. In these sectors, the relevant core supervisory principles issued by the Basel Committee, IAIS, and IOSCO should also be adhered to. For certain issues, these supervisory principles will overlap with or be complementary to the requirements set out in the FATF standards. Assessors should be aware of, and have regard to, any assessments or findings made with respect to the Core Principles, or to other relevant principles or standards issued by the supervisory standard-setting bodies. For other types of financial institutions, it will vary from country to country as to whether these laws and obligations are implemented and enforced through a regulatory or supervisory framework, or by other means.

27. **Sanctions** – Several Recommendations require countries to have "*effective, proportionate, and dissuasive sanctions*" for failure to comply with AML/CFT requirements. Different elements of these requirements are assessed in the context of technical compliance and of effectiveness. In the technical compliance assessment, assessors should consider whether the country's framework of laws and enforceable means includes a sufficient range of sanctions that they can be applied *proportionately* to greater or lesser breaches of the requirements[3]. In the effectiveness assessment, assessors should consider whether the sanctions applied in practice are *effective* at ensuring future compliance by the sanctioned institution; and *dissuasive* of non-compliance by others.

28. **International Co-operation** – In this Methodology, international co-operation is assessed in specific Recommendations and Immediate Outcomes (principally Recommendations 36-40 and

[3] Examples of types of sanctions include: written warnings; orders to comply with specific instructions (possibly accompanied with daily fines for non-compliance); ordering regular reports from the institution on the measures it is taking; fines for non-compliance; barring individuals from employment within that sector; replacing or restricting the powers of managers, directors, and controlling owners; imposing conservatorship or suspension or withdrawal of the license; or criminal penalties where permitted.

Immediate Outcome 2). Assessors should also be aware of the impact that a country's ability and willingness to engage in international co-operation may have on other Recommendations and Immediate Outcomes (*e.g.,* on the investigation of crimes with a cross-border element or the supervision of international groups), and set out clearly any instances where compliance or effectiveness is positively or negatively affected by international co-operation.

29. **Draft legislation and proposals** – Assessors should only take into account relevant laws, regulations or other AML/CFT measures that are in force and effect by the end of the on-site visit to the country. Where bills or other specific proposals to amend the system are made available to assessors, these may be referred to in the report, but should not be taken into account in the conclusions of the assessment or for ratings purposes.

30. **FATF Guidance** - assessors may also consider FATF Guidance as background information on how countries can implement specific requirements. A full list of FATF Guidance is included as an annex to this document. Such guidance may help assessors understand the practicalities of implementing the FATF Recommendations, but the application of the guidance should not form part of the assessment.

TECHNICAL COMPLIANCE

31. The technical compliance component of the Methodology refers to the implementation of the specific requirements of the FATF Recommendations, including the framework of laws and enforceable means; and the existence, powers and procedures of competent authorities. For the most part, it does not include the specific requirements of the standards that relate principally to effectiveness. These are assessed separately, through the effectiveness component of the Methodology.

32. The FATF Recommendations, being the recognised international standards, are applicable to all countries. However, assessors should be aware that the legislative, institutional and supervisory framework for AML/CFT may differ from one country to the next. Provided the FATF Recommendations are complied with, countries are entitled to implement the FATF Standards[4] in a manner consistent with their national legislative and institutional systems, even though the methods by which compliance is achieved may differ. In this regard, assessors should be aware of the risks, and the structural or contextual factors for the country.

33. The technical compliance component of the Methodology sets out the specific requirements of each Recommendation as a list of criteria, which represent those elements that should be present in order to demonstrate full compliance with the mandatory elements of the Recommendations. Criteria to be assessed are numbered sequentially for each Recommendation, but the sequence of criteria does not represent any priority or order of importance. In some cases, elaboration (indented below the criteria) is provided in order to assist in identifying important aspects of the assessment of the criteria. For criteria with such elaboration, assessors should review whether each of the elements is present, in order to judge whether the criterion as a whole is met.

COMPLIANCE RATINGS

34. For each Recommendation assessors should reach a conclusion about the extent to which a country complies (or not) with the standard. There are four possible levels of compliance: compliant, largely compliant, partially compliant, and non-compliant. In exceptional circumstances, a Recommendation may also be rated as not applicable. These ratings are based only on the criteria specified in the technical compliance assessment, and are as follows:

[4] The FATF Standards comprise the FATF Recommendations and their Interpretive Notes.

Technical compliance ratings		
Compliant	C	There are no shortcomings.
Largely compliant	LC	There are only minor shortcomings.
Partially compliant	PC	There are moderate shortcomings.
Non-compliant	NC	There are major shortcomings.
Not applicable	NA	A requirement does not apply, due to the structural, legal or institutional features of a country.
When deciding on the level of shortcomings for any Recommendation, assessors should consider, having regard to the country context, the number and the relative importance of the criteria met or not met.		

35. It is essential to note that it is the responsibility of the assessed country to demonstrate that its AML/CFT system is compliant with the Recommendations. In determining the level of compliance for each Recommendation, the assessor should not only assess whether laws and enforceable means are compliant with the FATF Recommendations, but should also assess whether the institutional framework is in place.

36. **Weighting** – The individual criteria used to assess each Recommendation do not all have equal importance, and the number of criteria met is not always an indication of the overall level of compliance with each Recommendation. When deciding on the rating for each Recommendation, assessors should consider the relative importance of the criteria in the context of the country. Assessors should consider how significant any deficiencies are given the country's risk profile and other structural and contextual information (*e.g.,* for a higher risk area or a large part of the financial sector). In some cases a single deficiency may be sufficiently important to justify an NC rating, even if other criteria are met. Conversely a deficiency in relation to a low risk or little used types of financial activity may have only a minor effect on the overall rating for a Recommendation.

37. **Overlaps between Recommendations** – In many cases the same underlying deficiency will have a cascading effect on the assessment of several different Recommendations. For example: a deficient risk assessment could undermine risk-based measures throughout the AML/CFT system; or a failure to apply AML/CFT regulations to a particular type of financial institution or DNFBP could affect the assessment of all Recommendations which apply to financial institutions or DNFBPs. When considering ratings in such cases, assessors should reflect the deficiency in the factors underlying the rating for each applicable Recommendation, and, if appropriate, mark the rating accordingly. They should also clearly indicate in the MER that the same underlying cause is involved in all relevant Recommendations.

38. **Comparison with previous ratings** - Due to the revision and consolidation of the FATF Recommendations and Special Recommendations in 2012, and the introduction of separate

assessments for technical compliance and effectiveness, the ratings given under this Methodology will not be directly comparable with ratings given under the 2004 Methodology.

EFFECTIVENESS

39. The assessment of the effectiveness of a country's AML/CFT system is equally as important as the assessment of technical compliance with the FATF standards. Assessing effectiveness is intended to: (a) improve the FATF's focus on outcomes; (b) identify the extent to which the national AML/CFT system is achieving the objectives of the FATF standards, and identify any systemic weaknesses; and (c) enable countries to prioritise measures to improve their system. For the purposes of this Methodology, effectiveness is defined as "*The extent to which the defined outcomes are achieved*".

40. In the AML/CFT context, effectiveness is the extent to which financial systems and economies mitigate the risks and threats of money laundering, and financing of terrorism and proliferation. This could be in relation to the intended result of a given (a) policy, law, or enforceable means; (b) programme of law enforcement, supervision, or intelligence activity; or (c) implementation of a specific set of measures to mitigate the money laundering and financing of terrorism risks, and combat the financing of proliferation.

41. The goal of an assessment of effectiveness is to provide an appreciation of the whole of the country's AML/CFT system and how well it works. Assessing effectiveness is based on a fundamentally different approach to assessing technical compliance with the Recommendations. It does not involve checking whether specific requirements are met, or that all elements of a given Recommendation are in place. Instead, it requires a judgement as to whether, or to what extent defined outcomes are being achieved, *i.e.* whether the key objectives of an AML/CFT system, in line with the FATF Standards, are being effectively met in practice The assessment process is reliant on the judgement of assessors, who will work in consultation with the assessed country.

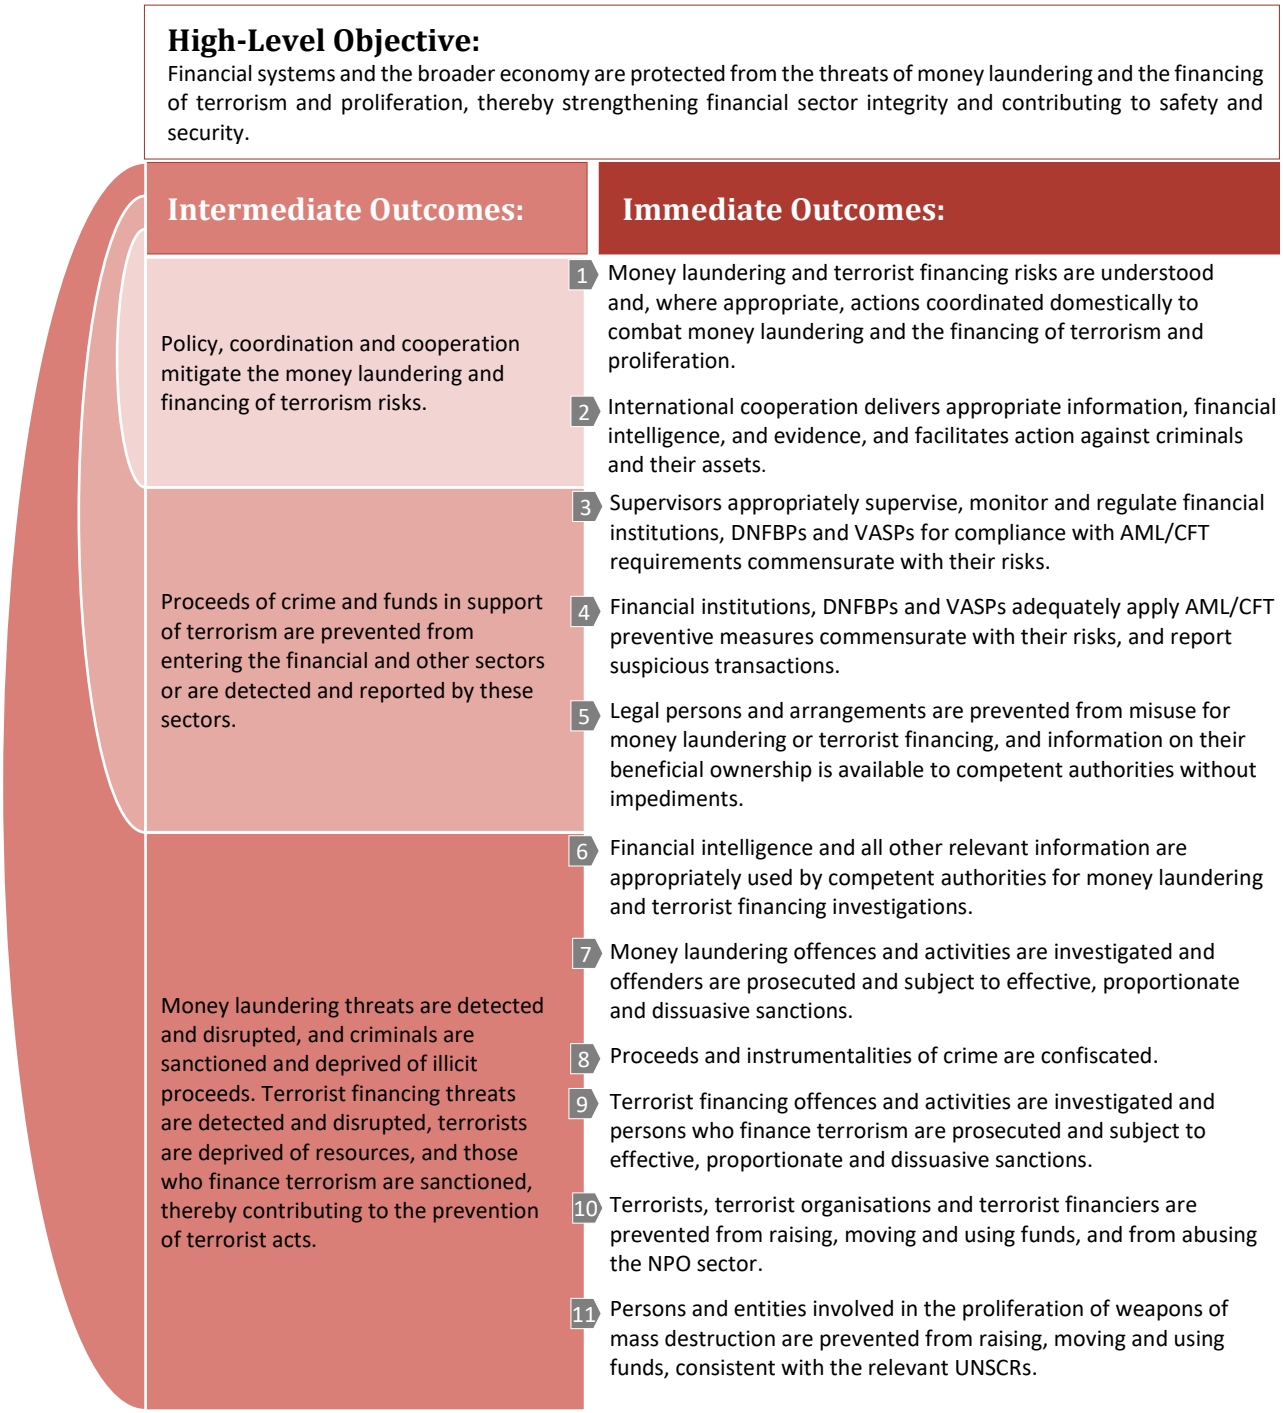
42. It is essential to note that it is the responsibility of the assessed country to demonstrate that its AML/CFT system is effective. If the evidence is not made available, assessors can only conclude that the system is not effective.

THE FRAMEWORK FOR ASSESSING EFFECTIVENESS

43. For its assessment of effectiveness, the FATF has adopted an approach focusing on a hierarchy of defined outcomes. At the highest level, the objective in implementing AML/CFT measures is that "*Financial systems and the broader economy are protected from the threats of money laundering and the financing of terrorism and proliferation, thereby strengthening financial sector integrity and contributing to safety and security*". In order to give the right balance between an overall understanding of the effectiveness of a country's AML/CFT system, and a detailed appreciation of how well its component parts are operating, the FATF assesses effectiveness primarily on the basis of *eleven Immediate Outcomes*. Each of these represents one of the key goals which an effective AML/CFT system should achieve, and they feed into three Intermediate Outcomes which represent the major thematic goals of AML/CFT measures. This approach does not seek to assess directly the effectiveness with which a country is implementing individual Recommendations; or the performance of specific organisations, or institutions. Assessors are not expected to evaluate directly the High-Level Objective

or Intermediate Outcomes, though these could be relevant when preparing the written MER and summarising the country's overall effectiveness in general terms.

44. The relation between the High-Level Objective, the Intermediate Outcomes, and the Immediate Outcomes, is set out in the diagram below:



SCOPING

45. Assessors must assess all eleven of the Immediate Outcomes. However, prior to the on-site visit, assessors should conduct a scoping exercise, in consultation with the assessed country, which should take account of the risks and other factors set out in paragraphs 5 to 10 above. Assessors should, in consultation with the assessed country, identify the higher risk issues, which should be examined in more detail in the course of the assessment and reflected in the final report. They should also seek to identify areas of lower/low risk, which may not need to be examined in the same level of detail. As the assessment continues, assessors should continue to engage the country and review their scoping based on their initial findings about effectiveness, with a view to focusing their attention on the areas where there is greatest scope to improve effectiveness in addressing the key ML/TF risks.

LINKS TO TECHNICAL COMPLIANCE

46. The country's level of technical compliance contributes to the assessment of effectiveness. Assessors should consider the level of technical compliance as part of their scoping exercise. The assessment of technical compliance reviews whether the legal and institutional foundations of an effective AML/CFT system are present. It is unlikely that a country that is assessed to have a low level of compliance with the technical aspects of the FATF Recommendations will have an effective AML/CFT system (though it cannot be taken for granted that a technically compliant country will also be effective). In many cases, the main reason for poor effectiveness will be serious deficiencies in implementing the technical elements of the Recommendations.

47. In the course of assessing effectiveness, assessors should also consider the impact of technical compliance with the relevant Recommendations when explaining why the country is (or is not) effective and making recommendations to improve effectiveness. There may in exceptional circumstances be situations in which assessors conclude that there is a low level of technical compliance but nevertheless a certain level of effectiveness (*e.g.,* as a result of specific country circumstances, including low risks or other structural, material or contextual factors; particularities of the country's laws and institutions; or if the country applies compensatory AML/CFT measures which are not required by the FATF Recommendations). Assessors should pay particular attention to such cases in the MER, and must fully justify their decision, explaining in detail the basis and the specific reasons for their conclusions on effectiveness, despite lower levels of technical compliance.

USING THE EFFECTIVENESS METHODOLOGY

48. An assessment of effectiveness should consider each of the eleven Immediate Outcomes individually, but does not directly focus on the Intermediate or High-Level Outcomes. For each of the Immediate Outcomes, there are two overarching questions which assessors should try to answer:

- ***To what extent is the outcome being achieved?*** Assessors should assess whether the country is effective in relation to that outcome (*i.e.* whether the country is achieving the results expected of a well-performing AML/CFT system). They should base their conclusions principally on the *Core Issues*, supported by the *examples of information* and the *examples of specific*

factors; and taking into account the level of technical compliance, and contextual factors.

- ***What can be done to improve effectiveness?*** Assessors should understand the reasons why the country may not have reached a high level of effectiveness and, where possible, make recommendations to improve its ability to achieve the specific outcome. They should base their analysis and recommendations on their consideration of the *core issues* and on the *examples of specific factors that could support the conclusions on core issues*, including activities, processes, resources and infrastructure. They should also consider the effect of technical deficiencies on effectiveness, and the relevance of contextual factors. If assessors are satisfied that the outcome is being achieved to a high degree, they would not need to consider in detail *what can be done to improve effectiveness* (though there may still be value in identifying good practises or potential further improvements, or ongoing efforts needed to sustain a high level of effectiveness).

Characteristics of an Effective System

49. The boxed text at the top of each of the Immediate Outcomes describes the main features and outcomes of an effective system. This sets out the situation in which a country is effective at achieving the outcome, and provides the benchmark for the assessment.

Core Issues to be considered in determining whether the Outcome is being achieved

50. The second section sets out the basis for assessors to judge if, and to what extent, the outcome is being achieved. The *core issues* are the mandatory questions which assessors should seek to answer, in order to get an overview about how effective a country is under each outcome. Assessors' conclusions about how effective a country is should be based on an overview of each outcome, informed by the assessment of the *core issues*.

51. Assessors should examine all the *core issues* listed for each outcome. However, they may vary the degree of detail with which they examine each in order to reflect the degree of risk and materiality associated with that issue in the country. In exceptional circumstances, assessors may also consider additional issues which they consider, in the specific circumstances, to be core to the effectiveness outcome (*e.g.,* alternative measures which reflect the specificities of the country's AML/CFT system, but which are not included in the *core issues* or as additional *information* or *specific factors*). They should make clear when, and why, any additional issues have been used which are considered to be core.

Examples of information that could support the conclusions on Core Issues

52. The *Examples of Information* sets out the types and sources of information which are most relevant to understanding the extent to which the outcome is achieved, including particular data points which assessors might look for when assessing the *core issues*. The supporting information and

other data can test or validate assessors' understanding of the core issues, and can provide a quantitative element to complete the assessors' picture of how well the outcome is achieved.

53. The supporting information and data listed are not exhaustive and not mandatory. The data, statistics, and other material which are available will vary considerably from country to country, and assessors should make use of whatever information the country can provide in order to assist in reaching their judgement.

54. Assessment of effectiveness is not a statistical exercise. Assessors should use data and statistics, as well as other qualitative information, when reaching an informed judgement about how well the outcome is being achieved, but should interpret the available data critically, in the context of the country's circumstances. The focus should not be on raw data (which can be interpreted in a wide variety of ways and even with contradictory conclusions), but on information and analysis which indicates, in the context of the country being assessed, whether the objective is achieved. Assessors should be particularly cautious about using data relating to other countries as a comparison point in judging effectiveness, given the significant differences in country circumstances, AML/CFT systems, and data collection practices. Assessors should also be aware that a high level of outputs does not always contribute positively towards achieving the desired outcome.

Examples of specific factors that could support the conclusions on core issues

55. The *factors* section of the Methodology sets out examples of the elements which are normally involved in delivering each outcome. These are not an exhaustive list of the possible factors, but are provided as an aid to assessors when considering the reasons why a country may (or may not) be achieving a particular outcome (*e.g.,* through a breakdown in one of the factors). In most cases, assessors will need to refer to the *factors* in order to reach a firm conclusion about the extent to which a particular outcome is being achieved. It should be noted that the activities and processes listed in this section do not imply a single mandatory model for organising AML/CFT functions, but only represent the most commonly implemented administrative arrangements, and that the reasons why a country may not be effective are not limited to the factors listed. It should be noted that assessors need to focus on the qualitative aspects of these *factors*, not on the mere underlying process or procedure.

56. Assessors are not required to review all the *factors* in every case. When a country is demonstrably effective in an area, assessors should set out succinctly why this is the case, and highlight any areas of particular good practice, but they do not need to examine every individual factor in this section of the Methodology. There may also be cases in which a country is demonstrably not effective and where the reasons for this are fundamental (*e.g.,* where there are major technical deficiencies). In such cases, there is also no need for assessors to undertake further detailed examination of why the outcome is not being achieved.

57. Assessors should be aware of outcomes which depend on a sequence of different steps, or a *value-chain* to achieve the outcome (*e.g.,* Immediate Outcome 7, which includes investigation, prosecution and sanctioning, in order). In these cases, it is possible that an outcome may not be achieved because of a failure at one stage of the process, even though the other stages are themselves effective.

58. Assessors should also consider contextual factors, which may influence the issues assessors consider to be material or higher risk, and consequently, where they focus their attention. These factors may be an important part of the explanation why the country is performing well or poorly, and an important element of assessors' recommendations about how effectiveness can be improved. However, they should not be an excuse for poor or uneven implementation of the FATF standards.

CROSS-CUTTING ISSUES

59. The Immediate Outcomes are not independent of each other. In many cases an issue considered specifically under one Immediate Outcome will also contribute to the achievement of other outcomes. In particular, the factors assessed under Immediate Outcomes 1 and 2, which consider (a) the country's assessment of risks and implementation of the risk-based approach; and (b) its engagement in international co-operation, may have far-reaching effects on other outcomes (*e.g.,* risk assessment affects the application of risk-based measures under Immediate Outcome 4, and the deployment of competent authorities' resources relative to all outcomes; international co-operation includes seeking co-operation to support domestic ML investigations and confiscation proceedings under Immediate Outcomes 7 and 8). Therefore, assessors should take into consideration how their findings for Immediate Outcomes 1 and 2 may have a positive or negative impact on the level of effectiveness for other Immediate Outcomes. These cross-cutting issues are reflected in the *notes to assessors* under each Immediate Outcome.

CONCLUSIONS ON EFFECTIVENESS

60. For each individual Immediate Outcome, assessors should reach conclusions about the extent to which a country is (or is not) effective. In cases where the country has not reached a high level of effectiveness, assessors should also make recommendations about the reasons why this is the case, and the measures which the country should take to improve its ability to achieve the outcome.

61. ***Effectiveness is assessed in a fundamentally different way to technical compliance***. Assessors' conclusions about the extent to which a country is more or less effective should be based on an overall understanding of the degree to which the country is achieving the outcome. ***The Core Issues should <u>not</u> be considered as a checklist of criteria***, but as a set of questions which help assessors achieve an appropriate understanding of the country's effectiveness for each of the Immediate Outcomes. The core issues are not equally important, and their significance will vary according to the specific situation of each country, taking into account the ML/TF risks and relevant structural factors. Therefore, assessors need to be flexible and to use their judgement and experience when reaching conclusions.

62. Assessors' conclusions should reflect only *whether the outcome is being achieved*. Assessors should set-aside their own preferences about the best way to achieve effectiveness, and should not be unduly influenced by their own national approach. They should also avoid basing their conclusions on the number of problems or deficiencies identified, as it is possible that a country may have several weaknesses which are not material in nature or are offset by strengths in other areas, and is therefore able to achieve a high overall level of effectiveness.

63. ***Assessors' conclusions on the level of effectiveness should be primarily descriptive***. Assessors should set out clearly the extent to which they consider the outcome to be achieved overall, noting any variation, such as particular areas where effectiveness is higher or lower. They should also clearly explain the basis for their judgement, *e.g.,* problems or weaknesses which they believe are responsible for a lack of effectiveness; the *core issues* and the information which they considered to be most significant; the way in which they understood data and other indicators; and the weight they gave to different aspects of the assessment. Assessors should also identify any areas of particular strength or examples of good practice.

64. In order to ensure clear and comparable decisions, assessors should also summarise their conclusion in the form of a rating. For each Immediate Outcome there are four possible ratings for effectiveness, based on the extent to which the *core issues* and *characteristics* are addressed: *High level of effectiveness; Substantial level of effectiveness; Moderate level of effectiveness; and Low level of effectiveness.* These ratings should be decided on the basis of the following:

Effectiveness ratings	
High level of effectiveness	The Immediate Outcome is achieved to a very large extent. Minor improvements needed.
Substantial level of effectiveness	The Immediate Outcome is achieved to a large extent. Moderate improvements needed.
Moderate level of effectiveness	The Immediate Outcome is achieved to some extent. Major improvements needed.
Low level of effectiveness	The Immediate Outcome is not achieved or achieved to a negligible extent. Fundamental improvements needed.

RECOMMENDATIONS ON HOW TO IMPROVE THE AML/CFT SYSTEM

65. Assessors' recommendations to a country are a vitally important part of the evaluation. On the basis of their conclusions, assessors should make recommendations of measures that the country should take in order to improve its AML/CFT system, including both the level of effectiveness and the level of technical compliance. The report should prioritise these recommendations for remedial measures, taking into account the country's circumstances and capacity, its level of effectiveness, and any weaknesses and problems identified. Assessors' recommendations should not simply be to address each of the deficiencies or weaknesses identified, but should add value by identifying and prioritising specific measures in order to most effectively mitigate the risks the country faces. This could be on the basis that they offer the greatest and most rapid practical improvements, have the widest-reaching effects, or are easiest to achieve.

66. Assessors should be careful to consider the circumstances and context of the country, and its legal and institutional system when making recommendations, noting that there are several different ways to achieve an effective AML/CFT system, and that their own preferred model may not be appropriate in the context of the country assessed.

67. In order to facilitate the development of an action plan by the assessed country, assessors should clearly indicate in their recommendations where a specific action is required, and where there may be some flexibility about how a given priority objective is to be achieved. Assessors should avoid making unnecessarily rigid recommendations (*e.g.,* on the scheduling of certain measures), so as not to hinder countries efforts to fully adapt the recommendations to fit local circumstances.

68. Even if a country has a high level of effectiveness, this does not imply that there is no further room for improvement. There may also be a need for action in order to sustain a high level of effectiveness in the face of evolving risks. If assessors are able to identify further actions in areas where there is a high degree of effectiveness, then they should also include these in their recommendations.

POINT OF REFERENCE

69. If assessors have any doubts about how to apply this Methodology, or about the interpretation of the FATF Standards, they should consult the FATF Secretariat or the Secretariat of their FSRB.

TECHNICAL COMPLIANCE ASSESSMENT

RECOMMENDATION 1 ASSESSING RISKS AND APPLYING A RISK-BASED APPROACH[5]

OBLIGATIONS AND DECISIONS FOR COUNTRIES

Risk assessment

1.1 Countries[6] should identify and assess the ML/TF risks for the country,

1.2 Countries should designate an authority or mechanism to co-ordinate actions to assess risks.

1.3 Countries should keep the risk assessments up-to-date.

1.4 Countries should have mechanisms to provide information on the results of the risk assessment(s) to all relevant competent authorities and self-regulatory bodies (SRBs), financial institutions and DNFBPs.

Risk mitigation

1.5 Based on their understanding of their risks, countries should apply a risk-based approach to allocating resources and implementing measures to prevent or mitigate ML/TF.

1.6 Countries which decide not to apply some of the FATF Recommendations requiring financial institutions or DNFBPs to take certain actions, should demonstrate that:

(a) there is a proven low risk of ML/TF; the exemption occurs in strictly limited and justified circumstances; and it relates to a particular type of financial institution or activity, or DNFBP; or

(b) a financial activity (other than the transferring of money or value) is carried out by a natural or legal person on an occasional or very limited basis (having regard to quantitative and absolute criteria), such that there is a low risk of ML/TF.

---

5 The requirements in this recommendation should be assessed taking into account the more specific risk based requirements in other Recommendations. Under Recommendation 1 assessors should come to an overall view of risk assessment and risk mitigation by countries and financial institutions/DNFBPs as required in other Recommendations, but should not duplicate the detailed assessments of risk-based measures required under other Recommendations. Assessors are not expected to conduct an in-depth review of the country's assessment(s) of risks. Assessors should focus on the process, mechanism, and information sources adopted by the country, as well as the contextual factors, and should consider the reasonableness of the conclusions of the country's assessment(s) of risks.

6 Where appropriate, ML/TF risk assessments at a supra-national level should be taken into account when considering whether this obligation is satisfied.

1.7 Where countries identify higher risks, they should ensure that their AML/CFT regime addresses such risks, including through: (a) requiring financial institutions and DNFBPs to take enhanced measures to manage and mitigate the risks; or (b) requiring financial institutions and DNFBPs to ensure that this information is incorporated into their risk assessments.

1.8 Countries may allow simplified measures for some of the FATF Recommendations requiring financial institutions or DNFBPs to take certain actions, provided that a lower risk has been identified, and this is consistent with the country's assessment of its ML/TF risks[7].

1.9 Supervisors and SRBs should ensure that financial institutions and DNFBPs are implementing their obligations under Recommendation 1[8].

OBLIGATIONS AND DECISIONS FOR FINANCIAL INSTITUTIONS AND DNFBPS

Risk assessment

1.10 Financial institutions and DNFBPs should be required to take appropriate steps to identify, assess, and understand their ML/TF risks (for customers, countries or geographic areas; and products, services, transactions or delivery channels)[9]. This includes being required to:

(a) document their risk assessments;

(b) consider all the relevant risk factors before determining what is the level of overall risk and the appropriate level and type of mitigation to be applied;

(c) keep these assessments up to date; and

(d) have appropriate mechanisms to provide risk assessment information to competent authorities and SRBs.

Risk mitigation

1.11 Financial institutions and DNFBPs should be required to:

(a) have policies, controls and procedures, which are approved by senior management, to enable them to manage and mitigate the risks that have been identified (either by the country or by the financial institution or DNFBP);

(b) monitor the implementation of those controls and to enhance them if necessary; and

---

7 Where the FATF Recommendations identify higher risk activities for which enhanced or specific measures are required, countries should ensure that all such measures are applied, although the extent of such measures may vary according to the specific level of risk.

8 The requirements in this criterion should be assessed taking into account the findings in relation to Recommendations 26 and 28.

9 The nature and extent of any assessment of ML/TF risks should be appropriate to the nature and size of the business. Competent authorities or SRBs may determine that individual documented risk assessments are not required, provided that the specific risks inherent to the sector are clearly identified and understood, and that individual financial institutions and DNFBPs understand their ML/TF risks.

(c) take enhanced measures to manage and mitigate the risks where higher risks are identified.

1.12 Countries may only permit financial institutions and DNFBPs to take simplified measures to manage and mitigate risks, if lower risks have been identified, and criteria 1.9 to 1.11 are met. Simplified measures should not be permitted whenever there is a suspicion of ML/TF.

RECOMMENDATION 2 NATIONAL CO-OPERATION AND CO-ORDINATION

2.1 Countries should have national AML/CFT policies which are informed by the risks identified, and are regularly reviewed.

2.2 Countries should designate an authority or have a co-ordination or other mechanism that is responsible for national AML/CFT policies.

2.3 Mechanisms should be in place to enable policy makers, the Financial Intelligence Unit (FIU), law enforcement authorities, supervisors and other relevant competent authorities to co-operate, and where appropriate, co-ordinate and exchange information domestically with each other concerning the development and implementation of AML/CFT policies and activities. Such mechanisms should apply at both policymaking and operational levels.

2.4 Competent authorities should have similar co-operation and, where appropriate, co-ordination mechanisms to combat the financing of proliferation of weapons of mass destruction.

2.5 Countries should have cooperation and coordination between relevant authorities to ensure the compatibility of AML/CFT requirements with Data Protection and Privacy rules and other similar provisions (e.g. data security/localisation).[10]

[10] For purposes of technical compliance, the assessment should be limited to whether there is co-operation and, where appropriate, co-ordination, whether formal or informal, between the relevant authorities.

RECOMMENDATION 3 MONEY LAUNDERING OFFENCE

3.1 ML should be criminalised on the basis of the Vienna Convention and the Palermo Convention (see Article 3(1)(b)&(c) Vienna Convention and Article 6(1) Palermo Convention)[11].

3.2 The predicate offences for ML should cover all serious offences, with a view to including the widest range of predicate offences. At a minimum, predicate offences should include a range of offences in each of the designated categories of offences[12].

3.3 Where countries apply a threshold approach or a combined approach that includes a threshold approach[13], predicate offences should, at a minimum, comprise all offences that:

(a) fall within the category of serious offences under their national law; or

(b) are punishable by a maximum penalty of more than one year's imprisonment; or

(c) are punished by a minimum penalty of more than six months' imprisonment (for countries that have a minimum threshold for offences in their legal system).

3.4 The ML offence should extend to any type of property, regardless of its value, that directly or indirectly represents the proceeds of crime.

3.5 When proving that property is the proceeds of crime, it should not be necessary that a person be convicted of a predicate offence.

3.6 Predicate offences for money laundering should extend to conduct that occurred in another country, which constitutes an offence in that country, and which would have constituted a predicate offence had it occurred domestically.

3.7 The ML offence should apply to persons who commit the predicate offence, unless this is contrary to fundamental principles of domestic law.

3.8 It should be possible for the intent and knowledge required to prove the ML offence to be inferred from objective factual circumstances.

3.9 Proportionate and dissuasive criminal sanctions should apply to natural persons convicted of ML.

---

11 Note in particular the physical and material elements of the offence.

12 Recommendation 3 does not require countries to create a separate offence of "participation in an organised criminal group and racketeering". In order to cover this category of "designated offence", it is sufficient if a country meets either of the two options set out in the Palermo Convention, *i.e.* either a separate offence or an offence based on conspiracy.

13 Countries determine the underlying predicate offences for ML by reference to (a) all offences; or (b) to a threshold linked either to a category of serious offences or to the penalty of imprisonment applicable to the predicate offence (threshold approach); or (c) to a list of predicate offences; or (d) a combination of these approaches.

3.10 Criminal liability and sanctions, and, where that is not possible (due to fundamental principles of domestic law), civil or administrative liability and sanctions, should apply to legal persons. This should not preclude parallel criminal, civil or administrative proceedings with respect to legal persons in countries in which more than one form of liability is available. Such measures are without prejudice to the criminal liability of natural persons. All sanctions should be proportionate and dissuasive.

3.11 Unless it is not permitted by fundamental principles of domestic law, there should be appropriate ancillary offences to the ML offence, including: participation in; association with or conspiracy to commit; attempt; aiding and abetting; facilitating; and counselling the commission.

RECOMMENDATION 4 CONFISCATION AND PROVISIONAL MEASURES

4.1 Countries should have measures, including legislative measures, that enable the confiscation of the following, whether held by criminal defendants or by third parties:

(a) property laundered;

(b) proceeds of (including income or other benefits derived from such proceeds), or instrumentalities used or intended for use in, ML or predicate offences;

(c) property that is the proceeds of, or used in, or intended or allocated for use in the financing of terrorism, terrorist acts or terrorist organisations; or

(d) property of corresponding value.

4.2 Countries should have measures, including legislative measures, that enable their competent authorities to:

(a) identify, trace and evaluate property that is subject to confiscation;

(b) carry out provisional measures, such as freezing or seizing, to prevent any dealing, transfer or disposal of property subject to confiscation[14];

(c) take steps that will prevent or void actions that prejudice the country's ability to freeze or seize or recover property that is subject to confiscation; and

(d) take any appropriate investigative measures.

4.3 Laws and other measures should provide protection for the rights of *bona fide* third parties.

4.4 Countries should have mechanisms for managing and, when necessary, disposing of property frozen, seized or confiscated.

[14] Measures should allow the initial application to freeze or seize property subject to confiscation to be made *ex-parte* or without prior notice, unless this is inconsistent with fundamental principles of domestic law.

RECOMMENDATION 5 TERRORIST FINANCING OFFENCE

5.1 Countries should criminalise TF on the basis of the Terrorist Financing Convention[15].

5.2 TF offences should extend to any person who wilfully provides or collects funds or other assets by any means, directly or indirectly, with the unlawful intention that they should be used, or in the knowledge that they are to be used, in full or in part: (a) to carry out a terrorist act(s); or (b) by a terrorist organisation or by an individual terrorist (even in the absence of a link to a specific terrorist act or acts).[16]

5.2bis TF offences should include financing the travel of individuals who travel to a State other than their States of residence or nationality for the purpose of the perpetration, planning, or preparation of, or participation in, terrorist acts or the providing or receiving of terrorist training.

5.3 TF offences should extend to any funds or other assets whether from a legitimate or illegitimate source.

5.4 TF offences should not require that the funds or other assets: (a) were actually used to carry out or attempt a terrorist act(s); or (b) be linked to a specific terrorist act(s).

5.5 It should be possible for the intent and knowledge required to prove the offence to be inferred from objective factual circumstances.

5.6 Proportionate and dissuasive criminal sanctions should apply to natural persons convicted of TF.

5.7 Criminal liability and sanctions, and, where that is not possible (due to fundamental principles of domestic law), civil or administrative liability and sanctions, should apply to legal persons. This should not preclude parallel criminal, civil or administrative proceedings with respect to legal persons in countries in which more than one form of liability is available. Such measures should be without prejudice to the criminal liability of natural persons. All sanctions should be proportionate and dissuasive.

5.8 It should also be an offence to:

(a) attempt to commit the TF offence;

(b) participate as an accomplice in a TF offence or attempted offence;

(c) organise or direct others to commit a TF offence or attempted offence; and

15 Criminalisation should be consistent with Article 2 of the International Convention for the Suppression of the Financing of Terrorism.

16 Criminalising TF solely on the basis of aiding and abetting, attempt, or conspiracy is not sufficient to comply with the Recommendation.

(d) contribute to the commission of one or more TF offence(s) or attempted offence(s), by a group of persons acting with a common purpose[17].

5.9 TF offences should be designated as ML predicate offences.

5.10 TF offences should apply, regardless of whether the person alleged to have committed the offence(s) is in the same country or a different country from the one in which the terrorist(s)/terrorist organisation(s) is located or the terrorist act(s) occurred/will occur.

[17] Such contribution shall be intentional and shall either: (i) be made with the aim of furthering the criminal activity or criminal purpose of the group, where such activity or purpose involves the commission of a TF offence; or (ii) be made in the knowledge of the intention of the group to commit a TF offence.

RECOMMENDATION 6 TARGETED FINANCIAL SANCTIONS RELATED TO TERRORISM AND TERRORIST FINANCING

Identifying and designating

6.1 In relation to designations pursuant to United Nations Security Council 1267/1989 (Al Qaida) and 1988 sanctions regimes (Referred to below as "UN Sanctions Regimes"), countries should:

(a) identify a competent authority or a court as having responsibility for proposing persons or entities to the 1267/1989 Committee for designation; and for proposing persons or entities to the 1988 Committee for designation;

(b) have a mechanism(s) for identifying targets for designation, based on the designation criteria set out in the relevant United Nations Security Council resolutions (UNSCRs);

(c) apply an evidentiary standard of proof of "reasonable grounds" or "reasonable basis" when deciding whether or not to make a proposal for designation. Such proposals for designations should not be conditional upon the existence of a criminal proceeding;

(d) follow the procedures and (in the case of UN Sanctions Regimes) standard forms for listing, as adopted by the relevant committee (the 1267/1989 Committee or 1988 Committee); and

(e) provide as much relevant information as possible on the proposed name[18]; a statement of case[19] which contains as much detail as possible on the basis for the listing[20]; and (in the case of proposing names to the 1267/1989 Committee), specify whether their status as a designating state may be made known.

6.2 In relation to designations pursuant to UNSCR 1373, countries should:

(a) identify a competent authority or a court as having responsibility for designating persons or entities that meet the specific criteria for designation, as set forth in UNSCR 1373; as put forward either on the country's own motion or, after examining and giving effect to, if appropriate, the request of another country.

---

18 In particular, sufficient identifying information to allow for the accurate and positive identification of individuals, groups, undertakings, and entities, and to the extent possible, the information required by Interpol to issue a Special Notice

19 This statement of case should be releasable, upon request, except for the parts a Member State identifies as being confidential to the relevant committee (the 1267/1989 Committee or 1988 Committee).

20 Including: specific information supporting a determination that the person or entity meets the relevant designation; the nature of the information; supporting information or documents that can be provided; and details of any connection between the proposed designee and any currently designated person or entity

(b) have a mechanism(s) for identifying targets for designation, based on the designation criteria set out in UNSCR 1373[21];

(c) when receiving a request, make a prompt determination of whether they are satisfied, according to applicable (supra-) national principles that the request is supported by reasonable grounds, or a reasonable basis, to suspect or believe that the proposed designee meets the criteria for designation in UNSCR 1373;

(d) apply an evidentiary standard of proof of "reasonable grounds" or "reasonable basis" when deciding whether or not to make a designation[22]. Such (proposals for) designations should not be conditional upon the existence of a criminal proceeding; and

(e) when requesting another country to give effect to the actions initiated under the freezing mechanisms, provide as much identifying information, and specific information supporting the designation, as possible.

6.3 The competent authority(ies) should have legal authorities and procedures or mechanisms to:

(a) collect or solicit information to identify persons and entities that, based on reasonable grounds, or a reasonable basis to suspect or believe, meet the criteria for designation; and

(b) operate *ex parte* against a person or entity who has been identified and whose (proposal for) designation is being considered.

Freezing

6.4 Countries should implement targeted financial sanctions without delay[23].

6.5 Countries should have the legal authority and identify domestic competent authorities responsible for implementing and enforcing targeted financial sanctions, in accordance with the following standards and procedures:

---

21 This includes having authority and effective procedures or mechanisms to examine and give effect to, if appropriate, the actions initiated under the freezing mechanisms of other countries pursuant to UNSCR 1373 (2001)

22 A country should apply the legal standard of its own legal system regarding the kind and quantum of evidence for the determination that "reasonable grounds" or "reasonable basis" exist for a decision to designate a person or entity, and thus initiate an action under a freezing mechanism. This is the case irrespective of whether the proposed designation is being put forward on the relevant country's own motion or at the request of another country.

23 For UNSCR 1373, the obligation to take action without delay is triggered by a designation at the (supra-) national level, as put forward either on the country's own motion or at the request of another country, if the country receiving the request is satisfied, according to applicable legal principles, that a requested designation is supported by reasonable grounds, or a reasonable basis, to suspect or believe that the proposed designee meets the criteria for designation in UNSCR 1373.

(a) Countries should require all natural and legal persons within the country to freeze, without delay and without prior notice, the funds or other assets of designated persons and entities.

(b) The obligation to freeze should extend to: (i) all funds or other assets that are owned or controlled by the designated person or entity, and not just those that can be tied to a particular terrorist act, plot or threat; (ii) those funds or other assets that are wholly or jointly owned or controlled, directly or indirectly, by designated persons or entities; and (iii) the funds or other assets derived or generated from funds or other assets owned or controlled directly or indirectly by designated persons or entities, as well as (iv) funds or other assets of persons and entities acting on behalf of, or at the direction of, designated persons or entities.

(c) Countries should prohibit their nationals, or[24] any persons and entities within their jurisdiction, from making any funds or other assets, economic resources, or financial or other related services, available, directly or indirectly, wholly or jointly, for the benefit of designated persons and entities; entities owned or controlled, directly or indirectly, by designated persons or entities; and persons and entities acting on behalf of, or at the direction of, designated persons or entities, unless licensed, authorised or otherwise notified in accordance with the relevant UNSCRs.

(d) Countries should have mechanisms for communicating designations to the financial sector and the DNFBPs immediately upon taking such action, and providing clear guidance to financial institutions and other persons or entities, including DNFBPs, that may be holding targeted funds or other assets, on their obligations in taking action under freezing mechanisms.

(e) Countries should require financial institutions and DNFBPs to report to competent authorities any assets frozen or actions taken in compliance with the prohibition requirements of the relevant UNSCRs, including attempted transactions.

(f) Countries should adopt measures which protect the rights of *bona fide* third parties acting in good faith when implementing the obligations under Recommendation 6.

De-listing, unfreezing and providing access to frozen funds or other assets

6.6 Countries should have publicly known procedures to de-list and unfreeze the funds or other assets of persons and entities which do not, or no longer, meet the criteria for designation. These should include:

(a) procedures to submit de-listing requests to the relevant UN sanctions Committee in the case of persons and entities designated pursuant to the UN Sanctions Regimes , in the view of the country, do not or no longer meet the criteria for designation. Such

[24] "or", in this particular case means that countries must both prohibit their own nationals and prohibit any persons/entities in their jurisdiction.

procedures and criteria should be in accordance with procedures adopted by the *1267/1989 Committee* or the *1988 Committee*, as appropriate[25];

(b) legal authorities and procedures or mechanisms to de-list and unfreeze the funds or other assets of persons and entities designated pursuant to UNSCR 1373, that no longer meet the criteria for designation;

(c) with regard to designations pursuant to UNSCR 1373, procedures to allow, upon request, review of the designation decision before a court or other independent competent authority;

(d) with regard to designations pursuant to UNSCR 1988, procedures to facilitate review by the *1988 Committee* in accordance with any applicable guidelines or procedures adopted by the *1988 Committee*, including those of the Focal Point mechanism established under UNSCR 1730;

(e) with respect to designations on the *Al-Qaida Sanctions List*, procedures for informing designated persons and entities of the availability of the *United Nations Office of the Ombudsperson*, pursuant to UNSCRs 1904, 1989, and 2083 to accept de-listing petitions;

(f) publicly known procedures to unfreeze the funds or other assets of persons or entities with the same or similar name as designated persons or entities, who are inadvertently affected by a freezing mechanism (*i.e.* a false positive), upon verification that the person or entity involved is not a designated person or entity; and

(g) mechanisms for communicating de-listings and unfreezings to the financial sector and the DNFBPs immediately upon taking such action, and providing guidance to financial institutions and other persons or entities, including DNFBPs, that may by holding targeted funds or other assets, on their obligations to respect a de-listing or unfreezing action.

6.7 Countries should authorise access to frozen funds or other assets which have been determined to be necessary for basic expenses, for the payment of certain types of fees, expenses and service charges, or for extraordinary expenses, in accordance with the procedures set out in UNSCR 1452 and any successor resolutions. On the same grounds, countries should authorise access to funds or other assets, if freezing measures are applied to persons and entities designated by a (supra-)national country pursuant to UNSCR 1373.

[25] The procedures of the *1267/1989 Committee* are set out in UNSCRs 1730; 1735; 1822; 1904; 1989; 2083 and any successor resolutions. The procedures of the *1988 Committee* are set out in UNSCRs 1730; 1735; 1822; 1904; 1988; 2082; and any successor resolutions.

RECOMMENDATION 7 TARGETED FINANCIAL SANCTIONS RELATED TO PROLIFERATION

7.1 Countries should implement targeted financial sanctions without delay to comply with United Nations Security Council Resolutions, adopted under Chapter VII of the Charter of the United Nations, relating to the prevention, suppression and disruption of proliferation of weapons of mass destruction and its financing.[26].

7.2 Countries should establish the necessary legal authority and identify competent authorities responsible for implementing and enforcing targeted financial sanctions, and should do so in accordance with the following standards and procedures.

(a) Countries should require all natural and legal persons within the country to freeze, without delay and without prior notice, the funds or other assets of designated persons and entities.

(b) The freezing obligation should extend to: (i) all funds or other assets that are owned or controlled by the designated person or entity, and not just those that can be tied to a particular act, plot or threat of proliferation; (ii) those funds or other assets that are wholly or jointly owned or controlled, directly or indirectly, by designated persons or entities; and (iii) the funds or other assets derived or generated from funds or other assets owned or controlled directly or indirectly by designated persons or entities, as well as (iv) funds or other assets of persons and entities acting on behalf of, or at the direction of designated persons or entities.

(c) Countries should ensure that any funds or other assets are prevented from being made available by their nationals or by any persons or entities within their territories, to or for the benefit of designated persons or entities unless licensed, authorised or otherwise notified in accordance with the relevant United Nations Security Council Resolutions.

(d) Countries should have mechanisms for communicating designations to financial institutions and DNFBPs immediately upon taking such action, and providing clear guidance to financial institutions and other persons or entities, including DNFBPs,

26 Recommendation 7 is applicable to all current UNSCRs applying targeted financial sanctions relating to the financing of proliferation of weapons of mass destruction, any future successor resolutions, and any future UNSCRs which impose targeted financial sanctions in the context of the financing of proliferation of weapons of mass destruction. At the time of issuance of the FATF Standards to which this Methodology corresponds (June 2017), the UNSCRs applying targeted financial sanctions relating to the financing of proliferation of weapons of mass destruction are: UNSCR 1718(2006) on DPRK and its successor resolutions 1874(2009), 2087(2013), 2094(2013), 2270(2016), 2321(2016) and 2356(2017). UNSCR 2231(2015), endorsing the Joint Comprehensive Plan of Action (JCPOA), terminated all provisions of UNSCRs relating to Iran and proliferation financing, including 1737(2006), 1747(2007), 1803(2008) and 1929(2010), but established specific restrictions including targeted financial sanctions. This lifts sanctions as part of a step by step approach with reciprocal commitments endorsed by the Security Council. Implementation day of the JCPOA was on 16 January 2016.

that may be holding targeted funds or other assets, on their obligations in taking action under freezing mechanisms.

(e) Countries should require financial institutions and DNFBPs to report to competent authorities any assets frozen or actions taken in compliance with the prohibition requirements of the relevant UNSCRs, including attempted transactions.

(f) Countries should adopt measures which protect the rights of *bona fide* third parties acting in good faith when implementing the obligations under Recommendation 7.

7.3 Countries should adopt measures for monitoring and ensuring compliance by financial institutions and DNFBPs with the relevant laws or enforceable means governing the obligations under Recommendation 7. Failure to comply with such laws or enforceable means should be subject to civil, administrative or criminal sanctions.

7.4 Countries should develop and implement publicly known procedures to submit de-listing requests to the Security Council in the case of designated persons and entities that, in the view of the country, do not or no longer meet the criteria for designation[27]. These should include:

(a) enabling listed persons and entities to petition a request for de-listing at the Focal Point for de-listing established pursuant to UNSCR 1730, or informing designated persons or entities to petition the Focal Point directly;

(b) publicly known procedures to unfreeze the funds or other assets of persons or entities with the same or similar name as designated persons or entities, who are inadvertently affected by a freezing mechanism (*i.e.* a false positive), upon verification that the person or entity involved is not a designated person or entity;

(c) authorising access to funds or other assets, where countries have determined that the exemption conditions set out in UNSCRs 1718 and 2231 are met, in accordance with the procedures set out in those resolutions; and

(d) mechanisms for communicating de-listings and unfreezings to the financial sector and the DNFBPs immediately upon taking such action, and providing guidance to financial institutions and other persons or entities, including DNFBPs, that may be holding targeted funds or other assets, on their obligations to respect a de-listing or unfreezing action.

7.5 With regard to contracts, agreements or obligations that arose prior to the date on which accounts became subject to targeted financial sanctions:

(a) countries should permit the addition to the accounts frozen pursuant to UNSCRs 1718 or 2231 of interests or other earnings due on those accounts or payments due under contracts, agreements or obligations that arose prior to the date on which

[27] In the case of UNSCR 1718 and its successor resolutions, such procedures and criteria should be in accordance with any applicable guidelines or procedures adopted by the United Nations Security Council pursuant to UNSCR 1730 (2006) and any successor resolutions, including those of the Focal Point mechanism established under that resolution.

those accounts became subject to the provisions of this resolution, provided that any such interest, other earnings and payments continue to be subject to these provisions and are frozen; and

(b) freezing action taken pursuant to UNSCR 1737 and continued by UNSCR 2231, or taken pursuant to UNSCR 2231 should not prevent a designated person or entity from making any payment due under a contract entered into prior to the listing of such person or entity, provided that: (i) the relevant countries have determined that the contract is not related to any of the prohibited items, materials, equipment, goods, technologies, assistance, training, financial assistance, investment, brokering or services referred to in UNSCR 2231 and any future successor resolutions; (ii) the relevant countries have determined that the payment is not directly or indirectly received by a person or entity subject to the measures in paragraph 6 of Annex B to UNSCR 2231; and (iii) the relevant countries have submitted prior notification to the Security Council of the intention to make or receive such payments or to authorise, where appropriate, the unfreezing of funds, other financial assets or economic resources for this purpose, ten working days prior to such authorisation.

RECOMMENDATION 8 NON-PROFIT ORGANISATIONS (NPOS)

Taking a risk-based approach

8.1 Countries should:

(a) Without prejudice to the requirements of Recommendation 1, since not all NPOs are inherently high risk (and some may represent little or no risk at all), identify which subset of organizations fall within the FATF definition[28] of NPO, and use all relevant sources of information, in order to identify the features and types of NPOs which by virtue of their activities or characteristics, are likely to be at risk of terrorist financing abuse[29];

(b) identify the nature of threats posed by terrorist entities to the NPOs which are at risk as well as how terrorist actors abuse those NPOs;

(c) review the adequacy of measures, including laws and regulations, that relate to the subset of the NPO sector that may be abused for terrorism financing support in order to be able to take proportionate and effective actions to address the risks identified; and

(d) periodically reassess the sector by reviewing new information on the sector's potential vulnerabilities to terrorist activities to ensure effective implementation of measures.

Sustained outreach concerning terrorist financing issues

8.2 Countries should:

(a) have clear policies to promote accountability, integrity, and public confidence in the administration and management of NPOs;

(b) encourage and undertake outreach and educational programmes to raise and deepen awareness among NPOs as well as the donor community about the potential vulnerabilities of NPOs to terrorist financing abuse and terrorist financing risks, and the measures that NPOs can take to protect themselves against such abuse;

(c) work with NPOs to develop and refine best practices to address terrorist financing risk and vulnerabilities and thus protect them from terrorist financing abuse; and

---

28 For the purposes of this Recommendation, NPO refers to a legal person or arrangement or organisation that primarily engages in raising or disbursing funds for purposes such as charitable, religious, cultural, educational, social or fraternal purposes, or for the carrying out of other types of "good works".

29 For example, such information could be provided by regulators, tax authorities, FIUs, donor organisations or law enforcement and intelligence authorities.

(d) encourage NPOs to conduct transactions via regulated financial channels, wherever feasible, keeping in mind the varying capacities of financial sectors in different countries and in different areas of urgent charitable and humanitarian concerns.

Targeted risk-based supervision or monitoring of NPOs

8.3 Countries should take steps to promote effective supervision or monitoring such that they are able to demonstrate that risk based measures apply to NPOs at risk of terrorist financing abuse.[30]

8.4 Appropriate authorities should:

(a) monitor the compliance of NPOs with the requirements of this Recommendation, including the risk-based measures being applied to them under criterion 8.3[31]; and

(b) be able to apply effective, proportionate and dissuasive sanctions for violations by NPOs or persons acting on behalf of these NPOs.[32]

Effective information gathering and investigation

8.5 Countries should:

(a) ensure effective co-operation, co-ordination and information-sharing to the extent possible among all levels of appropriate authorities or organisations that hold relevant information on NPOs;

(b) have investigative expertise and capability to examine those NPOs suspected of either being exploited by, or actively supporting, terrorist activity or terrorist organisations;

(c) ensure that full access to information on the administration and management of particular NPOs (including financial and programmatic information) may be obtained during the course of an investigation; and

(d) establish appropriate mechanisms to ensure that, when there is suspicion or reasonable grounds to suspect that a particular NPO: (1) is involved in terrorist financing abuse and/or is a front for fundraising by a terrorist organisation; (2) is being exploited as a conduit for terrorist financing, including for the purpose of escaping asset freezing measures, or other forms of terrorist support; or (3) is concealing or obscuring the clandestine diversion of funds intended for legitimate purposes, but redirected for the benefit of terrorists or terrorist organisations, that

30 Some examples of measures that could be applied to NPOs, in whole or in part, depending on the risks identified are detailed in sub-paragraph 6(b) of INR.8. It is also possible that existing regulatory or other measures may already sufficiently address the current terrorist financing risk to the NPOs in a jurisdiction, although terrorist financing risks to the sector should be periodically re-assessed.

31 In this context, rules and regulations may include rules and standards applied by self-regulatory organisations and accrediting institutions.

32 The range of such sanctions might include freezing of accounts, removal of trustees, fines, de-certification, delicensing and de-registration. This should not preclude parallel civil, administrative or criminal proceedings with respect to NPOs or persons acting on their behalf where appropriate.

this information is promptly shared with competent authorities, in order to take preventive or investigative action.

Effective capacity to respond to international requests for information about an NPO of concern

8.6 Countries should identify appropriate points of contact and procedures to respond to international requests for information regarding particular NPOs suspected of terrorist financing or involvement in other forms of terrorist support.

RECOMMENDATION 9 FINANCIAL INSTITUTION SECRECY LAWS

9.1 Financial institution secrecy laws should not inhibit the implementation of the FATF Recommendations[33].

[33] Areas where this may be of particular concern are the ability of competent authorities to access information they require to properly perform their functions in combating ML or FT; the sharing of information between competent authorities, either domestically or internationally; and the sharing of information between financial institutions where this is required by Recommendations 13, 16 or 17.

RECOMMENDATION 10 CUSTOMER DUE DILIGENCE[34] (CDD)

10.1 Financial institutions should be prohibited from keeping anonymous accounts or accounts in obviously fictitious names.

When CDD is required

10.2 Financial institutions should be required to undertake CDD measures when:

(a) establishing business relations;

(b) carrying out occasional transactions above the applicable designated threshold (USD/EUR 15 000), including situations where the transaction is carried out in a single operation or in several operations that appear to be linked;

(c) carrying out occasional transactions that are wire transfers in the circumstances covered by Recommendation 16 and its Interpretive Note;

(d) there is a suspicion of ML/TF, regardless of any exemptions or thresholds that are referred to elsewhere under the FATF Recommendations; or

(e) the financial institution has doubts about the veracity or adequacy of previously obtained customer identification data.

Required CDD measures for all customers

10.3 Financial institutions should be required to identify the customer (whether permanent or occasional, and whether natural or legal person or legal arrangement) and verify that customer's identity using reliable, independent source documents, data or information (identification data).

10.4 Financial institutions should be required to verify that any person purporting to act on behalf of the customer is so authorised, and identify and verify the identity of that person.

10.5 Financial institutions should be required to identify the beneficial owner and take reasonable measures to verify the identity of the beneficial owner, using the relevant information or data obtained from a reliable source, such that the financial institution is satisfied that it knows who the beneficial owner is.

10.6 Financial institutions should be required to understand and, as appropriate, obtain information on, the purpose and intended nature of the business relationship.

[34] The principle that financial institutions conduct CDD should be set out in law, though specific requirements may be set out in enforceable means.

10.7 Financial institutions should be required to conduct ongoing due diligence on the business relationship, including:

(a) scrutinising transactions undertaken throughout the course of that relationship to ensure that the transactions being conducted are consistent with the financial institution's knowledge of the customer, their business and risk profile, including where necessary, the source of funds; and

(b) ensuring that documents, data or information collected under the CDD process is kept up-to-date and relevant, by undertaking reviews of existing records, particularly for higher risk categories of customers.

Specific CDD measures required for legal persons and legal arrangements

10.8 For customers that are legal persons or legal arrangements, the financial institution should be required to understand the nature of the customer's business and its ownership and control structure.

10.9 For customers that are legal persons or legal arrangements, the financial institution should be required to identify the customer and verify its identity through the following information:

(a) name, legal form and proof of existence;

(b) the powers that regulate and bind the legal person or arrangement, as well as the names of the relevant persons having a senior management position in the legal person or arrangement; and

(c) the address of the registered office and, if different, a principal place of business.

10.10 For customers that are legal persons[35], the financial institution should be required to identify and take reasonable measures to verify the identity of beneficial owners through the following information:

(a) the identity of the natural person(s) (if any[36]) who ultimately has a controlling ownership interest[37] in a legal person; and

---

35 Where the customer or the owner of the controlling interest is a company listed on a stock exchange and subject to disclosure requirements (either by stock exchange rules or through law or enforceable means) which impose requirements to ensure adequate transparency of beneficial ownership, or is a majority-owned subsidiary of such a company, it is not necessary to identify and verify the identity of any shareholder or beneficial owner of such companies. The relevant identification data may be obtained from a public register, from the customer or from other reliable sources.

36 Ownership interests can be so diversified that there are no natural persons (whether acting alone or together) exercising control of the legal person or arrangement through ownership.

37 A controlling ownership interest depends on the ownership structure of the company. It may be based on a threshold, e.g. any person owning more than a certain percentage of the company (e.g. 25%).

(b) to the extent that there is doubt under (a) as to whether the person(s) with the controlling ownership interest is the beneficial owner(s) or where no natural person exerts control through ownership interests, the identity of the natural person(s) (if any) exercising control of the legal person or arrangement through other means; and

(c) where no natural person is identified under (a) or (b) above, the identity of the relevant natural person who holds the position of senior managing official.

10.11 For customers that are legal arrangements, the financial institution should be required to identify and take reasonable measures to verify the identity of beneficial owners through the following information:

(a) for trusts, the identity of the settlor, the trustee(s), the protector (if any), the beneficiaries or class of beneficiaries[38], and any other natural person exercising ultimate effective control over the trust (including through a chain of control/ownership);

(b) for other types of legal arrangements, the identity of persons in equivalent or similar positions.

CDD for Beneficiaries of Life Insurance Policies

10.12 In addition to the CDD measures required for the customer and the beneficial owner, financial institutions should be required to conduct the following CDD measures on the beneficiary of life insurance and other investment related insurance policies, as soon as the beneficiary is identified or designated:

(a) for a beneficiary that is identified as specifically named natural or legal persons or legal arrangements – taking the name of the person;

(b) for a beneficiary that is designated by characteristics or by class or by other means – obtaining sufficient information concerning the beneficiary to satisfy the financial institution that it will be able to establish the identity of the beneficiary at the time of the payout;

(c) for both the above cases – the verification of the identity of the beneficiary should occur at the time of the payout.

10.13 Financial institutions should be required to include the beneficiary of a life insurance policy as a relevant risk factor in determining whether enhanced CDD measures are applicable. If the financial institution determines that a beneficiary who is a legal person or a legal arrangement presents a higher risk, it should be required to take enhanced measures which should include reasonable measures to identify and verify the identity of the beneficial owner of the beneficiary, at the time of payout.

---

38 For beneficiaries of trusts that are designated by characteristics or by class, financial institutions should obtain sufficient information concerning the beneficiary to satisfy the financial institution that it will be able to establish the identity of the beneficiary at the time of the payout or when the beneficiary intends to exercise vested rights.

Timing of verification

10.14 Financial institutions should be required to verify the identity of the customer and beneficial owner before or during the course of establishing a business relationship or conducting transactions for occasional customers; or (if permitted) may complete verification after the establishment of the business relationship, provided that:

(a) this occurs as soon as reasonably practicable;

(b) this is essential not to interrupt the normal conduct of business; and

(c) the ML/TF risks are effectively managed.

10.15 Financial institutions should be required to adopt risk management procedures concerning the conditions under which a customer may utilise the business relationship prior to verification.

Existing customers

10.16 Financial institutions should be required to apply CDD requirements to existing customers[39] on the basis of materiality and risk, and to conduct due diligence on such existing relationships at appropriate times, taking into account whether and when CDD measures have previously been undertaken and the adequacy of data obtained.

Risk-Based Approach

10.17 Financial institutions should be required to perform enhanced due diligence where the ML/TF risks are higher.

10.18 Financial institutions may only be permitted to apply simplified CDD measures where lower risks have been identified, through an adequate analysis of risks by the country or the financial institution. The simplified measures should be commensurate with the lower risk factors, but are not acceptable whenever there is suspicion of ML/TF, or specific higher risk scenarios apply.

Failure to satisfactorily complete CDD

10.19 Where a financial institution is unable to comply with relevant CDD measures:

(a) it should be required not to open the account, commence business relations or perform the transaction; or should be required to terminate the business relationship; and

(b) it should be required to consider making a suspicious transaction report (STR) in relation to the customer.

[39] Existing customers as at the date that the new national requirements are brought into force.

CDD and tipping-off

10.20 In cases where financial institutions form a suspicion of money laundering or terrorist financing, and they reasonably believe that performing the CDD process will tip-off the customer, they should be permitted not to pursue the CDD process, and instead should be required to file an STR.

RECOMMENDATION 11 RECORD KEEPING[40]

11.1 Financial institutions should be required to maintain all necessary records on transactions, both domestic and international, for at least five years following completion of the transaction.

11.2 Financial institutions should be required to keep all records obtained through CDD measures, account files and business correspondence, and results of any analysis undertaken, for at least five years following the termination of the business relationship or after the date of the occasional transaction.

11.3 Transaction records should be sufficient to permit reconstruction of individual transactions so as to provide, if necessary, evidence for prosecution of criminal activity.

11.4 Financial institutions should be required to ensure that all CDD information and transaction records are available swiftly to domestic competent authorities upon appropriate authority.

40 The principle that financial institutions should maintain records on transactions and information obtained through CDD measures should be set out in law.

RECOMMENDATION 12 POLITICALLY EXPOSED PERSONS (PEPS)

12.1 In relation to foreign PEPs, in addition to performing the CDD measures required under Recommendation 10, financial institutions should be required to:

(a) put in place risk management systems to determine whether a customer or the beneficial owner is a PEP;

(b) obtain senior management approval before establishing (or continuing, for existing customers) such business relationships;

(c) take reasonable measures to establish the source of wealth and the source of funds of customers and beneficial owners identified as PEPs; and

(d) conduct enhanced ongoing monitoring on that relationship.

12.2 In relation to domestic PEPs or persons who have been entrusted with a prominent function by an international organisation, in addition to performing the CDD measures required under Recommendation10, financial institutions should be required to:

(a) take reasonable measures to determine whether a customer or the beneficial owner is such a person; and

(b) in cases when there is higher risk business relationship with such a person, adopt the measures in criterion 12.1 (b) to (d).

12.3 Financial institutions should be required to apply the relevant requirements of criteria 12.1 and 12.2 to family members or close associates of all types of PEP.

12.4 In relation to life insurance policies, financial institutions should be required to take reasonable measures to determine whether the beneficiaries and/or, where required, the beneficial owner of the beneficiary, are PEPs. This should occur, at the latest, at the time of the payout. Where higher risks are identified, financial institutions should be required to inform senior management before the payout of the policy proceeds, to conduct enhanced scrutiny on the whole business relationship with the policyholder, and to consider making a suspicious transaction report.

RECOMMENDATION 13 CORRESPONDENT BANKING

13.1 In relation to cross-border correspondent banking and other similar relationships, financial institutions should be required to:

(a) gather sufficient information about a respondent institution to understand fully the nature of the respondent's business, and to determine from publicly available information the reputation of the institution and the quality of supervision, including whether it has been subject to a ML/TF investigation or regulatory action;

(b) assess the respondent institution's AML/CFT controls;

(c) obtain approval from senior management before establishing new correspondent relationships; and

(d) clearly understand the respective AML/CFT responsibilities of each institution.

13.2 With respect to "payable-through accounts", financial institutions should be required to satisfy themselves that the respondent bank:

(a) has performed CDD obligations on its customers that have direct access to the accounts of the correspondent bank; and

(b) is able to provide relevant CDD information upon request to the correspondent bank.

13.3 Financial institutions should be prohibited from entering into, or continuing, correspondent banking relationships with shell banks. They should be required to satisfy themselves that respondent financial institutions do not permit their accounts to be used by shell banks.

RECOMMENDATION 14 MONEY OR VALUE TRANSFER SERVICES (MVTS)

14.1 Natural or legal persons that provide MVTS (MVTS providers) should be required to be licensed or registered[41].

14.2. Countries should take action, with a view to identifying natural or legal persons that carry out MVTS without a licence or registration, and applying proportionate and dissuasive sanctions to them.

14.3 MVTS providers should be subject to monitoring for AML/CFT compliance.

14.4 Agents for MVTS providers should be required to be licensed or registered by a competent authority, or the MVTS provider should be required to maintain a current list of its agents accessible by competent authorities in the countries in which the MVTS provider and its agents operate.

14.5 MVTS providers that use agents should be required to include them in their AML/CFT programmes and monitor them for compliance with these programmes.

41 Countries need not impose a separate licensing or registration system with respect to licensed or registered financial institutions which are authorised to perform MVTS.

RECOMMENDATION 15 NEW TECHNOLOGIES

Note to Assessors:
For the purposes of applying the FATF Recommendations, countries should consider virtual assets as "property", "proceeds", "funds", "funds or other assets", or other "corresponding value". When assessing any Recommendation(s) using these terms[42], the words virtual assets do not have to appear or be explicitly included in legislation referring to or defining those terms.

Assessors should satisfy themselves that the country has demonstrated that nothing in the text of the legislation or in case law precludes virtual assets from falling within the definition of these terms. Where these terms do not cover virtual assets, the deficiency should be noted in the relevant Recommendation(s) that use the term.

Assessors should also satisfy themselves that VASPs may be considered as existing sources of information on beneficial ownership for the purposes of c.24.6(c)(i) and 25.5; and are empowered to obtain relevant information from trustees for the purposes of c.25.3 and 25.4.[43]

Paragraph 1 of INR.15 also requires countries to apply the relevant measures under the FATF Recommendations to virtual assets and virtual asset service providers (VASPs):

a) Where these are preventive measures under Recommendations 10 to 21 and implementation of TFS in R.6 (sub-criteria 6.5(d) and (e), and 6.6(g)) and R.7 (sub-criteria 7.2(d) and (e), criterion 7.3, and sub-criterion 7.4(d)), their application to VASPs should be assessed under Recommendation 15, as should compliance with relevant aspects of R.1, 26, 27, 34, 35 and 37 to 40.

b) Where these are other relevant measures relating to virtual assets and VASPs under Recommendations 2 to 5, R.6 (sub-criteria 6.5(a) to (c), 6.6(a) to (f), and criterion 6.7), R.7 (sub-criteria 7.2(a) to (c), 7.4(b) and 7.4(c), and criterion 7.5)), R.8 to 9, and R.29 to 33, their application to virtual assets and VASPs should be assessed in those Recommendations (not in R.15).

Assessors should refer to paragraph 15 of the Introduction section of the Methodology for more guidance on how to assess the FATF Standards relating to virtual assets and VASPs.

New technologies

15.1 Countries and financial institutions should identify and assess the ML/TF risks that may arise in relation to the development of new products and new business practices, including

42 The terms property, proceeds, funds, funds or other assets and/or corresponding value are used in R.3 (criteria 3.4 and 3.5), R.4 (criteria 4.1, 4.2 and 4.4), R.5 (criteria 5.2, 5.3 and 5.4), R.6 (criteria 6.5, 6.6 and 6.7), R.7 (criteria 7.2, 7.4 and 7.5), R.8 (criteria 8.1 and 8.5), R.10 (criteria 10.7), R.12 (criterion 12.1), R.20 (criterion 20.1), R.29 (criterion 29.4), R.30 (criteria 30.2, 30.3 and 30.5), R.33 (criterion 33.1), R.38 (criteria 38.1, 38.3 and 38.4) and R.40 (criterion 40.17). See additional guidance in paragraph 15 of the Introduction to the Methodology.

43 Consideration of VASPs in the context of these criteria is meant to ensure availability of beneficial ownership information. Assessors should not consider these criteria to impose obligations on VASPs.

new delivery mechanisms, and the use of new or developing technologies for both new and pre-existing products.

15.2 Financial institutions should be required to:

(a) undertake the risk assessments prior to the launch or use of such products, practices and technologies; and
(b) take appropriate measures to manage and mitigate the risks.

Virtual assets and virtual asset service providers[44]

15.3 In accordance with Recommendation 1, countries should:

(a) identify and assess the money laundering and terrorist financing risks emerging from virtual asset activities and the activities or operations of VASPs;

(b) based on their understanding of their risks, apply a risk-based approach to ensure that measures to prevent or mitigate money laundering and terrorist financing are commensurate with the risks identified; and

(c) require VASPs to take appropriate steps to identify, assess, manage and mitigate their money laundering and terrorist financing risks, as required by criteria 1.10 and 1.11.

15.4 Countries should ensure that:

(a) VASPs are required to be licensed or registered[45] at a minimum[46]:

(i) when the VASP is a legal person, in the jurisdiction(s) where it is created[47]; and

---

44 Note to assessors: Countries that have decided to prohibit virtual assets should only be assessed under criteria 15.1, 15.2, 15.3(a) and 15.3(b), 15.5 and 15.11, as the remaining criteria are not applicable in such cases.

45 A country need not impose a separate licensing or registration system with respect to natural or legal persons already licensed or registered as financial institutions (as defined by the FATF Recommendations) within that country, which, under such license or registration, are permitted to perform VASP activities and which are already subject to the full range of applicable obligations under the FATF Recommendations.

46 Jurisdictions may also require VASPs that offer products and/or services to customers in, or conduct operations from, their jurisdiction to be licensed or registered in this jurisdiction.

47 References to creating a legal person include incorporation of companies or any other mechanism that is used. To clarify, the requirement in criterion 15.4(a)(i) is that a country must ensure that a VASP created within the country is licenced or registered, but not that any VASP licenced or registered in the country is also registered in any third country where it was created.

(ii) when the VASP is a natural person, in the jurisdiction where its place of business is located[48]; and

(b) competent authorities take the necessary legal or regulatory measures to prevent criminals or their associates from holding, or being the beneficial owner of, a significant or controlling interest, or holding a management function in, a VASP.

15.5 Countries should take action to identify natural or legal persons that carry out VASP activities without the requisite license or registration, and apply appropriate sanctions to them.[49]

15.6 Consistent with the applicable provisions of Recommendations 26 and 27, countries should ensure that:

(a) VASPs are subject to adequate regulation and risk-based supervision or monitoring by a competent authority[50], including systems for ensuring their compliance with national AML/CFT requirements;

(b) supervisors have adequate powers to supervise or monitor and ensure compliance by VASPs with requirements to combat money laundering and terrorist financing, including the authority to conduct inspections, compel the production of information and impose a range of disciplinary and financial sanctions, including the power to withdraw, restrict or suspend the VASP's license or registration, where applicable.

15.7 In line with Recommendation 34, competent authorities and supervisors should establish guidelines, and provide feedback, which will assist VASPs in applying national measures to combat money laundering and terrorist financing, and, in particular, in detecting and reporting suspicious transactions.

15.8 In line with Recommendation 35, countries should ensure that:

(a) there is a range of proportionate and dissuasive sanctions, whether criminal, civil or administrative, available to deal with VASPs that fail to comply with AML/CFT requirements; and

(b) sanctions should be applicable not only to VASPs, but also to their directors and senior management.

15.9 With respect to the preventive measures, VASPs should be required to comply with the requirements set out in Recommendations 10 to 21, subject to the following qualifications:

(a) R.10 – The occasional transactions designated threshold above which VASPs are required to conduct CDD is USD/EUR 1 000.

---

48 To clarify, criterion 15.4(a)(ii) requires that a country ensure that a VASP that is a natural person located in their country is licensed or registered in their country; not that any VASP that is a natural person with a place of business located in the country is registered in any third country where it also has a place of business.

49 Note to assessors: Criterion 15.5 applies to all countries, regardless of whether they have chosen to license, register or prohibit virtual assets or VASPs.

50 In this context, a "competent authority" cannot include a SRB.

(b) R.16 – For virtual asset transfers[51], countries should ensure that:

(i) originating VASPs obtain and hold required and accurate originator information and required beneficiary information[52] on virtual asset transfers, submit[53] the above information to the beneficiary VASP or financial institution (if any) immediately and securely, and make it available on request to appropriate authorities;

(ii) beneficiary VASPs obtain and hold required originator information and required and accurate beneficiary information on virtual asset transfers, and make it available on request to appropriate authorities[54];

(iii) other requirements of R.16 (including monitoring of the availability of information, and taking freezing action and prohibiting transactions with designated persons and entities) apply on the same basis as set out in R.16; and

(iv) the same obligations apply to financial institutions when sending or receiving virtual asset transfers on behalf of a customer.

15.10 With respect to targeted financial sanctions, countries should ensure that the communication mechanisms, reporting obligations and monitoring referred to in criteria 6.5(d), 6.5(e), 6.6(g), 7.2(d), 7.2(e), 7.3 and 7.4(d) apply to VASPs.

15.11 Countries should rapidly provide the widest possible range of international cooperation in relation to money laundering, predicate offences, and terrorist financing relating to virtual assets, on the basis set out in Recommendations 37 to 40. In particular, supervisors of VASPs should have a legal basis for exchanging information with their foreign counterparts, regardless of the supervisors' nature or status and differences in the nomenclature or status of VASPs.[55]

---

51 For the purposes of applying R.16 to VASPs, all virtual asset transfers should be treated as cross-border transfers.

52 As defined in INR.16, paragraph 6, or the equivalent information in a virtual asset context.

53 The information can be submitted either directly or indirectly. It is not necessary for this information to be attached directly to virtual asset transfers.

54 *Appropriate authorities* means *appropriate competent authorities*, as referred to in paragraph 10 of INR.16.

55 Countries that have prohibited VASPs should fulfil this requirement by having in place a legal basis for permitting their relevant competent authorities (e.g. law enforcement agencies) to exchange information on issues related to VAs and VASPs with non-counterparts, as set out in paragraph 17 of INR.40.

RECOMMENDATION 16 WIRE TRANSFERS

Ordering financial institutions

16.1 Financial institutions should be required to ensure that all cross-border wire transfers of USD/EUR 1 000 or more are always accompanied by the following:

(a) Required and accurate[56] originator information:

(i) the name of the originator;

(ii) the originator account number where such an account is used to process the transaction or, in the absence of an account, a unique transaction reference number which permits traceability of the transaction; and

(iii) the originator's address, or national identity number, or customer identification number, or date and place of birth.

(b) Required beneficiary information:

(i) the name of the beneficiary; and

(ii) the beneficiary account number where such an account is used to process the transaction or, in the absence of an account, a unique transaction reference number which permits traceability of the transaction.

16.2 Where several individual cross-border wire transfers from a single originator are bundled in a batch file for transmission to beneficiaries, the batch file should contain required and accurate originator information, and full beneficiary information, that is fully traceable within the beneficiary country; and the financial institution should be required to include the originator's account number or unique transaction reference number.

16.3 If countries apply a *de minimis* threshold for the requirements of criterion 16.1, financial institutions should be required to ensure that all cross-border wire transfers below any applicable *de minimis* threshold (no higher than USD/EUR 1 000) are always accompanied by the following:

(a) Required originator information:

(i) the name of the originator; and

(ii) the originator account number where such an account is used to process the transaction or, in the absence of an account, a unique transaction reference number which permits traceability of the transaction.

56 "Accurate" is used to describe information that has been verified for accuracy; *i.e.* financial institutions should be required to verify the accuracy of the required originator information.

(b) Required beneficiary information:

(i) the name of the beneficiary; and

(ii) the beneficiary account number where such an account is used to process the transaction or, in the absence of an account, a unique transaction reference number which permits traceability of the transaction

16.4 The information mentioned in criterion 16.3 need not be verified for accuracy. However, the financial institution should be required to verify the information pertaining to its customer where there is a suspicion of ML/TF.

16.5 For domestic wire transfers[57], the ordering financial institution should be required to ensure that the information accompanying the wire transfer includes originator information as indicated for cross-border wire transfers, unless this information can be made available to the beneficiary financial institution and appropriate authorities by other means.

16.6 Where the information accompanying the domestic wire transfer can be made available to the beneficiary financial institution and appropriate authorities by other means, the ordering financial institution need only be required to include the account number or a unique transaction reference number, provided that this number or identifier will permit the transaction to be traced back to the originator or the beneficiary. The ordering financial institution should be required to make the information available within three business days of receiving the request either from the beneficiary financial institution or from appropriate competent authorities. Law enforcement authorities should be able to compel immediate production of such information.

16.7 The ordering financial institution should be required to maintain all originator and beneficiary information collected, in accordance with Recommendation 11.

16.8 The ordering financial institution should not be allowed to execute the wire transfer if it does not comply with the requirements specified above at criteria 16.1-16.7.

Intermediary financial institutions

16.9 For cross-border wire transfers, an intermediary financial institution should be required to ensure that all originator and beneficiary information that accompanies a wire transfer is retained with it.

16.10 Where technical limitations prevent the required originator or beneficiary information accompanying a cross-border wire transfer from remaining with a related domestic wire transfer, the intermediary financial institution should be required to keep a record, for at

57 This term also refers to any chain of wire transfers that takes place entirely within the borders of the European Union. It is further noted that the European internal market and corresponding legal framework is extended to the members of the European Economic Area.

least five years, of all the information received from the ordering financial institution or another intermediary financial institution.

16.11 Intermediary financial institutions should be required to take reasonable measures, which are consistent with straight-through processing, to identify cross-border wire transfers that lack required originator information or required beneficiary information.

16.12 Intermediary financial institutions should be required to have risk-based policies and procedures for determining: (a) when to execute, reject, or suspend a wire transfer lacking required originator or required beneficiary information; and (b) the appropriate follow-up action.

Beneficiary financial institutions

16.13 Beneficiary financial institutions should be required to take reasonable measures, which may include post-event monitoring or real-time monitoring where feasible, to identify cross-border wire transfers that lack required originator information or required beneficiary information.

16.14 For cross-border wire transfers of USD/EUR 1 000 or more[58], a beneficiary financial institution should be required to verify the identity of the beneficiary, if the identity has not been previously verified, and maintain this information in accordance with Recommendation 11.

16.15 Beneficiary financial institutions should be required to have risk-based policies and procedures for determining: (a) when to execute, reject, or suspend a wire transfer lacking required originator or required beneficiary information; and (b) the appropriate follow-up action.

Money or value transfer service operators

16.16 MVTS providers should be required to comply with all of the relevant requirements of Recommendation 16 in the countries in which they operate, directly or through their agents.

16.17 In the case of a MVTS provider that controls both the ordering and the beneficiary side of a wire transfer, the MVTS provider should be required to:

(a) take into account all the information from both the ordering and beneficiary sides in order to determine whether an STR has to be filed; and

(b) file an STR in any country affected by the suspicious wire transfer, and make relevant transaction information available to the Financial Intelligence Unit.

---

58 Countries may adopt a *de minimis* threshold for cross-border wire transfers (no higher than USD/EUR 1 000). Countries may, nevertheless, require that incoming cross-border wire transfers below the threshold contain required and accurate originator information.

Implementation of Targeted Financial Sanctions

16.18 Countries should ensure that, in the context of processing wire transfers, financial institutions take freezing action and comply with prohibitions from conducting transactions with designated persons and entities, as per obligations set out in the relevant UNSCRs relating to the prevention and suppression of terrorism and terrorist financing, such as UNSCRs 1267 and 1373, and their successor resolutions.

RECOMMENDATION 17 RELIANCE ON THIRD PARTIES

17.1 If financial institutions are permitted to rely on third-party financial institutions and DNFBPs to perform elements (a)-(c) of the CDD measures set out in Recommendation 10 (identification of the customer; identification of the beneficial owner; and understanding the nature of the business) or to introduce business, the ultimate responsibility for CDD measures should remain with the financial institution relying on the third party, which should be required to:

(a) obtain immediately the necessary information concerning elements (a)-(c) of the CDD measures set out in Recommendation 10;

(b) take steps to satisfy itself that copies of identification data and other relevant documentation relating to CDD requirements will be made available from the third party upon request without delay;

(c) satisfy itself that the third party is regulated, and supervised or monitored for, and has measures in place for compliance with, CDD and record-keeping requirements in line with Recommendations 10 and 11.

17.2 When determining in which countries the third party that meets the conditions can be based, countries should have regard to information available on the level of country risk.

17.3 For financial institutions that rely on a third party that is part of the same financial group, relevant competent authorities[59] may also consider that the requirements of the criteria above are met in the following circumstances:

(a) the group applies CDD and record-keeping requirements, in line with Recommendations 10 to 12, and programmes against money laundering and terrorist financing, in accordance with Recommendation 18;

(b) the implementation of those CDD and record-keeping requirements and AML/CFT programmes is supervised at a group level by a competent authority; and

(c) any higher country risk is adequately mitigated by the group's AML/CFT policies.

[59] The term *relevant competent authorities* in Recommendation 17 means (i) the home authority, that should be involved for the understanding of group policies and controls at group-wide level, and (ii) the host authorities, that should be involved for the branches/subsidiaries.

RECOMMENDATION 18 INTERNAL CONTROLS AND FOREIGN BRANCHES AND SUBSIDIARIES

18.1 Financial institutions should be required to implement programmes against ML/TF, which have regard to the ML/TF risks and the size of the business, and which include the following internal policies, procedures and controls:

(a) compliance management arrangements (including the appointment of a compliance officer at the management level);

(b) screening procedures to ensure high standards when hiring employees;

(c) an ongoing employee training programme; and

(d) an independent audit function to test the system.

18.2 Financial groups should be required to implement group-wide programmes against ML/TF, which should be applicable, and appropriate to, all branches and majority-owned subsidiaries of the financial group. These should include the measures set out in criterion 18.1 and also:

(a) policies and procedures for sharing information required for the purposes of CDD and ML/TF risk management;

(b) the provision, at group-level compliance, audit, and/or AML/CFT functions, of customer, account, and transaction information from branches and subsidiaries when necessary for AML/CFT purposes. This should include information and analysis of transactions or activities which appear unusual (if such analysis was done)[60]. Similarly branches and subsidiaries should receive such information from these group-level functions when relevant and appropriate to risk management[61]; and

(c) adequate safeguards on the confidentiality and use of information exchanged, including safeguards to prevent tipping-off.

18.3 Financial institutions should be required to ensure that their foreign branches and majority-owned subsidiaries apply AML/CFT measures consistent with the home country requirements, where the minimum AML/CFT requirements of the host country are less strict than those of the home country, to the extent that host country laws and regulations permit.

If the host country does not permit the proper implementation of AML/CFT measures consistent with the home country requirements, financial groups should be required to

60 This could include an STR, its underlying information, or the fact than an STR has been submitted.

61 The scope and extent of the information to be shared in accordance with this criterion may be determined by countries, based on the sensitivity of the information, and its relevance to AML/CFT risk management.

apply appropriate additional measures to manage the ML/TF risks, and inform their home supervisors.

RECOMMENDATION 19 HIGHER RISK COUNTRIES

19.1 Financial institutions should be required to apply enhanced due diligence, proportionate to the risks, to business relationships and transactions with natural and legal persons (including financial institutions) from countries for which this is called for by the FATF.

19.2 Countries should be able to apply countermeasures proportionate to the risks: (a) when called upon to do so by the FATF; and (b) independently of any call by the FATF to do so.

19.3 Countries should have measures in place to ensure that financial institutions are advised of concerns about weaknesses in the AML/CFT systems of other countries.

RECOMMENDATION 20 REPORTING OF SUSPICIOUS TRANSACTIONS[62]

20.1 If a financial institution suspects or has reasonable grounds to suspect that funds are the proceeds of a criminal activity[63], or are related to TF, it should be required to report promptly its suspicions to the Financial Intelligence Unit.

20.2 Financial institutions should be required to report all suspicious transactions, including attempted transactions, regardless of the amount of the transaction.

62 The requirement that financial institutions should report suspicious transactions should be set out in law.

63 "Criminal activity" refers to: (a) all criminal acts that would constitute a predicate offence for ML in the country; or (b) at a minimum, to those offences that would constitute a predicate offence, as required by Recommendation 3.

RECOMMENDATION 21 TIPPING-OFF AND CONFIDENTIALITY

21.1 Financial institutions and their directors, officers and employees should be protected by law from both criminal and civil liability for breach of any restriction on disclosure of information imposed by contract or by any legislative, regulatory or administrative provision, if they report their suspicions in good faith to the FIU. This protection should be available even if they did not know precisely what the underlying criminal activity was, and regardless of whether illegal activity actually occurred.

21.2 Financial institutions and their directors, officers and employees should be prohibited by law from disclosing the fact that an STR or related information is being filed with the Financial Intelligence Unit. These provisions are not intended to inhibit information sharing under Recommendation 18.

RECOMMENDATION 22 DESIGNATED NON-FINANCIAL BUSINESSES AND PROFESSIONS (DNFBPS): CUSTOMER DUE DILIGENCE

22.1 DNFBPs should be required to comply with the CDD requirements set out in Recommendation 10 in the following situations:

(a) Casinos – when customers engage in financial transactions[64] equal to or above USD/EUR 3 000.

(b) Real estate agents – when they are involved in transactions for a client concerning the buying and selling of real estate[65].

(c) Dealers in precious metals and dealers in precious stones – when they engage in any cash transaction with a customer equal to or above USD/EUR 15,000.

(d) Lawyers, notaries, other independent legal professionals and accountants when they prepare for, or carry out, transactions for their client concerning the following activities:

- buying and selling of real estate;
- managing of client money, securities or other assets;
- management of bank, savings or securities accounts;
- organisation of contributions for the creation, operation or management of companies;
- creating, operating or management of legal persons or arrangements, and buying and selling of business entities.

(e) Trust and company service providers when they prepare for or carry out transactions for a client concerning the following activities:

- acting as a formation agent of legal persons;
- acting as (or arranging for another person to act as) a director or secretary of a company, a partner of a partnership, or a similar position in relation to other legal persons;
- providing a registered office, business address or accommodation, correspondence or administrative address for a company, a partnership or any other legal person or arrangement;

64 Conducting customer identification at the entry to a casino could be, but is not necessarily, sufficient. Countries must require casinos to ensure that they are able to link CDD information for a particular customer to the transactions that the customer conducts in the casino. "Financial transactions" does not refer to gambling transactions that involve only casino chips or tokens.

65 This means that real estate agents should comply with the requirements set out in Recommendation 10 with respect to both the purchasers and the vendors of the property.

- acting as (or arranging for another person to act as) a trustee of an express trust or performing the equivalent function for another form of legal arrangement;
- acting as (or arranging for another person to act as) a nominee shareholder for another person.

22.2 In the situations set out in Criterion 22.1, DNFBPs should be required to comply with the record-keeping requirements set out in Recommendation 11.

22.3 In the situations set out in Criterion 22.1, DNFBPs should be required to comply with the PEPs requirements set out in Recommendation 12.

22.4 In the situations set out in Criterion 22.1, DNFBPs should be required to comply with the new technologies requirements set out in Recommendation 15.

22.5 In the situations set out in Criterion 22.1, DNFBPs should be required to comply with the reliance on third-parties requirements set out in Recommendation 17.

RECOMMENDATION 23 DNFBPS: OTHER MEASURES

23.1 The requirements to report suspicious transactions set out in Recommendation 20 should apply to all DNFBPs subject to the following qualifications:

(a) Lawyers, notaries, other independent legal professionals and accountants [66] – when, on behalf of, or for, a client, they engage in a financial transaction in relation to the activities described in criterion 22.1(d)[67].

(b) Dealers in precious metals or stones – when they engage in a cash transaction with a customer equal to or above USD/EUR 15,000.

(c) Trust and company service providers – when, on behalf or for a client, they engage in a transaction in relation to the activities described in criterion 22.1(e).

23.2 In the situations set out in criterion 23.1, DNFBPs should be required to comply with the internal controls requirements set out in Recommendation 18.

23.3 In the situations set out in criterion 23.1, DNFBPs should be required to comply with the higher-risk countries requirements set out in Recommendation 19.

23.4 In the situations set out in criterion 23.1, DNFBPs should be required to comply with the tipping-off and confidentiality requirements set out in Recommendation 21[68].

---

66 Lawyers, notaries, other independent legal professionals, and accountants acting as independent legal professionals, are not required to report suspicious transactions if the relevant information was obtained in circumstances where they are subject to professional secrecy or legal professional privilege. It is for each country to determine the matters that would fall under legal professional privilege or professional secrecy. This would normally cover information lawyers, notaries or other independent legal professionals receive from or obtain through one of their clients: (a) in the course of ascertaining the legal position of their client, or (b) in performing their task of defending or representing that client in, or concerning judicial, administrative, arbitration or mediation proceedings.

67 Where countries allow lawyers, notaries, other independent legal professionals and accountants to send their STRs to their appropriate self-regulatory bodies (SRBs), there should be forms of co-operation between these bodies and the FIU.

68 Where lawyers, notaries, other independent legal professionals and accountants acting as independent legal professionals seek to dissuade a client from engaging in illegal activity, this does not amount to tipping-off.

RECOMMENDATION 24 — TRANSPARENCY AND BENEFICIAL OWNERSHIP OF LEGAL PERSONS[69]

24.1 Countries should have mechanisms that identify and describe: (a) the different types, forms and basic features of legal persons in the country; and (b) the processes for the creation of those legal persons, and for obtaining and recording of basic and beneficial ownership information. This information should be publicly available.

24.2 Countries should assess the ML/TF risks associated with all types of legal person created in the country.

Basic Information

24.3 Countries should require that all companies created in a country are registered in a company registry, which should record the company name, proof of incorporation, legal form and status, the address of the registered office, basic regulating powers, and a list of directors. This information should be publicly available.

24.4 Companies should be required to maintain the information set out in criterion 24.3, and also to maintain a register of their shareholders or members[70], containing the number of shares held by each shareholder and categories of shares (including the nature of the associated voting rights). This information should be maintained within the country at a location notified to the company registry[71].

24.5 Countries should have mechanisms that ensure that the information referred to in criteria 24.3 and 24.4 is accurate and updated on a timely basis.

---

69 Assessors should consider the application of all the criteria to all relevant types of legal persons. The manner in which these requirements are addressed may vary according to the type of legal person involved:

1. *Companies* - The measures required by Recommendation 24 are set out with specific reference to companies.
2. *Foundations, Anstalt, and limited liability partnerships* - countries should take similar measures and impose similar requirements as those required for companies, taking into account their different forms and structures.
3. *Other types of legal persons* - countries should take into account the different forms and structures of those other legal persons, and the levels of ML/TF risks associated with each type of legal person, with a view to achieving appropriate levels of transparency. At a minimum, all legal persons should ensure that similar types of basic information are recorded.

70 The register of shareholders and members can be recorded by the company itself or by a third person under the company's responsibility.

71 In cases in which the company or company registry holds beneficial ownership information within the country, the register of shareholders and members need not be in the country, if the company can provide this information promptly on request.

Beneficial Ownership Information

24.6 Countries should use one or more of the following mechanisms to ensure that information on the beneficial ownership of a company is obtained by that company and available at a specified location in their country; or can be otherwise determined in a timely manner by a competent authority:

(a) requiring companies or company registries to obtain and hold up-to-date information on the companies' beneficial ownership;

(b) requiring companies to take reasonable measures to obtain and hold up-to-date information on the companies' beneficial ownership;

(c) using existing information, including: (i) information obtained by financial institutions and/or DNFBPs, in accordance with Recommendations 10 and 22; (ii) information held by other competent authorities on the legal and beneficial ownership of companies; (iii) information held by the company as required in criterion 24.3 above; and (iv) available information on companies listed on a stock exchange, where disclosure requirements ensure adequate transparency of beneficial ownership.

24.7 Countries should require that the beneficial ownership information is accurate and as up-to-date as possible.

24.8 Countries should ensure that companies co-operate with competent authorities to the fullest extent possible in determining the beneficial owner, by:

(a) requiring that one or more natural persons resident in the country is authorised by the company[72], and accountable to competent authorities, for providing all basic information and available beneficial ownership information, and giving further assistance to the authorities; and/or

(b) requiring that a DNFBP in the country is authorised by the company, and accountable to competent authorities, for providing all basic information and available beneficial ownership information, and giving further assistance to the authorities; and/or

(c) taking other comparable measures, specifically identified by the country.

24.9 All the persons, authorities and entities mentioned above, and the company itself (or its administrators, liquidators or other persons involved in the dissolution of the company), should be required to maintain the information and records referred to for at least five years after the date on which the company is dissolved or otherwise ceases to exist, or five years after the date on which the company ceases to be a customer of the professional intermediary or the financial institution.

[72] Members of the company's board or senior management may not require specific authorisation by the company.

Other Requirements

24.10 Competent authorities, and in particular law enforcement authorities, should have all the powers necessary to obtain timely access to the basic and beneficial ownership information held by the relevant parties.

24.11 Countries that have legal persons able to issue bearer shares or bearer share warrants should apply one or more of the following mechanisms to ensure that they are not misused for money laundering or terrorist financing:

(a) prohibiting bearer shares and share warrants; or

(b) converting bearer shares and share warrants into registered shares or share warrants (for example through dematerialisation); or

(c) immobilising bearer shares and share warrants by requiring them to be held with a regulated financial institution or professional intermediary; or

(d) requiring shareholders with a controlling interest to notify the company, and the company to record their identity; or

(e) using other mechanisms identified by the country.

24.12 Countries that have legal persons able to have nominee shares and nominee directors should apply one or more of the following mechanisms to ensure they are not misused:

(a) requiring nominee shareholders and directors to disclose the identity of their nominator to the company and to any relevant registry, and for this information to be included in the relevant register;

(b) requiring nominee shareholders and directors to be licensed, for their nominee status to be recorded in company registries, and for them to maintain information identifying their nominator, and make this information available to the competent authorities upon request; or

(c) using other mechanisms identified by the country.

24.13 There should be liability and proportionate and dissuasive sanctions, as appropriate for any legal or natural person that fails to comply with the requirements.

24.14 Countries should rapidly provide international co-operation in relation to basic and beneficial ownership information, on the basis set out in Recommendations 37 and 40. This should include:

(a) facilitating access by foreign competent authorities to basic information held by company registries;

(b) exchanging information on shareholders; and

(c) using their competent authorities' investigative powers, in accordance with their domestic law, to obtain beneficial ownership information on behalf of foreign counterparts.

24.15 Countries should monitor the quality of assistance they receive from other countries in response to requests for basic and beneficial ownership information or requests for assistance in locating beneficial owners residing abroad.

RECOMMENDATION 25 TRANSPARENCY AND BENEFICIAL OWNERSHIP OF LEGAL ARRANGEMENTS[73]

25.1 Countries should require:

(a) trustees of any express trust governed under their law[74] to obtain and hold adequate, accurate, and current information on the identity of the settlor, the trustee(s), the protector (if any), the beneficiaries or class of beneficiaries, and any other natural person exercising ultimate effective control over the trust;

(b) trustees of any trust governed under their law to hold basic information on other regulated agents of, and service providers to, the trust, including investment advisors or managers, accountants, and tax advisors; and

(c) professional trustees to maintain this information for at least five years after their involvement with the trust ceases.

25.2 Countries should require that any information held pursuant to this Recommendation is kept accurate and as up to date as possible, and is updated on a timely basis.

25.3 All countries should take measures to ensure that trustees disclose their status to financial institutions and DNFBPs when forming a business relationship or carrying out an occasional transaction above the threshold.

25.4 Trustees should not be prevented by law or enforceable means from providing competent authorities with any information relating to the trust[75]; or from providing financial institutions and DNFBPs, upon request, with information on the beneficial ownership and the assets of the trust to be held or managed under the terms of the business relationship.

---

73 The measures required by Recommendation 25 are set out with specific reference to trusts. This should be understood as referring to express trusts (as defined in the glossary). In relation to other types of legal arrangement with a similar structure or function, countries should take similar measures to those required for trusts, with a view to achieving similar levels of transparency. At a minimum, countries should ensure that information similar to that specified in respect of trusts should be recorded and kept accurate and current, and that such information is accessible in a timely way by competent authorities. When considering examples provided in the Glossary definition of legal arrangement, assessors are reminded that the examples provided should not be considered definitive. Assessors should refer to the Glossary definition of trust and trustee which references Article 2 of the Hague Convention on the law applicable to trusts and their recognition when determining whether a legal arrangement has a similar structure or function to an express trust and therefore falls within the scope of R.25, regardless of whether the country denominates the legal arrangement using the same terminology. If a country does not apply the relevant obligations of R.25 on trustees (or those performing a similar function in relation to other legal arrangements), assessors should confirm whether such exemptions are consistent with criterion 1.6.

74 Countries are not required to give legal recognition to trusts. Countries need not include the requirements of Criteria 25.1; 25.2; 25.3; and 25.4 in legislation, provided that appropriate obligations to such effect exist for trustees (e.g. through common law or case law).

75 Domestic competent authorities or the relevant competent authorities of another country pursuant to an appropriate international cooperation request.

25.5 Competent authorities, and in particular law enforcement authorities, should have all the powers necessary to be able to obtain timely access to information held by trustees, and other parties (in particular information held by financial institutions and DNFBPs), on the beneficial ownership and control of the trust, including: (a) the beneficial ownership; (b) the residence of the trustee; and (c) any assets held or managed by the financial institution or DNFBP, in relation to any trustees with which they have a business relationship, or for which they undertake an occasional transaction.

25.6 Countries should rapidly provide international co-operation in relation to information, including beneficial ownership information, on trusts and other legal arrangements, on the basis set out in Recommendations 37 and 40. This should include:

(a) facilitating access by foreign competent authorities to basic information held by registries or other domestic authorities;

(b) exchanging domestically available information on the trusts or other legal arrangement; and

(c) using their competent authorities' investigative powers, in accordance with domestic law, in order to obtain beneficial ownership information on behalf of foreign counterparts.

25.7 Countries should ensure that trustees are either (a) legally liable for any failure to perform the duties relevant to meeting their obligations; or (b) that there are proportionate and dissuasive sanctions, whether criminal, civil or administrative, for failing to comply[76].

25.8 Countries should ensure that there are proportionate and dissuasive sanctions, whether criminal, civil or administrative, for failing to grant to competent authorities timely access to information regarding the trust referred to in criterion 25.1.

[76] This does not affect the requirements for proportionate and dissuasive sanctions for failure to comply with requirements elsewhere in the Recommendations.

RECOMMENDATION 26 REGULATION AND SUPERVISION OF FINANCIAL INSTITUTIONS

26.1 Countries should designate one or more supervisors that have responsibility for regulating and supervising (or monitoring) financial institutions' compliance with the AML/CFT requirements.

Market Entry

26.2 Core Principles financial institutions should be required to be licensed. Other financial institutions, including those providing a money or value transfer service or a money or currency changing service, should be licensed or registered. Countries should not approve the establishment, or continued operation, of shell banks.

26.3 Competent authorities or financial supervisors should take the necessary legal or regulatory measures to prevent criminals or their associates from holding (or being the beneficial owner of) a significant or controlling interest, or holding a management function, in a financial institution.

Risk-based approach to supervision and monitoring

26.4 Financial institutions should be subject to:

(a) *for core principles institutions* - regulation and supervision in line with the core principles[77], where relevant for AML/CFT, including the application of consolidated group supervision for AML/CFT purposes.

(b) *for all other financial institutions* - regulation and supervision or monitoring, having regard to the ML/TF risks in that sector. At a minimum, for *financial institutions providing a money or value transfer service, or a money or currency changing service* - systems for monitoring and ensuring compliance with national AML/CFT requirements.

26.5 The frequency and intensity of on-site and off-site AML/CFT supervision of financial institutions or groups should be determined on the basis of:

(a) the ML/TF risks and the policies, internal controls and procedures associated with the institution or group, as identified by the supervisor's assessment of the institution's or group's risk profile;

(b) the ML/TF risks present in the country; and

77 The Core Principles which are relevant to AML/CFT include: Basel Committee on Banking Supervision (BCBS) Principles 1-3, 5-9, 11-15, 26, and 29; International Association of Insurance Supervisors (IAIS) Principles 1, 3-11, 18, 21-23, and 25; and International Organization of Securities Commission (IOSCO) Principles 24, 28, 29 and 31; and Responsibilities A, B, C and D. Assessors may refer to existing assessments of the country's compliance with these Core Principles, where available.

(c) the characteristics of the financial institutions or groups, in particular the diversity and number of financial institutions and the degree of discretion allowed to them under the risk-based approach.

26.6 The supervisor should review the assessment of the ML/TF risk profile of a financial institution or group (including the risks of non-compliance) periodically, and when there are major events or developments in the management and operations of the financial institution or group.

RECOMMENDATION 27 POWERS OF SUPERVISORS

27.1 Supervisors should have powers to supervise or monitor and ensure compliance by financial institutions with AML/CFT requirements.

27.2 Supervisors should have the authority to conduct inspections of financial institutions.

27.3 Supervisors should be authorised to compel[78] production of any information relevant to monitoring compliance with the AML/CFT requirements.

27.4 Supervisors should be authorised to impose sanctions in line with Recommendation 35 for failure to comply with the AML/CFT requirements. This should include powers to impose a range of disciplinary and financial sanctions, including the power to withdraw, restrict or suspend the financial institution's licence.

78 The supervisor's power to compel production of or to obtain access for supervisory purposes should not be predicated on the need to require a court order.

RECOMMENDATION 28 REGULATION AND SUPERVISION OF DNFBPS

Casinos

28.1 Countries should ensure that casinos are subject to AML/CFT regulation and supervision. At a minimum:

(a) Countries should require casinos to be licensed.

(b) Competent authorities should take the necessary legal or regulatory measures to prevent criminals or their associates from holding (or being the beneficial owner of) a significant or controlling interest, or holding a management function, or being an operator of a casino.

(c) Casinos should be supervised for compliance with AML/CFT requirements.

DNFBPs other than casinos

28.2 There should be a designated competent authority or SRB responsible for monitoring and ensuring compliance of DNFBPs with AML/CFT requirements.

28.3 Countries should ensure that the other categories of DNFBPs are subject to systems for monitoring compliance with AML/CFT requirements.

28.4 The designated competent authority or self-regulatory body (SRB) should:

(a) have adequate powers to perform its functions, including powers to monitor compliance;

(b) take the necessary measures to prevent criminals or their associates from being professionally accredited, or holding (or being the beneficial owner of) a significant or controlling interest, or holding a management function in a DNFBP; and

(c) have sanctions available in line with Recommendation 35 to deal with failure to comply with AML/CFT requirements.

All DNFBPs

28.5 Supervision of DNFBPs should be performed on a risk-sensitive basis, including:

(a) determining the frequency and intensity of AML/CFT supervision of DNFBPs on the basis of their understanding of the ML/TF risks, taking into consideration the characteristics of the DNFBPs, in particular their diversity and number; and

(b) taking into account the ML/TF risk profile of those DNFBPs, and the degree of discretion allowed to them under the risk-based approach, when assessing the adequacy of the AML/CFT internal controls, policies and procedures of DNFBPs.

RECOMMENDATION 29 FINANCIAL INTELLIGENCE UNITS (FIU)

29.1 Countries should establish an FIU with responsibility for acting as a national centre for receipt and analysis of suspicious transaction reports and other information relevant to money laundering, associated predicate offences and terrorist financing; and for the dissemination of the results of that analysis.[79]

29.2 The FIU should serve as the central agency for the receipt of disclosures filed by reporting entities, including:

(a) Suspicious transaction reports filed by reporting entities as required by Recommendation 20 and 23; and

(b) any other information as required by national legislation (such as cash transaction reports, wire transfers reports and other threshold-based declarations/disclosures).

29.3 The FIU should[80]:

(a) in addition to the information that entities report to the FIU, be able to obtain and use additional information from reporting entities, as needed to perform its analysis properly; and

(b) have access to the widest possible range[81] of financial, administrative and law enforcement information that it requires to properly undertake its functions.

29.4 The FIU should conduct:

(a) operational analysis, which uses available and obtainable information to identify specific targets, to follow the trail of particular activities or transactions, and to determine links between those targets and possible proceeds of crime, money laundering, predicate offences and terrorist financing; and

(b) strategic analysis, which uses available and obtainable information, including data that may be provided by other competent authorities, to identify money laundering and terrorist financing related trends and patterns.

29.5 The FIU should be able to disseminate, spontaneously and upon request, information and the results of its analysis to relevant competent authorities, and should use dedicated, secure and protected channels for the dissemination.

---

79 Considering that there are different FIU models, Recommendation 29 does not prejudge a country's choice for a particular model, and applies equally to all of them.

80 In the context of its analysis function, an FIU should be able to obtain from any reporting entity additional information relating to a suspicion of ML/TF. This does not include indiscriminate requests for information to reporting entities in the context of the FIU's analysis (e.g., "fishing expeditions").

81 This should include information from open or public sources, as well as relevant information collected and/or maintained by, or on behalf of, other authorities and, where appropriate commercially held data.

29.6 The FIU should protect information by:

(a) having rules in place governing the security and confidentiality of information, including procedures for handling, storage, dissemination, and protection of, and access to, information;

(b) ensuring that FIU staff members have the necessary security clearance levels and understanding of their responsibilities in handling and disseminating sensitive and confidential information; and

(c) ensuring that there is limited access to its facilities and information, including information technology systems.

29.7 The FIU should be operationally independent and autonomous, by:

(a) having the authority and capacity to carry out its functions freely, including the autonomous decision to analyse, request and/or forward or disseminate specific information;

(b) being able to make arrangements or engage independently with other domestic competent authorities or foreign counterparts on the exchange of information;

(c) when it is located within the existing structure of another authority, having distinct core functions from those of the other authority; and

(d) being able to obtain and deploy the resources needed to carry out its functions, on an individual or routine basis, free from any undue political, government or industry influence or interference, which might compromise its operational independence.

29.8 Where a country has created an FIU and is not an Egmont Group member, the FIU should apply for membership in the Egmont Group. The FIU should submit an unconditional application for membership to the Egmont Group and fully engage itself in the application process.

RECOMMENDATION 30 RESPONSIBILITIES OF LAW ENFORCEMENT AND INVESTIGATIVE AUTHORITIES

30.1 There should be designated law enforcement authorities that have responsibility for ensuring that money laundering, associated predicate offences and terrorist financing offences are properly investigated, within the framework of national AML/CFT policies.

30.2 Law enforcement investigators of predicate offences should either be authorised to pursue the investigation of any related ML/TF offences during a parallel financial investigation[82], or be able to refer the case to another agency to follow up with such investigations, regardless of where the predicate offence occurred.

30.3 There should be one or more designated competent authorities to expeditiously identify, trace, and initiate freezing and seizing of property that is, or may become, subject to confiscation, or is suspected of being proceeds of crime.

30.4 Countries should ensure that Recommendation 30 also applies to those competent authorities, which are not law enforcement authorities, *per se*, but which have the responsibility for pursuing financial investigations of predicate offences, to the extent that these competent authorities are exercising functions covered under Recommendation 30.

30.5 If anti-corruption enforcement authorities are designated to investigate ML/TF offences arising from, or related to, corruption offences under Recommendation 30, they should also have sufficient powers to identify, trace, and initiate freezing and seizing of assets.

---

82 A '*parallel financial investigation*' refers to conducting a financial investigation alongside, or in the context of, a (traditional) criminal investigation into money laundering, terrorist financing and/or predicate offence(s).

A '*financial investigation*' means an enquiry into the financial affairs related to a criminal activity, with a view to: (i) identifying the extent of criminal networks and/or the scale of criminality; (ii) identifying and tracing the proceeds of crime, terrorist funds or any other assets that are, or may become, subject to confiscation; and (iii) developing evidence which can be used in criminal proceedings.

RECOMMENDATION 31 POWERS OF LAW ENFORCEMENT AND INVESTIGATIVE AUTHORITIES

31.1 Competent authorities conducting investigations of money laundering, associated predicate offences and terrorist financing should be able to obtain access to all necessary documents and information for use in those investigations, and in prosecutions and related actions. This should include powers to use compulsory measures for:

(a) the production of records held by financial institutions, DNFBPs and other natural or legal persons;

(b) the search of persons and premises;

(c) taking witness statements; and

(d) seizing and obtaining evidence.

31.2 Competent authorities conducting investigations should be able to use a wide range of investigative techniques for the investigation of money laundering, associated predicate offences and terrorist financing, including:

(a) undercover operations;

(b) intercepting communications;

(c) accessing computer systems; and

(d) controlled delivery.

31.3 Countries should have mechanisms in place:

(a) to identify, in a timely manner, whether natural or legal persons hold or control accounts; and

(b) to ensure that competent authorities have a process to identify assets without prior notification to the owner.

31.4 Competent authorities conducting investigations of money laundering, associated predicate offences and terrorist financing should be able to ask for all relevant information held by the FIU.

RECOMMENDATION 32 CASH COURIERS

Note to Assessors:
Recommendation 32 may be implemented on a supra-national basis by a supra-national jurisdiction, such that only movements that cross the external borders of the supra-national jurisdiction are considered to be cross-border for the purposes of Recommendation 32. Such arrangements are assessed on a supra-national basis, on the basis set out in Annex I.

32.1 Countries should implement a declaration system or a disclosure system for incoming and outgoing cross-border transportation of currency and bearer negotiable instruments (BNIs). Countries should ensure that a declaration or disclosure is required for all physical cross-border transportation, whether by travellers or through mail and cargo, but may use different systems for different modes of transportation.

32.2 In a declaration system, all persons making a physical cross-border transportation of currency or BNIs, which are of a value exceeding a pre-set, maximum threshold of USD/EUR 15 000, should be required to submit a truthful declaration to the designated competent authorities. Countries may opt from among the following three different types of declaration system:

(a) A written declaration system for all travellers;

(b) A written declaration system for all travellers carrying amounts above a threshold; and/or

(c) An oral declaration system for all travellers.

32.3 In a disclosure system, travellers should be required to give a truthful answer and provide the authorities with appropriate information upon request, but are not required to make an upfront written or oral declaration.

32.4 Upon discovery of a false declaration or disclosure of currency or BNIs or a failure to declare or disclose them, designated competent authorities should have the authority to request and obtain further information from the carrier with regard to the origin of the currency or BNIs, and their intended use.

32.5 Persons who make a false declaration or disclosure should be subject to proportionate and dissuasive sanctions, whether criminal, civil or administrative.

32.6 Information obtained through the declaration/disclosure process should be available to the FIU either through: (a) a system whereby the FIU is notified about suspicious cross-border transportation incidents; or (b) by making the declaration/disclosure information directly available to the FIU in some other way.

32.7 At the domestic level, countries should ensure that there is adequate co-ordination among customs, immigration and other related authorities on issues related to the implementation of Recommendation 32.

32.8 Competent authorities should be able to stop or restrain currency or BNIs for a reasonable time in order to ascertain whether evidence of ML/TF may be found in cases:

(a) where there is a suspicion of ML/TF or predicate offences; or

(b) where there is a false declaration or false disclosure.

32.9 Countries should ensure that the declaration/disclosure system allows for international co-operation and assistance, in accordance with Recommendations 36 to 40. To facilitate such co-operation, information[83] shall be retained when:

(a) a declaration or disclosure which exceeds the prescribed threshold is made; or

(b) there is a false declaration or false disclosure; or

(c) there is a suspicion of ML/TF.

32.10 Countries should ensure that strict safeguards exist to ensure proper use of information collected through the declaration/disclosure systems, without restricting either: (i) trade payments between countries for goods and services; or (ii) the freedom of capital movements, in any way.

32.11 Persons who are carrying out a physical cross-border transportation of currency or BNIs that are related to ML/TF or predicate offences should be subject to: (a) proportionate and dissuasive sanctions, whether criminal, civil or administrative; and (b) measures consistent with Recommendation 4 which would enable the confiscation of such currency or BNIs.

83 At a minimum, the information should set out (i) the amount of currency or BNIs declared, disclosed or otherwise detected, and (ii) the identification data of the bearer(s).

RECOMMENDATION 33 STATISTICS

33.1 Countries should maintain comprehensive statistics on matters relevant to the effectiveness and efficiency of their AML/CFT systems.[84] This should include keeping statistics on:

(a) STRs, received and disseminated;

(b) ML/TF investigations, prosecutions and convictions;

(c) Property frozen; seized and confiscated; and

(d) Mutual legal assistance or other international requests for co-operation made and received.

[84] For purposes of technical compliance, the assessment should be limited to the four areas listed below.

RECOMMENDATION 34 GUIDANCE AND FEEDBACK

34.1 Competent authorities, supervisors, and SRBs should establish guidelines and provide feedback, which will assist financial institutions and DNFBPs in applying national AML/CFT measures, and in particular, in detecting and reporting suspicious transactions.

RECOMMENDATION 35 SANCTIONS

35.1 Countries should ensure that there is a range of proportionate and dissuasive sanctions, whether criminal, civil or administrative, available to deal with natural or legal persons that fail to comply with the AML/CFT requirements of Recommendations 6, and 8 to 23.[85]

35.2 Sanctions should be applicable not only to financial institutions and DNFBPs but also to their directors and senior management.

[85] The sanctions should be directly or indirectly applicable for a failure to comply. They need not be in the same document that imposes or underpins the requirement, and can be in another document, provided there are clear links between the requirement and the available sanctions.

RECOMMENDATION 36 INTERNATIONAL INSTRUMENTS

36.1 Countries should become a party to the Vienna Convention, the Palermo Convention, the United Nations Convention against Corruption (the Merida Convention) and the Terrorist Financing Convention.

36.2 Countries should fully implement[86] the Vienna Convention, the Palermo Convention, the Merida Convention and the Terrorist Financing Convention.

86 The relevant articles are: the Vienna Convention (Articles 3-11, 15, 17 and 19), the Palermo Convention (Articles 5-7, 10-16, 18-20, 24-27, 29-31, & 34), the Merida Convention (Articles 14-17, 23-24, 26-31, 38, 40, 43-44, 46, 48, 50-55, 57-58), and the Terrorist Financing Convention (Articles 2-18).

RECOMMENDATION 37 MUTUAL LEGAL ASSISTANCE

37.1 Countries should have a legal basis that allows them to rapidly provide the widest possible range of mutual legal assistance in relation to money laundering, associated predicate offences and terrorist financing investigations, prosecutions and related proceedings.

37.2 Countries should use a central authority, or another established official mechanism, for the transmission and execution of requests. There should be clear processes for the timely prioritisation and execution of mutual legal assistance requests. To monitor progress on requests, a case management system should be maintained.

37.3 Mutual legal assistance should not be prohibited or made subject to unreasonable or unduly restrictive conditions.

37.4 Countries should not refuse a request for mutual legal assistance:

(a) on the sole ground that the offence is also considered to involve fiscal matters; or

(b) on the grounds of secrecy or confidentiality requirements on financial institutions or DNFBPs, except where the relevant information that is sought is held in circumstances where legal professional privilege or legal professional secrecy applies.

37.5 Countries should maintain the confidentiality of mutual legal assistance requests that they receive and the information contained in them, subject to fundamental principles of domestic law, in order to protect the integrity of the investigation or inquiry.

37.6 Where mutual legal assistance requests do not involve coercive actions, countries should not make dual criminality a condition for rendering assistance.

37.7 Where dual criminality is required for mutual legal assistance, that requirement should be deemed to be satisfied regardless of whether both countries place the offence within the same category of offence, or denominate the offence by the same terminology, provided that both countries criminalise the conduct underlying the offence.

37.8 Powers and investigative techniques that are required under Recommendation 31 or otherwise available to domestic competent authorities should also be available for use in response to requests for mutual legal assistance, and, if consistent with the domestic framework, in response to a direct request from foreign judicial or law enforcement authorities to domestic counterparts. These should include:

(a) all of the specific powers required under Recommendation31 relating to the production, search and seizure of information, documents, or evidence (including financial records) from financial institutions, or other natural or legal persons, and the taking of witness statements; and

(b) a broad range of other powers and investigative techniques.

RECOMMENDATION 38 MUTUAL LEGAL ASSISTANCE: FREEZING AND CONFISCATION

38.1 Countries should have the authority to take expeditious action in response to requests by foreign countries to identify, freeze, seize, or confiscate:

(a) laundered property from,

(b) proceeds from,

(c) instrumentalities used in, or

(d) instrumentalities intended for use in,

money laundering, predicate offences, or terrorist financing; or

(e) property of corresponding value.

38.2 Countries should have the authority to provide assistance to requests for co-operation made on the basis of non-conviction based confiscation proceedings and related provisional measures, at a minimum in circumstances when a perpetrator is unavailable by reason of death, flight, absence, or the perpetrator is unknown, unless this is inconsistent with fundamental principles of domestic law.

38.3 Countries should have: (a) arrangements for co-ordinating seizure and confiscation actions with other countries; and (b) mechanisms for managing, and when necessary disposing of, property frozen, seized or confiscated.

38.4 Countries should be able to share confiscated property with other countries, in particular when confiscation is directly or indirectly a result of co-ordinated law enforcement actions.

RECOMMENDATION 39 EXTRADITION

39.1 Countries should be able to execute extradition requests in relation to ML/TF without undue delay. In particular, countries should:

(a) ensure ML and TF are extraditable offences;

(b) ensure that they have a case management system, and clear processes for the timely execution of extradition requests including prioritisation where appropriate; and

(c) not place unreasonable or unduly restrictive conditions on the execution of requests.

39.2 Countries should either:

(a) extradite their own nationals; or

(b) where they do not do so solely on the grounds of nationality, should, at the request of the country seeking extradition, submit the case without undue delay to its competent authorities for the purpose of prosecution of the offences set forth in the request.

39.3 Where dual criminality is required for extradition, that requirement should be deemed to be satisfied regardless of whether both countries place the offence within the same category of offence, or denominate the offence by the same terminology, provided that both countries criminalise the conduct underlying the offence.

39.4 Consistent with fundamental principles of domestic law, countries should have simplified extradition mechanisms[87] in place.

[87] Such as allowing direct transmission of requests for provisional arrests between appropriate authorities, extraditing persons based only on warrants of arrests or judgments, or introducing a simplified extradition of consenting persons who waive formal extradition proceedings.

RECOMMENDATION 40 OTHER FORMS OF INTERNATIONAL CO-OPERATION

General Principles

40.1 Countries should ensure that their competent authorities can rapidly provide the widest range of international co-operation in relation to money laundering, associated predicate offences and terrorist financing. Such exchanges of information should be possible both spontaneously and upon request.

40.2 Competent authorities should:

(a) have a lawful basis for providing co-operation;

(b) be authorised to use the most efficient means to co-operate;

(c) have clear and secure gateways, mechanisms or channels that will facilitate and allow for the transmission and execution of requests;

(d) have clear processes for the prioritisation and timely execution of requests; and

(e) have clear processes for safeguarding the information received.

40.3 Where competent authorities need bilateral or multilateral agreements or arrangements to co-operate, these should be negotiated and signed in a timely way, and with the widest range of foreign counterparts.

40.4 Upon request, requesting competent authorities should provide feedback in a timely manner to competent authorities from which they have received assistance, on the use and usefulness of the information obtained.

40.5 Countries should not prohibit, or place unreasonable or unduly restrictive conditions on, the provision of exchange of information or assistance. In particular, competent authorities should not refuse a request for assistance on the grounds that:

(a) the request is also considered to involve fiscal matters; and/or

(b) laws require financial institutions or DNFBPs to maintain secrecy or confidentiality (except where the relevant information that is sought is held in circumstances where legal professional privilege or legal professional secrecy applies); and/or

(c) there is an inquiry, investigation or proceeding underway in the requested country, unless the assistance would impede that inquiry, investigation or proceeding; and/or

(d) the nature or status (civil, administrative, law enforcement, etc.) of the requesting counterpart authority is different from that of its foreign counterpart.

40.6 Countries should establish controls and safeguards to ensure that information exchanged by competent authorities is used only for the purpose for, and by the authorities, for which the information was sought or provided, unless prior authorisation has been given by the requested competent authority.

40.7 Competent authorities should maintain appropriate confidentiality for any request for co-operation and the information exchanged, consistent with both parties' obligations concerning privacy and data protection. At a minimum, competent authorities should protect exchanged information in the same manner as they would protect similar information received from domestic sources. Competent authorities should be able to refuse to provide information if the requesting competent authority cannot protect the information effectively.

40.8 Competent authorities should be able to conduct inquiries on behalf of foreign counterparts, and exchange with their foreign counterparts all information that would be obtainable by them if such inquiries were being carried out domestically.

Exchange of Information between FIUs

40.9 FIUs should have an adequate legal basis for providing co-operation on money laundering, associated predicate offences and terrorist financing[88].

40.10 FIUs should provide feedback to their foreign counterparts, upon request and whenever possible, on the use of the information provided, as well as on the outcome of the analysis conducted, based on the information provided.

40.11 FIUs should have the power to exchange:

(a) all information required to be accessible or obtainable directly or indirectly by the FIU, in particular under Recommendation 29; and

(b) any other information which they have the power to obtain or access, directly or indirectly, at the domestic level, subject to the principle of reciprocity.

Exchange of information between financial supervisors[89]

40.12 Financial supervisors should have a legal basis for providing co-operation with their foreign counterparts (regardless of their respective nature or status), consistent with the applicable international standards for supervision, in particular with respect to the exchange of supervisory information related to or relevant for AML/CFT purposes.

40.13 Financial supervisors should be able to exchange with foreign counterparts information domestically available to them, including information held by financial institutions, in a manner proportionate to their respective needs.

40.14 Financial supervisors should be able to exchange the following types of information when relevant for AML/CFT purposes, in particular with other supervisors that have a shared responsibility for financial institutions operating in the same group:

---

88 FIUs should be able to provide cooperation regardless of whether their counterpart FIU is administrative, law enforcement, judicial or other in nature.

89 This refers to financial supervisors which are competent authorities and does not include financial supervisors which are SRBs.

(a) regulatory information, such as information on the domestic regulatory system, and general information on the financial sectors;

(b) prudential information, in particular for Core Principles supervisors, such as information on the financial institution's business activities, beneficial ownership, management, and fit and properness; and

(c) AML/CFT information, such as internal AML/CFT procedures and policies of financial institutions, customer due diligence information, customer files, samples of accounts and transaction information.

40.15 Financial supervisors should be able to conduct inquiries on behalf of foreign counterparts, and, as appropriate, to authorise or facilitate the ability of foreign counterparts to conduct inquiries themselves in the country, in order to facilitate effective group supervision.

40.16 Financial supervisors should ensure that they have the prior authorisation of the requested financial supervisor for any dissemination of information exchanged, or use of that information for supervisory and non-supervisory purposes, unless the requesting financial supervisor is under a legal obligation to disclose or report the information. In such cases, at a minimum, the requesting financial supervisor should promptly inform the requested authority of this obligation.

Exchange of information between law enforcement authorities

40.17 Law enforcement authorities should be able to exchange domestically available information with foreign counterparts for intelligence or investigative purposes relating to money laundering, associated predicate offences or terrorist financing, including the identification and tracing of the proceeds and instrumentalities of crime.

40.18 Law enforcement authorities should also be able to use their powers, including any investigative techniques available in accordance with their domestic law, to conduct inquiries and obtain information on behalf of foreign counterparts. The regimes or practices in place governing such law enforcement co-operation, such as the agreements between Interpol, Europol or Eurojust and individual countries, should govern any restrictions on use imposed by the requested law enforcement authority.

40.19 Law enforcement authorities should be able to form joint investigative teams to conduct cooperative investigations, and, when necessary, establish bilateral or multilateral arrangements to enable such joint investigations.

Exchange of information between non-counterparts

40.20 Countries should permit their competent authorities to exchange information indirectly[90] with non-counterparts, applying the relevant principles above. Countries should ensure

[90] Indirect exchange of information refers to the requested information passing from the requested authority through one or more domestic or foreign authorities before being received by the requesting

that the competent authority that requests information indirectly always makes it clear for what purpose and on whose behalf the request is made.

authority. Such an exchange of information and its use may be subject to the authorisation of one or more competent authorities of the requested country.

EFFECTIVENESS ASSESSMENT

Immediate Outcome 1	Money laundering and terrorist financing risks are understood and, where appropriate, actions co-ordinated domestically to combat money laundering and the financing of terrorism and proliferation.

Characteristics of an effective system

A country properly identifies, assesses and understands its money laundering and terrorist financing risks, and co-ordinates domestically to put in place actions to mitigate these risks. This includes the involvement of competent authorities and other relevant authorities; using a wide range of reliable information sources; using the assessment(s) of risks as a basis for developing and prioritising AML/CFT policies and activities; and communicating and implementing those policies and activities in a co-ordinated way across appropriate channels. The relevant competent authorities also co-operate, and co-ordinate policies and activities to combat the financing of proliferation. Over time, this results in substantial mitigation of money laundering and terrorist financing risks.

This outcome relates primarily to Recommendations 1, 2, 33 and 34, and also elements of R.15.

Note to Assessors:

1) Assessors are not expected to conduct an in-depth review of, or assess the country's assessment(s) of risks. Assessors, based on their views of the reasonableness of the assessment(s) of risks, should focus on how well the competent authorities use their understanding of the risks in practice to inform policy development and actions to mitigate the risks.

2) Assessors should take into consideration their findings for this Immediate Outcome (IO) in their assessment of the other IOs. However, assessors should only let their findings relating to the co-operation and co-ordination of measures to combat the financing of proliferation affect the assessments of IO.11 and not of the other IOs. (*i.e.* IO.2 to IO.10) that deal with combating money laundering and terrorist financing.

Core Issues to be considered in determining if the Outcome is being achieved

1.1. How well does the country understand its ML/TF risks?

1.2. How well are the identified ML/TF risks addressed by national AML/CFT policies and activities?

1.3. To what extent are the results of the assessment(s) of risks properly used to justify exemptions and support the application of enhanced measures for higher risk scenarios, or simplified measures for lower risk scenarios?

1.4. To what extent are the objectives and activities of the competent authorities and SRBs consistent with the evolving national AML/CFT policies and with the ML/TF risks identified?

1.5. To what extent do the competent authorities and SRBs co-operate and co-ordinate the development and implementation of policies[91] and activities to combat ML/TF and, where appropriate, the financing of proliferation of weapons of mass destruction?[92]

1.6. To what extent does the country ensure that respective financial institutions, DNFBPs and other sectors affected by the application of the FATF Standards are aware of the relevant results of the national ML/TF risk assessment(s)?

a) Examples of Information that could support the conclusions on Core Issues

1. The country's assessment(s) of its ML/TF risks (e.g., *types of assessment(s) produced; types of assessment(s) published / communicated*).

2. AML/CFT policies and strategies (e.g., *AML/CFT policies, strategies and statements communicated/published; engagement and commitment at the senior officials and political level*).

3. Outreach activities to private sector and relevant authorities (e.g., *briefings and guidance on relevant conclusions from risk assessment(s); frequency and relevancy of consultation on policies and legislation, input to develop risk assessment(s) and other policy products*).

b) Examples of Specific Factors that could support the conclusions on Core Issues

4. What are the methods, tools, and information used to develop, review and evaluate the conclusions of the assessment(s) of risks? How comprehensive are the information and data used?

5. How useful are strategic financial intelligence, analysis, typologies, and guidance?

6. Which competent authorities and relevant stakeholders (including financial institutions and DNFBPs) are involved in the assessment(s) of risks? How do they provide inputs to the national level ML/TF assessment(s) of risks, and at what stage?

7. Is the assessment(s) of risks kept up-to-date, reviewed regularly and responsive to significant events or developments (including new threats and trends)?

---

91 Having regard to AML/CFT requirements and Data Protection and Privacy rules and other similar provisions (e.g. data security/localisation) as needed.

92 Considering that there are different forms of co-operation and co-ordination between relevant authorities, Core Issue 1.5 does not prejudge a country's choice for a particular form and applies equally to all of them.

8. To what extent is the assessment(s) of risks reasonable and consistent with the ML/TF threats, vulnerabilities and specificities faced by the country? Where appropriate, does it take into account risks identified by other credible sources?

9. Do the policies of competent authorities respond to changing ML/TF risks?

10. What mechanism(s) or body do the authorities use to ensure proper and regular co-operation and co-ordination of the national framework and development and implementation of policies to combat ML/TF, at both policymaking and operational levels (and where relevant, the financing of proliferation of weapons of mass destruction)? Does the mechanism or body include all relevant authorities?

11. Is interagency information sharing undertaken in a timely manner on a bilateral or multiagency basis as appropriate?

12. Are there adequate resources and expertise involved in conducting the assessment(s) of risks, and for domestic co-operation and co-ordination?

Immediate Outcome 2	International co-operation delivers appropriate information, financial intelligence, and evidence, and facilitates action against criminals and their assets.

Characteristics of an effective system

The country provides constructive and timely information or assistance when requested by other countries. Competent authorities assist with requests to:

- locate and extradite criminals; and
- identify, freeze, seize, confiscate and share assets and provide information (including evidence, financial intelligence, supervisory and beneficial ownership information) related to money laundering, terrorist financing or associated predicate offences.

Competent authorities also seek international co-operation to pursue criminals and their assets. Over time, this makes the country an unattractive location for criminals (including terrorists) to operate in, maintain their illegal proceeds in, or use as a safe haven.

This outcome relates primarily to Recommendations 36 - 40 and also elements of Recommendations 9, 15, 24, 25 and 32.

Note to Assessors:

Assessors should take into consideration how their findings on the specific role of relevant competent authorities in seeking and delivering international co-operation under this IO would impact other IOs (particularly IO.3, IO.5, IOs. 6 to 10) including how the country seeks international co-operation with respect to domestic cases when appropriate.

Core Issues to be considered in determining if the Outcome is being achieved

2.1. To what extent has the country provided constructive and timely mutual legal assistance and extradition across the range of international co-operation requests? What is the quality of such assistance provided?

2.2. To what extent has the country sought legal assistance for international co-operation in an appropriate and timely manner to pursue domestic ML, associated predicate offences and TF cases which have transnational elements?

2.3. To what extent do the different competent authorities seek other forms of international co-operation to exchange financial intelligence and supervisory, law enforcement or other information in an appropriate and timely manner with their foreign counterparts for AML/CFT purposes?

2.4. To what extent do the different competent authorities provide (including spontaneously) other forms of international co-operation to exchange financial intelligence and supervisory, law enforcement or other information in a constructive and timely manner with their foreign counterparts for AML/CFT purposes?

2.5. How well are the competent authorities providing and responding to foreign requests for co-operation in identifying and exchanging basic and beneficial ownership information of legal persons and arrangements?

a) Examples of Information that could support the conclusions on Core Issues

1. Evidence of handling and making requests for international co-operation with respect to extradition, mutual legal assistance and other forms of international co-operation (*e.g., number of requests made, received, processed, granted, or refused relating to different competent authorities (e.g., central authority, FIU, supervisors, and law enforcement agencies) and types of request; timeliness of response, including prioritisation of requests; cases of spontaneous dissemination / exchange*).
2. Types and number of co-operation arrangements with other countries (including bilateral and multilateral MOUs, treaties, co-operation based on reciprocity, or other co-operation mechanisms).
3. Examples of: (a) making requests for, and (b) providing successful international co-operation (e.g.*, making use of financial intelligence / evidence provided to or by the country (as the case may be); investigations conducted on behalf or jointly with foreign counterparts; extradition of suspects/criminals for ML/TF*).
4. Information on investigations, prosecutions, confiscation and repatriation/sharing of assets (e.g., *number of ML/TF investigations/ prosecutions, number and value of assets frozen and confiscated (including non-conviction-based confiscation) arising from international co-operation; value of assets repatriated or shared*).

b) Examples of Specific Factors that could support the conclusions on Core Issues

5. What operational measures are in place to ensure that appropriate safeguards are applied, requests are handled in a confidential manner to protect the integrity of the process (*e.g.,* investigations and inquiry), and information exchanged is used for authorised purposes?
6. What mechanisms (including case management systems) are used among the different competent authorities to receive, assess, prioritise and respond to requests for assistance?
7. What are the reasons for refusal in cases where assistance is not or cannot be provided?
8. What mechanisms (including case management systems) are used among the different competent authorities to select, prioritise and make requests for assistance?
9. How do different competent authorities ensure that relevant and accurate information is provided to the requested country to allow it to understand and assess the requests?

10. How well has the country worked with the requesting or requested country to avoid or resolve conflicts of jurisdiction or problems caused by poor quality information in requests?

11. How do competent authorities ensure that details of the contact persons and requirements for international co-operation requests are clear and easily available to requesting countries?

12. To what extent does the country prosecute its own nationals without undue delay in situations when it is unable by law to extradite them?

13. What measures and arrangements are in place to manage and repatriate assets confiscated at the request of other countries?

14. Are there aspects of the legal, operational or judicial process (*e.g.,* excessively strict application of dual criminality requirements etc.) that impede or hinder international co-operation?

15. To what extent are competent authorities exchanging information, indirectly, with non-counterparts?

16. Are adequate resources available for: (a) receiving, managing, coordinating and responding to incoming requests for co-operation; and (b) making and coordinating requests for assistance in a timely manner?

Immediate Outcome 3	Supervisors appropriately supervise, monitor and regulate financial institutions, DNFBPs and VASPs for compliance with AML/CFT requirements commensurate with their risks.

Characteristics of an effective system

Supervision and monitoring address and mitigate the money laundering and terrorist financing risks in the financial and other relevant sectors by:

- preventing criminals and their associates from holding, or being the beneficial owner of, a significant or controlling interest or a management function in financial institutions, DNFBPs or VASPs; and
- promptly identifying, remedying, and sanctioning, where appropriate, violations of AML/CFT requirements or failings in money laundering and terrorist financing risk management.

Supervisors[93] provide financial institutions, DNFBPs and VASPs with adequate feedback and guidance on compliance with AML/CFT requirements. Over time, supervision and monitoring improve the level of AML/CFT compliance, and discourage attempts by criminals to abuse the financial, DNFBP and VASP sectors, particularly in the sectors most exposed to money laundering and terrorist financing risks.

This outcome relates primarily to Recommendations 14, 15, 26 to 28, 34 and 35, and also elements of Recommendations 1 and 40.

Note to Assessors:

1) Assessors should determine which financial, DNFBP and VASP sectors to weight as being most important, moderately important or less important, and should reflect their judgment in Chapters 1, 5 and 6 of the report. While judging on the overall effectiveness of this IO, assessors should explain how they have weighted the identified deficiencies and also explain how these have been taken into account in relation to how the assessors have weighted the different sectors.

2) When determining how to weight the various financial, DNFBP and VASP sectors, assessors should consider their relative importance, taking into account the following factors:

a) the ML/TF risks facing each sector, taking into account the materiality relevant to each sector (e.g. the relative importance of different parts of the financial sector and different

[93] In relation to financial institutions and DNFBPs (but not to VASPs), references to "Supervisors" include SRBs for the purpose of the effectiveness assessment.

DNFBPs and VASPs; the size, integration and make-up of the financial sector[94]; the relative importance of different types of financial products or institutions; the amount of business which is domestic or cross-border; the extent to which the economy is cash-based; and estimates of the size of the informal sector and/or shadow economy), and

b) structural elements and other contextual factors (e.g. whether established supervisors with accountability, integrity and transparency are in place for each sector; and the maturity and sophistication of the regulatory and supervisory regime for each sector)[95].

For more information on how assessors should take risk, materiality, structural elements and other contextual factors into account, see paragraphs 5 to 12 of the Methodology. For more guidance on how to reflect in the report their judgment on the relative importance of the financial, DNFBP and VASP sectors, see the Mutual Evaluation Report Template in Annex II of the Methodology.

3) Assessors should also consider the relevant findings (including at the financial group level) on the level of international co-operation which supervisors are participating in when assessing this IO.

Core Issues to be considered in determining if the Outcome is being achieved

3.1. How well does licensing, registration or other controls implemented by supervisors or other authorities prevent criminals and their associates from holding, or being the beneficial owner of a significant or controlling interest or holding a management function in financial institutions, DNFBPs or VASPs? How well are breaches of such licensing or registration requirements detected?

3.2. How well do the supervisors identify and maintain an understanding of the ML/TF risks in the financial and other sectors as a whole, between different sectors and types of institution, and of individual institutions?

3.3. With a view to mitigating the risks, how well do supervisors, on a risk-sensitive basis, supervise or monitor the extent to which financial institutions, DNFBPs and VASPs are complying with their AML/CFT requirements?

3.4. To what extent are remedial actions and/or effective, proportionate and dissuasive sanctions applied in practice?

3.5. To what extent are supervisors able to demonstrate that their actions have an effect on compliance by financial institutions, DNFBPs and VASPs?

3.6. How well do the supervisors promote a clear understanding by financial institutions, DNFBPs and VASPs of their AML/CFT obligations and ML/TF risks?

94 E.g. including, but not limited to, the business concentration in the different sectors.

95 E.g. special supervisory activities, such as thematic reviews and targeted outreach to specific sectors or institutions.

a) Examples of Information that could support the conclusions on Core Issues

1. Contextual factors regarding the size, composition, and structure of the financial, DNFBP and VASP sectors and informal or unregulated sector (e.g., *number and types of financial institutions (including MVTS), DNFBPs and VASPs licensed or registered in each category; types of financial (including cross-border) activities; relative size, importance and materiality of sectors*).
2. Supervisors' risk models, manuals and guidance on AML/CFT (e.g., *operations manuals for supervisory staff; publications outlining AML/CFT supervisory / monitoring approach; supervisory circulars, good and poor practises, thematic studies; annual reports*).
3. Information on supervisory engagement with the industry, the FIU and other competent authorities on AML/CFT issues (e.g., *providing guidance and training, organising meetings or promoting interactions with financial institutions, DNFBPs and VASPs*).
4. Information on supervision (e.g., *frequency, scope and nature of monitoring and inspections (on-site and off-site); nature of breaches identified; sanctions and other remedial actions* (e.g., *corrective actions, reprimands, fines) applied, examples of cases where sanctions and other remedial actions have improved AML/CFT compliance*).

b) Examples of Specific Factors that could support the conclusions on Core Issues

5. What are the measures implemented to prevent the establishment or continued operation of shell banks in the country?
6. To what extent are "fit and proper" tests or other similar measures used with regard to persons holding senior management functions, holding a significant or controlling interest, or professionally accredited in financial institutions, DNFBPs and VASPs?
7. What measures do supervisors employ in order to assess the ML/TF risks of the sectors and entities they supervise/monitor? How often are the risk profiles reviewed, and what are the trigger events (e.g., changes in management or business activities)?
8. What measures and supervisory tools are employed to ensure that financial institutions (including financial groups), DNFBPs and VASPs are regulated and comply with their AML/CFT obligations (including those which relate to targeted financial sanctions on terrorism, and to countermeasures called for by the FATF)? To what extent has this promoted the use of the formal financial system?
9. To what extent do the frequency, intensity and scope of on-site and off-site inspections relate to the risk profile of the financial institutions (including financial group), DNFBPs and VASPs?
10. What is the level of co-operation between supervisors and other competent authorities in relation to AML/CFT (including financial group ML/TF risk management) issues? What are the circumstances where supervisors share or seek information from other competent authorities with regard to AML/CFT issues (including market entry)?

11. What measures are taken to identify, license or register, monitor and sanction as appropriate, persons who carry out MVTs and virtual asset services or activities?

12. Do supervisors have adequate resources to conduct supervision or monitoring for AML/CFT purposes, taking into account the size, complexity and risk profiles of the sector supervised or monitored?

13. What are the measures implemented to ensure that financial supervisors have operational independence so that they are not subject to undue influence on AML/CFT matters?

Immediate Outcome 4	Financial institutions, DNFBPs and VASPs adequately apply AML/CFT preventive measures commensurate with their risks, and report suspicious transactions.

Characteristics of an effective system

Financial institutions, DNFBPs and VASPs understand the nature and level of their money laundering and terrorist financing risks; develop and apply AML/CFT policies (including group-wide policies), internal controls, and programmes to adequately mitigate those risks; apply appropriate CDD measures to identify and verify the identity of their customers (including the beneficial owners) and conduct ongoing monitoring; adequately detect and report suspicious transactions; and comply with other AML/CFT requirements. This ultimately leads to a reduction in money laundering and terrorist financing activity within these entities.

This outcome relates primarily to Recommendations 9 to 23, and also elements of Recommendations 1, 6 and 29.

Note to Assessors:

1) Assessors should determine which financial, DNFBP and VASP sectors to weight as being most important, moderately important or less important, and should reflect their judgment in Chapters 1, 5 and 6 of the report. While judging on the overall effectiveness of this IO, assessors should explain how they have weighted the identified deficiencies and also explain how these have been taken into account in relation to how the assessors have weighted the different sectors.

2) When determining how to weight the various financial, DNFBP and VASP sectors, assessors should consider their relative importance, taking into account the following factors:

a) the ML/TF risks facing each sector, taking into account the materiality relevant to each sector (e.g. the relative importance of different parts of the financial sector and different DNFBPs and VASPs; the size, integration and make-up of the financial sector[96]; the relative importance of different types of financial products or institutions; the amount of business which is domestic or cross-border; the extent to which the economy is cash-based; and estimates of the size of the informal sector and/or shadow economy), and

96 E.g. including, but not limited to, the business concentration in the different sectors.

b) structural elements and other contextual factors (e.g. whether established supervisors with accountability, integrity and transparency are in place for each sector; and the maturity and sophistication of the regulatory and supervisory regime for each sector)[97].

For more information on how assessors should take risk, materiality, structural elements and other contextual factors into account, see paragraphs 5 to 12 of the Methodology. For more guidance on how to reflect in the report their judgment on the relative importance of the financial, DNFBP and VASP sectors, see the Mutual Evaluation Report Template in Annex II of the Methodology.

3) Assessors are not expected to conduct an in-depth review of the operations of financial institutions, DNFBPs or VASPS, but should consider, on the basis of evidence and interviews with supervisors, FIUs, financial institutions, DNFBPs and VASPs, whether financial institutions, DNFBPs and VASPs have adequately assessed and understood their exposure to money laundering and terrorist financing risks; whether their policies, procedures and internal controls adequately address these risks; and whether regulatory requirements (including STR reporting) are being properly implemented.

Core Issues to be considered in determining if the Outcome is being achieved

4.1. How well do financial institutions, DNFBPs and VASPs understand their ML/TF risks and AML/CFT obligations?

4.2. How well do financial institutions, DNFBPs and VASPs apply mitigating measures commensurate with their risks?

4.3. How well do financial institutions, DNFBPs and VASPs apply the CDD and record-keeping measures (including beneficial ownership information and ongoing monitoring)? To what extent is business refused when CDD is incomplete?

4.4. How well do financial institutions, DNFBPs and VASPs apply the enhanced or specific measures for: (a) PEPs, (b) correspondent banking, (c) new technologies, (d) wire transfer rules[98], (e) targeted financial sanctions relating to TF, and (f) higher-risk countries identified by the FATF?

4.5. To what extent do financial institutions, DNFBPs and VASPs meet their reporting obligations on the suspected proceeds of crime and funds in support of terrorism? What are the practical measures to prevent tipping-off?

4.6. How well do financial institutions, DNFBPs and VASPs apply internal controls and procedures (including at financial group level) to ensure compliance with AML/CFT requirements? To what extent are there legal or regulatory requirements (*e.g.,* financial secrecy) impeding its implementation?

---

97 E.g. special supervisory activities, such as thematic reviews and targeted outreach to specific sectors or institutions.

98 In the context of VASPs, this refers to virtual asset transfer rules.

a) Examples of Information that could support the conclusions on Core Issues

1. Contextual factors regarding the size, composition, and structure of the financial, DNFBP and VASP sectors and informal or unregulated sector (e.g., *number and types of financial institutions (including MVTS), DNFBPs and VASPs licensed or registered in each category; types of financial (including cross-border) activities; relative size, importance and materiality of sectors*).
2. Information (including trends) relating to risks and general levels of compliance (e.g., *internal AML/CFT policies, procedures and programmes, trends and typologies reports*).
3. Examples of compliance failures (e.g., *sanitised cases; typologies on the misuse of financial institutions, DNFBPs and VASPs*).
4. Information on compliance by financial institutions, DNFBPs and VASPs (e.g., *frequency of internal AML/CFT compliance review; nature of breaches identified and remedial actions taken or sanctions applied; frequency and quality of AML/CFT training; time taken to provide competent authorities with accurate and complete CDD information for AML/CFT purposes; accounts/relationships rejected due to incomplete CDD information; wire transfers rejected due to insufficient requisite information*).
5. Information on STR reporting and other information as required by national legislation (e.g., *number of STRs submitted, and the value of associated transactions; number and proportion of STRs from different sectors; the types, nature and trends in STR filings corresponding to ML/TF risks; average time taken to analyse the suspicious transaction before filing an STR*).

b) Examples of Specific Factors that could support the conclusions on Core Issues

6. What are the measures in place to identify and deal with higher (and where relevant, lower) risk customers, business relationships, transactions, products and countries?
7. Does the manner in which AML/CFT measures are applied prevent the legitimate use of the formal financial system, and what measures are taken to promote financial inclusion?
8. To what extent do the CDD and enhanced or specific measures vary according to ML/TF risks across different sectors / types of institution, and individual institutions? What is the relative level of compliance between international financial groups and domestic institutions?
9. To what extent is there reliance on third parties for the CDD process and how well are the controls applied?
10. How well do financial institutions and groups, DNFBPs and VASPs ensure adequate access to information by the AML/CFT compliance function?
11. Do internal policies and controls of the financial institutions and groups, DNFBPs and VASPs enable timely review of: (i) complex or unusual transactions, (ii) potential STRs for reporting to the FIU, and (iii) potential false-positives? To what extent do the STRs reported contain complete, accurate and adequate information relating to the suspicious transaction?

12. What are the measures and tools employed to assess risk, formulate and review policy responses, and institute appropriate risk mitigation and systems and controls for ML/TF risks?

13. How are AML/CFT policies and controls communicated to senior management and staff? What remedial actions and sanctions are taken by financial institutions, DNFBPs and VASPs when AML/CFT obligations are breached?

14. How well are financial institutions, DNFBPs and VASPs documenting their ML/TF risk assessments, and keeping them up to date?

15. Do financial institutions, DNFBPs and VASPs have adequate resources to implement AML/CFT policies and controls relative to their size, complexity, business activities and risk profile?

16. How well is feedback provided to assist financial institutions, DNFBPs and VASPs in detecting and reporting suspicious transactions?

Immediate Outcome 5	Legal persons and arrangements are prevented from misuse for money laundering or terrorist financing, and information on their beneficial ownership is available to competent authorities without impediments.

Characteristics of an effective system:

Measures are in place to:

- prevent legal persons and arrangements from being used for criminal purposes;
- make legal persons and arrangements sufficiently transparent; and
- ensure that accurate and up-to-date basic and beneficial ownership information is available on a timely basis.

Basic information is available publicly, and beneficial ownership information is available to competent authorities. Persons who breach these measures are subject to effective, proportionate and dissuasive sanctions. This results in legal persons and arrangements being unattractive for criminals to misuse for money laundering and terrorist financing.

This outcome relates primarily to Recommendations 24 and 25, and also elements of Recommendations 1, 10, 37 and 40.

Note to Assessors:

Assessors should also consider the relevant findings in relation to the level of international co-operation which competent authorities are participating in when assessing this Immediate Outcome. This would involve considering the extent to which competent authorities seek and are able to provide the appropriate assistance in relation to identifying and exchanging information (including beneficial ownership information) for legal persons and arrangements.

Core Issues to be considered in determining if the Outcome is being achieved

5.1. To what extent is the information on the creation and types of legal persons and arrangements in the country available publicly?

5.2. How well do the relevant competent authorities identify, assess and understand the vulnerabilities, and the extent to which legal persons created in the country can be, or are being misused for ML/TF?

5.3. How well has the country implemented measures to prevent the misuse of legal persons and arrangements for ML/TF purposes?

5.4. To what extent can relevant competent authorities obtain adequate, accurate and current basic and beneficial ownership information on all types of legal persons created in the country, in a timely manner?

5.5. To what extent can relevant competent authorities obtain adequate, accurate and current beneficial ownership information on legal arrangements, in a timely manner?

5.6. To what extent are effective, proportionate and dissuasive sanctions applied against persons who do not comply with the information requirements?

a) Examples of Information that could support conclusion on Core Issues

1. Contextual information on the types, forms and basic features of legal persons and arrangements in the jurisdiction.

2. Experiences of law enforcement and other relevant competent authorities (e.g., *level of sanctions imposed for breach of the information requirements; where and how basic and beneficial ownership information (including information on the settlor, trustee(s), protector and beneficiaries) is obtained; information used in supporting investigation*).

3. Typologies and examples of the misuse of legal persons and arrangements (e.g., *frequency with which criminal investigations find evidence of the country's legal persons and arrangements being used for ML/TF; legal persons misused for illegal activities dismantled or struck-off).*

4. Sources of basic and beneficial ownership information (e.g., *types of public information available to financial institutions and DNFBPs; types of information held in the company registry or by the company*).

5. Information on the role played by "gatekeepers" (e.g., *company service providers, accountants, legal professionals*) in the formation and administration of legal persons and arrangements.

6. Other information (e.g., *information on existence of legal arrangements; responses (positive and negative) to requests for basic or beneficial ownership information received from other countries; information on the monitoring of quality of assistance*).

b) Examples of Specific Factors that could support the conclusions on Core Issues

7. What are the measures taken to enhance the transparency of legal persons (including dealing with bearer shares and share warrants, and nominee shareholders and directors) and arrangements?

8. How do relevant authorities ensure that accurate and up-to-date basic and beneficial ownership information on legal persons is maintained? Is the presence and accuracy of information monitored, tested/certified or verified?

9. To what extent is the time taken for legal persons to register changes to the required basic and beneficial ownership information adequate to ensure that the information is accurate and

up to date? Where applicable, to what extent are similar changes in legal arrangements registered in a timely manner?

10. To what extent can financial institutions and DNFBPs obtain accurate and up-to-date basic and beneficial ownership information on legal persons and arrangements? What is the extent of information that trustees disclose to financial institutions and DNFBPs?

11. Do the relevant authorities have adequate resources to implement the measures adequately?

Immediate Outcome 6	Financial intelligence and all other relevant information are appropriately used by competent authorities for money laundering and terrorist financing investigations.

Characteristics of an effective system

A wide variety of financial intelligence and other relevant information is collected and used by competent authorities to investigate money laundering, associated predicate offences and terrorist financing. This delivers reliable, accurate, and up-to-date information; and the competent authorities have the resources and skills to use the information to conduct their analysis and financial investigations, to identify and trace the assets, and to develop operational analysis.

This outcome relates primarily to Recommendations 29 to 32 and also elements of Recommendations 1, 2, 4, 8, 9, 15, 34 and 40.

Note to Assessors:

1) This outcome includes the work that the FIU does to analyse STRs and other data; and the use by competent authorities of FIU products, other types of financial intelligence and other relevant information[99].

2) Assessors should also consider the relevant findings on the level of international co-operation which competent authorities are participating in when assessing this Immediate Outcome. This would involve considering the extent which FIUs and law enforcement agencies are able to, and do seek appropriate financial and law enforcement intelligence and other information from their foreign counterparts.

Core Issues to be considered in determining if the Outcome is being achieved

6.1. To what extent are financial intelligence and other relevant information accessed and used in investigations to develop evidence and trace criminal proceeds related to ML, associated predicate offences and TF?

[99] The sources include information derived from STRs, cross-border reports on currency and bearer negotiable movements, law enforcement intelligence; criminal records; supervisory and regulatory information; and information with company registries etc. Where applicable, it would also include reports on cash transactions, foreign currency transactions, wire transfers records, information from other government agencies including security agencies; tax authorities, asset registries, benefits agencies, NPOs authorities; and information which can be obtained through compulsory measures from financial institutions and DNFBPs including CDD information and transaction records, as well as information from open sources.

6.2. To what extent are the competent authorities receiving or requesting reports (e.g., STRs, reports on currency and bearer negotiable instruments) that contain relevant and accurate information that assists them to perform their duties?

6.3. To what extent is FIU analysis and dissemination supporting the operational needs of competent authorities?

6.4. To what extent do the FIU and other competent authorities co-operate and exchange information and financial intelligence? How securely do the FIU and competent authorities protect the confidentiality of the information they exchange or use?

a) Examples of Information that could support the conclusions on Core Issues

1. Experiences of law enforcement and other competent authorities (e.g., *types of financial intelligence and other information available; frequency with which they are used as investigative tools).*

2. Examples of the co-operation between FIUs and other competent authorities and use of financial intelligence (e.g., *statistics of financial intelligence disseminated/exchanged; cases where financial intelligence was used in investigation and prosecution of ML/TF and associated predicate offences, or in identifying and tracing assets*).

3. Information on STRs (e.g., *number of STRs/cases analysed; perception of quality of information disclosed in STRs; frequency with which competent authorities come across examples of unreported suspicious transactions; cases of tipping-off; see also Immediate Outcome 4 for information on STR reporting).*

4. Information on other financial intelligence and information *(*e.g., *number of currency and bearer negotiable instruments reports received, and analysed; types of information that law enforcement and other competent authorities receive or obtain/access from other authorities, financial institutions and DNFBPs).*

5. Other documents (e.g., *guidance on the use and reporting of STRs and other financial intelligence; typologies produced using financial intelligence*).

b) Examples of Specific Factors that could support the conclusions on Core Issues

6. How well does the FIU access and use additional information to analyse and add value to STRs? How does the FIU ensure the rigour of its analytical assessments?

7. How well do competent authorities make use of the information contained in STRs and other financial intelligence to develop operational analysis?

8. To what extent does the FIU incorporate feedback from competent authorities, typologies and operational experience into its functions?

9. What are the mechanisms implemented to ensure full and timely co-operation between competent authorities, and from financial institutions, DNFBPs and other reporting entities to provide the relevant information? Are there any impediments to the access of information?

10. To what extent do the STRs reported contain complete, accurate and adequate information relating to the suspicious transaction?

11. To what extent do the relevant competent authorities review and engage (including outreach by the FIU) reporting entities to enhance financial intelligence reporting?

12. Do the relevant authorities have adequate resources (including IT tools for data mining and analysis of financial intelligence and to protect its confidentiality) to perform its functions?

13. What are the measures implemented to ensure that the FIU has operational independence so that it is not subject to undue influence on AML/CFT matters?

Immediate Outcome 7	Money laundering offences and activities are investigated and offenders are prosecuted and subject to effective, proportionate and dissuasive sanctions.

Characteristics of an effective system

Money laundering activities, and in particular major proceeds-generating offences, are investigated; offenders are successfully prosecuted; and the courts apply effective, proportionate and dissuasive sanctions to those convicted. This includes pursuing parallel financial investigations and cases where the associated predicate offences occur outside the country, and investigating and prosecuting stand-alone money laundering offences. The component parts of the systems (investigation, prosecution, conviction, and sanctions) are functioning coherently to mitigate the money laundering risks. Ultimately, the prospect of detection, conviction, and punishment dissuades potential criminals from carrying out proceeds generating crimes and money laundering.

This outcome relates primarily to Recommendations 3, 30 and 31, and also elements of Recommendations 1, 2, 15, 32, 37, 39 and 40.

Note to Assessors:

Assessors should also consider the relevant findings on the level of international co-operation which competent authorities are participating in when assessing this Immediate Outcome. This would involve considering the extent to which law enforcement agencies are seeking appropriate assistance from their foreign counterparts in cross-border money laundering cases.

Core Issues to be considered in determining if the Outcome is being achieved

7.1. How well, and in what circumstances are potential cases of ML identified and investigated (including through parallel financial investigations)?

7.2. To what extent are the types of ML activity being investigated and prosecuted consistent with the country's threats and risk profile and national AML/CFT policies?

7.3. To what extent are different types of ML cases prosecuted (*e.g.,* foreign predicate offence, third-party laundering, stand-alone offence[100] etc.) and offenders convicted?

[100] **Third party money laundering** is the laundering of proceeds by a person who was not involved in the commission of the predicate offence. **Self-laundering** is the laundering of proceeds by a person who was involved in the commission of the predicate offence. **Stand-alone (or autonomous) money laundering** refers to the prosecution of ML offences independently, without also necessarily prosecuting the predicate offence. This could be particularly relevant inter alia i) when there is insufficient evidence of the particular predicate offence that gives rise to the criminal proceeds; or ii) in situations where there is a lack of territorial jurisdiction over the predicate offence. The proceeds may have been laundered by the defendant (self-laundering) or by a third party (third party ML).

7.4. To what extent are the sanctions applied against natural or legal persons convicted of ML offences effective, proportionate and dissuasive?

7.5. To what extent do countries apply other criminal justice measures in cases where a ML investigation has been pursued but where it is not possible, for justifiable reasons, to secure a ML conviction? Such alternative measures should not diminish the importance of, or be a substitute for, prosecutions and convictions for ML offences.

a) Examples of Information that could support the conclusions on Core Issues

1. Experiences and examples of investigations, prosecutions and convictions*(* e.g., *examples of cases rejected due to insufficient investigative evidence; what are the significant or complex ML cases that the country has investigated and prosecuted; examples of successful cases against domestic and transnational organised crime; cases where other criminal sanctions or measures are pursued instead of ML convictions).*

2. Information on ML investigations, prosecutions and convictions (e.g., *number of investigations and prosecutions for ML activity; proportion of cases leading to prosecution or brought to court; number or proportion of ML convictions relating to third party laundering, stand-alone offence, self-laundering, and foreign predicate offences; types of predicate crimes involved; level of sanctions imposed for ML offences; sanctions imposed for ML compared with those for other predicate offences).*

b) Examples of Specific Factors that could support the conclusions on Core Issues

3. What are the measures taken to identify, initiate and prioritise ML cases (at least in relation to all major proceeds-generating offences) for investigation (*e.g.,* focus between small and larger or complex cases, between domestic and foreign predicates etc.)?

4. To what extent, and how quickly, can competent authorities obtain or access relevant financial intelligence and other information required for ML investigations?

5. To what extent are joint or cooperative investigations (including the use of multi-disciplinary investigative units) and other investigative techniques (*e.g.,* postponing or waiving the arrest or seizure of money for the purpose of identifying persons involved) used in major proceeds generating offences?

6. How are ML cases prepared for timely prosecution and trial?

7. In what circumstances are decisions made not to proceed with prosecutions where there is indicative evidence of a ML offence?

8. To what extent are ML prosecutions: (i) linked to the prosecution of the predicate offence (including foreign predicate offences), or (ii) prosecuted as an autonomous offence?

9. How do the relevant authorities, taking into account the legal systems, interact with each other throughout the life-cycle of a ML case, from the initiation of an investigation, through gathering of evidence, referral to prosecutors and the decision to go to trial?

10. Are there other aspects of the investigative, prosecutorial or judicial process that impede or hinder ML prosecutions and sanctions?

11. Do the competent authorities have adequate resources (including financial investigation tools) to manage their work or address the ML risks adequately?

12. Are dedicated staff/units in place to investigate ML? Where resources are shared, how are ML investigations prioritised?

Immediate Outcome 8	Proceeds and instrumentalities of crime are confiscated.

Characteristics of an effective system

Criminals are deprived (through timely use of provisional and confiscation measures) of the proceeds and instrumentalities of their crimes (both domestic and foreign) or of property of an equivalent value. Confiscation includes proceeds recovered through criminal, civil or administrative processes; confiscation arising from false cross-border disclosures or declarations; and restitution to victims (through court proceedings). The country manages seized or confiscated assets, and repatriates or shares confiscated assets with other countries. Ultimately, this makes crime unprofitable and reduces both predicate crimes and money laundering.

This outcome relates primarily to Recommendations 1, 4, 32 and also elements of Recommendations 15, 30, 31, 37, 38, and 40.

Note to Assessors:

Assessors should also consider the relevant findings on the level of international co-operation which competent authorities are participating in when assessing this Immediate Outcome. This would involve considering the extent which law enforcement and prosecutorial agencies are seeking appropriate assistance from their foreign counterparts in relation to cross-border proceeds and instrumentalities of crime.

Core Issues to be considered in determining if the Outcome is being achieved

8.1. To what extent is confiscation of criminal proceeds, instrumentalities and property of equivalent value pursued as a policy objective?

8.2. How well are the competent authorities confiscating[101] (including repatriation, sharing and restitution) the proceeds and instrumentalities of crime, and property of an equivalent value, involving domestic and foreign predicate offences and proceeds which have been moved to other countries?

8.3. To what extent is confiscation regarding falsely / not declared or disclosed cross-border movements of currency and bearer negotiable instruments being addressed and applied as

[101] For the purposes of assessing the effectiveness of IO.8, full credit should be given for relevant use of the tax system, namely amounts recovered using tax assessment procedures that relate to the proceeds and instrumentalities of crime. The assessed country should ensure that any data provided is limited to tax recoveries that are linked to criminal proceeds/instrumentalities, or the figures should be appropriately caveated.

an effective, proportionate and dissuasive sanction by border/custom or other relevant authorities?

8.4. How well do the confiscation results reflect the assessments(s) of ML/TF risks and national AML/CFT policies and priorities?

a) Examples of Information that could support the conclusions on Core Issues

1. Experiences and examples of confiscation proceedings (e.g., *the most significant cases in the past; types of confiscation orders obtained by the country; trends indicating changes in methods by which proceeds of crime is being laundered).*

2. Information on confiscation (e.g., *number of criminal cases where confiscation is pursued; type of cases which involve confiscation; value of proceeds of crimes, instrumentalities or property of equivalent value confiscated, broken down by foreign or domestic offences, whether through criminal or civil procedures (including non-conviction-based confiscation); value of falsely / not declared or disclosed cross-border currency and bearer negotiable instruments confiscated; value or proportion of seized or frozen proceeds that is subject to confiscation; value or proportion of confiscation orders realised*).

3. Other relevant information (*e.g. value of criminal assets seized / frozen*; *amount of proceeds of crime restituted to victims, shared or repatriated).*

b) Examples of Specific Factors that could support the conclusions on Core Issues

4. What are the measures and approach adopted by competent authorities to target proceeds and instrumentalities of crime (including major proceeds-generating crimes and those that do not originate domestically or have flowed overseas)?

5. How do authorities decide, at the outset of a criminal investigation, to commence a financial investigation, with a view to confiscation?

6. How well are competent authorities identifying and tracing proceeds and instrumentalities of crimes or assets of equivalent value? How well are provisional measures (*e.g.,* freeze or seizures) used to prevent the flight or dissipation of assets?

7. What is the approach adopted by the country to detect and confiscate cross-border currency and bearer negotiable instruments that are suspected to relate to ML/TF and associated predicate offences or that are falsely / not declared or disclosed?

8. What are the measures adopted to preserve and manage the value of seized/confiscated assets?

9. Are there other aspects of the investigative, prosecutorial or judicial process that promote or hinder the identification, tracing and confiscation of proceeds and instrumentalities of crime or assets of equivalent value?

10. Do the relevant competent authorities have adequate resources to perform their functions adequately?

Immediate Outcome 9	Terrorist financing offences and activities are investigated and persons who finance terrorism are prosecuted and subject to effective, proportionate and dissuasive sanctions.

Characteristics of an effective system

Terrorist financing activities are investigated; offenders are successfully prosecuted; and courts apply effective, proportionate and dissuasive sanctions to those convicted. When appropriate, terrorist financing is pursued as a distinct criminal activity and financial investigations are conducted to support counter terrorism investigations, with good co-ordination between relevant authorities. The components of the system (investigation, prosecution, conviction and sanctions) are functioning coherently to mitigate the terrorist financing risks. Ultimately, the prospect of detection, conviction and punishment deters terrorist financing activities.

This outcome relates primarily to Recommendations 5, 30, 31 and 39, and also elements of Recommendations 1, 2, 15, 32, 37 and 40.

Note to Assessors:

1) Assessors should be aware that some elements of this outcome may involve material of a sensitive nature (*e.g.,* information that is gathered for national security purposes) which countries may be reluctant or not able to make available to assessors.

2) Assessors should also consider the relevant findings on the level of international co-operation which competent authorities are participating in when assessing this Immediate Outcome. This would involve considering the extent which law enforcement and prosecutorial agencies are seeking appropriate assistance from their foreign counterparts in cross-border terrorist financing cases.

Core Issues to be considered in determining if the Outcome is being achieved

9.1. To what extent are the different types of TF activity (*e.g.,* collection, movement and use of funds or other assets) prosecuted and offenders convicted? Is this consistent with the country's TF risk profile?

9.2. How well are cases of TF identified, and investigated? To what extent do the investigations identify the specific role played by the terrorist financier?

9.3. To what extent is the investigation of TF integrated with, and used to support, national counter-terrorism strategies and investigations (*e.g.,* identification and designation of terrorists, terrorist organisations and terrorist support networks)?

9.4. To what extent are the sanctions or measures applied against natural and legal persons convicted of TF offences effective, proportionate and dissuasive?

9.5. To what extent is the objective of the outcome achieved by employing other criminal justice, regulatory or other measures to disrupt TF activities where it is not practicable to secure a TF conviction?

a) Examples of Information that could support the conclusions on Core Issues

1. Experiences and examples of TF investigations and prosecutions (e.g., *cases where TF investigations are used to support counter-terrorism investigations and prosecutions; significant cases where (foreign or domestic) terrorists and terrorist groups are targeted, prosecuted or disrupted; observed trends in TF levels and techniques; cases where other criminal sanctions or measures are pursued instead of TF convictions).*

2. Information on TF investigations, prosecutions and convictions (e.g., *number of TF investigations and prosecutions; proportion of cases leading to TF prosecution, type of TF prosecutions and convictions (*e.g., *distinct offences, foreign or domestic terrorists, financing of the travel of foreign terrorist fighters); level of sanctions imposed for TF offences; sanctions imposed for TF compared with those for other criminal activity; types and level of disruptive measures applied*).

b) Examples of Specific Factors that could support the conclusions on Core Issues

3. What are the measures taken to identify, initiate and prioritise TF cases to ensure prompt investigation and action against major threats and to maximise disruption?

4. To what extent and how quickly can competent authorities obtain and access relevant financial intelligence and other information required for TF investigations and prosecutions?

5. What are the underlying considerations for decisions made not to proceed with prosecutions for a TF offence?

6. To what extent do the authorities apply specific action plans or strategies to deal with particular TF threats and trends? Is this consistent with the national AML/CFT policies, strategies and risks?

7. How well do law enforcement authorities, the FIU, counter-terrorism units and other security and intelligence agencies co-operate and co-ordinate their respective tasks associated with this outcome?

8. Are there other aspects of the investigative, prosecutorial or judicial process that impede or hinder TF prosecutions, sanctions or disruption?

9. Do the competent authorities have adequate resources (including financial investigation tools) to manage their work or address the TF risks adequately?

10. Are dedicated staff/units in place to investigate TF? Where resources are shared, how are TF investigations prioritised?

Immediate Outcome 10	Terrorists, terrorist organisations and terrorist financiers are prevented from raising, moving and using funds, and from abusing the NPO sector.

Characteristics of an effective system

Terrorists, terrorist organisations and terrorist support networks are identified and deprived of the resources and means to finance or support terrorist activities and organisations. This includes proper implementation of targeted financial sanctions against persons and entities designated by the United Nations Security Council and under applicable national or regional sanctions regimes. The country also has a good understanding of the terrorist financing risks and takes appropriate and proportionate actions to mitigate those risks, including measures that prevent the raising and moving of funds through entities or methods which are at greatest risk of being misused by terrorists. Ultimately, this reduces terrorist financing flows, which would prevent terrorist acts.

This outcome relates primarily to Recommendations 1, 4, 6 and 8, and also elements of Recommendations 14, 15, 16, 30 to 32, 37, 38 and 40.

Note to Assessors:

Assessors should also consider the relevant findings on the level of international co-operation which competent authorities are participating in when assessing this Immediate Outcome.

Core Issues to be considered in determining if the Outcome is being achieved

10.1. How well is the country implementing targeted financial sanctions pursuant to (i) UNSCR1267 and its successor resolutions, and (ii) UNSCR1373 (at the supra-national or national level, whether on the country's own motion or after examination, to give effect to the request of another country)?

10.2. To what extent, without disrupting or discouraging legitimate NPO activities, has the country applied focused and proportionate measures to such NPOs which the country has identified as being vulnerable to terrorist financing abuse, in line with the risk-based approach?

10.3. To what extent are terrorists, terrorist organisations and terrorist financiers deprived (whether through criminal, civil or administrative processes) of assets and instrumentalities related to TF activities?

10.4. To what extent are the above measures consistent with the overall TF risk profile?

a) Examples of Information that could support the conclusions on Core Issues

1. Experiences of law enforcement, FIU and counter terrorism authorities (e.g., *trends indicating that terrorist financiers are researching alternative methods for raising / transmitting funds;*

intelligence/source reporting indicating that terrorist organisations are having difficulty raising funds in the country).

2. Examples of interventions and confiscation (e.g., *significant cases where terrorists, terrorist organisations or terrorist financiers are prevented from raising, moving and using funds or their assets seized / confiscated; investigations and interventions in NPOs misused by terrorists).*

3. Information on targeted financial sanctions (e.g., *persons and accounts subject to targeted financial sanctions under UNSC or other designations; designations made (relating to UNSCR1373); assets frozen; transactions rejected; time taken to designate individuals; time taken to implement asset freeze following designation*).

4. Information on sustained outreach and targeted risk-based supervision and monitoring of NPOs that the country has identified as being at risk of terrorist financing abuse (*e.g. frequency of review and monitoring of such NPOs (including risk assessments); frequency of engagement and outreach (including guidance) to NPOs regarding CFT measures and trends; remedial measures and sanctions taken against NPOs*).

b) Examples of Specific Factors that could support the conclusions on Core Issues

5. What measures has the country adopted to ensure the proper implementation of targeted financial sanctions without delay? How are those designations and obligations communicated to financial institutions, DNFBPs, VASPs and the general public in a timely manner?

6. How well are the procedures and mechanisms implemented for (i) identifying targets for designation / listing, (ii) freezing / unfreezing, (iii) de-listing, and (iv) granting exemption? How well is the relevant information collected?

7. To what extent is the country utilising the tools provided by UNSCRs 1267 and 1373 to freeze and prevent the financial flows of terrorists?

8. How well do the systems for approving or licensing the use of assets by designated entities for authorised purposes comply with the requirements set out in the relevant UNSCRs (*e.g.,* UNSCR 1452 and any successor resolutions)?

9. What is the approach adopted by competent authorities to target terrorist assets? To what extent are assets tracing, financial investigations and provisional measures (*e.g.,* freezing and seizing) used to complement the approach?

10. To what extent are all four of the following elements being used to identify, prevent and combat terrorist financing abuse of NPOs: (a) sustained outreach, (b) targeted risk-based supervision or monitoring, (c) effective investigation and information gathering, and (d) effective mechanisms for international cooperation. To what extent are the measures being applied focused and proportionate and in line with the risk-based approach such that NPOs are protected from terrorist financing abuse and legitimate charitable activities are not disrupted or discouraged?

11. To what extent are appropriate investigative, criminal, civil or administrative actions, co-operation and coordination mechanisms applied to NPOs suspected of being exploited by, or

actively supporting terrorist activity or terrorist organisations? Do the appropriate authorities have adequate resources to perform their outreach / supervision / monitoring / investigation duties effectively?

12. How well do NPOs understand their vulnerabilities and comply with the measures to protect themselves from the threat of terrorist abuse?

13. Are there other aspects of the investigative, prosecutorial or judicial process that promote or hinder the identification, tracing and deprivation of assets and instrumentalities related to terrorists, terrorist organisations or terrorist financiers?

14. Do the relevant competent authorities have adequate resources to manage their work or address the terrorist financing risks adequately

15. Where resources are shared, how are terrorist financing related activities prioritised?

Immediate Outcome 11	Persons and entities involved in the proliferation of weapons of mass destruction are prevented from raising, moving and using funds, consistent with the relevant UNSCRs.

Characteristics of an effective system

Persons and entities designated by the United Nations Security Council Resolutions (UNSCRs) on proliferation of weapons of mass destruction (WMD) are identified, deprived of resources, and prevented from raising, moving, and using funds or other assets for the financing of proliferation. Targeted financial sanctions are fully and properly implemented without delay; monitored for compliance and there is adequate co-operation and co-ordination between the relevant authorities to prevent sanctions from being evaded, and to develop and implement policies and activities to combat the financing of proliferation of WMD.

This outcome relates to Recommendation 7 and elements of Recommendations 2 and 15.

Core Issues to be considered in determining if the Outcome is being achieved

11.1. How well is the country implementing, without delay, targeted financial sanctions concerning the UNSCRs relating to the combating of financing of proliferation?

11.2. To what extent are the funds or other assets of designated persons and entities (and those acting on their behalf or at their direction) identified and such persons and entities prevented from operating or from executing financial transactions related to proliferation?

11.3. To what extent do financial institutions, DNFBPs and VASPs comply with, and understand their obligations regarding targeted financial sanctions relating to financing of proliferation?

11.4. How well are relevant competent authorities monitoring and ensuring compliance by financial institutions, DNFBPs and VASPs with their obligations regarding targeted financial sanctions relating to financing of proliferation?

a) Examples of Information that could support the conclusions on Core Issues

1. Examples of investigations and intervention relating to financing of proliferation (e.g., *investigations into breaches of sanctions; significant cases in which country has taken enforcement actions (*e.g., *freezing or seizures) or provided assistance).*

2. Information on targeted financial sanctions relating to financing of proliferation (e.g., *accounts of individuals and entities subject to targeted financial sanctions; value of frozen assets and property; time taken to designate persons and entities; time taken to freeze assets and property of individuals and entities following their designation by the UNSC*).

3. Monitoring and other relevant information relating to financing of proliferation (*e.g., frequency of review and monitoring of financial institutions, DNFBPs and VASPs for compliance with targeted financial sanctions; frequency of engagement and outreach; guidance documents; level of sanctions applied on financial institutions, DNFBPs* and VASPs *for breaches*).

b) Examples of Specific Factors that could support the conclusions on Core Issues

4. What measures has the country adopted to ensure the proper implementation of targeted financial sanctions relating to financing of proliferation without delay? How are these designations and obligations communicated to relevant sectors in a timely manner?

5. Where relevant, how well are the procedures implemented for (i) designation / listing, (ii) freezing / unfreezing, (iii) de-listing, and (iv) granting exemption? To what extent do they comply with the UNSCR requirements?

6. How well do the systems and mechanisms for managing frozen assets and licensing the use of assets by designated individuals and entities for authorised purposes, safeguard human rights and prevent the misuse of funds?

7. What mechanisms are used to prevent the evasion of sanctions? Do relevant competent authorities provide financial institutions, DNFBPs and VASPs with other guidance or specific feedback?

8. To what extent would the relevant competent authorities be able to obtain accurate basic and beneficial ownership information on legal persons (*e.g.,* front companies), when investigating offences or breaches concerning the UNSCRs relating financing of proliferation?

9. To what extent are the relevant competent authorities exchanging intelligence and other information for investigations of violations and breaches of targeted financial sanctions in relation to financing of proliferation, as per the relevant UNSCRs?

10. Do the relevant competent authorities have adequate resources to manage their work or address the financing of proliferation risks adequately?

ANNEX I

SUPRA-NATIONAL ASSESSMENT

[Annex to be finalised]

ANNEX II

MUTUAL EVALUATION REPORT TEMPLATE

Notes for Assessors:

This template should be used as the basis for preparing Mutual Evaluation Reports (MERs) for evaluations conducted using the FATF's 2013 Methodology. It sets out the structure of the MER, and the information and conclusions which should be included in each section.

The template incorporates guidance to assessors on how the MER should be written, including what information should be included, and the way analysis and conclusions should be presented. This guidance is clearly indicated in grey shaded text (like this section). It should not appear in the final MER. Text which appears in unshaded script (including chapter and section headings and pro-forma paragraphs) should be included in the final report (with any square brackets completed as necessary).

Assessors should note that a completed MER is expected to be 100 pages or less (together with a technical annex of 60 pages or less). There is no predetermined limit to the length of each chapter, and assessors may decide to devote more, or less, attention to any specific issue, as the country's situation requires. Nevertheless, assessors should ensure the MER does not become excessively long, and should be prepared to edit their analysis as necessary. In order to ensure the right balance in the final report, assessors should aim to summarise technical compliance with each Recommendation in one or two paragraphs, totalling a maximum of half a page. Assessors may be very brief on issues where there is little or no substance to report (e.g. a single sentence description of technical compliance would be sufficient for Recommendations rated "compliant").

The Executive Summary is intended to serve as the basis for Plenary discussion of each Mutual Evaluation, and to provide clear conclusions and recommendations for ministers, legislators, and other policymakers in the assessed country. It is therefore important that it does not exceed five pages, and that assessors follow the guidance in that section on the selection and presentation of issues.

Assessors are urged to include statistics and case studies where relevant. These should be provided in the format shown at the end of the template.

EXECUTIVE SUMMARY

1. This report summarises the AML/CFT measures in place in [name of assessed country] as at the date of the on-site visit [date]. It analyses the level of compliance with the FATF 40 Recommendations and the level of effectiveness of [country]'s AML/CFT system, and provides recommendations on how the system could be strengthened.

Key Findings

a)

b) Assessors should provide a short summary of the key findings, both positive and negative, taking into account the country's risk profile and AML/CFT regime. The focus should be on 5-7 points raised in the report rather than a summary of each and every single IO or chapter.

Risks and General Situation

2.

3. This section should give a brief summary (1-2 paragraphs) of the country's ML/TF risk situation and context – focusing in particular on the country's exposure to domestic and international ML/TF risks, and identifying the issues and sectors that present the greatest risks. Assessors should note any areas where they have identified material risks which were not considered in the country's own risk assessment, or where they consider the level of risk to be significantly different.

Overall Level of Compliance and Effectiveness

4.

5. Assessors should give a very brief overview of the AML/CFT situation in the country, based on the level of both compliance and effectiveness.

6. In the sections below, assessors should briefly summarise, the overall level of effectiveness of the country's AML/CFT system in each thematic area as well as the overall level of technical compliance with the FATF Recommendations, noting any areas of particular strength or weakness. Assessors should also note the progress since the last MER, highlighting any significant changes and flagging any key issues that remain outstanding from the previous assessment.

Assessment of risk, coordination and policy setting (Chapter 2; IO.1, R.1, 2, 33 & 34)

7.

8. Assessors should set out their main findings in more details and for each chapter of the main report as structured in sub-sections below. Any relevant factors of importance would need to be highlighted such as high-risk or significant contextual or other issues for the country; areas where the country performs particularly well both on effectiveness and technical compliance, highlighting unusual or innovative mechanisms; significant failures of effectiveness; and important areas of technical

non-compliance. Each section should contain a brief summary of the assessor's conclusions on the overall level of compliance and effectiveness – including highlighting key findings for each relevant IOs- and any actions required. The description should include sufficient detail for readers to understand assessors' conclusions and the main issues/positive features. However, it should not include a full analysis, and should not defend assessors' conclusions or anticipate and rebut objections. Any additional information should be set out in the main body of the report, rather than in the executive summary.

Financial intelligence, ML investigations, prosecutions and confiscation (Chapter 3; IO.6, 7, 8; R.1, 3, 4, 29–32)

9.

Terrorist and proliferation financing (Chapter 4; IO.9, 10, 11; R. 1, 4, 5–8, 30, 31 & 39.)

10.

Preventive measures (Chapter 5; IO.4; R.9–23)

11.

Supervision (Chapter 6; IO.3; R.14, R.26–28, 34, 35)

12.

Transparency and beneficial ownership (Chapter 7; IO.5; R.24, 25)

13.

International cooperation (Chapter 8; IO.2; R.36–40)

14.

Priority Actions

a)

b)

The report should set out a series of priority actions that the country should take:

Assessors should set out the priority actions which the country should take to improve its AML/CFT system. This can include measures to improve effectiveness; to address technical compliance problems; or to tackle structural or cross-cutting issues.

Assessors should indicate briefly what action is required and the reason why it should be prioritised (e.g. that it is a fundamental building block of the AML/CFT system).

The actions identified will normally correspond to the issues set out in the key findings section above – but need not always do so, e.g. if assessors identify scope for a single action to address a number of deficiencies which are not included in the key findings.

The priority actions should normally take up one page or less.

If assessors identify actions which offer the opportunity to make a significant improvement quickly or at a relatively low cost, these should also be highlighted in this section

Effectiveness & Technical Compliance Ratings

Table 1. Effectiveness Ratings

IO.1	IO.2	IO.3	IO.4	IO.5	IO.6	IO.7	IO.8	IO.9	IO.10	IO.11

Note: Effectiveness ratings can be either a High- HE, Substantial- SE, Moderate- ME, or Low – LE, level of effectiveness.

Table 2. Technical Compliance Ratings

R.1	R.2	R.3	R.4	R.5	R.6	R.7	R.8	R.9	R.10
R.11	**R.12**	**R.13**	**R.14**	**R.15**	**R.16**	**R.17**	**R.18**	**R.19**	**R.20**
R.21	**R.22**	**R.23**	**R.24**	**R.25**	**R.26**	**R.27**	**R.28**	**R.29**	**R.30**
R.31	**R.32**	**R.33**	**R.34**	**R.35**	**R.36**	**R.37**	**R.38**	**R.39**	**R.40**

Note: Technical compliance ratings can be either a C – compliant, LC – largely compliant, PC – partially compliant or NC – non compliant.

MUTUAL EVALUATION REPORT

Preface

This report summarises the AML/CFT measures in place as at the date of the on-site visit. It analyses the level of compliance with the FATF 40 Recommendations and the level of effectiveness of theAML/CFT system, and recommends how the system could be strengthened.

This evaluation was based on the 2012 FATF Recommendations, and was prepared using the 2013 Methodology. The evaluation was based on information provided by the country, and information obtained by the evaluation team during its on-site visit to the country from [dates].

The evaluation was conducted by an assessment team consisting of: [list names and agencies of examiners and their role *e.g.* legal expert] with the support from the FATF Secretariat of [list names from the FATF Secretariat]. The report was reviewed by [list names of reviewers].

[Country] previously underwent a FATF Mutual Evaluation in [year], conducted according to the 2004 FATF Methodology. The [date] evaluation [*and [date] follow-up report*] has been published and is available at [web address].

That Mutual Evaluation concluded that the country was compliant with [...] Recommendations; largely compliant with [...]; partially compliant with [...]; and non-compliant with [...]. [Country] was rated compliant or largely compliant with ... of the 16 Core and Key Recommendations.

[Note the country's status in the follow-up process – including whether and when the country entered and exited follow-up, and the basis on which this was done (*i.e.* LC with all Core and Key Recommendations, or with outstanding issues). Assessors should note any core or key Recommendations which are not yet considered equivalent to an LC.]

CHAPTER 1. ML/TF RISKS AND CONTEXT

15.

16. This section should begin with a very brief description of the country's general situation: its size, territorial makeup, population, GDP, and constitutional structure.

17. This section should note any territorial or jurisdictional issues affecting the evaluation, (*e.g.* if the MER includes assessment of territories or regions with different AML/CFT regimes, or if the country is part of a supranational jurisdiction).

18. For any of the information contained in sub-sections 1.1-1.4, assessors should provide a balanced picture where possible thus covering, for example, higher risk or lower risk areas, strengths and weaknesses.

1.1 ML/TF Risks and Scoping of Higher-Risk Issues

1.1.1 Overview of ML/TF Risks

19.

20. This section should set out the ML and TF threats and risks faced by the country. It should include the main underlying threats, drawing on the country's risk assessment and on other relevant information, as set out in the introduction to the methodology. Particular points to cover include:

- the underlying levels of proceeds generating crime in the country, and its nature;
- the country's exposure to cross-border illicit flows (related to crimes in other countries) – including any significant potential role as a transit route for illicit goods or funds;
- any available information on the country's exposure to terrorist financing threats (including the existence of terrorist groups active in the country; or the use of the country as a source of funds or recruits for terrorist groups active in other countries) and financing of proliferation; and
- the ML/TF risks, taking into account vulnerabilities (including vulnerabilities posed by virtual asset activity) and consequences.

1.1.2 Country's risk assessment & Scoping of Higher Risk Issues

21.

22. The above should be framed in the context of the country's understanding and assessment of its own risks. Assessors should set out the arrangements for the preparation of the National Risk Assessment(s), including how the risk assessment(s) was commissioned, how it is structured (e.g. as a single assessment or on the basis of regional/sectoral assessments), how it was prepared and the type of information used in conducting the risk assessment(s), as well as assessors' conclusions on the adequacy of the process. Assessors should set out their views regarding the reasonableness of the conclusions of the assessment(s), as well as any points on which they consider the conclusions were not reasonable, and any additional risks or risk factors which they consider significant, but which were not adequately taken into account in the assessment. If assessors identify such additional risks, they should note

the basis for their judgement, and the credible or reliable sources of information supporting this. In addition assessors should summarise the scoping exercise conducted prior to the onsite in order to identify higher and lower risk issues to be considered in more detail in the course of the assessment. This should include setting out the reasons why they consider each issue to be higher or lower risk, and noting how additional attention was given to these issues in the course of the evaluation.

1.2 Materiality

23.

24. This section should set out the size and general makeup of the economy, and of the financial sector, DNFBP and VASP sectors. It should note the relative importance of different types of financial institution, DNFBP and VASP and their activity, the international role of the country's financial, DNFBP and VASP sectors (*e.g.* if the country is a regional financial centre, an international financial centre, a centre for company formation and registration), and highlight particularly significant features of the country's financial, DNFBP and VASP sectors. This section should also note any other significant factors affecting materiality, as set out in paragraph 8 of the introduction to the Methodology. It should be a brief summary.

1.3 Structural Elements

25.

26. Assessors should note whether the main structural elements required for an effective AML/CFT system are present in the country (as set out in paragraph 9 of the introduction to the Methodology).

27. If there are serious concerns that any of the structural elements which underpin an effective AML/CFT system is weak or absent, assessors should highlight those concerns in this section. Note that assessors are not expected to reach a general conclusion about the extent to which such factors are present.

1.4 Background and other Contextual Factors

28.

29. Assessors should note domestic and international contextual factors that might significantly influence the effectiveness of the country's AML/CFT measures. This could include such factors as the maturity and sophistication of the AML/CFT regime and the institutions which implement it, or issues of corruption or financial exclusion. All other background information necessary for the understanding of the effectiveness analysis in the main chapters of the report should be incorporated here as well including the following:

1.4.1 AML/CFT strategy

30.

31. This section should set out the main policies and objectives of the Government for combating money laundering and terrorist financing. It should describe the government's priorities and objectives in these areas, noting where there are also

wider policy objectives (such as financial inclusion) which affect the AML/CFT strategy. Any relevant policies and objectives for combating the financing of proliferation should also be set out in this section.

1.4.2. Legal & institutional framework

32.

33. Assessors should give a brief overview of which ministries, agencies, and authorities are responsible for formulating and implementing the government's AML/CFT and proliferation financing policies. Assessors should briefly describe the principal role and responsibilities of each body involved in the AML/CFT strategy, as well as noting the bodies responsible for combating the financing of proliferation. Assessors should indicate any significant changes since the last MER to the institutional framework, including the rationale for those changes. This section should also set out the country's legal framework for AML/CFT and proliferation financing in a brief summary form. Detailed description and analysis of each element is not necessary – this should be included in the technical annex. Assessors should describe the co-operation and coordination mechanisms used by the country to assist the development of AML/CFT policies, and policies for combating the financing of proliferation.

1.4.3 Financial sector, DNFBPs and VASPs

34.

35. In this section, assessors should describe the size and makeup of the financial sector, DNFBP and VASP sectors. The section should note the relative importance of different types of financial institutions and activity, DNFBPs and generic types of virtual asset activities and providers primarily being used in the country. It is important that assessors explain their weighting of the relative importance of the different types of financial institutions, DNFBPs and VASPs to ensure consistent weighting throughout the MER, particularly when assessing IO.3 and IO.4. This is important because the risks, materiality and context varies widely from country to country (e.g. in some countries, a particular type of DNFBP such as TCSPs or casinos may be as (or almost as) important as the banking sector which means that weak supervision or weak preventive measures in that sector would be weighted much more heavily in IO.3 and IO.4 than in countries where such sectors are of lesser importance).

36. Assessors may explain how they have weighted the different sectors, in general terms (e.g. by explaining which sectors were weighted most important, highly important, moderately important or less important) rather than trying to rank each sector's prevalence individually (e.g. 1, 2, 3, 4, 5, 6, 7, 8…) which would be overly granular and a rather artificial distinction given the many different types of financial institutions, DNFBPs and VASPs that are subject to the FATF Recommendations.

37. In this section, the assessors should also describe the international role of the country's financial sector – *e.g.* if the country is a regional financial centre, an international financial centre, or a centre for company formation and registration, and should highlight particularly significant or important features of the country's financial, DNFBP and VASP sectors.

38. They should also summarise the types and key features of financial institutions, DNFBPs and VASPs which exist in the country, and the numbers of each type of

institution, as well as some information relating to the materiality of the sector and the institutions within it. Tables may be used in order to summarise the information.

1.4.4 Preventive measures

39.

40. This section should set out the legal (or other enforceable) instruments through which they are applied, and the scope of such obligations. If assessors identify any problems regarding the scope of AML/CFT obligations, they should briefly identify such issues in this section. If countries have exempted specific sectors or activities from the requirements, these exemptions should be noted in this section. Assessors should indicate whether such exemptions meet the criteria set out in R.1, and whether they consider the exemptions justified on the basis of the country's ML/TF risk assessment(s). This section should also note cases where countries have decided, on the basis of risk, to require AML/CFT preventive measures to be applied by additional sectors which are normally outside the scope of the FATF Recommendations.

1.4.5 Legal persons and arrangements

41.

42. Assessors should briefly describe the types of legal persons and legal arrangements that can be established or created in the country and relevant from an AML/CFT perspective. Basic characteristics of these should be provided as well as their numbers and their significance within the country and in financial and DNFBP sectors. Tables may be used in order to summarise the information. As per sub-section (c), the international elements should be covered in particular the extent to which the country acts as an international centre for the creation or administration of legal persons or arrangements (even if only as a source-of-law jurisdiction); and the extent to which legal persons and arrangements created in another jurisdiction (or under the law of another jurisdiction) hold assets or used in the country.

1.4.6 Supervisory arrangements[102]

43.

44. Assessors should set out the institutional arrangements for supervision and oversight of financial institutions, DNFBPs and VASPs, including the roles and responsibilities of regulators, supervisors and SRBs; their general powers and resources. Similarly, this section should also note the institutional framework for legal persons and arrangements, including the authorities (if any) with responsibility for the creation, registration, and supervision of legal persons and arrangements.

1.4.7 International Cooperation

45.

102 Assessors should describe the supervisory arrangements in place for financial institutions, DNFBPs and VASPs.

46. Assessors should briefly summarise the international ML/TF risks and threats faced by the country, including the potential use of the country to launder proceeds of crime in other countries and vice-versa. To the extent possible, assessors should identify the country's most significant international partners with respect to ML/TF issues. This section should also note any institutional framework for international cooperation e.g. a Central Authority for MLA.

CHAPTER 2. NATIONAL AML/CFT POLICIES AND COORDINATION

2.1. Key Findings and Recommended Actions

Key Findings

a)

b) Assessors should briefly summarise their conclusions for this chapter, highlighting the most significant findings. Key findings and key recommended actions should be consistent on the substance without a need to strictly mirror each other.

Recommended Actions

a) This section should set out a targeted and prioritised set of recommendations on how the country should improve its level of effectiveness and its level of compliance with the FATF Recommendations. The section should include assessors' recommendations regarding the Immediate Outcomes and Recommendations covered in this chapter of the MER. Assessors will therefore need to consider a range of Outcomes and Recommendations, and actions aimed at addressing both technical deficiencies and practical issues of implementation or effectiveness, and decide which actions should be prioritised.

b) Assessors should clearly indicate which Recommendation(s) or Outcome(s) each recommended action is intended to address. Assessors should follow the same general approach when making recommendations in other chapters of the MER.

47. The relevant Immediate Outcome considered and assessed in this chapter is IO.1. The Recommendations relevant for the assessment of effectiveness under this section are R.1, 2, 33 and 34, and elements of R.15.

2.2 Immediate Outcome 1 (Risk, Policy and Coordination)

48. This section should set out assessors' analysis of Immediate Outcome 1. The first paragraph(s) should note any general considerations regarding the country's risks and context which affect the assessment.

49. This section should also summarise assessors' general impression of whether the country appears to exhibit the characteristics of an effective system.

50. Assessors should cover each of the Core Issues in their analysis. Assessors have some flexibility about how they organise the analysis in this section. For some immediate

outcomes, it may be appropriate to consider each of the core issues in turn. For others (e.g. I.O.4) it may be better to set out the analysis sector-by-sector; or (e.g. for I.O.7) to proceed step-by-step with the analysis of each element of the process covered by the Outcome. Whichever approach assessors take to organising their analysis, they should ensure that they consider each of the core issues, ***and should highlight any general conclusions they reach on them***. Assessors are required to resort to sub-headings to structure their analysis and clearly sign-post how core issues have been addressed. This does not preclude the use of additional sub-headings where necessary or to indicate that a particular Core Issue is not applicable in a particular country (and why). In the case of IO1, this includes the suggested sub-headings below.

51. Examples of sub-headings for other IOs are provided in this template. Assessors still retain full flexibility to amend and order these as most benefit their analysis and the overall report. Similarly, assessors may add or delete sub-headings as they see fit and in line with the specific circumstances of the assessed country. In all cases sub-headings should be neutral and not provide any qualitative comment as to how the country is performing on a given IO. Assessors should note the main sources of information and evidence used (e.g. the sources noted in sections (a) and (b) of the Immediate Outcome). Assessors are not required to use all the information noted in the methodology – but should set out here the information and evidence which has a material influence on their conclusion. Assessors should also note in their analysis any technical compliance issues which influence the level of effectiveness.

2.2.1 Country's understanding of its ML/TF risks

52.

2.2.2 National policies to address identified ML/TF risks

53.

2.2.3 Exemptions, enhanced and simplified measures

54.

2.2.4 Objectives and activities of competent authorities

55.

2.2.5 National coordination and cooperation

56.

2.2.6 Private sector's awareness of risks

57.

Overall Conclusion on IO.1

58. [Weighting and conclusion]

59. [Evaluated country] is rated as having a [rating] level of effectiveness for IO.1.

60. At the end of this section, assessor***s should indicate the effectiveness rating for the Immediate Outcome***. When deciding on the overall level of effectiveness, assessors should take into account: (a) the core issues, (b) any relevant technical compliance issues/deficiencies; (c) risks and contextual factors; and (d) the level of effectiveness in other Immediate Outcomes that are relevant. Assessors should briefly explain their conclusion on the appropriate effectiveness rating. They should be explicit about the weight and importance they attach to the elements taken into account. The conclusion should not duplicate the Key Findings section at the beginning of each chapter and should be, ideally, not more than one or two paragraphs long.

61. Assessors should follow the same general approach when setting out their analysis of effectiveness for all other outcomes.

The following are templates for tables and case studies for use in this section Chapter. Copy and paste where necessary, or remove.

Table 2.1. <Sample table>

<!!Type the subtitle here. If you do not need a subtitle, please delete this line.!!>

CHAPTER 3. LEGAL SYSTEM AND OPERATIONAL ISSUES

3.1 Key Findings and Recommended Actions

Key Findings

a)

b) Assessors should briefly summarise their conclusions for this chapter, highlighting the most significant findings. Key findings and key recommended actions should be consistent on the substance without a need to strictly mirror each other.

Recommended Actions

a)

b) Assessors should list all the main corrective actions required for the country to improve its level of effectiveness and technical compliance in a targeted and prioritised way. Assessors should clearly indicate which IO/REC the recommended actions relate to.

62. The relevant Immediate Outcomes considered and assessed in this chapter are IO.6-8. The Recommendations relevant for the assessment of effectiveness under this section are R.1, R. 3, R.4 and R.29-32 and elements of R.2, 8, 9, 15, 30, 31, 34, 37, 38, 39 and 40.

3.2 Immediate Outcome 6 (Financial Intelligence ML/TF)

63. This Immediate Outcome relates to both money laundering and the financing of terrorism. Assessors should note any issues which relate specifically to either ML or TF. Sub-headings related to core issues could include:

3.2.1. Use of financial intelligence and other information

64.

3.2.2. STRs received and requested by competent authorities

65.

3.2.3. Operational needs supported by FIU analysis and dissemination

66.

3.2.4. Cooperation and exchange of information/financial intelligence

67.

Overall conclusion on IO.6

68. [Weighting and conclusion: See IO.1 for instructions]

69. **[Evaluated country] is rated as having a [rating] level of effectiveness for IO.6.**

3.3 Immediate Outcome 7 (ML investigation and prosecution)

3.3.1. ML identification and investigation

70.

3.3.2. Consistency of ML investigations and prosecutions with threats and risk profile, and national AML policies

71.

3.3.3. Types of ML cases pursued

72.

3.3.4. Effectiveness, proportionality and dissuasiveness of sanctions

73.

3.3.5. Use of alternative measures

74.

Overall conclusion on IO.7

75. [Weighting and conclusion: See IO.1 for instructions]

76. [Evaluated country] is rated as having a [rating] level of effectiveness for IO.7.

3.4 Immediate Outcome 8 (Confiscation)

3.4.1. Confiscation of proceeds, instrumentalities and property of equivalent value as a policy objective

77.

3.4.2. Confiscation of proceeds from foreign and domestic predicates, and proceeds located abroad

78.

3.4.3. Confiscation of falsely or undeclared cross-border transaction of currency/BNI

79.

3.4.4. Consistency of confiscation results with ML/TF risks and national AML/CFT policies and priorities

80.

Overall conclusion on IO.8

81. [Weighting and conclusion: See IO.1 for instructions]
82. **[Evaluated country] is rated as having a [rating] level of effectiveness for IO.8.**

CHAPTER 4. TERRORIST FINANCING AND FINANCING OF PROLIFERATION

4.1. Key Findings and Recommended Actions

Key Findings

a)

b) Assessors should briefly summarise their conclusions for this chapter, highlighting the most significant findings. Key findings and key recommended actions should be consistent on the substance without a need to strictly mirror each other.

Recommended Actions

a)

b) Assessors should briefly list the main corrective actions required for the country to improve its level of effectiveness and technical compliance. Assessors should clearly indicate which IO/REC the recommended actions relate to.

83. The relevant Immediate Outcomes considered and assessed in this chapter are IO.9-11. The Recommendations relevant for the assessment of effectiveness under this section are R. 1, 4, 5–8, 30, 31 and 39, and elements of R.2, 14, 15, 16, 32, 37, 38 and 40.

4.2. Immediate Outcome 9 (TF investigation and prosecution)

4.2.1. Prosecution/conviction of types of TF activity consistent with the country's risk-profile

84.

4.2.2. TF identification and investigation

85.

4.2.3. TF investigation integrated with –and supportive of- national strategies

86.

4.2.4. Effectiveness, proportionality and dissuasiveness of sanctions

87.

4.2.5. Alternative measures used where TF conviction is not possible (e.g. disruption)

88.

Overall conclusions on IO.9

89. [Weighting and conclusion: See IO.1 for instructions]
90. **[Evaluated country] is rated as having a [rating] level of effectiveness for IO.9.**

4.3. Immediate Outcome 10 (TF preventive measures and financial sanctions)

4.3.1. Implementation of targeted financial sanctions for TF without delay

91.

4.3.2. Targeted approach, outreach and oversight of at-risk non-profit organisations

92.

4.3.3. Deprivation of TF assets and instrumentalities

93.

4.3.4. Consistency of measures with overall TF risk profile

94.

Overall conclusions on IO.10

95. [Weighting and conclusion: See IO.1 for instructions]
96. **[Evaluated country] is rated as having a [rating] level of effectiveness for IO.10**.

4.4. Immediate Outcome 11 (PF financial sanctions)

4.4.1. Implementation of targeted financial sanctions related to proliferation financing without delay

97.

4.4.2. Identification of assets and funds held by designated persons/entities and prohibitions

98.

4.4.3. FIs and DNFBPs' understanding of and compliance with obligations

99.

4.4.4. Competent authorities ensuring and monitoring compliance

100.

Overall conclusion on IO.11

101. [Weighting and conclusion: See IO.1 for instructions]

102. [Evaluated country] is rated as having a [rating] level of effectiveness for IO.11.

The following are templates for tables and case studies for use in this section Chapter. Copy and paste where necessary, or remove.

CHAPTER 5. PREVENTIVE MEASURES

5.1. Key Findings and Recommended Actions

Key Findings

a)

b) Assessors should briefly summarise their conclusions for this chapter, highlighting the most significant findings. Key findings and key recommended actions should be consistent on the substance without a need to strictly mirror each other.

Recommended Actions

a)

b) Assessors should briefly list the main corrective actions required for the country to improve its level of effectiveness and technical compliance. Assessors should clearly indicate which IO/REC the recommended actions relate to.

103. The relevant Immediate Outcome considered and assessed in this chapter is IO.4[103]. The Recommendations relevant for the assessment of effectiveness under this section are R.9-23, and elements of R.1, 6, 15 and 29.

5.2. Immediate Outcome 4 (Preventive Measures) [104]

5.2.1. Understanding of ML/TF risks and AML/CFT obligations

104.

[103] When assessing effectiveness under Immediate Outcome 4, assessors should take into consideration the risk, context and materiality of the country being assessed. Assessors should clearly explain these factors in Chapter One of the mutual evaluation report under the heading of Financial Institutions, DNFBPs and VASPs, as required in the instructions under that heading in the Methodology.

[104] The first paragraph should give a short summary of what relative importance assessors have given to the different types of financial institutions, designated non-financial businesses and professions and VASPs, taking into account the risk, context and materiality of the country being assessed. This should be supplemented by a cross-reference to the more detailed information in Chapter One on how each sector has been weighted (based on risk, context and materiality) (as required in the instructions under that heading in the Methodology).

5.2.2. Application of risk mitigating measures

105.

5.2.3. Application of CDD and record-keeping requirements

106.

5.2.4. Application of EDD measures

107.

5.2.5. Reporting obligations and tipping off

108.

5.2.6. Internal controls and legal/regulatory requirements impending implementation

109.

Overall conclusions on IO.4

110. [Weighting and conclusion]

111. **[Evaluated country] is rated as having a [rating] level of effectiveness for IO.4.**

The following are templates for tables and case studies for use in this section Chapter. Copy and paste where necessary, or remove.

Source: <!!Add the source here. If you do not need a source, please delete this line.!!>

CHAPTER 6. SUPERVISION

6.1. Key Findings and Recommended Actions

Key Findings

a)

b) Assessors should briefly summarise their conclusions for this chapter, highlighting the most significant findings. Key findings and key recommended actions should be consistent on the substance without a need to strictly mirror each other.

Recommended Actions

a)

b) Assessors should briefly list the main corrective actions required for the country to improve its level of effectiveness and technical compliance. Assessors should clearly indicate which IO/REC the recommended actions relate to.

112. The relevant Immediate Outcome considered and assessed in this chapter is IO.3[105]. The Recommendations relevant for the assessment of effectiveness under this section are R.14, 15, 26-28, 34, 35 and elements of R.1 and 40.

6.2. Immediate Outcome 3 (Supervision) [106]

6.2.1. Licensing, registration and controls preventing criminals and associates from entering the market

113.

[105] When assessing effectiveness under Immediate Outcome 3, assessors should take into consideration the risk, context and materiality of the country being assessed. Assessors should clearly explain these factors in Chapter One of the mutual evaluation report under the heading of Financial Institutions, DNFBPs and VASPs, as required in the instructions under that heading in the Methodology.

[106] The first paragraph should give a short summary of what relative importance assessors have given to the different types of financial institutions, designated non-financial businesses and professions and VASPs, taking into account the risk, context and materiality of the country being assessed. This should be supplemented by a cross-reference to the more detailed information in Chapter One on how each sector has been weighted (based on risk, context and materiality) (as required in the instructions under that heading in the Methodology).

6.2.2. Supervisors' understanding and identification of ML/TF risks

114.

6.2.3. Risk-based supervision of compliance with AML/CFT requirements

115.

6.2.4. Remedial actions and effective, proportionate, and dissuasive sanctions

116.

6.2.5. Impact of supervisory actions on compliance

117.

6.2.6. Promoting a clear understanding of AML/CFT obligations and ML/TF risks

118.

Overall conclusion on IO.3

119. [Weighting and conclusion]

120. **[Evaluated country] is rated as having a [rating] level of effectiveness for IO.3.**

The following are templates for tables and case studies for use in this section Chapter. Copy and paste where necessary, or remove.

Source: <!!Add the source here. If you do not need a source, please delete this line.!!>

CHAPTER 7. LEGAL PERSONS AND ARRANGEMENTS

7.1. Key Findings and Recommended Actions

Key Findings

a)

b) Assessors should briefly summarise their conclusions for this chapter, highlighting the most significant findings. Key findings and key recommended actions should be consistent on the substance without a need to strictly mirror each other.

Recommended Actions

a)

b) Assessors should briefly list the main corrective actions required for the country to improve its level of effectiveness and technical compliance. Assessors should clearly indicate which IO/REC the recommended actions relate to.

121. The relevant Immediate Outcome considered and assessed in this chapter is IO.5. The Recommendations relevant for the assessment of effectiveness under this section are R.24-25, and elements of R.1, 10, 37 and 40.[107]

7.2. Immediate Outcome 5 (Legal Persons and Arrangements)

7.2.1. Public availability of information on the creation and types of legal persons and arrangements

122.

7.2.2. Identification, assessment and understanding of ML/TF risks and vulnerabilities of legal entities

123.

[107] The availability of accurate and up-to-date basic and beneficial ownership information is also assessed by the OECD Global Forum on Transparency and Exchange of Information for Tax Purposes. In some cases, the findings may differ due to differences in the FATF and Global Forum's respective methodologies, objectives and scope of the standards.

7.2.3. Mitigating measures to prevent the misuse of legal persons and arrangements

124.

7.2.4. Timely access to adequate, accurate and current basic and beneficial ownership information on legal persons

125.

7.2.5. Timely access to adequate, accurate and current basic and beneficial ownership information on legal arrangements

126.

7.2.6. Effectiveness, proportionality and dissuasiveness of sanctions

127.

Overall conclusion on IO.5

128. [Weighting and conclusion: See IO.1 for instructions]

129. **[Evaluated country] is rated as having a [rating] level of effectiveness for IO.5.**

The following are templates for tables and case studies for use in this section Chapter. Copy and paste where necessary, or remove.

CHAPTER 8. INTERNATIONAL COOPERATION

8.1. Key Findings and Recommended Actions

Key Findings

a)

b) Assessors should briefly summarise their conclusions for this chapter, highlighting the most significant findings. Key findings and key recommended actions should be consistent on the substance without a need to strictly mirror each other.

Recommended Actions

a)

b) Assessors should briefly list the main corrective actions required for the country to improve its level of effectiveness and technical compliance. Assessors should clearly indicate which IO/REC the recommended actions relate to.

130. The relevant Immediate Outcome considered and assessed in this chapter is IO.2. The Recommendations relevant for the assessment of effectiveness under this section are R.36-40 and elements of R.9, 15, 24, 25 and 32.

8.2. Immediate Outcome 2 (International Cooperation)

8.2.1. Providing constructive and timely MLA and extradition

131.

8.2.2. Seeking timely legal assistance to pursue domestic ML, associated predicates and TF cases with transnational elements

132.

8.2.3. Seeking other forms of international cooperation for AML/CFT purposes

133.

8.2.4. Providing other forms international cooperation for AML/CFT purposes

134.

8.2.5. International exchange of basic and beneficial ownership information of legal persons and arrangements

135.

Overall conclusions on IO.2

136. [Weighting and conclusion: See IO.1 for instructions]

137. **[Evaluated country] is rated as having a [rating] level of effectiveness for IO.2.**

The following are templates for tables and case studies for use in this section Chapter. Copy and paste where necessary, or remove.

ANNEX A. TECHNICAL COMPLIANCE ANNEX

1. This section provides detailed analysis of the level of compliance with the FATF 40 Recommendations in their numerical order. It does not include descriptive text on the country situation or risks, and is limited to the analysis of technical criteria for each Recommendation. It should be read in conjunction with the Mutual Evaluation Report.
2. Where both the FATF requirements and national laws or regulations remain the same, this report refers to analysis conducted as part of the previous Mutual Evaluation in [date]. This report is available from [link].

Recommendation 1 – Assessing risks and applying a risk-based approach

For each Recommendation, an opening paragraph should set out the issues on which new analysis is needed, and the issues where earlier analysis will be referred-to. This should include:

- the rating given in the previous MER, where applicable, and the main deficiencies identified;
- any conclusions reached in the follow-up process about whether the country has addressed its deficiencies;
- new FATF requirements, relative to the 2004 methodology; and
- the main changes to the relevant laws, regulations, and other elements in the country.

Criterion 1.1 – (Met / Mostly met / Partly met / Not met)

Each of the criteria should be reviewed, normally in a single paragraph.

If one or more criteria have been considered previously and the relevant laws, enforceable means, or other elements are unchanged, assessors should not repeat the previous analysis. Instead, they should summarise the conclusions, and include a reference to the report where the detailed analysis is set out (including paragraph numbers). Such references should only be made to MERs, FSAPs, or exit-from-follow-up reports which are publicly available; were analysed, considered, and adopted by an assessment body; and if assessors consider the analysis and conclusion were correct.

For each criterion, and prior to the narrative, the assessment team should set out in parenthesis whether the country is meeting FATF requirements. These sub-ratings will ultimately be removed before publication but will guide discussions ahead of and during the Plenary.

Criterion 1.2 – (Met / Mostly met / Partly met / Not met)

Assessors should include only their analysis of whether the criterion is met. General descriptions of the country's situation, context, or of the legal and institutional framework should be included in the main report, and not in this annex (though assessors may cross-reference any relevant points in the main report).

Assessors have flexibility to devote more space to their analysis where necessary, particularly to complex criteria or criteria which apply to a number of different sectors. In such cases, it may be helpful to set out their analysis in the form of a table. However, assessors should remember that the overall length of this technical annex should normally be limited to a maximum of 60 pages.

Weighting and Conclusion

Assessors should set out their conclusion on the appropriate technical compliance rating, and the reasoning for this. They should be explicit about the importance they attach to each of the criteria (including with reference to the country's risk and context, as set out in the main MER). **The rating should be stated in bold at the end of the paragraph.**

Recommendation 2 - National Cooperation and Coordination

Criterion 2.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 3 - Money laundering offence

Criterion 3.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 4 - Confiscation and provisional measures

Criterion 4.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 5 - Terrorist financing offence

Criterion 5.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 6 - Targeted financial sanctions related to terrorism and terrorist financing

Criterion 6.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 7 – Targeted financial sanctions related to proliferation

Criterion 7.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 8 – Non-profit organisations

Criterion 8.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 9 – Financial institution secrecy laws

Criterion 9.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 10 – Customer due diligence

Criterion 10.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 11 – Record-keeping

Criterion 11.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 12 – Politically exposed persons

Criterion 12.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 13 – Correspondent banking

Criterion 13.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 14 – Money or value transfer services

Criterion 14.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 15 – New technologies

Criterion 15.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 16 – Wire transfers

Criterion 16.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 17 – Reliance on third parties

Criterion 17.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 18 – Internal controls and foreign branches and subsidiaries

Criterion 18.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 19 – Higher-risk countries

Criterion 19.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 20 – Reporting of suspicious transaction

Criterion 20.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 21 – Tipping-off and confidentiality

Criterion 21.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 22 – DNFBPs: Customer due diligence

Criterion 22.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 23 – DNFBPs: Other measures

Criterion 23.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 24 – Transparency and beneficial ownership of legal persons

Criterion 24.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 25 – Transparency and beneficial ownership of legal arrangements

Criterion 25.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 26 – Regulation and supervision of financial institutions

Criterion 26.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 27 – Powers of supervisors

Criterion 27.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 28 – Regulation and supervision of DNFBPs

Criterion 28.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 29 - Financial intelligence units

Criterion 29.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 30 – Responsibilities of law enforcement and investigative authorities

Criterion 30.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 31 - Powers of law enforcement and investigative authorities

Criterion 31.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 32 – Cash Couriers

Criterion 32.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 33 – Statistics

Criterion 33.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 34 – Guidance and feedback

Criterion 34.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 35 – Sanctions

Criterion 35.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 36 – International instruments

Criterion 36.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 37 - Mutual legal assistance

Criterion 37.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 38 – Mutual legal assistance: freezing and confiscation

Criterion 38.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 39 – Extradition

Criterion 39.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

Recommendation 40 – Other forms of international cooperation

Criterion 40.1 – (Met / Mostly met / Partly met / Not met)

Weighting and Conclusion

LEGAL BASIS OF REQUIREMENTS ON FINANCIAL INSTITUTIONS AND DNFBPS AND VASPS

1. All requirements for financial institutions, DNFBPs or VASPs should be introduced either (a) in law (see the specific requirements in Recommendations 10, 11 and 20 in this regard), or (b) for all other cases, in law or enforceable means (the country has discretion).

2. In Recommendations 10, 11 and 20, the term "*law*" refers to any legislation issued or approved through a Parliamentary process or other equivalent means provided for under the country's constitutional framework, which imposes mandatory requirements with sanctions for non-compliance. The sanctions for non-compliance should be effective, proportionate and dissuasive (see Recommendation 35). The notion of law also encompasses judicial decisions that impose relevant requirements, and which are binding and authoritative in all parts of the country.

3. The term "*Enforceable means*" refers to regulations, guidelines, instructions or other documents or mechanisms that set out enforceable AML/CFT requirements in mandatory language with sanctions for non-compliance, and which are issued or approved by a competent authority. The sanctions for non-compliance should be effective, proportionate and dissuasive (see Recommendation 35).

4. In considering whether a document or mechanism has requirements that amount to *enforceable means*, the following factors should be taken into account:

   (a) There must be a document or mechanism that sets out or underpins requirements addressing the issues in the FATF Recommendations, and providing clearly stated requirements which are understood as such. For example:

      (i) if particular measures use the word *shall* or *must*, this should be considered mandatory;

      (ii) if they use *should*, this could be mandatory if both the regulator and the regulated institutions demonstrate that the actions are directly or indirectly required and are being implemented; language such as measures *are encouraged*, *are recommended* or institutions *should consider* is less likely to be regarded as mandatory. In any case where weaker language is used, there is a presumption that the language is not mandatory (unless the country can demonstrate otherwise).

   (b) The document/mechanism must be issued or approved by a competent authority.

   (c) There must be sanctions for non-compliance (sanctions need not be in the same document that imposes or underpins the requirement, and can be in another document, provided that there are clear links between the requirement and the available sanctions), which should be effective, proportionate and dissuasive. This involves consideration of the following issues:

(i) there should be an adequate range of effective, proportionate and dissuasive sanctions available if persons fail to comply with their obligations;

(ii) the sanctions should be directly or indirectly applicable for a failure to comply with an AML/CFT requirement. If non-compliance with an AML/CFT requirement does not have a sanction directly attached to it, then the use of sanctions for violation of broader requirements, such as not having proper systems and controls or not operating in a safe and sound manner, is satisfactory provided that, at a minimum, a failure to meet one or more AML/CFT requirements could be (and has been as appropriate) adequately sanctioned without a need to prove additional prudential failures unrelated to AML/CFT; and

(iii) whether there is satisfactory evidence that effective, proportionate and dissuasive sanctions have been applied in practice.

5. In all cases it should be apparent that financial institutions, DNFBPs and VASPs understand that sanctions would be applied for non-compliance and what those sanctions could be.

GENERAL GLOSSARY

Terms	Definitions
Accounts	References to "accounts" should be read as including other similar business relationships between financial institutions and their customers.
Accurate	Please refer to the IN to Recommendation 16.
Agent	For the purposes of Recommendations 14 and 16, *agent* means any natural or legal person providing MVTS on behalf of an MVTS provider, whether by contract with or under the direction of the MVTS provider.
Appropriate authorities	Please refer to the IN to Recommendation 8.
Associate NPOs	Please refer to the IN to Recommendation 8.
Batch transfer	Please refer to the IN to Recommendation 16.
Bearer negotiable instruments	*Bearer negotiable instruments (BNIs)* includes monetary instruments in bearer form such as: traveller's cheques; negotiable instruments (including cheques, promissory notes and money orders) that are either in bearer form, endorsed without restriction, made out to a fictitious payee, or otherwise in such form that title thereto passes upon delivery; incomplete instruments (including cheques, promissory notes and money orders) signed, but with the payee's name omitted.
Bearer shares	*Bearer shares* refers to negotiable instruments that accord ownership in a legal person to the person who possesses the bearer share certificate.
Beneficial owner	*Beneficial owner* refers to the natural person(s) who ultimately[109] owns or controls a customer[110] and/or the natural person on whose behalf a transaction is being conducted. It also includes those persons who exercise ultimate effective control over a legal person or arrangement.
Beneficiaries	Please refer to the IN to Recommendation 8.
Beneficiary	The meaning of the term *beneficiary* in the FATF Recommendations depends on the context: ■ In trust law, a beneficiary is the person or persons who are entitled to the benefit of any trust arrangement. A beneficiary can be a natural or

109 Reference to "ultimately owns or controls" and "ultimate effective control" refer to situations in which ownership/control is exercised through a chain of ownership or by means of control other than direct control.

110 This definition should also apply to beneficial owner of a beneficiary under a life or other investment linked insurance policy.

Terms	Definitions
	legal person or arrangement. All trusts (other than charitable or statutory permitted non-charitable trusts) are required to have ascertainable beneficiaries. While trusts must always have some ultimately ascertainable beneficiary, trusts may have no defined existing beneficiaries but only objects of a power until some person becomes entitled as beneficiary to income or capital on the expiry of a defined period, known as the accumulation period. This period is normally co-extensive with the trust perpetuity period which is usually referred to in the trust deed as the trust period. ■ In the context of life insurance or another investment linked insurance policy, a beneficiary is the natural or legal person, or a legal arrangement, or category of persons, who will be paid the policy proceeds when/if an insured event occurs, which is covered by the policy. Please also refer to the Interpretive Notes to Recommendation 16.
Beneficiary Financial Institution	Please refer to the IN to Recommendation 16.
Competent authorities	*Competent authorities* refers to all public authorities[111] with designated responsibilities for combating money laundering and/or terrorist financing. In particular, this includes the FIU; the authorities that have the function of investigating and/or prosecuting money laundering, associated predicate offences and terrorist financing, and seizing/freezing and confiscating criminal assets; authorities receiving reports on cross-border transportation of currency & BNIs; and authorities that have AML/CFT supervisory or monitoring responsibilities aimed at ensuring compliance by financial institutions and DNFBPs with AML/CFT requirements. SRBs are not to be regarded as competent authorities.
Confiscation	The term *confiscation,* which includes forfeiture where applicable, means the permanent deprivation of funds or other assets by order of a competent authority or a court. Confiscation or forfeiture takes place through a judicial or administrative procedure that transfers the ownership of specified funds or other assets to be transferred to the State. In this case, the person(s) or entity(ies) that held an interest in the specified funds or other assets at the time of the confiscation or forfeiture loses all rights, in principle, to the confiscated or forfeited funds or other assets. Confiscation or forfeiture orders are usually linked

111 This includes financial supervisors established as independent non-governmental authorities with statutory powers.

Terms	Definitions
	to a criminal conviction or a court decision whereby the confiscated or forfeited property is determined to have been derived from or intended for use in a violation of the law.
Core Principles	*Core Principles* refers to the Core Principles for Effective Banking Supervision issued by the Basel Committee on Banking Supervision, the Objectives and Principles for Securities Regulation issued by the International Organization of Securities Commissions, and the Insurance Supervisory Principles issued by the International Association of Insurance Supervisors.
Correspondent banking	*Correspondent banking* is the provision of banking services by one bank (the "correspondent bank") to another bank (the "respondent bank"). Large international banks typically act as correspondents for thousands of other banks around the world. Respondent banks may be provided with a wide range of services, including cash management (e.g. interest-bearing accounts in a variety of currencies), international wire transfers, cheque clearing, payable-through accounts and foreign exchange services.
Country	All references in the FATF Recommendations to *country* or *countries* apply equally to territories or jurisdictions.
Cover Payment	Please refer to the IN. to Recommendation 16.
Criminal activity	*Criminal activity* refers to: (a) all criminal acts that would constitute a predicate offence for money laundering in the country; or (b) at a minimum to those offences that would constitute a predicate offence as required by Recommendation 3.
Cross-border Wire Transfer	Please refer to the IN to Recommendation 16.
Currency	*Currency* refers to banknotes and coins that are in circulation as a medium of exchange.
Designated categories of offences	*Designated categories of offences* means: ■ participation in an organised criminal group and racketeering; ■ terrorism, including terrorist financing; ■ trafficking in human beings and migrant smuggling; ■ sexual exploitation, including sexual exploitation of children; ■ illicit trafficking in narcotic drugs and psychotropic substances; ■ illicit arms trafficking;

Terms	Definitions
	■ illicit trafficking in stolen and other goods; ■ corruption and bribery; ■ fraud; ■ counterfeiting currency; ■ counterfeiting and piracy of products; ■ environmental crime; ■ murder, grievous bodily injury; ■ kidnapping, illegal restraint and hostage-taking; ■ robbery or theft; ■ smuggling; (including in relation to customs and excise duties and taxes); ■ tax crimes (related to direct taxes and indirect taxes); ■ extortion; ■ forgery; ■ piracy; and ■ insider trading and market manipulation. When deciding on the range of offences to be covered as predicate offences under each of the categories listed above, each country may decide, in accordance with its domestic law, how it will define those offences and the nature of any particular elements of those offences that make them serious offences.
Designated non-financial businesses and professions	*Designated non-financial businesses and professions* means: a) Casinos[112] b) Real estate agents. c) Dealers in precious metals. d) Dealers in precious stones. e) Lawyers, notaries, other independent legal professionals and accountants – this refers to sole practitioners, partners or employed professionals within professional firms. It is not meant to refer to 'internal' professionals that are employees of other types of businesses, nor to professionals working for government agencies, who may already be subject to AML/CFT measures.

[112] References to *Casinos* throughout the FATF Standards include internet- and ship-based casinos.

Terms	Definitions
	f) Trust and Company Service Providers refers to all persons or businesses that are not covered elsewhere under these Recommendations, and which as a business, provide any of the following services to third parties: ■ acting as a formation agent of legal persons; ■ acting as (or arranging for another person to act as) a director or secretary of a company, a partner of a partnership, or a similar position in relation to other legal persons; ■ providing a registered office; business address or accommodation, correspondence or administrative address for a company, a partnership or any other legal person or arrangement; ■ acting as (or arranging for another person to act as) a trustee of an express trust or performing the equivalent function for another form of legal arrangement; ■ acting as (or arranging for another person to act as) a nominee shareholder for another person.
Designated person or entity	The term designated person or entity refers to: (i) individual, groups, undertakings and entities designated by the Committee of the Security Council established pursuant to resolution 1267 (1999) (the 1267 Committee), as being individuals associated with Al-Qaida, or entities and other groups and undertakings associated with Al-Qaida; (ii) individuals, groups, undertakings and entities designated by the Committee of the Security Council established pursuant to resolution 1988 (2011) (the 1988 Committee), as being associated with the Taliban in constituting a threat to the peace, stability and security of Afghanistan, or entities and other groups and undertakings associated with the Taliban; (iii) any natural or legal person or entity designated by jurisdictions or a supra-national jurisdiction pursuant to Security Council resolution 1373 (2001); (iv) any individual, natural or legal person or entity designated for the application of targeted financial sanctions pursuant to Security Council resolution 1718 (2006) and any future successor resolutions by the Security Council in annexes to the relevant resolutions, or by the Security Council Committee established pursuant to resolution 1718 (2006) (the 1718 Sanctions Committee) pursuant to Security Council resolution 1718 (2006); and

Terms	Definitions
	(v) any natural or legal person or entity designated for the application of targeted financial sanctions pursuant to Security Council resolution 2231 (2015) and any future successor resolutions by the Security Council.
Designation	The term *designation* refers to the identification of a person[113], individual or entity that is subject to targeted financial sanctions pursuant to: ■ United Nations Security Council resolution 1267 (1999) and its successor resolutions; ■ Security Council resolution 1373 (2001), including the determination that the relevant sanctions will be applied to the person or entity and the public communication of that determination; ■ Security Council resolution 1718 (2006) and any future successor resolutions; ■ Security Council resolution 2231 (2015) and any future successor resolutions; and ■ any future Security Council resolutions which impose targeted financial sanctions in the context of the financing of proliferation of weapons of mass destruction. As far as Security Council resolution 2231 (2015) and any future successor resolutions are concerned, references to "designations" apply equally to "listing".
Domestic Wire Transfer	Please refer to the IN to Recommendation 16.
Enforceable means	Please refer to the Note on the Legal Basis of requirements on Financial Institutions and DNFBPs.
Ex Parte	The term *ex parte* means proceeding without prior notification and participation of the affected party.
Express trust	*Express trust* refers to a trust clearly created by the settlor, usually in the form of a document e.g. a written deed of trust. They are to be contrasted with trusts which come into being through the operation of the law and which do not result from the clear intent or decision of a settlor to create a trust or similar legal arrangements (e.g. constructive trust).

[113] Natural or legal.

Terms	Definitions
False declaration	Please refer to the IN to Recommendation 32.
False disclosure	Please refer to the IN to Recommendation 32.
Financial group	*Financial group* means a group that consists of a parent company or of any other type of legal person exercising control and coordinating functions over the rest of the group for the application of group supervision under the Core Principles, together with branches and/or subsidiaries that are subject to AML/CFT policies and procedures at the group level.
Financial institutions	*Financial institutions* means any natural or legal person who conducts as a business one or more of the following activities or operations for or on behalf of a customer: 1. Acceptance of deposits and other repayable funds from the public.[114] 2. Lending.[115] 3. Financial leasing.[116] 4. Money or value transfer services.[117] 5. Issuing and managing means of payment (e.g. credit and debit cards, cheques, traveller's cheques, money orders and bankers' drafts, electronic money). 6. Financial guarantees and commitments. 7. Trading in: (a) money market instruments (cheques, bills, certificates of deposit, derivatives etc.); (b) foreign exchange; (c) exchange, interest rate and index instruments; (d) transferable securities; (e) commodity futures trading. 8. Participation in securities issues and the provision of financial services related to such issues.

114 This also captures private banking.

115 This includes *inter alia*: consumer credit; mortgage credit; factoring, with or without recourse; and finance of commercial transactions (including forfeiting).

116 This does not extend to financial leasing arrangements in relation to consumer products.

117 It does not apply to any natural or legal person that provides financial institutions solely with message or other support systems for transmitting funds. See the Interpretive Note to Recommendation 16.

Terms	Definitions
	9. Individual and collective portfolio management. 10. Safekeeping and administration of cash or liquid securities on behalf of other persons. 11. Otherwise investing, administering or managing funds or money on behalf of other persons. 12. Underwriting and placement of life insurance and other investment related insurance[118]. 13. Money and currency changing.
Foreign counterparts	Foreign counterparts refers to foreign competent authorities that exercise similar responsibilities and functions in relation to the cooperation which is sought, even where such foreign competent authorities have a different nature or status (e.g. depending on the country, AML/CFT supervision of certain financial sectors may be performed by a supervisor that also has prudential supervisory responsibilities or by a supervisory unit of the FIU).
Freeze	In the context of confiscation and provisional measures (e.g., Recommendations 4, 32 and 38), the term freeze means to prohibit the transfer, conversion, disposition or movement of any property, equipment or other instrumentalities on the basis of, and for the duration of the validity of, an action initiated by a competent authority or a court under a freezing mechanism, or until a forfeiture or confiscation determination is made by a competent authority. For the purposes of Recommendations 6 and 7 on the implementation of targeted financial sanctions, the term freeze means to prohibit the transfer, conversion, disposition or movement of any funds or other assets that are owned or controlled by designated persons or entities on the basis of, and for the duration of the validity of, an action initiated by the United Nations Security Council or in accordance with applicable Security Council resolutions by a competent authority or a court. In all cases, the frozen property, equipment, instrumentalities, funds or other assets remain the property of the natural or legal person(s) that held an interest in them at the time of the freezing and may continue to be administered by third parties, or through other arrangements established by such natural or legal person(s) prior to the initiation of an action under a freezing mechanism, or in accordance with other national provisions. As part of the implementation of a freeze, countries may decide to take control of the property, equipment, instrumentalities, or funds or other assets as a means to protect against flight.

[118] This applies both to insurance undertakings and to insurance intermediaries (agents and brokers).

Terms	Definitions
Fundamental principles of domestic law	This refers to the basic legal principles upon which national legal systems are based and which provide a framework within which national laws are made and powers are exercised. These fundamental principles are normally contained or expressed within a national Constitution or similar document, or through decisions of the highest level of court having the power to make binding interpretations or determinations of national law. Although it will vary from country to country, some examples of such fundamental principles include rights of due process, the presumption of innocence, and a person's right to effective protection by the courts.
Funds	The term *funds* refers to assets of every kind, whether corporeal or incorporeal, tangible or intangible, movable or immovable, however acquired, and legal documents or instruments in any form, including electronic or digital, evidencing title to, or interest in, such assets.
Funds or other assets	The term *funds or other assets* means any assets, including, but not limited to, financial assets, economic resources (including oil and other natural resources), property of every kind, whether tangible or intangible, movable or immovable, however acquired, and legal documents or instruments in any form, including electronic or digital, evidencing title to, or interest in, such funds or other assets, including, but not limited to, bank credits, travellers cheques, bank cheques, money orders, shares, securities, bonds, drafts, or letters of credit, and any interest, dividends or other income on or value accruing from or generated by such funds or other assets, and any other assets which potentially may be used to obtain funds, goods or services.
Identification data	The term *identification data* refers to reliable, independent source documents, data or information.
Intermediary financial institution	Please refer to the IN to Recommendation 16.
International organisations	International organisations are entities established by formal political agreements between their member States that have the status of international treaties; their existence is recognised by law in their member countries; and they are not treated as resident institutional units of the countries in which they are located. Examples of international organisations include the United Nations and affiliated international organisations such as the International Maritime Organisation; regional international organisations such as the Council of Europe, institutions of the European Union, the Organization for Security and Co-operation in Europe and the Organization of American States; military international organisations such as the North Atlantic Treaty Organization, and economic organisations such as the World Trade Organisation or the Association of Southeast Asian Nations, etc.

Terms	Definitions
Law	Please refer to the Note on the Legal Basis of requirements on Financial Institutions and DNFBPs.
Legal arrangements	*Legal arrangements* refers to express trusts or other similar legal arrangements. Examples of other similar arrangements (for AML/CFT purposes) include fiducie, treuhand and fideicomiso.
Legal persons	*Legal persons* refers to any entities other than natural persons that can establish a permanent customer relationship with a financial institution or otherwise own property. This can include companies, bodies corporate, foundations, anstalt, partnerships, or associations and other relevantly similar entities.
Money laundering offence	References (except in Recommendation 3) to a *money laundering offence* refer not only to the primary offence or offences, but also to ancillary offences.
Money or value transfer service	*Money or value transfer services (MVTS)* refers to financial services that involve the acceptance of cash, cheques, other monetary instruments or other stores of value and the payment of a corresponding sum in cash or other form to a beneficiary by means of a communication, message, transfer, or through a clearing network to which the MVTS provider belongs. Transactions performed by such services can involve one or more intermediaries and a final payment to a third party, and may include any new payment methods. Sometimes these services have ties to particular geographic regions and are described using a variety of specific terms, including *hawala*, *hundi*, and *fei-chen*.
Non-conviction based confiscation	*Non-conviction based confiscation* means confiscation through judicial procedures related to a criminal offence for which a criminal conviction is not required.
Non-profit organisations	Please refer to the IN to Recommendation 8.
Originator	Please refer to the IN to Recommendation 16.
Ordering financial institution	Please refer to the IN to Recommendation 16.
Payable-through accounts	Please refer to the IN to Recommendation 13.
Physical cross-border transportation	Please refer to the IN. to Recommendation 32.

Terms	Definitions
Politically Exposed Persons (PEPs)	*Foreign PEPs* are individuals who are or have been entrusted with prominent public functions by a foreign country, for example Heads of State or of government, senior politicians, senior government, judicial or military officials, senior executives of state owned corporations, important political party officials. *Domestic PEPs* are individuals who are or have been entrusted domestically with prominent public functions, for example Heads of State or of government, senior politicians, senior government, judicial or military officials, senior executives of state owned corporations, important political party officials. *Persons who are or have been entrusted with a prominent function by an international organisation* refers to members of senior management, i.e. directors, deputy directors and members of the board or equivalent functions. The definition of PEPs is not intended to cover middle ranking or more junior individuals in the foregoing categories.
Proceeds	*Proceeds* refers to any property derived from or obtained, directly or indirectly, through the commission of an offence.
Property	*Property* means assets of every kind, whether corporeal or incorporeal, moveable or immoveable, tangible or intangible, and legal documents or instruments evidencing title to, or interest in such assets.
Qualifying wire transfers	Please refer to the IN to Recommendation 16.
Reasonable measures	The term *Reasonable Measures* means: appropriate measures which are commensurate with the money laundering or terrorist financing risks.
Related to terrorist financing or money laundering	Please refer to the IN. to Recommendation 32.
Required	Please refer to the IN to Recommendation 16.
Risk	All references to *risk* refer to the risk of money laundering and/or terrorist financing. This term should be read in conjunction with the Interpretive Note to Recommendation 1.
Satisfied	Where reference is made to a financial institution being *satisfied* as to a matter, that institution must be able to justify its assessment to competent authorities.

Terms	Definitions
Seize	The term *seize* means to prohibit the transfer, conversion, disposition or movement of property on the basis of an action initiated by a competent authority or a court under a freezing mechanism. However, unlike a freezing action, a seizure is effected by a mechanism that allows the competent authority or court to take control of specified property. The seized property remains the property of the natural or legal person(s) that holds an interest in the specified property at the time of the seizure, although the competent authority or court will often take over possession, administration or management of the seized property.
Self-regulatory body (SRB)	A SRB is a body that represents a profession (e.g. lawyers, notaries, other independent legal professionals or accountants), and which is made up of members from the profession, has a role in regulating the persons that are qualified to enter and who practise in the profession, and also performs certain supervisory or monitoring type functions. Such bodies should enforce rules to ensure that high ethical and moral standards are maintained by those practising the profession.
Serial Payment	Please refer to the IN. to Recommendation 16.
Settlor	*Settlors* are natural or legal persons who transfer ownership of their assets to trustees by means of a trust deed or similar arrangement.
Shell bank	*Shell bank* means a bank that has no physical presence in the country in which it is incorporated and licensed, and which is unaffiliated with a regulated financial group that is subject to effective consolidated supervision. *Physical presence* means meaningful mind and management located within a country. The existence simply of a local agent or low-level staff does not constitute physical presence.
Should	For the purposes of assessing compliance with the FATF Recommendations, the word *should* has the same meaning as *must.*
Straight-through processing	Please refer to the IN. to Recommendation 16.
Supervisors	*Supervisors* refers to the designated competent authorities or non-public bodies with responsibilities aimed at ensuring compliance by financial institutions ("*financial supervisors*" [119]) and/or DNFBPs with requirements to combat money laundering and terrorist financing. Non-public bodies (which could include certain types of SRBs) should have the power to supervise and sanction financial institutions or DNFBPs in relation to the AML/CFT requirements. These non-public bodies should also be empowered by law to exercise the functions they

[119] Including Core Principles supervisors who carry out supervisory functions that are related to the implementation of the FATF Recommendations.

Terms	Definitions
	perform, and be supervised by a competent authority in relation to such functions.
Targeted financial sanctions	The term *targeted financial sanctions* means both asset freezing and prohibitions to prevent funds or other assets from being made available, directly or indirectly, for the benefit of designated persons and entities.
Terrorist	The term *terrorist* refers to any natural person who: (i) commits, or attempts to commit, terrorist acts by any means, directly or indirectly, unlawfully and wilfully; (ii) participates as an accomplice in terrorist acts ; (iii) organises or directs others to commit terrorist acts ; or (iv) contributes to the commission of terrorist acts by a group of persons acting with a common purpose where the contribution is made intentionally and with the aim of furthering the terrorist act or with the knowledge of the intention of the group to commit a terrorist act.
Terrorist act	A *terrorist act* includes: (a) an act which constitutes an offence within the scope of, and as defined in one of the following treaties: (i) Convention for the Suppression of Unlawful Seizure of Aircraft (1970); (ii) Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation (1971); (iii) Convention on the Prevention and Punishment of Crimes against Internationally Protected Persons, including Diplomatic Agents (1973); (iv) International Convention against the Taking of Hostages (1979); (v) Convention on the Physical Protection of Nuclear Material (1980); (vi) Protocol for the Suppression of Unlawful Acts of Violence at Airports Serving International Civil Aviation, supplementary to the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation (1988); (vii) Convention for the Suppression of Unlawful Acts against the Safety of Maritime Navigation (2005); (viii) Protocol for the Suppression of Unlawful Acts against the Safety of Fixed Platforms located on the Continental Shelf (2005); (ix) International Convention for the Suppression of Terrorist Bombings (1997); and (x) International Convention for the Suppression of the Financing of Terrorism (1999). (b) any other act intended to cause death or serious bodily injury to a civilian, or to any other person not taking an active part in the hostilities in a situation of armed conflict, when the purpose of such act, by its nature or context, is to intimidate a population, or to compel a Government or an international organisation to do or to abstain from doing any act.
Terrorist financing	*Terrorist financing* is the financing of terrorist acts, and of terrorists and terrorist organisations.
Terrorist financing abuse	Please refer to the IN to Recommendation 8.

Terms	Definitions
Terrorist financing offence	References (except in Recommendation 4) to a *terrorist financing offence* refer not only to the primary offence or offences, but also to ancillary offences.
Terrorist organisation	The term *terrorist organisation* refers to any group of terrorists that: (i) commits, or attempts to commit, terrorist acts by any means, directly or indirectly, unlawfully and wilfully; (ii) participates as an accomplice in terrorist acts; (iii) organises or directs others to commit terrorist acts; or (iv) contributes to the commission of terrorist acts by a group of persons acting with a common purpose where the contribution is made intentionally and with the aim of furthering the terrorist act or with the knowledge of the intention of the group to commit a terrorist act.
Third parties	For the purposes of Recommendations 6 and 7, the term *third parties* includes, but is not limited to, financial institutions and DNFBPs. Please also refer to the IN to Recommendation 17.
Trustee	The terms *trust* and *trustee* should be understood as described in and consistent with Article 2 of the *Hague Convention on the law applicable to trusts and their recognition*[120]. Trustees may be professional (e.g. depending on the jurisdiction, a lawyer or trust company) if they are paid to act as a trustee in the course of their business, or non-professional (e.g. a person acting without reward on behalf of family).
Unique transaction reference number	Please refer to the IN. to Recommendation 16.

120 Article 2 of the Hague Convention reads as follows:

For the purposes of this Convention, the term "trust" refers to the legal relationships created – inter-vivos or on death - by a person, the settlor, when assets have been placed under the control of a trustee for the benefit of a beneficiary or for a specified purpose.

A trust has the following characteristics -

a) the assets constitute a separate fund and are not a part of the trustee's own estate;

b) title to the trust assets stands in the name of the trustee or in the name of another person on behalf of the trustee;

c) the trustee has the power and the duty, in respect of which he is accountable, to manage, employ or dispose of the assets in accordance with the terms of the trust and the special duties imposed upon him by law.

The reservation by the settlor of certain rights and powers, and the fact that the trustee may himself have rights as a beneficiary, are not necessarily inconsistent with the existence of a trust.

Terms	Definitions
Virtual Asset	A virtual asset is a digital representation of value that can be digitally traded, or transferred, and can be used for payment or investment purposes. Virtual assets do not include digital representations of fiat currencies, securities and other financial assets that are already covered elsewhere in the FATF Recommendations
Virtual Asset Service Providers	Virtual asset service provider means any natural or legal person who is not covered elsewhere under the Recommendations, and as a business conducts one or more of the following activities or operations for or on behalf of another natural or legal person: i. exchange between virtual assets and fiat currencies; ii. exchange between one or more forms of virtual assets; iii. transfer[121] of virtual assets; iv. safekeeping and/or administration of virtual assets or instruments enabling control over virtual assets; and v. participation in and provision of financial services related to an issuer's offer and/or sale of a virtual asset.
Without delay	The phrase without delay means, ideally, within a matter of hours of a designation by the United Nations Security Council or its relevant Sanctions Committee (e.g. the 1267 Committee, the 1988 Committee, the 1718 Sanctions Committee). For the purposes of S/RES/1373(2001), the phrase without delay means upon having reasonable grounds, or a reasonable basis, to suspect or believe that a person or entity is a terrorist, one who finances terrorism or a terrorist organisation. In both cases, the phrase without delay should be interpreted in the context of the need to prevent the flight or dissipation of funds or other assets which are linked to terrorists, terrorist organisations, those who finance terrorism, and to the financing of proliferation of weapons of mass destruction, and the need for global, concerted action to interdict and disrupt their flow swiftly.

121 In this context of virtual assets, *transfer* means to conduct a transaction on behalf of another natural or legal person that moves a virtual asset from one virtual asset address or account to another.

INFORMATION ON UPDATES MADE TO THE FATF METHODOLOGY

The following amendments have been made to the FATF Methodology since the text was adopted in February 2013.

Date	Type of amendments	Sections subject to amandments
Oct 2015	Addition of footnote to clarify the interpretation of criterion 29.3.	• R.29 – page 81 To add a footnote to guide the application of the methodology for criterion 29.3 on the FIU's power to obtain additional information.
Feb 2016	Revision of R.5 and IO.9.	• R.5 and IO.9 – pages 32-33 and 124-125 To align the methodology for R.5 and IO.9 with the revised Interpretive Note to Recommendation 5 relating to UNSCR 2178.
Feb 2016	Addition of footnote to clarify the requirements of criterion 33.1.	• R.33 – page 87 To add a footnote to clarify the application of the methodology for criterion 33.1.
Feb 2016	Addition of footnote on the terminology of different types of ML activity to IO.7.	• IO.7 – pages 119-121 To add a footnote clarifying the terminology of different types of ML activity as referred to in the Methodology for IO.7 (core issue 7.3).
Oct 2016	Revision of R.8 and IO.10.	• R.8 and IO.10, and Glossary – pages 41-43 and 126-128 To align the methodology for R.8 and IO.10 with the revised Recommendation 8 and Interpretive Note to Recommendation 8.
Oct 2016	Addition of footnote on tax and confiscation to IO.8.	• IO.8 – pages 122-123 To add a footnote about how tax confiscation figures should be taken into account for the assessment of effectiveness under IO.8 (core issue 8.2).
Feb 2017	Revision of R.5 and IO.9.	• R.5 and IO.9 – pages 32-33 and 124-125 To align the methodology for R.5 and IO.9 with the revised Interpretive Note to Recommendation 5 and the Glossary term "funds or other assets".
Nov 2017	Revision to Recommendation 7.	• R.7 – page 38-40 To amend R.7 to mirror amendments to the FATF Standards (INR.7 and the Glossary) made in June 2017 which reflected changes to the UN Security Council Resolutions on proliferation financing since the FATF standards were issued in February 2012.

Date	Type of amendments	Sections subject to amandments
Nov 2017	Revision of footnote to Recommendation 25.	• R.25 – page 75-76 To amend footnote 73 to the methodology for R.25 to provide guidance on how to identify other legal arrangements that fall within the scope of R.25 and IO.5 because of characteristics and features which are similar to express trusts and could be particularly vulnerable from a ML/TF perspective, and to ensure a consistent approach across mutual evaluations.
Feb 2018	Revision of Recommendations 18 and 21	• R.18 – pages 63-64 and R.21 - page 67 To amend R.18 and R.21 to reflect the November 2017 amendments to the FATF Standards (INR.18 and R.21) which clarified the requirements on sharing of information related to unusual or suspicious transactions within financial groups, and the interaction of these requirements with tipping-off provisions.
Oct 2018	Revision of Recommendation 2 and Immediate Outcome 1	• R.2 – page 28 and IO.1 – page 99 To reflect the February 2018 amendments to the FATF Standards (R.2) which clarify the need for compatability of AML/CFT requirements and data protection and privacy rules and build on the conclusions of RTMG's report on inter-agency CT/CFT information sharing.
Oct 2018	Revisions to Chapter 1 and addition of footnotes in Chapters 5 and 6 related to Immediate Outcomes 3 and 4	• Chapter 1 – page 138 • Chapter 5 – page 146, and Chapter 6 – page 147 Addition of footnotes to clarify the expectations when assessing effectiveness under IO.3 and IO.4, taking into consideration the risk, context and materiality of the country being assessed.
Feb 2019	Revisions to Immediate Outcomes 3 and 4 Addition of notes to assessors and footnotes	• Outcome 3 - pages 105-106 • Outcome 4 - pages 109-110 Addition of notes to assessors and footnotes to provide further guidance on how to assess the relative importance of the different sectors of financial institutions and DNFBPs.

Date	Type of amendments	Sections subject to amandments
Oct 2019	Revisions to Recommendation 15 and Immediate Outcomes 1 - 4, and 6 – 11 to reflect amendments to the FATF Standards (R.15, INR.15 and Glossary terms) incorporating virtual assets and virtual asset service providers	• Introduction paragraph 15 – page 8 New paragraph and footnote to provide guidance on how to assess requirements relating to virtual assets and virtual asset service providers. • Introduction paragraphs 21, 22, 24 and diagram at paragraph 44 – pages 9, 10 and 18 Addition of references to virtual assets and virtual asset service providers. • Recommendation 15, Note to assessors and criteria 15.3 – 15.11 – pages 54-57 • Immediate Outcomes 3 and 4 – pages 105 - 112 Addition of further guidance on how to assess requirements relating to virtual assets and virtual asset service providers and new criteria to reflect the amendments to the FATF Standards (R.15, INR.15 and Glossary terms “virtual assets” and “virtual asset service provider”). • Immediate Outcomes 1, 2, 3, 4, 6, 7, 8, 9, 10 and 11 – pages 97, 102, 105-108, 109-112, 116, 119, 122, 124, 126-127, and 129-130. Addition of reference to R.15, or elements of R.15, as being related to the outcome and reference to VASPs as needed.

PROCEDURES FOR THE FATF FOURTH ROUND OF AML/CFT MUTUAL EVALUATIONS

Updated October 2019

FINANCIAL ACTION TASK FORCE

The Financial Action Task Force (FATF) is an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction. The FATF Recommendations are recognised as the global anti-money laundering (AML) and counter-terrorist financing (CFT) standard.

For more information about the FATF, please visit the website: www.fatf-gafi.org

This document and/or any map included herein are without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and boundaries and to the name of any territory, city or area.

MER	Mutual Evaluation Report
ML	Money Laundering
NC	Non-compliant
PC	Partially Compliant
STR	Suspicious transaction report
SRB	Self-Regulatory Body
TC	Technical Compliance

PROCEDURES FOR THE FATF FOURTH ROUND OF AML/CFT MUTUAL EVALUATIONS

INTRODUCTION

1. The FATF is conducting a fourth round of mutual evaluations for its members based on the FATF Recommendations (2012), and the Methodology for Assessing Compliance with the FATF Recommendations and the Effectiveness of AML/CFT Systems (2013), as amended from time to time. This document sets out the procedures that are the basis for that fourth round of mutual evaluations.

I. SCOPE, PRINCIPLES AND OBJECTIVES FOR THE FOURTH ROUND

2. As set out in the Methodology, the scope of the evaluations will involve two inter-related components for technical compliance and effectiveness. The technical compliance component will assess whether the necessary laws, regulations or other required measures are in force and effect, and whether the supporting anti-money laundering (AML) / countering the financing of terrorism (CFT) institutional framework is in place. The effectiveness component will assess whether the AML/CFT systems are working, and the extent to which the country is achieving the defined set of outcomes.

3. There are a number of general principles and objectives that govern FATF mutual evaluations, as well as AML/CFT assessments conducted by the FATF-Style Regional Bodies (FSRBs), IMF or World Bank. The procedures should:

a) Produce objective and accurate reports of a high standard in a timely way.

b) Ensure that there is a level playing field, whereby mutual evaluation reports (MERs), including the executive summaries, are consistent, especially with respect to the findings, the recommendations and ratings.

c) Ensure that there is transparency and equality of treatment, in terms of the assessment process, for all countries assessed.

d) Seek to ensure that the evaluation and assessment exercises conducted by all relevant organisations and bodies (FATF, IMF, World Bank, FSRBs) are equivalent, and of a high standard.

e) (i) be clear and transparent; (ii) encourage the implementation of higher standards, (iii) identify and promote good and effective practices, and (iv) alert governments and the private sector to areas that need strengthening.

f) Be sufficiently streamlined and efficient to ensure that there are no unnecessary delays or duplication in the process and that resources are used effectively.

II. CHANGES IN THE FATF STANDARDS

4. As a dynamic process, on-going work within the FATF could lead to further changes to the Recommendations, the Interpretive Notes or the Methodology. All countries should be evaluated on the basis of the FATF Recommendations and Interpretative Notes, and the Methodology as they exist at the date of the country's on-site visit. The report should state clearly if an assessment has been made against recently amended Standards. To ensure equality of treatment, and to protect the international financial systems, compliance with the relevant elements of the changes could be assessed as part of the follow-up process (see section X below), if they have not been assessed or as part of the mutual evaluation.

III. SCHEDULE FOR THE FOURTH ROUND

5. The schedule of mutual evaluations for the fourth round, and the number of evaluations to be prepared each year is primarily governed by the number of MERs that can be discussed at each Plenary meeting, and by the need to complete the entire round in a reasonable timeframe.

6. A schedule of mutual evaluations showing the fixed or proposed date of the on-site visit, of relevant Financial Sector Assessment Programme (FSAP) missions and the date for the Plenary discussion of the MER will be maintained. Any proposed changes to the evaluation dates will require Plenary approval. Normally two MERs will be discussed per Plenary, but this could, on an exceptional basis, extend to three MERs. Other relevant information that will be provided includes information on the countries which have volunteered to provide assessors for forthcoming mutual evaluations. The considerations underlying the sequence of evaluations were:

- Members' views on their preferred date - members are consulted on the possible dates for on-site visits and Plenary discussion of their MER, and this is taken into account in the schedule.
- The scheduled date of any possible FSAP mission – see section IX below regarding the timing of the FSAP and of a mutual evaluation.
- The date of the last mutual evaluation or International Financial Institution (IFI) assessment.

IV. PROCEDURES AND STEPS IN THE EVALUATION PROCESS

7. A summary of the key steps and timelines for the assessment team and the country in the FATF mutual evaluation process is set out at Appendix 1. Those steps are described more fully below. The assessed countries and assessment teams have the flexibility to extend the overall timeline by up to one or two months in order to plan around FATF Plenary meetings, events or holidays, or to adjust the date of the on-site visit to the most appropriate time. In practice, this may require an earlier start to the evaluation process as there is no scope for reducing the time allocated to the post-onsite stages of the process, and the assessed country and assessment team should therefore agree on the broad timeline of the evaluation at least 14 months before the FATF Plenary discussion.

PREPARATION FOR THE ON-SITE VISIT

8. At least six months before the on-site visit or as early as possible, the Secretariat will fix the precise dates for the evaluation on-site visit as well as the timelines for the whole process in consultation with the country, and based on the timelines in Appendix 1 (some flexibility is permissible). The country will advise whether they wish to conduct the evaluation in English or French. The onus is on the country to demonstrate that it has complied with the Standards and that its AML/CFT regime is effective, hence, the country should provide all relevant information to the assessment team during the course of the assessment. As appropriate, assessors should be able to request or access documents (redacted if necessary), data, or other relevant information.

9. All updates and information should be provided in an electronic format and countries should ensure that laws, regulations, guidelines and other relevant documents are made available in the language of the evaluation and the original language.

(a) Information Updates on Technical Compliance

10. The updates and information provided by the assessed country are intended to provide key information for the preparatory work before the on-site visit, including understanding the country's ML/TF risks, identifying potential areas of increased focus for the on-site, and preparing the draft MER. Countries should provide the necessary updates and information to the Secretariat no less than six months before the on-site. Prior to that, it would be desirable to have informal engagement between the country and the Secretariat.

11. In some countries AML/CFT issues are matters that are addressed not just at the level of the national government, but also at state/province or local levels. Countries are requested to note the AML/CFT measures that are the responsibility of state/provincial/local level authorities, and to provide an appropriate description of these measures. Assessors should also be aware that AML/CFT measures may be taken at one or more levels of government, and should examine and take into account all the relevant measures, including those taken at a state/provincial/local level. Equally, assessors should take into account and refer to supra-national laws or regulations that apply to a country.

12. Countries should rely on the questionnaire for the technical compliance update (see Appendix 3) to provide relevant information to the assessment team. Along with previous reports, this will be used as a starting basis for the assessment team to conduct the desk-based review on technical compliance. The questionnaire is a guide to assist countries to provide relevant information in relation to: (i) background information on the institutional framework; (ii) information on risks and context; (iii) information on the measures that the country has taken to meet the criteria for each Recommendation. Countries should complete the questionnaire and may choose to present other information in whatever manner they deem to be most expedient or effective.

(b) Information on Effectiveness

13. Countries should provide information on effectiveness based on the 11 Immediate Outcomes identified in the effectiveness assessment no less than four months before the on-site. They should set out fully how each of the core issues is being addressed as set out in each Immediate Outcome. It

is important for countries to provide a full and accurate description (including examples of information, data and other factors) that would help to demonstrate the effectiveness of the AML/CFT regime.

(c) Composition and Formation of Assessment Team

14. The assessors are confirmed by the President through the Secretariat. This will normally take place at least four months before the on-site, and will be coordinated with member countries that had earlier volunteered assessors for the proposed assessment. The President or the Executive Secretary will formally advise the country of the composition of the assessment team at the time the team is confirmed.

15. An assessment team will usually consist of five to six expert assessors (comprising at least one legal, financial[1] and law enforcement expert), principally drawn from FATF members, and will be supported by members of the FATF Secretariat. Depending on the country and the ML/TF risks, additional assessors or assessors with specific expertise may also be required. In selecting the assessors, a number of factors will be considered: (i) their relevant operational and assessment experience; (ii) language of the evaluation; (iii) nature of the legal system (civil law or common law) and institutional framework; and (iv) specific characteristics of the jurisdiction (e.g. size and composition of the economy and financial sector, geographical factors, and trading or cultural links), to ensure that the assessment team has the correct balance of knowledge and skills. Assessors should be very knowledgeable about the FATF Standards, and are required to attend a fourth round assessor training seminar before they conduct a mutual evaluation. Usually, at least one of the assessors should have had previous experience conducting an assessment.

16. In joint evaluations, the assessment team will be made up of assessors from both the FATF and the relevant FSRB(s) (see section VII) and will also be supported by members of the FATF Secretariat. For some other FATF evaluations, the Secretariat could, with the consent of the assessed country, invite an expert from an FSRB (member or Secretariat) or the IMF/World Bank[2] to participate as an expert on the assessment team, on the basis of reciprocity. Normally there should be no more than one, or in exceptional cases two, such experts per evaluation.

17. Due to the nature of the peer review process, the Secretariat will work to ensure that the mutuality of the process is maintained, and all members should provide qualified experts to be assessors at least five times[3] over the course of the fourth round as a minimum, on a graduated basis, with the largest countries being expected to provide assessors at least nine times during the round. Taking into account that this minimum contribution of five assessors is a huge effort for smaller countries, flexibility will be introduced on the basis that the Secretariat will work with those countries, give them priority when forming assessment teams, and take into account their preferences for what assessor expertise they wish to provide and which countries they wish to assess, as agreed by the

1 The assessment team should have assessors with expertise relating to the preventive measures necessary for the financial sector and designated non-financial businesses and professions.

2 Participation (on a reciprocal basis) of experts from other observers that are conducting assessments, such as UNCTED, could be considered on a case by case basis.

3 The commitment of providing a minimum of five assessors could be met by the same person(s) participating as an assessor in multiple evaluations.

Plenary. Up to 2 assessors provided by FATF members to FSRB-only assessments should be recognised as contributions to FATF assessments. Countries that do not provide their minimum expected contribution of assessors should make a financial contribution to the FATF in an amount equivalent to the cost of providing such assessors, as determined by the Plenary. A list of countries' contribution of assessors for assessments will be maintained and monitored by the FATF's Evaluations and Compliance Group (ECG).

(d) Responsibilities of the Secretariat

18. The Secretariat

- Supports the assessment team and the assessed country;
- Focuses on quality and consistency;
- Ensures compliance with process and procedures;
- Assists assessors and assessed country in the interpretation of the standards, methodology and process in line with past Plenary decisions;
- Ensures that assessors and assessed countries have access to relevant documentation;
- Project-leads the process and other tasks as indicated in these procedures.

(e) Responsibilities of the Assessment Team (Assessors)

19. The core function of the assessment team is, collectively, to produce an independent report (containing analysis, findings and recommendations) concerning the country's compliance with the FATF Standards, in terms of both technical compliance and effectiveness. A successful assessment of an AML/CFT regime requires, at a minimum, a combination of financial, legal and law enforcement expertise, particularly in relation to the assessment of effectiveness. Experts therefore have to conduct an evaluation in a fully collaborative process, whereby all aspects of the review are conducted holistically. Each expert is expected to contribute to all parts of the review, but should take the lead on, or take primary responsibility for topics related to his or her own area of expertise. An overview of assessors' respective primary responsibilities should be shared with the assessed country, even if the assessment remains an all-team responsibility. As a result, assessors will be actively involved in all areas of the report and beyond their primary assigned areas of responsibilities.) It is also important that assessors are able to devote their time and resources to reviewing all the documents (including the information updates on technical compliance, and information on effectiveness), raising queries prior to the on-site, preparing and conducting the assessment, drafting the MER, attending the meetings (e.g. on-site, face-to-face meeting, and Plenary discussion), and adhere to the deadlines indicated.

20. The mutual evaluation is a dynamic and continuous process. The assessment team/Secretariat should engage and consult the assessed country on an on-going basis, commencing at least six months before the on-site. The country should indicate an identified contact person(s) or point(s) for the assessment. Throughout the process the Secretariat will ensure that the assessors can access all relevant material and that regular conference calls take place between assessors and the assessed country so as to ensure a smooth exchange of information and open lines of communication.

(f) Desk Based Review for Technical Compliance

21. Prior to the on-site visit, the assessment team will conduct a desk-based review of the country's level of technical compliance, and the contextual factors and ML/TF risks. The review will be based on information provided by the country in the information updates on technical compliance, pre-existing information drawn from the country's third round MER, follow-up reports and other credible or reliable sources of information. This information will be carefully taken into account, though the assessment team can review the findings from the previous MER and follow-up reports, and may highlight relevant strengths or weaknesses not previously noted. If the assessors reach a different conclusion to previous MERs and follow-up reports (in cases where the Standards and the legislation have not changed) then they should explain the reasons for their conclusion.

22. The technical compliance annex is drafted by the Secretariat on the basis of a comprehensive prior analysis by the assessors. This requires assessors to indicate if each sub-criterion is met, mostly met, partly met or not met and why. When drafting the TC Annex for assessors, the Secretariat takes into account the quality and consistency of mutual evaluation reports. Subsequent to the review, the assessment team will provide the country with a first draft of the technical compliance annex (which needs not contain ratings or recommendations) about three months before the on-site. This will include a description, analysis, and list of potential technical deficiencies noted. The country will have one month to clarify and comment on this first draft on technical compliance.

23. In conducting the assessment, assessors should only take into account relevant laws, regulations or other AML/CFT measures that are in force and effect at that time, or will be in force and effect by the end of the on-site visit. Where relevant bills or other specific proposals to amend the system are made available, these will be referred to in the MER (including for the purpose of the recommendations to be made to the country) but should not be taken into account in the conclusions of the assessment or for ratings purposes.

(g) Ensuring Adequate Basis to Assess International Cooperation

24. Six months before the on-site visit, FATF members and FSRBs[4] will be invited to provide information on their experience of international co-operation with the country being evaluated.

25. In addition, the assessment team and the country may also identify key countries which the assessed country has provided international cooperation to or requested it from, and seek specific feedback. The feedback could relate to: (i) general experience, (ii) positive examples, and (iii) negative examples, on the assessed country's level of international cooperation. The responses received will be made available to the assessment team and the assessed country.

(h) Identifying Potential Areas of Increased Focus for On-Site Visit

26. The assessment team will have to examine the country's level of effectiveness in relation to all the 11 Immediate Outcomes during the on-site. The assessment team may also, based on its preliminary analysis (of both technical compliance and effectiveness issues) prior to the on-site,

[4] FSRBs and their members will only be invited to provide this information where they are willing to reciprocally invite FATF members to provide the same type of information in relation to their mutual evaluations.

identify specific areas which it would pay more attention to during the on-site visit and in the MER, as well as the areas of reduced focus. This will usually relate to effectiveness issues but could also include technical compliance issues. In doing so, the team will consult the country. In addition, delegations will be invited to provide any comments that they may have that would assist the team to focus on areas of higher or lower risks that need increased or reduced focus.

27. Where there are potential areas of increased focus for the on-site, the assessment team should obtain and consider all relevant information and commence discussion of these areas approximately four months before the on-site, and consult the country at least two months before the on-site. The country should normally provide additional information regarding the areas which the assessment team would like to pay more attention to. While the prerogative lies with the assessment team, the areas for increased focus should, to the extent possible, be mutually agreed with the country, and should be set out in a draft scoping note. The scoping note should set out briefly (in no more than two pages) the areas for increased focus, as well as areas of reduced focus, and why these areas have been selected. The draft scoping note, along with relevant background information (e.g. the country's risk assessment(s)), should be sent to the reviewers (described in the section on quality and consistency, below) and to the country. Reviewers should, within one week of receiving the scoping note, provide their feedback to the assessment team regarding whether the scoping note reflects a reasonable view on the focus of the assessment, having regard to the material made available to them as well as their general knowledge of the jurisdiction. The assessment team should consider the merit of the reviewers' comments, and amend the scoping note as needed, in consultation with the country. The final version should be sent to the country, at least four weeks prior to the on-site, along with any requests for additional information on the areas of increased focus. The country should seek to accommodate any requests arising from the additional focus. The country should also consider holding a presentation on its risk and context at the start of the on-site visit for assessors to better evaluate the country's understanding of risks.

28. To expedite the mutual evaluation process, and to facilitate the on-site visit, the assessment team will, one week before the on-site visit, prepare a revised draft TC annex and an outline of initial findings/key issues to discuss on effectiveness. In order to facilitate the discussions on-site, the revised TC annex will be sent to the country at that time.

(i) Programme for On-Site Visit (Pre-Plenary)

29. The country (designated contact) should work with the Secretariat, and prepare a draft programme and coordinate the logistics for the on-site. The draft programme, together with any specific logistical arrangements, should be sent to the assessment team no later than eight weeks before the visit. Please see Appendix 2 for the list of authorities and businesses that would usually be involved in the on-site. To assist in their preparation, the assessment team should prepare a preliminary analysis identifying key issues on effectiveness, eight weeks before the on-site.

30. The draft programme should take into account the areas where the assessment team may want to apply increased focus. Where practical, meetings could be held in the premises of the agency/organisation being met, since this allows the assessors to meet the widest possible range of staff and to obtain information more easily. However, for some evaluations travelling between venues can be time consuming and wasteful, and generally, unless venues are in close proximity, there should

be no more than two to three venues per day. The programme should be finalised at least three weeks prior to the on-site visit. The assessment team may also request additional meetings during the on-site.

31. Both in terms of the programme and more generally, the time required for interpretation, and for translation of documents, must be taken into account. During the on-site visit there also needs to be professional and well-prepared interpreters if interpretation from the country language to English/French is required. However, for the efficient use of time, meetings should generally be conducted in the language of the assessment.

(j) Confidentiality

32. All documents and information produced: (i) by an assessed country during a mutual evaluation exercise (e.g. updates and responses, documents describing a country's AML/CFT regime, measures taken or risks faced (including those for which there will be increased focus), or responses to assessors' queries); (ii) by the FATF Secretariat or assessors (e.g. reports from assessors, draft MER); and (iii) comments received through the consultation or review mechanisms, should be treated as confidential. They should only be used for the specific purposes provided and not be made publicly available, unless the assessed country and the FATF (and where applicable, the originator of the document) consents to their release. These confidentiality requirements apply to the assessment team, the Secretariat, reviewers, officials in the assessed country and any other person with access to the documents or information. In addition, at least four months before the on-site visit, the members of the assessment team and reviewers should sign a confidentiality agreement, which will include text regarding the need to declare a conflict of interest.

ON-SITE VISIT

33. The on-site visit provides the best opportunity to clarify issues relating to the country's AML/CFT system, and assessors need to be fully prepared to review the 11 Immediate Outcomes relating to the effectiveness of the system, and clarify any outstanding technical compliance issues. Assessors should also pay more attention to areas where higher money laundering and terrorist financing risks are identified. Assessors must be cognisant of the different country circumstances and risks, and that countries may adopt different approaches to meet the FATF Standards and to create an effective system. Assessors thus need to be open and flexible, and seek to avoid narrow comparisons with their own national requirements.

34. Experience has shown that at least seven to eight days of meetings are required for countries with developed AML/CFT systems. A typical on-site visit could thus allow for the following.

- An initial half day preparatory meeting between the Secretariat and assessors.
- Seven to eight days of meetings[5] with representatives of the country, including an opening and closing meeting. Time may have to be set aside for additional or follow-up

[5] The assessment team should also set aside time midway through the on-site to review the progress of the mutual evaluation and where relevant, the identified areas of increased focus for the on-site initially.

meetings, if, in the course of the set schedule, the assessors identify new issues that need to be explored, or if they need further information on an issue already discussed.

- One to two days where assessors work on the draft MER (supported by the Secretariat), ensure that all the major issues that arose during the evaluation are noted in the report, and discuss and agree ratings, and key recommendations. The assessment team should provide a written summary of its key findings to the assessed country officials at the closing meeting.

35. The total length of the mission for a normal evaluation is therefore likely to be in the order of ten working days, but this could be extended for large or complex jurisdictions.

36. It is important that the assessment team be able to request and meet with all relevant agencies during the on-site. The country being evaluated, and the specific agencies met should ensure that appropriate staff are available for each meeting. The assessment team should be provided with a specific office for the duration of the on-site mission, and the room should have photocopying, printing and other basic facilities, as well as internet access.

37. Meetings with the private sector or other non-government representatives[6] are an important part of the visit, and generally, the assessors should be given the opportunity to meet with such bodies or persons in private, and without a government official present, if there is concern that the presence of the officials may inhibit the openness of the discussion. The team may also request that meetings with certain government agencies are restricted to those agencies only.

POST ON-SITE - PREPARATION OF DRAFT EXECUTIVE SUMMARY AND MER

38. There should be a minimum of twenty seven (27) weeks between the end of the on-site visit and the discussion of the MER in Plenary. The timely preparation of the MER and Executive Summary[7] will require the assessors to work closely with the Secretariat and the country. Depending on when the Plenary discussion is scheduled, the time period may also be extended or adjusted. In exceptional cases, and based on justified circumstances (and with the consent of the assessed country), a shorter period of time may be allowed for.

39. The steps in finalising a draft report for discussion at Plenary, and the approximate time that is required for each part, are set out in greater detail below (see also Appendix 1). With the aim to facilitate communication between the assessment team and the assessed country, the Secretariat should facilitate regular conference calls between all parties, in particular after the circulation of an updated draft MER. In their drafting of the first and second draft MER, assessors should aim to clarify as much as possible how information submitted by the assessed country was taken into account, if/where additional information is still needed, and state clearly if they are not willing to change their views on a particular topic.

6 E.g. those listed in Appendix 2.

7 The format for the Executive Summary and MER is contained in Annex II of the Methodology. Assessors should also pay attention to the guidance on how to complete the Executive Summary and MER, including with respect to the expected length of the MER (100 pages or less, together with a technical annex of up to 60 pages).

(k) 1st Draft MER

40. The assessment team will have six weeks to coordinate and refine the first draft MER (including the key findings, potential issues of note and recommended actions for the country). The first draft MER will include the preliminary recommended actions and ratings. This is then sent to the country for comments. The country will have four weeks to review and provide its comments on the first draft MER to the assessment team. During this time, the assessment team would have to be prepared to respond to queries and clarifications that may be raised by the country.

(l) 2nd Draft MER and Executive Summary

41. On receipt of the country's comments on the first draft MER, the assessment team will have four weeks to review the various comments and make further amendments, as well as prepare the Executive Summary. The second draft MER and Executive Summary will then be sent to the country and to the reviewers (approximately 14 weeks after the on-site). As in the case of the first draft, assessors should aim to clarify as much as possible, in writing, how specific information was taken into account in their analysis.

(m) Initial Quality & Consistency Review

42. As part of the FATF mutual evaluation process, there will be a quality and consistency review. The main functions of the initial reviewers are to ensure MERs are of an acceptable level of quality and consistency, and to assist both the assessment team and the assessed country by reviewing and providing timely input on the scoping note and the draft MER and Executive Summary (including any annexes) with a view to:

- Commenting on assessors' proposals for the scope of the on-site.
- Reflecting a correct interpretation of the FATF Standards and application of the Methodology (including the assessment of risks, integration of the findings on technical compliance and effectiveness, and areas where the analysis and conclusions are identified as being clearly deficient).
- Checking whether the description and analysis supports the conclusions (including ratings), and whether, based on these findings, sensible recommended actions and priority actions for improvement are made.
- Where applicable, highlighting potential inconsistencies with earlier decisions adopted by the FATF on technical compliance and effectiveness issues.
- Checking that the substance of the report is generally coherent and comprehensible.

43. The review will involve drawing on expertise from a pool of qualified volunteer experts. This pool would contain experts from FATF and FSRB delegations, FSRB Secretariat members, and the IFIs. To avoid potential conflicts, the reviewers selected for any given quality and consistency review will be from countries other than those of the assessors, and will be made known to the country and assessors in advance. Generally, three reviewers would be allocated to each assessment; comprising two reviewers from the FATF, and one reviewer from another assessment body, each of whom could in principle focus on part of the report.

44. The reviewers will need to be able to commit time and resources to review the scoping note and the quality, coherence and internal consistency of the second draft MER, as well as consistency with the FATF Standards and FATF precedent. In doing so, the reviewers should have a copy of the comments provided by the country on the first draft MER. Reviewers need to be able to access all key supporting documents – from the assessed country's technical compliance submission to its risk assessment. To ensure transparency, all comments from the reviewers will be disclosed to the assessors and country. The reviewers will have three weeks to examine the second draft MER and provide their comments to the assessment team. These comments will be forwarded to the assessed country. The reviewers for the quality and consistency review do not have any decision making powers or powers to change a report. It is the responsibility of the assessment team to consider the reviewers' comments and then decide whether any changes should be made to the report. The assessment team will provide a short response to the Plenary regarding the changes it has made to the report based on the reviewers' comments and on the decisions that it has made.

45. The assessed country will have the opportunity to submit further comments on the second draft MER, in parallel with the review process. After three weeks, the comments from the country and reviewers on the second draft MER will be used as input for the face-to-face meeting.

46. Due to the nature of the peer review process, the Secretariat will work to ensure that the mutuality of the process is maintained, and members should provide qualified experts as reviewers. A list of past and forthcoming reviewers will be maintained and monitored by ECG.

(n) Face-to-Face Meeting

47. As is indicated in paragraph 44, following the conclusion of the initial review, the assessment team and the country will have three weeks to consider country and reviewers' comments received on the second draft MER and Executive Summary, discuss likely changes and unresolved issues, and identify issues for discussion at the face-to-face meeting.

48. A face-to-face meeting is an important way to assist the country and assessment team to resolve outstanding issues. The assessment team (including Secretariat) and the country should have a face-to-face meeting to further discuss the second draft MER and Executive Summary. During this session, the assessment team and country should work to resolve any disagreements over technical compliance or effectiveness issues and identify potential key issues for Plenary discussion. The face-to-face meeting should occur at least eight weeks before the Plenary (i.e. approximately 19 weeks after the on-site). As a rule, and whenever possible, the face-to-face meeting is also attended by the ECG co-chairs as this will assist the identification of key issues for Plenary discussions.

49. Subsequent to the face-to-face meeting, the assessment team will consider whether any further changes should be made to the draft MER and Executive Summary.

(o) Identifying Issues for Plenary Discussion

50. The revised Executive Summary and MER (third draft going to the Plenary), will then be sent to all members, associate members and observers at least five weeks (ideally six weeks) prior to Plenary. The assessed country's comments on this draft will be circulated then as well. Where the original draft is in French, the English translation will also be distributed at this time. Delegations will

have two weeks to provide any written comments on the MER and Executive Summary, and in particular, to identify any key issues that they wish to discuss in ECG/Plenary. The comments should focus on the substantive key issues, or on other high-level or horizontal aspects of the assessment, though other observations may also be made. The comments received will be made available to all delegations.

51. Based on the MER and Executive Summary, and comments received, the ECG co-chairs will engage the country, the assessment team and prepare a list of (usually five to seven) priority and substantive key issues that will be discussed in ECG. This should take into account the issues that the assessed country and delegations are most keen to discuss. After consultation with the President, the list of substantive key issues for Plenary discussion will be distributed. The list of key issues for discussion in ECG would include key issues arising from the report (whether referenced by the country, the assessment team or delegations), as well as any areas of interpretation or inconsistency with other MERs adopted by the FATF.

52. The finalised list of key issues will be circulated to delegations two weeks before the Plenary discussion. Drafting amendments received on the Executive Summary or MER can be made after the Plenary, and will also take into account the decisions made. After discussions in ECG, a revised key issue document is submitted to the Plenary for discussions.

(p) Respecting Timelines

53. The timelines are intended to provide guidance on what is required if the reports are to be prepared within a reasonable timeframe, and in sufficient time for discussion in Plenary. It is therefore important that all parties respect the timelines.

54. Delays may significantly impact the ability of the Plenary to discuss the report in a meaningful way. The draft schedule of evaluations has been prepared so as to allow enough time between the on-site visit and the Plenary discussion. A failure to respect the timetables may mean that this would not be the case. By agreeing to participate in the mutual evaluation process, the country and the assessors undertake to meet the necessary deadlines and to provide full, accurate and timely responses, reports or other material as required under the agreed procedure. Where there is a failure to comply with the agreed timelines, then the following actions could be taken (depending on the nature of the default):

a) Failure by the country - the FATF President may write to the head of delegation or the relevant Minister in the country. The Plenary will be advised as to reasons for deferral, and publicity could be given to the deferment (as appropriate) or other additional action considered. In addition the assessment team may have to finalise and conclude the report based on the information available to them at that time.

b) Failure by the assessors, the reviewers or the Secretariat - the President may write a letter to or liaise with the head of delegation of the assessor or reviewer, or the FATF Executive Secretary (for the Secretariat).

55. The Secretariat will keep the Presidency advised of any failures so that the President can respond in an effective and timely way. The Plenary is also to be advised if the failures result in a request to delay the discussion of the MER.

THE PLENARY DISCUSSION

56. The discussion of each MER and Executive Summary in Plenary (particularly the list of key issues)[8] will focus on high-level and substantive key issues, primarily concerning effectiveness. Where appropriate, important technical issues would also be discussed. Adequate time should always be set aside to discuss the country's response to the mutual evaluation and other issues. The discussion is likely, on average, to take three to four hours of Plenary time. The procedure for the discussion will be as follows:

- Assessment team briefly presents in high-level terms the key issues and findings from the report. The team will have the opportunity to intervene/comment on any issue concerning the Executive Summary or MER.
- Assessed country makes a short opening statement.
- The Plenary discusses the list of key issues identified by the ECG. This would usually be introduced briefly by ECG co-chairs.
- Adequate time (approximately half the Plenary's time) will be set aside to discuss the overall situation of the assessed country's AML/CFT regime and ML/TF risks, the priority actions set out in the Executive Summary, the country's response to the mutual evaluation including any actions already taken, and the key findings.
- Time permitting, other issues could be raised from the floor, and discussed by the Plenary.

ADOPTION OF THE MER AND EXECUTIVE SUMMARY

57. At the end of the Plenary discussion, the MER and the Executive Summary will be submitted to Plenary for adoption. The adopted report will be subject to further checks for typographical or similar errors.

58. If the MER and the Executive Summary are not agreed, then the assessors, the country and the Secretariat should prepare amendments to meet the issues raised by the Plenary. Where substantive changes are required, either because additional information is required to be added, or the report has to be substantially amended, then the Plenary could decide to: (a) defer adoption of the report, and agree to have a further discussion of an amended report at the following Plenary, or (b) where the required changes are less significant, adopt the report subject to it being amended, and the amended report being approved through a written process. The assessment team would be responsible for ensuring that all the changes agreed by the Plenary have been made. Following the discussion of the report, and prior to its formal adoption, the Plenary should discuss the nature of the follow-up measures that would be required (see section X below).

59. The final report is a report of the FATF, and not simply a report by the assessors. As such, the Plenary will retain the final decision on the wording of any report, consistent with the requirements of the FATF Standards and Methodology. The Plenary will give careful consideration to the views of

[8] The Executive Summary will describe the key risks, the strengths and weaknesses of the system, and the priority actions for the country to improve its AML/CFT regime.

the assessors and the country when deciding on the wording, as well as take into account the need to ensure consistency between reports.

V. POST-PLENARY QUALITY AND CONSISTENCY (Q&C) REVIEW AND PUBLICATION

60. Where an FATF or FSRB member, the FATF Secretariat, FSRB Secretariat or an IFI considers that a FATF or FSRB report has significant problems of quality and consistency (Q&C), it should wherever possible raise such concerns with the body conducting the assessment (the assessment body) prior to adoption. The assessment body, assessment team and assessed country should consider and work to appropriately address the concerns.

61. Nevertheless, highly exceptional situations may arise where significant concerns about the Q&C of a report remain after its adoption. To address such issues, the post-Plenary Q&C process applies to all assessment bodies with a view to preventing the publication of reports with significant Q&C problems and ensuring that poor quality assessments do not damage the FATF brand.

62. The post-Plenary quality and consistency (Q&C) review process applies to all mutual evaluation reports (MERs) (including their executive summaries), detailed assessment reports (DARs)[9] (including their executive summaries), mutual evaluation follow-up reports with technical compliance re-ratings (FURs) and follow-up assessment reports (FUARs).[10] The exception is FURs with technical compliance (TC) re-ratings where no Q&C issues are raised through the pre-plenary review process or during the relevant working group/plenary discussion. Such FURs are not subject to the post-Plenary review process and ordinarily should be published within six weeks after their adoption by Plenary.

STEPS IN THE POST-PLENARY Q&C PROCESS

63. After adoption of the report, the FATF Secretariat will amend all documents as necessary and will circulate a revised version of the report to the country within one week of the Plenary. Within two weeks of receiving it from the Secretariat, the country must confirm that the report is accurate and/or advise of any typographical or similar errors. Care will be taken to ensure that no confidential information is included in any published report.

64. The FATF Secretariat will then circulate the report to all FATF members, FSRBs and the IFIs, along with a template for referring Q&C issues for consideration. Parties who identify any serious or major Q&C issues have two weeks to advise the FATF Secretariat (for FATF reports) or both the FATF

[9] Where the evaluation is conducted by one of the International Financial Institutions (IFI) (IMF or World Bank).

[10] In this section, MERs, DARs, FURs and FUARs are collectively referred to as *reports.*

Secretariat and assessment body (for non-FATF reports)[11] in writing, using the template provided to indicate their specific concerns and how these concerns meet the substantive threshold.[12]

65. To be considered further in this process, a specific concern should be raised by at least two of the following parties: FATF or FSRB members[13] or Secretariats or IFIs, at least one of which should have taken part in the adoption of the report. Otherwise, the post-Plenary Q&C review process is complete, the FATF Secretariat will advise the assessment body and delegations accordingly and the report will be published.[14]

66. If two or more parties identify a specific concern, the Co-Chairs of the FATF Evaluations and Compliance Group (ECG) will review the concern to determine whether *prima facie* it meets the substantive threshold and procedural requirements. To aid in this decision, the FATF Secretariat will liaise with the relevant FATF or FSRB Secretariat team to provide the ECG Co-Chairs with any necessary background information on the issue, including (where relevant and appropriate):

a) information submitted by parties raising the Q&C issue

b) background information on any related comments raised at the pre-Plenary stage

c) the rationale for the relevant rating/issue under discussion based on the facts in the report and/or any relevant co-chairs' report or summary record from the working group/Plenary meeting where the report was discussed (including whether the issue was discussed in detail, what the outcome of the those discussions was and any reasons cited for maintaining or changing the rating or report)

d) objective cross-comparisons with previous FATF reports that have similar issues

e) the report's consistency with the corresponding parts of the Methodology

f) any connection or implications for the ICRG process, and

g) what next steps might be appropriate.

67. If the ECG Co-Chairs conclude that *prima facie* the substantive threshold and procedural requirements are met, the Secretariat will circulate the report to all FATF delegations for

11 Where FATF or FSRB members or secretariats consider that an MER which has been adopted by an IFI has or continues to have significant problems of quality or consistency, they should promptly inform the IFI of those concerns (and the FATF Secretariat when the concerns are raised by others).

12 The substantive threshold is *when serious or major issues of quality and consistency are identified, with the potential to affect the credibility of the FATF brand as a whole*.

13 Not including the assessed country.

14 Ordinarily publication would happen within six weeks of the report being adopted if no further steps in the post-Plenary Q&C process are needed.

consideration by the ECG along with a decision paper prepared by the FATF Secretariat in consultation with the relevant assessment body (FSRB/Secretariat/IFI). On the other hand, if the ECG Co-Chairs conclude that *prima facie* the substantive threshold and procedural requirements are not met, the issue would not be taken forward for discussion, but a short note explaining the Co-Chair's position would be presented to ECG for information.

68. Issues identified less than four to six weeks before the FATF Plenary will be discussed at the next FATF Plenary to ensure sufficient time for consultation among Secretariats and preparation of the decision paper. The decision paper prepared by the FATF Secretariat in consultation with the relevant assessment body will include the background information listed above in paragraph 66 to the extent that it is relevant and appropriate.

69. The ECG will decide whether the report meets the substantive threshold (serious or major issues of Q&C with the potential to affect the credibility of the FATF brand as a whole). Examples of situations meeting this substantive threshold include:

a) the ratings are clearly inappropriate and not consistent with the analysis

b) there has been a serious misinterpretation of the Standards, Methodology and/or Procedures

c) an important part of the Methodology has been systematically misapplied, or

d) laws that are not in force and effect have been taken into account in the analysis and ratings of a report.

70. If ECG decides that the report meets the substantive threshold, it will refer the matter to the FATF Plenary along with clear recommendations on what action would be appropriate (e.g. requesting that the relevant assessment body reconsiders the report and/or makes appropriate changes before any publication). On the other hand, if ECG decides that the report does not meet the substantive threshold, the FATF Secretariat will advise the assessment body and delegations that the post-Plenary Q&C review is complete, and the report will be published.

71. Where ECG has referred a post-Plenary Q&C issue, the FATF Plenary will discuss the matter and decide on the appropriate action. The Secretariat will advise the assessment body of the FATF Plenary's decision. If the assessment body declines to respond to the action requested by the FATF, the FATF Plenary will consider what further action may be necessary. The assessment body will not publish the report until the issue is resolved within FATF and the assessment body, and the FATF Secretariat advises that the post-Plenary Q&C review process is complete.

72. Following completion of the post-Plenary Q&C review process, the assessment body will publish the report on its website. Additionally, the FATF publishes all reports on its website to give timely publicity to an important part of the work of FATF and the global network.

VI. EVALUATIONS OF NEW MEMBERS

73. Where a potential new member undergoes a mutual evaluation by the FATF in order to assess whether it meets the criteria for FATF membership, the procedures laid out in sections I to V of these procedures will apply. If the criteria for membership are met, and the country is admitted as an FATF member, but if deficiencies are identified in the country's AML/CFT system, the Plenary shall apply the FATF's follow-up policy (section X). However, if the membership criteria are not met and a country agrees to an action plan, and is admitted as a new member before the completion of the action plan, the new member will then be required to provide more detailed information as part of its enhanced follow-up reports focusing on progress towards achieving the IOs identified in the action plan. Plenary retains the discretion to vary the specific frequency of reporting by new members in enhanced follow-up.

VII. JOINT MUTUAL EVALUATIONS WITH FSRBS

74. The FATF's policy is that FATF members that are also members of FSRB(s) will undergo a joint evaluation by these bodies. Generally, the FATF will be the principal organiser, and will provide three assessors, while one to two assessors could be provided by the participating FSRBs. The FATF and the FSRB(s) Secretariats will participate. Reviewers should be provided by FATF, the FSRB(s), and another assessment body. To ensure adequate attention is given to consistency, a joint evaluation may use additional reviewers beyond the three set out in section IV(m). The first discussion of the MER should take place in the FATF, and given the additional measures adopted for joint evaluations, the presumption is that the FATF's view would be conclusive.

75. The process (including the FATF procedures for preparing the draft MER and Executive Summary) for joint evaluations would be the same as for other FATF evaluations, with the FSRB(s) and its/their members having opportunities to participate directly through being part of the assessment team, and also being able to provide comments and input like other delegations. FSRBs should allow reciprocal participation in mutual evaluation discussions for FATF members, and on this basis, the following measures should also apply for joint evaluations.

- A representative from the FSRB(s) will be given a specific opportunity to intervene during the Plenary discussion of the MER.
- All the FATF assessors on the assessment team are encouraged to attend the FSRB Plenary(ies) at which the joint evaluation report is considered, and at least one FATF assessor should attend the FSRB Plenary(ies). The same approach should be applied to IFI-led assessments of FATF members that are also members of FSRBs.
- In an exceptional case where a report was agreed within FATF but subsequently the FSRB identified major difficulties with the text of the report, then the FSRB Secretariat would advise the FATF Secretariat of the issues, and the issues should be discussed at the following FATF Plenary.
- Consideration will also be given to the timing of publication, if the MER has not been discussed in the FSRB(s), with a view to finding a mutually agreed publication date.

- If scheduling permits, the Plenary discussion of a joint MER may take place at a joint Plenary meeting of the FATF and the FSRB, with the full participation of all FATF and FSRB members.

76. For the evaluation of a member country of the Gulf Cooperation Council, the assessment team may adopt Arabic as the working language, provided that bilingual assessors, reviewers, and FATF and MENAFATF secretariat staff are available. In this case, laws and other documents would be provided in Arabic and meetings conducted in Arabic. The third draft report (post face-to-face meeting) would be translated into English, in time for circulation, which would be the primary language for Plenary discussion.

VIII. IMF OR WORLD BANK LED ASSESSMENTS OF FATF MEMBERS

77. The FATF is responsible for the mutual evaluation process for all of its members, and there is a presumption that the FATF will conduct the mutual evaluations[15] of all FATF members as part of this process. The presumption can be overridden at the discretion of the FATF Plenary on a case by case basis, with the country's agreement. For the purposes of the FATF fourth round of mutual evaluations, the FATF Plenary has discretion as to the number of FATF assessments that could be conducted by the IMF or World Bank (IFI), but the expectation is that there would be five to six IFI-led assessments during the fourth round of mutual evaluations (one a year), and such IFI-led assessments should be agreed and fixed on the same basis as other evaluations in the schedule (see section III).

78. For the FATF assessment schedule to be fixed with appropriate certainty and in a coordinated manner, the process leading to the Plenary decision as to which FATF countries will have an assessment led by an IFI team should be clear and transparent. In order for the evaluation schedule to be appropriately planned and assessment teams to be formed in sufficient time, it will be necessary for the FATF to be involved at an early stage in the process of determining which countries will be assessed by an IFI. The ECG will be informed at every Plenary as to the current status of the assessment schedule, including proposals as to whether assessments will be IFI-led, and the Plenary will decide on any such requests. Where the IMF or World Bank conduct an AML/CFT assessment as part of the FATF fourth round they should use procedures and a timetable similar to those of the FATF.

79. The FATF Plenary will in all cases have to approve an IFI assessment that is conducted under the FATF fourth round for it to be accepted as a mutual evaluation.

IX. CO-ORDINATION WITH THE FSAP PROCESS

80. The FATF Standards are recognised by the IFIs as one of 12 key standards and codes, for which Reports on the Observance of Standards and Codes (ROSCs) are prepared, often in the context of a Financial Sector Assessment Programme (FSAP). Under current FSAP policy, every FSAP and FSAP update should incorporate timely and accurate input on AML/CFT. Where possible, this input should be based on a comprehensive quality AML/CFT assessment, and in due course, on a follow-up assessment conducted against the prevailing standard. The FATF and the IFIs should therefore co-

15 Including any follow up that may be required.

ordinate with a view to ensuring a reasonable proximity between the date of the FSAP mission and that of a mutual evaluation or follow-up assessment conducted under the prevailing methodology, to allow for the key findings of that evaluation or follow-up assessment to be reflected in the FSAP; and members are encouraged to co-ordinate the timing for both processes internally, and with the FATF Secretariat and IFI staff.[16]

81. The basic products of the evaluation process are the MER and the Executive Summary (for the FATF) and the DAR and ROSC (for the IFIs)[17]. The Executive Summary, whether derived from a MER or follow-up assessment report, will form the basis of the ROSC. Following the Plenary, and after the finalisation of the Executive Summary, the summary is provided by the Secretariat to the IMF or World Bank so that a ROSC can be prepared, following a pro forma review.

82. The substantive text of the draft ROSC will be the same as that of the Executive Summary, though a formal paragraph will be added at the beginning:

> "This Report on the Observance of Standards and Codes for the *FATF Recommendations and Effectiveness of AML/CFT Systems* was prepared by the Financial Action Task Force (FATF). The report provides a summary of [the/certain][18] AML/CFT measures in place in [*Jurisdiction*] as at [*date*], the level of compliance with the FATF Recommendations, the level of effectiveness of the AML/CFT system, and contains recommendations on how the latter could be strengthened. The views expressed in this document have been agreed by the FATF and [*Jurisdiction*], but do not necessarily reflect the views of the Boards or staff of the IMF or World Bank."

X. FOLLOW-UP PROCESS

83. The follow-up process is intended to: (i) encourage members' implementation of the FATF Standards; (ii) provide regular monitoring and up-to-date information on countries' compliance with the FATF Standards (including the effectiveness of their AML/CFT systems); (iii) apply sufficient peer pressure and accountability; and (iv) better align the FATF and FSAP assessment cycle.

84. Following the discussion and adoption of a MER, the country could be placed in either regular or enhanced follow-up. Regular follow-up is the default monitoring mechanism for all countries. Enhanced follow-up is based on the FATF's traditional policy that deals with members with significant

---

16 If necessary, the staff of the IFIs may supplement the information derived from the ROSC to ensure the accuracy of the AML/CFT input. In instances where a comprehensive assessment or follow-up assessment against the prevailing standard is not available at the time of the FSAP, the staff of the IFIs may need to derive key findings on the basis of other sources of information, such as the most recent assessment report, and follow-up and/or other reports. As necessary, the staff of the IFIs may also seek updates from the authorities or join the FSAP mission for a review of the most significant AML/CFT issues for the country in the context of the prevailing standard and methodology. In such cases, staff would present the key findings in the FSAP documents: however, staff would not prepare a ROSC or ratings.

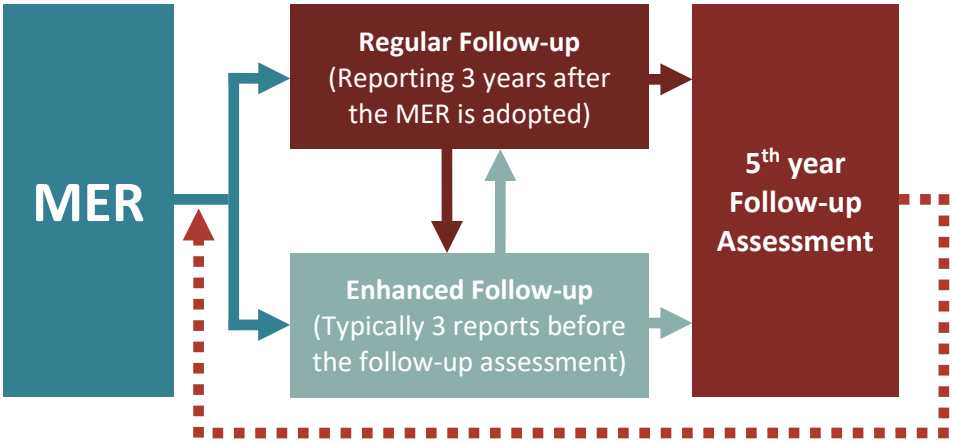
17 The DAR and ROSC use the common agreed template that is annexed to the Methodology and have the same format, although the ROSC remains the responsibility and prerogative of the IMF/World Bank.

18 For ROSCs based on an MER, the word "the" should be used; for ROSCs based on a MER follow-up assessment, the alternative wording "certain" would be used (since the follow-up assessment is not a comprehensive one)

deficiencies (for technical compliance or effectiveness) in their AML/CFT systems, and involves a more intensive process of follow-up.

85. Whether under regular or enhanced follow-up, the country will have a follow-up assessment after five years. This is intended to be a targeted but more comprehensive report on the countries' progress, with the main focus being on areas in which there have been changes, high risk areas identified in the MER or subsequently, on the priority areas for action. A schematic of the 4th round process is included below.

Figure 1. **Process of the 4th Round of Mutual Evaluations**



86. Countries may seek re-ratings for technical compliance with Recommendations rated as NC or PC before or after the 5th year follow-up assessment as part of the follow-up process. The general expectation is for countries to have addressed most if not all of the technical compliance deficiencies by the end of the 3rd year, and the effectiveness shortcomings by the time of the follow-up assessment. Requests for technical compliance re-ratings will not be considered where the expert(s) determines that the legal, institutional, or operational framework has not changed since the country's MER (or previous FUR, if applicable) and there have been no changes to the FATF Standards or their interpretation.[19]

87. If any of the FATF Standards have been revised since the end of the on-site visit (or previous FUR, if applicable), the country will be assessed for compliance with all revised standards at the time its re-rating request is considered (including cases where the revised Recommendation was rated LC or C). In the exceptional case that it comes to the Plenary's attention that a country has significantly lowered its compliance with the FATF Standards, the Plenary may request the country to address any new deficiencies as part of the follow-up process.

[19] Where there is disagreement between the expert(s) and the assessed country in this respect, they should discuss with ECG Co-Chairs to achieve an agreement.

(a) Regular Follow-up

88. Regular follow-up will be the default mechanism to ensure a continuous and on-going system of monitoring. This is the minimum standard that will apply to all members. Countries subject to regular follow-up will report back to the Plenary after three years (10 Plenary meetings) from the adoption of the country's MER, and will be subject to a follow-up assessment after five years.

(b) Enhanced Follow-up

89. The Plenary may decide, at its discretion, that the country should be placed in enhanced follow-up, which would result in the country reporting back more frequently than for regular follow-up. Countries in enhanced follow-up would typically first report back four Plenary meetings after the adoption of the country's MER, and subsequently report twice more at intervals of three Plenary meetings. Plenary retains the discretion to vary the specific frequency of reporting. Minor technical compliance issues remaining after the third follow-up report (or the first report for regular follow-up) will be assessed during the follow-up assessment after the fifth year.

90. In deciding whether to place a country in enhanced follow-up, the Plenary would consider the following factors:

a) After the discussion of the MER: a country will be placed immediately into enhanced follow-up if any one of the following applies:

   (i) it has 8 or more NC/PC ratings for technical compliance, or

   (ii) it is rated NC/PC on any one or more of R.3, 5, 10, 11 and 20, or

   (iii) it has a low or moderate level of effectiveness for 7 or more of the 11 effectiveness outcomes, or

   (iv) it has a low level of effectiveness for 4 or more of the 11 effectiveness outcomes.

b) After the discussion of a regular follow-up report or the 5th year follow-up assessment: the Plenary could decide to place the country into enhanced follow-up at any stage, if a significant number of priority actions have not been adequately addressed on a timely basis.

c) If and when it comes to the Plenary's attention that a country has lowered its compliance with the FATF Standards during the regular follow-up process: a country will be placed into enhanced follow-up if its level of technical compliance changed to a level that the Plenary considers as equivalent to NC/PC on any one or more of R.3, 5, 10, 11 and 20.

91. In addition to more frequent reporting, the Plenary may also apply other enhanced measures to countries placed in enhanced follow–up, particularly if satisfactory progress is not achieved. Possible enhanced measures include:

a) A letter could be sent from the FATF President to the relevant minister(s) in the member jurisdiction drawing attention to the lack of compliance with the FATF Standards.

b) A high-level mission could be arranged to the member jurisdiction to reinforce this message. This mission would meet with Ministers and senior officials.

c) In the context of the application of Recommendation 19 by its members, issuing a formal FATF statement to the effect that the member jurisdiction is insufficiently in compliance with the FATF Standards, and recommending appropriate action, and considering whether additional counter-measures are required.

d) Suspending the jurisdiction's membership of the FATF until the priority actions have been implemented. Suspension would mean that the country would be considered as a non-member of the FATF for the period of the suspension, would not be able to attend FATF meetings or provide input into FATF processes except for the process to determine whether deficiencies have been adequately addressed.

e) Terminate the membership of the jurisdiction.

92. Countries may move to regular follow-up at any time during the enhanced follow-up process in the following situations:

a) Where the country entered enhanced follow-up on the basis of meeting a criterion in paragraph 89(a), the Plenary may decide that the country will be moved from enhanced to regular follow-up following Plenary's decision that the country no longer meets any of those criteria (i.e., after approving a request for re-ratings).

b) The Plenary also has the discretion to decide to move the country to regular follow-up at any time, if it is satisfied that the country has made significant progress against the priority actions in its MER or has taken satisfactory action to address its deficiencies, even if the country still meets a criterion in paragraph 89(a).

93. Where countries in enhanced follow-up move to regular follow-up, the Plenary will decide the timing of the country's next regular follow-up report or of the follow–up assessment.

(c) Follow-up Reports

94. In preparation for the follow-up reports, the country will provide an update to the Secretariat setting out the actions it has taken or is taking to address the priority actions and recommended actions, and deficiencies in its MER.

- **For regular follow-up reports**, as the expectation is that significant progress would have been made in the three year period since the MER was adopted, the report should focus on re-ratings for technical compliance and/or demonstrating progress in addressing the shortcomings in the MER.
- **For enhanced follow-up**, the first follow-up report should at least contain an outline of the country's strategy for addressing the issues identified in their MER and exiting enhanced follow-up, for Plenary's information. If not already contained in the first follow-up report, subsequent reports should focus on re-ratings for technical compliance and/or demonstrating progress in addressing the shortcomings in the MER.

- **For countries subject to review by the International Cooperation Review Group** (on the basis of an agreed action plan), no reporting is expected on the Recommendations that are included in an ongoing action plan. However, overall progress on each Recommendation is still expected to be achieved, including on parts of Recommendations that are not covered by the action plan, under the normal timelines, or as soon as the country has completed its action plan (if this is after the regular timelines).

95. The country will be asked to submit information regarding technical compliance (which may be used to justify re-ratings) and effectiveness (for information only).

- **Technical compliance updates** should be provided in a similar format to the Mutual Evaluation technical compliance questionnaire (see Appendix 3), in relation to the shortcomings identified in the MER.
- **Effectiveness updates** should include any information that goes towards addressing the priority actions or other recommended actions in the MER, such as the lists in the FATF Methodology on the Examples of Information that could support the conclusions on Core Issues for each Immediate Outcome. As with the Mutual Evaluation process, there is no fixed format for the effectiveness update.

96. Although effectiveness will not be re-assessed until the follow-up assessment, updates on effectiveness facilitate a better understanding by the FATF of the progress made over time. Plenary may refer to such updates in determining whether to move a country from enhanced follow-up to regular follow-up (or vice versa), or whether to apply other enhanced measures to countries in enhanced follow–up that do not achieve satisfactory progress.

97. Re-ratings for technical compliance may only be made with Plenary approval, which will be sought by written process. Where a country wishes to seek technical compliance re-ratings, it should indicate on which Recommendations a re-rating will be requested, seven months in advance of Plenary meetings. The update by the country should be submitted to the Secretariat at least six months in advance of Plenary meetings. Only relevant laws, regulations or other AML/CFT measures that are in force and effect by the six-month deadline to submit information for a re-rating request, will be taken into account for a re-rating.[20]

- **Peer review principle**. Assessments of a country's request for technical compliance re-ratings and preparation of the summary report will be undertaken by other members, consistent with the peer review principle of the Mutual Evaluation process.
- **Composition of the group of experts**. The group of experts may include those who were involved in that country's Mutual Evaluation, but may also consist of other experts nominated by their delegation or assigned by the ECG, if necessary. The experts will be chosen from a subgroup of delegations (open to all delegations to participate in) that

[20] This rule may only be relaxed in the exceptional case where the legislation is not yet in force at the six-month deadline, but the text will not change and will be in force by the time of the Plenary. In other words, the legislation has been enacted, but is awaiting the expiry of an implementation or transitional period before it is enforceable. In all other cases, the procedural deadlines should be strictly followed to ensure that experts have sufficient time to do their analysis.

will coordinate the analysis of re-ratings requests and conduct its business in writing. Experts from the subgroup will be assigned by the ECG Co-Chairs to review re-rating requests. The number of experts assigned to a report, and their expertise, will depend on the nature of the particular re-rating request.

- **Reporting of analysis and recommendations**. The group of experts should submit their analysis at least nine weeks before the ECG/Plenary meeting for comments to all members, associate members and observers who have two weeks to comment on the draft. If no comments are received (including from the assessed country), the report will deemed approved and proceed to publication. If comments are received, a revised report will be circulated for adoption six weeks before the ECG/Plenary meeting. If no comments on the revised report are received, the report will be deemed approved and proceed to publication. If two or more delegations (not including the assessed country) raise concerns, regarding the experts' analysis of a particular Recommendation, that Recommendation and the issues raised will be discussed at Plenary.
- Depending on the comments received, the follow-up report may be first discussed at ECG before Plenary. Where there are major disagreements between the expert reviewers and the assessed country on the findings contained in the follow-up report (e.g. re-ratings) and/or major issues raised through the pre-plenary review process, the expert review group and/or secretariat should compile a short list of the most significant issues, and should circulate this to all members, observers and associate members at least two weeks prior to the relevant working group and/or plenary discussion. The relevant working group and/or plenary discussion should prioritise discussion of these issues and should be limited in time and scope. Although follow-up reports may in some instances be first discussed at ECG, Plenary remains the only decision-making body.
- **Consideration of follow-up reports**. Follow-up reports with re-ratings for technical compliance where two or more delegations (not including the assessed country) raise concerns regarding the expert's analysis of a particular Recommendation, the report will be considered by Plenary as a discussion item. Plenary discussions on a follow-up report with technical compliance re-ratings should take, on average, no more than one hour of Plenary time. Plenary will not discuss an individual criterion rating unless it will impact an overall Recommendation rating.
- **Continued involvement of Secretariat**. The Secretariat will assist experts in achieving consistency in the application of the FATF Standards and Methodology, and will equally support the countries in follow-up. The Secretariat will also advise the ECG/Plenary on process and procedural issues (e.g., in cases where no progress has been made).

98. Follow-up reports that do not involve re-ratings should be submitted at least two months in advance of the relevant Plenary meeting. The Secretariat will conduct a desk-based analysis, and prepare a summary report with a cover note solely focusing on the follow-up process and progress. These reports will be considered by Plenary as information items.

99. In preparing the analysis and summary report for Plenary, the original assessors may be consulted, if available. The analysis and summary report will be provided to the country for its

comments before it is sent to delegations. The report will contain a recommendation regarding the next step in the follow-up process.

100. Although most follow-up reports will be considered by written process or as an information item, ECG/Plenary may opt to discuss follow-up reports that receive written comments and/or involve substantive issues. Examples of substantive issues include, but are not limited to:

- Requests for technical compliance re-ratings.
- Significant changes in a country leading to a decline in technical compliance or effectiveness.
- Insufficient progress made by a country against the priority actions in its MER.
- Recommendations to place a country in or out of enhanced follow-up.

(d) 5th Year Follow-up Assessment

101. The follow-up assessment is intended to provide a more comprehensive update on the country's AML/CFT regime. It is intended to serve a similar function as an update that is part of a country's Financial Sector Assessment Programme. This takes place five years after the adoption of the country's MER, and will occur regardless of whether the country has been in regular or enhanced follow-up. Should a country request to undertake its follow-up assessment before or after the fifth year, Plenary may approve the request on a case-by-case basis, considering the FATF's work plan and the available resources of members, ECG/Plenary, and the Secretariat.

102. The scope of the FUAs should primarily target the Immediate Outcomes (IOs) with Low or Moderate Effectiveness (LE/ME) in areas of higher risk and materiality. In principle, there will be flexibility to consider more than 4 Immediate Outcomes (IO), but on a very targeted basis (e.g. focusing only on the most important deficiencies and areas of greatest risk, rather than systematically analysing every aspect of every IO) so as to reduce the resource burden. A scoping exercise, based on a review of the MER and subsequent follow-up reports, will occur about two years before discussion of the report, in coordination with the assessors and the assessed country, and supported by the Secretariat.

103. Each FUA requires up to three assessors (preferably experts that were on the original assessment team). The FUA assessors have the same role as they do in the mutual evaluation process (responsible for analysing countries' level of effectiveness and determining whether a re-rating is appropriate). To ensure quality and consistency, each FUA is supported by one Secretariat staff. The level of the Secretariat's involvement is the same as it is in the mutual evaluation process. The FUA process will be streamlined to limit the resource burden on delegations and the Secretariat. Assessed countries should deliver their effectiveness material to the Secretariat six months before discussion of its FUA and are encouraged to present it using structured formats. As well, to the extent possible, video-/tele-conferencing may be used to narrow the issues. The onsite visit (if one is needed) occurs about 4 months before the discussion of the report. The team would prepare a progress assessment report for Plenary discussion and decision. Re-ratings on both technical compliance and effectiveness are possible, and Plenary will decide whether the country should then be placed in regular or enhanced follow up, with the process continuing as previously.

(e) Publication of Follow-Up Reports

104. The FATF publication policy applies to actions taken under the FATF's follow-up policy. Regular follow-up reports and follow-up assessment reports will be published. The Plenary will retain flexibility on the frequency with which enhanced follow-up reports are published, but they will be published whenever there is a re-rating. After adoption, and prior to publication, final follow-up reports with TC re-ratings should be provided to all assessment bodies for consideration in the post-Plenary Q&C Review described in section V of these Procedures. Follow-up reports where no issues are raised through the pre-plenary review process or during the relevant working group/plenary discussion are not subject to this post Plenary Q&C review process.

105. For follow-up reports, only the technical compliance analysis is published by the FATF, as effectiveness updates are not analysed and discussed by Plenary until the follow-up assessment. The analysis of effectiveness will be included in the publication of the follow-up assessment. If requested by a country, a link will be provided from the FATF website to a website of the country on which it has placed additional updates or other information relevant to the actions it has taken to enhance its AML/CFT system, including for effectiveness.

APPENDIX 1 – TIMELINES FOR THE 4TH ROUND MUTUAL EVALUATION PROCESS

Date[21]	Week	Key Indicative Milestones[22]		
		for Assessment Team	*for the Country*[23]	*for Reviewers*
At least 6 months before the on-site	-26	■ Commence research and desk-based review on technical compliance (TC). ■ Confirm (or find) assessors drawn from countries which had volunteered[24]. President to formally advise country of the assessors once confirmed. ■ Invite delegations to provide information about (a) assessed country's risk situation and any specific issues which should be given additional attention by assessors, (b) their international cooperation experiences with the assessed country.	■ Designate contact point(s) or person(s) and set up an internal coordination mechanisms (as necessary)[25]. ■ Respond to technical compliance update by providing updated information on new laws and regulations, guidance, institutional framework, risk and context.	

21 Differences between the timeline expressed in months and the timeline expressed in weeks are part of the flexibility that assessors and the assessed country have when determining the calendar.

22 Interaction between assessors, secretariat and country is a dynamic and continuous process. The assessment team should engage the assessed country as soon and as much as reasonably possible, and seeking and provision of information will occur throughout the process. Countries should respond to queries raised by assessment team in a timely manner.

23 The country would have to commence preparation and review of its AML/CFT regime for compliance with the FATF Standards more than six months prior to the on-site.

24 The assessment team should comprise at least four assessors, including at least one legal, law enforcement, and financial expert. Depending on the country and risks, additional assessors with the relevant expertise may be sought.

25 Contact person(s) should ideally be familiar or trained in the FATF Standards before the commencement of the process.

Date[21]	Week	Key Indicative Milestones[22]		
		for Assessment Team	*for the Country*[23]	*for Reviewers*
4 months before the on-site	-16	■ Prepare preliminary draft TC annex. ■ Analyse country's assessment of risk and discuss potential areas of increased or reduced focus for on-site[26]. ■ Confirm reviewers (drawn from pool of experts).	■ Provide response on effectiveness based on the 11 Immediate Outcomes and the underlying Core Issues (including as relevant supporting information and data).	
3 months before the on-site visit	-13	■ Send first Draft of TC annex (need not contain ratings or recommended actions) to country for comments.	■ Contact point(s) or person(s) to engage Secretariat to prepare for the on-site.	
2 months before the on-site visit	-9	■ Advise and consult country on preliminary areas of increased or reduced focus for on-site. This could involve preliminary discussions on the assessment team's impressions on the country's ML/TF risks. ■ Send draft scoping note to reviewers. ■ Prepare a preliminary analysis identifying key issues on effectiveness.	■ Provide comments on draft TC assessment. ■ Provide draft programme for on-site visit to the assessment team.[27]	■ Review draft scoping note
1 month before the on-site visit	-4	■ Final date for members and FSRBs to provide specific information on their international co-operation experiences with the country. ■ Finalise areas of increased focus for on-site visit, and key government agencies and private sector to bodies meet.		

26 This may identify a need to request additional experts with other specific expertise for the assessment team.

27 Contact point(s) or person(s) to identify and inform key government agencies and private sector bodies that would be involved for the on-site.

Date[21]	Week	Key Indicative Milestones[22]		
		for Assessment Team	*for the Country*[23]	*for Reviewers*
At least 3 weeks before the on-site	-3	■ Finalise programme and logistics arrangements for on-site.		
At least 2 week before the on-site	-2	■ Assessment team to prepare revised draft TC annex, draft TC text for MER, and outline of initial findings/key issues to discuss on effectiveness. Where possible a working draft MER prepared. Revised draft TC annex sent to country.	■ Country to provide responses to any outstanding questions from the assessment team.	
On-site Visit				
Usually 2 weeks (but may vary)	0	■ Conduct opening and closing meetings with country. A written summary of key findings is to be provided at the closing meeting. ■ Where relevant, assessment team to review the identified areas for greater focus for the on-site. ■ Discuss and draft MER.		
After the on-site visit				
Within 6 weeks of on-site visit	6	■ Assessment team to prepare the complete first draft MER and send to country for comments.		
Within 4 weeks of receipt of draft MER	10	■ Review and provide inputs on queries that country may raise.	■ Respond to first draft MER.	

Date[21]	Week	Key Indicative Milestones[22]		
		for Assessment Team	*for the Country*[23]	*for Reviewers*
Within *4 weeks* of receiving country comments	14	■ Review country's response on first draft of MER. Prepare and send second draft MER to country and reviewers. Send country comments to reviewers.		
Minimum – 10 weeks before the Plenary	17	■ Engage the assessed country to discuss further changes to the draft MER, and identify issues for discussion at the face-to-face meeting. ■ Circulate second set of assessed country comments, reviewers' comments, and assessment team's responses to reviewers, to the ECG team in the FATF secretariat.	■ Respond to second draft MER.	■ Provide comments on second draft MER.
Minimum – 8 weeks before the Plenary	*19*	■ Conduct face-to-face meeting to discuss the second draft MER & ES. ■ Work with country to resolve disagreements and identify potential priority issues for Plenary discussions. ■ If French language assessment, send final draft MER & ES for translation. [Teams may consider starting their assessment process earlier to have additional translation time].		
At least- 5 (ideally 6 weeks) before Plenary	*22*	■ Send final draft MER & ES, together with reviewers' comments, assessed country's views and assessment team response to all delegations for comments (two weeks).		

Date[21]	Week	Key Indicative Milestones[22]		
		for Assessment Team	*for the Country*[23]	*for Reviewers*
Minimum – 3 weeks before Plenary	*24*	■ Deadline for written comments from delegations.		
Two-week period before Plenary	*25*	■ Engage country and assessors on priority key issues, and other comments received on MER or ES. ■ Circulate (a) compilation of delegation comments, and (b) finalised list of priority key issues to be discussed in Plenary. ■ Review and provide inputs on priority key issues, and other comments received on MER or ES.	■ Work with assessment team on priority key issues, and other comments received on MER or ES.	
Plenary Week	*27*	**Discussion of MER**		
Post Plenary – Publication and Finalisation of MER				
The MER adopted by Plenary is to be published as soon as possible, and within six weeks, once the assessment team has reviewed it to take into account additional comments raised in Plenary, and the country confirms that the report is accurate and/or advises of any consistency, typographical or similar errors in the MER. This period to publication is inclusive of any post-Plenary quality and consistency review as required by the Universal Procedures for AML/CFT assessments.				

APPENDIX 2 – AUTHORITIES AND BUSINESSES TYPICALLY INVOLVED FOR ON-SITE VISIT

Ministries:

- Ministry of Finance.
- Ministry of Justice, including central authorities for international co-operation.
- Ministry of Interior.
- Ministry of Foreign Affairs.
- Ministry responsible for the law relating to legal persons, legal arrangements, and non-profit organisations.
- Other bodies or committees to co-ordinate AML/CFT action, including the assessment of the money laundering and terrorist financing risks at the national level.

Criminal justice and operational agencies:

- The FIU.
- Law enforcement agencies including police and other relevant investigative bodies.
- Prosecution authorities including any specialised confiscation agencies.
- Customs service, border agencies, and where relevant, trade promotion and investment agencies.
- If relevant - specialised drug or anti-corruption agencies, tax authorities, intelligence or security services.
- Task forces or commissions on ML, FT or organised crime.

Financial sector bodies:

- Ministries/agencies responsible for licensing, registering or otherwise authorising financial institutions.
- Supervisors of financial institutions, including the supervisors for banking and other credit institutions, insurance, and securities and investment.
- Supervisors or authorities responsible for monitoring and ensuring AML/CFT compliance by other types of financial institutions, in particular bureaux de change and money remittance businesses.
- Exchanges for securities, futures and other traded instruments.
- If relevant, Central Bank.

- The relevant financial sector associations, and a representative sample of financial institutions (including both senior executives and compliance officers, and where appropriate internal auditors).
- A representative sample of external auditors.

DNFBP and other matters:

- Casino supervisory body;
- Supervisor or other authority or Self-Regulatory Body (SRB) responsible for monitoring AML/CFT compliance by other DNFBPs;
- Registry for companies and other legal persons, and for legal arrangements (if applicable);
- Bodies or mechanisms that have oversight of non-profit organisations, for example tax authorities (where relevant);
- A representative sample of professionals involved in non-financial businesses and professions (managers or persons in charge of AML/CFT matters (e.g. compliance officers) in casinos, real estate agencies, precious metals/stones businesses as well as lawyers, notaries, accountants and any person providing trust and company services);
- Any other agencies or bodies that may be relevant (e.g. reputable academics relating to AML/CFT and civil societies).

Efficient use has to be made of the time available on-site, and it is therefore suggested that the meetings with the financial sector and DNFBP associations also have the representative sample of institutions/DNFBP present.

APPENDIX 3 – QUESTIONNAIRE FOR TECHNICAL COMPLIANCE UPDATE

BACKGROUND AND KEY DOCUMENTS

Countries should list the principal laws and regulations in their AML/CFT system, and give a brief, high-level summary of their scope. The (translated) text of these laws should be provided to assessors. It is preferable to assign each document a unique number or name to ensure references are consistent. These numbers should be listed here.

Countries should list the main competent authorities responsible for AML/CFT policy and operations, and summarise their specific AML/CFT responsibilities.

Countries could also briefly note any significant changes to their AML/CFT system which have taken place since the last evaluation or since they exited the follow-up process. This includes new AML/CFT laws, regulations and enforceable means and competent authorities, or significant reallocation of responsibility between competent authorities.

1. [Example –"The principal laws relevant to AML/CFT are:

- *Money Laundering Act (1963) (document L1) – establishes a criminal offence of money laundering*
- *Proceeds of Crime Act (2007) (document L2) – sets a legal framework for confiscation of the proceeds of crime*
- *National Security Act (2005) (document L3) – establishes a criminal offence of terrorist financing and a legal framework for implementing targeted financial sanctions*
- *Financial Sector Act (1999) (document L4) – provides the legal basis for financial sector regulation and supervision and sets out the basic AML/CFT obligations on firms.*

2. [Optional: Example –"Since the last evaluation, Country X has passed the 'Law on Suspicious Transaction Reporting (2009)' and established an FIU. Responsibility for investigating suspicious transactions has been transferred from the Ministry of Interior to the FIU.

RISK AND CONTEXT

Countries should provide assessors with available documents about the ML/TF risks in their country. They should list each document they provide, and briefly describe their scope. Countries should also note any important considerations about risk and context which they wish to bring to the attention of assessors. This should not duplicate information included in the documents provided. If countries wish to highlight specific contextual factors, they should provide documentation on these.

Countries should describe the size and structure of their financial and DNFBP sectors, using the tables in Annex 1.

TECHNICAL COMPLIANCE INFORMATION

Countries should provide information on their technical compliance with each of the Criteria used in the FATF Methodology.

For each criterion, countries should, as a minimum, set out the reference (name of instrument, article or section number) that applies. Countries should always specifically refer to the specific clauses of their laws, enforceable means, or other mechanisms which are relevant to each criterion. If necessary countries should also briefly explain the elements of their laws, enforceable means, or other mechanisms which implement the criterion, (e.g. an outline of the procedures followed, or an explanation of the interaction between two laws). Countries could also note whether the law or enforceable means referred to has changed since the last MER or follow-up report.

The (translated) text of all relevant laws, enforceable means, and other documents should be provided separately (but as early as possible).

Countries should provide brief factual information only – there is no need for lengthy argument or interpretation. There is no need to set out each criterion in full. Information could be provided in the following form:

Recommendation 1

Criterion 1.1

86. [Example – "Country X has conducted separate risk assessments on Money Laundering (attached as document R1) and on Terrorist Financing (edited public version attached as document R2). These risk assessments are both used as the basis for the National Strategic Plan on AML/CFT (attached as document R3) which brings together both ML and TF risks."]

Criterion 1.2

87. [Example – "The Minister of Finance has overall responsibility for AML/CFT. The National Strategic Plan on AML/CFT (document R3) assigns responsibility for ML risk assessment to the National Police Authority (page 54), and for TF risk assessment to the Interior Ministry (page 55). Actions are coordinated through the National AML/CFT Coordinating Committee (terms of reference on page 52)."]

Criterion 1.3

88. [Example – "Both ML and TF risk assessments are required to be updated on an annual basis (document R3, pages 54, 55)"]

Criterion 1.4

89. *[Example – "The ML risk assessment is a public document (document R1). The TF risk assessment is confidential but available to selected staff of all relevant competent authorities. A public version of the TF assessment is prepared which sets out key findings for financial institutions, and DNFBPs (document R2)."]*

etc.

Consolidated Processes and Procedures for Mutual Evaluations and Follow-Up

"Universal Procedures"

October 2019

FINANCIAL ACTION TASK FORCE

The Financial Action Task Force (FATF) is an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction. The FATF Recommendations are recognised as the global anti-money laundering (AML) and counter-terrorist financing (CFT) standard.

For more information about the FATF, please visit the website: www.fatf-gafi.org

This document and/or any map included herein are without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and bounderies and to the name of any territory, city or area.

CONSOLIDATED PROCESSES AND PROCEDURES FOR MUTUAL EVALUATIONS AND FOLLOW-UP

"UNIVERSAL PROCEDURES"

OCTOBER 2019

TABLE OF CONTENTS

CONSOLIDATED PROCESSES AND PROCEDURES FOR MUTUAL EVALUATIONS AND FOLLOW-UP ("UNIVERSAL PROCEDURES")

1. All Anti-Money Laundering/Countering the Financing of Terrorism (AML/CFT) assessment bodies (i.e. FATF, FATF-style regional bodies (FSRBs), IMF and the World Bank) will conduct the next round of assessments in accordance with the FATF 2013 Methodology. In principle, FSRBs' and International Financial Institutions' (IFI) assessment procedures should be the same as, or close to, those of the FATF. However, as in the previous round, there will be some flexibility in the procedural arrangements. Nevertheless, there will be a set of core elements which should apply to all AML/CFT assessment bodies (as noted in the *High-Level Principles and Objectives for the relationship between the FATF and the FSRBs*[1]).

2. Based on the Procedures for the FATF 4th Round of AML/CFT evaluations, these are the "Universal Procedures" that should form the basis for the evaluations conducted by all assessment bodies. Assessment bodies should periodically review their procedures to identify on-going challenges and update their procedures to address those challenges. When a FSRB's or IFI's evaluation procedure is updated, the changes will be checked against the Universal Procedures. When the Universal Procedures are updated, e.g. after the FATF Procedures are changed, all FSRBs' and IFIs' evaluation procedures should be updated within a reasonable amount of time, and will be checked against the updated Universal Procedures. Before updating the Universal Procedures, the FATF should consider the impact of any changes on the FSRBs. Where any evaluation procedure of an assessment body continues to be inconsistent with the Universal Procedures, the FATF Secretariat would provide a paper to allow for a discussion by FATF's Evaluation and Compliance Group (ECG).

INTERACTION WITH THE EVALUATED COUNTRY

3. The assessment team, facilitated by the FATF/FSRB Secretariat or IFI contact point(s), should engage with and consult the assessed country on an on-going basis throughout the evaluation process. This may include early engagement with higher level authorities to obtain support for and co-ordination of the evaluation for the entirety of the process and training for the assessed country to familiarise stakeholders with the mutual evaluation process. Assessment bodies should review from time to time whether the way in which they engage with assessed jurisdictions is satisfactory.

4. Assessed jurisdictions should consider appointing, at an early stage in the evaluation process, a co-ordinator responsible for the mutual evaluation process to ensure adequate co-ordination and clear channels of communication between the secretariat and the assessed jurisdiction.[2]

---

1 www.fatf-gafi.org/publications/fatfgeneral/documents/high-levelprinciplesfortherelationshipbetweenthefatfandthefatf-styleregionalbodies.html

2 The co-ordinator should have the appropriate seniority to be able to co-ordinate with other authorities effectively and make certain decisions when required to do so. The co-ordinator should also have an understanding of the mutual evaluation process and be able to perform quality control of responses provided by other agencies.

SETTING AND RESPECTING TIMELINES AND OTHER ASPECTS OF THE MUTUAL EVALUATION PROCESS

5. Assessment bodies should develop timelines for the evaluation process, following the FATF approach[3]. Timelines should include key milestones for the process and the relevant responsibilities of the assessment team, the assessed country and the reviewers at each of the various steps, together with remedial action for cases where the timelines are not observed.

6. The assessed countries and assessment teams have the flexibility to extend the overall timeline by up to one or two months in order to plan around plenary meetings, events or holidays or to adjust the date of the on-site visit to the most appropriate time. When translation is needed, assessment bodies should ensure that at least 3 to 4 extra weeks are scheduled for translation purposes. In practice, these extensions may require an earlier start to the evaluation process as there is no scope for reducing the time allocated to the post-onsite stages of the process. Therefore, the assessed country and assessment team should therefore agree on the broad timeline of the evaluation at least 14 months before the plenary discussion.

7. The timelines are intended to provide guidance on what is required if the reports are to be prepared within a reasonable timeframe, and in sufficient time for discussion in Plenary. It is therefore important that both the assessors and the assessed country respect the timelines.

8. Delays may significantly impact the ability of the Plenary to discuss the report in a meaningful way. The draft schedule of evaluations has been prepared so as to allow enough time between the on-site visit and the Plenary discussion. A failure to respect the timetables may mean that this would not be the case. By agreeing to participate in the mutual evaluation process, the country and the assessors undertake to meet the necessary deadlines and to provide full, accurate and timely responses, reports, or other material as required under the agreed procedure. Where there is a failure to comply with the agreed timelines, then the following actions could be taken (depending on the nature of the default):

a) Failure by the country-The assessment body's President/Chair may write to the head of delegation or the relevant Minister in the country. The Plenary will be advised as to the reasons for deferral, and publicity could be given to the deferment (as appropriate) or other additional action considered. In addition, the assessment team may have to finalise and conclude the report based on the information available to them at that time.

b) Failure by the assessors, the reviewers or the Secretariat - the assessment body's President/Chair may write a letter to or liaise with the head of delegation of the assessor or the reviewer, or the assessment body's Executive Secretary (for the Secretariat).

9. The Secretariat will keep the Presidency/Chairmanship advised of any failures so that the President/Chairman can respond in an effective and timely way. The Plenary is also to be advised if the failures result in a request to delay the discussion of the MER.

[3] See Appendix 1 of the FATF Procedures

ASSESSMENT TEAMS AND SECRETARIAT SUPPORT

10. Assessors should be very knowledgeable about the FATF Standards, and are required to attend and successfully complete an assessor training event before they conduct a mutual evaluation. Assessment bodies should implement the criteria for selecting and assessing the level of expertise of persons attending assessor training events, including those criteria approved by the FATF Plenary.[4] To ensure that the mutuality of the peer review process is maintained, members should provide qualified experts. It is also important that assessors are able to devote their time and resources to reviewing all the documents (including the information updates on technical compliance, and information on effectiveness), raising queries prior to the on-site, preparing and conducting the assessment, drafting the MER, attending the meetings (e.g. on-site, face-to-face meeting, and Plenary discussion), and adhere to the deadlines indicated.

11. Assessment teams should have the correct balance of knowledge and skills to ensure a quality mutual evaluation. To the extent possible, the following factors should be considered before confirming an assessor to participate in a mutual evaluation: (i) their relevant operational and assessment experience; (ii) language of the evaluation; (iii) nature of the legal system (civil law or common law) and institutional framework; and (iv) specific characteristics of the jurisdiction (e.g. size and composition of the economy and financial sector, geographical factors, and trading or cultural links).

12. Through the mutual evaluation process, the FATF/FSRB Secretariat or IFI contact point(s) supports the assessment team and the assessed country. This support includes:

- Project-leading the process and undertaking other tasks as indicated in the applicable procedures;
- Focusing on quality and consistency of the MER, including taking steps necessary to ensure that the assessors' analysis is clearly and concisely written, comprehensive, objective and supported by evidence;
- Ensuring compliance with processes and applicable procedures;
- Assisting and guiding the assessors and assessed country in the interpretation of the FATF Standards and Methodology in line with past FATF Plenary decisions; and
- Ensuring that assessors and assessed countries have access to relevant and accurate documentation and that statistics and legislative references are cited correctly.

13. Assessment bodies should review from time to time whether their respective Secretariat is staffed to adequately support the mutual evaluation process, understanding that 2 or 3 staff members should be considered optimal for the majority of evaluations. Where resource issues exist, the assessment body should review its work plan and allocation of resources to other projects to ensure that work on MERs/FURs is adequately prioritised.

PREPARATION FOR THE ON-SITE VISIT

14. The assessment team, supported by the secretariat, will conduct a desk-based review for technical compliance (TC), based on the necessary updates and information (background information

[4] See, e.g. FATF/PLEN/RD(2018)21

on the institutional framework, risks and context and information on the measures taken to meet the criteria for each Recommendation) provided by the assessed country and other reliable sources (e.g. reports from other international organisations). The assessed country should rely on the questionnaire template for the technical compliance update[5] to provide relevant information to the assessment team.

15. A draft of the TC compliance annex, which need not include ratings nor recommendations, will be provided to the assessed country in sufficient time before the on-site visit for it to provide comments.

16. The FATF Methodology requires that in conducting their analysis, assessors should only take into account relevant laws, regulations or other AML/CFT measures that are in force and effect at that time, or will be in force and effect by the end of the on-site. Where relevant bills or other firm proposals to amend the system are made available, these will be referred to in the Mutual Evaluation Report (MER)[6] (including for the purpose of the analysis and recommendations to be made to the assessed country) but should not be taken into account for ratings purposes unless they are in force and effect at the time of the on-site.

17. Countries should provide information on effectiveness. For each of the 11 Immediate Outcomes, they should set out fully how each of the core issues is being addressed. It is important for countries to provide a full and accurate description (including examples of information, data and other factors) that would help to demonstrate the effectiveness of the AML/CFT regime. Other countries which are FATF and FSRB members should be invited to provide information on their experience of international co-operation with the country being evaluated, or any other AML/CFT issues that they would like to see raised and discussed during the on-site visit. In addition, the assessment team and the assessed country may also identify key countries which the assessed country has provided international cooperation to or requested it from, and seek specific feedback. The onus is on the assessed country to provide all relevant and necessary information, both in relation to technical compliance and effectiveness.

18. Based on its preliminary review and analysis of the risks and the assessed country's situation prior to the on-site, the assessment team may identify specific areas which it would pay more attention to during the on-site visit and in the MER. In doing so, the team will consult the assessed country. This will usually relate to effectiveness issues but could also include technical compliance issues. Delegations will be invited to provide any information and comments that they may have that would assist the team to prepare a short scoping note identifying areas of lower and higher risk that need reduced or increased focus. The scoping note should set out briefly the areas for increased and reduced focus, and the rationale. The draft scoping note, along with relevant background information (e.g. the country's risk assessment(s)), should be sent to the reviewers (described in the section on quality and consistency, below) and to the assessed country.

19. There should be adequate confidentiality requirements that apply to the assessment team, Secretariats, reviewers, officials in the assessed country and any other person with access to assessment documents or information.

---

5 See Appendix 3 of the FATF Procedures for an example, or refer to templates that some FSRBs have created.

6 References to MER include detailed assessment reports (DAR) prepared by IFIs.

ON-SITE VISIT

20. The on-site visit will include the following:

- An initial internal preparatory meeting for the assessment team.
- Meetings[7] with representatives of the assessed country, the private sector or other relevant non-government bodies or persons[8], including an opening and closing meeting. The opening meeting should consider including an overview of the country's understanding of risk, to complement the write-ups of the country's national risk assessment(s). The programme of meetings should take into account the areas where the assessment team may want to apply increased and reduced focus. Time may have to be set aside for additional or follow-up meetings, if, in the course of the set schedule, the assessors identify new issues that need to be explored, or if they need further information on an issue already discussed.
- Typically, an onsite programme would also include 1-2 days where the assessors work only on the draft MER (supported by the Secretariat), ensuring that all the major issues that arose during the evaluation are noted in the report, and discusses and agrees ratings and key recommendations.
- The assessment team should provide a written summary of its key findings to the assessed country officials at the closing meeting.

AFTER THE ON-SITE VISIT

21. There should be an adequate amount of time between the end of the on-site visit and the discussion of the MER[9] in Plenary in order to complete all the steps below (noting the timeline set out in Appendix 1 of the FATF *Procedures*).

22. The assessment team will prepare, coordinate and refine a draft MER and the Executive Summary, including the key findings, as well as the preliminary recommendations and ratings. This will then be sent to the assessed country, which should have at least 4 weeks to review and provide its comments on the draft MER to the assessment team.

23. With the aim to facilitate communication between the assessment team and the assessed country, the Secretariat should facilitate regular conference calls between all parties when necessary; in particular after the circulation of an updated draft MER. When writing-up the draft MERs and/or during calls, assessors should aim to clarify in writing or orally as much as possible how information

---

7 The assessment team should also set aside time midway through the on-site to review the progress of the mutual evaluation and where relevant, the identified areas of increased focus for the on-site.

8 Generally, assessors should be given the opportunity to meet with such bodies or persons in private without a government official present, not only if there is concern that the presence of the officials may inhibit the openness of the discussion. The team may also request that meetings with certain government agencies are restricted to those agencies only.

9 The format for the Executive Summary and MER is contained in Annex II of the Methodology. Assessors should also pay attention to the guidance on how to complete the Executive Summary and MER, including with respect to the expected length of the MER (100 pages or less, together with a technical annex of up to 60 pages).

submitted by the assessed country was taken into account[10], if/where additional information is still needed.

24. On receipt of the assessed country's comments on the draft MER and Executive Summary, the assessment team will review the various comments and make further amendments. Every effort should be made to ensure that the revised draft is as close to a final draft MER as possible. The revised draft MER and Executive Summary will then be sent to the reviewers and the assessed country.

QUALITY AND CONSISTENCY REVIEW

25. All assessment bodies will have an effective and robust mechanism in place to ensure the review of the quality and consistency of their own reports that meets the following principles:

a) *Equivalent Purpose and Rigour* – the mechanism for ensuring quality and consistency should have the same objective, and be of equivalent rigour, to the FATF Quality and Consistency review. FSRBs and IFIs should adopt and follow the same quality and consistency procedures as the FATF (set out in section IV (l) of the FATF Procedures), except where the ECG agrees to an alternative procedure.

b) *Scoping* – the mechanism should consider whether the assessors' draft scoping note reflects a reasonable view on the focus of the assessment, and should provide feedback to the assessment team.

c) *External Involvement* – the mechanism should include at least one expert from outside the assessment body (e.g. from the FATF, IFI, or another FSRB).

26. Following the receipt of the reviewers' and assessed country's comments, assessors should respond to all substantive comments by external reviewers and the Secretariat should liaise with external reviewers as needed to facilitate this process. The Secretariat will engage the assessed country to discuss further changes to the draft MER, and identify issues for discussion at the face-to-face meeting or video/teleconference.

INTERACTION WITH THE COUNTRY BEFORE THE PLENARY DISCUSSION

27. The assessment team (including Secretariat) and the assessed country should have a face to face meeting to further discuss the draft MER and Executive Summary. During this session, the assessment team and assessed country should work to resolve any disagreements over technical compliance or effectiveness issues and identify potential priority issues for Plenary discussion. If a meeting is not possible then there should at a minimum be a video or teleconference. Where significant substantive changes are made to the MER after the face-to-face meeting, the FATF/FSRB Secretariat should consider circulating a revised second draft to external reviewers for a targeted review.

PLENARY DISCUSSION

28. The revised Executive Summary and MER, together with the conclusions of the quality and consistency mechanism, and assessors' response, will then be sent to all members, associate members and observers, including FATF (for circulation to FATF members), at least five weeks (ideally six weeks) prior to Plenary for their comments. There should be no further changes to the substance of

[10] Assessors need not include all the information submitted by the assessed country, and should exercise discretion in determining which information are the most relevant to be included.

the draft MER thereafter to allow delegations to provide comments and prepare for the discussion at Plenary (and/or the working group prior to Plenary, if any). Delegations should have sufficient time (ideally two weeks) to provide written comments on the MER and Executive Summary, and in particular, to identify any key issues that they wish to discuss in the relevant working group (if any) and Plenary. The comments should focus on the substantive key issues, or on other high-level or horizontal aspects of the assessment, though other observations may also be made. The comments received will be made available to all delegations. A similar process and timeline should be applied in relation to assessments of countries that are not members of FSRBs, with the documents provided well in advance of finalisation.

29. Ideally three weeks preceding the Plenary, the Secretariat should engage the assessed country and the assessors on priority issues, and other comments received on the MER or Executive Summary and prepare a list of priority and substantive key issues that will be discussed in Plenary and/or Working Group. Key issues should focus on effectiveness, but may include issues related to technical compliance, and should take into account the issues that the assessed country and delegations are most keen to discuss, as well as the assessed country's risk and context. The list of substantive key issues (usually five to seven) will be circulated to all delegations at least two weeks prior to the Plenary discussion.

30. The MER will be discussed in Plenary and/or Working Group (particularly the list of key issues) and should focus on high-level and substantive key issues, primarily concerning effectiveness. Where appropriate, important technical issues would also be discussed.. The President/Chair should manage the discussions and the time for discussion should be limited to a reasonable length (ideally three to four hours). The procedure for the discussion will be as follows:

- Assessment team briefly presents, in high-level terms, the key issues and findings from the report. The team will have the opportunity to intervene/comment on any issue concerning the Executive Summary or MER.
- Assessed country makes a short opening statement.
- The Plenary discusses the list of key issues.
- Time permitting, other issues could be raised from the floor, and discussed by the Plenary.

31. The representative of the FATF Secretariat at the Plenary will be expected to assist and advise on all issues relating to the interpretation of the Recommendations, and the quality and consistency aspects of the draft MERs. The Plenary discussion will provide members and observers adequate opportunity to raise and discuss concerns about the quality and consistency of an MER. At the end of the Plenary discussion, the MER and the Executive Summary will be submitted to the Plenary for adoption.[11]

PUBLICATION AND OTHER PROCEDURES FOLLOWING THE PLENARY

32. Following the Plenary discussion of the report, the Secretariat will work with the assessors to amend all documents as agreed by the Plenary, and will circulate a revised version of the report to

[11] Within an FSRB, the term "the Plenary" refers to the body of senior officials representing member countries.

the assessed country. The assessed country must confirm that the MER is accurate and/or advise of any typographical or similar errors in the MER.

Post plenary quality and consistency review

33. Where an FATF or FSRB member, the FATF Secretariat, FSRB Secretariat or an IFI considers that a FATF or FSRB report has significant problems of quality and consistency (Q&C), it should wherever possible raise such concerns with the body conducting the assessment (the assessment body) prior to adoption. The assessment body, assessment team and assessed country should consider and work to appropriately address the concerns.

34. Nevertheless, highly exceptional situations may arise where significant concerns about the Q&C of a report remain after its adoption. To address such issues, the post-Plenary Q&C process applies to all assessment bodies with a view to preventing the publication of reports with significant Q&C problems and ensuring that poor quality assessments do not damage the FATF brand.

35. The post-Plenary quality and consistency (Q&C) review process applies to all mutual evaluation reports (MERs) (including their executive summaries), detailed assessment reports (DARs)[12] (including their executive summaries), mutual evaluation follow-up reports with technical compliance re-ratings (FURs) and follow-up assessment reports (FUARs), regardless of which assessment body prepared the report.[13] The exception is FURs with technical compliance (TC) re-ratings where no Q&C issues are raised through the pre-plenary review process or during the relevant working group/plenary discussion. Such FURs are not subject to the post-Plenary review process and ordinarily should be published within six weeks after their adoption by Plenary.

Steps in the post-Plenary Q&C process

36. After adoption of the report, the assessment body will amend all documents as necessary and will circulate a revised version of the report to the country within one week of the Plenary. Within two weeks of receiving it from the assessment body, the country must confirm that the report is accurate and/or advise of any typographical or similar errors. Care will be taken to ensure that no confidential information is included in any published report. The assessment body will then forward the final version of the report to the FATF Secretariat.

37. Where an FSRB has a Council of Ministers, or equivalent body, the report should be adopted at the meeting of officials (the Plenary), and there should be no delay in publication due to the need to have the approval or recognition of Ministers regarding the reports.

38. The FATF Secretariat will then circulate the report to all the FATF members, FSRBs and the IFIs, along with a template for referring Q&C issues for consideration. FSRBs should forward the report and template to all of their members for consideration. Parties who identify any serious or major Q&C issues have two weeks to advise the FATF Secretariat (for FATF reports) or both the FATF

12. Where the evaluation is conducted by one of the International Financial Institutions (IFI) (IMF or World Bank).

13 In this section, MERs, DARs, FURs and FUARs are collectively referred to as *reports.*

Secretariat and assessment body (for non-FATF reports)[14] in writing, using the template provided to indicate their specific concerns and how these concerns meet the substantive threshold.

39. To be considered further in this process, a specific concern should be raised by at least two of the following parties: FATF or FSRB members [15]or Secretariats or IFIs, at least one of which should have taken part in the adoption of the report. Otherwise, the post-Plenary Q&C review process is complete, the FATF Secretariat will advise the assessment body and delegations accordingly and the report will be published.[16]

40. If two or more parties identify a specific concern, the Co-Chairs of the FATF Evaluations and Compliance Group (ECG) will review the concern to determine whether *prima facie* it meets the substantive threshold and procedural requirements. To aid in this decision, the FATF Secretariat will liaise with the relevant FATF or FSRB Secretariat team to provide the ECG Co-Chairs with any necessary background information on the issue, including (where relevant and appropriate):

a) information submitted by parties raising the Q&C issue

b) background information on any related comments raised at the pre-Plenary stage

c) the rationale for the relevant rating/issue under discussion based on the facts in the report and/or any relevant co-chairs' report or summary record from the working group/Plenary meeting where the report was discussed (including whether the issue was discussed in detail, what the outcome of the those discussions was and any reasons cited for maintaining or changing the rating or report)

d) objective cross-comparisons with previous FATF reports that have similar issues

e) the report's consistency with the corresponding parts of the Methodology

f) any connection or implications for the ICRG process, and

g) what next steps might be appropriate.

41. If the ECG Co-Chairs conclude that *prima facie* the substantive threshold and procedural requirements are met, the Secretariat will circulate the report to all FATF delegations for consideration by the ECG along with a decision paper prepared by the FATF Secretariat in consultation with the relevant assessment body (FSRB/Secretariat/IFI). On the other hand, if the ECG Co-Chairs conclude that *prima facie* the substantive threshold and procedural requirements are not met, the issue would not be taken forward for discussion, but a short note explaining the Co-Chair's position would be presented to ECG for information.

42. Issues identified less than four to six weeks before the FATF Plenary will be discussed at the next FATF Plenary to ensure sufficient time for consultation among Secretariats and preparation of the decision paper. The decision paper prepared by the FATF Secretariat in consultation with the

14 Where FATF or FSRB members or secretariats consider that an MER which has been adopted by an IFI has or continues to have significant problems of quality or consistency, they should promptly inform the IFI of those concerns (and the FATF Secretariat when the concerns are raised by others).

15 Not including the assessed country.

16 Ordinarily, publication would happen within six weeks of the report being adopted if no further steps in the post-Plenary Q&C process are needed.

relevant assessment body will include the background information listed above in paragraph 35 to the extent that it is relevant and appropriate.

43. The ECG will decide whether the report meets the substantive threshold (serious or major issues of Q&C with the potential to affect the credibility of the FATF brand as a whole). Examples of situations meeting this substantive threshold include:

a) the ratings are clearly inappropriate and not consistent with the analysis

b) there has been a serious misinterpretation of the Standards, Methodology and/or Procedures

c) an important part of the Methodology has been systematically misapplied, or

d) laws that are not in force and effect have been taken into account in the analysis and ratings of a report.

44. If ECG decides that the report meets the substantive threshold, it will refer the matter to the FATF Plenary along with clear recommendations on what action would be appropriate (e.g. requesting that the relevant assessment body reconsiders the report and/or makes appropriate changes before any publication). On the other hand, if ECG decides that the report does not meet the substantive threshold, the FATF Secretariat will advise the assessment body and delegations that the post-Plenary Q&C review is complete, and the report will be published.

45. Where ECG has referred a post-Plenary Q&C issue, the FATF Plenary will discuss the matter and decide on the appropriate action. The Secretariat will advise the assessment body of the FATF Plenary's decision. If the assessment body declines to respond to the action requested by the FATF, the FATF Plenary will consider what further action may be necessary. The assessment body will not publish the report until the issue is resolved within FATF and the assessment body, and the FATF Secretariat advises that the post-Plenary Q&C review process is complete.

46. Following completion of the post-Plenary Q&C review process, the assessment body will publish the report on its website. Additionally, the FATF publishes all reports on its website to give timely publicity to an important part of the work of FATF and the global network.

FOLLOW-UP PROCESS

47. The FATF and FSRBs should have transparent, clear and rules-based follow-up procedures, to which all members commit and which they apply rigorously and consistently. In particular, the procedures should enable FATF and the FSRBs to track progress made by countries in addressing their AML/CFT risks and deficiencies, to focus on countries which do not make sufficient progress in addressing their risks and deficiencies, and to exert pressure on such countries to improve their performance.

48. The FATF and FSRBs' follow-up procedures should include two types of process:

- Regular follow-up as the default monitori ng mechanism, based on a system of regular reporting.
- Enhanced follow-up, involving a more intensive process of follow-up, for countries with significant deficiencies, or countries making insufficient progress. In deciding whether to place a country in enhanced follow-up, the Plenary should consider both the level of technical compliance and of effectiveness reached by the country.
  - As regards technical compliance, a country would be placed into enhanced follow up if it has 8 or more NC/PC ratings for technical compliance, or is rated NC/PC on any one or more of

R.3, 5, 10, 11 and 20. A country would also be placed into enhanced follow-up if, during the regular follow-up process, its level of technical compliance changed to a level that the Plenary considers as equivalent to NC/PC on any one or more of R.3, 5, 10, 11 and 20.

- As regards effectiveness, the assessment body should consider what a reasonable level of effectiveness should be. In principle, FSRBs should aim to apply the same threshold as the FATF, i.e. a country would be placed into enhanced follow-up if it has a low or moderate level of effectiveness for 7 or more of the 11 effectiveness outcomes, or it has a low level of effectiveness for 4 or more of the 11 effectiveness outcomes.

49. Follow-up reports should be analysed by the Secretariat and/or the relevant FATF or FSRB review group, who should highlight both the progress made and the remaining deficiencies, and propose timelines to take remedial actions. Only NC/PC rated Recommendations are eligible for a technical compliance re-rating request. Re-ratings for technical compliance may be allowed if the follow-up report, and other relevant information submitted by the country, provides sufficient justification for the Plenary to come to such a conclusion based on the analyses conducted by the Secretariat/the relevant Review Group. Re-rating requests will not be considered where the Secretariat/the relevant Review Group determines that the legal, institutional, or operational framework has not changed since the country's MER (or previous FUR, if applicable) and there have been no changes to the FATF Standards or their interpretation.[17] The general expectation[18] is for countries to have addressed most if not all of the technical compliance deficiencies by the end of the 3rd year after the adoption of the MER.

50. Countries seeking a technical compliance re-rating should indicate on which Recommendations a re-rating will be requested, seven months in advance of Plenary meetings and submit any information to justify the re-rating ideally six months in advance of Plenary meetings. Only relevant laws, regulations or other AML/CFT measures that are in force and effect by the deadline to submit information for a re-rating request, will be taken into account for a re-rating.

51. Follow-up reports with technical compliance re-ratings should be circulated to all members, associate members and observers, including FATF (for circulation to FATF members), at least five weeks prior to discussion in the relevant working group and/or plenary meeting, who have two weeks to provide written comments on such reports. Where there are major disagreements between the expert reviewers and the assessed country on the findings contained in the follow-up report (e.g. re-ratings) and/or major issues raised through the pre-plenary review process, the expert review group and/or secretariat should compile a short list of the most significant issues, and should circulate this to all members, observers and associate members at least two weeks prior to the relevant working group and/or plenary discussion. The relevant working group and/or plenary discussion should prioritise discussion of these issues and should be limited in time and scope, for example, FSRBs could consider excluding the discussion of an individual criterion rating unless it will have an impact on the overall Recommendation rating. FSRBs can also opt to approve follow-up reports through written process, in line with written process procedures already available in the relevant FSRB. At a minimum, if comments are raised when a report is circulated for approval by written process, Secretariats should work with expert reviewers and the assessed country to amend

17 Where there is disagreement between the expert(s) and the assessed country in this respect, they should discuss with WG Co-Chairs to achieve an agreement.

18 It is up to the Plenary to determine the extent to which its members are subject to this general expectation, depending on the member's context.

the report and address comments received. The report would be then circulated again for approval and be discussed in Plenary if any other comments are raised.

52. In the exceptional case that it comes to the Plenary's attention that a country has significantly lowered its compliance with the FATF Standards, the Plenary may request the country to address any new deficiencies as part of the follow-up process. If any of the FATF Standards have been revised since the end of the on-site visit, the country will be assessed for compliance with all revised standard at the time its re-rating request is considered (including cases where the revised Recommendation was rated LC or C).

53. For countries subject to review by the International Cooperation Review Group (on the basis of an agreed ICRG action plan), no reporting is expected on the Recommendations that are included in an ongoing ICRG action plan. However, overall progress on each Recommendation is still expected to be achieved, including on parts of Recommendations that are not covered by the ICRG action plan, under the normal timelines, or as soon as the country has completed its ICRG action plan (if this is after the regular timelines).

54. The follow-up procedures should include a range of graduated measures (including letters to Ministers, high level visits and public statements regarding the level of compliance) to be taken if countries fail to meet their commitment or make insufficient progress in addressing their priority actions. The follow-up procedures should also include how countries can be moved to regular follow-up from enhanced follow-up if the country no longer meets the criteria for enhanced follow-up.

55. The follow-up procedures should require all countries to be submitted to a follow-up assessment, which should take place within a reasonable timeframe (normally five years) after the initial MER, though this should take into account the total duration of the assessment body's round of MEs.

56. This would focus on the progress made by the country on the priority actions in its MER, and other areas where the country had significant deficiencies. The follow-up assessment could also examine any other elements of the country's AML/CFT regime which have changed significantly as well as high-risk areas identified in the MER or noted subsequently in the follow-up process. The process for the follow-up assessment should include a short on-site visit (2/3 days) to assess improvements in effectiveness and other areas. Re-rating on both TC and effectiveness are possible.

Publication of Follow-up Reports

57. The general publication policy of FATF and FSRBs applies to actions taken under the follow-up policy. Regular follow-up reports and their analysis made by the Secretariat/the relevant Review Group, and the follow-up assessment reports will be published. The Plenary will retain flexibility on the frequency with which enhanced follow-up reports are published, but they will be published whenever there is a re-rating. After adoption, and prior to publication, final follow-up reports with TC re-ratings should be provided to the FATF Secretariat and all other assessment bodies for consideration in the post-Plenary Q&C Review process described in the Post-Plenary Quality and Consistency Review section of these Procedures. Follow-up reports where no issues are raised through the pre-plenary review process or during the relevant working group/plenary discussion are not subject to this post-Plenary Q&C review process.

JOINT MUTUAL EVALUATIONS FATF/FSRBS

58. In line with FATF's policy, FATF members that are also members of FSRB(s) will undergo a joint evaluation by these bodies. Generally, the FATF will be the principal organiser, and will provide three assessors, while one or two assessors could be provided by the participating FSRBs. The assessors will be supported by the FATF and the FSRB(s) Secretariats. The first discussion of the MER should take place in the FATF, and given the additional measures adopted for joint evaluations, the presumption is that the FATF's view would be conclusive.

59. The process (including the FATF procedures for preparing the draft MER and Executive Summary) for joint evaluations would be the same as for other FATF evaluations, with the FSRB and its members having opportunities to participate directly through being part of the assessment team, and also being able to provide comments and input like other delegations. FSRBs should allow reciprocal participation in mutual evaluation discussions for FATF members. Measures for joint evaluations defined in the FATF Procedures will apply.

IFI-LED ASSESSMENTS

60. The FATF and FSRBs are in principle responsible for the mutual evaluation process for all of their members, and there is a presumption that they will conduct the mutual evaluations[19] of all their members as part of this process. The presumption can be overridden on a case by case basis.

61. For the FATF and FSRB assessment schedules to be fixed with appropriate certainty and in a coordinated manner, and for assessment teams to be formed in sufficient time, the process leading to a decision about which countries will have an assessment led by an IFI team should be clear and transparent. The FATF and FSRBs are to be involved at an early stage in the process of determining which countries will be assessed by an IFI (including receiving advice regarding proposals for IFI-led assessments). Where the IMF or World Bank conducts an AML/CFT assessment of an FATF/FSRB member, they should use procedures and a timetable similar to those of the FATF/FSRB, including any procedures that the FATF/FSRB has in addition to what is required by the Universal Procedures.

62. The FATF and/or FSRB Plenary will in all cases have to approve an IFI assessment for it to be accepted as a mutual evaluation.

[19] Including any follow-up that may be required.

Based on the Procedures for the FATF 4th Round of anti-money laundering (AML) and countering the financing of terrorism (CFT) evaluations, these are the "Universal Procedures" that should form the basis for the evaluations conducted by all assessment bodies: FATF, FATF-Style Regional Bodies, IMF and the World Bank.

Appendix I:

FATF, *Consolidated Table of Assessment Ratings* (Paris: FATF, 2020)

Updated 30 April 2020

Effectiveness
Ratings that reflect the extent to which a country's measures are effective. The assessment is conducted on the basis of 11 immediate outcomes, which represent key goals that an effective AML/CFT system should achieve. For more information see:

FATF Methodology

Technical Compliance
Ratings which reflect the extent to which a country has implemented the technical requirements of the FATF Recommendations.
For more information see:

FATF Methodology FATF Recommendations

Assessment Bodies

The body or bodies who conducted the mutual evaluation. Click on the links for more information.

APG	Asia/Pacific Group on Money Laundering
CFATF	Caribbean Financial Action Task Force
EAG	Eurasian Group
ESAAMLG	Eastern and Southern Africa Anti-Money Laundering Group
GABAC	Task Force on Money Laundering in Central Africa
GAFILAT	Financial Action Task Force of Latin America
GIABA	Inter Governmental Action Group against Money Laundering in West Africa
MENAFATF	Middle East and North Africa Financial Action Task Force
MONEYVAL	Council of Europe Committee of Experts on the Evaluation of Anti-Money Laundering Measures and the Financing of Terrorism
IMF	International Monetary Fund
WB	World Bank

Effectiveness

Ratings that reflect the extent to which a country's measures are effective. The assessment is conducted on the basis of 11 immediate outcomes, which represent key goals that an effective AML/CFT system should achieve. See the FATF Methodology for more information.

HE	High level of effectiveness - The Immediate Outcome is achieved to a very large extent. Minor improvements needed.
SE	Substantial level of effectiveness - The Immediate Outcome is achieved to a large extent. Moderate improvements needed.
ME	Moderate level of effectiveness - The Immediate Outcome is achieved to some extent. Major improvements needed.
LE	Low level of effectiveness - The Immediate Outcome is not achieved or achieved to a negligible extent. Fundamental improvements needed.

Immediate Outcomes

IO1	Money laundering and terrorist financing risks are understood and, where appropriate, actions co-ordinated domestically to combat money laundering and the financing of terrorism and proliferation.
IO2	International co-operation delivers appropriate information, financial intelligence, and evidence, and facilitates action against criminals and their assets.
IO3	Supervisors appropriately supervise, monitor and regulate financial institutions and DNFBPs for compliance with AML/CFT requirements commensurate with their risks.
IO4	Financial institutions and DNFBPs adequately apply AML/CFT preventive measures commensurate with their risks, and report suspicious transactions.
IO5	Legal persons and arrangements are prevented from misuse for money laundering or terrorist financing, and information on their beneficial ownership is available to competent authorities without impediments.
IO6	Financial intelligence and all other relevant information are appropriately used by competent authorities for money laundering and terrorist financing investigations.
IO7	Money laundering offences and activities are investigated and offenders are prosecuted and subject to effective, proportionate and dissuasive sanctions.
IO8	Proceeds and instrumentalities of crime are confiscated.
IO9	Terrorist financing offences and activities are investigated and persons who finance terrorism are prosecuted and subject to effective, proportionate and dissuasive sanctions.
IO10	Terrorists, terrorist organisations and terrorist financiers are prevented from raising, moving and using funds, and from abusing the NPO sector.
IO11	Persons and entities involved in the proliferation of weapons of mass destruction are prevented from raising, moving and using funds, consistent with the relevant UNSCRs.

Technical Compliance

Ratings which reflect the extent to which a country has implemented the technical requirements of the FATF Recommendations. See the FATF Recommendations and the FATF Methodology for more information.

C	Compliant
LC	Largely compliant - There are only minor shortcomings.
PC	Partially compliant - There are moderate shortcomings.
NC	Non-compliant - There are major shortcomings.
NA	Not applicable - A requirement does not apply, due to the structural, legal or institutional features of the country.

Recommendations	
	AML/CFT Policies and Coordination

FATF-IV

FINANCIAL ACTION TASK FORCE ON MONEY LAUNDERING

ANNUAL REPORT 1992-1993

June 29, 1993

TABLE OF CONTENTS

FINANCIAL ACTION TASK FORCE ON MONEY LAUNDERING

ANNUAL REPORT 1992-1993

SUMMARY

1. The fourth round of the Task Force, which was chaired by Australia, continued to focus on three priorities:

(i) monitoring the implementation by FATF members of the forty recommendations for combating money laundering set out in its first report;

(ii) keeping track of developments in money laundering methods and examining appropriate counter-measures;

(iii) carrying out its external relations programme to promote world-wide action against money laundering.

2. The monitoring of members' implementation of the Recommendations has been undertaken on the basis of the self-assessment and mutual evaluation procedures developed in the previous round. Further refinements were made to the annual self-assessment exercise and this now provides a comprehensive and objective analysis of the state of implementation of the Recommendations across the membership. The 1992-93 exercise showed that members were making significant progress in this area. In particular, nearly all members have now made drug money laundering a criminal offence or are in the process of doing so.

3. The mutual evaluations of FATF members, which provide a more detailed examination of the measures to combat money laundering, are well under way. The number of evaluations doubled in 1992-1993 and nearly half of the FATF member jurisdictions have now been evaluated. Summaries of the 8 evaluations carried out in FATF-IV (Denmark, the United States, Belgium, Canada, Italy, Austria, Luxembourg and Switzerland) are contained in the report. The evaluation process has proved to be a particularly effective monitoring mechanism which is of benefit not only to the country examined but to all members. The remaining evaluations are expected to be completed by the end of 1994.

4. The assessment carried out in 1992-1993 of developments in money laundering techniques confirmed the trend towards greater use of non-bank financial institutions for money laundering purposes. It also showed that businesses outside the financial sector were being used to an increasing extent.

5. As regards development of countermeasures, no new Recommendations were drawn up during FATF-IV. However, Interpretative Notes were agreed on the law enforcement technique known as "controlled delivery"; and on clarifying the application of certain existing Recommendations to insurance business. The FATF also continued its work on two initiatives begun in earlier rounds: preventive measures in the non-bank financial sector; and on the audit trail for fund transfers on electronic payment and message systems. On the latter issue, the FATF has established good

co-operation with SWIFT, the leading international funds transfer messages system, and substantial progress has been achieved in this field.

6. Two further policy initiatives were launched during the round. A major study was carried out on the use of shell corporations for money laundering. Active consideration is being given to ways of applying Recommendation 13 (which requires financial institutions to take reasonable measures to obtain information on beneficial customers) in this area. Work has also begun on measures to counteract money laundering through non-financial businesses. Both these initiatives will be pursued in FATF-V.

7. In the external relations field, the FATF has intensified its efforts to encourage non-member countries to take effective action against money laundering. The programmes undertaken in 1992-93 have involved contacts with countries from every continent, with a particular emphasis on the Caribbean, Central and Eastern Europe and Asia.

8. FATF members participated in the work of the Caribbean Financial Action Task Force which, in November 1992, endorsed the FATF Recommendations and agreed to establish its own process to monitor their implementation by its members. In Central and Eastern Europe, the FATF held seminars in Budapest (attended by officials from a number of states from the region) and Warsaw. A seminar for Asian and Pacific states was held during the FATF's September 1992 meeting in Sydney, Australia, and was followed by a major money laundering symposium for Asian countries in Singapore in April this year. Further initiatives are planned in various parts of the world in 1993-1994.

9. In carrying out its external relations mission the FATF has worked in close co-operation with other international bodies involved in the fight against money laundering, such as the Commonwealth Secretariat, the Council of Europe, the United Nations International Drug Control Programme, the Customs Co-operation Council and INTERPOL.

10. During its 1993-1994 round, which will be chaired by the United Kingdom, the FATF will carry out the review of its statute and future work which was agreed when its mandate was renewed by Ministers in June 1991. However, it has already been decided that the group will continue until at least the end of 1994 to complete the mutual evaluations of FATF members.

11. At its 2-3 June meeting, the Council of OECD Ministers reaffirmed "the importance of co-operative global action to combat money laundering". They also welcomed "the substantial progress made by members of the Financial Action Task Force in implementing effective counter-measures in their countries and look forward to the greater application of these measures in the non-bank financial sector".

INTRODUCTION

12. The Financial Action Task Force was established by the G7 Economic Summit in Paris in 1989 to examine measures to combat money laundering. In April 1990, it issued a report with a programme of forty Recommendations. Following a second round of the Task Force, Member governments decided in June 1991 that it should continue its work for a further period. The Task Force has twenty eight member jurisdictions and regional organisations, including all OECD countries and other major financial centres.

13. Australia succeeded Switzerland as the Presidency of the Task Force for the fourth round of its work. Six series of meetings were held in 1992-1993, the first in Sydney and the remainder at the OECD headquarters in Paris. As agreed in the previous round, membership of the FATF has not been expanded. The Task Force continued to draw together experts from a wide range of disciplines, including finance, justice and external affairs ministries, law enforcement authorities and financial supervisory and regulatory agencies. Meetings of the Task Force were also attended, on an ad hoc basis, by representatives from the Council of Europe, the Customs Co-operation Council, the International Monetary Fund, the International Organisation of Securities Commissions, Interpol, the United Nations International Drug Control Programme and the World Bank.

14. In addition to holding plenary meetings, the FATF has also continued to operate through three Working Groups, dealing respectively with legal issues (Working Group I, Chairman: Italy); financial matters (Working Group II, Chairman: the Netherlands and, for the last part of the round, France); and external relations (Working Group III, Chairman: the USA). Working Groups I and II met jointly on several occasions to discuss the draft mutual evaluation reports on FATF members and policy issues of mutual interest.

15. In line with the remit for the FATF agreed in June 1991, the Task Force has focused on three main areas of work:

(i) evaluating the progress made by FATF members in implementing the forty Recommendations for countering money laundering set out in the first FATF report;

(ii) monitoring developments in money laundering techniques and pursuing appropriate refinements to the counter measures; and

(iii) implementing an external relations programme to promote the widest possible international action against money laundering.

I. MONITORING THE PROGRESS OF FATF MEMBERS IN IMPLEMENTING THE FORTY RECOMMENDATIONS

16. The Task Force monitors the performance of its members using the two methods agreed in 1991: an annual self-assessment exercise; and the more detailed mutual evaluation process under which each member jurisdiction is examined once over the period 1991-1994.

(i) Self Assessment

17. The self-assessment process continued on the basis of separate questionnaires relating to the legal and financial Recommendations. Drawing on the experience of the 1991-1992 exercise, various improvements were made to the questionnaires to elicit more precise information from members and to ensure that all aspects of the Recommendations were covered. In particular, the questionnaire dealing with financial issues was substantially revised so that the state of the application of the relevant Recommendations in the various sectors of non-bank financial institutions (securities, insurance, etc.) could be more accurately assessed. As before, members were invited to supply any appropriate narrative information as well as answering the questions. Most took the opportunity to do so.

18. When all member jurisdictions had completed the questionnaires, the FATF Secretariat drew up two grids of the responses showing the state of implementation of the Recommendations across the membership. These were then discussed in the respective Working Groups. Although there inevitably remain some differences in interpretation of some of the questions, the exercise now provides a generally objective analysis of the performance of members.

(ii) State of Implementation

(a) Legal Matters

19. The responses to the questionnaire showed that members have made substantial progress in putting into place the necessary legal measures, although there is still some way to go before all members are in full compliance with the Recommendations.

20. Nearly all members have now made drug money laundering a criminal offence or are taking steps to enable them to do so within the next twelve months. In addition, whereas in the survey carried out in FATF-III, very few members had criminalised money laundering other than for drugs proceeds, ten members have now introduced measures making it an offence to launder the proceeds of any serious crime or any crime which generates significant proceeds and another eight are in the process of doing so. In addition to the ten members who have ratified the Vienna Convention, another eight expect to have done so within the next twelve months and another four have partially implemented its provisions.

21. Nearly all members have laws enabling the confiscation of the proceeds from, and instrumentalities of, criminal offences. Such laws almost uniformly provide for law enforcement authorities to freeze and seize assets subject to confiscation and most include measures for identification, tracing and evaluation of assets. In addition, three FATF members have now ratified the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds of Crime, which will come into force on 1 September 1993. The majority of the European members of the FATF expect to have ratified the Convention within the next twelve months.

22. There has also been encouraging progress in promoting mutual legal assistance between members on money laundering issues. The domestic law of most FATF members allows them to conduct

co-operative investigations with other jurisdictions regarding money laundering and asset seizure/confiscation. Nearly all these members have conducted such investigations, although statistics are not generally available. Similarly, the great majority of FATF members can provide legal assistance in relation to drug money laundering offences either under bilateral or multilateral legal assistance treaties or general provisions. However, so far only a minority of members have such arrangements for non-drug money laundering cases.

(b) Financial Issues

23. There was also continued progress in implementing the financial Recommendations, particularly in the case of several European Task Force Member governments who are required to comply with the provisions of the EC Money Laundering Directive. But, as with the legal Recommendations, full compliance has not yet been achieved. In particular, there is a considerable disparity in the state of implementation of the various recommendations between the banking sector and non-bank financial institutions.

24. The vast majority of members are in full or partial compliance with customer identification and record-keeping rules, although there are still important exceptions, in particular for fiduciary transactions and requirements for non-bank financial institutions to take reasonable measures to obtain information about the true identity of persons on whose behalf an account is opened or a transaction is conducted.

25. While a majority of FATF Member governments requires banks to pay special attention to complex, unusual, large transactions, only a quarter of them currently oblige non-bank financial institutions to do so. Most FATF members either permit or require financial institutions to report promptly their suspicions to the competent authorities, although many still allow these institutions to warn their customers that reports are being made. Some two thirds of FATF member governments require banks to pay special attention to business relations and transactions with persons from countries with insufficient anti-money laundering measures. In a large majority of members, banks fully or partially ensure that the FATF principles are also applied to their branches and majority-owned subsidiaries located abroad. Similar measures are applied by non-bank financial institutions only in a minority of FATF members.

26. Most members require banks to develop specific programmes against money laundering and, in the majority, the regulatory authorities ensure that the supervised institutions have adequate programmes in place. In nearly all members, the competent authorities supervising banks and other financial institutions co-operate with law enforcement authorities in money laundering investigations and prosecutions. Some member governments have designated competent authorities to deal with the implementation of the FATF Recommendations as far as other professions dealing with cash are concerned. Guidelines have already been established by half of the Member governments to assist banks in detecting suspicious patterns of behaviour. Some members have done so for non-bank financial institutions as well. A large majority of members have also taken measures to guard against the control or acquisition of financial institutions by criminals.

(iii) Mutual Evaluation

27. The mutual evaluation process is now well under way. The number of evaluations carried out doubled in the 1992-1993 round. Nearly half the FATF member jurisdictions have now been subject to this process. The procedures established in FATF-III, which involve on-site visits by a team of experts followed by the preparation of detailed reports for discussion and endorsement by the FATF, have proved to be a particularly effective monitoring mechanism.

28. The evaluations provide a very thorough scrutiny of the action taken against money laundering by the members concerned and identify possible improvements to their anti-money laundering systems. The process produces a consistent and analytical assessment across the FATF membership while taking into account the particular circumstances of each individual FATF member (such as the scale and nature of the money laundering problem; the degree of development of the financial system; and the state of advancement of the anti-money laundering framework). The evaluation reports and the discussions in FATF meetings have proved to be of benefit to the FATF membership as a whole as well as to the individual member examined.

29. Eight mutual evaluations were carried out in FATF-IV: Denmark, the USA, Belgium, Canada, Italy, Austria, Luxembourg and Switzerland. The summaries of the reports are as follows:

Denmark

30. Denmark does not have a major drug consumption problem, nor is it a major centre for money laundering activity. Nevertheless, the fact that Denmark is not free of criminal activity, including the sales of drugs, means that criminal proceeds are generated within the country. However, the requirement for Danish banks to report accounts to the taxation authorities and the high level of income and capital taxation in Denmark act as powerful deterrents to resident criminals using the financial system for money laundering.

31. Denmark has adopted a clear political attitude towards the philosophy of the FATF. However, Denmark has, until now, not separated money laundering as a problem which differs from other kinds of serious crime. In addition, there is no Danish law enforcement agency specialised in the fight against money laundering. Despite the lack of legislation specifically criminalising money laundering, the combination of existing laws with respect to a wide range of predicate offences together with the confiscation provisions provides a legal framework which the authorities have used on a number of occasions to punish the laundering of criminal proceeds.

32. The bulk of the anti-money laundering requirements for the financial sector is introduced in the Danish legislation by Act 348 of 9 June 1993 on measures to prevent money laundering. This Act implements the EC Directive of 10 June 1991 on prevention of the use of the financial system for the purpose of money laundering.

33. With a view to preventing money laundering, the legislation requires the financial institutions to adopt internal rules of adequate control, communications procedures, training and institutions programmes for their employees. Financial institutions will ask their customers to provide proof of identity when establishing business relations with them. The requirement concerning proof of identity will also apply to occasional customers for every transaction above the equivalent value of ECU 15,000 and to transactions carried out on behalf of a third party. When there is a suspicion that a transaction is associated with money laundering, the financial institutions will have to investigate it closely, and at that same time, report it to the police only if the suspicion cannot be disproved. Information from the banks and the financial institutions passed on to the police in good faith will not be treated as a breach of confidentiality and will not involve these institutions in any liability.

34. An effective and complete implementation of the EC Directive is crucial to strengthen the Danish approach to money laundering. Concentrating on areas for enhancement, efforts should focus on the role of the Financial Supervisory Financial Authority which needs to be clearly defined in the anti-money laundering process. While the legislation to implement the EC Directive is comprehensive

with regard to banks and traditional financial institutions, the question remains as to how to address the use of non-traditional financial institutions for money laundering.

United States

35. The US has the most serious drug consumption problem and drug-related social problems of any industrialised country in the world. Money laundering takes place on a huge scale and the laundering of drug proceeds has increased enormously since the early 1980's. However, very large amounts of the proceeds of non-drug crimes are also laundered - in total almost as much (if not more) than drug funds. The US is also notable for the size and diversity of its financial system, which complicates the task of combating laundering. The scale of the informal financial sector, which is largely unregulated, is a particular problem since the launderers are increasingly using such institutions.

36. The US conducts a very vigorous programme against money laundering. Its strategy is based on aggressive prosecution of money laundering offences, a concentrated effort to prevent the use of financial institutions for laundering, with a particular emphasis on reporting of large currency transactions, and determined efforts to locate, seize and forfeit the proceeds of money laundering. The US is also very active in bilateral and multilateral initiatives in this field.

37. The US has had anti-money laundering legislation since 1970 and this is regularly revised and updated to respond to changes in the money laundering threat, most recently in an Act of October 1992. The key elements are the Bank Secrecy Act and the Money Laundering Control Act. The former, which applies to all deposit-taking institutions and other specified categories of activity, provides for the reporting of large cash transactions (which is mandatory for all businesses whether or not in the financial sector); identification of customers; and record-keeping requirements. Depository institutions are also required to report suspicious transactions and have anti-money laundering compliance programmes. These requirements are now in the process of being extended to other institutions. The money laundering offence itself is notable for the very wide range of predicate crimes which are specified in the legislation.

38. The US is very substantially in compliance with the forty FATF Recommendations, the main area of weakness being the non-bank financial sector where application of anti-money laundering measures is as yet far from comprehensive. There is a generally commendable legal framework for dealing with money laundering. Both the US authorities and the mainstream financial institutions are without question very strongly committed to the fight against money laundering. The dedication and professionalism of the agencies merits high respect, although the number of agencies involved in this field presents its own challenges.

39. Given the scale and nature of the money laundering problem faced by the US, there is clearly a need to ensure that the regulatory and law enforcement resources and systems available are organised and targeted to maximum effect. Reinforcement of the resources directed towards the informal financial sector would be consistent with the increased use of this sector by launderers. Concerns have also been expressed about the burdens imposed by the large currency reporting system in its present form and potential problems in running both this and suspicions reporting in tandem. The recently announced review by the US Treasury of the burdens and efficiency of the currency reporting system is therefore welcome.

Belgium

40. Belgium does not differ significantly from other European countries with regard to drug manufacturing, dealing and consumption. However, there is a risk that the Belgian financial system will, like others, find itself confronted with attempts at money laundering. This risk is accentuated by the fact that neighbouring countries have stiffened their legislation and that Brussels has consolidated its position as a financial centre. For this reason Belgium considered it necessary to adopt a certain number of measures aimed at combating money laundering in conformity with its international obligations.

41. Before the Act of 11 January 1993 on preventing the financial system being used for money laundering purposes, Belgium had already adopted anti-money laundering measures. First, the Act of 17 July 1990 made money laundering a criminal offence and provided for rules regarding confiscation. Second, on 17 July 1991, the Banking and Finance Commission issued a circular that requires credit institutions to observe certain requirements regarding the identification of customers, recordkeeping and internal procedures and increased diligence for unusual transactions. These measures were extended to stock brokerage companies as from September 1992.

42. The Act of 11 January 1993 on preventing the financial system from being used for money laundering went a long way towards completing Belgium's anti-money laundering machinery. The Act implements the provisions of EC Directive of 10 June 1991 in Belgium. It contains a set of preventive measures to be implemented by financial bodies. The Act also organises the collaboration of the financial bodies in the fight against money laundering by introducing a system for channeling information to an administrative unit called the "Financial Information Processing Unit". Financial bodies report suspicious operations to this Unit. The task assigned to the Unit is to collect reports from financial bodies and analyse them in the light of its own investigations. The Unit is empowered to ask the financial bodies to suspend an operation and, under certain circumstances, it can also inform the Crown Prosecutor.

43. The banking sector has made noteworthy efforts to combine its own action with those of the supervisory authorities. In particular, the Belgian Banking Federation and most credit institutions have set up remarkable training programmes. With regard to law enforcement matters, the Belgian anti-money laundering system will be reinforced by the creation of the Central Organised Economic and Financial Crime Enforcement Bureau.

44. The objectives defined in the FATF's Recommendations are being seriously and correctly pursued. While Belgium has recently acquired a coherent set of anti-money laundering measures, thanks to the Acts of 17 July 1990 and 11 January 1993, there is room for supplementary measures. Belgium should ensure that, in practice, rules against money laundering are implemented as fully as possible, especially in the case of individual currency agents and the non-financial professions.

Canada

45. Canada is primarily a drug consuming rather than producing country and the drugs situation is considered to be a serious social problem. It is estimated that drugs trafficking could generate several billion dollars a year. Like other financial centre countries, Canada's financial system has been used to launder foreign (particularly US), as well as domestically generated illicit funds. As legislation and programs were developed to combat money laundering within the sphere of traditional regulated financial institutions, the informal financial sector, particularly currency exchanges, has become a focus of concern.

46. Canada was quick to take action against money laundering. It was made a criminal offence in legislation enacted in 1988 and goes beyond drug trafficking to embrace a wide range of "enterprise crime" predicates. The legislation also enhanced the ability of the authorities to investigate, seize and obtain forfeiture of the proceeds of crime and provided for immunity from liability for reporting of suspicions. This was supplemented by new legislation and regulations brought into force earlier this year regarding record-keeping and customer identification by financial institutions and others. The federal Canadian financial services supervisor also took early action and issued money laundering guidelines which apply to all deposit-taking institutions it supervises. The Canadian banks have very active programmes of their own, although, as in other FATF members, the position in the non-bank sector is less well-developed. At the operational level, the Royal Canadian Mounted Police have had an anti-drug profiteering programme since 1981 and special integrated anti-drug profiteering units have recently been set up. Internationally, Canada has been very active in negotiating mutual legal assistance treaties.

47. Canada is substantially in compliance with the FATF Recommendations and is to be commended for the extensive list of money laundering predicates, although consideration might be given to extending this to cover all serious crimes or those generating substantial proceeds. Canadian law deals comprehensively at the domestic level with provisional measures against, and confiscation of proceeds of crime, although the requirement for the prosecution to give undertakings regarding payment of damages or costs in relation to restraint orders and freezing of assets does seem to be a constraint in practice. It would also be desirable if the authorities could act directly on requests from foreign countries to freeze and seize assets.

48. Full acknowledgement needs to be given to the Canadian authorities' willingness to keep their anti-money laundering measures under review and to make improvements to the system. For example, legislation providing for the sharing of confiscated assets domestically and internationally, was enacted in June 1993. Two additional changes - the introduction of mandatory suspicions reporting and the establishment of more effective powers to deal with suspicious currency at the border - are currently under consideration. The evaluation supported the introduction of such measures, which would further strengthen the Canadian system.

Italy

49. Located at the crossroads between the Middle East, the Mediterranean and northern Europe, Italy is the focus of a very large-scale narcotics traffic. However, the amount of laundered funds does not derive exclusively from the volume of narcotics trafficking in Italy, but also comes from the proceeds of the illicit activities of the organised crime in Italy - based on associations (clans, families) that control the traffic of drugs, arms, smuggling, etc. This means that a large part of the illicit money is channeled into and retained in financial and/or commercial activities. Therefore, the fight against money laundering is centered on this phenomenon.

50. The Penal Code provides for the repression of money laundering in its various forms, in conformity with the relevant international instruments. In order to refine and extend the scope of the repressive legislation, a Bill is under discussion in Parliament. With regard to confiscation, the provisions of the Penal Code and other criminal laws allow for the seizure of the proceeds of crime with respect to all types of crimes.

51. The key element of the Italian financial legislation to combat money laundering is Act 197 of 5 July 1991. The aim of this Act is to control cash transactions and flows, through the requirement that cash (or cash equivalent) transactions above 20 million lire (the equivalent of roughly US$ 13,000) must be carried out only through authorised financial intermediaries. Act 197 also extends the obligation of

identifying and recording the identity of the customers to all financial institutions, and broadens the requirement of recording to all means of payment. In addition, financial intermediaries are obliged to report suspicious transactions to the police. Finally, financial companies are required to be registered with the Italian Foreign Exchange Office. In parallel, the Act 227 of 1990 introduces the requirement that cross-border movements of cash or cash equivalents above 20 million lire must be channeled through authorised financial intermediaries.

52. The Italian system deserves to be characterised as a coherent and comprehensive money laundering control scheme. From a legal and administrative point of view, Italy has implemented the FATF Recommendations. However, it seems too early to offer any kind of substantive judgement as to how the legislation is working or will work in practice. Indeed, some aspects of the Italian system, i.e. the intelligence task dedicated to the UIC, will only produce results in the future.

53. As numerous authorities are involved in the anti-money laundering programme, the necessity for strong co-ordination seems to be of paramount importance. This is crucial to the achievement of the best results in money laundering investigations. The situation is different when an organised crime aspect is involved. Recent cases ("Green Ice", "Seaport") in this latter field have shown excellent efficiency both at the Italian level and at the international co-operation level between law enforcement agencies. For purely money laundering enquiries, the most important organisational problem is to determine the co-ordinating point. The latter is represented by the magistrate in charge of the investigation, who may co-ordinate his work with that of other magistrates involved in the same investigation. With regard to police investigations, the Central Investigation Office is responsible for the co-ordination of the work carried out by provincial officers.

Austria

54. Austria is not a major drug consuming country, although it does have a growing drug problem. It is one of the transit points for the supply of drugs to markets further west in Europe and to North America. Cocaine and heroin smuggling is increasing and there is growing activity by trafficking gangs from Central and Eastern European states. Although some domestic money laundering takes place, at present the problem is mainly seen in terms of the misuse of the Austrian financial system to launder the proceeds of foreign crimes, with indications that Austrian financial institutions have been used by Colombian cartels among others.

55. Measures to combat money laundering are currently limited to two main instruments: a decree of the Austrian National Bank, issued in 1991, establishing specific identification procedures for clients of banks who are not Austrian residents, although these do not fully apply to security deposit accounts; and a due diligence agreement by the Austrian banking industry, which contains various provisions, including a requirement to sever business relations in cases where there is well-founded suspicion that the funds stem from crime. Tight banking secrecy means that suspicions cannot be reported to the authorities. To date, there is no money laundering offence per se and two categories of anonymous accounts are permitted.

56. The new system being drawn up will provide a much more comprehensive and potentially effective framework. Legislation has been introduced to create a specific money laundering offence, covering the proceeds of all serious crimes. This is to be welcomed, although, in addition to actual knowledge that proceeds derive from crime, it would be desirable if the offence covered cases of wilful blindness or even those where the person should have known the criminal origin of the funds. Legislation is also being drafted to amend the Penal Code concerning confiscation of proceeds from crime, extradition and mutual legal assistance. The Banking Law will be amended to introduce a

mandatory suspicions reporting system (with a central reporting point); provide for immunity from liability for reports made in good faith; and prohibit institutions from warning customers that reports have been made. There will also be enhanced customer identification and record-keeping requirements. Nonetheless, on current proposals, identification would still not be required for passbook and security deposit Schilling accounts held by Austrian residents - a very sensitive issue in Austria and the subject of much ongoing discussion and public debate.

57. It is too soon to make a final evaluation of the Austrian anti-money laundering system, given that the new measures have yet to be implemented. However, whilst acknowledging the progress represented by the proposed laws, the retention of the two classes of anonymous accounts is a matter of concern, running directly counter to a very important FATF Recommendation. Failure to take action in this area would compromise efforts to combat money laundering in Austria and overshadow what should otherwise be a generally commendable system.

Luxembourg

58. Luxembourg does not have a significant drug problem. However, like all international financial centers, it runs the risk of being used by money launderers, as is shown by past money laundering cases, which all had an international dimension, with Luxembourg being used at the intermediary stage of the laundering process.

59. Luxembourg has implemented most of the forty Recommendations of the FATF. It has criminalized narcotics money laundering; and has required banks and other financial institutions to know and record the identity of their customers engaging in significant transactions, including recording sizeable currency transactions at thresholds appropriate to that country's economic situation (client identity must be verified for transactions exceeding 500,000 FLux, roughly US$15,000). It has required banks and other financial institutions to maintain, for an adequate time, records necessary to reconstruct large transactions through financial institutions in order to be in a position to respond rapidly to requests for information from the appropriate authorities in drug-related money laundering cases.

60. Luxembourg has also created systems for identifying, tracing, freezing, seizing and forfeiting narcotics-related assets; and has co-operated, when requested, with the appropriate law enforcement agencies of other governments investigating financial crimes related to narcotics.

61. Luxembourg introduced specific anti-money laundering regulations as early as 1989, in particular the Luxembourg Monetary Institutes's circular 89/57. The Act of 5 April 1993 on the financial sector raised the legal status of these regulations to a single coherent text, applicable to the whole financial sector, thus codifying the requirements imposed on the financial sector by the FATF Recommendations and the 1991 EC Directive. A key point of the new law, central to the FATF Recommendations, is that it obliges financial professionals to take the initiative to inform the public prosecutor of any suspicion of a laundering offence. No professional secrecy obligation inhibits this obligation to inform the authorities and a financial professional who, in good faith, provides such information is protected from criminal and civil liability. A potential problem for Luxembourg is that, as controls discourage the use of the regulated financial institutions, money launderers might be attracted to other less regulated businesses. Another problem concerns the limitation of the predicate offences to those connected to drug trafficking. Efforts are therefore underway to impose on other vulnerable sectors obligations similar to those prevailing for the financial sector, and to extend the incrimination of money laundering to other criminal offences.

62. The concept of money laundering and the role of the financial institutions have undergone an important evolution in Luxembourg. To its credit, the local financial community acknowledges that to

maintain the Grand Duchy's reputation as a safe and sound banking environment, money laundering schemes do little to enhance the center's reputation. At the same time, the enactment of the Act of 5 April 1993 remains an important element in demonstrating Luxembourg's commitment to fighting money laundering and its desire to comply fully with the forty Recommendations of the FATF.

Switzerland

63. The domestic consumption and trafficking of drugs in Switzerland produces only a low level of laundering. On the other hand, as an international financial center, Switzerland is likely to be used for money laundering purposes. The authorities and the banking sector were consequently induced to take significant measures for fighting against this phenomenon.

64. Since 1990, the Swiss Penal Code contains the specific offence of money laundering. Every serious offence, not only drug trafficking, is considered as a predicate offence. The Penal Code also contains a general obligation, which applies to all intermediaries in the financial sector, to identify the customer as well as any possible beneficial owner of the funds. Moreover, the competent authorities are entitled to freeze, seize and confiscate the proceeds of all offences. The Swiss penal law is thus in full compliance with FATF Recommendations 4 and 5, and goes even further than the mere letter of the measures recommended.

65. The banking sector takes advantage of a notable experience in the fight against money laundering. Since 1977, the obligation to identify the contracting partners and beneficial owners of funds is anchored in a private law agreement, the Agreement on the banks' code of conduct with regard to the exercise of due diligence (CDB). This latter has been periodically reinforced, and it is considered as a minimum requirement for the application of penal measures and prudential supervision. The other requirements for banks are set out in a circular of the Federal Banking Commission, the bank supervisory authority. The Swiss banking sector thus applies the great majority of the FATF Recommendations on financial matters. In addition, a Bill introducing the right for financial sector professionals to pass on their money laundering suspicions to the penal prosecution authorities, will soon be submitted to Parliament. However, with regard to the non-banking financial sector, additional efforts will be necessary to implement the FATF Recommendations. In this context, the adoption of the draft Bill on the fight against money laundering in the financial sector, which is still confidential, in a shorter time limit than anticipated, appears as a necessity.

66. While Switzerland has not yet ratified the UN Convention, it already applies its provisions related to international assistance. Its very broad definition of money laundering has furthermore enabled Switzerland to ratify without difficulty, Convention No. 141 of the Council of Europe. With its Federal law of 1983 on International Mutual Assistance in Criminal Matters, Switzerland is finally equipped with a domestic law which allows it to co-operate in this field with all requesting States, even those to whom it is not bound by a bilateral treaty.

67. The progress acccomplished by Switzerland in the fight against money laundering deserves recognition and many aspects of the Swiss system could serve as an example to other Member governments in their own implementation of the FATF's Recommendations.

Assessment

68. No final conclusions on the state of play across the FATF membership revealed by the mutual evaluation exercise can be drawn until all the examinations have been completed. However, some provisional observations can be made. The members examined during FATF-IV were at different stages in the development of their anti-money laundering framework. For example, some had had laws in the area for some years, while others were still in the process of enacting measures. But all were making generally good progress in their implementation of or were already substantially in compliance with the FATF Recommendations.

69. Most already had, or were proposing to enact, a money laundering offence which went wider than just the proceeds of drugs trafficking. All fully recognised the importance of enlisting the support of the financial community in the fight against money laundering and the banking sector was already well aware of the problem, although the position was more variable in the case of non-bank financial institutions. In all cases, the reports pointed to some areas where the anti-money laundering framework could be strengthened with a view to maximising the effectiveness of the counter-measures and preventing the exploitation of any weak links in the system by money launderers.

II. MONITORING DEVELOPMENTS ON MONEY LAUNDERING TECHNIQUES AND REFINEMENT OF THE FATF RECOMMENDATIONS

70. Money laundering is a dynamic activity. The criminals are constantly searching for new points of vulnerability and adjusting their laundering techniques as FATF members and other countries apply counter-measures. An essential element of the FATF's work is therefore to collect and share information on the latest developments and trends in money laundering methods and consider appropriate responses.

1992-1993 Survey of Laundering Trends and Techniques

71. It is rare for a genuinely new technique to be developed - and none were discernible in the monitoring exercise carried out in FATF-IV. But the exercise did reveal important trends in the pattern of money laundering and the increased utilisation of more sophisticated methods. Many methods mentioned in earlier exercises, such as the use of wire transfers, structuring of transactions ("smurfing"), were emphasised as subjects of continuing concern. However, it was noted that there was an increasing amount of laundering of the proceeds of non-drugs crimes, for example, arms smuggling and "white-collar" crime.

72. The trend towards greater use of non-bank financial institutions as a means of getting the proceeds of crime into the financial system ("placement") was confirmed. The use of bureaux de change, casinos, financial brokers, life insurance and postal money orders were all mentioned in cases submitted by FATF members.

73. Evidence was also presented of the increasing use of legitimate non-financial businesses, such as retail shops and import-export companies. (This was a major feature of the famous "Green Ice" operation against the Colombian cocaine cartels.) These businesses were used not only for the investment of the proceeds of crime (the final "integration" phase of a laundering operation) but also in earlier phases of placement and "layering" (conducting a series of transactions to hide the illicit origin of the money). Control over well-established existing businesses by money launderers provides a continuing means of facilitating their operations. The proceeds of crime can be commingled with those of the legitimate commercial activities of the company and false invoicing used to disguise the illicit origin of funds. Such businesses can also be used in drug trafficking operations themselves: shipments of drugs being sent together with the legitimate goods in which the companies were dealing.

74. Shell corporations continue to be widely used by money launderers, mainly, though not exclusively, those registered in offshore havens. Finally, the renewed recourse to physical movement of cash across international borders, using increasingly sophisticated methods of concealment, was noted.

Refinement of Countermeasures

75. In response to the findings from this exercise, the FATF launched various new studies of appropriate counter-measures as well as continuing the policy development work begun in early rounds, notably on the use of non-bank financial institutions for money laundering. As in FATF-III, it was decided not to add to, or modify, the original forty Recommendations for the time being. But FATF-IV agreed to adopt three further Interpretative Notes to the existing Recommendations and also carried out substantial work on other issues.

Interpretative Notes

(i) Controlled Delivery

76. FATF-III agreed an Interpretative Note stating that members should consider taking measures to postpone or waive the arrest of suspected persons and/or seizure of suspect funds to enable the identification of those engaged in suspected money laundering operations and gather evidence. In 1992-1993, the FATF looked further at the technique of controlled delivery - allowing shipments of or transactions involving items of a suspect origin to proceed under the surveillance of the authorities to identify and gather evidence against as many as possible of the criminals involved. The use of this technique in international drugs trafficking cases has been accepted for many years but it is equally applicable in those involving suspected money laundering. To promote the use of this technique, the FATF therefore adopted the following Interpretative Note to Recommendations 32, 33, 36 and 38 (which deal with exchange of information and co-operation between legal authorities):

" The controlled delivery of funds known or suspected to be the proceeds of crime is a valid and effective law enforcement technique for obtaining information and evidence in particular on international money laundering operations. It can be of great value in pursuing particular criminal investigations and can also help in obtaining more general intelligence on money laundering activities. The use of these techniques should be strongly encouraged. The appropriate steps should therefore be taken so that no obstacles exist in legal systems preventing the use of controlled delivery techniques, subject to any legal requisites, including judicial authorisation for the conduct of such operations. The FATF welcomes and supports the undertakings by the Customs Co-operation Council and INTERPOL to encourage their members to take all appropriate steps to further the use of these techniques."

(ii) Insurance

77. During 1992-1993, the FATF discussed modalities for implementing its Recommendations on financial matters (Recommendations 9-32) in specific sectors of non-bank financial institutions, particularly in the insurance industry.

78. With regard to the scope of application of the Recommendations, it was recognised that, while life insurance can be an instrument for laundering illicit funds, money laundering through non-life insurance or insurance products other than investment products, is rare. To take account of this, the following Interpretative Note was adopted to Recommendation 9:

> "The FATF Recommendations should be applied in particular to life insurance and other investment products offered by insurance companies, whereas Recommendation 29 applies to the whole of the insurance sector."

79. As far as the increased diligence of financial institutions is concerned, the following Interpretative Note to Recommendation 15 was agreed to clarify what was meant by the term "transactions" in relation to insurance:

> "The word "transactions" should be understood to refer to the insurance product itself, the premium payment and the benefits."

Shell Corporations

80. It was agreed in FATF-III that FATF members should take notice of the potential for abuse by money launderers of shell corporations and should consider measures to prohibit unlawful use of such entities. The further work carried out on this issue in FATF-IV has focused on studying the ways in which shell corporations (and similar entities such as ghost or front corporations) can be employed in money laundering operations; and in discussing appropriate steps which would counter these abuses without prejudicing the legitimate use of such bodies. A survey of FATF members and a sample of non-FATF jurisdictions was carried out to obtain information on the form of beneficial ownership and conditions for incorporation of shell corporations; and the ability to find out who owns such bodies and provide this information to foreign and domestic law enforcement authorities. The legislation of the various FATF members differs significantly in this field of commercial law.

81. A key factor which makes shell corporations attractive to money launderers is the ability in many jurisdictions to conceal or obfuscate the true beneficial ownership of the entity. The FATF has therefore concentrated on the issue of transparency of ownership. The FATF Recommendations already place responsibilities on financial institutions to identify their clients and take reasonable measures to obtain information about beneficial customers, particularly in the case of domiciliary companies. Active consideration is being given to a possible Interpretative Note to these Recommendations or further guidance which would clarify the measures to be taken by financial institutions in obtaining identification information in respect of such clients. Consideration has also begun of the feasibility of specific methods to ensure that adequate records of owners of shell corporations are maintained and can be accessed by law enforcement authorities.

Use of Non-Financial Businesses for Money Laundering

82. The range of businesses which can be used - whether wittingly or unwittingly - by money launderers is a wide one. Those which deal with large amounts of cash or conduct some form of financial services activity in addition to their mainstream operations are potential targets. Work has begun on identifying businesses which carry out quasi-financial activities and will consider where application of the FATF Recommendations is appropriate and which are the relevant Recommendations. However, this is obviously a major and complex area which will need to be the subject of a long-term study.

Non-Bank Financial Institutions

83. The Task Force reviewed the tendencies of the use of the non-banking financial sector by money launderers. Bureaux de change, intermediaries in investment businesses and insurance companies were identified as having been used, or particularly vulnerable to being used, for money laundering. The results of this study will provide the basis for further work during FATF-V. In parallel, modalities for implementing the FATF financial Recommendations in the non-bank financial sector were discussed on several occasions.

Customer Identification

84. Work was also carried out on the specific problem of how best to conduct identification in cases where there is no face-to-face contact between the institution and its customer. In such cases, the provision of identifying documents poses real difficulties or is impractical and runs counter to the way in which transactions or business relations are conducted. It was agreed that further work should be done on this important issue in 1993-1994, bearing in mind the need to ensure both a level playing field for the various categories of financial institutions and a proper balance between flexibility and security.

Electronic Fund Transfers

85. In 1992-1993, the FATF addressed the issue of how to deal with money laundering cases that involve use of domestic and/or international electronic funds transfers. FATF members took note of the increased use of electronic payment and message systems in the money laundering process. They held meetings with SWIFT (the Society for Worldwide Interbank Financial Telecommunications) in order to discuss their concern that international funds transfers can be used to dissimulate the identity of the original ordering customer or the beneficiary. As a result, SWIFT responded to this concern by broadcasting a message to all the users of its system asking them to include these details in the messages they send. In turn, national authorities have also taken steps to encourage the users of the SWIFT system, within their respective jurisdictions, to follow the advice contained in the SWIFT broadcast. SWIFT and the FATF have also co-operated in studying what further improvements might be made to the audit trail left by electronic payment and message instructions.

III. EXTERNAL RELATIONS

86. In 1992-1993, the FATF intensified its efforts to promote the widest possible world-wide action against money laundering, based on the external relations plan agreed in the previous round. A series of initiatives were mounted in different parts of the world to disseminate the FATF programme and respond to requests from particular countries for provision of training and technical assistance. The Task Force has also continued to monitor progress by dependent, associate or otherwise connected territories of FATF members in adopting and implementing the forty Recommendations.

87. In carrying out its external relations programme, the FATF collaborates closely with other international and regional organisations with an interest in combating money laundering. These links have been strengthened and diversified during the past year and the FATF aims to develop an increasingly co-ordinated approach in the future.

(i) Disseminating the FATF Programme

88. An essential feature of the FATF's external relations strategy is its multi-disciplinary approach. Great emphasis is placed on gathering together all the relevant interests concerned - financial and regulatory; legal and judicial; and law enforcement - and promoting co-operation between them. As far as possible, the FATF also seeks to involve financial institutions as well as government agencies in its contacts with non-member countries.

89. Geographically, the FATF has concentrated its efforts on three regions during 1992-1993: the Caribbean area; Central and Eastern Europe; and Asia.

a) The Caribbean

90. FATF members have worked closely with the Caribbean Islands and Central American States since 1990 when a drug money laundering conference was held in Aruba. Subsequently a Caribbean Financial Action Task Force (CFATF) was formed. The CFATF process has gathered pace in 1992-1993 and major progress has been made in promulgating the FATF message in the region. A Ministerial Conference of the CFATF held in Jamaica in November 1992 formally endorsed and undertook to implement the forty FATF Recommendations and the nineteen Recommendations drawn up at the Aruba Conference in 1990. The CFATF also agreed on the need for a mechanism to monitor and encourage progress in this work, including a self-assessment and evaluation process. To further this aim and to facilitate the provision of training and technical assistance in the region, the meeting proposed the creation of a small CFATF Secretariat to be based in Trinidad and Tobago, which is taking over the Presidency of this body. A further meeting of the CFATF will be held in 1994 to evaluate progress.

b) Central and Eastern Europe

91. Central and Eastern Europe has been a particular focus for the FATF's external relations work during 1992-1993. The countries present an increasingly attractive target for money launderers as they liberalise their economic and financial systems. With the increasing presence of organised crime in the area, there is also a growing risk of domestic money laundering operations. The FATF has therefore been encouraging these states to implement effective anti-money laundering measures in the process of reforming their laws and financial systems.

92. At the occasion of the Council of Europe's money laundering conference in September 1992, FATF members held meetings with delegates from most Central and Eastern European countries to find

out more about the money laundering situations within these countries and discuss how the FATF might assist them. These contacts resulted in the FATF's organising two seminars in Hungary and Poland.

93. The first took place in Budapest in early February. In addition to representatives from Hungarian government agencies and commercial banks, delegations from Albania, Bulgaria, the Czech Republic, Poland, Romania and Slovakia attended as observers. In preparation for the seminar, FATF members held detailed discussions with Hungarian officials and bankers on the money laundering situation in Hungary and progress in developing counter-measures. The symposium covered all aspects of the anti-money laundering framework and resulted in the preparation of a set of recommendations to the Hungarian authorities on their next steps in this area.

94. A similar symposium took place in Warsaw in early March for officials from Polish government agencies and financial institutions. Again, the FATF held discussions with the relevant Polish agencies beforehand, including the Governor of the National Bank of Poland and other high-level officials, and produced recommendations for the Government of Poland.

95. Individual FATF members took part in other missions to particular Central and Eastern European countries and both the European Community and the Council of Europe have ongoing initiatives in the region.

96. The FATF and UNDCP are now initiating a dialogue with relevant policy makers in Russia. The FATF will also be following up the links established with Hungary and Poland to evaluate progress and provide further assistance as necessary.

c) Asia and the Pacific

97. Preliminary contacts with Asian and Pacific countries had been made in earlier FATF rounds. However, given the importance of this region, both in terms of the numbers of developed or emerging financial centres as well as drug producing countries, the FATF undertook two initiatives in the area during 1992-1993.

98. The Sydney meeting of the FATF in September included a programme for selected Asian and Pacific states. Representatives from Fiji, Indonesia, Malaysia, Nauru, Papua New Guinea, the Philippines, the Solomon Islands, Tonga and Taiwan took part in presentations and discussions on the money laundering situation in the region.

99. This was followed in April 1993 by the Asia Money Laundering Symposium. This was organised jointly by the FATF and the Commonwealth Secretariat, with the support of the UNDCP, and hosted by the Government of Singapore. The Symposium was attended by participants from fourteen non-FATF countries/regions and SEACEN, as well as nine FATF members, the UNDCP and INTERPOL. The Symposium concentrated on raising awareness of the money laundering problem and explaining countermeasures. The non-FATF members were asked to give serious consideration to implementing the forty FATF Recommendations, and interest was expressed in holding a follow-up Symposium in about a year's time.

d) Other Areas

100. In November 1992, FATF members met representatives of the Central African Republic, the Ivory Coast, Kenya, Morocco, Nigeria and Zimbabwe for discussions on the best way of pursuing anti-money laundering initiatives in Africa. Consultations are also taking place with selected regional organisations. The FATF is now drawing up proposals for a programme of action in Africa during the 1993-1994 Round of the Task Force.

101. In the Middle East, a conference on money laundering, organised jointly by the FATF, the Gulf Co-operation Council and the Saudi Arabian Monetary Authority, is planned for October 1993. In South America the FATF is continuing to follow the progress of the Organisation of American States' anti-money laundering initiative.

(ii) Implementation of FATF Recommendations by Dependent, Associate or Otherwise Connected Territories of FATF Members.

102. The FATF has continued to oversee the action taken by these non-member territories in implementing anti-money laundering measures. The reports provided by the FATF members who have links with these territories indicate that good progress is being made in a number of areas. Most are in the process either of enacting or implementing laws to make money laundering a criminal offence. However, it was agreed that the sponsoring FATF members should maintain their efforts to encourage these territories to put in place a comprehensive anti-money laundering system as soon as possible.

103. The FATF has begun consideration of how to evaluate progress by these territories. Some already take part in the FATF self-assessment survey or will be covered by the Caribbean FATF evaluation process. But these arrangements are not systematic or comprehensive at present.

Co-operation with Regional and International Organisations

104. While the Task Force is the only international body which specialises in and concentrates solely on the fight against money laundering, it works in close co-operation with other international organisations in this field. Representatives from the Council of Europe, INTERPOL, the UNDCP and the Customs Co-operation Council have regularly attended FATF meetings and participated in the planning and execution of the various initiatives carried out in 1992-1993 and contacts have also been maintained with the IMF and the World Bank. Close links have been established with the Commercial Crime Unit of the Commonwealth Secretariat and the FATF is also having discussions with the European Bank for Reconstruction and Development regarding anti-money laundering initiatives in Eastern Europe.

105. It is clearly important that the international community avoids overlap and duplication and draws strength from collective action. In conjunction with the other major organisations, FATF is therefore taking steps to promote a more co-ordinated approach in this area.

Assessment

106. The FATF has made substantial progress in its external relations agenda during round IV. Promoting money laundering awareness remains an important element of its work. But, in addition to seeking a firm commitment to implementation of the forty Recommendations, the FATF also wants to secure agreements by third countries to be evaluated on their progress in applying anti-money laundering measures. Clearly, results cannot be expected immediately and the FATF is at different stages in its dialogue with various regions. However, the Caribbean FATF process has shown that, over time,

substantive commitments can be achieved. The challenge for the future is to give substance to the contacts which have already been made, whilst spreading the FATF message to those parts of the world where even awareness of the money laundering problem remains at a very low level.

CONCLUSIONS

107. The FATF has made substantial progress in its work in 1992-1993 and last year's experience confirmed that it remains an effective and flexible forum for combating money laundering. Implementation of the forty Recommendations by FATF members is gathering pace and the monitoring mechanisms devised in round III provide a searching scrutiny of performance. The FATF's external relations efforts have been intensified and, as the Caribbean FATF process shows, have now started to produce firm commitments in important areas to action against money laundering. The FATF has also continued to undertake valuable work in refining and developing anti-money laundering counter-measures.

108. Nevertheless, there can be no cause for complacency nor any let up in the efforts of the Task Force to carry out its programme. There is still some way to go before all the Recommendations are implemented and it is essential that all members complete the process without further delay. There is also a need to be constantly on guard against new money laundering techniques and take prompt action to remedy any weaknesses revealed. In its external relations work, the Task Force, in co-operation with other international bodies, must maintain the momentum of its efforts to persuade all financial centres to join the fight against money laundering. There are still some areas where the FATF's message has not penetrated and others where further work is needed to reinforce the process. The more widespread the action against money laundering, the more effective it will be.

109. The 1993-1994 round of FATF, which will be chaired by the United Kingdom, will therefore have a full agenda. This will include the review of the future of the FATF, which will examine the statute and future operations of the Task Force.

FATF-IV

FINANCIAL ACTION TASK FORCE ON MONEY LAUNDERING

ANNEXES TO THE ANNUAL REPORT 1992-1993

June 29, 1993

CONTENTS

REPORT TO THE FATF FROM WORKING GROUP I (LEGAL MATTERS)
1992-93

I. Introduction

On 9-11 September 1992, FATF IV established the following mandate for Working Group I:

1. In consultation with Working Group II, continuation, updating and improvement of the balanced monitoring mechanism for:

a) self assessment:

i) questionnaire
ii) compilation and analysis of answers

b) mutual evaluation:

i) questionnaire;
ii) participation in discussion of the draft reports.

Working Group I covers Recommendations 1-8 and 33-40 and, jointly with Working Group II, Recommendation 32.

2. Monitoring of new money laundering techniques ("typology"), in cooperation with Working Groups II & III, including general lessons to be learnt from specific cases.

3. Complements and/or Interpretative Notes to the 40 Recommendations as necessary.

4. Further study of legal issues, including, inter alia, "predicate offences", "shelf corporations", corporate liability and controlled delivery; and discussion of practical aspects of legal cooperation between FATF members, (in particular, extradition and cooperation in the prosecution of defendants).

5. Input as necessary into WG II work (for example on electronic fund transfers)

In FATF IV Working Group I concentrated on four main areas:

(a) reviewing the progress of FATF members in implementing the 40 FATF Recommendations through analysis of the self-assessment questionnaires and participation in discussion of the eight mutual evaluation reports completed during the Round;
(b) monitoring of new money laundering techniques and counter-measures;
(c) further studies of the issues of shell corporations and controlled delivery;
(d) launching a study of ways of countering money laundering by non-financial businesses.

During 1992-93 the Group met 5 times (9 September 1992, 20 January 1993, 30 - 31 March 1993, 12-13 May 1993 and, in conjunction with Working Group II 28 June 1993). A sub-group meeting on money laundering typologies was also held on 16 November 1992.

II. Reviewing Progress in Implementing Anti-Money Laundering Measures

At the 9 September meeting the Working group agreed to make various revisions to the legal matters self-assessment questionnaire so that it now covers all the relevant FATF Recommendations. All member governments completed the questionnaire. The Secretariat then produced a compilation of the answers which was discussed at the meeting of the Group on 31 March. A revised compilation, incorporating amendments proposed by FATF members, was then re-circulated at the meeting on 12 May. This compilation was approved by all members.

The analysis of responses indicated that FATF members have continued to make substantial progress in implementing the legal Recommendations. For example, 10 members have now fully implemented the Vienna Convention and another 8 expect to have done so within the next 12 months. A further 4 members have partially implemented the Convention. Similarly, nearly all members have criminalised drug money laundering or expect to do so over the next year. Moreover, an increasing number of members have decided to go beyond a purely narcotics-based offence and to criminalise the laundering of the proceeds of all serious crimes or offences which generate a significant amount of proceeds. 10 members have already introduced such measures and another 8 are in the process of doing so. There has also been encouraging progress in promoting mutual legal assistance between members on money laundering issues.

The Group also participated jointly with Working Group II in the discussion of the draft mutual evaluation reports on Denmark, US, Belgium, Canada, Italy, Austria, Luxembourg and Switzerland. These reports were endorsed, subject to amendment, and forwarded to the plenary.

III. Monitoring New Money Laundering Techniques and Countermeasures

As in previous FATF Rounds, a major element in FATF IV was the refinement and updating of assessments of money laundering techniques.All members were invited to submit written case histories or synthetic analyses illustrating developments in this area. 20 members contributed to this exercise. An expert sub-group, attended by representatives from most FATF members together with INTERPOL, UNDCP and the CCC, was convened on 16 November 1992 to discuss this material and present othercases. A typology paper, incorporating these examples and the conclusions of the sub-group, was then prepared and discussed at a joint meeting of Working Groups I and II on 19 January. The paper was endorsed subject to minor changes.

The exercise revealed no genuinely new money laundering techniques. However, it indicated various significant trends. The use of shell corporations and wire transfers as methods of laundering money were emphasised as a subject of continuing concern. The trend towards increasing use of non-bank financial institutions for placement activity also appeared to be continuing. There was also increased evidence of the use of non-financial businesses for the placement and layering as well as the integration of the proceeds of crime, and in drug-trafficking operations themselves. Finally, the renewed recourse to the physical movement of cash across international borders was noted. As regarded law enforcement counter-measures, the use of controlled delivery and other types of undercover operations were emphasised as valuable and important techniques.

IV. Shell Corporations

The use of offshore shell corporations in money laundering schemes had been noted in FATF III and it had been agreed that FATF members should take notice of the potential for abuse by money launderers of these bodies and should consider measures to prohibit unlawful use of such entities. Further work on this subject was carried out in FATF IV. The US delegation presented a detailed study on the ways in which shell corporations (and similar entities such as ghost and front companies) could be used to facilitate laundering. Working Group I also carried out a survey in FATF members and a sample of non-FATF jurisdictions of the conditions of ownership and incorporation for shell corporations; and of the ability to obtain information about such ownership and provide it to foreign and domestic law enforcement.

In the discussion of ways to counter the use of shell corporations for money laundering, the importance of transparency regarding the beneficial ownership of these bodies was highlighted. It was noted that the FATF Recommendations already covered the responsibilities of financial institutions to identify their clients, including beneficial owners. A general discussion was held on the need for on Interpretative Note in this area and a draft of such a Note was presented to the joint meeting of Working Groups I and II on 12 May. At this meeting it was agreed that further consideration should be given to this subject at a meeting of Working Group II in June and, as appropriate that Working Group I would have the opportunity to examine further the legal aspects of the issue.

Working Group I also considered the feasibility of other mechanisms to ensure that adequate records of the owners of shell corporations were maintained and available to law enforcement authorities in money laundering investigations.

V. Controlled Delivery

Working Group I had considered the issue of and adopted an Interpretative Note on deferred arrests and seizures in FATF III. In 1992-93 further work was carried out on the technique of controlled delivery. The Group agreed that this was an important law enforcement countermeasure against money laundering, particularly at the international level and adopted an Interpretative Note concerning removal of legal impediments to the use of this technique. The text of the Interpretative Note and supporting explanation is attached.

VI. Use of Non-Financial Businesses for Money Laundering

The Group held three discussions on the question of what countermeasures might be introduced to combat money laundering through non-financial businesses. It was recognised that this was a complex area which needed to be the subject of a long term study, extending into future FATF Rounds. It was noted that a wide variety of businesses could be used - whether willingly or without their knowledge - for money laundering purposes. Vulnerable businesses ranged from ones which carried out activities similar to those conducted by financial institutions to businesses which dealt with large amounts of cash.

It was agreed that in its work the Group should concentrate first on the quasi-financial businesses and: (i) examine how to identify such businesses; (ii) in what sectors or in what circumstances thesebusinesses should be subject to the FATF Recommendations; and (iii) what were the appropriate Recommendations for such businesses. In relation to the first item, the Group considered an approach based on the types of activity conducted rather than the sector or entity involved, including the implications of such an approach for the selection of the anti-money

laundering requirements to be applied. The Group considered that this approach merited further study along with other possible alternatives.

The work on use of non-financial businesses for money laundering will be pursued in Round V of FATF.

REPORT FATF IV - WG II

Report to the FATF from Working Group II (Financial Matters)

1992-1993

I. INTRODUCTION

On 9-11 September 1992, FATF-IV established the following mandate for Working Group II:

1. Continuation, updating and improvement of the balanced monitoring mechanism for, in consultation with Working Group I:

(a) self assessment:
(i) questionnaire;
(ii) compilation and analysis of answers;

(b) mutual evaluation:
(i) questionnaire;
(ii) participation in discussion of the draft reports.

Working Group II materially covers the topics of Recommendations 9-31. (Working Group I covers Recommendations 1-8 and 33-40); Recommendation 32 is covered by both Working Groups.)

2. Collection and dissemination among members of members' (updated) lists of non-bank financial institutions and other businesses that have been used, or are particularly vulnerable to being used, in money laundering.

3. Regulatory coverage of non-bank financial institutions.

4. Monitoring of new money laundering techniques ("typology") in co-operation with Working Groups I and III, and under the leadership of Working Group I, including general lessons to be learnt from specific cases.

5. Complements and/or interpretative notes to the 40 Recommendations as necessary.

6. Collection and dissemination among members of members' guidelines for assisting financial institutions in detecting suspicious patterns of behaviour by their customers, and consideration of the feasibility and utility of collecting suspicious or unusual transaction reports currently used in member countries in a standardised form and developing a standardised transaction reporting format.

7. Consider the feasibility and utility of measures dealing with money laundering cases that involve use of domestic and/or international electronic funds transfers.

8. Input, as necessary, into WGs I and III work (for example, shell corporations: standards of incorporation, recordkeeping by attorneys and other intermediaries, and due diligence by financial institutions).

During 1992/1993, the Working Group met six times (9-10 September 1992, 17 November 1992 (volunteer meeting), 20 January 1993, 31 March 1993, 12 May 1993, 28 June 1993. These meetings enabled Working Group II to address the issues contained in its mandate.

II. ACCOMPLISHMENTS

1. Monitoring Mechanism

(a) Self-assessment

During the 9-11 September 1992 FATF meetings, a revised self-assessment questionnaire was agreed upon. All countries have filed their answers to the questionnaire. The Secretariat has distributed a detailed compilation of answers to the questionnaire. During its 31 March 1993 meeting the Working Group discussed this compilation. As the answers filed are supposed to reflect the current state of implementation, several members subsequently updated the information contained in the compilation. An analysis, based upon the filed answers to the questionnaire as updated, was circulated.

(b) Mutual evaluation

During the 9-11 September 1992 FATF meetings, a revised mutual evaluation questionnaire was agreed upon. The Plenary adopted the programme for FATF-IV which included the mutual evaluation schedule. During a joint meeting on 30 March 1993, Working Groups I and II discussed the draft reports on Denmark and the United States. These groups jointly discussed draft reports on Belgium, Canada and Italy on 13 May 1993, and draft reports on Austria, Switzerland and Luxembourg on 28 June 1993. After having made some amendments, the working groups advised the Plenary to accept the reports.

2. Collection and dissemination among members of members' (updated) lists of non-bank financial institutions and other businesses that have been used, or are particularly vulnerable to being used, in money laundering.

A large majority of FATF members participated in an exercise to identify types of non-bank financial institutions[1]) and other businesses that have been used, or are particularly vulnerable to being used, in money laundering. A compilation of lists of such institutions was made by the Secretariat based on members' contributions. This compilation was discussed in a volunteer meeting of the Working Group on 17 November 1992 and subsequently during working group meetings on 20 January and 31 March 1993.

The Working Group identified categories which were often, sometimes, and occasionally mentioned. Within the main categories of non-bank financial institutions, bureaux de change), intermediaries in investment business, and life insurance companies were often mentioned by FATF members. Other categories of non-bank financial institutions, such as postal financial services, finance

[1] It is noted that FATF leaves the definition of "bank" or "credit institution" to individual members. Consequently, the definition of bank, and also of "non-bank financial institution" may vary between members. Members with a broad definition of "bank" may identify fewer non-bank financial institutions.

companies, collective investment schemes, and credit card companies were sometimes quoted. Leasing and factoring companies and money transmitters were occasionally quoted.

The issue of non-financial institutions and businesses was referred to Working Group I (legal issues). The first FATF-V Plenary could consider whether the compilation of lists of non-bank financial institutions would be the basis for further action. This action would concern some of the most often mentioned sectors on specific recommendations, particularly no. 15 (complex, unusual large transactions, and unusual patterns of transactions, which have no apparent economic or visible lawful purpose); no. 16 (suspicion that funds stem from a criminal activity); nos. 20/26 (programmes against money laundering); and no. 28 (guidelines which will assist (non-bank) financial institutions in detecting suspicious patterns of behaviour by their customers).

3. The application of the FATF Recommendations to non-bank financial institutions

During its volunteer meeting on 17 November 1992, and during its meeting on 31 March 1993, the Working Group discussed modalities for implementing the FATF Recommendations on financial matters (9-32, except recommendations 12 and 13 which are subject to a specific study on identification: see item 5 of this report) in three specific sectors of non-bank financial institutions: the securities (intermediaries in investment business) and insurance industries, and the bureaux de change. The discussions were structured on the basis of papers presented by the United Kingdom (securities), the Netherlands (insurance), and the United States (bureaux de change). A report has been prepared on the basis of the discussions of the Working Group, identifying relevant particulars of these sectors and containing proposals for clarifications and interpretative notes to Recommendations 9 and 15. The two interpretative notes are related to the insurance sector and they read as follows:

Recommendation 9: **"The FATF Recommendations should be applied in particular to life insurance and other investment products offered by insurance companies, whereas Recommendation 29 applies to the whole of the insurance sector."**

Recommendation 15: **"The word "transactions" should be understood to refer to the insurance product itself, the premium payment and the benefits."**

4. New money laundering techniques

On 19 January 1993, a joint meeting of Working Groups I and II discussed and adopted the draft report that had been prepared by the 16 November 1992 typologies Sub-Group meeting. The report of Working Group I (legal issues) covers this issue in more depth.

5. Complements and/or interpretative notes to the 40 Recommendations as necessary

The Working Group saw no need for additional recommendations. As noted under 3 above, two interpretative notes are suggested for the implementation of the recommendations in the insurance sector.

In parallel, the Working Group noted that many transactions or entries into business relations between financial institutions and their customers involve no face to face contact between the two parties. In such cases, the provision of identifying documents poses real difficulties or is impractical and runs counter to the way in which transactions/business relations are conducted in these cases. A non paper on customer identification requirements for certain transactions with financial institutions set out an analytical view of the general identification requirements in cases where there is no face to face contact between the

institution and its customer. Although the Working Group recognised the importance of this subject, it was decided not to adopt interpretative notes. It was agreed to further work on the issue of identification requirements (Recommendations 12 and 13) during FATF-V, bearing in mind two specific elements: the need to establish a level playing field between categories of financial institutions and a balance between flexibility and security.

6. Suspicious and unusual transactions guidelines and reporting formats

The Working Group noted that point 6 of its mandate contains two aspects:

(a) collection and dissemination among members of members' guidelines for assisting financial institutions in detecting suspicious patterns of behaviour by their customers; and

(b) consideration of the feasibility and utility of collecting suspicious or unusual transaction reports currently used in member countries in a standardised form and developing a standardised transaction report format.

With regard to point (a), members were asked to provide the Secretariat with updates and new elements that could be useful to other members who are also in the process of developing guidelines for assisting financial institutions in detecting unusual or suspicious patterns of behaviour by their customers (the implementation of recommendations 15, 16, 20/26 and 28). The Secretariat has made a compilation of members' updates.

With regard to point (b), the Italian delegation and the Secretariat have drafted a brief questionnaire on the issue of standardisation. It contains two main questions:

- what are the view of the members on which information should as a minimum be contained in a suspicious or unusual transaction report?

- what actual measures have been taken by the authorities to ensure that financial institutions provide this information?

This questionnaire will be used to address the feasibility and utility of this standardised transactions reporting format during FATF-V.

7. Electronic funds transfers

Following on from analysis presented to the FATF by various law enforcement authorities showing that many major money laundering cases in recent times have involved the use of electronic payment arrangements, the FATF mandated an ad hoc group to study the use made of the world's electronic funds transfer systems in the money laundering process. The ad hoc group concluded that it had become relatively easy to transfer funds through the international banking system in such a way that the identity of the original ordering customer or the ultimate beneficiary is concealed.

The ad hoc group was mandated to hold discussions about this issue with the Society for Worldwide Interbank Financial Telecommunication SC (SWIFT) - the principal carrier of cross-border electronic payment messages. These resulted in the Chairman of SWIFT sending a broadcast to all users of the SWIFT system on 30 July 1992 asking them to ensure that they key fields for the ordering and

beneficiary customers in the important MT100 message type are completed with names and addresses.[2] A subsequent follow-up letter was sent to all user organisations on 30 October 1992 by the Chief Executive Officer of SWIFT. FATF member governments have also taken steps to encourage the users of the SWIFT system within their own respective jurisdictions to follow the advice contained in the SWIFT broadcast.

Further discussion with SWIFT has resulted in their agreeing to redraft the instructions for completion of the ordering institution field in the MT100 message type and to issue a Usage Guideline on identifying the ordering parties in the MT100. The purpose of this is to ensure that, regardless of however many messages are sent to achieve a particular payment, details of the financial institution which initiated the payment for the ordering customer are identified throughout the payment chain.

These two initiatives are aimed at ensuring that using the SWIFT system to give payment instructions does not provide money launderers with a means of breaking the audit trail. FATF member governments would determine if it is appropriate and technically feasible that payment messages in their respective national electronic payment systems contain information on the ordering and beneficiary customers and the institution that originated the payment instruction.

8. Input into the work of other working groups

On 19 January 1993, a joint meeting of Working Groups I and II had a presentation by the United States on the subject of shell corporations, followed by a preliminary discussion of the issues. On 30 March 1993, Working Groups I and II had a further presentation on this subject. The issue of shell corporations was discussed again during the FATF May and June meetings.

[2] In the case of the ordering customer, if it is not possible to include the name and address, the account number may be included instead.

REPORT TO THE FATF FROM WORKING GROUP III (EXTERNAL RELATIONS) 1992-93

I. Introduction

The mandate for Working Group III was adopted at the FATF meeting on 10 - 11 September 1992. The work of the Group during 1992-93 has concentrated on implementing of the action programme for external relations set out in the report of FATF III. The Group mounted a large number of activities to promote the widest possible global mobilisation against money laundering, and encourage non-Member governments both to commit themselves to implement the FATF Recommendations and agree to assess their progress in doing so. In response to requests from particular third countries, Working Group III has also provided training and technical assistance through the services of FATF Members and others. The Group has also developed its co-operation with the international and regional organisations with an interest in money laundering. Finally, the Group has continued to monitor the contacts between relevant Member governments and their dependent, associate or otherwise connected territories regarding their implementation of Task Force Recommendations.

II. Outreach Programme

In carrying out its programme of contacts with third countries the Group decided to create various sub-groups of particular FATF members to advise on the best approach for developing contacts with selected regional areas. Under the general direction of the Group, these sub-groups have organised and carried out various seminars and training programmes.

a) Central and Eastern Europe

Central and Eastern Europe has been a particular focus for the FATF's external relations work during 1992-93. Although this area is not at present a major money laundering centre, the countries are becoming an increasingly attractive target for money launderers as they develop their financial systems, open their economies and move towards convertibility of their currencies. With the spread of organised crime gangs in this part of Europe, the area could also see the development of domestic money laundering operations, making use of the financial systems in other countries as well as their own. Hence it is very important that they take the opportunity of the reform and restructuring of their laws and systems to put in place measures to protect themselves against money laundering.

The Council of Europe held a major money laundering conference in Strasbourg in September 1992, attended by representatives from most Central and Eastern European countries, including Russia and certain Newly Independent States. In the framework of this conference members of Working Group III met delegates from Hungary, Poland, the (then) Czech and Slovak republics, Bulgaria, Romania, Russia, Latvia, Croatia and Slovenia. The purpose of these meetings was to find out more about the money laundering situations within these countries and discuss how the FATF might assist them.

These contacts led to requests for both policy seminars and more detailed training programmes from Hungary and Poland. The first seminar took place in Budapest on 4-5 and 8-10 February. In addition to representatives from financial, legal, prosecutorial and law enforcement interests from Hungary (including commercial banks), delegations from Albania, Bulgaria, the Czech Republic, Poland, Romania and Slovakia attended the policy seminar as observers, thanks to financial support from the Council of Europe. The seminar and training programme were carried out by delegations from 9 FATF members, together with officials from the Council of Europe, INTERPOL and the UNDCP and

included representatives from banks and other financial institutions. Prior to the policy seminar, the FATF presenters met with relevant Hungarian Ministries and agencies for detailed discussions on the money laundering situation in Hungary and progress in developing counter-measures. The seminar and training programme provided a thorough exposition of anti-money laundering measures, with individual sessions for financial, regulatory, legal and law enforcement groups. The outcome was the preparation of a set of recommendations to the Hungarian authorities on their next steps in this area.

The symposium in Warsaw, held on 2-4 March, followed a similar pattern, although in this case participation was limited to officials from Polish government agencies and financial institutions. The experience gained from the seminar in Budapest enabled the refinement and compression of the programme. Again, the FATF presenters had the opportunity for discussions with the relevant Polish agencies before the start of the seminar and there was also a meeting with the Governor of the National Bank of Poland and other high-level officials, and recommendations were made to the Polish authorities resulting from the symposium.

In addition to these two events, during the year individual FATF members also took part in missions to particular Central and Eastern European countries organised by the Council of Europe or on a bilateral basis. The European Community has incorporated in its Association agreements with Eastern European countries specific clauses committing them to apply the FATF recommendations. A PHARE pilot programme of assistance to six countries in the region is being set up in the field of drugs. This programme covers money laundering. The FATF and UNDCP have also begun preparations for a money laundering seminar in Moscow in September for Russia and other members of the CIS.

b) Asia and the Pacific

Contacts with Asian and Pacific countries had been made in earlier FATF Rounds through a conference organised by Japan, together with the Economic and Social Commission of the United Nations for Asia and the Pacific, in February 1991 and FATF representation at a meeting of South East Asian Central Banks Board of Governors in Jakarta in October 1991. Given the importance of this region both in terms of the numbers of developed or emerging financial centres and the drug producing countries, it was decided to hold two meetings in the area during 1992-93.

The meeting of the FATF in Sydney in September provided the opportunity to organise a programme in parallel for selected Asian and Pacific states. Representatives from Fiji, Indonesia, Malaysia, Nauru, Papua New Guinea, the Philippines, the Solomon Islands, Tonga and Taiwan attended the sessions at which there were presentations and discussions on the money laundering situation in the region.

This was followed in April 1993 by the Asia Money Laundering Symposium organised jointly by the FATF and the Commonwealth Secretariat, with the support of the UNDCP and hosted by the Government of Singapore. This was a major conference involving participants from 14 non-FATF countries/regions and SEACEN, 9 FATF members (including the 7 FATF sponsors), UNDCP and INTERPOL. The Symposium concentrated on raising awareness of the money laundering problem and explaining countermeasures. Separate detailed sessions were held for financial and regulatory; legal and judicial; and law enforcement groups. A written statement of the conclusions of the Symposium was produced and the non-FATF members were asked to give serious consideration to implementing the 40 FATF Recommendations. The value was recognised of holding a further Symposium in about a year's time.

c) The Caribbean

FATF members have worked closely with the Caribbean Islands and Central American States since 1990 and a Caribbean Financial Action Task Force (CFATF) has been established. The CFATF process has gathered pace in 1992-93 and major progress has been made in promulgating the FATF message in the Caribbean region. With the support of FATF members, a Ministerial Conference of the CFATF was held in Kingston, Jamaica in November 1992. At this meeting the CFATF members formally endorsed and agreed to implement the 40 FATF Recommendations and the 19 Recommendations drawn up at the Aruba Conference in 1990. It was also agreed that there needed to be a mechanism to monitor and encourage progress in this work, including a self-assessment and mutual evaluation process. To further this and to facilitate the provision of training and technical assistance in the region, the meeting proposed the creation of a small CFATF Secretariat to be based in Trinidad and Tobago, which is taking over the Presidency of this body. Another meeting of the CFATF will be held in 1994 to evaluate progress. The FATF sponsoring countries (Canada, France, Netherlands, UK and US) are now discussing arrangements for the ongoing operations of the CFATF.

d) Africa

Working Group III has given continued attention to the mechanisms for pursuing anti-money laundering initiatives in Africa, given the absence of any clearly suitable continental body with whom the FATF can work. In November 1992 members of Group met representatives of the Central African Republic, the Ivory Coast, Kenya, Morocco, Nigeria and Zimbabwe for discussions on the best way forward. The FATF Secretariat is also in contact with selected regional organisations. Proposals for FATF activities in Africa during Round V of the Task Force are being drawn up, taking account of these consultations.

e) Other Areas

In the Middle East the Gulf Co-operation Council has continued to encourage compliance with FATF Recommendations by its six Gulf State members. A conference on money laundering, organised jointly by the FATF, GCC and the Saudi Arabian Monetary Authority, is planned for October 1993.

In South America, as in previous Rounds, the FATF has not pursued any direct contacts, given the well-established initiative of the OAS in this area.

III. Co-ordination and Oversight of Liaison between Relevant Members and their Dependent, Associate or Otherwise Connected Territories.

At its meeting in April 1993 the Group received reports from "sponsor" members on the action taken by these territories in implementing anti-money laundering measures. The conclusion was that progress is being made in a number of areas but the FATF "sponsors" need to continue their efforts to encourage early action.

The Working Group has also begun consideration of how to evaluate progress by these territories. Certain have completed self-assessment questionnaires (and some are also involved in the CFATF process) but there is currently no comprehensive and systematic mechanism.

IV. Co-operation with Regional and International Organisations in Furthering the Objectives of the FATF

During Round IV the FATF has further developed the good relations established with other organisations most closely involved in combating money laundering. Representatives from the Council of Europe, INTERPOL, the UNDCP and CCC have regularly attended meeting of Working Group III and participated in the planning and execution of the various external relations initiatives carried out in 1992-93. FATF members have also taken part in money laundering events organised by these bodies and the Chairman of Working Group III was invited to make a presentation at the November 1992 meeting of the United Nations General Assembly's Third Committee devoted to action against drugs trafficking and money laundering.

The Round has also seen FATF extend the range of organisations with whom it has worked. There was close co-operation with the Commercial Crime Unit of the Commonwealth Secretariat in respect of the Asia Money Laundering Symposium. The FATF has also developed links with the European Bank for Reconstruction and Development regarding anti-money laundering initiatives in Eastern Europe. A representative from the Bank attended the Symposium in Budapest and the Chairman of Working Group III visited the Bank in May for discussions on further co-operative efforts in this area.

With the number of international organisations engaged in anti-money laundering work, particularly in some areas of the world, particularly Eastern Europe, it is clearly important to make best use of the available resources and avoid overlap and duplication of efforts. In conjunction with the other major organisations, FATF through Working Group III is taking steps to institute a co-ordination mechanism, starting with the production of a calendar of all the money laundering initiatives planned by the various bodies.

V. Conclusions

The Group has made substantial progress in its external relations agenda during Round IV. Building on the contacts established in previous Rounds, the Group has continued its mission of promulgating the FATF message. Promoting money laundering awareness remains an important feature of its work but emphasis is placed not only seeking a firm commitment from third countries to implementation of the 40 Recommendations but also an agreement to be evaluated on progress. Clearly results cannot be expected immediately and the FATF is at different stages in its contacts with various regions. However, the CFATF process has shown that, over time, substantive commitments can be achieved. The challenge for future Rounds will be to ensure that there is proper follow-up to the actions already taken whilst finding a way to reach those parts of the world where even awareness of the money laundering problem remains at a very low level.

INTERPRETATIVE NOTE

CONTROLLED DELIVERY OF FUNDS SUSPECTED OR KNOWN TO BE THE PROCEEDS OF CRIME

1. In its third report the FATF called on member governments to consider taking the necessary measures to allow their competent authorities investigating money laundering cases to postpone or waive the arrest of suspected persons and/or the seizure of money for the purpose of identifying persons involved in such activities or for evidence gathering. This was with the specific intention of enabling the use of procedures such as controlled delivery and undercover operations. In its fourth round the FATF has carried out further studies on the issue of controlled delivery.

2. Controlled delivery is a technique whereby, when law enforcement agencies become aware of a shipment of, or a transaction involving, items of an illegal or suspected illegal origin, those items are not seized immediately. Instead, law enforcement interests are better served by allowing the shipment/transaction to proceed under the close, covert surveillance of the authorities in order to gather evidence and identify those involved. Arrests and seizures are then made at a later stage as appropriate. Application of controlled delivery techniques to international transportation of illegal drugs has been accepted in law enforcement circles for many years. Provisions for their international use are included in the 1988 Vienna Convention.

3. The FATF considers that controlled delivery is an equally valid technique in money laundering cases involving shipments of or transactions involving funds[3] suspected to be the proceeds of crime, whether at the domestic or international levels. Indeed, it is arguably of greater utility from an evidential standpoint in such cases than in those involving drugs trafficking. In the latter, it is easy to establish if the substances are illegal. However, it may not be readily apparent whether or not particular funds are the proceeds of crime. Further investigations are generally necessary to determine this and controlled delivery is a very effective method in this context. Even where it is clear that funds are of criminal origin, a controlled delivery operation, subject as necessary to the requisite legal authorisation, can be of great value in helping to identify and gather evidence against as many as possible of the criminals involved. In particular, it offers a route to the higher level criminals and the beneficial owners of the funds.

4. Controlled delivery is an important counter-measure against money laundering at the international level. The FATF's work on money laundering methods has indicated that there is an increasing return to cross-border movement of the proceeds of crime, especially those from drugs trafficking. This trend can be expected to continue as the various FATF members (and other countries) implement the FATF Recommendations as regards preventing and detecting the use of their financial systems for the purpose of money laundering. The major money laundering organisations have shown that they are sensitive to national law enforcement initiatives. The enforcement of anti-money laundering measures by countries provides a disincentive for criminals to use their financial systems and instead to move funds generated from crimes in those countries to countries which do not yet have adequate anti-laundering measures and whose financial systems can consequently be penetrated with less risk.

---

[3] The term funds covers not only currency but all types of monetary and financial instruments.

5. Application of controlled delivery techniques to international movements of funds can obviously be of value in obtaining information and evidence concerning particular money laundering operations. At a more strategic level, it can also provide useful intelligence on the international flows of illegal funds, identifying countries whose financial systems are perceived by money launders as particularly vulnerable. In this context, the application of the techniques to suspicious international inter and intra bank bulk cash transactions as well as particular cross-border consignments of cash by money launderers is important. Use of controlled delivery techniques is of particular value in countries or territories which have yet to implement the full range of anti-money laundering measures as, for this reason, they are the most likely targets for illegal currency flows.

6. Clearly there needs to be effective co-operation between law enforcement agencies in the various countries concerned if international controlled deliveries are to be successful. An essential precondition is that countries should permit controlled delivery whether under their general law or specific legal provisions. This is already the case in the majority of FATF members, subject to the law enforcement agencies having any necessary permission from legal/judicial authorities to conduct the operation.

7. The Customs Co-operation Council has endorsed a recommendation that its members be encouraged to use controlled delivery techniques and both it and INTERPOL consider it would be helpful if the FATF were to encourage action by these organisations in this area.

8. In the light of the above considerations and in furtherance of FATF Recommendations 32, 33, 36 and 38 (including the Interpretative Note to this Recommendation), the Interpretative Note on deferred arrests and seizures as well as Article 9 of the Vienna Convention, the FATF has therefore adopted the following Interpretative Note.

" The controlled delivery of funds known or suspected to be the proceeds of crime is a valid and effective law enforcement technique for obtaining information and evidence in particular on international money laundering operations. It can be of great value in pursuing particular criminal investigations and can also help in obtaining more general intelligence on money laundering activities. The use of these techniques should be strongly encouraged. The appropriate steps should therefore be taken so that no obstacles exist in legal systems preventing the use of controlled delivery techniques, subject to any legal requisites, including judicial authorisation for the conduct of such operations. The FATF welcomes and supports the undertakings by the Customs Co-operation Council and INTERPOL to encourage their members to take all appropriate steps to further the use of these techniques."

ANNEX D - Summary of compliance with the forty Recommendations

ANNEX E - Providing Feedback to Reporting Financial Institutions and Other Persons: Best Practices Guidelines

FINANCIAL ACTION TASK FORCE ON MONEY LAUNDERING

ANNUAL REPORT 1997-1998

SUMMARY

1. Belgium chaired the ninth round of the Financial Action Task Force on Money Laundering (FATF). A major task conducted during the 1997-1998 round by the FATF was the review of its future mission and programme of work from 1999 to 2004. The FATF also continued its work relating to the implementation and refinement of anti-money laundering measures. In addition, the Task Force further developed co-operation with a number of international organisations concerned with the combat of money laundering.

2. On 28 April 1998, FATF Ministers and the European Commissioner for Financial Services endorsed the report prepared by the FATF which defines a five year plan -- 1999-2004 -- to spread the anti-money laundering message to all continents and regions of the globe. To this end, Ministers urged FATF to foster the establishment of a world-wide anti-money laundering network based on adequate expansion of the FATF membership, the development of FATF-style regional bodies such as the Caribbean FATF and the Asia/Pacific Group on Money Laundering, and close co-operation with all the relevant international organisations, in particular the United Nations Office for Drug Control and Crime Prevention (UNODCCP) and the International Financial Institutions. They also agreed that other important tasks of the FATF for the next five years should include improving the implementation of the forty Recommendations within its own membership and strengthening the review of money laundering trends and countermeasures.

3. As in previous rounds, the Task Force devoted a considerable part of its work to the monitoring of members' implementation of the forty Recommendations on the basis of the self-assessment and mutual evaluation procedures. Through an enhanced process, which now includes a question and answer session at a Plenary meeting, the 1997-1998 self-assessment exercise showed that members had continued to make progress in implementing the forty Recommendations. Furthermore, the mutual evaluation procedure, which provides for a thorough examination of the counter-measures in place and their effectiveness, continues to be an irreplaceable monitoring mechanism. Sixteen FATF members have now been examined in the second round of mutual evaluations. Summaries of the eight mutual evaluation examinations (Canada, Switzerland, Germany, the Netherlands, Italy, Japan, Norway and Greece) which were conducted during FATF-IX are contained in Part II of the report.

4. The assessment of current and future money laundering threats, an essential part of the FATF's work, confirmed the trends observed in previous exercises. The annual survey of money laundering typologies [1] clearly noted the emergence of new areas which are not yet fully mapped: electronic money, new payment technologies, remittance businesses, non-financial professions, the insurance sector and stock exchange dealers. The FATF also continued the dialogue which has been opened with the private sector through a second Forum with representatives from the international financial services industry. The event provided an opportunity for representatives from the industry to meet with FATF government delegates and discuss issues of importance such as the need to provide feedback to reporting financial institutions. During the round, experts from FATF members and several international organisations continued the work commenced in 1997 on estimating the magnitude of money laundering.

[1] See Annex C.

5. The FATF's strategy for relations with non-members is directed towards supporting the various activities of other regional and international bodies involved in the fight against money laundering. In this regard, it should be noted that a Select Committee of the Council of Europe and the Offshore Group of Banking Supervisors commenced mutual evaluation programmes of the anti-money laundering measures taken by their members. While the Caribbean FATF pursued its anti-money laundering activities, notably its mutual evaluation programme and typologies exercise, a major event during 1997-1998 was the first meeting of the Asia/Pacific Group on Money Laundering, which was held in March 1998 and which was attended by 23 countries and territories throughout the region. Finally, in September 1997, the FATF carried out a mission to Cyprus and in October 1997, it organised, with the Bank of Russia, an international money laundering Conference in St. Petersburg.

6. The necessary development of in-depth international co-operation in combating money laundering was clearly demonstrated at the highest level when Mr. Michel Camdessus, Managing Director of the International Monetary Fund[2], and Mr. Pino Arlacchi, Executive Director of the United Nations Office for Drug Control and Crime Prevention, addressed the February 1998 FATF Plenary meeting. To meet the request for technical assistance from its member States, particularly in fulfilling their obligations to counter money laundering deriving from the 1988 Vienna Convention, the United Nations launched, in 1997, their Global Programme against Money Laundering. Furthermore, the 1998 June Special Session of the United Nations General Assembly provided an opportunity for governments to renew their commitment to combat the drug problem, including the countering of money laundering. In 1997-1998, the UNODCCP and the FATF co-operated in several anti-money laundering meetings. The Task Force also initiated contacts with the regional development banks, particularly the Inter-American Development Bank.

7. According to the objectives decided in the review of the FATF's future, the issue of enlarging FATF membership will need to be addressed in 1998-1999. This critical task will be carried out under the Presidency of Japan, which will commence on 1 July 1998.

[2] See Annex A.

INTRODUCTION

8. The Financial Action Task Force was established by the G-7 Summit in Paris in 1989 to examine measures to combat money laundering. In 1990, the FATF issued forty Recommendations for action against this phenomenon. These were revised in 1996 to reflect changes in money laundering trends. Membership of the FATF comprises twenty six governments[3] and two regional organisations[4], representing major financial centres of North America, Europe and Asia. The delegations of the Task Force's members are drawn from a wide range of disciplines, including experts from the ministries of finance, justice, interior and external affairs, financial regulatory authorities and law enforcement agencies.

9. In July 1997, Belgium succeeded Italy in holding the Presidency of the Task Force for its ninth round of work. Three Plenary meetings were held in 1997-1998, two at the headquarters of the OECD in Paris and one in Brussels. Two special experts' meetings were held; the first in November 1997 in Paris to consider trends and developments in money laundering methods and counter-measures and the second in May 1998 to work on the issue of estimating the size of money laundering. In addition, a meeting of the FATF Ministers was held in the margins of the OECD Council meeting at Ministerial level on 28 April 1998.

10. The FATF co-operates closely with international and regional organisations concerned with combating money laundering. Representatives from the Asia/Pacific Group on Money Laundering (APG), the Caribbean Financial Action Task Force (CFATF), the Council of Europe, the Commonwealth Secretariat, the European Bank for Reconstruction and Development, the International Monetary Fund (IMF), the Inter-American Development Bank (IDB), the Inter-American Drug Abuse Control Commission (CICAD), Interpol, the International Organisation of Securities Commissions (IOSCO), the Offshore Group of Banking Supervisors (OGBS), the United Nations Office for Drug Control and Crime Prevention (UNODCCP), the World Bank and the World Customs Organisation (WCO) attended various FATF meetings during the year.

11. A major element of the deliberations of the Task Force during 1997-1998 was the review of its future mission. Part I of the report sets out the conclusions of this review, which were endorsed by all FATF member governments. Parts II, III and IV of the report outline the progress made over the past twelve months in the following three areas:

- monitoring the implementation of anti-money laundering measures by its members;
- reviewing money laundering methods and countermeasures; and
- promoting the widest possible international action against money laundering.

I. THE FUTURE MISSION OF THE FINANCIAL ACTION TASK FORCE

12. In 1994, five years after the FATF was established by the 1989 G-7 Summit, its members decided that the Task Force -- which is not a permanent international organisation -- should continue its work for a further five years, i.e. until 1999. It was also agreed that no final decision on the future of FATF should be taken until 1997-1998, at which time it would be necessary to consider how the fight against money laundering could best be carried forward. Therefore, an in-depth review of the FATF's needs, mission and work programme, which is summarised in the paragraphs below, was carried out during FATF-IX.

A. PROGRESS ACHIEVED

13. The FATF issued in 1990 and revised in 1996, forty Recommendations which cover legal, financial regulatory, law enforcement and international action which governments should take to combat money laundering. The FATF's forty Recommendations have become an internationally accepted benchmark in this area.[5] Since 1991, the FATF has concentrated on the following three main tasks: establishing standards and reviewing money laundering methods; monitoring the implementation of anti-money laundering measures by member governments; and promoting the adoption of counter measures by non-member countries.

14. Considerable progress has been made in the implementation of anti-money laundering measures by FATF members. By mid-1999, every member will have undergone two evaluations of their anti-money laundering systems. The first round of evaluations dealt with the question of whether all members had adequately implemented the forty Recommendations, while the second round deals with the effectiveness of the anti-money laundering system in each member. The FATF has also conducted an ambitious programme of missions and seminars in non-member countries to promote awareness of the money laundering problem and to encourage them to take action. While the FATF's forty Recommendations have gained some international prominence, a large number of countries around the world still need to implement anti-money laundering systems.

15. There is no doubt that the FATF has played a key role over the last eight years in building an international consensus on the measures that need to be taken to combat money laundering. It has also helped to persuade many countries to implement these measures. In this process, it has helped to create a "network" of money laundering experts in each of the FATF members, improving co-operation and the flow of information, both at the domestic level and internationally. Moreover, the FATF has achieved this with very limited permanent resources.

B. FUTURE MISSION AND PROGRAMME OF WORK

(i) The need for continued action against money laundering and the major tasks to be accomplished

16. Although considerable progress has been made in the fight against money laundering since 1989, much remains to be done and there is an obvious need for continued mobilisation at the international level to deepen and widen anti-money laundering action. The major tasks are described hereafter.

(a) To establish a world-wide anti-money laundering network and to spread the FATF's message to all continents and regions of the globe

---

[5] See Annex B.

17. The FATF has decided to foster the establishment of a world-wide anti-money laundering network based on :

- an adequate expansion of the FATF membership to strategically important countries which already have certain key anti-money laundering measures in place (criminalisation of money laundering; mandatory customer identification and suspicious/unusual transactions reporting by financial institutions), and which are politically determined to make a full commitment towards the implementation of the forty Recommendations, and which could play a major role in their regions in the process of combating money laundering;

- the development of FATF-style regional bodies, especially in areas where FATF is not sufficiently represented and strengthening of work of bodies which already exist (the CFATF, the Asia/Pacific Group on Money Laundering, the Council of Europe, the OAS/CICAD and the OGBS); and

- close co-operation with relevant international organisations, in particular the United Nations bodies and the International Financial Institutions.

(b) Improve the implementation of the forty Recommendations in FATF members

18. Improving the implementation of the forty Recommendations in FATF members is an important and challenging policy objective to be pursued. There is a need to ensure that all members have implemented the revised forty Recommendations in their entirety and in an effective manner. It was therefore agreed to review the existing monitoring mechanisms so as to establish a renewed assessment process, focusing on compliance with the 1996 Recommendations, and involving the following elements:

- en enhanced self-assessment process; and

- a third round of simplified mutual evaluations for all FATF members starting in 2001, focusing exclusively on compliance with the revised parts of the Recommendations, the areas of significant deficiencies identified in the second round and generally the effectiveness of the counter-measures.

(c) Strengthen the review of money laundering trends and countermeasures

19. Money laundering is an evolving activity, the trends of which should continue to be monitored. It is therefore crucial for FATF members to acquire the best possible experience and knowledge of money laundering trends and techniques and to assess the effectiveness of the FATF Recommendations. There is also a need to extend the geographical scope of the future typologies exercises. The latter may raise the issue of the need for new countermeasures. If this occurs, the FATF must be at the forefront of the elaboration of these new countermeasures. In order to achieve a set of Recommendations to counter actual money laundering threats, the FATF could embark, if necessary, on a further updating exercise in 2003/2004, covering new countermeasures as well as perhaps reviewing those Recommendations which currently ask members simply to consider and decide whether action should be mandatory or not, incorporating the input from FATF-style regional bodies. In any case, FATF must ensure that the forty Recommendations remain the most effective and widely-respected international standard in the anti-money laundering area.

(ii) Future Direction, Duration and Objectives of the FATF

20. Action to combat money laundering must rely on effective co-operation between experts from a wide range of disciplines: legal and judicial, financial and regulatory, and law enforcement. The success of the FATF's work so far demonstrates that there is no alternative international organisation, body or

group, which has the necessary expertise, i.e. of a multidisciplinary nature with the experience and ability to assume responsibility of the FATF in a flexible and efficient way.

21. The medium to long term objectives of the FATF are: the development of credible and effective FATF-style regional bodies and an adequate expansion of its membership to include strategically important new members. At the beginning of 2005, the FATF should ideally have achieved its objective of promoting the establishment of a world-wide anti-money laundering network. In any case, an assessment of the FATF's achievements and strategy between 1999 and 2004, and future should be carried out in 2003-2004.

C. POLITICAL SUPPORTS TO THE FATF'S FUTURE MISSION

22. A Ministerial meeting of the FATF, held on 28 April 1998 in the margins of the OECD Council meeting at Ministerial level, fully endorsed the conclusions of the review of the future of the Task Force and the continuation of its work until 2004. The Ministers stressed that the major focus of FATF's future work should be to promote the establishment of a world-wide anti-money laundering network encompassing all continents and regions of the globe. They particularly supported the intention to bring into the FATF some additional strategically important countries which are committed to the combat of money laundering and to foster the development of further regional anti-money laundering bodies, in addition to the Caribbean FATF and the Asia Pacific Group on money laundering.

23. Further expressions of support towards the FATF's future mission were made at political level. In their April 1998 Communiqué, the Ministers of the OECD "welcomed the decision of the FATF Ministerial meeting to extend its work for a further five years and the new strategy it has adopted" and also noted the "FATF decision to promote the establishment of a world-wide anti-money laundering network based on adequate expansion of membership".

24. On 8 May 1998, the G-7 Finance Ministers "commended the work that FATF has carried out since its creation to develop and promote action against money laundering" and endorsed the decision of the FATF to continue its mandate for a further five years and the new strategy it has adopted". The G-7 Finance Ministers also called on the FATF to make recommendations on what can be done to rectify the abuses raised by a "number of countries and territories, including some financial offshore centres, which continue to offer excessive banking secrecy and allow screen companies to be used for illegal purposes".

25. Finally, on 17 May 1998, the G-8 Heads of State and Government "welcomed the FATF decision to continue and enlarge its work to combat money laundering in partnership with regional groupings" and "placed special emphasis on the issues of money laundering and financial crime, including issues raised by offshore financial centres".

II. MONITORING THE IMPLEMENTATION OF ANTI-MONEY LAUNDERING MEASURES

26. A considerable part of FATF's work focuses on monitoring the implementation by its members of the forty Recommendations. FATF members are clearly committed to the discipline of multilateral surveillance and peer review. All members have their implementation of the Recommendations monitored through a two-pronged approach:

- an annual self-assessment exercise; and,

- the more detailed mutual evaluation process under which each member is subject to an on-site examination.

A. 1997/1998 SELF-ASSESSMENT EXERCISE

(i) Process

27. In this exercise, each member is asked to provide information concerning the status of their implementation of the forty Recommendations. This information is then compiled and analysed, and provides the basis for assessing to what extent the forty Recommendations have been implemented by both individual countries and the group as a whole.

(ii) State of implementation[6]

(a) Legal issues

28. The overall state of implementation is very similar to the situation recorded in the previous round, which reflects that almost all members are in compliance with a large majority of the Recommendations, though there are still a few areas of weakness. It is satisfying to note that the Vienna Convention has now been ratified and implemented by twenty-three members, and that the remaining three members will soon be in a position of full compliance.

29. In regard to most Recommendations the position is quite satisfactory. All members have enacted laws to make drug money laundering a criminal offence, and all but three members have enacted an offence which covers the laundering of the proceeds of range of crimes in addition to drug trafficking. The overall level of compliance will improve considerably when Japan, Luxembourg and Singapore have extended their drug money laundering offences to serious crimes. In Luxembourg, a Bill extending money laundering offences beyond drug trafficking is about to be enacted. In Japan, a Bill of a similar type has been submitted to the Diet. Singapore expects to put in place laws to criminalise serious crimes money laundering before the end of 1998.

30. A number of members also still need to take measures in relation to confiscation and provisional measures, both domestically and pursuant to mutual legal assistance. In relation to domestic confiscation, nineteen members are in full compliance, with six in partial compliance, whilst for mutual legal assistance in this area, there are seventeen members in full compliance, five partially comply, and three are out of compliance (Canada, Greece and the United States). These figures reflect only a marginal increase in compliance over the past few years, and despite the attention paid by FATF to this issue, there needs to be urgent action by some members to bring themselves into compliance with the relevant Recommendations.

(b) Financial issues

31. The 1997-1998 self-assessment exercise generally showed a slight improvement in the overall implementation of the FATF Recommendations on financial issues. Significant improvements were recorded in relation to two new recommendations that were introduced in 1996, namely Recommendation 13 dealing with the need to pay attention to new technologies, and Recommendation 25 dealing with shell corporations. However, differences still remain in the relative state of implementation between the banking sector and the non-bank financial institution sector. On an individual country basis, Finland and Switzerland made significant progress following the enactment of new legislation.

---

[6] A copy of the summary of compliance with the legal and financial recommendations is at Annex D.

32. Almost all members comply fully with customer identification and record-keeping requirements for banks, but there are some persistent gaps in coverage with respect to certain categories of non-bank financial institutions. However, as mentioned in the mutual evaluation section of this report, the serious concerns regarding the anonymous passbooks for residents in Austria have not been resolved, and are being pursued through the FATF non-compliance procedures.

33. In relation to the requirement for financial institutions to report suspicious transactions and related measures, the position is generally very satisfactory in relation to banks and almost as good for non-bank financial institutions. However there is still room for improvement with respect to non-bank financial institutions and the need to pay attention to large, unusual transactions and the obligation to develop internal controls. For banks, almost all members have now established anti-money laundering guidelines and taken steps to guard banks against control or acquisition by criminals, and though there were improvements, a number of countries still have to take similar measures for all categories of non-bank financial institutions. Canada and Iceland need to take urgent measures to bring themselves into full compliance with respect to various categories of non-bank financial institutions, and additional measures also need to be taken in the banking sector. In the United States, there is also a pressing need to finalise and implement the proposed regulations to significantly enhance anti-money laundering controls over many categories of non-bank financial institutions, particularly bureaux de change, money remitters, check cashers, issuers and sellers of money orders and travellers cheques, casinos and securities brokers and dealers. The United States is also urged to place additional money laundering controls on insurance companies.

(iii) Summary of performance

34. The overall conclusion from the 1997-1998 self-assessment exercise is that a large majority of members have reached an acceptable level of compliance with the 1996 forty Recommendations, and notable progress was made during the year by some members. However, as mentioned above, a number of members still need to take steps to widen their money laundering offence, or to implement a fuller range of anti-money laundering measures in the financial sector. It is important that these changes be brought in as soon as possible.

(iv) Gulf Cooperation Council

35. In May 1997, the GCC agreed to carry out, in conjunction with the FATF, an evaluation of the anti-money laundering measures that had been taken by its six member States - Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and the United Arab Emirates (U.A.E), and as a first step self-assessment questionnaires were sent in August 1997. However, due to partial and incomplete replies from some GCC members, the FATF is currently unable to determine the level of compliance with the forty Recommendations. It was therefore agreed that a high level mission will meet with the relevant officials in the Secretariat General of the GCC and the U.A.E. in order to obtain more information on the implementation of the forty Recommendations in the GCC member States and to discuss how to improve the implementation of effective anti-money laundering systems in the Gulf region.

B. MUTUAL EVALUATIONS

(i) Objective and process of the second round of mutual evaluations

36. The second and major element for monitoring the implementation of the FATF Recommendations is the mutual evaluation process. Each member is examined in turn by the FATF on the basis of a report drawn up by a team of three or four selected experts drawn from the legal, financial and law enforcement fields of other members. The purpose of this exercise is to provide a comprehensive and objective assessment of the extent to which the country in question has moved forward in implementing effective measures to counter money laundering and to highlight areas in which further progress may still be required.

(ii) Summaries of reports

Canada

37. The largest source of criminal proceeds laundered in Canada comes from narcotics trafficking (approximately 70%), however numerous other types of profitable criminal activities exist such as tobacco and alcohol smuggling, illegal gambling, smuggling and white collar crimes such as fraud, counterfeiting and computer/ telecommunications crimes. Money laundering mechanisms in Canada involve the use of a wide range of techniques and methods in many different parts of the financial and non-financial sectors. Money laundering has occurred through deposit taking institutions, currency exchanges, the securities industry, real estate, incorporation and operation of shell companies, dealings in gold and precious metals, the insurance industry, gambling facilities (lotteries and casinos), automobile and boat dealerships, professionals (lawyers and accountants), and cross border movement of illicit proceeds. The pattern of money laundering has changed in recent years, with a movement from bank to near-banks/currency exchanges by money launderers, whilst an important external factor is the location of Canada next to the United States.

38. Canada's money laundering control scheme is based on a strong penal response through the prosecution of money launderers and the confiscation of the proceeds of crime. There have been a limited number of significant direct changes made to the anti-money laundering regime since the first evaluation, though some amendments have indirectly strengthened the regime. The most significant legislative changes were measures contained in organised crime legislation enacted in May 1997 which widen the money laundering offences, and introduce a power to freeze and confiscate the instrumentalities of organised crime offences. Other amendments improved several aspects of the forfeiture legislation, and give the police extra powers with respect to "sting" and controlled delivery operations. Another significant measure was the creation of 13 new Integrated Proceeds of Crime (IPOC) units to combat money laundering and organised crime. In the financial sector, the Office of the Superintendent of Financial Institutions published new anti-money laundering guidelines in 1996.

39. The penal legislation appears to be working well, though the extension of the more serious money laundering offence to all serious crimes, together with some minor changes to the forfeiture legislation, would make the system even more effective. Canada must be strongly commended for the willingness to apply significant resources into tackling the problem of proceeds of crime - a measure which will undoubtedly result in many more prosecutions and forfeited proceeds. Considerable efforts have also been made in relation to international co-operation and the only major weakness is the inability to effectively and efficiently respond to requests for assistance in relation to restraint and forfeiture. The use of domestic money laundering proceedings to seize, restrain and forfeit the proceeds of offences committed in other countries is recognised as sometimes ineffective, and legislation to allow Canada to enforce foreign forfeiture requests directly should be introduced.

40. In the law enforcement area the suspicious transaction reporting regime does not appear to be working effectively, and there needs to be an urgent resolution of the internal review process which has been continuing since 1993. The examiners consider that the most essential improvements are to create a new regime, consistent with the Charter of Rights and Freedoms, which makes reporting mandatory, and to create a new financial intelligence unit which would deal with the collection, management, analysis and dissemination of suspicious transaction reports and other relevant intelligence data. Other measures which would assist are detailed guidance on what transactions may be suspicious, a penal or administrative sanction for failing to report, and improved general and specific feedback. In addition, detailed proposals need to be created and taken forward for a system of cross border reporting and ancillary powers for Customs officers. The adoption of these measures, when combined with the new IPOC units, should lead to a much more effective system.

41. Changes are also required in the financial sector, where the mixture of federal, provincial and self regulation, the lack of uniformity and the combination of requirements laid down by law and also by guidelines, makes the system complex. The limited customer identification obligations in relation to corporations and beneficial owners of accounts is not in conformity with Recommendation 11, and additional measures should be enacted to remove this discrepancy. The legislation should also be extended to cover other types of non-bank financial institution such as money remitters and check cashers, as well as non-financial businesses such as casinos. The threat posed by professional facilitators of money laundering should also be examined. The regulations and systems for compliance review, internal controls, education and training for the different parts of the non-bank financial sector need to be more comprehensive and uniform, and there needs to be greater co-ordination and support by government agencies.

42. The Canadian anti-money laundering system as a whole is substantially in compliance with the almost all of the 1990 FATF forty Recommendations. In those areas where it has been proactive such as prosecutions, forfeiture, and general international assistance it has achieved considerable success. It now needs to expeditiously extend this proactive response, and resolve the deficiencies identified above. By doing so it will create a law enforcement and regulatory system which should combat money laundering most effectively.

Switzerland

43. Switzerland's central geographical location, its relative political, social and monetary stability, the current context of liberalisation and the professional secrecy that characterises the country's financial system are attractive to all investors, whether the origin of their funds is legal or illegal. In addition, advanced technology and a great diversity of institutions in the financial centre expose Switzerland to being used in international money laundering schemes. In this context, Switzerland is used primarily, but not exclusively, at the "layering" stage of the money laundering process.

44. There are three main facets to Swiss anti-laundering policy: a very broad definition of laundering offences involving assets derived from any crime; a system of self-regulation in the financial sector (banking and non-banking) accompanied by State monitoring; a "reporting right", which since 1994 has authorised financial intermediaries to convey their suspicions and which was replaced on 1 April 1998 with a "reporting obligation".

45. For some years, the Swiss authorities have been endeavouring to toughen the penal law in order to step up the fight against new forms of crime, particularly economic offences and organised crime. As a result, on 1 August 1990, Articles 305 *bis* and 305 *ter* of the Penal Code), on the offences of money laundering and lack of due vigilance in financial transactions respectively, entered into force. This arsenal of criminal law was supplemented on 1 August 1994 by a second round of measures against organised crime which strengthened powers of confiscation and authorised financial intermediaries to report suspicious transactions (CP: Article 305 *ter*, paragraph 2). In addition, the Federal Act of 7 October 1994

on the Central Offices of the Federal Criminal Police set up an organisation vital to improved prosecution of persons involved in organised crime.

46. In the financial sector, the Federal Banking Commission (CFB) issued a circular of 18 December 1991 to all licensed banks and auditing firms containing guidelines for preventing and combating money laundering. Concerning the obligation to identify, CFB circular 91/3 mirrors the Agreement on the Banks' Obligation of Diligence (CDB).

47. A Law on counter-laundering in the financial sector ("the Money Laundering Act", or LBA) was adopted by the Parliament on 10 October 1997. Under this legislation, all physical and legal persons active in the financial sector would be subject to special obligations of diligence (to ascertain the identity of customers and beneficial owners, to clarify certain transactions and to establish and keep certain documents). These persons must also take organisational measures to prevent money laundering. The LBA calls for the creation of a Money Laundering Control Authority responsible for monitoring the compliance of financial intermediaries with anti-laundering obligations. Intermediaries will also be required to file reports with the Money Laundering Reporting Office and to freeze suspicious assets if they have reason to suspect that money is being laundered. The Act entered into force on 1 April 1998.

48. Although the penal aspect of the Swiss system has been significantly improved, prevention for the non-banking sector should be in accord with FATF Recommendations with the entry into force of the LBA. In order to comply with the new Recommendation 15, the LBA introduces a reporting obligation. However, as this obligation only exists when business relations are established, compliance with this Recommendation would not be fully met if a restrictive interpretation should be made of it. Before the entry into force of the LBA, Switzerland did not comply with Recommendation 17. The LBA introduces a prohibition to inform the customer during the period of freezing established by Article 10, this prohibition will be generally relayed by a decision of the penal cantonal authorities which are competent to decide during the entire investigation. In general, the current proposals to remedy shortcomings pointed out in the first evaluation are significant, but their application is too slow.

49. Switzerland is nevertheless to be congratulated on the LBA definition of professionals subject to its anti-money laundering obligations, which spans the entire financial sector, including financial activities carried on professionally by lawyers. However, assessment of compliance with the new obligations of vigilance by non-banking professions will have to await implementation of the LBA, even though Article 305 ter already imposed an obligation of vigilance in financial transactions.

50. At this stage, it is impossible to assess the effectiveness of the system for reporting suspicions, given the lack of appropriate statistics. The LBA will contribute to an appreciable improvement in this system with the introduction of an obligation to declare suspicions of which the incomplete nature of the obligation, due to the fact that the latter arises only at the establishment of business relations, should be noted as well as the restrictive interpretation of it by financial institutions. The Swiss financial sector rather tends to protect itself against money launderers by being scrupulous in entering into business relations and hence gives preference to refusal to enter business relations with suspect customers. Although the LBA is intended to change this state of affairs, the role of the supervisory authorities, including the CFB, the Money Laundering Control Authority as well as the Reporting Office in particular, will be vital in convincing the entire financial sector of the need actively to participate in preventing money laundering. As regards the non-banking sector the Money Laundering Control Authority, as empowered by the LBA, has to act effectively, particularly in sectors at present not covered such as money changers.

51. In legal terms, the provisions on seizure and confiscation and on offences under the Criminal Code which largely reflect Recommendation 4, are to be welcomed. The absence of real prosecution powers at federal level is an obstacle to effective prosecution. Giving power to the public prosecutor of the Confederation as is at present being considered, is a first step, but does not seem to go far enough.

Real progress would be made by giving the Confederation -- as proposed in the draft overall revision of the Constitution -- power to legislate on criminal procedure.

Netherlands

52. The major sources of illegal proceeds in the Netherlands are believed to be fraud and drug trafficking. The patterns of money-laundering have changed as a result of the enactment of the anti-money laundering legislation and the growing awareness by financial and non-financial institutions of the phenomenon of money-laundering. The carriage of cash across borders with neighbouring countries has increased, as has the use of money transfer businesses. Whilst the number of bureaux de change has decreased significantly, other areas of money laundering concern remain. One issue is the inflow of money from some countries of the former Soviet Union and Eastern Europe, the origin of which cannot be checked, whilst another is the operation by representative offices of certain foreign banks of "collection accounts" to send money on behalf of their nationals back to the country of origin.

53. The principal aims of the Dutch anti-money laundering system are to protect and maintain the integrity of the financial system, and to detect and prosecute activities concerning money laundering. The heart of the system is the mandatory reporting of unusual transactions on the basis of objective and subjective indicators. The investigation and prosecution of financial crime is a priority for the government, as is the exchange of information and co-operation, both nationally and internationally. Since the first evaluation, some of the more significant changes have been the enactment of the Identification (Financial Services) Act (the Identification Act) and the Disclosure of Unusual Transactions Act (the Disclosure Act); the licensing and supervision of bureaux de change; and the expansion of the reporting obligation to credit card companies, bureaux de change and casinos.

54. The anti-money laundering system in the Netherlands is comprehensive and progressive, and is subject to a continuous process of review and improvement. The government has responded positively to many of the suggestions for improvement in the first mutual evaluation report, and the result is a system which meets, and in many areas goes beyond, the forty Recommendations. The solid legislative basis has been complemented by an active system of supervision, co-operation, education and training in the financial sector. All relevant parts of government, supervisors and the private sector are involved in the fight against money laundering, and the general approach is one of professionalism and commitment by all agencies concerned. Despite this, there are some areas for improvement.

55. The penal offence has a broad scope as it covers all predicate offences, and the mens rea extends to reasonable suspicion. The legislation will be strengthened though if money laundering is made an offence separate from receiving, and the position regarding the elements that need to be proved in relation to foreign predicate offences is clarified. The confiscation system also appears to have a solid legal foundation, though it is unclear from the statistics how well the system is working. However, it is most important that a solution be quickly found to the problems caused in the "Bucro" case, which prevents the seizure and confiscation of assets held in the name of a third party legal entities, even if they are derived from criminal activity. These issues are currently being examined.

56. Measures taken in the financial sector regarding such matters as customer identification and the supervision of institutions such as bureaux de change provide a model that could be followed in other countries. Through the government committees and working groups, the major financial institutions and their associations have shown a high level of commitment, and these result in strong interaction between the government and the private sector, and a constant examination and review of potential sources of weakness. The system of reporting unusual transactions to the financial intelligence unit (MOT), which then reports the suspicious transactions to law enforcement appears to be working effectively in most respects. However there are some potential risks which need to be addressed - in particular there needs to be an increased emphasis on non-cash money laundering and continued attention needs to be paid to the lack of reports from the securities and insurance sectors. The extension of the reporting system to

professionals such as lawyers, notaries and accountants should be seriously examined, and minor refinements could be made in relation to feedback and the exemptions available to reporting institutions.

57. The Netherlands is party to a wide range of international instruments which allow it to provide and make requests for all types of assistance. This would be further strengthened if the requirement of a treaty or agreement was removed. Administrative co-operation between MOT and other similar bodies needs to be further improved through entering more agreements (memoranda of understanding) for the exchange of information at an international level.

58. Overall, the legal and administrative structure for the anti-money laundering system appears to be an effective one, with strong efforts made to promote and co-ordinate anti-money laundering activities in many parts of government and the financial sector. The results in several areas are not apparent because of the lack of statistics, and this makes it difficult to judge the true effectiveness of the system. However the basic structure is a strong one, and combined with the firm commitment at all levels and the resolution of the deficiencies identified above, this will result in a very strong anti-money laundering system.

Germany

59. The major sources of illegal proceeds in Germany are believed to be from drug trafficking, property offences, and the smuggling of alcohol and cigarettes. Other crimes which generate significant profits for organised crime include subsidy fraud against the European Union, counterfeiting, illegal arms sales, extortion, prostitution and investment fraud. The amount of international criminal activity and the profits generated from crime have increased considerably since the last evaluation. It appears that criminals have increasingly resorted to areas where no safeguards have been taken or where regulatory bodies do or did not exist, such as bureaux de change, money remittance and cross border transportation of cash etc. A large amount of money is transferred to Germany from Eastern Europe and the C.I.S states, often through cash importation, but the source of that money is unknown in most cases. Other money laundering techniques and trends which have been observed include the purchase of luxury goods, and the increasing use of so-called collective accounts of foreign credit institutions or the representative offices of such.

60. A twofold approach has been adopted to counter money laundering. Measures within the financial sector are intended to have a preventive effect, while criminal provisions such as the money laundering offence and confiscation laws will punish the offender for the criminal activity as well as depriving him of any illegal benefits. Since the first evaluation, the most significant changes have been the extension of the list of predicate offences for money laundering to include less serious offences committed on a commercial and gang basis, and an amendment to the Banking Act which made bureaux de change, money transmitter agencies, brokers, and other companies offering financial services subject to banking supervision. Legislation is also pending which will, inter alia, extend the list of predicate offences for money laundering and criminalise money laundering activity by the predicate offender; facilitate the provisional seizure of suspicious amounts of money; raise the threshold for customer identification in occasional transactions over DM 30,000 (US$ 16,700); and increase the involvement of the tax authorities in combating money laundering.

61. In most respects the legal framework for the German anti-money laundering system is comprehensive and strong, and in compliance with the forty Recommendations. Certain deficiencies were identified by the German authorities and this has led to amendments which have either been brought into force or are proposed, and all these measures will substantially strengthen the system. The penal legislation in relation to money laundering and the seizure and forfeiture of criminal proceeds is basically sound and comprehensive, and though the number of convictions obtained for money laundering is disappointing, there is a significant commitment to pursuing this offence. The offence will be strengthened by making the predicate offender liable for laundering his own proceeds. The confiscation legislation provides for a wide

range of measures, but the available statistics indicate that the amount of money confiscated is quite small, and this suggests that there is a significant problem of implementation. The amendments to deal with the claims of victims and the issue of "urgent suspicion" will help to make the system more effective, but consideration should also be given as to how the concept of extended forfeiture can be used more effectively within the limits of court decisions. There would also be benefit if the concept of units dedicated to the proceeds of crime and money laundering issues were introduced.

62. Law enforcement powers and resources in relation to money laundering are sufficient, and bilateral co-ordination and co-operation appears to work reasonably well. However, as stated in the first mutual evaluation report, there is an urgent need to implement a more efficient and effective structure to centralise the STR reporting procedure. The establishment of a central reception point or financial intelligence unit would be the most effective option, and an extension of the joint financial investigation group concept which is currently operating may be a solution. If this is not realistic within the political context, then a minimum requirement must be the creation of a central data-base accessible to all law enforcement agencies. Given that steps have already been taken by the ZKA to develop a system, this project should be completed and implemented as soon as possible, and should be supplemented by ensuring that all relevant law enforcement agencies have access to the databases maintained by the Länder.

63. The results of the suspicious transaction reporting system show that the number of cases generated from STRs has remained fairly static and that the vast majority of reports come from banks, with insurance companies also contributing a significant number. The system could be improved through efforts to resolve weaknesses such as the comparatively modest number of reports, the over-emphasis on cash transactions, and the lack of reports from outside the banking and insurance sectors. The quality of STR reporting would also improve if there was increased feedback to financial institutions.

64. Measures in the financial sector are characterised by extensive obligations and a comprehensive framework in certain parts of the financial system, but with distinct areas of weakness and inconsistency in other parts. The extensive and thorough guidelines, the innovative training and education process, active supervision of banks and insurance companies' anti-money laundering compliance, and the commitment of such institutions are most commendable and provide an example for other jurisdictions. However, the extensive obligations in the Money Laundering Act (the Act) impose some unnecessary burdens. The increase of the threshold for customer identification in relation to large cash transactions to DM 30,000 is helpful, but should be accompanied by measures to eliminate the requirements to identify customers making cash withdrawals. The use of s.154 of the Fiscal Code for customer identification when opening an account creates several weaknesses, and the legislation would be strengthened if this obligation was set out in the Act. One matter of concern is the lack of specific sanctions for: (a) failing to comply with the obligation under s.154, (b) breach of the FBSO and FISO guidelines, and (c) non-compliance with the requirements laid down in ss.6, 11 & 14 of the Act (suspicious transaction identification, STRs and safeguards). All these requirements should be made subject to sanctions such as administrative proceedings and a possible fine. Stricter supervision of NBFI, and particularly casinos, which are supervised by Land authorities is needed, though the situation should improve with the transfer of supervisory responsibilities to the FBSO.

65. The framework for mutual legal assistance is fundamentally very sound, and with a few minor modifications would be an exemplary system. Co-operation at an administrative level is made more complex by the federal system, fragmented nature of the law enforcement response to money laundering, and the lack of any centralised database for all STR. Co-operation with police and Customs authorities in other countries appears to be working well, but the inability to directly exchange information with so-called administrative FIUs is a weakness. Consideration should be given to entering into agreements or understandings which would give law enforcement agencies which have access to all STR the ability to co-operate directly with such bodies, provided they observe similar obligations of secrecy as exist in Germany.

Italy

66. The main sources of illegal proceeds in Italy are derived from fraud, corruption, international drug trafficking, extortion as well as organised crime. The structure of the organised crime, based on associations (clans, families) which control drug trafficking, smuggling, etc., means that a large part of the illicit proceeds is channelled into domestic financial and/or commercial circuits. This implies that these organisations ("cosa nostra", "ndrangheta", "camorra", "sacra corona unita"), exercise a firm control on the territory where they are located as well as on local business activities. In some recent cases, it has been noticed that organised crime (especially "cosa nostra") has been engaging in increasingly sophisticated money laundering activities, with the help of highly skilled external consultants or independent organisations. The internationalisation of the Italian criminal organisations means that funds are transferred to less regulated countries, thus reducing the chances of being detected. However, this does not rule out an interest by organised crime in local investments including financial ones.

67. Law no. 197 of July 1991 instituted measures to curtail the use of cash and bearer instruments in financial transactions and to prevent the criminal use of the financial system for money laundering purposes. Its key provision is the prohibition of transfers of cash and bearer instruments in amounts greater than L 20 million (about US$ 12,000), except when such transfers are carried out by means of authorised intermediaries which are required to identify customers and register transactions. Other main provisions deal with the reporting of suspicious transactions and the monitoring of financial intermediaries' compliance with the law.

68. The provisions establishing money laundering as an offence were amended in 1993, to widen the original scope of predicate offences to "all intentional criminal offences". Recently, a Legislative Decree (no. 153/97 of 26 May 1997) amended the laws in force by three important measures: firstly, so as to enhance compliance with the obligation to report suspicious transactions, ensuring that the identity of any person reporting such information be kept absolutely confidential; secondly, the centralisation of the reporting of suspicious transactions to the Ufficio Italiano dei Cambi (UIC) a public institution chaired by the Governor of the Bank of Italy and thirdly, operational links were established for money laundering between financial, investigative and judicial authorities as far as organised crime is concerned. In the near future, the Government is planning to extend the scope of specific categories of non-financial businesses to anti-money laundering measures. Moreover, a review of the anti-money laundering legislation has already started in order to strengthen it by introducing new provisions or eliminating redundancies.

69. The Italian Government has made significant progress in combating money laundering since its last mutual evaluation in 1993. The changes it has effected are for the most part quite recent and derive from the latest anti-money laundering legislation, Legislative Decree no. 153/97. The most significant change provided for in the Decree is the designation of a single recipient for suspicious transaction reports, namely, the Ufficio Italiano dei Cambi, thus in effect becoming Italy's Financial Intelligence Unit (FIU). Previously, reports from financial institutions were reported to the local police.

70. Law enforcement efforts also focused on the financial aspects of organised crime have aided Italy in achieving a degree of sophistication which the new reporting system should further strengthen. This observation also applies for the legal measures because Italian anti-money laundering legislation has been developed taking also into account the need for combating organised crime. The scope of the Italian legislation is now very wide and the legislative base both for confiscation and money laundering offence is sound domestically and also, following new legislation in 1993, internationally. However, extending the anti-money laundering provisions to cover corporate liability would improve the system. In addition, the decision of the Italian Government to consolidate all the various laws into a more accessible form would also assist in training and in general use.

71. Measures in the financial sector are characterised by extensive obligations and a comprehensive framework. However, the implementation of these measures by non-bank financial institutions not subject to

prudential supervision presents some weaknesses in comparison with the very innovative internal procedures and training programmes carried out by the banks and other financial institutions regulated in a similar manner. Further supervision, guidance and training is therefore needed for non-bank financial institutions not subject to prudential supervision in order to improve their participation in the reporting of suspicious transactions. It is also quite clear that the envisaged extension of the anti-money laundering provisions to individuals or companies carrying out activities which are particularly liable to being used for money laundering purposes will considerably strengthen the Italian anti-money laundering system. For all these reasons, it is hoped that the new legislation will be enacted soon.

72. Overall, the legal and administrative framework of the Italian anti-money laundering system appears to be fundamentally sound, characterised by commendable efforts to improve the major deficiencies identified in the first mutual evaluation. In addition, the strong and firm commitment at political and high civil servant level to combat money laundering is evident. The establishment of an Interagency Policy Commission, comprising all the ministries and agencies concerned, if properly implemented, should be able to exercise strong and effective overshight. The lack of available statistics in certain areas and the weaknesses related to the previous system for reporting suspicious transactions, make it difficult to judge the true effectiveness of the system. However, it is expected that the full implementation of Decree Law no. 153/97 will result in an effective anti-money laundering system.

Norway

73. Drug trafficking together with smuggling and illegal trade in goods subject to high rates of taxation - such as alcohol and tobacco - remain the most significant sources of illegal income. Various types of economic crime, such as national and international investment fraud, invoicing frauds, tax and VAT fraud, and bankruptcy fraud against creditors also appear to be generating a large amount of illegal proceeds and the problem is increasing. As regards money laundering trends, there are indications of increasing cash movements across the borders, and criminals residing in Norway are depositing cash into banks in foreign countries, before transferring the money back to Norway as loans. Like many other countries, Norway has a problem with funds related to persons or companies from the former Eastern Bloc Countries, due to the difficulty of clarifying whether the funds are legal or not. Non-financial businesses or professions are also regularly used in the various stages of the money laundering process.

74. Norwegian control policy on money laundering is based on international initiatives, and an old preventive principle of Norwegian law that crime shall not pay. Measures that are considered important in meeting Norway's anti-money laundering objectives are: (a) increasing the risk of detection and prosecution; (b) improving the tracing and confiscating of illegal proceeds; and (c) facilitating international co-operation. The most significant changes since 1993 have been amendments which entered into force on 1 January 1997, and which extended the predicate offences for suspicious transactions reporting to offences with a sentence greater than six months; extended the preventive measures to the Central Bank, Postbank and more non bank financial institutions; and made available to ØKOKRIM information gathered pursuant to the system of reporting of foreign exchange transactions and the notifications of import and export of cash. The 1988 Vienna Convention and the 1990 Council of Europe Convention on Money Laundering were both ratified in 1994.

75. The money laundering offence, which covers both money laundering and general receiving offences, is very broadly worded and provides a firm basis for prosecution. However, consideration could be given to a specific money laundering offence, which is not part of the general receiving offence. The present confiscation legislation provides a basic structure, and if the recommendations of the Commission on Confiscation are fully implemented, the system should be a strong and effective one. The proposals to reverse of the burden of proof, extend provisions so as to allow illegal assets to be recovered from third parties and extra measures relating to provisional measures and enforcement are all to be commended. Further administrative resourcing measures are required, as are training initiatives, and staff dedicated to the issue of proceeds of crime in the police districts. In relation to international co-operation, Norway is party to

a wide range of international instruments which allow it to provide assistance. This would be further strengthened if operational co-operation between ØKOKRIM and similar foreign bodies were improved through an easing of the secrecy requirements and the entering of more memoranda of understanding to exchange information.

76. The efforts of ØKOKRIM have enhanced the suspicious transaction reporting system, but further changes are required to make the operational and investigative aspects of law enforcement more effective. An increase in resources allocated to ØKOKRIM will allow it to effectively fill the central role that has been allocated to it. The Norwegian police appear to have a more limited knowledge of anti-money laundering procedures and need comprehensive training on the issue of money laundering, so that they can successfully investigate and prosecute such cases. Customs should be taking an increased co-operative role in relation to investigations through an enhanced input in relation to cross-border transactions and more effective measures to combat smuggling and related money laundering. Implementation of the recommendations of the Commission on Investigative Methods should lead to an improved legal framework in relation to new investigative techniques and these measures should be used more frequently in practice.

77. The basic structure of the anti-money laundering measures for the financial sector as set out in the Financial Services Act and Regulations is sound. All the basic elements are there, and the amendments of 1 January 1997 helped to considerably strengthen the legislation. The larger banks are fully supportive of the anti-money laundering initiatives, and are co-ordinate with government authorities, though they would like to increase the degree of contact and exchange of information. However, some further measures would enhance the system.

78. Insurance companies need to be expressly referred to in the Act. A careful and comprehensive study should be made of the categories of non-financial businesses or professions which should be brought under the Act and Regulations. The STR provisions are strong ones, and the system of feedback is excellent, but there is a need to encourage greater and more widespread reporting through increased training and education. The more active involvement of Kredittilsynet in a number of these issues will also improve the implementation of anti-money laundering measures throughout the financial sector.

79. In general, the anti-money laundering system in Norway is solidly based and meets almost all the requirements of the FATF forty Recommendations, and in certain areas the anti-money laundering legislation and system has the potential to be very effective. The positive response to many suggestions of the 1993 FATF report has led to an enhancement of the system, and this has been complemented by the strong role provided by ØKOKRIM in seeking to make the anti-money laundering system effective. Increased expertise and support from other parts of government, together with implementation of the further changes referred to above, will make the system a fully effective and efficient one.

Japan

80. It may be assumed that substantial volumes of criminal gains are laundered in Japan although these acts are not all criminalised. The principal sources of these laundered gains are probably drug crime and fund-raising offences (illicit gaming, extortion, illicit betting, as well as violent crime and property-related offences of all kinds) committed by criminal organisations, e.g. the Boryokudans (Japanese mafia). The latter commit a variety of crimes in pursuit of a vast amount of funds, sometimes abusing legitimate corporate activities. The laundering in Japan, whether each act is criminalised as a money laundering offence or not, of an appreciable volume of gains from foreign crime cannot be ruled out either.

81. Until recently, the Japanese Government had focused its attention on combating drug money laundering. The most important piece of legislation in this respect is the Anti-Drug Special Law (ADSL) which was adopted by the Diet on 2 October 1991, and became effective on 1 July 1992. The ADSL penalises money laundering by prescribing the offences of concealment and receipt of illicit proceeds derived from drug offences. It also enlarges the system of confiscation (including value-based confiscation) and introduces freezing of illicit proceeds, as well as the suspicious transactions reporting system of which the only target is illicit proceeds from drug offences. In accordance with the FATF forty Recommendations and ADSL, financial supervisory authorities have put financial institutions under an obligation to identify their customers on the occasion of certain transactions, and to make suspicious transaction reports (STRs)to their respective supervisory authorities if they suspect that properties taken might be proceeds deriving from drug crimes.

82. However, the Japanese government intends to step up action against money laundering and to reinforce the legal measures at its disposal, as follows:

- the catalogue of predicate offences for money laundering is to be substantially enlarged so as to include all criminal offences of fundamental significance, which will make it easier for financial institutions to report suspicious transactions and the provisions for freezing and confiscating assets are to be extended; and
- a financial intelligence unit (FIU) is to be established in the Financial Supervisory Agency, in conjunction with a new STR system, in which this FIU evaluates the suspicious transaction reports and pass them on through official channels to the law enforcement agencies.

83. To this end the Japanese Government has submitted to the Diet a new Anti-Organised Crime Law (hereafter referred to as "AOCL"), which would provide for the above-mentioned anti-money laundering measures. Upon the enactment of AOCL, strict enforcement of the latter and ADSL would be an effective way to further enhance the combat against money laundering.

84. The Japanese government did not begin until 1996 to remedy some of the defects identified in the first mutual evaluation (the limitation of predicate offences for money laundering to drug crimes, the lack of guidelines for STRs by financial institutions, the lack of a central agency for the receipt of STRs and the limited access of investigatory authorities to these reports). Thus guidelines on STRs were issued in July 1996 and the police are now notified of STRs without an express request. To date, however, this has not brought any decisive improvement in combating money laundering. The low number of STRs shows that investigators are still deprived of the information from financial institutions that is very useful for initiating and assisting investigations. Effective improvements in action to counter money laundering may be expected should the draft of the AOCL come into effect. This applies in particular to the extension of the catalogue of predicate offences and the installation of an FIU at the Financial Supervisory Agency.

85. Pending the adoption of the AOCL, the current legal anti-money laundering provisions of Japan can be assessed as virtually ineffective because of the limited scope of the money laundering predicates

and the direct tracing requirements placed on law enforcement. In addition, these provisions have seldom been used in the fight against money laundering. Compared with other leading international financial centres, the low level of STRs in Japan demonstrates obvious weaknesses in the anti-money laundering system. While the uniqueness of the Japanese economy may contribute to a lower level of STR than western economies, it is difficult to comprehend why an economy of Japan's size and its drug problem should not have led to a more reasonable level of disclosures.

86. While the police appeared to be highly motivated towards money laundering investigations, they do lack valuable tools to assist them in their efforts. In addition, law enforcement and prosecutors must become more proactive in their approaches to detecting and prosecution money laundering. Additional measures, such as setting up independent anti-money laundering units in the investigatory authorities, close co-operation among law enforcement authorities, the Financial Supervisory Agency and its FIU, and use of special investigation methods including electronic surveillance which is incorporated in the AOCL, would greatly assist in the fight against money laundering.

87. The Japanese financial institutions have shown some appreciation of the money laundering problem in Japan and the vulnerability of the financial system. Nevertheless, in practice, there are doubts as to how well their appreciation of the money laundering problem is translated into anti-money laundering action, and whether front-line staff are properly and adequately trained and encouraged to identify and report suspicious transactions. In addition, more industry-specific and detailed guidelines to money changers, securities dealers, insurers and other financial institutions, including those drawn from international typology experience should help to improve the system.

88. As a whole, the current Japanese anti-money laundering system is not effective in practice. In this context, Japan's intention to step up action against money laundering is more than welcome. However, it will not be possible to assess the effectiveness of the future system until it has been in place for several years.

Greece

89. Drug trafficking remains the major concern for Greek authorities, and it is estimated that it accounts for a large part, probably in excess of 50%, of the proceeds of all Greek criminality. Other serious crimes of concern include smuggling, particularly in the antiquities trade, usury, major fraud and other crimes connected with organised crime, as well as other economic crimes such as tax evasion. There is a lack of strong evidence clearly identifying money-laundering trends, however cash placement still seems to be the main problem. The influx of refugees and so-called "economic migrants" from neighbouring Balkan countries has led to increased crime, whilst the activities of some émigrés from the former Soviet Union have been the subject of suspicious transaction reports. There has also been an increase in the physical cross-border transportation of cash, especially foreign banknotes, with such money being deposited temporarily in Greece and then transferred abroad.

90. Greece has attached a high priority to the development of its anti-money laundering framework and policies, and since the first mutual evaluation has worked to build up a satisfactory legislative framework, an effective organisational structure, and an adequate mechanism to ensure compliance and enforcement. The most significant changes were the enactment of : (a) Law 2331 of 24 August 1995 which established the money laundering offence, dealt with confiscation and provisional measures, and introduced provisions to enhance co-operation between law enforcement authorities and financial institutions and suspicious transaction reporting (STR). It also laid the groundwork for the establishment of a central authority (the "Competent Committee"), the functioning of which was completed by Presidential Decree 401/10 December 1996; and (b) the creation of the Financial and Economic Crimes Office with powers to investigate economic crimes, including money laundering.

91. The money laundering offence extends to 20 predicate offences, and makes it an offence if the defendant knew that the property was derived from criminal activity. This could be strengthened if the offence was extended to at least all serious offences, and the mental element of the offence widened to at least gross negligence, though perhaps with less severe penalties than provided for the intentional offence. The provisions relating to confiscation and provisional measures are generally adequate, though some provisions such as article 3(1) Law 2331, which reverses the burden of proof, have the potential to be very effective. However the provisions to confiscate and seize property from non bona-fide third party owners could be enhanced, and it is a matter of concern that no confiscations and few seizures have taken place. This problem should be considered and rectifying measures taken where needed. As regards international co-operation, the most important step is for Greece to ratify and fully implement the 1990 Council of Europe Convention as soon as possible.

92. The creation of the Competent Committee as the financial intelligence unit for Greece has set up a unique structure for the receipt, investigation and analysis of STR. The Committee has a wide range of experience available in its membership, and possesses extensive powers, but because it is a part-time body it will need to carefully monitor its workload and the administrative arrangements with other Greek authorities as they develop. The suspicious transaction reporting system has only been in full operation for 18 months and it is too early to fully assess how effective the system is, and though the results so far are modest, they appear to be progressing the right direction. Some further measures or issues which should be considered include extending the obligation to report to all criminal offences, supplementing the guidance and education which is provided in relation to reporting, whether the time period in which the Committee must consider reports is adequate, and enhancing general and specific feedback.

93. The basic structure of the anti-money laundering measures for the financial sector as set out in Law 2331 and ancillary provisions is sound, though the system of laws, guidelines, education and training appears to have been much more effective in the banking sector than in the non-bank financial sector. The Hellenic Banking Association and the Bank of Greece, and more recently the Competent Committee, have taken a strong and active role in promoting anti-money laundering measures and must be commended for this. Although there also appears to be a preparedness to adopt anti-money laundering measures by non-bank financial institutions, the progress has been considerably slower. The supervisory authorities, and particularly the supervisor for the insurance sector, need to take a more active role in checking the implementation of effective anti-money laundering measures in the non-bank financial sector, through a program of increased supervision, guidance and training.

94. Since the first mutual evaluation in 1994 Greece has made considerable advances and the platform that has been built will provide a sound springboard for the future. The Greek anti-money laundering system now meets most of the 40 Recommendations, and though lack of statistics and data, as well as the fact that major legislative and regulatory measures are quite recent, made it difficult to accurately assess the effectiveness of the system, it appears to be working reasonably well in several areas. Despite this, the results achieved so far, though moving in the right direction, are modest, and Greece will need to continue to monitor the system and implement the necessary changes to make the system more effective.

C. APPLICATION OF THE FATF POLICY FOR NON-COMPLYING MEMBERS

(i) Principles

95. Being aware that it could not expect others to do what certain of its members fail to do, FATF defined in 1996, a policy for dealing with its members which are not in compliance with the initial forty Recommendations. The measures contained in this policy represent a graduated approach aimed at enhancing peer pressure.

(ii) Steps applied in 1997-1998

Austria

96. In accordance with the request made at the June 1997 FATF meeting, Austria reported back to the FATF in February 1998 on the anti-money laundering measures it had taken between June 1997 and February 1998, and the plan of action that it proposed to remove the problems identified in the report. Austria advised that it had:

- amended the common note of interpretation so as to require identification of trustors by lawyers, notaries and certified public accountants;
- acted to clarify other identification requirements;
- created guidelines concerning the protection of employees of credit and financial institutions which act as witnesses;
- set up procedures to obtain extra statistics; and
- published a draft Bill regarding the removal of the monetary threshold of ATS 100,000 in Art 165 Penal Code.

97. However, Austria also advised that the Austrian government had not altered its position in relation to anonymous passbook for Austrian residents. In consequence of this failure, the President wrote a letter to the Austrian government indicating the concern of the FATF regarding the lack of progress in removing the anonymous passbooks. Due to the failure of the Austria to indicate that it would be taking positive steps to remove the passbooks, it was decided to pursue the measures in the FATF policy for non-complying members, i.e. to send a high level mission to Vienna in order to reinforce this expression of concern.

Canada

98. It was suggested during the discussion of the second Canadian mutual evaluation report in September 1997 that Canada provide a progress report, in view of serious concerns over its failure to comply, or to comply fully, with a number of the forty Recommendations. Canada provided a progress report at the June 1998 Plenary meeting and advised that:

- The Department of the Solicitor General had issued a public consultation paper which sets out proposals for :

  a) a mandatory suspicious transaction reporting (STR) system, which would be based on sets of indicators;
  b) offences for failing to file a report and filing a false report, as well as a "tipping-off" offence;
  c) protection from criminal and civil liability for any person or body which makes a report;
  d) the establishment of a federal authority as a new financial intelligence unit (FIU) which would be at arms-length from law enforcement, and which would receive all STR, as well as reports on cross-border transactions, and information from foreign FIU;

e) a cross border reporting system for currency and monetary instruments greater than C$ 10,000, as well as powers to seize as forfeited if no declaration is made. An administrative process for remission of penalty might also be included.

- the Solicitor General has indicated that following the consultation period, Canada intends to table legislation as soon as possible, and probably during autumn 1998;
- Canada was considering signing the 1990 Council of Europe Convention, and will consider in the future the question of amending its legislation to allow enforcement of foreign confiscation orders. However no timeframe has been set for these measures;
- in relation to customer identification, including beneficial ownership, Canada is reviewing the existing regulations and practices with a view to issuing fuller and more comprehensive draft regulations for public comment in autumn 1998, which could come into force in spring 1999;
- it will review the existing coverage of its anti-money laundering regulations with a view to expanding coverage to further categories of non-bank financial institutions such as check cashers, money remitters and postal money order business;
- it will review existing guidelines on matters such as customer identification, record keeping, internal controls and Recommendation 21, with a view to closing any gaps. The federal guidelines will be reviewed initially and revised as appropriate for all federally regulated financial institutions. Furthermore, the federal government will be working with provincial governments and regulators regarding their role in furthering compliance with the FATF Recommendations through the provision of appropriate guidance to provincially regulated financial institutions. Additional measures will be taken with respect to sectors which are not subject to supervision. It was indicated that Canada hopes to achieve some results by spring 1999, although noting that any initiatives are likely to be developed and implemented over the longer term.

Canada offered to provide a further report to the Plenary at the FATF meeting in February 1999.

III. REVIEWING MONEY LAUNDERING METHODS AND COUNTER-MEASURES

99. The FATF conducted a further survey of money laundering methods and countermeasures which provides a global overview of trends and techniques. In this context, the issues of money laundering through new payments technologies (smart cards, banking through Internet), and the non-financial businesses and remittance companies were addressed. Two other areas of work were the issues of how to improve the appropriate level of feedback which should be provided to reporting financial institutions, and the continuation of work on estimating the magnitude of money laundering. Finally, the FATF convened a second Forum with representatives of the world's financial sector institutions.

A. 1997-1998 SURVEY OF MONEY LAUNDERING TRENDS AND TECHNIQUES

100. The FATF typologies exercises provide a forum for the exchange of information and intelligence on prevailing trends in money laundering and effective countermeasures, through an annual meeting of experts from member law enforcement agencies and regulatory authorities. The following paragraphs summarise briefly the conclusions of this year's survey.[7]

101. In addition to money laundering via non-financial professions and businesses, which was the main subject for the FATF-IX typology exercise, the experts also discussed issues relating to companies which specialise in international money transfers, and new technology payments. With regard to new

[7] The Report of FATF-IX on Typologies is at Annex C.

technology, much work has still to be done before all the related money laundering dangers have been clearly identified and before any possible specific counter-measures can be considered. However, even at present, the speed at which transactions are performed in this sector, admittedly an advance in itself, seems to pose grave threats to the adequacy of the traditional anti-money laundering methods as they relate to the systems of new payment technologies. With regard to companies specialising in international money transfers, consideration and action were both further advanced, judging from the scale of counter-measures already in place in many FATF member countries.

102. Among other typologies of interest, particular emphasis was placed on money laundering through the gold market. Although FATF has already devoted considerable attention to sectors such as insurance or money changing, the involvement of both in money laundering is still clearly on the increase. With regard to the bureaux de change sector, it is clear that further consideration must be given to the consequences of the conversion of European currencies into the Euro. Finally, the survey of money laundering trends in non-member countries again proved most instructive. Although progress is being made in implementing anti-money laundering measures outside the FATF membership, much still remains to be done to mobilise many countries which remain somewhat passive and complacent about the financial, economic, political and social dangers posed by money laundering.

103. The 1997-1998 typologies exercise was marked by a more targeted form of discussion than in previous exercises. Since the classic mechanisms for laundering are now well identified, the main challenge in the future will be to survey the emergence of new areas which are not yet fully mapped, such as electronic money and new-technology forms of payment, non-financial professions, the insurance sector and stock exchange dealers.

B. OTHER AREAS OF WORK

(i) Providing feedback to financial institutions

104. Following consideration of the range of general and specific feedback that was being provided in FATF members, and having regard to the importance of providing appropriate and timely feedback, it was decided that a set of guidelines indicating current best practice would be prepared. The guidelines recognise that ongoing law enforcement investigations should not be put at risk, that secrecy laws in some countries may prevent their financial intelligence unit from disclosing significant feedback, and that general privacy laws can also limit feedback. Therefore, the guidelines are not mandatory requirements, but are meant to provide assistance and guidance to financial intelligence units, law enforcement and other government bodies which are involved in the receipt, analysis and investigation of suspicious transaction reports, and in the provision of feedback to reporting institutions on those reports. The Guidelines[8] were discussed with representatives of the financial services sector at the Second FATF Financial Services Forum in June 1998.

105. Amongst the recommendations relating to general feedback are the following : (a) statistics be kept on the reports received and on the results obtained, together with appropriate breakdowns of that information; (b) the statistics on the reports received are cross referenced with results so as to identify areas where money laundering and other criminal activity are being successfully detected; (c) new money laundering methods or techniques, as well as trends in existing techniques are described and identified, and that institutions are advised of these trends and techniques; (d) that sanitised cases be made available to reporting institutions, and that each case could include a description of the fact, a summary of the result, a description of the inquiries made by the FIU if appropriate; and a description of the lessons to be learnt from the reporting and investigative procedures that were adopted in the case.

[8] See Annex E.

Consideration should also be given to providing other general information, such as an explanation on money laundering process, the legal obligations regarding reporting, the procedures and processes etc.

106. The guidelines also consider the methods by which such feedback can be provided, and these include annual reports, regular newsletters, videos, electronic information systems such as websites, electronic databases or message systems, meetings with institutions, conferences and workshops, and working or liaison groups. When deciding on the methods of general feedback to use, each country should take into account the views of the reporting institutions as to degree to which reporting of suspicious or unusual transactions should be made public knowledge.

107. Specific feedback is more difficult to provide than general feedback, for both legal and practical reasons. Practical concerns include not putting ongoing law enforcement investigations at risk and the issue of resource implications, while legal issues can involve secrecy laws relating to the financial intelligence unit or general privacy laws. Finally, there is a need to ensure the safety of the staff of institutions, and to protect them from being called as witnesses in court. Having regard to all these matters, it is recommended that whenever possible, the following specific feedback is provided:

- receipt of the report should be acknowledged by the FIU;
- if a report will be subject to a fuller investigation, the institution could be advised of the agency that will investigate the report, if this would not adversely affect the investigation; and
- if a case is closed or completed, whether because of a concluded prosecution, because the report was found to relate to a legitimate transaction or for other reasons, then the institution should receive information on that decision or result.

(ii) Estimating the magnitude of money laundering

108. During 1997-98 work continued on the study to estimate the magnitude of money laundering. An Ad Hoc group, chaired by the head of the United States delegation, has considered a number of studies that had been completed previously as well as some current ongoing studies that consider issues relating to estimating the volume of criminal proceeds. One important strand of the work is being principally carried out by the IMF, which is updating a previous study it made in 1996 on the "Adjusted Demand for Money Model". This model estimates the impact of money laundering associated with crime on the demand for currency and money balances in the banking system, and concludes that it can have a significant impact.

109. The major part of the work of the group has focussed on obtaining agreement for a sound but practical methodology for using microeconomic data and techniques to estimate the amount of criminal proceeds available in relation to a range of serious profit generating crimes, and the amount of such proceeds available for money laundering. A meeting of experts from members and international organisations sponsored by the Chair of the Ad Hoc Group on 28-29 May 1998, considered the alternative methods and data sources that are available for making the necessary calculations. The meeting also considered a United Kingdom study that was being prepared in the context of efforts by the European Union to develop estimates of the proceeds of certain illegal activities for national accounts purposes.

110. It was recognised that the complex questions arise concerning the availability, reliability and comparability of national and international data, and in relation to the methodology which should be adopted; however it was agreed that the FATF should continue to develop this study and that all FATF member jurisdictions should participate. The study will therefore continue during FATF-X, and will focus on researching the available national and international data, and on finalising details as to how that data can be gathered and analysed.

C. SECOND FORUM WITH THE FINANCIAL SERVICES INDUSTRY

111. One of the FATF's goals is to encourage cooperation with the private financial sector in the development of policies and programmes to combat money laundering. To further this aim, two years after the first international meeting between the FATF and representatives of the financial services industry, a second Forum was convened during FATF-IX. The purpose of this event was to discuss with the private sector, areas of common interest and ways to best develop measures to prevent and detect money laundering through the financial community.

112. Representatives from FATF members, national banking and insurance associations as well as members of the non-bank financial sector and delegates from international financial services industry organisations (Banking Federation of the European Union, International Banking Security Association, European Insurance Committee, European Grouping of Savings Banks, Federation of Latin American Bankers Association, International Federation of Accountants, the Central Bank of the Russian Federation) attended a Forum organised by the FATF in Brussels. Five general topics were addressed in the Forum: money laundering typologies exercises and the development of FATF policy; the nature of the money laundering threat and the countermeasures in the non-bank financial institutions; the implications of the new technologies (including direct banking) for money laundering and the use of these media to detect suspicious/unusual transactions; providing necessary feedback to financial institutions reporting suspicious transactions; and the role of the accounting profession in anti-money laundering action.

IV. FATF'S EXTERNAL RELATIONS AND OTHER INTERNATIONAL ANTI-MONEY LAUNDERING INITIATIVES

113. As the third component of its mission, the FATF undertakes external relations actions designed to raise awareness in non-member nations or regions to the need to combat money laundering, and offers the forty Recommendations as a basis for doing so. In promoting the adoption of anti-money laundering measures, it is important to bear in mind that the FATF does not act in a vacuum. A number of international organisations or bodies play a significant role in this respect. The following paragraphs describe the most important developments which occurred in 1997-1998 in the international fight against money laundering.

114. In general, the FATF continued to collaborate with the relevant international organisations/bodies rather than launch new initiatives. The FATF participates in anti-money laundering events organised by other bodies so that it can observe the developments taking place in non-members and in particular the adoption of money laundering counter measures. The United Nations Global Programme on Money Laundering will contribute significantly to the implementation of these measures through the provision of training and technical assistance.

115. To increase the effectiveness of international anti-money laundering efforts, the FATF and the other organisations and bodies endeavour to co-ordinate their activities. Regular co-ordination meetings of the regional and international bodies concerned with combating money laundering take place in the margins of the FATF Plenaries.

A. FATF'S EXTERNAL RELATIONS INITIATIVES

Cyprus

116. A FATF mission to Cyprus took place at the beginning of September 1997, with the participation of an OGBS's representative, to discuss money laundering issues with the competent Government departments and the Central Bank of the Republic of Cyprus. It was quite clear that a number of important steps had been taken to fight money laundering, particularly the enactment of the Law on the Prevention and Suppression of Money Laundering Activities in April 1996. Among other measures, the Law contains a definition of a serious crimes money laundering offence and a requirement to report suspicious transactions to the Unit for Combating Money Laundering. The Republic of Cyprus has also ratified the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances and the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds of Crime. However, the FATF mission recommended that the Cypriot authorities continue their efforts, specifically with respect to the coverage of the non-bank financial sector. The mission also strongly encouraged Cyprus to undergo a joint Council of Europe/OGBS mutual evaluation of its money laundering system so that further progress can be made. This evaluation was carried out in the spring of 1998.

Russian Federation

117. A joint FATF/Bank of Russia Money Laundering Conference took place on 9-10 October in St. Petersburg, as a follow-up to the FATF high-level mission to Moscow of 1996. The Conference was attended by participants from nine FATF countries. The Russian Federation was represented by numerous delegates from the Bank of Russia, the Ministry of Finance, the Ministry of Justice, the Customs Committee, the Federal Service on Foreign Exchange and Export Control, the Ministry of the Interior, the Federal Security Service, the State Tax Service, the Tax Police, the General Prosecutor, and the Association of Russian Banks.

118. The Conference discussed the role of the financial and credit institutions in the combat of money laundering with particular emphasis on the regulatory bodies. It was pointed out that the Bank of Russia has taken a major anti-money laundering step by creating a national system of preventive measures aimed at safeguarding the banking community against dirty money. In July 1997, the Bank of Russia issued recommendations to prevent illegal funds passing through banks and credit institutions; a Directive on organising internal banking controls and a Guideline on how to organise internal controls in credit institutions which participate in financial markets. Due to a lack of legislation, these texts will assist banks and credit institutions to undertake anti-money laundering work. For the elaboration of the above-mentioned texts, the Bank of Russia used as a basis the forty FATF Recommendations.

119. Participants from the FATF countries expressed their support for the joint efforts undertaken by the Federal Government bodies and the Bank of Russia in creating a national system to prevent dirty money from entering into the economy. They also expressed the wish that the Bill on "Countering Legalisation (Laundering) of Illegally Gained Incomes" which has been pending in the Duma for more than a year, will be expedited.

B. ANTI-MONEY LAUNDERING ACTION BY "FATF-STYLE" REGIONAL BODIES

Caribbean FATF

120. Since its inception, participation in the CFATF has grown to twenty-four states of the Caribbean basin.[9] The CFATF has instituted measures to ensure the effective implementation of, and compliance with, the Recommendations. The CFATF Secretariat monitors members' implementation of the Kingston Ministerial Declaration through the following activities:

- self-assessment of the implementation of the Recommendations;
- on-going programme of mutual evaluation of members;
- co-ordination of, and participation in, training and technical assistance programmes;
- bi-annual plenary meetings for technical representatives; and
- annual Ministerial meetings.

121. To further its mandate to identify and act as a clearing house for facilitating training and technical assistance needs of members, the Secretariat works closely with regional Mini-Dublin Groups, the diplomatic representatives of countries with interest in the region. Prominent here are Canada, France, the Netherlands, the United Kingdom and the United States. There is also close liaison with CARICOM, the Caribbean Customs Law Enforcement Council (CCLEC), the Centre Interministériel de Formation Anti Drogue (CIFAD) in Martinique, the Association of Caribbean Chiefs of Police (ACCP), the Commonwealth Secretariat and the International United Nations Drug Control Programme (UNDCP).

122. Supported by, and in collaboration with UNDCP, the CFATF Secretariat has developed a regional strategy for technical assistance and training to aid effective investigation and prosecution of money laundering and related asset forfeiture cases. The development of this regional strategy parallels and closely co-ordinates with similar initiatives by the European Commission and with efforts arising from the Summit of the Americas Ministerial in Buenos Aires.

123. The FATF strongly supports the significant progress which has been made by the CFATF under both the chairmanships of Costa Rica and Barbados. Three mutual evaluation reports were discussed (Costa Rica, Panama, Barbados), and six on-site visits took place (Antigua and Barbuda, Bahamas, Bermuda, the Dominican Republic, St. Vincent and the Grenadines, Turks and Caicos) in 1997-1998 together with the adoption of a firm timetable for the remainder. The CFATF also pursued its active typologies programme and the development of important internal processes, which are all significant advances.

Asia/Pacific

124. The Working Party meeting of the Asia/Pacific Group on Money Laundering (APG) which was held in Beijing in July 1997 made valuable progress. Countries in the region have started to exchange information and examine the strengths and weaknesses of their systems through the mechanism of jurisdiction reports. Measures are also proposed for improving technical assistance and training, enhancing mutual legal assistance and improving cooperation with the financial sector. The Working Party also recognised that, although regional differences need to be taken into account, the FATF forty Recommendations provide guiding principles for action in establishing an effective anti-money laundering system. The FATF stands ready to assist the APG in its consideration of how international standards such as the forty Recommendations can best be implemented in the region.

[9] See the list of CFATF members at Annex B.

125. The Asia/Pacific Group currently consists of 16 members[10] in the Asia/Pacific region comprising members from South Asia, Southeast and East Asia and the South Pacific. In March 1998, the first annual meeting of the APG was held in Tokyo and attended by 25 jurisdictions from the region. A revised Terms of Reference was agreed, as well as an action plan for the future. The Tokyo meeting represented the full establishment of the APG as a cohesive regional group following on from the earlier awareness-raising efforts. The Asia/Pacific Group provides an essential foundation for countering the global threat of money laundering. It will lead to more effective anti-money laundering legislation in each country, and to enhanced international cooperation.

126. In addition to a statement issued on 6 April 1997 by the Finance Ministers of the Asia Pacific Economic Cooperation (APEC) welcoming the establishment of the APG, the leaders of the 1998 Asia-Europe Meeting (ASEM) asked their Finance Ministers to encourage enhanced co-operation between Europe and Asia in the fight against money laundering.

C. MUTUAL EVALUATION PROCEDURES CARRIED OUT BY OTHER BODIES

General

127. The FATF has adopted a policy for assessing the implementation of anti-money laundering measures in non-member governments. The rationale for this policy is that the implementation of a mutual evaluation procedure will encourage countries and territories not only to get on with implementing anti-money laundering laws but also to improve the counter-measures already in place. The Task Force has already validated and supported the mutual evaluation processes of other bodies which have agreed to carry out mutual evaluations of their members. In this respect, the FATF assessed the CFATF, the Council of Europe and the OGBS's mutual evaluation procedures as being in conformity with its own principles. As the latter is comprised of representatives of banking supervisory authorities, the FATF has sought formal political endorsement of the procedures and the forty Recommendations from those governments of the members of the OGBS which are not represented in either the CFATF or the FATF.

128. The FATF believes that the mutual evaluation procedures of the CFATF, the Council of Europe and the OGBS will contribute to secure the adoption of adequate anti-money laundering measures in many non-member countries and territories. The FATF has therefore furthered its co-operation with these bodies. First, it stands ready to provide assistance in the training of mutual evaluators of non-FATF bodies. Second, FATF member countries will supply observer examiners, if requested, by one of the three bodies/organisations mentioned above.

CFATF

129. CFATF member governments have made a firm commitment to submit to mutual evaluations of their compliance both with the Vienna Convention and with the CFATF and FATF Recommendations. Signalling this firm commitment is the fact that the October 1997 CFATF Council of Ministers in Barbados adopted a mandatory schedule of mutual evaluations. According to the latter, the CFATF's first round of mutual evaluations will be completed by the year 2000. In the past eighteen months of the schedule, eight members have undergone mutual evaluations: Costa Rica, Panama, the Dominican Republic, Barbados, St. Vincent and the Grenadines, the Bahamas, Antigua and Barbuda, and Turks and Caicos Islands. Even before this, in 1995, the Cayman Islands and Trinidad and Tobago were evaluated. By the end of 1998, Bermuda, St. Lucia, St. Kitts and Nevis, and Nicaragua will increase the number of members to have been mutually evaluated.

Council of Europe

[10] See the list of APG members at Annex B.

130. In September 1997, the Committee of Ministers of the Council of Europe established a Select Committee (PC-R-EV) to conduct self- and mutual assessment exercises for member states of the Council, which would be modelled on FATF processes. Over a two year period ending in December 1999, mutual evaluations are to be conducted for the members of the Council which are not also members of the FATF. Experts from member countries of the FATF will assist with and participate in those evaluations. The process commenced with evaluations of Slovenia and Cyprus (conducted in conjunction with the Offshore Group of Banking Supervisors), and the mutual evaluation reports for those two countries were considered and adopted at a meeting of the PC-R-EV in June 1998. Further evaluations (e.g. Czech Republic, Slovakia, Malta, Hungary, Lithuania and Andorra) will be conducted during the second half of 1998.

131. In March 1998, the Council of Europe, in conjunction with the Belgian Presidency of the FATF and the European Commission, organised in Brussels a training seminar for persons from non-FATF countries who would be participating as evaluators in the mutual evaluation process. This event, which was well attended by participants from those countries, discussed the applicable international conventions and instruments, the practical aspects of the process, and the legal, financial and law enforcement components of anti-money laundering systems.

OGBS

132. FATF has received ministerial letters indicating political endorsement of the forty Recommendations and the mutual evaluation procedure from all but one member of the Offshore Group of Banking Supervisors (Lebanon). The Task Force has therefore endorsed the commencement of the OGBS mutual evaluation process, except for the aforementioned country which, as a result, has been changed from full membership of OGBS to observer status. The OGBS is taking steps to carry out its first mutual evaluations before the end of 1998; these will concern Jersey, Guernsey, the Isle of Man and possibly Vanuatu. Two other members of the OGBS -- Cyprus and Malta -- have been or will be covered by a joint Council of Europe/OGBS mutual evaluation.

D. OTHER INTERNATIONAL ANTI-MONEY LAUNDERING ACTION

United Nations

133. The Global Programme against Money Laundering (GPML), a research and technical co-operation programme implemented by the UN Office for Drug Control and Crime Prevention (ODCCP), is now in operation. Its aim is to increase the effectiveness of international action against money laundering through comprehensive technical co-operation services offered to Governments. The Programme is carried out in cooperation with other international and regional organisations. In the context of the GPML, the UNODCCP organised several important international anti-money laundering events in 1997-1998, including two awareness-raising seminars for West Africa in Ivory Coast on 1-3 December 1997 and for South Asian countries plus Myanmar and Thailand in New Delhi on 2-4 March 1998.

134. Finally, the United Nations General Assembly was convened on 8-10 June 1998 in New York for a Special Session devoted to the fight against the illicit production, sale, demand, traffic and distribution of narcotic drugs and psychotropic substances and related activities, including money laundering. The General Assembly adopted a Political Declaration in which the Member States of the United Nations undertake to make special efforts against the laundering of money linked to drug trafficking and recommend that States which have not yet done so, adopt by the year 2003 national anti-money laundering legislation and programmes in accordance with relevant provisions of the Vienna Convention and a package of measures for countering money laundering, adopted at the same session.

Commonwealth

135. Commonwealth Heads of Government at recent summits have repeatedly called for concerted action to combat money laundering which has been and continues to be a high-priority activity for the Commonwealth Secretariat. Following their last meeting in Edinburgh, in October 1997, a joint meeting of finance and law officials was convened so that a co-ordinated approach could be developed to consider further measures to combat money laundering. The joint meeting was held in London on 1-2 June 1998 and considered the four following main items:

- improving domestic co-ordination through national interdisciplinary co-ordinating structure;
- the special problems of dealing with money laundering in countries with large parallel economies;
- strengthening regional initiatives for more effective implementation of anti-money laundering measures; and
- self-evaluation of progress made in implementing anti-money laundering measures in the financial sector.

Inter-American Development Bank

136. The IDB, in conjunction with the Banking Superintendent of Colombia and the Andean Development Corporation, sponsored a seminar on the subject of asset laundering during the 1998 annual meeting of the Board of Governors in Cartagena de Indias (Colombia). The session addressed the multifaceted aspects of asset laundering activities as well as international approaches to combat money laundering on the basis of presentations made by the United Nations, the OAS/CICAD, the IDB, the IMF, the Federation of Latin American Bankers Association and the FATF. The seminar ended with certain common goals, focusing on a multilateral approach to combating asset laundering in Latin America and the Caribbean, as well as current and future activities in the region. The IDB was encouraged to: (a) use its own funds and to seek additional funding for programmes, including the training needs of supervisors, regulators and financial institutions, particularly on the detection and prevention of new laundering techniques on a regional and/or national basis; (b) serve as a clearing house for such proposed programmes, sources of funding, and potential executing entities; (c) strengthen the dialogue between private banking sectors and government regulators; and (d) use its good offices to encourage implementation of effective laws and regulatory frameworks to address the issue of asset laundering.

OAS/CICAD

137. The CICAD Group of experts to Control Money Laundering has continued to put into effect the Buenos Aires Plan of Action.[11] The CICAD Group of Experts, which meets twice a year, at its last meeting in May 1998 approved a training programme for judges, prosecutors, FIU personnel and law enforcement. It also undertook to amend the Model Regulations to expand the predicate offence for money laundering and to provide for the creation of national forfeiture funds. In addition, the Group finalised a directory of contact points for the purpose of effecting information exchange and mutual legal assistance which would be accessible through the OAS's web-page.

---

[11] In December 1995, the Ministers responsible for addressing money laundering in the States of the Western hemisphere met in Buenos Aires where they endorsed a Statement of Principles to combat money laundering and agreed to recommend to their Governments a Plan of Action reflecting this Statement of Principles for adoption and implementation. The Plan of Action specifically provided that the Governments intended to institute on-going assessments of the implementation of the Plan of Action within the framework of the OAS. This and other activities identified in this Plan were remitted to the CICAD for action.

CONCLUSION

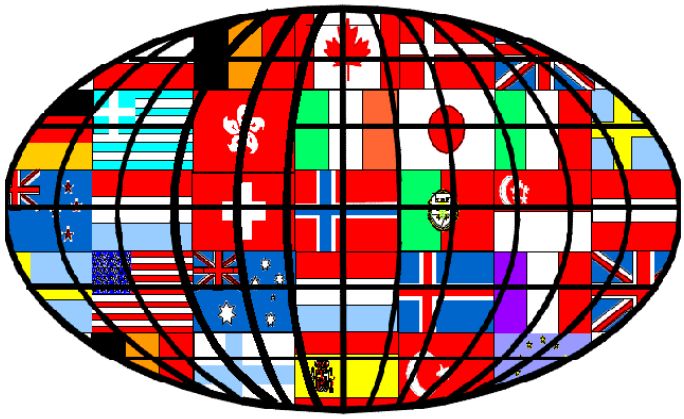
138. During 1997-1998, further progress was again made in combating money laundering, both within and outside the FATF membership. However, the need for continuing action against money laundering is obvious. It is for this reason that it was decided that the Task Force should continue its work for a further five years and focus its efforts to spread the anti-money laundering message to all continents and regions of the globe.

139. The globalisation of financial markets -- and financial crime -- implies that the counter-measures necessary to combat money laundering must be universally applied. To this end, the FATF will work to foster the establishment of a world-wide anti-money laundering network based on an adequate expansion of the FATF membership, the development of the FATF-style regional bodies such as the Caribbean FATF and the Asia/Pacific Group on Money Laundering, and close co-operation with all the relevant international organisations. As money laundering is an evolving phenomenon, it will also be essential to strengthen the review of money laundering trends and countermeasures. In addition, improving the effective implementation of the forty Recommendations within the FATF membership will be a critical challenge.

140. As the world-wide mobilisation against money laundering has now become the priority goal of the FATF, external action will be given a high priority in the forthcoming years. This vital task will be carried forward in 1998-1999 under the Presidency of Japan.

FATF-IX

FINANCIAL ACTION TASK FORCE ON MONEY LAUNDERING



ANNEXES

1997-1998 ANNUAL REPORT

June 1998

TABLE OF CONTENTS

ANNEX A

Money Laundering: the Importance of International Countermeasures

Address by Michel Camdessus
Managing Director of the International Monetary Fund
at the Plenary Meeting of the Financial Action Task Force
on Money Laundering
Paris, February 10, 1998

The statement at the October 1996 Annual Meetings in Washington D.C. of the IMF's Interim Committee—its highest decision-making authority—featured money laundering as one of the most serious issues facing the international financial community. This is a confirmation, if at all needed, of our wish to develop our relationship with you as the main body for dealing with money laundering, and this is also why I wished to come here today to honor your remarkable work, which has been most impressive in its scope and the speed with which it has been geared up. Let me do so by putting this question before you: why is money laundering viewed as such a serious threat to the global monetary system? And if it is a threat, what is the role that the IMF can play in assisting the work of the FATF? How can we limit this threat, which can take on such proportions that it undermines the effectiveness of macroeconomic policy?

* * * * *

Macroeconomic impact of money laundering

I hardly need say that the IMF regards the anti-money laundering actions advocated by the FATF as crucial for the smooth functioning of the financial markets. While we cannot guarantee the accuracy of our figures—and you have certainly a better evaluation than us—the estimates of the present scale of money laundering transactions are almost beyond imagination—2 to 5 percent of global GDP would probably be a consensus range. This scale poses two sorts of risks: one prudential, the other macroeconomic. Markets and even smaller economies can be corrupted and destabilized. We have seen evidence of this in countries and regions which have harbored large-scale criminal organizations. In the beginning, good and bad monies intermingle, and the country or region appears to prosper, but in the end Gresham's law operates, and there is a tremendous risk that only the corrupt financiers remain. Lasting damage can clearly be done, when the infrastructure that has been built up to guarantee the integrity of the markets is lost. Even in countries that have not reached this point, the available evidence suggests that the impact of money laundering is large enough that it must be taken into account by macroeconomic policy makers. Money subject to laundering behaves in accordance with particular management principles. There is evidence that it is less productive, and therefore that it contributes minimally, to say the least, to optimization of economic growth. Potential macroeconomic consequences of money laundering include,

but are not limited to: inexplicable changes in money demand, greater prudential risks to bank soundness, contamination effects on legal financial transactions, and greater volatility of international capital flows and exchange rates due to unanticipated cross-border asset transfers.

Moreover, I should add that while, from the viewpoint of the Fund as a financial institution, I emphasize the economic costs, we must also remember the social and political dimensions of crime and related money laundering—the suffering of the victims and the overall weakening of the social fabric and collective ethical standards. All of this lends urgency to anti-laundering efforts, which attack criminal activity at the most vulnerable point—where its proceeds enter the financial system.

But does this mean that we should abandon the liberalization of the financial markets? This high-minded argument is often raised by those of our critics who believe that the IMF should halt its efforts to move its members away from control-based, towards market-based, financial systems because such systems open up possibilities for money launderers. Some have argued that keeping in place centralized credit allocation and foreign exchange control systems is necessary to identify money launderers—even if we now know that such systems are inimical to economic growth. However, I am reassured that Recommendation 22 of the FATF's 40 Recommendations is very clear on this point: "Countries should ... monitor the physical cross-border transportation of cash and bearer instruments—without impeding in any way the freedom of capital movements." Information, rather than control of the transactions, is the key to the basic "know your customer" approach of the FATF. More generally, the value of adequate information to guide the supervision of financial markets has been made very clear by recent events in South-East Asia. It is not just free financial markets that the IMF advocates, but also modern financial markets—in which there is a good measure of transparency and prudential regulation to ensure the fairness, soundness, and legality of the systems. Adoption of the FATF's recommendations is an important part of that aspect of market development. On the other hand, controls of all kinds and state interventions do not have an impressive record in avoiding money laundering, while they frequently create opportunities for corruption. Does this still hold true in a context of globalization?

Globalization and money laundering

Globalization of financial markets is one of the most important contemporary developments. What are its implications for the fight against money laundering? Clearly, globalization implies that the prevention strategies must be universally applied. All countries must participate—and participate enthusiastically—or the money being laundered will flow quickly to the weakest point in the international system. It is in this respect that the FATF plays an especially important role. It has developed a comprehensive and authoritative set of international standards for anti-money laundering policies, and procedures for their application and enforcement. Through its so-called "typologies" exercises, the FATF has pooled the intelligence of its members regarding financial instruments and institutions used by the money launderers, and this is reflected in its standards. The FATF has also been energetic in spreading its message beyond its own membership, which is comprised largely of the industrial countries. Like the IMF, it has found the "mission" format, by which groups of FATF experts visit nonmember countries, to be valuable in disseminating and promoting its policies. But this process is even more effective when the countries concerned are members of the FATF group—and can enjoy the immediacy, "ownership," and self-evaluation that come with membership.

It is therefore a significant achievement that the FATF has established, within the few years since its own formation, two regional offshoots—the Caribbean FATF, and very recently, the Asia/Pacific Group on Money Laundering. These regional bodies will play an important role in promoting the "modern" financial markets that I referred to earlier—taking into account the special features and state of development of the regional systems.

Good governance

Much has been accomplished, but much remains to be done—on your part and our own. Our efforts and your efforts cannot be separated from the global strategy of improving governance. The IMF is increasingly incorporating governance issues within its overall mandate. The IMF's Interim Committee, at its meeting in Washington in September 1996, adopted a declaration which identified "promoting good governance in all its aspects, including ensuring the rule of law, improving the efficiency and accountability of the public sector, and tackling corruption" as an essential element of a framework within which economies can prosper. Particularly in countries where there is significant participation of government institutions or officials in illegal activities—which yields proceeds that must then be laundered—the adoption of anti-laundering policies can have far-reaching effects on governance. In such countries, the IMF is actively using its available leverage to persuade the authorities to take the necessary steps. The global nature of the IMF's surveillance and technical assistance activities offers opportunities for raising awareness of the need for a robust international anti-money laundering system—pointing to the need for governments to adopt effective anti-laundering legislation, and to contact the FATF for its expert assistance in developing detection and enforcement capabilities. An important step toward full international coverage of this system will be the creation of further regional FATFs—notably for the transitional economies of Europe, and in the African and Middle Eastern regions.

Role of banking supervision

Another area of the Fund's work that has a close association with the fight against money laundering is that of banking supervision. The Core Principles for Effective Banking Supervision, approved by the Basle Committee in September 1997, state that "Banking supervisors must determine that banks have adequate policies, practices and procedures in place, including strict ?know-your-customer' rules, that promote high ethical and professional standards in the financial sector and prevent the bank being used, intentionally or unintentionally, by criminal elements." The IMF provides extensive policy and technical assistance to central banks and other national institutions around the world in building up their supervisory capabilities. This assistance has been framed around, and in fact has contributed to, the core principles. Recent developments have shown an acute need for actions to strengthen the infrastructure for prudential supervision in some countries that otherwise have relatively advanced financial markets, but where inadequate supervision remains an "Achilles heel." Top priority must be given to developing supervision of financial sectors. Such supervisory frameworks will also constitute an important means of generating close adherence to the FATF's principles. They are in the best interest not only of the international system, but also, and first and foremost, of the individual countries concerned.

In the context of banking supervision, I would like to say a special word about offshore banking centers. With the widespread elimination of exchange controls and the emergence of domestic derivative finance, the traditional role of the offshore centers has

diminished. However, the proliferation of smaller offshore centers offering "tax and regulatory services," including secrecy and confidentiality, is a cause for concern. Some of the offshore centers feature prominently in international discussions of serious money laundering problems. Even with the government's best will—and that is sometimes not present—very small countries or territories tend to lack the expert resources needed to supervise large numbers of offshore banks. Caution thus dictates that licenses to operate offshore facilities in such countries should be granted only to proven institutions that are adequately supervised in their respective countries of origin. I am not sure that this is always the case, and the question is whether the international community can continue to tolerate these weak links in its organization.

Other related work of the IMF

What other aspects of the IMF's activities bear on the money laundering problem?

- First, in many countries, the IMF provides technical and policy assistance to members in drafting new central bank and commercial banking laws. This provides a good opportunity to remind countries of the need for anti-laundering provisions, such as the obligation to verify the identity of customers and to report suspicious transactions to the police or similar enforcement groups. Model laws, which draw together expertise of other countries, can provide a very useful start to this process.

- Then there are the IMF's ***research and statistical functions***. It probably does not surprise you to know that IMF staff have been active in researching underground economies and the closely related money laundering problem for almost two decades now. Good analysis is necessary to determine the scope and form of the money laundering problem, and to help direct enforcement resources efficiently to the key aspects of the problem. Good data are also necessary—money laundering is by definition a hidden activity—and therefore indicators must be drawn from a wide range of economic and social data. Although not directly usable to identify money laundering, extensive international financial and cross-border data compiled by the IMF have been used in a number of economic studies of money laundering. In fact, money laundering is now an important consideration for compilers of international data because it creates global asymmetries in the data.

- Finally, there is the IMF's work on fiscal issues, and on ***tax evasion*** in particular. Although some members' anti-money laundering legislation does not apply to the proceeds of tax evasion, there are inevitably close linkages between the two. Money that has evaded taxes must be disguised, and laundered money must be kept hidden from the tax authorities. The IMF's policy and technical work to help its members improve their tax collections therefore assists the fight against money laundering—directly or indirectly, depending on the relevant legislation in the individual country.

* * * * *

I will conclude by emphasizing once again that there is no conflict between free, competitive markets and anti-money laundering regulations. On the contrary, there is considerable synergism between the two. The same oversight and supervision mechanisms that operate to ensure the smooth functioning of the market-oriented

financial system make a strong contribution to the information base and the general environment of integrity that supports the FATF policies. Conversely, money-laundering seriously undermines the functioning of markets, with a consequent negative impact on economic growth. It is true that the regulatory policies to achieve both sets of aims are by necessity those of sovereign nations and cannot simply be imposed on them. But unquestionably, they deserve the support of all—the international financial and enforcement communities, as well as the individual banks, nonbank intermediaries, and regulators in each of the countries. And we as international bodies must ensure that the policies are ***perceived*** as being in the self-interest of all. It need hardly be said that the quality of our cooperation will only add to the strength of our common message!

ANNEX B

Sources of support for the forty Recommendations outside FATF

CFATF

The Caribbean Financial Action Task Force (CFATF) endorsed the original forty FATF Recommendations in the Kingston Declaration of November 1992.[12]

The current CFATF members[13] are: Antigua and Barbuda, Anguilla, Aruba, the Bahamas, Barbados, Belize, Bermuda, the British Virgin Islands, the Cayman Islands, Costa Rica, Dominica, Dominican Republic, Grenada, Jamaica, Montserrat, the Netherlands Antilles, Nicaragua, Panama, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Turks and Caicos Islands, Trinidad and Tobago and Venezuela.

Commonwealth

In October 1997, the Commonwealth Heads of Government (CHOGM) welcomed the endorsement by Finance Ministers of the updated forty Recommendations of the FATF.

The Commonwealth members, which are not members of FATF,[14] are: Antigua and Barbuda, Bahamas, Bangladesh, Barbados, Belize, Botswana, Brunei Darussalam, Cameroon, Cyprus, Dominica, Gambia, Ghana, Grenada, Guyana, India, Jamaica, Kenya, Kiribati, Lesotho, Malawi, Malaysia, Maldives, Malta, Mauritius, Mozambique, Namibia, Nauru, Nigeria, Pakistan, Papua New Guinea, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Seychelles, Sierra Leone, Solomon Islands, South Africa, Sri Lanka, Swaziland, Tonga, Trinidad and Tobago, Tuvalu, Uganda, United Republic of Tanzania, Vanuatu, Western Samoa, Zambia and Zimbabwe.

Council of Europe

The Council of Europe Select Committee of Experts on the Evaluation of Anti-money Laundering Measures takes into account, as one of the relevant international standards, the forty Recommendations of the FATF (cf. Specific terms of reference adopted by the European Committee on Crime Problems for the Select Committee).

The membership of the Committee is comprised of the Council of Europe member States which are not members of the FATF: Albania, Andorra, Bulgaria, Croatia, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Liechtenstein, Lithuania, Moldova, Malta, Poland, Romania, Russian Federation, San Marino, Slovakia, Slovenia, "The Former Yugoslav Republic of Macedonia" and Ukraine.

---

[12] In the Kingston Declaration, the governments of the CFATF members also made a commitment to implement the 19 additional CFATF Recommendations. The CFATF has been conducting a typologies exercise evaluate and to determine whether any interpretative notes and/or amendments to the FATF revised Recommendations and the CFATF 19 recommendations are appropriate.

[13] Aruba and the Netherlands Antilles are part of the Kingdom of the Netherlands, which is a member of FATF.

[14] The Commonwealth members which are members of the FATF are: Australia, Canada, New Zealand, Singapore and the United Kingdom.

Offshore Group of Banking Supervisors

The conditions for membership of the Offshore Goup of Banking Supervisors (OGBS) include a clear commitment to be made to the FATF's forty Recommendations.

In addition, the following members of the OGBS, which are not members of the FATF or the CFATF, are formally committed to the forty Recommendations through individual Ministerial letters sent to the FATF President during 1997-1998: Bahrain, Cyprus, Gibraltar, Guernesey, Isle of Man, Jersey, Malta, Mauritius and Vanuatu.

Riga Declaration

In a Declaration signed at Riga in November 1996 by their Prime Ministers, Estonia, Latvia and Lithuania committed their Governments to the fight against money laundering. The preamble of the Declaration states, inter alia, that these governments are committed to implementing anti-money laundering measures based on the forty Recommendations of the FATF.

Asia/Pacific Group on Money Laundering (APG)

The revised Terms of Reference for the APG, adopted in Tokyo on 10-12 March 1998, recognised that the FATF's forty Recommendations are accepted international standards.

The members of the APG are: Australia, Bangladesh, Chinese Taipei, Fiji, Hong Kong,China, India, Japan, New Zealand, Peoples Republic of China, Republic of Korea, Republic of the Philippines, Singapore, Sri Lanka, Thailand, United States of America and Vanuatu.

ASEM

The Communiqué of the Asia-Europe meeting (ASEM2) held in London on 3-4 April 1998, stated that "The development of policies against money laundering has been helped by the FATF's forty Recommendations which are now the internationally accepted standard."

United Nations

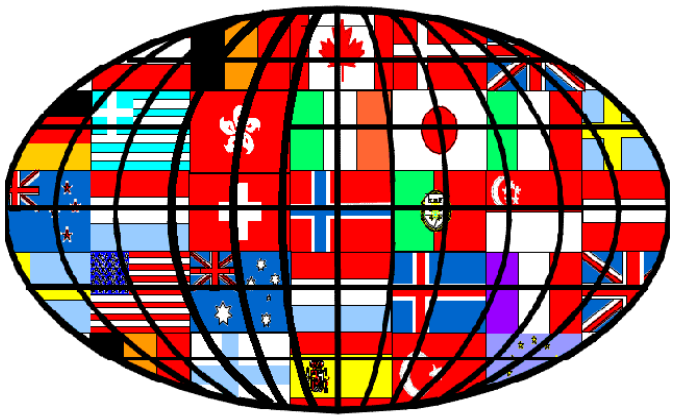
In a Declaration of 10 June 1998, the United Nations General Assembly in Special Session on the world drug problem recalled that the 1996 Resolution 5 of the United Nations Commission on Narcotic Drugs noted that "the forty Recommendations of the Financial Action Task Force .... remain the standard by which anti-money laundering measures adopted by concerned States should be judged;"

In December 1997, in Gand-Bassam (Ivory Coast), participants in the United Nations Workshop on Money Laundering recommended that States should adopt or take into account the Recommendations of the Financial Action Task Force on Money Laundering.

In March 1998, a United Nations Conference on Money Laundering awareness-raising for South and South West Asia recommended that "in drafting their legislation, States should have regard to the standards set out in the 40 Recommendations of the Financial Action Task Force on Money Laundering; ...".

ANNEX C

FINANCIAL ACTION TASK FORCE ON MONEY LAUNDERING FATF



1997-1998 REPORT ON MONEY LAUNDERING TYPOLOGIES

12 February 1998

FATF-IX REPORT ON MONEY LAUNDERING TYPOLOGIES

I. Introduction

1. The group of experts met in Paris on 19-20 November 1997 under the chairmanship of Mr. Pierre Fond, deputy Secretary-General of TRACFIN (*Traitement du renseignement et action contre les circuits financiers clandestins* -- Treatment of information and action against illicit financial circuits). The meeting took place at the Conference Centre of the French Ministry of the Economy, Finance and Industry in Paris. The group comprised representatives of the following FATF members: Australia, Austria, Belgium, Canada, Denmark, European Commission, Finland, France, Germany, Greece, Ireland, Italy, Japan, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. Experts from non-member international organisations with observer status, namely Interpol, the International Organization of Securities Commissions (IOSCO), the World Customs Organisation (WCO) and the United Nations International Drug Control Programme (UNDCP), also attended the meeting.

2. The purpose of the 1997-1998 typologies exercise was to provide a forum for law enforcement and regulation experts to discuss recent trends in the laundering of criminal proceeds, emerging threats and effective countermeasures. While the discussions focused principally on money laundering developments in FATF member countries, the experts also sought to pool available information on prevailing money laundering patterns in non-member countries or regions.

3. In the context of work on the more targeted typologies, the present report focuses mainly on areas which still have to be mastered, such as new methods of payment, but also on the non-financial professional activities that constituted the central subject of the 1997-1998 exercise. The report also deals with the question of laundering through fund transfer companies and presents other interesting typologies noted by the experts. The final part of the report seeks to give a picture of the laundering situation in regions of the world where FATF has few or no members.

II. Analysis of specific trends in laundering in FATF countries

(i) Present trends in money laundering

4. A number of delegations stated that there had been no really new developments since the previous exercise. Drug trafficking and financial crime continue to be the chief sources of illicit proceeds. Several members cited increased cigarette and alcohol smuggling as the main origin of capital for laundering. Others cited usury, investment and VAT fraud, false invoicing and financial fraud. A shift of some laundering activities from the traditional financial sector to non-financial professions or enterprises was noted.

5. While it would not be strictly true to say that new segments of the financial sector are being used by launderers, new developments have been observed as regards *bureaux de change* and insurance companies. Manual currency exchange operations, which formerly were used essentially at the placement stage, are now being used also at the layering stage. Where insurance is concerned, relatively complex cases involving single premium contracts have recently been discovered which reveal less rapid procedures and less liquid transactions, allowing longer-term laundering that may offer a degree of safety to criminals. This complexity and diversification of laundering techniques, also to be found in the securities and futures trading sector, underscores the need for further investigative work in these areas. The other notable development in 1997 was the surge of new payment technologies in the banking and financial networks of FATF member countries.

(ii) New payment technologies

a. Present status of new technology systems and developments since the last typologies exercise

6. Although many members stressed that there had been little innovation relative to laundering, it was generally found that the new technology systems were in a phase of steady development or even rapid expansion. In Sweden, one of the country's largest banks now has 100 000 customers with an account on the Internet, with the same 24-hour services as those offered at the counter. An increasing number of banks have their own website and some have even introduced virtual counters permitting most of the conventional banking operations: consultation of accounts, transfers, etc. In some countries (Belgium, for example) these services are at present confined to domestic transactions.

b. How may the new technology systems facilitate money laundering?

7. Although no case of laundering has been detected in this sector, the experts endeavoured to show what might be the risks posed by the new technologies. The fact that no laundering operation has been identified to date may mean that the appropriate services lack the necessary means and capability of detection or else that the new payment technologies do not carry any particular laundering risks. However, this second possibility should probably be discounted in view of several features of these technologies such as the rapidity of transaction performance, the numerous opportunities for anonymity that are offered, and the risk of a break in the audit trail and withdrawal from the traditional banking system. The experts exchanged views on these questions in regard to the following systems: electronic purses, banking on the Internet and direct (distance) banking. Most members saw more inherent danger in Internet transactions than in smart cards, although other delegations stressed the dangers of the latter.

8. The vulnerability of electronic purses would be limited by the following conditions:

- limitation of the amount of any one transaction;
- distribution of cards by issuers connected to financial institutions, and linkage to a bank account;
- restriction of payment card operations to the national territory.

9. Electronic purse systems would present a laundering risk in future if their upper limits were to be raised substantially or even removed altogether. However, some of these limits are already quite high. In the United Kingdom, most smart cards have a payment capacity of between £ 100 and £ 200 (i.e. between roughly US$ 150 and US$ 320), but a few go as high as £ 500 (about US$ 820), in which case it could easily be imagined that criminals would not hesitate to practise "smurfing".

10. Electronic purse systems also present increased risks of laundering when they can be used for cross-border transactions. This risk is very real, given that the one corporation is preparing to introduce such a system, which will certainly pose problems of international co-operation as regards jurisdictional competence and the site of legal proceedings. Finally, the dangers of laundering are evident with the development of cyberpayment systems involving direct transfer from cardholder to cardholder so that there is no audit trail.

11. The Internet sites opened by duly authorised banks are not particularly disturbing in themselves. It seems natural that banks should use this new commercial technique like other business enterprises. What is clearly a problem, however, is the opening of bank sites on the Internet in breach of banking regulations. In this case, the difficulty is to bring proceedings against the perpetrator, given the international character of the Internet and the difficulty of locating a site, which may be different from the one where the illegal practices were identified, and identifying the national law that would apply. As

yet only one case of this kind has been encountered, namely that of the Antigua-based "European Union Bank" which explicitly proposed completely anonymous investments (see also paragraph 72).

12. The new payment technologies present features very similar to those of electronic funds transfers: rapidity of execution, dematerialisation and magnitude of transactions. These features pose difficulties as regards traceability of payments and law enforcement intervention only after the event. At the same time, the new technologies could theoretically provide effective means of record keeping. In practice, all that can be established at present is the fact that the necessary adaptation of controls to combat criminal activity has not kept pace with the industrialisation of transactions.

13. Apart from banking on the Internet and electronic purse systems, delegations noted that the development of banking by telephone and of casinos on the Internet could make laundering easier. The intensive use of 24-hour telephone banking services has created a significant obstacle to investigations of laundering. Direct banking implies the establishment of a distance between the banker and his client, and hence the lessening or even disappearance of the physical contact on which the traditional conception of client identification rested. While these services clearly have practical advantages for clients in terms of flexibility, they make it more difficult to detect laundering activities since the traditional methods of supervision cannot be applied. As regards information available on the Internet, casinos in several countries offer complete anonymity to potential gamblers, the latter placing their bets by way of credit card. The risk of laundering is even more patent if the casinos in question also manage the accounts of their Internet customers.

c. Implementation of countermeasures

14. Before introducing any countermeasures, law enforcement authorities should make certain that such measures will be of a nature compatible with the real risks and the constraints imposed on financial institutions and should engage in consultations with the private sector for this purpose. If one is to avoid the emergence of a two-speed system of anti-laundering action, with the traditional banking system on the one hand and the new technology systems on the other, controls will havc to be adapted to the latter.

15. A number of countries have set up task forces on this question: in Australia, following a 1996 report by AUSTRAC (Australian Transaction Reports and Analysis Centre) to the Commonwealth Law Enforcement Board, a research group on electronic trading has been established to provide advice to the Board and Government. In Belgium, a task force on the Internet has been set up by the Minister of Justice, notably to study prevention and indictment of all forms of criminal action committed on the network. In Sweden, a government commission is currently working on various problems connected with electronic money, including money laundering, and has produced a partial report. The final report is scheduled for the end of July 1998.

16. Of the different approaches envisaged, members decided to consider how the existing laws could be adapted as opposed to the introduction of new legislation. The need to apply different policies according to type of transaction was also mentioned. Finally, the importance of international co-operation in this area was stressed.

17. In more concrete terms, particular consideration might be given to the following measures:

- making not only issuers but also distributors of instruments linked with the new technologies subject to anti-laundering legislation, given the shift of laundering away from the financial sector and the fact that the agents of these systems are not all financial institutions;

- authorisation and surveillance of issuers of new technology products, since anti-launder ing measures are better complied with when they apply to a regulated and controlled sector;

- a possible adjustment of existing anti-laundering measures, notably as regards client identification and the audit trail, so as to enable issuers of new technology products to help the competent authorities to detect the circulation of anonymous instruments of payment for criminal purposes.

(iii) Funds transfer enterprises or activities (formal and informal)

a. Brief overview of the sector

18. In most FATF countries, international funds transfers are performed essentially by the banks. However, there are other possibilities of transferring funds abroad through money remitters, who normally provide a valid and legitimate financial service. Enterprises performing this activity receive from their clients cash sums which are transferred to designated beneficiaries against payment of a commission. Money remitters traditionally serve the non-banking segment of the population, notably new immigrants, permit-holding or clandestine foreigners or any other person not having a bank account. Funds are often transferred to the least advanced regions of the world where no proper banking services exist.

19. The different operations may be classsified as follows:

- funds transfer companies possessing separate networks (like Western Union and Money Gram);
- money transfer systems connected with clandestine banks (underground banking);
- money transfers by way of the collection accounts of foreign banks (accounts opened with subsidiaries or branches, or even representative offices of foreign banks which transfer the earnings of immigrant workers to their countries of origin);
- international money orders.

b. Use of international funds transfer for laundering purposes

20. The law enforcement services of different member countries have discovered an increasing number of suspicious transactions involving money remitters. The authorities of one member estimate that this is one of the principal laundering methods used in their territory. In a member country, the average sum transferred abroad is about US$ 4 900 and these transfers are often made under false identities. In an Asian member country, a money remitter operating without authorisation from the competent ministry transferred a total of about US$ 93 million to China over a period of three years. A member has established that Colombian cartels use certain money remitters operating in its territory to launder their proceeds from drug trafficking.

21. The risks of laundering are not confined to the funds transfer networks serving ethnic groups, they may also apply to official networks like those of the postal service. For example, the authorities of a Scandinavian country have noted a steep increase in international money orders to the countries of ex-Yugoslavia. In a member country, the mail services are being used to send packages containing large cash sums and also drugs anonymously.

22. Other laundering activities through funds transfer systems involve *bureaux de change*. The authorities of a member have identified several proprietors of exchange offices and remittance services who have links with drug traffickers and receive sums from them for transfer to other parts of the world. Another member noted that remittances on behalf of ethnic groups may also go through *bureaux de change*, although performance of these notional transfers by manual exchange operations is regarded as an illegal banking activity.

23. On the whole it is considered that systems based on trust rather than on a professional and legal foundation favour anonymity and make it difficult to identify the actual recipient of funds. Another problem, mentioned by Australia, is the insufficiency of hard evidence of laundering, although numerous investigations have been opened in this sector.

c. Countermeasures in place or planned

24. The dangers of laundering in the funds transfer sector have been taken seriously by all countries. Many have already introduced a set of measures or about to do so, even though the professions or activities in question are not specifically targeted by the present FATF Recommendations. A first approach has been to bring funds transfer companies within the scope of anti-laundering legislation (as in Australia, Belgium and Germany). In the Netherlands, money remitters will be made subject to the requirement to report unusual transactions and a system of surveillance will be introduced. In Spain, the competent authorities are preparing a decree regulating the activities of offices handling international funds transfers, which are already covered by the general rules regarding prevention of laundering in the financial system. The decree will serve to tighten supervision of the activities concerned. In February 1997, the Hong Kong police published specific directives for funds transfer corporations and *bureaux de change* advising them to adopt anti-laundering measures similar to those of the banks, as regards client identification, record keeping and reporting of suspicious transactions. In a number of countries, the international postal money order services, too, are subject to the anti-laundering law (as in France).

25. In Germany, the fact that suppliers of funds transfer services are subject to the anti-laundering law makes it possible also to cover the case of foreign banks' representative offices that perform transfers. The banking supervision authorities plan to introduce supplementary measures for money remitters, such as the lowering of client identification thresholds to DM 5 000 (about US$ 2 700), the requirement to supply monthly statistics on the number of transfers and their amounts, and additional measures as regards identification record keeping. In the Netherlands identification thresholds have also been lowered, from NLG 10 000 to 5 000 (approximately US$ 4 800 to US$ 2 400). While the lowering of these thresholds is an appropriate measure, there is still the question of the effects which this may produce, notably an increase in "smurfing" operations. Consequently, it is necessary to think about ways of detecting such activities. It is also important to ensure better identification of the recipients of funds, or at least to be able to detect any convergence of transactions on a sole operator located abroad.

26. As regards transfers made by agencies of international corporations like Western Union and Money Gram, these are covered by anti-laundering law in many member countries. In Switzerland, for example, transfers made through Western Union will be subject to the new law on money laundering as of 1 April 1998, and notably to the reporting requirement. In Sweden, a constructive dialogue appears to have begun between the NFIS (National Financial Intelligence Service) and Western Union representatives. However, in some countries, the sub-agents and agents of Western Union operating through "kiosks" are not covered by the anti-laundering regulations.

27. Several members pointed out that the introduction of measures should be reinforced by action to alert the professions concerned. In the United Kingdom, the National Criminal Intelligence Service (NCIS) is seeking to make fund transmitters aware of their obligations under anti-laundering law so that more information will be forthcoming from this sector. In Hong Kong, the police services have recently made on-the-spot visits to explain the content of the directives they have issued to money changers and fund transmitters.

28. Finally, there are more specifically targeted controls like the United States GTO (Geographic Targeting Order). These orders impose, relative to the Banking Secrecy Act, stricter requirements on financial services providers as to disclosure of suspicious transactions and the keeping of records for a limited period and in a specific geographic area. A GTO of 7 August 1996 was applied to 12 money transmitters and 1 600 agents in the metropolitan area of New York, requiring them to report all cash transfers of over US$ 750 to Colombia. The initial order, valid for 60 days, was renewed six times so as

to terminate in October 1997. Its coverage was also extended to 23 licensed transmitters and about 3 500 agents. The result of the New York GTO was an immediate and spectacular reduction in the flow of drug trafficking proceeds to Colombia (down 30 per cent in volume). About 900 money transmitters ceased their activity and some of them were even arrested.

(iv) Other observed trends in laundering

a. The insurance sector

29. The written submissions and presentations made at the meeting of the group of experts revealed some diversification of laundering activities in other segments of the financial sector, like insurance. A member noted the use of single premium insurance contracts to conceal illicit income. In two other member countries, reports of suspicious activities from the insurance sector reveal the practice of early redemption of capital invested, in spite of possible penalties.

b. Money changing

30. The *bureaux de change* sector continues to be a very important link in the laundering chain: cash proceeds from drug trafficking and other criminal activities often transit through this sector. For some years now the authorities of a member have noted a shift of certain very large-scale exchange transactions from the banks to small *bureaux de change*, and this development, which is the direct consequence of the rules of vigilance introduced by the banking sector, is becoming more pronounced. Thus a report of suspicious activity from a money changer implicated two individuals who had jointly made a US dollar/local currency exchange transaction amounting to US$ 5 million. The unusual feature of this transaction was that used dollar bills were changed into local notes which were then utilised, on the same day and in the same *bureau*, to purchase unused dollar bills. In another member country an investigation revealed a case of laundering in which an exchange office had changed more than US$ 50 million at a foreign bank over a period of 13 months (see Case No. 6).

31. In an European FATF member, during the first nine months of 1997 a total of 92 actions were initiated against 289 persons having used *bureaux de change* for transactions amounting in all to about US$ 45 million. In another member country, the law enforcement services have observed a strong and growing tendency for *bureaux de change* to be used by criminal organisations. Two main techniques are reported at present: the changing of large amounts of criminal proceeds in local currency into low bulk continental currencies for physical smuggling out of the country, and electronic funds transfers to offshore centres. Underground exchange mechanisms are obviously also being widely used for money laundering purposes (see Case No. 8).

32. With regard to exchange transactions, the member countries of the Economic and Monetary Union should consider whether existing anti-money laundering provisions are appropriate to the exceptional circumstances resulting from the period of conversion of national currencies to the Euro which will start in four years.

c. Cross-border transportation of cash and electronic funds transfers

33. Hard evidence of the growth and sophistication of cross-border transportation of cash was supplied by several members (see Case No. 3). In Spain, the government is considering expanding the current obligations to declare the import of cash at the customs.

34. Two other members pointed out that electronic funds transfers feature very often in layering operations. One of the most popular techniques is simply to transfer illicit funds through several different banks in order to blur the trail to the funds' source. Another method is to make transfers from a large number of bank accounts, into which deposits have been made by "smurfing", to a principal collecting account which is often located abroad in an offshore financial centre. In this regard, the

adequacy of present anti-laundering measures can be questioned: to obtain the relevant information concerning an international electronic transfer made in one day, the investigating services have to wait an average of about two years for the results of an investigation by jurisdictional delegation.

d. The gold market

35. The FATF experts considered for the first time the posibilities of laundering in the gold market. The scale of laundering in this sector, which is not a recent development, constitutes a real threat. Gold is a very popular recourse for launderers because of the following characteristics:

-- a universally accepted medium of exchange;
-- a hedge in times of uncertainty;
-- prices set daily, hence a reasonably foreseeable value;
-- a material traded on world markets;
-- anonymity;
-- easy changeability of its forms;
-- possibility for dealers of layering transactions in order to blur the audit trail;
-- possibilities of double invoicing, false shipments and other fraudulent practices.

36. Gold is the only raw material comparable to money. Although other precious metals and diamonds are used in cases of recycling, gold is preferred by launderers. Moreover, the drug routes, especially for heroin, coincide fairly clearly with the gold routes. The "hawala" alternative banking system, which is widespread in South Asia and the Middle East, is also connected with the gold circuits. The investigating services are having the greatest difficulty in piercing this system which facilitates both currency exchange and the purchase and sale of gold.

37. Two members instanced specific legislation to combat gold market laundering. In Australia, gold traders are subject to the requirements of client identification and disclosure of transactions in excess of A$ 10 000 (about US$ 6 700). In Italy, a procedure, similar to the US Geographic Targeting Order, requires all the financial institutions in a town where gold was refined to disclose all relevant ransactions.

38. The question of laundering in the gold market most certainly needs to be examined in greater depth. It would be extremely useful to continue to study it in future typologies exercises as a specific subject, after collecting written submissions on the different regulations in force in member countries.

III. Money laundering and non-financial professions

39. For the first time FATF has made an in-depth analysis of laundering in the non-financial sector, treating this question as a special subject in the 1997-1998 typologies exercise. The method used was to assemble all the facts indicating involvement in money laundering and the magnitude of the problem, together with the existence of specific or general countermeasures, on a strictly sectoral basis.

40. Given the development of anti-laundering legislation in many countries, criminals are having increasing recourse to intermediaries other than those of the banking and financial sectors. In view of this trend, governments have started to tackle the problem. In one member country, a recent study has identified a number of professions in which laundering activities are intensively pursued (dealers in motor vehicles, boats and real estate, lawyers and accountants, lotteries, horse races and casinos). In the framework of the European Union, a high-level task force on organised crime has called for measures to be developed to shield certain vulnerable professions from influences of organised crime in general and recommends that the obligation in the money laundering Directive to report suspicions should be extended to persons and professions outside the financial sector. Article 12 of the Directive already

provides a basis for such extension, although delicate questions such as the professional secrecy of certain professions, will have to be addressed.

41. Several countries are in the process of enacting legislation to bring non-financial professions under their anti-laundering regimes. In Belgium, an extension of the scope of the Act of 11 January 1993 to bailiffs, notaries, company auditors, external auditors, real estate agents, casinos and funds transport firms is the subject of a Bill for the implementation of the government's plan of action against organised crime. In Finland, a new law on prevention and detection of laundering will require casinos, betting offices and real estate agents to identify their clients and report suspicious transactions. In Italy, the provisions of the anti-laundering Act No. 197/91 will soon be extended to companies practising activities particularly liable to be used for laundering purposes (casinos, lawyers, accountants, jewellers). In Sweden, a Bill is under consideration for the introduction of reporting requirements, but not a complete incorporation of the non-financial professions into the anti-laundering regime.

42. Even in countries where the non-financial professions are already covered by anti-laundering legislation, attempts are being made to improve existing measures. For example, in the present state of law of one member, non-financial professions are required to report to judicial authorities the facts of laundering of which they have knowledge, as opposed to simply their suspicions. This provision, which has yielded few results (about ten cases in seven years), greatly diminishes the effectiveness of anti-laundering action, for in many files it is clear that the suspicious nature of the operation may have been discovered much earlier, in particular by the real estate agents or notaries concerned. The possibility of aligning the obligations of non-financial professions connected with real estate transactions (agencies, notaries) with those of financial institutions is therefore being studied.

(i) Lawyers, notaries and acountants acting as advisers or financial intermediaries

43. Several members cited cases involving lawyers. In one member country, one of the laundering techniques used is to deposit cash in solicitors' client accounts, in several amounts under about US$ 6 700, and then use the total credit balance for a real estate investment. In another member, a recent enquiry revealed how a lawyer could use a client account to launder the proceeds from a credit fraud offence. The funds were paid into the lawyer's client account, then coverted by him into cheques drawn on a bank of another country which were subsequently cashed by a correspondent designated by the lawyer concerned.

44. In one member country, thanks to information transmitted to the public prosecutor's office in real time by a local banking establishment, the criminal investigation department was able to arrest *in flagrante delicto* a lawyer from another country who had appeared at the counter of the bank concerned to withdraw the money in his correspondent's account by way of a power of attorney in due form. Investigations with foreign authorities confirmed that the acount holder was being held in their country on charges of large-scale drug trafficking. The account holder's credit balance amounted to about US$ 600 000.

45. In one member country, a solicitor transferred funds to a colleague, explaining that they were the proceeds from a sale of assets bequeathed by an individual in his will. The second solicitor was not satisfied with this explanation and reported his suspicions. The subsequent enquiry confirmed these suspicions about the legitimacy of the purported asset transactions.

46. In one member country, a prominent attorney performed services for a whole clientele of launderers. A client with US$ 80 million, proceeds from an insurance fraud, used the lawyer to transfer the money to financial institutions in countries where there are few or no anti-laundering regulations. The attorney opened accounts in various banks under false names of individuals or corporations. The illegal funds were placed in the form of cash or cheques in banks in the member in question, then wired to the different accounts controlled by the attorney. It should be noted that because of his professional

repute the domestic banks never considered it necessary to look more closely at the nature of the transactions in question (see Case No. 4).

47. Accountants may also be involved in various cases of laundering. In one member, an accountant was recently sentenced to three years' imprisonment for laundering drug money. He had received 10 per cent commission on a total sum of about US$ 700 000 in profits of criminal origin. At the same time it has to be acknowledged that accountants can also be useful sources of information in anti-laundering action. Technically, they are among the professionals best fitted to detect the fraudulent mechanism that may underlie an unusual transaction. Accountants and auditors are very present in the business sector, and less directly in charge of their clients' interests than lawyers. In France, for example, the association of accountants, concerned about its reputation and aware of its responsibilities in combating the scourge that criminal money has become, has contacted the authorities to see what contribution it might make. Needless to say, the inclusion of accountants in the scope of anti-laundering legislation can be effective only if they become familiar with the typologies of criminal money recycling.

48. The need for relevant training of this profession, but also of lawyers and notaries, was stressed by several delegations, even in the case of countries where an anti-laundering system is already in place. In the United Kingdom, solicitors and accountants respectively have to comply with professional codes of conduct and guidelines, but to date they have made very few declarations of suspicion. In the Netherlands, notaries are required to check the identity of their clients and that their services are being used for legal purposes. A list of relevant indicators has been issued by the association of notaries. If the checks do not confirm legality, the notary must refuse to provide his services.

49. Because of their central position in the legal system applying to real estate transfers and other important transactions, and in some countries the setting up of corporations, notaries are liable to experience instances of laundering. Their involvement may range from simple acquiescence to facilitation or even active participation in the laundering operation with full knowledge of the facts. In one member country, nationals of a Central European country were reported for having, on numerous occasions, paid cash sums into the account of a notary up to a total of about US$ 700 000. Another case revealed a swindle perpetrated by a European company for the benefit of another company located in a tax haven, the deal being founded on a contract signed in due form in the presence of a notary. The sum in question amounted to about US$ 840 000.

50. The problem confronting legislators in many countries is to establish a clear distinction between the financial intermediary and advisory activities not only of notaries but also of lawyers. In Switzerland professionals offering financial services will be subject to the money laundering legislation as of 1 April 1998. They will then have two years in which to register with a self-regulatory body.

51. The examples cited in this section of the report, both as to cases and as regards countermeasures, are applicable only to the individual countries concerned, since the definitions of the legal professions vary greatly from one country to another. It would therefore be useful to have a complete picture of the anti-laundering legislations applicable in the different member countres, bearing in mind that the responses to the new annual self-assessment questionnaires should also yield some interesting information in this regard.

(ii) Shell corporations and company formation enterprises

52. Shell corporations, in countries where these exist, continue to be a widely used tool for recycling illegal money (see Case No. 2). In this connection two delegations provided a good example of a case that also involved a company supplying secretarial services (see Case No. 5).

53. The role that company formation enterprises might play was mentioned by the United Kingdom. NCIS has therefore recently published a set of guidelines for such enterprises, some of which are covered by the anti-laundering regulations.

(iii) Casinos and gambling

54. In this other part of the non-financial sector, cases of laundering abound. In one member country, methods reported during the past year include the purchase and repayment of gambling tokens in multiple amounts of less than about US$ 6 700, the receipt by casino clients of winner's cheques made out in the name of third persons, and the use of tokens for purchases of goods and services and for drug purchases. Other delegations cited different cases involving casinos, gaming businesses and various lotteries, including horse-racing. These entities provide ample opportunities for laundering, given the amount of cash that changes hands there.

55. Casinos are the site of the first stage in the laundering process, i.e. converting the funds to be laundered from banknotes (circulating currency) to cheques (bank money). In practice the method is to buy chips with cash and then request repayment by cheque drawn on the casino's account. The system can be made more opaque by using a chain of casinos with establishments in different countries. Rather than request repayment by cheque in the casino where the chips were purchased with cash, the gambler says that he will be travelling to another country in which the casino chain has an establishment, asks for his credit to be made available there and withdraws it in the form of a cheque in due course.

56. Gaming businesses and lotteries, too, are being used increasingly by launderers. One member has evidence of multiple financial transactions made by the same person by way of cheques drawn on gambling agencies: loto, horse-racing and also casinos. This suggests that circuits have been set up to organise systematic buy-back of winning tickets from their legitimate holders. Another laundering technique connected with horse-racing and gaming has emerged. In this case the person will actually gamble the money to be laundered, but in such a way as to be reasonably sure of ultimately more or less recovering his stake in the form of cheques issued by the gambling or betting agency and corresponding to perfectly verifiable winnings from gaming. This method is much more reliable than the previous one, since the police investigation service, once it has verified the reality of the gaming operation and the person's winnings, will in principle have a great deal of trouble in going further and identifying the source of the money staked.

57. Countermeasures specific to the gambling sector, mainly for casinos, have been enacted by some FATF members. The closing of casinos in Turkey, which took effect on 10 February 1998, is anticipated by that country to contribute to anti-money laundering efforts as well. In the Netherlands, casinos belong to a public establishment named Casinos of Holland. Casinos are covered by the anti-laundering legislation, and only winnings from gambling are accepted for electronic transfer to a bank account. This arrangement might prove effective in countries where casinos offer a wide range of financial services, as in the United States. Other examples of countermeasures are to be found in the United Kingdom where emphasis is being placed on the importance of client identification, the concept of gamblers' "profiles" and the need to involve all the authorities concerned. Since the gambling sector is not covered by anti-laundering regulations, a code of conduct for the gaming profession has been adopted.

58. In the United States, comments have been requested on a new declaration form for casinos entitled SARC (Suspicious Activity Report by Casinos), which is already in use in the State of Nevada. In Belgium the introduction of a requirement for casinos to report to the CTIF (*Cellule de Traitement des Informations Financières* -- financial information processing cell) is envisaged. Casinos and the gambling sector in general should therefore constitute a genuine subject of concern for FATF, given that it is an expanding industry which is central to the development of tourism in many countries. Gambling is also becoming increasingly international in scale. Finally, the consequences of the growth of non-casino types of gambling and their development on the Internet (e.g. Bingonet) should be examined very carefully.

(iv) Other non-financial professions, including real estate agents and sellers of high-value objects

59. The real estate sector is now fully within the sphere of money laundering activities. Investment of illicit capital in real estate is a classic and proven method of laundering dirty money, particularly in FATF countries enjoying political, economic and monetary stability. Laundering may be effected either by way of chain transactions in real estate to cloak the illicit source of funds, or by investment in tourist or recreational real estate complexes which lend an appearance of legality.

60. Numerous cases of laundering were cited by the experts. One of the methods used is to buy and sell properties under false names. In a recent case presented by one member, two criminals were arrested for laundering about US$ 270 000 through a real estate agency. One member was apprised of an interesting case involving a real estate agent located in an offshore centre and a notary (see Case No. 1). In another member, many suspicious real estate transactions take place in the south and involve amounts of the order of several million francs. In the Netherlands, thanks to the vigilance of banks, unusual transactions involving real estate agents have been reported to the MOT (Office for reports of unusual transactions). The government of that country is currently consulting the profession on its possible contribution to anti-laundering action.

61. In a Scandinavian country, a recent case was based on information concerning a previously convicted drug trafficker who had made several investments in real estate and was planning to buy a hotel. An assessment of his financial situation did not reveal the source of his income. Following his arrest and further investigations, he was sentenced for drug trafficking and money laundering to seven and a half years' imprisonment and about US$ 4,4 million was confiscated (see Case No. 7). In another Scandinavian country, despite a strict system of recording all real estate transactions, the authorities have identified a few cases involving low-interest loans of suspect origin obtained abroad for purposes of investment in that country.

62. Finally, sellers of high-value objects like artworks are unquestionably a significant presence in laundering activities. Within the European Union, systems of national heritage protection have been adopted, particularly in France where exports of cultural goods require prior authorisation by the Ministry of Culture. In the previously mentioned case concerning real estate, another part of the drug profits had been laundered by the director of a art museum from another country, who received about US$ 15 000 for producing false certificates of sale of art objects.

63. Another case, reported by a member, concerns the use of a rather special technique whereby a financial swindler on a international scale made one of his companies available to a major trafficker and launderer seeking to establish a source of funds. The latter would make periodic cash remittances to the money manager/swindler, who paid them into his company's accounts. Transfers were immediately made to Monaco and to other banking establishments in this member, in company accounts of which the launderer was the economic beneficiary. The purpose put forward to justify these transfers was the purchase of paintings by a master artist (Goya), either as payments on account or as settlements. The paintings were in fact fakes and, moreover, were never shipped. The payments in question were for amounts on the order of about US$ 1 million. With this technique it is obviously possible to launder extremely large amounts of illicit money.

64. As regards these latter categories of professions in the non-financial sector, existing legislation appears even more disparate than for the legal professions or gambling activities. Where reporting requirements exist, very few disclosures are forthcoming from these professionals, as pointed out by several delegations. This is another area where intensive efforts will have to be made to alert professionals to suspicious or unusual transactions through appropriate education.

IV. Assessment of world trends in money laundering

65. Money laundering is obviously not a problem restricted to FATF countries. Thanks to the implementation of countermeasures in those countries, the experts have been able to make the relatively detailed analyses that figure in the preceding sections of this report. The information available on money laundering in non-member countries is much less comprehensive; consequently, the following assessment by FATF of world trends in laundering does not claim to be exhaustive.

(i) Asia/Pacific

66. Sources of information on laundering activities in this vast region of the world are fairly scarce. The situation will be considerably improved when Interpol, in co-operation with the US agency FinCEN (Financial Crimes Enforcement Network), produces its reports on individual Asian countries. It should be noted that the Interpol group FOPAC (*Fonds provenant des activités criminelles* -- proceeds from criminal activities) has already produced similar reports on the Central and Eastern European Countries, and that the second series on Asian countries has been given high priority.

67. Two delegations considered that there were no really new laundering developments in this part of the world. The main factors observed in previous typologies exercises are still present. Thus in South Asia and India money laundering is still linked with drug trafficking and is undoubtedly facilitated by the parallel remittance systems known as "hawala" and "hundi".

68. In South-East Asia the countries that seem to warrant particular attention are Indonesia and Malaysia. Given the absence of appropriate legislation and the regime of strict bank secrecy in Indonesia, money laundering is only part of the financial crime that prevails there essentially in the shape of large-scale fraud and corruption. Several other countries in the region, notably Malaysia, offer numerous features attractive to launderers: provision of a wide range of financial services, facilities for setting up trust companies and offshore structures. Bank fraud is still a very important source of money for laundering.

69. In the Pacific region, Vanuatu is featuring increasingly in the laundering circuits. The offshore legislation in place there has created a favourable climate for laundering and the country's financial institutions have been cited in several cases.

70. Generally speaking, it would clearly be desirable to have more information on the Asia/Pacific region. FATF members therefore greatly welcomed the fact that the region's new anti-laundering group, set up at a symposium on money laundering in Asia and the Pacific at Bangkok in March 1997, would shortly be conducting its own typologies exercise. This initiative is a follow-up to the earlier workshops on Disposal of Proceeds of Crime, Money Laundering Methods organised by the FATF Asia Secretariat and Interpol in Hong Kong in 1995 and 1996.

(ii) Central America, South America and the Caribbean Basin

71. All these parts of the world continue to attract money laundering activities. As regards the Caribbean, FATF members welcomed the activities conducted by the Caribbean Financial Action Task Force (CFATF) in respect of typologies. The approach used by the latter is somewhat different from that of FATF, but it should nevertheless give rise to some very useful and interesting work, as regards both analysis of regional trends and assessment of the countermeasures to be adopted. The CFATF typologies exercise is phased over a number of years. Since February 1997 the CFATF experts have studied the forms of money laundering in domestic financial institutions and in the gambling sector. Future meetings will address the following themes: offshore financial establishments and international business corporations, financial institutions and cybermoney.

72. Laundering in the Caribbean region continues to be a serious problem and appears to concern the following countries in particular: Antigua, the Dominican Republic and St Vincent and the Grenadines. Suspect operations have also been detected in the French overseas departments, particularly in the areas of exchange and gaming. Russian organised crime operating out of Miami and Puerto Rico continues to be active in forming front companies all over the region in order to launder illicit profits. A case in point here is the European Union Bank set up in Antigua and famed as the first offshore bank operating via the Internet. The two Russian founders absconded with the deposits and subsequently the bank failed and was closed down in August 1997. Free trade zones, including those in Aruba and Panama, continue to be a target for money launderers using the black market peso exchange system to purchase and smuggle goods into Colombia (see Case No. 8). The Aruban and Panamanian governments are to be commended for taking aggressive steps to address this difficult problem.

73. The Dominican Republic and Jamaica were likewise mentioned in connection with money laundering circuits. In the United States, Dominican launderers use fund transfer companies to send sums not exceeding US$ 10 000 to the Dominican Republic under false names. Consequently the US Department of the Treasury this year issued a Geographic Targeting Order which requires the reporting of all transfers of over US$ 750 from Puerto Rico and the New York Metropolitain area to the Dominican Republic. In Jamaica, a recent case of money laundering concerned an offshore bookmaking operation by telephone for a total amount of several million dollars. Where no specific measures regarding cross-border currency movements exist, cash transportation seems to be a common method of laundering.

74. The nations of Latin America also continue to be affected by laundering of illegal funds, essentially the proceeds from drug trafficking. In Mexico numerous anti-laundering measures have been enacted in the past year. Banks are now required to report suspicious transactions to a central agency for financial information. In spite of these efforts, money laundering is still a problem to be taken very seriously, especially now that the Mexican drug cartels have parted company with their Colombian counterparts and have acquired some predominance in the region. One of the most favoured techniques continues to be outbound currency smuggling, along with electronic transfers, Mexican bank drafts and the "parallel" peso exchange market. Corruption remains the chief impediment to Mexico's anti-laundering efforts.

75. Another Central American country experiencing a growth of laundering activities is Costa Rica, notably by way of large-scale currency smuggling and investment by Colombian cartels in the tourist real estate sector. In Guatemala and Honduras laundering potential continues to increase in the absence of appropriate legislation. In Panama the target of launderers remains the Colon Free Zone. It should be pointed out, however, that anti-laundering measures applicable to the banking sector have been extended to the Zone. In Colombia, billions of dollars in drug money are being laundered through the "parallel" peso exchange market, which in fact is run by drug traffickers (see Case No. 8).

76. Within the framework of OAS (Organization of American States) the Inter-American Drug Abuse Control Commission (CICAD) has decided to launch its own typologies exercise through its group of experts on money laundering. FATF members welcomed this initiative, which will cover nearly all the countries of South America. Many countries in that region have recently introduced anti-laundering legislation following the Summit of Americas Ministerial Conference of December 1995. Despite these efforts, drug trafficking and money laundering are still major problems in this part of the world. It is therefore encouraging to see that the next Summit of Americas, to take place in Santiago, Chile in April 1998, will again address the subject of money laundering as a priority.

(iii) Middle East and Africa

77. In the absence of proper regional anti-money laundering groups, information on laundering in these areas is extremely limited. But numerous factors which assist laundering are present in the Gulf States with the international finance centres in Bahrain and the United Arab Emirates (in particular Abu Dhabi and Dubai), the hawala "banking" system and free trade zones. It should be noted, however, that

the Gulf Co-operation Council (GCC) has recently launched an evaluation of the anti-laundering measures adopted by its members (United Arab Emirates, Oman, Saudi Arabia, Qatar, Bahrain and Kuwait) which will provide a picture of the status of legislation in the region.

78. In the Near East the lack of anti-laundering legislation in Lebanon remains a matter of significant concern to FATF. It is hoped that a bill will soon be passed into law in Israel, where the authorities are facing general problems with organised crime and need to tackle the dangers of laundering in the diamond industry. In Cyprus the authorities have vigorously built up a comprehensive anti-laundering scheme since relevant legislation was passed in April 1996, and a unit has been established to receive suspicious transaction reports from banks. FATF experts visited Nicosia in September 1997 and noted the resolute and praiseworthy efforts being made by the Cypriot authorities to counter money laundering even if the name of Cyprus still appears in cases of laundering transactions at the layering stage.

79. Crime groups are increasingly turning to sub-Saharan Africa to conduct their activities, including money laundering. A few countries have begun to respond by introducing legislation, but significant obstacles have still to be overcome, notably the lack of resources available to operational services in Africa. One trend observed in West Africa concerns the use by organised crime of bank accounts of commercial businesses. Illicit funds can be moved via undercover banking systems and evade exchange control regulations. All FATF members acknowledge that the chief problem in West Africa continues to be fraud by Nigerian organised crime. It was accepted that this problem, which has been going on for too long, would merit appropriate international collective action. Nigerian organised crime is also active in South Africa, which is progressively becoming an entry point to the rest of the continent for crime groups.

(iv) Central and Eastern Europe

80. The East European countries continue to be a significant and indeed growing concern for the European members of FATF. The greatest difficulty concerning funds connected with individuals or companies in Central and Eastern European countries is in clarifying their source, which is very often impossible. The frequent use by some CEEC nationals of expertly forged identity papers, designed to get round strict application of the principle of customer identification by financial institutions, was noted. In addition, transcription from Cyrillic to Roman is often used to change identities, or provide multiple identities. Cases of dual nationality (Russian/Greek or Russian/Israeli, for example) are frequent, and hold similar potential for disguising true identity. Armenian or Georgian nationals claim Greek origins. The most significant problem in transactions with Russia is that the true beneficiary is not known.

81. As in previous years, the experts noted numerous cases involving Russian organised crime and from other members of the Commonwealth of Independent States. Most of the shell companies operating in one member are carrying on quite legitimate business, but their finance comes from fraud and criminal activities in Eastern Europe. A competent unit of this country, which has detected growing sophistication at the layering stage, with substantial use of offshore companies, is going to follow developments in this area very closely from 1998. The refinement of the methods used by organised Russian crime groups was also noted by the police of one member in a case involving letters of credit issued by a Russian bank for a total of US$ 100 million. Very substantial sums are involved in cases relating to nationals of Central and Eastern European countries or to CEEC-related financial transactions. One case detected in another member concerned US$ 13 million overall.

82. But there are other problem countries as well, notably the countries of the former Yugoslavia, as was noted by one member, which considers this to be the most serious problem that it comes across, in particular in relation to drug trafficking. In one member, a case covering a wide range of currencies (the equivalent of around US$ 300 000 involved Serbian immigrant workers. In Croatia, the authorities face a significant problem with the establishment of organised groups specialising in particular types of crime. These structures provide links with crime groups in Italy or Germany, and those operating in Russia, Serbia and Bosnia.

83. In the Black Sea region, only two countries (Greece and Turkey) belong to FATF. Their closeness to fifteen countries of the former Soviet Union raises a particular problem with regard to laundering. Another problem encountered by the banks of a member country has been massive inflows of funds from Albania, linked to the pyramid savings scandal. Investigations following the suspicious transaction reports have shown that considerable amounts in cash, around US$ 20 million, were deposited at banks in a neighbouring country during the summer of 1997. This is a problem which affects several FATF members. In addition, after the deliberate failures of many banks in Bulgaria, triggered by their owners' corruption, they were bought up by groups of white-collar criminals who could then help themselves to the bank assets.

84. Some progress has nonetheless been made in adopting and implementing counter-measures over the past year. The Czech Republic, Slovakia, Hungary and Slovenia have developed anti-laundering programmes, and now have financial intelligence units in operation. But the anti-money laundering Bill tabled in the Russian Parliament in late 1996 has still not been passed.

85. In the summer of 1997 the Central Bank of the Russian Federation issued guidelines to banks on customer identification and the prevention of money laundering. Together with FATF it organised an international seminar on money laundering in St. Petersburg in October 1997. But these efforts will only yield really practical results when the anti-laundering obligations of the financial sector are spelt out in law.

86. Reference should finally be made to a vital recent initiative by the Council of Europe, which launched its programme to evaluate anti-laundering measures in those of its members which do not belong to FATF. The countries in question are not all in Central and Eastern Europe, but the programme should give a considerable boost to enhancing or introducing anti-laundering legislation in that part of the world over the coming years.

V. Conclusions

87. The November 1997 meeting of the group of experts on typologies was marked by a new form of discussion, with in-depth treatment of more targeted topics than in previous exercises. Since the classic mechanisms for laundering are now well identified, the purpose will in future be to survey the new ground being broken by imaginative launderers, and to demonstrate how and why given new laundering practices are being developed. In short, the FATF's strategy needs to be tailored to the emergence of new areas which are not yet fully mapped: electronic money and new-technology forms of payment, non-financial professions, the insurance sector and stock exchange dealers.

88. In addition to laundering via non-financial professions and companies, which is the main subject for the FATF-IX typology exercise, the experts also examined issues relating to companies specialising in international money transfers, and new-technology means of payment. These are both essential areas that FATF needs to understand more fully in order to develop effective counter-measures. With regard to new technology, much work still has to be done before all the related laundering dangers are clearly identified and before any possible specific counter-measures can be considered. Even at present, the speed at which transactions are performed in this sector, admittedly an advance in itself, poses grave threats to the adequacy of the traditional anti-laundering methods to the systems of new payment technologies. As a result, this topic is likely to recur systematically at forthcoming typology meetings. With regard to companies specialising in international money transfers, consideration and action are both much further advanced, to judge from the scale of counter-measures already in place in many FATF member countries. This is in fact an area where exchanges of information on current regulations, and of practical experience, can no doubt be of benefit to those countries which have not yet really tackled the problem.

89. Among other typologies of interest, particular reference should be made to the gold market. While this is not a new topic, discussions showed that it was an area where FATF should also expend

energy in order to identify the problems more clearly. It is accordingly planned to make this a priority item for one of the forthcoming typology exercises. In any case, although FATF has already devoted considerable attention to sectors such as insurance or manual currency exchange, the involvement of both in money laundering is still clearly on the increase. With regard to the exchange bureaux sector, it is clear that further consideration must be given to the consequences of the conversion of European currencies into Euro.

90. Last, the survey of laundering trends in non-Member countries again proved most instructive. Although progress is being made in implementing anti-laundering measures outside the FATF members, much still remains to be done to mobilise a fair number of countries which remain somewhat passive and complacent about the financial, economic, political and social dangers posed by laundering.

12 February 1998

ANNEXES TO THE 1997-1998 FATF REPORT ON MONEY LAUNDERING TYPOLOGIES

Selected cases of money laundering

Case no. 1

Real Estate agents and Notaries

Facts

A real estate agent in a tax haven jurisdiction opened an account at a bank in a European country. The account was used to encash a cheque drawn by a foreign notary. Once the cheque had cleared, part of the funds were withdrawn as cash, part were re-transferred back to the original jurisdiction, and the balance was credited to the account of a notary in that country and used to purchase real property there.

The information that was acquired from the police authorities showed that the different persons involved in the transactions had been involved in fraud. Although the system put in place by the perpetrators appeared to be legal, inquiries showed that the account opened at the bank was only used as a temporary transfer account for the laundering of the proceeds of financial crime.

Results

The financial intelligence unit transferred the case to the judicial authorities, on the basis of the serious indications of money laundering.

Lessons

1. This case shows the need to be vigilant when considering possible money laundering cases, as even transactions which initially do not appear to be particularly suspicious can involve money laundering.

2. It also shows the importance of the “know your customer principle”, since the criminal past of the persons involved in this case was the only indicator which led to the discovery that the transactions in this case involved money laundering.

Case no. 2

Shell Corporations

Facts

A drug trafficker used drug trafficking proceeds to purchase a property of which part was paid in cash and the remainder was obtained through a mortgage. He then sold the property to a shell corporation, which he controlled, for a nominal sum. The corporation then sold the property to an innocent third party for the original purchase price. By this means the drug trafficker concealed his proceeds of crime in a shell corporation, and thereby attempted to disguise the origin of the original purchase funds.

Results

The accused pled guilty and an order of forfeiture was granted. The property which was part of the money laundering scheme is being disposed of by the authorities.

Lessons

1. The need to carefully trace the ownership history of a property, in order to identify possible links between owners and any suspicious transfers that may indicate attempts to commingle assets.

2. The need for enforcement agencies to be familiar with the general rules and practice regarding the purchase of property in relevant jurisdictions, and the need to be aware that transfers involving nominal amounts can be easily structured in some jurisdictions.

Case no. 3

Cross border cash

Facts

Three suspicious transaction reports were received relating to a number of transactions which were carried out at Danish banks whereby large amounts of money were deposited into accounts and then withdrawn shortly afterwards as cash. The first report was received in August 1994, and concerned an account held by Mr. X. Upon initial investigation, the subjects of the reports (X, Y and Z) were not known in police databases as being connected to drugs or any other criminal activity. However further investigation showed that X had imported more than 3 tonnes of hashish into Denmark over a 9 year period. Y had assisted him on one occasion, whilst Z had assisted in laundering the money.

Most of the money was transported by Z as cash from Denmark to Luxembourg where X and Z held 16 accounts at different banks, or to Spain and subsequently Gibraltar, where they held 25 accounts. The receipts from the Danish banks for the withdrawn money were used as documentation to prove the legal origin of the money, when the money was deposited into banks in Gibraltar and Luxembourg. It turned out that sometimes the same receipt was used at several banks so that more cash could be deposited as ”legal” than had actually been through the Danish bank accounts.

Results

X and Y were arrested, prosecuted and convicted for drug trafficking offences and received sentences of six and two years imprisonment respectively. A confiscation order for the equivalent of US$ 6 million was made against X. Z was convicted of drug money laundering involving US$ 1.3 million, and was sentenced to one year nine months imprisonment.

Lessons

1. Financial institutions should not accept proof of deposit to a bank account as being equivalent to proof of a legitimate origin.

2. Carrying illegal proceeds as cash across national borders remains an important method of money laundering.

Case no. 4

Lawyers

Facts

A prominent attorney operated a money laundering network which used sixteen domestic and international financial institutions, many of which were in offshore jurisdictions. The majority of his clients were law abiding citizens, however a number of clients were engaged in various types of fraud and tax evasion, and one client had committed an US$ 80 million insurance fraud. He charged his clients a flat fee to launder their money and to set up annuity packages to hide the laundering activity. In the event there were to be any inquiries by regulators or law enforcement officials, the attorney was prepared to give the appearance of legitimacy to any withdrawals from the "annuities".

One of the methods of laundering was for him to transfer funds from a client into one of his general accounts in the Caribbean. This account was linked to the attorney in name only, and he used it to commingle various client funds, before moving portions of the funds accumulated in the general account via wire transfers to accounts in other countries in the Caribbean. When a client needed funds, they could be transferred from these accounts to a U.S. account in the attorney's name or the client's name. The attorney indicated to his clients that they could "hide" behind the attorney-client privilege if they were ever investigated.

Another method of laundering funds was through the use of credit cards. He arranged for credit cards in false names to be issued to his clients, and the credit card issuer was not aware of the true identity of the individuals issued the cards. When funds were needed the client could use the credit card to make cash withdrawals at any automated teller machine in the United States. Once a month the Caribbean bank would debit the attorney's account in order to satisfy the charges incurred by his clients. The attorney knew the recipients of the credit cards.

Results

The attorney pleaded guilty to money laundering.

Lessons

1. Banks and their employees should be alert to "layered" wire transfers which utilise instructions such as "for further credit to". This may occur more frequently with correspondent accounts of "offshore banks". Suspicious transactions can then be identified and reported.

2. Banks should utilise "know your customer" requirements when issuing credit cards. In this case, the banks were issuing the credit cards to the attorney for further issuance to his clients.

3. Investigators should be aware that in a number of countries lawyer/attorney-client privilege is not applicable if the lawyer/attorney and his client were directly involved in criminal activity, and they should consult prosecutors if such an issue arises.

Case no. 5

Shell corporations and secretarial companies

Facts

During 1995/1996 financial institutions in a European country made suspicious transaction reports to the financial intelligence unit which receives such reports. The reports identified large cash deposits made to the banks which were exchanged for bank drafts made payable to a shell corporation based and operated from an Asian jurisdiction. The reports identified approximately US$ 1.6 million being transferred in this way to an account held by the shell corporation at a financial institution in the Asian jurisdiction.

At the same time police had been investigating a group in that country which were involved in importing drugs. In 1997 police managed to arrest several persons in the group, including the principal, who controlled the company in the Asian jurisdiction. They were charged with conspiring to import a large amount of cannabis. A financial investigation showed that the principal had made sizeable profits, and a large percentage of this has been traced and restrained. A total of approximately US$ 2 million was sent from the European country to the Asian jurisdiction, and subsequently transferred back to bank accounts in Europe, where it is now restrained.

Two methods were used to launder the money. The principal purchased a shell company in the Asian jurisdiction which was operated there by a secretarial company on his instructions. The shell company opened a bank account, which was used to receive cashiers orders and bank drafts which had been purchased for cash in the country of origin. The principal was also assisted by another person who controlled (through the same secretarial company) several companies, which were operated for both legitimate reasons and otherwise. This person laundered part of the proceeds by sending the funds on to several other jurisdictions, and used non-face to face banking (computer instructions from the original country) to do so.

Results

Seven persons including the principal are awaiting trial in the European country on charges of drug trafficking, and the principal and three other persons face money laundering charges.

Lessons

1. It shows how desirable and easy it is for criminals (even if not part of international organised crime) to use corporate entities in other jurisdictions, and to transfer illegal proceeds through several other jurisdictions in the hope of disguising the origin of the money.

2. It demonstrates the ease with which company incorporation services can be obtained, and shows that many of the companies which sell shelf/shell companies, as well as the secretarial companies which operate them, are not likely to be concerned about the purpose for which the shell company is used.

3. Highlights the need for financial institutions to have a system which identifies suspicious transactions not just at the front counter, but also for non-face to face transactions such as occurred in this case.

4. The length of time it can take to conduct international financial investigations and to trace the proceeds of crime transferred through several jurisdictions, and the consequent risk that the funds will be dissipated.

Case no. 6

Bureaux de change

Facts

A bureau de change ('The Counter') had been doing business in a small town near the German border for a number of years when exchange offices became regulated, and it became subject to obligations to prevent money laundering. The Counter often had a surplus of bank notes with a high denomination, and the owner (Peter) knew these notes were not popular and therefore had them exchanged into smaller denomination notes at a nearby bank. Prior to the legislation taking effect persons acting on behalf of The Counter regularly exchanged amounts in excess of the equivalent to US$ 50 000, but immediately after the legislation took effect the transactions were reduced to amounts of US$ 15 000 to US$ 30,000 per transaction. The employees of the bank branch soon noticed the dubious nature of the exchanges which did not have any sound economic reason, and the transaction were reported.

Peter had a record with the police relating to fencing and dealing in soft drugs, and because of this he transferred the ownership of The Counter to a new owner with no police record (Andre). Andre reports The Counter to the Central Bank as an exchange office and is accepted on a temporary basis. The financial intelligence unit consults various police files and establishes that the police have been observing this exchange office for some time. The suspect transactions are passed on to the crime squad in the town where The Counter has its office, and it starts an investigation. A few months later, the crime squad arrests Andre, house searches are made, expensive objects and an amount equivalent to more than US$ 250 000 in cash are seized. The records of The Counter show that many transactions were kept out of the official books and records. For example, over a period of thirteen months The Counter changed the equivalent of more than US$ 50 million at a foreign bank without registering these exchange transactions in the official books and records. The investigation showed that The Counter and its owners were working with a group of drug traffickers, which used the exchange office to launder their proceeds, and this formed a substantial part of the turnover of the business.

Results

The drug traffickers were prosecuted and convicted and are now serving long prison sentences. Andre was sentenced to six years in prison for laundering the proceeds of crime and forgery. Peter moved abroad with his family. A separate legal action is still pending to take away Andre's profits, the confiscated objects and the cash found. The Counter has been closed and its registration as an exchange office was refused.

Lessons

The need for banks and large, legitimate bureaux de change to pay attention to their business relations with smaller bureaux, particularly when supplying or exchanging currency with them.

Case no. 7

Lawyers, real estate

Facts

The financial intelligence unit received information that a previously convicted drug trafficker had made several investments in real estate and was planing to buy a hotel. An assessment of his financial situation did not reveal any legal source of income, and he was subsequently arrested and charged with an offence of money laundering. Further investigation substantiated the charge that part of the invested funds were proceeds of his own drug trafficking. He was charged with substantive drug trafficking, drug money laundering and other offences.

In the same case the criminal's lawyer received the equivalent of approximately US$ 70 000 cash from his client, placed this money in his client's bank account and later made payments and investments on the client's instructions. He was charged with negligent money laundering in relation to these transactions. Another part of the drug proceeds was laundered by a director of an art museum in a foreign country who received US$ 15 000 for producing forged documents for the sale of artworks which never took place.

Results

The drug trafficker was convicted of drug trafficking, was sentenced to seven and a half years imprisonment, and a confiscation order was made for US$ 450 000. The lawyer was convicted and sentenced to 10 months imprisonment. The art museum director could not be prosecuted as there was insufficient evidence that he knew the money was the proceeds of drug trafficking, but he has accepted a writ to confiscate his proceeds.

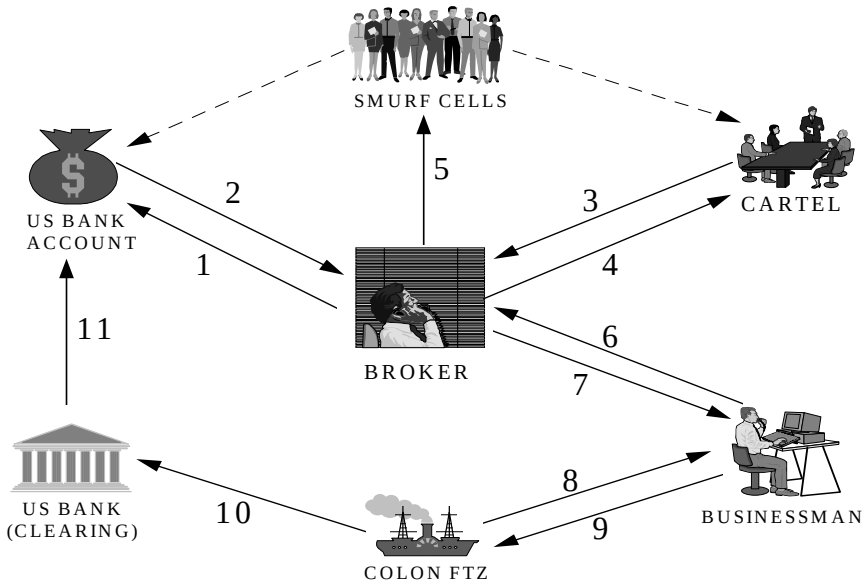
Lessons

1. The purchase of real estate is commonly used as part of the last stage of money laundering (integration). Such a purchase offers the criminal an investment which gives the appearance of financial stability, and the purchase of a hotel offers particular advantages, as it is often a cash intensive business.

2. The value of a money laundering offence with a lower scienter or mens rea requirement is shown in the prosecution of the lawyer in this case. There was insufficient evidence to prove that the lawyer knew the money was illegal drug proceeds, but sufficient evidence to show that he "should have known" on the facts available to him.

Case no. 8

Example of widely used money laundering technique - Colombian Black Market Peso Exchange, Casa de cambio, money laundering through trade, use of "shell accounts"



Drug traffickers in the U.S. collect and stockpile cash from illegal drug sales in "stash houses" located throughout the U.S. and this creates a logistical problem for the traffickers. The solution is as follows:

1. Black market money brokers in Colombia direct Colombians visiting or residing in the U.S. to open personal cheque accounts at U.S. banks, and deposit minimal amounts.

2. Cheques on these accounts are signed in blank by the customers and given to the brokers who pay them US$200-400 for each account. The brokers keep a stock of signed cheques on these "shell" U.S. accounts.

3. Colombian drug cartels sell their stockpiled cash at a parallel or "discounted" exchange rate to the Colombian money brokers in exchange for pesos which are paid in Columbia.

4. The brokers purchase the dollars at the discounted rate and the cartels lose a percentage of their profits but avoid the risks of laundering their own drug money.

5. Once the drug money is purchased, the broker directs his network *smurfs* to pick up the cash, and structure deposits into the various "shell" cheque accounts.

6. The broker then offers to sell cheques drawn on these accounts to legitimate Colombian businessmen (who need U.S. dollars to conduct international trade) at a "parallel" exchange rate.

7. The broker fills in the dollar amount on the signed cheque, but leaves the name of the payee blank. The broker also stamps his symbol on the cheque as a means to guarantee his payment on the cheque in the event there are ever insufficient funds in the "shell" checking account.

8. The businessman can then fill in the payees name when he uses the signed cheque as a U.S. dollar instrument to purchase goods (perfume, gold, etc.) in international markets such as Free Trade Zones.

9. The businessman then ships or smuggles the goods into Colombia.

10. The Free Trade Zone distributor, who is often a knowing participant in the black market exchange process, forwards the cheque to his U.S. bank account or it may even clear through his local bank account.

11. Once cleared, the cheque account is debited, and the distributor's U.S. account is credited.

Through this scheme:

Drug cartels in Colombia receive their profits from the U.S. drug trade in Columbia, without having the normal expenses of money laundering. The brokers make a profit on the "discounted" purchase of U.S. dollars from the drug cartels and a second profit on the subsequent sale of the dollars to Colombian businessmen at the "parallel exchange rate." The businessmen save money by exchanging their pesos for U.S. dollars on the "parallel" exchange market, and avoiding government scrutiny and taxes.

For more information about the Colombian Black Market Peso Exchange Process, visit the FinCEN Home Page at Http://www.ustreas.gov/treasury/bureaus/fincen. This information can be found in the advisory section.

ANNEX E

PROVIDING FEEDBACK TO REPORTING FINANCIAL INSTITUTIONS AND OTHER PERSONS

BEST PRACTICE GUIDELINES

I. INTRODUCTION

The importance of providing appropriate and timely feedback to financial and other institutions which report suspicious transactions has been stressed by industry representatives and recognised by the financial intelligence units (FIU) which receive such reports. Indeed, such information is valuable not just to those institutions, but also to their associations, to law enforcement and financial regulators and to other government bodies. However, the provision of general and specific feedback has both practical and legal implications which need to be taken into account.

2. It is recognised that ongoing law enforcement investigations should not be put at risk by disclosing inappropriate feedback information. Another important consideration is that some countries have strict secrecy laws which prevent their financial intelligence unit from disclosing any significant amount of feedback, or that more general privacy laws limit the feedback which can be given. However, those agencies which receive suspicious transaction reports should endeavour to design feedback mechanisms and procedures which are appropriate to their laws and administrative systems, which take into account such practical and legal limitations, and yet seek to provide an appropriate level of feedback. The limitations should not be used as an excuse to avoid providing feedback, though they may provide good reasons for using these guidelines in a flexible way so as to provide adequate levels of feedback for reporting institutions.

3. Based on the types and methods of feedback currently provided in a range of FATF member countries, this set of best practice guidelines will consider why providing feedback is necessary and important. The guidelines illustrate what is best practice in providing general feedback on money laundering and the results of suspicious transaction reports by setting out the different types of feedback and other information which could be provided and the methods for providing such feedback. The guidelines also address the issue of specific or case by case feedback and the conflicting considerations which affect the level of specific feedback which is provided in each country. The suggestions contained herein are not mandatory requirements, but are meant to provide assistance and guidance to financial intelligence units, law enforcement and other government bodies which are involved in the receipt, analysis and investigation of suspicious transaction reports, and in the provision of feedback on those reports.

II. WHY IS FEEDBACK ON SUSPICIOUS TRANSACTION REPORTS NEEDED

4. The reporting of suspicious transactions[15] by banks, non-bank financial institutions, and in some countries, other entities or persons, is now regarded as an essential element of the anti-money laundering program for every country. Recommendation 15 of the FATF forty Recommendations states :

> "15. If financial institutions suspect that funds stem from a criminal activity, they should
> be required to report promptly their suspicions to the competent authorities. "

5. Almost all FATF members have now implemented a mandatory system of reporting suspicious transactions, though the precise extent and form of the obligation varies from country to country. The requirement under Recommendation 15 is also supplemented by several other recommendations such as financial institutions and their staff should receive protection from criminal or civil liability for reports made in good faith (Recommendation 16), customers must not be tipped off about reports (Recommendation 17), and financial institutions should comply with instructions from the competent authorities in relation to reports (Recommendation 18).

6. It is recognised that measures to counter money laundering will be more effective if government ministries and agencies work in partnership with the financial sector. In relation to the reporting of suspicious transactions an important element of this partnership approach is the need to provide feedback to institutions or persons which report suspicious transactions. Financial regulators will also benefit from receiving certain feedback. There are compelling reasons why feedback should be provided :

- it enables reporting institutions to better educate their staff as to the transactions which are suspicious and which should be reported. This leads staff to make higher quality reports which are more likely to correctly identify transactions connected with criminal activity;

- it provides compliance officers of reporting institutions with important information and results, allowing them to better perform that part of their function which requires them to filter out reports made by staff which are not truly suspicious. The correct identification of transactions connected with money laundering or other types of crime allows a more efficient use of the resources of both the financial intelligence unit and the reporting institution;

- it also allows the institution to take appropriate action, e.g. to close the customer's account if he is convicted of an offence, or to clear his name if an investigation shows that there is nothing suspicious;

[15] In some jurisdictions the obligation is to report unusual transactions, and these guidelines should be read so as to include unusual transactions within any references to suspicious transactions, where appropriate.

- it can lead to improved reporting and investigative procedures, and is often of benefit to the supervisory authorities which regulate the reporting institutions; and

- feedback is one of the ways in which government and law enforcement can contribute to the partnership with the financial sector, and it provides information which demonstrates to the financial sector that the resources and effort committed by them to reporting suspicious transactions are worthwhile, and results are obtained.

7. In many countries the obligation to report suspicious transactions only applies to financial institutions. Moreover, the experience in FATF members in which an obligation to report also applies to non-financial businesses or to all persons is that the vast majority of suspicious transactions reports are made by financial institutions, and in particular by banks. In recent years though, money laundering trends suggest that money launderers have moved away from strongly regulated institutions with higher levels of internal controls such as banks, towards less strongly regulated sectors such as the non-bank financial institution sector and non-financial businesses. In order to promote increased awareness and co-operation in these latter sectors, FIUs need to analyse trends and provide feedback on current trends and techniques to such institutions and businesses if a comprehensive anti-money laundering strategy is to be put in place. The empirical evidence suggests that where there is increased feedback to, and co-operation with, these other sectors, this leads to significantly increased numbers of suspicious transaction reports.

III. GENERAL FEEDBACK

(i) Types of feedback

8. Several forms of general feedback are currently provided, at both national and international levels. The type of feedback and the way in which it is provided in each country may vary because of such matters as obligations of secrecy or the number of reports being received by the FIU, but the following types of feedback are used in several countries :

(a) statistics on the number of disclosures, with appropriate breakdowns, and on the results of the disclosures;

(b) information on current techniques, methods and trends (sometimes called "typologies"); and

(c) sanitised examples of actual money laundering cases.

9. The underlying information on which general feedback can be based is either statistics relating to the number of suspicious transaction reports and the results achieved from those reports, or cases or investigations involving money laundering (whether or not the defendant is prosecuted for a money laundering offence or for the predicate offences). As these cases or investigations could result from a suspicious transaction report or from other sources of information, it is important that those agencies which provide feedback ensure that all relevant examples are included in the feedback they provide. It is also important that all relevant authorities, together with the reporting institutions, agree on

the contents and form of sanitised cases, so as to prevent any subsequent difficulties to any institution or agency. It would also be beneficial if certain types of feedback, such as sanitised cases, are widely distributed, so that the benefits of this feedback are not restricted to the reporting institutions in that particular country.

(a) Statistics

What types of statistics should be made available?

10. Statistical information could be broken into at least two categories : (a) that which relates to the reports received and the breakdowns that can be made of this information, and (b) that which relates to reports which lead to or assist in investigations, prosecutions or confiscation action. Examples of the types of statistics which could be retained are :

- Category (a) - detailed information on matters such as the number of suspicious transaction reports, the number of reports by sector or institution, the monetary value of such reports and files, and the geographic areas from which cases have been referred. Information could also be retained to give a breakdown of the types of institutions which reported and the types of transactions involved in the transactions reported.

- Category (b) - information on the investigation case files opened, the number of cases closed, and cases referred to the prosecution authorities. Breakdowns could also be given of the year in which the report was made, the types of crimes involved and the amount of money, as well as the nationality of the parties involved and which of the three stages of a money laundering operation (placement, layering or integration) the case related to. Where appropriate, statistics could also be kept on the reports which have a direct and positive intelligence value, and an indication given of the value of those reports. This is because reports which do not lead directly to a money laundering prosecution can still provide valuable information which may lead to prosecutions or confiscation proceedings at a later date (see paragraph 18).

11. A cross referencing of the different breakdowns of category (a) information with the types of results achieved under category (b) should enable FIUs and reporting institutions to identify those areas where reporting institutions are successfully identifying money laundering and other criminal activity. It would also identify, for example, those areas where institutions are not reporting or are reporting suspicions which lead to below average results. As such it would be a valuable tool for all concerned. However, as with any statistics, care needs to be taken in their interpretion, and in the weight that is accorded to each statistic. In order to extract the desired statistics efficiently it is of course necessary that the suspicious transaction report form, whether it is sent on paper or on-line, is designed to allow the appropriate breakdowns to be made. Given the difficulties that many countries have in gathering and analysing statistics, it is essential that the amount of human resources required for this task are minimised, and that maximum use is made of technology, even if this initially requires capital expenditure or other resource inputs.

How often should statistics be published?

12. Statistics are the most commonly provided form of feedback, and are usually included in annual reports or regular newsletters, such as those published by FIUs. Having regard to the resource implications of collecting and providing statistics, and to the other types of feedback available, the publication of an annual set of comprehensive statistics should provide adequate feedback in most countries.

13. It is recommended that :

- **statistics are kept on the suspicious transaction reports received and on the results obtained from those reports, and that appropriate breakdowns are made of the available information;**
- **the statistics on the reports received are cross referenced with the results so as to identify areas where money laundering and other criminal activity is being successfully detected;**
- **technological resources are used to their maximum potential; and**
- **comprehensive statistics are published at least once a year.**

(b) Current techniques, methods and trends

14. The description of current money laundering techniques and methods will be largely based on the cases transmitted to the prosecution authorities, and the division of such cases into the three stages of money laundering can make it easier to differentiate between the different techniques used, though it must of course be recognised that it is often difficult to categorically state that a transaction falls into one stage or another. If new methods or techniques are identified these should be described and identified, and reporting institutions advised of such methods as well as current money laundering trends. Information on current trends will be derived from prosecutions, investigations or the statistics referred to above, and could usefully be linked with those statistics. An accurate description of current trends will allow financial institutions to focus on areas of current risk and also future potential risk.

15. In addition to any reports that are prepared by national FIUs, there are a number of international organisations or groups which also prepare a report of trends and techniques, or hold an exercise to review such trends. The FATF holds an annual typologies exercise where law enforcement and regulatory experts from FATF members, as well as delegates from relevant observer organisations review and discuss current trends and future threats in relation to money laundering. A public report is then published which reviews the conclusions of the experts and the trends and techniques in FATF members and other countries, as well as considering a special topic in more detail. This report is available from the FATF or at the FATF Website (http://www.oecd.org/fatf/). In addition, Interpol publishes regular bulletins which contain sanitised case examples.

16. Other international groups such as the Asia/Pacific Group on Money Laundering, the Caribbean Financial Action Task Force (CFATF), and the Organisation of American States/Inter-American Drug Abuse Control Commission (OAS/CICAD) are holding or will also hold typologies exercises which could provide further information on the trends and techniques that are being used to launder money in the regions concerned. International trends could usefully be extracted and included in feedback supplied by

national FIUs where they are particularly relevant, but in relation to more general information, reporting institutions should simply be made aware of how they can access such reports if they wish to. This will help to avoid information overload.

17. It is recommended that :

- **new money laundering methods or techniques, as well as trends in existing techniques are described and identified, and that financial and other institutions are advised of these trends and techniques;**

- **feedback on trends and techniques published by international bodies be extracted and included in feedback supplied by national FIUs only if it is particularly relevant, but that reporting institutions are made aware of how to access such reports.**

(c) Sanitised cases

18. This type of feedback is sometimes regarded by financial sector representatives as even more valuable than information on trends. Sanitised cases[16] are very helpful to compliance officers and front line staff, since they provide detailed examples of actual money laundering and the results of such cases, thus increasing the awareness of front line staff. Two examples of methods used to distribute this type of feedback are a quarterly newsletter and a database of sanitised cases. Both methods provide a set of sanitised cases which summarise the facts of the case, the inquiries made, and a brief summary of the results. A short section drawing out the lessons to be learnt from the case is also provided in the database. The length of the description of each case could vary from a paragraph outlining the case through to a longer and more detailed summary.

19. Care and consideration needs to be taken in choosing appropriate cases and in their sanitisation, in order to avoid any legal ramifications. In the countries which use such feedback, the examples used are generally cases which have been completed, either because the criminal proceedings are concluded or because the report was not found to be justified. Inclusion of cases where the report was unfounded can be just as helpful as those where the subject of the report was convicted of money laundering.

20. It is recommended that sanitised cases be published or made available to reporting institutions, and that each sanitised case could include :

- **a description of the facts;**
- **a brief summary of the result of the case;**
- **where appropriate, a description of the inquiries made by the FIU; and**
- **a description of the lessons to be learnt from the reporting and investigative procedures that were adopted in the case. Such lessons can be helpful not only to financial institutions and their staff, but also to law enforcement investigators.**

(ii) <u>Other information which could be provided</u>

21. In addition to general feedback of the types referred to above, there are other types of information which can be distributed to financial and other institutions using the same methods. Often this information is provided in guidance notes or annual reports, but it provides essential background information for the staff of reporting institutions, and also keeps them up to date on current issues. Examples of such other information include :

- **an explanation of why money laundering takes place, a description of the money laundering process and the three stages of money laundering, including practical examples;**
- **an explanation of the legal obligation to report, to whom it applies and the sanctions (if any) for failing to report**;

[16] Sanitised cases are cases which have had all specific identifying features removed.

- **the procedures and processes by which reports are made, analysed, and investigated, and by which feedback is provided**. This allows FIUs to provide information on matters such as the length of time it can take for a criminal proceeding to be finalised or to explain that even though not every report results in a prosecution for money laundering, the report could be used as evidence or intelligence which contributes to a prosecution for a criminal offence, or provides other valuable intelligence information;

- **a summary of any legislative changes** that may have been recently made in relation to the reporting regime or money laundering offences;

- **a description of current and/or future challenges for the FIU.**

(iii) Feedback Methods

22. ***Written Feedback*** - As noted above, two of the most popular methods of providing general feedback are through annual reports and regular newsletters or circulars. As noted above, annual reports could usefully contain sets of statistics and a description of money laundering trends. A short (for example, four page) newsletter or circular which is published on a regular basis two or four times a year provides continuity of contact with reporting institutions. It could contain sanitised cases, legislative updates or information on current issues or money laundering methods.

23. ***Meetings*** - There are a range of other ways in which feedback is provided to the bodies or persons who report. Most FIU provide such feedback through face to face meetings with financial institutions, either for a specific institution and its staff, or for a broader range of institutions. Seminars, conferences and workshops are commonly used to provide training for financial institutions and their staff, and this provides a forum in which feedback is provided as part of the training and education process. Several countries have also established working or liaison groups combining the FIU which receives the reports and representatives of the financial sector. These groups can also include the financial regulator or representatives of law enforcement agencies, and provide a regular channel of communication through which feedback and other topics such as reporting procedures, can be discussed. Finally, staff of FIUs could use meetings with individual compliance officers as an opportunity to provide general feedback.

24. ***Video*** - many countries and financial institutions or their associations have published an educational video as part of their overall anti-money laundering training and education process. Such a method of communication provides an opportunity for direct feedback to front line staff and could include material on sanitised cases, money laundering methods and other information.

25. ***Electronic information systems*** - obtaining information from Websites, other electronic databases or through electronic message systems has the advantage of speed, increased efficiency, reduced operating costs and better accessibility to relevant information. While the need for appropriate confidentiality and security must be maintained, consideration should be given to providing increasing feedback through a password protected or secure Website or database, or by electronic mail.

26. When deciding on the methods of general feedback that are to be used, each country will have to take into account the views of the reporting institutions as to degree to which reporting of suspicious or unusual transactions should be made public knowledge. For example, in some countries, the banks have no objection to sanitised cases becoming public information, in part because of the objective and transparent nature of the reporting system. However, in other countries, financial institutions would like to receive this type of feedback, but do not want it made available to the public as a whole. Such differing views mean that slightly different approaches may need to be taken in each country.

IV. SPECIFIC OR CASE BY CASE FEEDBACK

27. Reporting institutions and their associations welcome prompt and timely information on the results of reports of suspicious transactions, not only so they can improve the processes of their member institutions for identifying suspicious transactions, but also so they can take appropriate action in relation to the customer. There is concern that by keeping a customer's account open after a suspicious transaction report has been made the institution may be increasing its vulnerability with respect to monies owed to them by the customer. However specific feedback is much more difficult to provide than general feedback, for both legal and practical reasons.

28. One of the primary concerns is that ongoing law enforcement investigations should not be put at risk by providing specific feedback information to the reporting institution at a stage prior to the conclusion of the case. Another practical concern is the question of the resource implications and the best and most efficient method for providing such feedback, which will often depend on the amount of reports received by the FIU. Legal issues in some countries relate to strict secrecy laws which prevent the FIU from disclosing specific feedback, or concern general privacy laws which limit the feedback which can be provided. Finally, financial institutions are also concerned about the degree to which such feedback becomes public knowledge, and the need to ensure the safety of their staff and protect them from being called as witnesses who have to give evidence in court concerning the disclosure. This was dealt with in one country by a specific legislative amendment which prohibits suspicious transaction reports being put in evidence or even referred to in court.

29. Given these limitations and concerns, current feedback information provided by receiving agencies to reporting institutions on specific cases is more limited than general feedback. The only information which appears to be provided in most countries is an acknowledgement of receipt of the suspicious transaction report. In some countries this is provided through an automatic, computer generated response, which would be the most efficient method of responding. The other form of specific feedback which is relied on in many countries is informal feedback through unofficial contacts. Often this is based on the police officer or prosecutor who is investigating the case following up the initial report, and serving the reporting institution with a search warrant, or some other form of compulsory court order requiring further information to be produced. Although this gives the institution some further feedback information, it will only be interim information not showing the result of the case, and the institution is left uncertain as to when it will receive this information.

30. Depending on the degree to which the practical and legal considerations referred to in paragraph 28 apply in each country, other types of specific feedback are provided - this includes regular advice on cases that are closed, information on whether a case has been passed on for investigation and the name of the investigating police officer or district, and advice on the result of a case when it is concluded. In most countries, feedback is not normally provided during the pendancy of any investigation involving the report.

31. Having regard to current practice and the concerns identified above, and taking into account the requirements imposed by any national secrecy or privacy legislation, and subject to other limitations such as risk to the investigation and resource implications, it is recommended that whenever possible, the following specific feedback is provided (and that time limits could also be determined by appropriate authorities so that it is assured that the feedback is timely), namely that :

a) receipt of the report should be acknowledged by the FIU;

b) if the report will be subject to a fuller investigation, the institution could be advised of the agency that will investigate the report, if the agency does not believe this would adversely affect the investigation; and

c) if a case is closed or completed, whether because of a concluded prosecution, because the report was found to relate to a legitimate transaction or for other reasons, then the institution should receive information on that decision or result;

V. CONCLUSION

32. In relation to both specific and general feedback, it is necessary that an efficient system exists for determining whether the report led or contributed to a positive result, whether by way of prosecution or confiscation, or through it's intelligence value. Whatever the administrative structure of the government agencies involved in collecting intelligence or investigating and prosecuting criminality it is essential that whichever agency is responsible for providing feedback receives the information and results upon which that feedback is based. If the FIU which receives the report is the body responsible, this will usually require the investigating officers or the prosecutor to provide the FIU with feedback on the results in a timely and efficient way. One method of efficiently achieving this could be through the use of a standard reporting form, combined with a set distribution list. Failure to provide such information will make the feedback received by reporting institutions far less accurate or valuable.

33. It is clear that there is considerable diversity in the volume, types and methods of general and specific feedback currently being provided. The types and methods of feedback are undoubtedly improving, and many countries are working closely with their financial sectors to try to increase the amount of feedback and reduce any limitations, but it is clear that the provision of feedback is still at an early stage of development in most

countries. Further co-operative exchange of information and ideas is thus necessary for the partnership between FIUs, law enforcement and the financial sector to work more effectively, and for countries to provide not only an increased level of feedback, but also where feasible, greater uniformity.

2 June 1998

FATF, *Third Mutual Evaluation on Anti-Money Laundering and Combating the Financing of Terrorism: Canada* (Paris: FATF, 2008)

Financial Action Task Force
Groupe d'action financière

THIRD MUTUAL EVALUATION ON ANTI-MONEY LAUNDERING AND COMBATING THE FINANCING OF TERRORISM

CANADA

29 FEBRUARY 2008

TABLE OF CONTENTS

Tables

PREFACE - INFORMATION AND METHODOLOGY USED FOR THE EVALUATION[1]

1. The evaluation of the anti-money laundering (AML) and combating the financing of terrorism (CFT) regime of Canada was based on the Forty Recommendations 2003 and the Eight Special Recommendations on Terrorist Financing 2001 of the Financial Action Task Force (FATF), and was prepared using the AML/CFT Methodology 2004[2]. The evaluation was based on the laws, regulations and other materials supplied by Canada, and information obtained by the evaluation team during its on-site visit to Canada from 19 to 30 March 2007, and subsequently. During the on-site visit, the evaluation team met with officials and representatives of all relevant Canadian government agencies and the private sector. A list of the bodies met is set out in Annex II to the mutual evaluation report.

2. The evaluation was conducted by an assessment team which consisted of members of the FATF Secretariat, APG Secretariat and FATF and APG experts in criminal law, law enforcement and regulatory issues: Mr. John Carlson and Ms. Catherine Marty from the FATF Secretariat, Dr. Gordon Hook from the APG Secretariat, Ms. Anne Juniel, financial expert, Bank of France (France), Mr. Jack de Kluiver, legal expert, Department of Justice (United States), Mr. Marc Penna, law enforcement expert, Cellule de Traitement des Informations Financières (Belgium), Mr. Bill Peoples, law enforcement expert, New Zealand Police (New Zealand) and Mr. Jeremy Platts, financial expert, Hong Kong Monetary Authority (Hong Kong). Mr. Robin Sykes, Central Bank of Jamaica participated as an observer. The assessment team reviewed the institutional framework, the relevant AML/CFT laws, regulations, guidelines and other requirements, and the regulatory and other systems in place to deter money laundering (ML) and the financing of terrorism (FT) through financial institutions and Designated Non-Financial Businesses and Professions (DNFBP), as well as examining the capacity, the implementation and the effectiveness of all these systems.[3]

3. This report provides a summary of the AML/CFT measures in place in Canada as at the date of the on-site visit or immediately thereafter. It describes and analyses those measures, and provides recommendations on how certain aspects of the system could be strengthened (see Table 2). It also sets out Canada's levels of compliance with the FATF 40+9 Recommendations (see Table 1).[4]

---

1 Generally, FATF reports are written in United Kingdom English; however, this report is written in Canadian English to avoid any confusion that may be caused by the spelling of Canadian agencies or citations from Canadian laws, regulations and other sources.

2 As updated in February 2007.

3 The list of all bodies met during the on-site mission, the copies of the key laws, regulations and other measures and the list of all laws, regulations and other materials received and reviewed by the assessors are available in the Annexes of this report.

4 Also see Table 1 for an explanation of the compliance ratings (C, LC, PC and NC).

EXECUTIVE SUMMARY

1. Background Information

4. This report provides a summary of the AML/CFT measures in place in Canada as of June 2007. The report describes and analyses those measures and provides recommendations on how certain aspects of the system could be strengthened. It also sets out Canada's levels of compliance with the FATF 40 + 9 Recommendations (see attached table on the Ratings of Compliance with the FATF Recommendations).

5. Canada has strengthened its overall AML/CFT regime since its last FATF mutual evaluation (1997) by implementing a number of changes both in terms of statutory amendments and structural changes. The most important developments were the enactment of the Proceeds of Crime (Money Laundering) and Terrorist Financing Act and the creation of the Canadian Financial Intelligence Unit (FINTRAC) in 2000. With regard to the legal measures (ML and TF offences, confiscation, freezing mechanisms), the legal framework is generally in line with the FATF standards however further steps could be taken to enhance effective implementation. The Canadian FIU has been provided with extensive powers and responsibilities. Since it became operationally effective in November 2001, FINTRAC has undertaken extensive outreach and assistance to reporting entities and has developed close relationships with government partners. There are concerns about its effectiveness in disclosing money laundering and terrorist financing cases to law enforcement authorities.

6. Canada has recently introduced a significant set of new requirements for financial institutions that aim at implementing the FATF standards. A large number of these new requirements will only be in force in June 2008, and these, together with further amendments applicable to DNFBPs due to come into force in December 2008, have not been analysed in the context of this evaluation. As it currently stands however, the preventive system is generally insufficient to meet the FATF Recommendations. In addition, certain financial institutions that undertake financial activities, as defined by the FATF Recommendations, are not currently covered by the AML/CFT regime. Moreover, both the scope of coverage and the AML/CFT requirements for the designated non-financial businesses and professions (DNFBPs) are insufficient to meet the FATF standards. Although FINTRAC and the Office of the Superintendent of Financial Institutions (OSFI) are involved in comprehensive supervisory actions, there are varying degrees of supervision for AML/CFT purposes in the financial sector.

7. Illicit proceeds from a variety of criminal activities contribute to the ongoing money laundering situation in Canada with drug trafficking as the source of much of the money laundered. Other sources of proceeds of crime include, but are not limited to, prostitution rings, contraband smuggling, illegal arms sales, migrant smuggling, and white-collar crime such as securities offences, real estate fraud, credit card fraud and telemarketing fraud. While there is no estimate for the total annual proceeds of crime, drug sales are estimated to amount to several billion dollars.

8. The money laundering methods used in Canada have remained relatively consistent in recent years. They essentially consist of: smuggling; money service businesses and currency exchanges; casinos; purchase of real estate; wire transfers; establishment of offshore corporations; credit cards, stored value cards and new payment methods; use of nominees; use of foreign bank accounts; use of professional services (lawyers, accountants, etc.); and reinvestment and distribution in illicit drugs. At the placement stage, criminals are using money service businesses or casinos. Electronic funds transfers are being used for layering and at the integration stage, criminal proceeds are used to purchase high-value assets in attempts to conceal the origin of the funds. Most recently, there have been signs that criminals are turning to such methods as Internet payments or cross-border movement of gold bullion.

9. Canadian law enforcement authorities have identified a number of terrorist organisations operating in Canada. Investigations have shown that terrorist cells have a tendency to remain self-sufficient by generating funds locally. In some instances, they may do so by committing petty crimes, such as welfare fraud or credit card fraud. In other instances, cell members have started businesses to glean financial information from unsuspecting customers in order to clone credit cards and commit identity thefts. Law enforcement authorities have intelligence indicating that suspected terrorist entities in Canada are raising funds through drug trafficking.

10. The financial sector in Canada is diverse, mature, well developed and includes many service providers. The sector is significantly integrated, as many players offer similar services and a small group of "financial groups" or conglomerates offer a large variety of financial products directly or through subsidiaries. A wide range of financial institutions exist in Canada and are subject to AML/CFT requirements: banks; credit unions and *caisses populaires*; life insurance companies; trust companies (that offer services similar to those provided by banks but can also administer estates, personal and institutional trusts, trustee pension plans and agency contracts); securities firms and money service businesses (MSBs). Financial leasing, factoring, finance companies (*i.e.* entities specialised in consumer lending, credit cards, equipment financing and small business loans that are not loan companies), providers of e-money, Internet payment providers and cheque cashers are also engaged in financial activities as defined by the FATF.

11. The following DNFBPs are currently subject to AML/CFT requirements: casinos, real estate agents and accountants. In addition, the Government of Canada has recently enacted regulations to cover the following DNFBPs as of December 2008: lawyers, notaries (relevant in Québec and British Columbia only) and dealers in precious metals and stones. Trust and company service providers are not separately recognised nor regulated as a discrete category of entity in Canada and do not fall under the AML/CFT regime. Trust companies, accountants, lawyers and other independent legal professions provide most services of this nature, though it appears that some other businesses exist that engage in TCSP activity.

2. Legal System and Related Institutional Measures

12. The anti-money laundering offences are comprehensive and Canada generally meets the requirements under Recommendations 1 and 2. The money laundering offence (section 462.31 Criminal Code (CC)) is part of a broader proceeds of crime regime designed to cover all obligations in the 1988 Vienna Convention and the 2000 Palermo Convention. Section 462.31 encompasses acts of using, transferring the possession of, sending or delivering to any person or place, transporting, transmitting, altering, disposing of or otherwise dealings with, in any manner and by any means, any property or any proceeds of any property. The Section 462.31 offence is however technically inconsistent with the relevant UN Conventions in that it has a specific intent mental element that is not consistent with those Conventions. Designated offence refers to virtually all indictable offences and also covers all ancillary offences.

13. There is also a second offence of possession of proceeds of crime (s.354(1), CC), whereby it is an offence to knowingly possess money or property derived directly or indirectly from any indictable Canadian criminal offence or any foreign offence, that had it been committed in Canada would have been an indictable offence in Canada. The two offences cover almost all of the requirements of R.1 & 2, with only some minor technical deficiencies (see comments above). Despite this, the emphasis on and preference for pursuing the predicate crimes and the offence of possession of property obtained by crime, and the low number of s.462.31 convictions indicates that the statutes available for countering ML are not being used as effectively as they could be. Canada should develop a more proactive approach to prosecuting the specific money laundering charge under s.462.31.

14. Canada has three criminal offences related to the financing of terrorism (s. 83.02-83.04, CC). The offences are broadly defined and wide-reaching in effect. These offences cover the provision or collection of property intending or knowing that it will be used, in whole or in part, to carry out or

facilitate a "terrorist activity", to possess or use property for that purpose, or to benefit a terrorist group. The offences and related provisions cover all types of property; include ancillary offences; and generally meet all the requirements of the FATF standards. The offences have been in existence for several years and there have been a large number of investigations, but only three persons have been charged with terrorist financing and these charges have not been heard yet. There have been no convictions. Given these facts, the authorities should consider how the TF offence could be more effectively implemented. The overall effectiveness of the TF offence and regime is an issue that the authorities will need to pay close attention to going forward.

15. The CC and the Controlled Drugs and Substances Act (CDSA) contain extensive provisions that authorise the forfeiture of proceeds of crime and instrumentalities used in or intended for use in offences. Forfeiture is available for all money laundering and terrorist financing offences, as well as all predicate offences. Conviction for any indictable offence or a conspiracy or attempt to commit an indictable offence is a prerequisite to forfeiture. There are also discretionary provisions for a fine in lieu of forfeiture, which is the action that Canada has taken to seek to deprive criminals of property of equivalent value. If there are no assets to which such a fine can be applied the court must impose a jail sentence, otherwise the fine is enforced as a civil judgement against any other property of the offender, but cannot be applied against third party property in such cases.

16. Other legislative provisions are broad and allow the authorities to restrain or seize and search for proceeds of crime or instrumentalities. The definition of "property" is broad, and includes any benefit or advantage obtained or "derived directly or indirectly" as a result of the offence. The available data on seizure/restraint and forfeiture is not comprehensive and suggests that it could be more effective.

17. Canada's United Nations Act and its related regulations enable the Canadian government to implement the decisions contained in the resolutions of the United Nations Security Council. The United Nations Al-Qaida and Taliban Regulations (UNAQTR), and the Regulations Implementing the United Nations Resolutions on the Suppression of Terrorism (RIUNRST), were enacted under the authority of Canada's United Nations Act. These regulations allow Canada to list a terrorist individual or entity for the purpose of freezing the funds or assets owned or controlled by that individual or entity or its associates. A third listing mechanism exists under the Criminal Code for threats to Canada's domestic security. Canada has laws and regulations to freeze terrorist funds or other assets of persons designated in the context of S/RES/1267(1999) and S/RES/1373(2001) that are in line with the legal international requirements. However, although the lists are published in the Canada Gazette, there needs to be more communication on listed persons provided to certain categories of financial institutions and other potential asset holders as well as more clear and practical guidance to reporting entities (including DNFBPs and MSBs) that may be holding targeted funds or other assets concerning their obligations in taking action under freezing mechanisms. Canada should also enhance the existing measures to monitor the compliance with the legislation governing the obligations under SRIII (except for federally regulated financial institutions supervised by OSFI).

18. In 2000, Canada established the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) as a national centre for receiving, analyzing and disseminating information concerning suspected money laundering or terrorist financing. In addition to mandatory reporting by financial institutions and DNFBPs, FINTRAC can receive voluntary information concerning suspicions of money laundering or terrorist financing from the general public and various other sources, including information about cases being investigated by law enforcement agencies and foreign FIUs. FINTRAC has a high level of operational independence and information held by FINTRAC is securely protected.

19. Under the PCMLTFA, FINTRAC is authorized to disseminate financial information to domestic authorities for further action when it has reasonable grounds to suspect that the information would be relevant and useful to the investigation or prosecution of a money laundering or terrorist activity offence. FINTRAC provides comprehensive guidance to reporting entities regarding the manner of reporting and the procedures that should be followed when reporting. In February 2006, FINTRAC

launched an updated secure online report capture system that provides reporting entities with a reliable mechanism to file reports through the Internet. However, the format of reporting forms is perceived by certain reporting entities as being too rigid and reduces the capacity to communicate a maximum level of information. FINTRAC develops very few typologies and is not allowed by the PCMLTFA to ask (directly or indirectly) for additional financial information from reporting entities in line with the FATF requirements.

20. The information that FINTRAC can provide to a disclosure recipient is referred to as "designated information" and includes key details that identify individuals or entities and their financial transactions. Under the PCMLTFA, FINTRAC has the authority to collect information from databases maintained for law enforcement or national security purposes and in respect of which an agreement is entered into. FINTRAC currently has access to two major national police databases. However, FINTRAC has limited access to intelligence information from certain administrative authorities (such as the Canada Revenue Agency (CRA)).

21. There are serious issues in relation to effectiveness with respect to FINTRAC. Although Canada decided to establish a FIU that would make maximum use of advanced technologies in its analytical work, the number of staff dedicated to the analysis of potential ML/FT cases is low, especially in light of the number of reports FINTRAC receives, and FINTRAC has decided to concentrate its efforts on large or significant ML/TF cases. At the time of the on-site visit, the feedback provided by some organizations that receive FINTRAC disclosures was generally negative (unsatisfactory timelines for disclosures, relatively limited added value of FINTRAC disclosures in law enforcement investigations, FINTRAC disclosures positively contributed to existing investigations but rarely generated new ones). It seems that since March 2007, more positive feedback has been received from law enforcement authorities, especially with regard to the timeliness of disclosures. Another important issue is that, FINTRAC disclosures are largely based on voluntary information reports made by law enforcement authorities (80% of cases). This raises serious concerns with respect to the capability of FINTRAC to generate new ML/TF cases independent from existing investigations. Finally, until 2007, no conviction for ML or TF had directly resulted from a FINTRAC disclosure.

22. While all Canadian police forces can investigate money laundering and terrorist financing offences, the Royal Canadian Mounted Police (RCMP), and in particular its Integrated Proceeds of Crime Initiative, IPOC, Units, and, to a lesser extent, the provincial law enforcement authorities in Ontario (the Ontario Provincial Police) and Québec (*Sûreté du Québec*) undertake virtually all money laundering and terrorist financing investigations. The powers and capacity of the law enforcement services are sound and they have appropriate investigative techniques at their disposal. The RCMP acknowledges that, due to resources constraints, it essentially focuses its resources on large, complex ML investigations related to organised crime groups. The RCMP could undertake a larger number of investigations and tackle a larger spectrum of ML/TF cases with additional resources. In addition, consideration should be given to improving the educational and training programmes provided for judges and courts concerning ML and TF offences.

23. Canada has implemented comprehensive measures to detect the physical cross-border transportation of currency and bearer negotiable instruments that are related to ML or FT. These measures are fully in line with the FATF requirements and are effectively implemented.

3. Preventive Measures - Financial Institutions

24. To combat money laundering, the Canadian Parliament enacted the Proceeds of Crime (Money Laundering) Act which received Royal Assent on 29 June 2000. To help fight terrorism, it amended and renamed the legislation the Proceeds of Crime (Money Laundering) and Terrorist Financing Act (PCMLTFA). The PCMLTF Regulations and the PCMLTF Suspicious Transaction Reporting Regulations implement the provisions of the Act. In October 2006, a Bill proposing to further strengthen the PCMLTFA was introduced in Parliament to expand the scope of preventive measures. The Bill received Royal Assent in December 2006. Some new provisions of the PCMLTFA came into

force on 10 February 2007 and on 27 June 2007, the *Regulations Amending Certain Regulations Made Under the PCMLTFA* were enacted and published in the Canada Gazette. Some of these provisions came into force on 30 June 2007; others will take effect on 23 June 2008. A second package of regulatory amendments, the *Proceeds of Crime (Money Laundering) and Terrorist Financing Registration Regulations* setting out a framework for the registration of MSBs will come into force on 30 June 2008. Further regulations were enacted on 26 December 2007 that will come into force in December 2008. However, for the purpose of this report, none of the changes coming into force after June 2007 were considered.

25. FINTRAC (for all reporting parties), OSFI (for Federally Regulated Financial Institutions) and IDA (for securities dealers) have developed guidelines to assist persons and entities subject to the PCMLTFA and the Regulations to understand their obligations. IDA By-laws, Policies and Regulations are legally enforceable and can be considered as "other enforceable means". OSFI and FINTRAC Guidance are considered as non-binding guidance for the purpose of this report.

26. In Canada, certain entities that undertake financial activities, as defined by the FATF Recommendations, are not currently covered by the AML/CFT regime (except for entities that are caught because they also engage in financial activities which are captured under the regime). These include: financial leasing entities; factoring entities; finance companies (*i.e.* mostly entities specialized in consumer lending, issuing certain types of credit cards, equipment financing and unregulated small business lending entities); providers of e-money; Internet payment providers[5]; and cheque cashers[6] when their only activity is cashing cheques issued to denominated persons. Canada considers that these entities pose little or no threat of money laundering/terrorist financing. Canada's approach to risk is not in line with the FATF approach as defined in the Methodology where a list of activities and operations must be covered by the AML/CFT regime unless there is a proven low risk of ML/TF. Canada has applied the opposite approach and has extended coverage of the PCMLTFA only to activities for which there is a proven ML/TF risk. Moreover, the risk assessment process carried out by Canada to reach conclusions on the exposure of certain sectors to ML/TF risks is either non-existent or very fragmented and ad-hoc.

27. Customer identification measures in Canada are currently insufficient to meet the FATF standards[7]. Current legislation does not impose a requirement for financial institutions to conduct CDD in all cases covered by the FATF standards, including when there is a suspicion of ML or TF or when financial institutions have doubts about the veracity or adequacy of previously obtained CDD data. The current customer identification measures for natural persons are insufficient and, except for IDA supervised entities, financial institutions are not required to understand the ownership and control structure of the customer nor obliged to determine the natural persons that ultimately own or control the customer. There are currently no requirements (except for IDA supervised entities) to obtain information on the purpose and intended nature of the business relationship. There is no obligation to perform enhanced due diligence for higher risk categories of customer, business relationship or transaction and the current approach is not in line with the FATF standards regarding situations of lower risk. Finally, the timing of verification of customer identity is inadequate for certain financial entities vis-à-vis certain customers. Financial institutions (except IDA supervised entities in some circumstances) are not prohibited from opening an account or commencing a business relationship or performing a transaction and they are not required to make a suspicious transaction report where they are unable to identify the customer.

---

5 Internet payment and e-money providers are only subject to the Act if they also offer funds remittance or transmission services and, as such, would be considered money services businesses.

6 Cheque cashing businesses that also offer money remittance services are included in the definition of MSBs under the PCMLTFA and are therefore subject to the requirements of the PCMLTFA.

7 New provisions will enter into force in June 2008 and December 2008. These provisions will impose a number of additional requirements including in the following areas: CDD, politically exposed persons, SR VII, record keeping, reporting of suspicious transactions, requirements for DNFBPs, and beneficial ownership information in company legislation. These changes were not assessed as the changes fall outside the period of the evaluation.

28. At the time of the on-site visit, there were no specific legislative or other enforceable requirements in relation to PEPs and limited requirements in relation to correspondent banking relationships. Provisions in relation to the prevention of misuse of technological developments in ML/TF schemes and the mitigation of risks associated with non-face to face business were not in compliance with the FATF requirements. New provisions entered into force in June 2007 for correspondent banking, and will enter into force in June 2008 in relation to PEPs. Although introduced business arrangements exist in Canada, Canada has not implemented adequate requirements in relation to third party introduced business.

29. There is no financial institution secrecy law that inhibits the implementation of AML/CFT requirements. Canada's record-keeping requirements are generally satisfactory. At the time of the on-site visit, Canada had not implemented SRVII on wire transfers.

30. Under the PCMLTFA, there is currently no explicit provision requiring financial institutions to pay special attention to all complex, unusual large transactions. Such a requirement may only be indirectly deduced from (a) the requirement to report to FINTRAC suspicious transactions that may be related to money laundering or terrorist financing, and (b) the obligation to report large international electronic funds transfers and large cash transactions. Canada should ensure that the new provisions coming into force in June 2008 will fully and effectively address these issues. The obligation to give special attention to business relationships and transactions with persons from countries which do not or insufficiently apply the FATF Recommendations is also not fully met.

31. All financial institutions subject to the PCMLTFA are required to report to FINTRAC transactions of any amount for which there are reasonable grounds to suspect are related to the commission of a money laundering offence or a terrorist financing offence. However, certain categories of financial institution (see comments above) are not subject to the PCMLTFA and, consequently, to any mandatory reporting requirement to FINTRAC. Under the current legislation, reporting entities are only required to report completed transactions to FINTRAC. As from June 2008, the reporting requirement will be broadened to the reporting of any suspicious attempted transactions related to money laundering or terrorist financing. The total number of STRs sent by the financial sector appears satisfactory (an average of 20 000 every year since 2004). The different financial institutions however contributed unequally to the total number of STRs (securities dealers, life insurance companies and life insurance brokers and dealers have sent limited numbers of STRs).

32. No criminal or civil proceedings lie against persons and entities for making a suspicious transaction report, a terrorist property report, a large cash transaction report or an electronic funds transfer report in good faith or for providing FINTRAC with information about suspicions of money laundering or of the financing of terrorist activities. The provisions in relation to tipping off are also fully in line with the FATF standards. FINTRAC gives very detailed guidance related to STRs to assist financial institutions in implementing and complying with STR requirements and provides satisfactory general feedback to large financial institutions. Specific feedback is provided within the legislative limitations. The PCMLTFA requires reporting entities to submit reports to FINTRAC on large cash transactions and electronic funds transfers and the FATF requirements in that area are met.

33. The requirements in relation to internal procedures, policies and controls to prevent ML and FT are generally sound, but some changes are needed to bring them fully in line with the FATF standards. FRFIs have generally adopted enterprise-wide AML/CFT standards based on the OSFI Guideline and supervisory practice. There is no specific requirement regarding the enforcement of AML/CFT measures consistent with Canadian or FATF requirements in foreign branches and subsidiaries.

34. In addition, Canadian financial entities are prohibited from entering into a business relationship with shell banks or with foreign financial institutions that have correspondent banking relationships with shell banks. Canada is broadly in compliance with the FATF requirements in this regard.

35. FINTRAC is responsible for ensuring compliance with the PCMLTFA. FINTRAC's compliance program is based on a collaborative risk-based approach divided into two categories: the promotion of compliance and the monitoring of compliance. FINTRAC has signed MOUs with certain financial and gaming regulators or supervisors to share AML/CFT supervisory information. In addition, some regulators have provisions under their own legislation or codes of conduct that impose similar requirements to, or which complement the key provisions in the PCMLTFA. Globally, there are unequal degrees of regulation and supervision, depending on the sectors and provinces although OSFI is responsible for regulating well over 80% of the Canadian financial sector as measured by total assets. It is worth mentioning that the entities which are currently not subject to the PCMLTFA are not subject to prudential supervision either.

36. The number of examinations performed by FINTRAC appears to be relatively low compared with the total number of reporting financial entities (potentially more than 100 000) although a single FINTRAC examination can cover a large number of reporting entities (*e.g.* in the case of life insurance companies/agents and securities firms/dealers). Even including examinations conducted by FINTRAC's MOU partners, the figures remain rather low, except for the banking and federally regulated trust companies sectors which have a good supervisory coverage by OSFI. The use of a sophisticated risk-based model helps FINTRAC prioritise its supervisory activities. Those activities encompass not only examinations of reporting entities but also guidance, outreach, self-assessment tools and follow-up actions after examinations.

37. The securities sector is regulated by provincial securities regulatory authorities (SRAs) and has been subject to limited AML/CFT supervision. The on-site AML/CFT assessments conducted by OSFI since 2003 in the federally regulated life insurance sector amount to 90% of the industry measured by its assets but less than 10% of the supervised population. AML/CFT supervision by provincial financial supervisors appears to be less effective for life insurance agents because AML/CFT controls are mostly assessed by FINTRAC. In addition, despite the focus put on that sector, FINTRAC had managed to perform controls on only 60 credit unions and *caisses populaires* up to mid-2007, out of a total population of 1 250 reporting entities.

38. Under the current version of the PCMLTFA and its Regulations, FINTRAC has limited powers of enforcement against reporting entities and their directors or senior management for failure to comply with or properly implement AML/CFT requirements. Currently, FINTRAC cannot impose penalties and is limited to referring cases to law enforcement for investigation. Strengthening the sanctions regime in June 2008 with the introduction of administrative and monetary penalties should be a crucial enhancement of the system. The current PCMLTFA provides for a series of criminal sanctions for contraventions of various provisions of the Act. These can lead to criminal penalties of up to CAD 2 million in fines and five years in prison for non-compliance. The December 2006 amendments expanded the regime of criminal sanctions to the violations of most of the provisions of the PCMLTFA and regulations.

39. OSFI has a wider range of possible enforcement actions or sanctions than FINTRAC. Nevertheless, sanctions remain infrequently used, and do not appear to be sufficiently effective, proportionate and dissuasive, though this may be partially due to the early intervention strategy adopted by OSFI. In the securities sector, except for IDA which has effectively applied in a number of cases heavy sanctions to its members for non compliance with AML/CFT standards, it seems that the powers of sanction have generally not been used by SRAs or SROs in that area, as they have rarely issued specific rules or regulations related to AML/CFT and consider such issues to be mainly FINTRAC's responsibility.

40. Measures aimed at preventing criminals or their associates from holding a significant or controlling interest or holding a management function in a financial institution, as well as the "fit and proper" principle are widespread. There is no systematic harmonization of these requirements across the federal and provincial systems. At the time of the on-site visit, there was no compulsory obligation

for FRFIs to implement screening procedures for directors or senior management, after the initial incorporation or authorisation procedures are concluded.

41. There was no registration regime for MSBs at the time of the on-site visit although Canada has created a federal registration regime that will enter into force in June 2008. The preventive measures currently applicable to MSBs (especially in relation to CDD, reporting of suspicious transactions or SRVII) present serious weaknesses and the MSB sector is subject to a limited range of preventive measures that are not in compliance with international standards. In addition, the sanction regime applicable to MSBs that fail to comply with the PCMLTFA is currently not effective, proportionate and dissuasive. Canada should ensure effective implementation of the registration system for MSBs in force in June 2008 and ensure that the requirements applicable to MSBs fully meet the FATF requirements.

4. Preventive Measures – Designated Non-Financial Businesses and Professions (DNFBPs)

42. The PCMLTFA currently covers casinos, real estate brokers and sales representatives and accountants and accounting firms. Lawyers, Quebec Notaries, BC Notaries, dealers in precious metals and stones, Internet casinos, and TCSPs are not currently captured by the PCMLTFA and therefore are not subject to the requirements under Recommendations 5, 6 and 8-11. It should be noted that Internet casinos are illegal in Canada, but servers hosting such activity exists in Canada, and Canada should either take law enforcement action to eliminate this illegal activity, or regulate these casinos. The requirements in relation to Recommendation 5 and 13 applicable to land-based casinos, real estate brokers and sales representatives and accountants do not meet the FATF standards. Canada has not implemented any specific AML/CFT measures concerning PEPs that are applicable to DNFBPs. There are no specific legislative or other enforceable obligations for DNFBPs to take measures to prevent the misuse of technological developments in ML/TF schemes. The DNFBPs are not required to have policies and procedures in place to address any specific risk associated with non face-to-face business relationships or transactions. Provisions in relation to record-keeping with regard to casinos, real estate brokers and sales representatives and accountants are not fully in line with the FATF standards.

43. Because of limited staff resources, FINTRAC is not in a position to ensure an efficient monitoring of the effective application of AML/CFT legislation in the non-financial sectors captured by the PCMLTFA, especially in sectors/provinces where the primary regulators or SROs are not or insufficiently involved in AML/CFT compliance supervision. Canada should ensure that supervisory actions (especially on-site examinations) vis-à-vis casinos and more generally with regard to all DNFBPs are reinforced. With regard to DNFBPs, the sanction regime available to FINTRAC is currently inadequate but should be strengthened when administrative and monetary penalties are introduced in June 2008.

5. Legal Persons and Arrangements & Non-Profit Organisations

44. Canada's corporate registry and information collection system does not adequately focus on obtaining information relating to the beneficial owner or controller of bodies corporate in Canada. The information collected and maintained (including changes in information) relates almost solely to persons and other corporations that are the immediate owners or controllers of a corporation through shareholdings. The federal corporate registrar should consider measures to mitigate the threat that may arise from the use of legal persons to perpetrate money laundering and terrorist financing. Canada should ensure that competent authorities have access to accurate and current information on the ultimate beneficial owners and controllers of all legal persons on a timely basis.

45. The Canada Business Corporations Act (CBCA) appears to allow for the ownership of corporations through the use of bearer shares, although it is likely that the number of bearer shares is limited. Nonetheless, there do not appear to be any special measures in place to ensure disclosure of beneficial owners of these shares in order to mitigate the ML or TF risk.

46. Except for the province of Quebec (where the *fiducie* is similar to the trust), all provinces are common law jurisdictions and have trust laws. Canada relies on the investigatory powers of law enforcement to obtain or have access to information concerning the beneficial ownership and control of trusts and *fiducies*. These powers are generally sound and widely used. In the case of trusts and *fiducies*, limited, partial information is available, and even where certain information is recorded by agencies such as CRA or FINTRAC, agencies can only share this information with law enforcement authorities in limited circumstances. Canada should implement measures to ensure that adequate, accurate and timely information is available to law enforcement authorities concerning the beneficial ownership and control of trusts and *fiducie* in Québec.

47. Canada has a well-established registration system for charities and has taken considerable steps to implement SR VIII. Registered charities include most organizations that raise and distribute funds for social or humanitarian purposes. Charities represent the most significant portion of the financial resources of the NPO sector and account for a substantial share of the sector's foreign activities. Nevertheless, in line with the FATF's risk-based approach, Canada should continue to monitor risks in other segments of the NPO sector.

6. National and International Co-operation

48. Canada has developed a large number of initiatives to improve co-operation mechanisms among the different domestic stakeholders taking part in the fight against money laundering and terrorist financing. The interagency cooperation between the FIU and law enforcement authorities is not fully effective and should be enhanced in order for Canada to optimise its capacity to investigate ML and TF cases. Canada should consider encouraging more bilateral contacts among agencies.

49. Almost all of the provisions of the Palermo and Vienna Conventions have been fully implemented, and only some minor technical deficiencies remain. Canada has extensive formal and limited informal means of providing mutual legal assistance (MLA) to requesting countries. Where the evidence can only be gathered pursuant to a court order, Canada's Mutual Legal Assistance in Criminal Matters Act ("MLACMA" or "the Act") is the domestic legislation that enables a Canadian court to issue orders compelling the production or authorizing the seizure of evidence at the request of a treaty partner. Canada has a centrally-coordinated MLA regime involving: the Department of Justice, Crown prosecutors, the Judiciary and, on occasion, law enforcement agents who execute Canadian courts' orders. Canada should focus on improving the effectiveness of the current regime and the collection of adequate data.

50. Under the MLACMA, Canada can directly enforce foreign orders for the restraint, seizure and forfeiture of assets on receipt of a request from a treaty partner or designated entity in line with the FATF requirements. However, in terms of implementation, there is limited evidence of effective confiscation assistance, and Canada should consider how this could be enhanced.

51. The money laundering and terrorist financing offences are extraditable offences under Canada's Extradition Act. The current legal provisions on extradition meet the FATF standards; however Canada should maintain better extradition request data, so as to better assess the timeliness of assistance.

52. In general, law enforcement authorities can engage in a wide range of international co-operation. FINTRAC can also share its intelligence with foreign counterparts. As the AML/CFT supervisor, FINTRAC has the legal capacity to exchange supervisory information with foreign regulators, but has not yet entered into any MOUs that will allow it to share in practice. On the other hand, OSFI can exchange compliance information with foreign counterparts.

7. Other issues

53. Overall, authorities seem to be well-equipped, staffed, resourced and trained. There are concerns about the availability of resources within FINTRAC to undertake a sufficient number of comprehensive examinations. The number of staff at FINTRAC dedicated to the analysis of ML/TF cases is also too low. Finally, the authorities in charge of processing MLA requests should acquire additional resources to fulfil their tasks.

54. Canada collects a large set of statistics although more comprehensive data should be gathered regarding ML investigations and sentencing, MLA and extradition requests.

MUTUAL EVALUATION REPORT

1. GENERAL

1.1 General Information on Canada

55. Canada consists of 10 provinces (Alberta, British Columbia, Manitoba, Newfoundland and Labrador, New Brunswick, Nova Scotia, Ontario, Prince Edward Island, Québec and Saskatchewan), and three territories (the Northwest Territories, Nunavut and Yukon). Ottawa, Ontario, is the national capital. Geographically, it is the second-largest country in the world, with a land area of 9.9 million square kilometres. Canada is bordered by the United States of America to the south and northwest (Alaska), with coastlines on the Pacific Ocean to the west, the Arctic Ocean to the north and the Atlantic Ocean to the east. Approximately 86 % of Canada's 32 million people live in the country's four largest provinces: Ontario (39 %), Québec (24 %), British Columbia (13 %) and Alberta (10 %). Canadians have an average life expectancy of 80 years and the median age is currently 39 years. Canada's two official languages are English and French.

56. Canada is the eighth-largest economy in the world with about 70% of the economy devoted to services. Manufacturing now accounts for just over 25% and the primary sectors account for around 5%. In 2006, Canadian per capita gross domestic product (GDP) was CAD 44 083.

System of government

57. Canada is a federal state. Pursuant to the Constitution Act, 1867, the governing power of the country is divided between the federal government and provincial governments. The federal government is responsible for matters that affect all of Canada, including national defence, criminal law, banking, citizenship and foreign relations. Provincial and territorial governments look after such matters as education, health care and social services. They share responsibilities with the federal government in some areas. For instance, the federal government has legislative jurisdiction over criminal law and procedure, while the provinces are responsible for the administration of the courts of criminal jurisdiction including federal courts constituted under section 96 of the Constitution. This provincial jurisdiction includes the constitution, maintenance and organization of provincial courts in both civil and criminal jurisdictions, and civil procedure as applied in provincial courts. There is also a third level of government at the community level, known as municipal (or local) government, which is responsible for local matters.

58. Canada has a Westminster parliamentary system of government. Parliament is divided into three heads of power: the Queen, the Senate (the upper house of 105 members) and the House of Commons (the lower house of 308 members). Canada is a constitutional monarchy; Her Majesty Queen Elizabeth II is Canada's official head of state. She is represented in Canada by the Governor General, who gives Royal Assent, in the name of the Queen, to all legislation passed by Parliament. The Queen appoints the Governor General on the advice of the Prime Minister. One of the most important roles of the Governor General is to ensure that Canada always has a Prime Minister. The House of Commons, the Senate and the Governor General must approve all parliamentary bills before they become law. The government introduces most parliamentary legislation, but the Senate can also introduce its own bills, except bills to spend public money or impose taxes.

Legal system and hierarchy of laws

59. Canada is governed by the common law, or rule of precedent, and by a civil law system in Québec. Every federal law must be drafted in both official languages but, because of Canada's dual legal system, it must also respect both the common law and civil law traditions in the provinces. Provinces have a similar system for passing legislation into force with the exception that provincial legislatures do not have an upper house. As such, in order for provincial legislation to become law, it

requires enactment by the provincial legislature. The Queen's provincial representatives, the lieutenant governors, give Royal Assent, in the name of the Queen, to all legislation enacted by provincial legislatures. Territorial and local governments are not sovereign units. The powers of territories are delegated by Parliament, while those of local governments are delegated mainly by provincial governments.

60. Legislation and regulations are developed in a transparent manner to ensure they reflect the values of society and to ensure that use of the government's legislative and regulatory powers result in the greatest net benefit to Canadian society.

61. When a legislative proposal is made to the Cabinet, it is up to the sponsoring Minister to demonstrate that there are no other ways to achieve the policy objectives effectively. The decision to address a matter through a bill or regulation is made by Cabinet on the basis of analysis of the matter and its alternative solutions, consultations with partners and stakeholders, analysis of impacts of the proposed solution and analysis of the resources that the proposed solution would require. A bill must pass through a series of parliamentary stages (in the House of Commons and the Senate) before it becomes law. The final stage is Royal Assent. The Constitution Act, 1867 states that the approval of the Crown, signified by Royal Assent, is required for any bill to become law after passage by both Houses. Royal Assent can be given by the Governor General as the Queen's representative in Canada or a Deputy of the Governor General.

62. Regulations are another form of law that often stem from the introduction or amendments to legislation. Regulations are not made by Parliament but are made by persons or bodies to whom Parliament has delegated the authority to make them (such as the Governor in Council, a Minister or an administrative agency). Authority to make regulations must be expressly delegated by an Act.

63. The Statutory Instruments Act and the Regulatory Policy of the Government of Canada guide the development of regulations. The Statutory Instruments Act establishes a process designed to ensure that regulations are made on a legally secure foundation. A key element of the Policy is that Canadians are consulted, and that they have an opportunity to participate in developing or modifying regulations and regulatory programs. Each proposed regulation must pass through a series of steps before coming into force, including pre-publication, "making" the regulation, registration, publication, and distribution.

64. Draft regulations are pre-published in Part I of the Canada Gazette to give those who are interested in a regulatory proposal an opportunity to express their views. The length of pre-publication depends on the type of regulation, but typically lasts between 30 and 75 days. Following the period of pre-publication, regulations are "made" by the authority designated in the enabling Act and then transmitted to the Clerk of the Privy Council (within 7 days) for registration. Registration is a crucial step in the case of regulations because it determines when they take effect. Typically, regulations that must be registered come into force on the day they are registered. Following registration, regulations are published, in Part II of the Canada Gazette within 23 days after their registration.

The Canadian Charter of Rights and Freedoms

65. Canada has always sought to protect individual rights and freedoms through legislative enactments such as the Canadian Bill of Rights. This bill became law in 1960 and, as a federal statute, is limited in scope and has no application to provincial laws. On the other hand, the Canadian Charter of Rights and Freedoms enacted in 1982 is part of Canada's Constitution. Unlike the Bill of Rights, it constitutionally entrenches the basic principles and values by which Canadians live and govern themselves. It applies to both federal and provincial jurisdictions and guarantees, among other things, that everyone, regardless of colour, religion, race, belief or a ground analogous thereto, has certain fundamental rights and freedoms "subject only to such reasonable limits prescribed by law as can be demonstrably justified in a free and democratic society."

66. The Charter outlines fundamental rights and freedoms such as the right to life, liberty and security of the person; equality rights, such as the right to protection against discrimination; legal rights of persons accused of crimes, such as the right to a fair trial; freedom of conscience; freedom of religion; freedom of thought and freedom of association.

Canada's Privacy Laws

67. *Public Sector*. Privacy laws regulating the collection, use and disclosure of personal information by governments and the public sector have been in place in Canada since the early 1980s. On 1 July 1983, the Canadian federal government enacted the Privacy Act. This Act imposes obligations on some 150 federal government departments and agencies to respect privacy rights. Companion freedom of information legislation, called the Access to Information Act, was enacted at the same time. Most of Canada's provincial governments have followed suit with similar legislation covering both access to information and protection of privacy in provincial and municipal operations.

68. In relation to the fight against money laundering and terrorist financing, the Proceeds of Crime (Money Laundering) and Terrorist Financing Act (PCMLTFA) sets out numerous provisions specifically designed to protect the privacy of individuals and defines the circumstances under which the Canadian Financial Intelligence Unit (the Financial Transactions and Reports Analysis Centre of Canada, FINTRAC) may disclose personal information. The impact of the PCMLTFA on the privacy of Canadians and the existence of sufficient safeguards in the anti-money laundering and counter terrorist financing legislation has raised discussions in Canada[8]. The amendments that are being brought to the AML/CFT legislation are scrutimized to ensure that the new requirements do not unduly compromise the privacy of Canadians.

69. *Private Sector*. As of 2007, Canadian business and private sector organizations are also subject to federal or provincial privacy protection legislation governing both customer and, with some exceptions, employee information. Québec was the first Canadian jurisdiction to introduce privacy protection legislation applicable to the private sector when it implemented its Act Respecting the Protection of Privacy in the Private Sector in 1994. The federal government enacted the Personal Information Protection and Electronic Documents Act (PIPEDA) effective January 1, 2001. PIPEDA applies to federally-regulated private sector organizations (*i.e.* organizations in the transportation, communications, broadcasting, federal banking and offshore sectors, as well as in Canada's three territories), and to other private sector organizations in provinces that have not enacted "substantially similar" legislation. It applies to personal information and health information that is collected, used or disclosed in the course of commercial activity that takes place across the Canadian border, between provinces, and within a Canadian province that has not enacted "substantially similar" legislation. To date, Alberta and British Columbia have joined Québec in enacting their own private sector privacy legislation. The Privacy Act gives individuals the right to access and request correction of personal information about themselves held by these federal government organizations.

70. The governments of all provinces and territories in Canada, except for Newfoundland and Labrador, also have legislation governing the collection, use and disclosure of personal information. The legislation varies from province to province, but the general right to access and correct personal information exists in all, and each has a commissioner or ombudsman who is authorised to handle complaints.

Court System

71. Canada's court system comprises four levels of courts with varying jurisdictions. First there are provincial and territorial courts, which handle the great majority of criminal cases and some civil cases (*e.g.* family law). Second are the provincial and territorial superior courts (which are federally constituted but provincially administrated, Courts under 96 of the Constitution). Generally, these

[8] See for instance Bill C-25, *An Act to amend the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, the* Opening Statement by the Privacy Commissioner of Canada at: http://www.privcom.gc.ca/parl/2006/parl_061213_e.asp.

courts deal with more serious crimes. They may also take appeals from provincial and territorial court judgments. On the same hierarchical level is the Federal Court, which is responsible for various matters of federal jurisdiction, including immigration and tax cases. At the next level in the hierarchy are the provincial and territorial courts of appeal (again federally constituted) and the Federal Court of Appeal. The final arbiter of the law and highest court of appeal for all matters is the Supreme Court of Canada. The Supreme Court of Canada also plays a special role as adviser to the federal government on interpretation of law. In such a case, a specific question reaches the Supreme Court not after making its way through the court system, but via a direct referral from the government. Such cases are often called "Supreme Court references." Under the Canadian Charter of Rights and Freedoms, individuals accused of the most serious criminal offences (classified as indictable offences) generally have the right to choose to be tried by a judge and jury.

Measures against corruption

72. Corruption is considered to be a serious offence and the Canadian authorities have indicated that it is given high priority in Canadian domestic law. The federal government has amended existing legislation (including the Income Tax Act) and enacted new legislation (Corruption of Foreign Public Officials Act), parliamentary rules and administrative provisions to prevent and prohibit corruption.

73. Most recently, the Government adopted the Federal Accountability Act which puts in place a five-year lobbying ban, eliminates corporate and union donations, and protects whistleblowers, among other reforms. It also updated indictable offences for fraud with respect to public money or money of a Crown corporation, as well as penalties for these offences that include fines and imprisonment. An amendment to the Criminal Code makes persons convicted of those fraud offences ineligible for employment by the Crown, as well as being unable to otherwise contract with the Crown or benefit from contracts between the government and another person.

74. Canada plays an active role in the fight against corruption in a number of fora, such as the United Nations (UN), the Organisation for Economic Co-operation and Development (OECD), Asia-Pacific Economic Cooperation (APEC) and the Organization of American States (OAS). In 1998, Canada ratified the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions, thus triggering the convention's entry into force. Canada also ratified the OAS's Inter-American Convention Against Corruption at the OAS. More recently, efforts have focused on the negotiation of the UN Convention Against Corruption (UNCAC) on 31 October 2003, and Canada signed the UNCAC on 21 May 2004, and ratified it on October 2, 2007.

Ethics

75. Under the Constitution, the judiciary is separate from and independent of the other two branches of government, the executive and the legislative. Judicial independence is a guarantee that judges will make decisions free of influence and based solely on fact and law. It has three components: security of tenure, financial security and administrative independence. The Canadian Judicial Council, which is responsible for federally appointed judges, consists of the chief justices of all of the federal courts and provincial and territorial superior courts. The federal government created it to promote efficiency, consistency and good service in these courts. The Council has developed a set of ethical principles for judges, designed to assist judges in maintaining their independence, integrity and impartiality.

76. Prosecutors, known in Canada as Crown counsel, exercise their independence as representatives of an Attorney General. As such, the "independence" of Crown counsel is a delegated independence. Federal Crown counsel are obliged to make decisions in accordance with the policies of the Attorney General in the Federal Prosecution Deskbook. In general, each province also has a deskbook or a similar document to guide the provincial Crown counsel in their day-to-day work. Crown counsel is obliged to exercise independent judgment in making decisions. They are accountable for their decisions, and they must consult where required. Police officers are also subject to strict professional and ethical codes of conduct.

1.2 General Situation of Money Laundering and Financing of Terrorism

Predicate offences

77. Illicit proceeds from a variety of criminal activities contribute to the ongoing money laundering situation in Canada although drug trafficking is considered the source of much of the money laundered. Other sources of proceeds of crime include, but are not limited to, prostitution rings, contraband smuggling, illegal arms sales, migrant smuggling, and white-collar crime such as securities offences, real estate fraud, credit card fraud and telemarketing fraud.

78. The sales of illegal drugs in Canada amount to several billion dollars annually. Marijuana is one of the few drugs produced on a large scale in Canada. As such, an increasing amount of drugs is being smuggled into other countries, primarily the United States. There is evidence that in certain areas, both cocaine- and marijuana-trafficking organizations use money service businesses and currency exchanges to convert Canadian and U.S. dollars without going through formal exchange channels.

FINTRAC disclosures to law enforcement

79. Financial transactions in FINTRAC's drug-related case disclosures were cash intensive and, very often, of significant dollar value. Related financial activity frequently involved the use of foreign currency exchanges and casinos, and the physical or electronic movement of funds into or out of Canada. The vast majority of 2005/2006 disclosures fell into two readily identifiable categories of predicate offences: suspected illegal drugs and suspected fraud.

80. Suspected drug case disclosures were most prevalent and revealed the activity of small, homogenous networks of individuals. Suspected fraud cases were the largest in terms of scope, volume of transactions and dollar value. As opposed to the drug cases, suspected fraud cases appeared more complex and more organized. Many had a significant international dimension, and usually involved more than four businesses and four individuals. These companies often made heavy and uneconomical use of electronic funds transfers, and used multiple companies to conceal criminal funds.

Types of Criminal Organizations

81. Increasingly over the last several years, the Integrated Proceeds of Crime Units[9] (IPOC Units) have focused their investigation and assistance work on organized crime. Overall, more than 80% of the major files involved organized crime groups, climbing from 74% prior to 2001 to over 85% in the years since. Outlaw motorcycle gangs and other types of organised crime are present in Canada.

Money Laundering Methods

82. The money laundering methods used in Canada have remained relatively consistent in recent years. They essentially consist of: smuggling; money service businesses and currency exchanges; casinos; purchase of real estate; wire transfers; establishment of offshore corporations; credit cards, stored value cards and new payment methods; use of nominees; use of foreign bank accounts; use of professional services (lawyers, accountants, etc.); and reinvestment and distribution in illicit drugs.

83. At the placement stage, criminals are using money service businesses or casinos. Electronic funds transfers are being used for layering and at the integration stage, criminal proceeds are used to purchase high-value assets – such as cars, boats, jewellery, gold, diamonds and collectible items – in attempts to conceal the origin of the funds. Most recently, there have been signs that criminals are turning to such methods as Internet payments or cross-border movement of gold bullion.

---

[9] The IPOC Initiative brings together the skills, knowledge and abilities of a diverse group of experts including law enforcement officers, lawyers from the Department of Justice, forensic accountants and property managers from Public Works and Government Services Canada, Officers from Canada Border Services Agency, as well as Tax Agents from Canada Revenue Agency. The integration of the partner agencies facilitates a coordinated approach towards combating organized crime. For more information, see Section 2.6 of the report.

84. **Currency smuggling**. Cash continues to be a vehicle of choice for money laundering in Canada. Investigators regularly make large cash seizures of Canadian and U.S. currency and seize assets purchased with cash, such as real property, vehicles, personal property (jewellery, furniture and appliances), collectibles (antiques, coins, stamps) and other assets. Money launderers seem to be increasingly using the most rudimentary forms of money laundering, such as physically smuggling cash domestically and across international borders. Since 1994, nearly CAD 3 billion worth of contraband and cash has been seized as a result of the Pipeline/Convoy/Jetway Program[10].

85. **Money Service Businesses and Currency Exchanges**. Money service businesses (MSBs) and currency exchanges (F/Xs) play a role in money laundering activities, especially in large marijuana-producing areas, such as the Greater Vancouver region of British Columbia, where proceeds from sales in the U.S. must be converted into Canadian dollars. Both cocaine- and marijuana-trafficking organizations use some F/Xs to handle transactions involving different currencies used in cross-border activities. It appears that some foreign exchange dealers have also purposely dealt with other MSBs or foreign exchange dealers to avoid more traditional financial services, thereby limiting potential suspicions of links to criminal activity. Cheque cashing businesses have also been used as fronts for money laundering.

86. **Casinos**. Criminals use the Canadian casino industry extensively to launder illicit funds. They employ various techniques, including refining, exchanging currency, and chip purchases.

87. *Refining*. This term usually refers to the exchange of CAD 20 bills for CAD 50 or CAD 100 bills at the cash counter. In a variation often called the "ticket in ticket out" technique, criminals feed street-level money (CAD 5, CAD 10 and CAD 20 bills) into video lottery terminals. After minimal play, they cash the ticket stub at the counter for CAD 100 bills. In some instances, organized groups divide money to be refined among a number of individuals. They then enter the casino and go their own way. Once they have refined the money, they meet again outside the casino to assemble the total amount.

88. *Currency exchange*. Criminals are using casinos more frequently for currency exchange services. Several individuals associated with marijuana grow operations have used casinos to convert their proceeds of crime from U.S. currency into Canadian currency. Also, on occasion, they try to obtain casino cheques. In one case, a known chemical drug trafficker travelled to a casino outside his province of residence to exchange U.S. currency, obtained in Canada from drug-trafficking activities, for Canadian currency. Groups of people will also divide U.S. currency into small amounts to be exchanged for Canadian currency. They tend to use multiple casino locations. After exchanging the currencies, they meet again to assemble the total amount.

89. *Chip Purchases*. Buying casino chips in excess of the level of play and then cashing them out for a casino cheque is a known money laundering technique, frequently used by groups attempting to launder large sums of money. Some groups will travel outside their province of residence to use this technique. Reports from casinos to FINTRAC show that criminals tend to divide this money laundering activity into two separate tasks: some individuals buy casino chips, while others redeem these chips for a casino cheque. The group meets outside the casino to assemble the total amount. The separation of tasks makes it difficult to identify the individuals involved and to introduce detection methods. There is also evidence that casino chips are used as currency to purchase narcotics and contraband.

90. **Front companies**. Businesses that are especially attractive to money launderers are ones that customarily handle a high volume of cash transactions, such as retail stores, restaurants, bars, video rental stores, arcades, gas stations and food markets. As mentioned earlier, F/Xs, MSBs, and payday loan and cheque cashing businesses can also be used as fronts.

---

[10] The RCMP program's focus is the detection and seizure of contraband moving across Canada in cars and transport trucks.

91. **Real Estate**. Ongoing trends related to money laundering in the real estate sector include the following: (1) the use of nominees to register and make payments associated with real properties; (2) the use of facilitators — lawyers, real estate agents and mortgage brokers — to circumvent legal procedures, falsify documents and obscure the true nature of real estate transactions; and (3) the use of private mortgages (often involving the previous owner of a real property), and loan-back schemes.

92. **Gatekeepers**. Professionals such as accountants and lawyers act as "gatekeepers" when they provide access to the financial sector for their clients. This fact is open to abuse by criminals, who seek to use the gatekeeper to access the financial system, while themselves remaining anonymous. These professionals can also help clients move or conceal the proceeds of illegal activity.

93. **Credit Cards**. Credit cards are being used more frequently in every step of the money laundering process. In the initial placement stage, such techniques as "smurfing" or "structuring" can be used. Credit cards can be used to "commingle" legitimate revenues with proceeds of crime. At the layering stage, credit cards can be used in various ways: to transfer funds between accounts, to buy financial instruments and to carry out transactions in offshore jurisdictions. In the final integration stage, criminals primarily use credit cards to buy financial investments and luxury, "big ticket" items.

94. **Precious Stones**. Some investigations have revealed that the Canadian diamond industry is vulnerable to the threat of organized crime and money laundering.

95. **Stored Value and New Payment Methods**. Canadian law enforcement agencies have identified the use of credit cards, stored value cards and prepaid credit cards as an element of a growing number of money laundering schemes in Canada.

96. Internet payment systems (IPSs) are still quite new; one of the most popular systems, PayPal, was founded in 1998. IPSs allow users to send money around the world without going through the normal paths of the world's banking system. IPS accounts could be used to settle purchases of narcotics, contraband items, cigarettes, alcohol or stolen properties, for example.

97. **Trade-Based Money Laundering (TBML).** The Canadian law enforcement authorities have identified cases of TBML in relation to Colombian criminal organizations and cocaine importation in Canada.

98. **White-Label ATMs**. The Canadian law enforcement authorities have been confronted with cases involving White-Label automated teller machines (ATMs) which are owned and operated by independent service operators — individuals or companies — rather than banks. There are limited requirements on who can own or operate a white-label ATM due to a Competition Tribunal decision[11]. The owners of white-label ATMs have access cards that enable them to load cash into the machine. However, they are asked to identify the source of those funds only once, when they first set up the machine.

Terrorist Financing

99. Canadian authorities have identified a number of terrorist organisations operating in Canada. Investigations have shown that terrorist cells have a tendency to remain self-sufficient by generating funds locally. In some instances, they may do so by committing petty crimes, such as welfare fraud or credit card fraud. In other instances, cell members have started businesses to glean financial information from unsuspecting customers in order to clone credit cards and commit identity thefts. The RCMP has intelligence indicating that suspected terrorist entities in Canada are raising funds through drug trafficking or donating a portion of their criminal proceeds to support terrorism.

[11] In its decision of June 20, 1996, (CT-95 / 2) the Federal Competition Tribunal made an order that opened up the ATM market to independent operators. Prior to this decision, only banks and other deposit taking financial institutions had been allowed to join the *Interac Association* and operate ATMs.

100. Terrorists use techniques similar to those used by money launderers to evade authorities' attention and to protect the identity of their sponsors and the ultimate beneficiaries of the funds. Terrorist financing methods seen in Canada include the following: (1) the physical transportation of cash and other valuables; (2) the formal banking system; (3) MSBs and F/Xs; and (4) Internet value transfer systems. The most common venue for moving funds for the purpose of terrorism is the traditional banking system, since terrorism-related transactions can be camouflaged in the sheer volume of normal banking transactions.

101. In the course of fiscal year 2005/2006[12], FINTRAC made 34 case disclosures with a value of some CAD 256 million related to other threats to the security of Canada. FINTRAC observed that a large percentage of its case disclosures had an international component, where funds were wired to locations known to be terrorist hot spots. A number cases involved large cash deposits, made to personal or business accounts, where the funds were subsequently wire transferred out of the country.

102. **Value Cards.** Apart from wire transfers, value cards used to transfer funds for the purposes of terrorism are a relatively new trend in Canada and internationally. Value cards can be assets to terrorist supporters as they offer a convenient mechanism to quickly and easily transfer funds, often under the cloak of anonymity.

103. **Internet Payment Systems**. The newest terrorist financing method observed in RCMP investigations is the use of the Internet, where terrorist entities have set up accounts with electronic money services. These accounts can be credited from anywhere in the world by any person, and credits can be transferred from one account to another. These accounts can then be used to make purchases online. Credits can be purchased with cash at participating stores in the form of value cards in increments such as CAD10 or CAD20, similar to pre-paid telephone calling cards. Each card has a serial number. Once that number is entered on the money services website, the value of the card can be credited to a specific account. Such money services accounts facilitate the issuing of credit card accounts where electronic money services have agreements with banks. Users can transfer credits from these electronic money services accounts to credit card accounts, then use the credit cards in the normal fashion. These electronic money services are of particular concern because they are managed outside Canada.

104. **Charities**. Charities may collect donations from the public to support humanitarian causes overseas and forward the funds to overseas locations via the regulated banking system. At the receiving end, however, a portion of the funds may be diverted to support terrorism, with or without the complicity of Canadian donors and collectors. Analysis shows that charities and other non-profit organizations (NPOs) have figured in over one-third of FINTRAC disclosures related to suspected terrorist activity financing. These cases appeared to be associated with the collection of funds and financial movement suspected of being related to terrorist financing activity. These included: the use of multiple accounts by several NPOs, making the tracing of funds more difficult; the movement of funds to locations/countries of conflict, making it difficult to determine whether or not they are used for legitimate charitable purposes; and finally, the use of personal accounts by individuals or business accounts directly associated to NPOs, suggesting the possibility that accounts, other than the NPO accounts, are being used to collect and move funds.

Terrorist Financing Charges Brought Before Canadian Courts

105. Since the Anti-Terrorist Act came into effect in Canada in December 2001, there have been two instances where terrorist financing charges have been laid. Those two cases are currently before the courts.

106. The first case involves an individual named Momin Khawaja. He has been charged with seven offences under the Anti-Terrorist Act, including one charge related to terrorist financing under

[12] As is standard practice for the Government of Canada, fiscal years cover the period of April 1st to March 31st of the following year.

section 83.03 of the Criminal Code (providing property or services for terrorist purposes). This case has not been adjudicated yet. The case is linked to ongoing court proceedings in the U.K., where a terrorist allegedly attempted to build a 600-kilogram fertilizer-based bomb to attack targets in that country.

107. The second case involves the "Toronto 18" group. In June 2006, 18 individuals were arrested and charged in Canada with various offences under the Anti-Terrorist Act. Three of the 18 individuals were charged with terrorist financing offences under section 83.03 of the Criminal Code. None of these cases have been adjudicated yet. The most notable activities of this group included undergoing para-military training in Canada in December 2005, allegedly for terrorist purposes. This training allegedly spawned the formation of a sub-group in March 2006 that had the clear intention of building truck bombs to carry out terrorist attacks in the Toronto area.

1.3 Overview of the Financial Sector and DNFBP

Overview of the financial sector

Background

108. Overall, the financial sector contributes 6 percent of Canada's gross domestic product and has a yearly payroll of over CAD22 billion. The city of Toronto – located in Canada's most populous province, Ontario – is recognized as the centre of Canada's financial sector, with most of the large banks' headquarters, the country's equity exchanges (the Toronto Stock Exchange), the country's sole central securities depository (the Canadian Depository for Securities), the country's largest securities regulator (the Ontario Securities Commission), and offices of various regulators and other financial institutions. Two other major cities – Montréal, located in the province of Québec, and Vancouver, in the province of British Columbia – have vibrant financial sector activities.

109. While the financial sector in Canada is diverse and includes many service providers, it should be noted that the sector is significantly integrated, as different players offer similar services and "financial groups" or conglomerates offer a variety of financial products. Most notably, banks represent the largest portion of the Canadian financial services industry, reporting CAD1 257 billion in domestic assets in 2003, or over 70% of total assets within the financial sector. This integration is even more significant in light of the fact that Canada's six largest domestic banks account for the bulk of the activity, holding over 90% of all banking assets. Further, in the securities industry, the 11 largest firms (six of which are owned by the same largest domestic banks) account for 71% of total industry revenues. The five largest life insurance companies account for over 60% of the net premiums written by life insurers in Canada.

110. The following table compares the financial activities that define financial institutions under the FATF standards with financial sector entities subject to Canada's AML/CFT requirements:

Financial Activities as Defined by the FATF	Banks	Credit Unions, Caisses Populaires, Cooperative Credits Societies	Trust and Loan Companies	Investment Dealers	Mutual Fund Dealers	Portfolio Managers/ Investment Counsellors	Life Insurance Companies, Brokers and Agents	Money Service Businesses	Credit Card Companies	Crown Corporations That Accept Deposits	Canada Post (Money Orders)
1. Accepting deposits	✓	✓	✓							✓	
2. Lending	✓	✓	✓	✓	✓	✓	✓		✓		
3. Financial leasing	✓		✓				✓				
4. Transferring money or value	✓	✓	✓				✓	✓			
5. Issuing or managing means of payment	✓	✓	✓						✓		✓
6. Providing financial guarantees and commitments	✓	✓	✓				✓				
7. Trading: money market instruments, foreign exchange, securities, futures	✓	✓	✓	✓	✓	✓	✓				
8. Participating in securities issues	✓	✓	✓	✓	✓	✓	✓				
9. Managing portfolios	✓	✓	✓	✓	✓	✓	✓				
10. Safekeeping and custodial services	✓	✓	✓								
11. Investing and managing funds on behalf of others	✓	✓	✓	✓	✓	✓	✓				
12. Providing life insurance		✓					✓				
13. Changing money and currency	✓	✓	✓					✓			

Notes

1. There are businesses that specifically provide financial leasing arrangements. However, based on a risk analysis, the government has decided not to impose AML/CFT requirements on financial leasing companies.
2. Some businesses are involved solely in providing the credit card payment infrastructure to allow information to flow from the merchant to the company that manages the credit card accounts. These businesses have been excluded from the AML/CFT requirements due to their limited involvement in financial transactions.

Banking sector

111. *Background*. As of October 2006, there were 21 domestic banks, 25 foreign bank subsidiaries and 25 foreign bank branches operating in Canada (20 full-service branches and 5 lending branches). At the end of 2005, these institutions had over CAD2.1 trillion in global assets, including CAD1.5 trillion in domestic assets – accounting for about 70% of the total assets within the Canadian financial services sector. The six largest domestic banks account for the bulk of the activity, holding over 90% of banking assets as of the end of 2005[13]. The market concentration is as follows (December 2005):

[13] This does not include the assets of non-bank deposit-taking institutions, such as credit unions and caisses populaires.

Bank	Number of Deposit-taking branches in Canada	Number of ATMs in Canada	112. Assets (CAD billions)	Market Share (%)
Royal Bank of Canada	1 104	3 906	486	23.6
Toronto Dominion Bank	1 014	2 400	369	17.9
The Bank of Nova Scotia	950	2 500	324	15.8
Bank of Montreal	968	2 700	301	14.6
Canadian Imperial Bank of Commerce	1 100	4 000	289	14
National Bank of Canada	457	788	104	5.1
Total	5 593	15 994	1 872	91.0

Source: Office of the Superintendent of Financial Institutions.

113. Canada's banks operate through an extensive network that includes close to 6 000 branches and about 15 000 automated teller machines (ATMs) across the country. Canadians have access to an additional 35 000 ATMs operated by non-bank third parties. Canada has the highest number of ATMs per capita in the world and benefits from the highest penetration levels of electronic channels such as debit cards, Internet banking and telephone banking.

114. *Regulation and supervision*. Under the Bank Act, the federal government is responsible for the regulation of banks in Canada. However, given the diverse nature of the banks' activities, some of their subsidiary activities – such as trustee services and securities dealing – are provincially regulated. FINTRAC is responsible for ensuring compliance with AML/CFT requirements by banks and the Office of the Superintendent of Financial Institutions (OSFI) is the federal agency responsible for supervising banks in Canada. The Bank of Canada, Canada's central bank, works with other agencies and market participants to promote the safe and efficient operation of the financial system's key elements.

Credit Unions and *Caisses Populaires*

115. *Background.* Credit unions and *caisses populaires* are cooperative financial institutions owned and controlled by their members. Their ownership and corporate governance are based on cooperative principles, and their primary commitment is to serve their members' financial needs. In most provinces, each customer is required to become a member of the credit union or *caisse populaire*. Each member of a credit union or *caisse populaire* becomes a shareholder and has one vote, regardless of the size of deposit or share capital held. Members may run for election to the board, attend the annual meeting and vote on the election of directors and other matters. As shareholders, members are also entitled to yearly dividends and profit sharing.

116. In Québec, the provincially regulated Desjardins Group is the largest financial institution and consists of a network of *caisses populaires*. Outside Québec, all credit unions are shareholders in one of the nine provincial centrals, which are responsible for ensuring liquidity at the provincial level and providing services as a trade association. In turn, all nine provincial centrals are the primary shareholders of Credit Union Central of Canada (CUCC), which is responsible for establishing liquidity policy and overseeing liquidity maintenance at the national level.

117. Credit unions and *caisses populaires* are diversifying their services into non-traditional areas including full-service brokerage functions, mutual funds, commercial lending and wealth management. Some credit unions and *caisses populaires* are active in the insurance market as well. Credit union and caisse populaire membership was approximately 10.7 million by the end of 2005, or one third of Canada's population. Membership is highest in Québec, where 68 % of the population belongs to a caisse populaire.

118. At the end of 2005, the cooperative financial sector had 3 450 locations and about 4 800 ATMs. Credit unions and *caisses populaires* have also been purchasing bank branches, particularly in isolated

areas, helping to ensure that all Canadians continue to have access to financial services. At the end of 2005, Canada's credit union sector consisted of some 1 250 institutions. Credit unions and *caisses populaires* have maintained strong market shares in such key service areas as residential mortgage financing (14% as of 2005), consumer credit (7%) and deposit services (13%).

119. *Regulation and Supervision*. All credit unions and *caisses populaires* are provincially or territorially incorporated, as there is no federal legislation providing for the incorporation of credit unions or caisse populaires. As a result, the sector is regulated at the provincial / territorial level for prudential soundness and market conduct. As with the banking sector, FINTRAC is responsible for ensuring compliance with AML/CFT requirements by credit unions and *caisses populaires*. Both the provincial centrals that elected to be regulated by the federal level and the CUCC are supervised for prudential purposes by OSFI.

Insurance sector

120. In Canada, insurance companies are categorized as either life and health, or property and casualty. Consistent with FATF standards, AML/CFT requirements apply only to life and health insurance companies. Insurance products are sold by agents and brokers, some of them selling exclusively a single company's products (tied agents) while others sell insurance products of multiple companies (independent agents and brokers). AML/CFT requirements also directly apply to these insurance agents and brokers.

121. *Background*. In 2004, about 24 million Canadians and their dependants were covered by some form of life and health insurance. The total value of life insurance owned by Canadians was over CAD2.6 trillion. In 2004, Canada's life and health insurance industry comprised 105 firms, down from 120 firms in 2004 and 163 firms in 1990. This decline is largely the result of foreign insurers selling their operations to Canadian insurance companies, although there has been significant merger and acquisition activity among Canadian companies as well. In 2004, the 5 largest companies accounted for approximately 64% of the net premiums written by life insurers in Canada. Four of these firms, and 7 of the top 10 firms, are Canadian companies, as noted with a (C) in the following table. In the insurance industry, the market concentration is as follows (December 2005):

Company	Market share (%)
Great-West Life (C)	17.8
Manulife (C)	16.8
Sun Life (C)	15.4
Munich Re	6.9
Desjardins Life (C)	6.7
Total (top five)	**63.7**
Industry Total	**100.0**

Sources: Department of Finance calculations, using data from OSFI, l'Autorité des marchés financiers du Québec and corporate annual reports.

122. *Regulation and Supervision*. The federal and provincial governments share jurisdiction over the regulation of life insurance companies. In practice, the industry is largely regulated for financial soundness by OSFI, as federally incorporated companies account for over 90% of the total premium income of life insurers. While provinces reserve the power to ensure that federally incorporated companies conducting business in their jurisdictions are financially sound, all provinces except Québec accept federal regulation in this regard. FINTRAC is responsible for ensuring compliance with AML/CFT requirements for all life insurance companies.

Trust and Loan Companies

123. *Background*. Trust and loan companies offer services similar to those provided by banks; for instance, they accept deposits and make personal and mortgage loans. Trust companies, however, can

also administer estates, personal and institutional trusts, trusted pension plans and agency contracts. Although banks themselves are not permitted to undertake these activities directly, banks own the largest trust companies.

124. Before the 1990s, trust and loan companies – with their wide network of branches – provided major competition to the banks. In 1992, prohibitions on the ability of banks to acquire trust companies were removed. As a result the landscape in this industry changed dramatically. The recession and subsequent drop in the real estate market at that time also dealt a heavy blow to trust companies. As a result, the independent trust industry, as measured by assets owned, declined by more than half from 1990 to 1999.

125. Currently, 81 relatively small trust and loan companies operate in Canada. They account for less than 2% of the assets in the financial sector. The few remaining independent trust companies – among them Equitable Trust, Home Trust and Effort Trust – deal primarily in mortgage lending.

126. *Regulation and Supervision.* Both levels of government regulate trust and loan companies. Market conduct is regulated at the provincial level, and federally incorporated trust and loan companies are regulated for prudential purposes by OSFI under the Trust and Loan Companies Act. FINTRAC is responsible for ensuring compliance with AML/CFT requirements for all trust and loan companies.

Securities

127. *Background*. The Canadian securities industry plays a key role in Canada's financial services sector. The securities industry is made up of integrated, institutional and retail firms. Integrated firms offer products and services that cover all aspects of the industry for both the institutional and retail markets. Their functions include raising debt and equity capital for companies, helping governments raise capital to fund their operations and serving retail investors. Institutional firms provide services to large corporate clients such as pension funds, insurance companies, mutual fund organizations, banks and trust companies. Retail firms, which include full-service firms and discount brokers, offer a wide range of products and services to retail investors. Some 90 000 Canadians are licensed or registered as dealers and advisers participants.

128. There are a large number of firms in Canada that are involved in the securities industry. Generally speaking, the firms can be broken down into four categories: investment dealers firms that can sell all types of securities, mutual fund dealers firms that can only sell mutual fund products, investment counsel and portfolio management firms that provide investment advice and counselling, and restricted dealers/limited market dealers that can only sell restricted types of securities.

129. The number of firms participating in the Canadian securities industry has risen consistently throughout the last two decades. In the investment dealers firms category, the market is dominated by retail firms, followed by institutional firms and integrated firms. However, integrated securities firms, the six largest of which are owned by the big six domestic banks, account for 71% of total industry revenues. Retail firms accounted for 18% of revenues, while institutional firms accounted for 11%.

130. *Regulation*. In Canada, securities regulation is an area of provincial responsibility. FINTRAC is responsible for ensuring compliance with AML/CFT requirements for all securities dealers. Provincial and territorial securities regulatory authorities are members of Canadian Securities Administrators (CSA), an umbrella organization of the 13 regulators that serves as a forum for coordinating and harmonizing the regulation of Canadian capital markets. Securities regulators also delegate certain aspects of securities regulation to self-regulatory organizations, including the Investment Dealers Association of Canada, Market Regulation Services, Inc. and the Mutual Fund Dealers Association of Canada.

Money Service Businesses (MSBs) including Foreign Exchange Dealers

131. *Background*. Money service businesses (MSBs) in Canada refer to firms that remit or transmit funds by any means, through any person, entity or electronic funds transfer network. It also applies to those parties who issue or redeem money orders, travellers' cheques or other similar negotiable instruments. MSBs include alternative money remittance systems (such as hawala, hundi or chitti). They also include financial entities that remit or transfer funds – or issue or redeem money orders, travellers' cheques or other similar negotiable instruments – for anyone who is not an account holder. Banks, trust companies, *caisses populaires* and credit unions, for example, are only considered to be MSBs when they do occasional transactions, such as transactions for non-account holders.

132. The MSB sector includes currency exchange dealers and comprises many different businesses in Canada, including established money transfer companies such as Western Union and MoneyMart; and one-person businesses that offer money transfer or currency exchange services in tandem with another activity, such as operating a convenience store, video rental service or ethnic store. FINTRAC has identified some 700 businesses offering money transfer or currency exchange services throughout Canada. A number of these MSBs entered into a contract with agents to offer their products at various locations.

133. *Regulation and Supervision*. Although MSBs are not specifically covered by prudential or market conduct regulation in Canada, these businesses are subject to AML/CFT requirements and FINTRAC assesses AML/CFT compliance standards of MSBs.

Overview of the Designated Non-Financial Businesses and Professions (DNFBPs)

Background

134. The following designated non-financial businesses and professions (DNFBPs) are subject to Canada's AML/CFT requirements: casinos, real estate agents and accountants. In addition, the Government of Canada is currently in discussion with the following DNFBPs to cover these entities under AML/CFT requirements: lawyers, notaries (in Québec and British Columbia only) and dealers in precious metals and stones. Trust and company services providers are not separately recognised nor regulated as a separate business category and do not fall under the AML/CFT regime. Trust companies, accountants, lawyers and other independent legal professions provide such services.

135. The DNFBPs in Canada are as follows:

Reporting Entities	# of Reporting Entities	Primary Regulator	AML/CFT Regulator
Casinos	91	Provincial authorities	FINTRAC
Real estate agents	100 000	Provincial authorities and SRO	FINTRAC
Accountants	157 000	SRO	FINTRAC
Lawyers/notaries	89 000	SRO	FINTRAC
Dealers in precious metals and stones	4 000	None	FINTRAC

136. It should be noted that the number of reporting entities generally represents the entire sector. As some DNFBPs are subject to the PCMLTFA only in specific circumstances, only a small fraction of the sector will actually be required to comply with the AML/CFT requirements. For example, the majority of accountants are employed by corporations or in public practice, while only a small fraction of the 157 000 are actually employed within professional firms in private practice.

Casinos

137. *Permanent casinos*. Permanent casinos were established in Canada starting in the early 1990s. Currently, there are casinos in seven provinces (Nova Scotia, Québec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia) and one territory (Yukon). These include 34 commercial

casinos, 23 charity casinos, 22 Slot facilities and 8 First Nation casinos. Combined revenues for commercial casinos only were CAD3.5 billion in 2004 and CAD3.7 billion in 2005.

138. Gaming products include a wide variety of card games, roulette and slot machines. Varied financial services area available at casinos, including some that resemble services provided by financial institutions. Depending on the province, casinos can open customer deposit or credit accounts, have facilities for transmitting and receiving funds transfers directly from other institutions, and offer cheque cashing and foreign exchange dealer services. These services are ancillary to their core financial services, which are the sale and redemption of chips/tokens.

139. In Canada, provinces are responsible for licensing, operating and regulating legal forms of gaming, a responsibility that includes creating the rules for gaming products and financial services available within the casinos. FINTRAC is responsible for ensuring that casinos have implemented AML/CFT requirements outlined in the PCMLTFA. Gaming regulators are provincial agencies and exchange information through the Canadian Association of Gaming Regulators (CAGRA). This informal group provides a forum for exchanging regulatory information and techniques; collecting and disseminating regulatory and enforcement information, procedures and experiences; and providing ongoing education and training.

140. *Internet and cruise ship casinos*. Internet casinos do not fall in the scope of the PCMLTFA as no province has approved an Internet casino to date. Despite this, servers hosting illegal online casino gaming facilities exist within Canada. In addition, cruise ships can offer casino facilities under strict conditions in Canadian waters and are not covered by the AML/CFT legislation.

Real Estate Agents

141. The real estate industry in Canada consists of approximately 100 000 licensed real estate brokers and sales representatives working through 99 local real estate boards, 10 provincial associations, a territorial association and a national association. Brokers and sales representatives work with either a purchaser or a seller of real estate to manage a real estate transaction.

142. Provinces are responsible for the regulation of real estate industry professionals. In addition to provincial regulators, industry associations or boards at the national, provincial and local levels provide support, advocacy and training for real estate professionals. The Canadian Real Estate Association (CREA) comprises all provincial real estate associations and local boards throughout the country and is concerned with improving real estate practices across Canada. A key focus of CREA's activities is educating members about federal issues, including AML/CFT issues. There are 11 provincial and territorial real estate associations whose members are local real estate boards within the province or territory. The associations offer educational programs. Many provincial associations also provide real estate licensing courses. Local real estate boards maintain close contact with practising agents and provide detailed information about the local market. Local boards promote standards and make their members aware of publications and training courses available from federal and provincial associations. FINTRAC is responsible for ensuring that real estate agents have implemented the AML/CFT requirements outlined in the PCMLTFA.

Accountants

143. The accounting industry consists of firms and individuals providing a range of accounting services, which include auditing and reviewing financial records, preparing financial statements and accounting reports, developing budgets, designing accounting systems and providing advice on accounting matters. Accountants may also provide other related services, such as bookkeeping and payroll services, tax return preparation, and management consulting and insolvency services. In 2005, almost 22 000 establishments provided accounting services. The largest 20 firms generated 54% of the total operating revenues.

144. There are three main categories of professional accountants in Canada: chartered accountants (CAs), certified general accountants (CGAs) and certified management accountants (CMAs). There

are approximately 60 000 CAs, 51 000 CGAs and 35 000 CMAs. All of these accountants may be required to report to FINTRAC, depending on the types of financial transactions they undertake for clients. Each of the three categories of accountants is represented by a national association: the Canadian Institute of Chartered Accountants, the Certified General Accountants Association of Canada or the Society of Management Accountants of Canada. The associations representing CAs and CGAs are working to form a single body.

145. Provinces are primarily responsible for regulating the professional activities of accountants. Provincial accounting associations within each designation enforce the by-laws, codes of ethics and rules of professional conduct established by each designation to ensure that accountants are protecting the public interest. Provincial associations can discipline members for violations of the standards by imposing sanctions and revoking registration. FINTRAC is responsible for ensuring that accountants have implemented the AML/CFT requirements outlined in the PCMLTFA.

Lawyers and Notaries

Legal Counsel

146. The Federation of Law Societies of Canada is the national coordinating body of the 14 law societies in Canada (one for each of the 10 provinces except Québec, which has two societies and one for each of the three territories), which are responsible for regulating Canada's 88 500 lawyers and Québec's 3 500 notaries in the public interest. The Federation addresses key issues associated with the legal profession in Canada and sponsors two major national continuing legal education programs and intervenes in cases where protection of the public is of national concern.

147. The legal profession in Canada is governed by the laws, rules and regulations of the provincial or territorial law society of which a lawyer is a member. Provincial law societies regulate provincial legal professionals to ensure a competent and ethical bar. Provincial legislation authorises law societies to educate and license lawyers, and to regulate conduct, competence and capacity. Law society by-laws and rules of professional conduct set out the professional and ethical obligations of all members of the profession. Members failing to meet these obligations are subject to the provincial society's complaints and disciplinary process.

148. The Canadian Bar Association is a professional, voluntary organization formed in 1896. It was incorporated by a Special Act of Parliament on April 15, 1921. Today, the association represents some 35 000 lawyers, judges, notaries, law teachers and law students from across Canada. The main functions of the Canadian Bar Association are to act as an advocate and to provide personal and professional development and support.

Notaries

149. Unlike notaries in the province of Québec, who provide legal advice under Québec's civil code, notaries in British Columbia do not provide legal advice and are governed by the British Columbia Notaries Act. They are permitted to undertake only limited activities and they are allowed to hold trust accounts to carry out their duties.

150. It should be noted that notaries in provinces other than Québec and British Columbia are restricted to oath taking and document certification, except in Prince Edward Island where the profession is prohibited by law. These notaries do not conduct any financial transactions and the transfer of property is done exclusively through lawyers in these provinces.

151. British Columbia notaries are a self-governing profession under the Society of Notaries Public in British Columbia. The society enacts rules and by-laws, and regulates and sanctions its members, in a manner similar to that of a provincial law society. The governing legislation assigns the number of notaries that can be active in each of 84 specified provincial districts. The total number of notaries allowed in the province is 332.

Dealers in Precious Metals and Stones (DPMSs)

152. The precious metals and stones[14] industry in Canada consists of many stages and intermediaries. Canadian companies are active in sectors of the industry ranging from mining to retailing. While large firms predominate in the mining and production sector, dealers in precious metals and stones are primarily small firms. Of the more than 4 400 businesses in Canada involved in retailing, wholesaling, repairing and manufacturing jewellery, 90% have 20 or fewer employees. Estimates are that these activities employ 30 000 to 35 000 people, with over 60% working in the retail segment. Membership in industry associations and regulatory bodies is voluntary.

153. Canada has risen to become the world's third largest diamond-producing country by value. The rise in standing is due largely to the recovery of higher-quality stones than previously expected. The RCMP (see its Annual Report 2004) believes that accompanying the increase in diamond production is a corresponding increase in vulnerabilities and potential points of infiltration by organized crime groups. In general, more mines are in operation, more diamond-related companies are formed and a larger secondary diamond industry is developing. Organized crime interest in the diamond industry is monitored by the RCMP-led diamond protection service with the cooperation of the Canadian diamond and diamond exploratory industry.

154. The Canadian Jewellers Association is the dominant industry association, with a membership base that includes the majority of Canadian jewellery wholesalers and retailers. The Jewellers Vigilance Committee of Canada plays a role in preventing money laundering and fraud in the jewellery industry. As a voluntary, not-for-profit association, its mandate includes promoting consumer protection, publishing ethical guidelines, assisting law enforcement agencies and providing information on illegal activities, including fraud, smuggling and money laundering. It is funded in large part by industry contributions.

1.4 Overview of commercial laws and mechanisms governing legal persons and arrangements

Types of legal persons or arrangements recognised in Canada

155. Various types of business structures are available to Canadian entrepreneurs, including sole proprietorships, partnerships, limited or incorporated companies, and cooperatives. While the most appropriate corporate structure depends on factors such as the number of people involved, the type of business, tax issues, liability concerns and financial requirements of the firm, most Canadian businesses are incorporated to create a distinct legal entity separate from their owners. For this reason, most businesses elect to use the corporation as their legal form. There are an estimated 1.5 million corporations in Canada.

156. Incorporation may be done provincially, territorially or federally, giving a company the right to operate under its corporate name in a particular province or territory, or throughout Canada. However, a federally incorporated business must still register in each province in which it does business. A provincially or territorially incorporated corporation must also register in other provinces and territories, and can also conduct business in those other jurisdictions and nationally. While roughly 15% of corporations are incorporated federally, these firms are generally the largest companies and the most active ones, nationally and internationally. The main federal law establishing the legal and regulatory framework for corporations is the Canada Business Corporations Act (CBCA). Most provinces and territories have incorporation systems with measures broadly similar to the requirements in this Act. Cooperatives may also be incorporated either federally or provincially.

157. Most corporations in Canada are structured as private corporations, public corporations, unlimited liability companies or cooperatives, which are defined as follows:

[14] Precious metals and stones refer to high-value commodities used in the jewellery industry, such as gold, platinum, diamonds, tanzanite, emeralds, rubies and sapphires.

- *Private corporations*: One or more people can form a private corporation. A private corporation cannot sell shares or securities to the public. Most small businesses are private companies, and virtually all corporations start out that way.
- *Public corporations*: A public corporation is one that issues securities for public distribution. Besides filing incorporation documents, a public corporation must employ outside auditors and must distribute audited financial statements. It is subject to extensive disclosure and other requirements imposed by provincial securities regulators and corporate law. See section (c), below.
- *Unlimited liability companies*: These are currently permitted in Nova Scotia and Alberta only. They shelter shareholders from liability in most circumstances except on liquidation, when shareholders are liable for the excess of debts over assets.
- *Cooperatives*: These enterprises are jointly owned by the members who use their services. All members of a co-op are equal decision-makers in the cooperative, using a democratic system of one member, one vote. Federal cooperatives may issue shares and, therefore, have both members and shareholders.

158. Although the corporation is the most popular type of legal arrangement for Canadian businesses, the following types of legal persons and arrangements are also available in Canada:

- *Trusts*: A trust encompasses any relationship in which the legal and equitable (beneficial) titles to property are separated. Various types of trusts can be created in Canada. They are discussed in more detail in section 5.2 of this report.
- *Not-for-profits*: A not-for-profit organization is an organization not intending or intended to earn a profit for its members. Both provincial and federal not-for-profit legislation exists. The federal law governing not-for-profit organizations is the Canada Corporations Act, Part II.
- *Sole proprietorships*: A sole proprietorship is an unincorporated business that is owned by one individual and has no legal existence apart from the owner. Its liabilities are the owner's personal liabilities.
- *General partnerships*: A general partnership is the relationship between two or more persons who carry on a trade or business together. Each person contributes money, property, labour or skill, and expects to share in the profits and losses of the business.
- *Limited partnerships*: A limited partnership is an unincorporated business with at least one general partner and one or more limited partners. General partners have unlimited liability and limited partners have limited liability up to the amount of their investment.
- *Limited liability partnerships*: Most Canadian jurisdictions permit the formation of limited liability partnerships (LLPs). Under such a structure, which is generally restricted to eligible professions such as lawyers and accountants, a partner is not personally liable for any debts, obligations or liabilities of the LLP that arise from any negligent act by another partner or by any person under that partner's direct supervision and control. The law does not reduce or limit the liability of the firm. All of the firm's assets and insurance protection remain at risk. In addition, all partners of an LLP remain personally liable for their own actions and for the actions of those they directly supervise and control.

1.5 Overview of strategy to prevent money laundering and terrorist financing

a) AML/CFT Strategies and Priorities

159. Canada has continuously increased the responsibilities, funding and powers of domestic organizations working to identify, disrupt and dismantle money laundering and terrorist financing networks. It has also committed to engaging more actively in international fora.

160. Canada's AML/CFT regime has three primary objectives: detecting and deterring money laundering; preventing terrorist financing; and facilitating the investigation and prosecution of money laundering and terrorist financing offences. To do this, Canada has targeted the three stages of money laundering – placement, layering and integration – in its legislation (this report provides detailed information on this particular point).

Role of the Private Sector

161. As Canada moves forward with new legislation and regulations, some time and effort is invested in comprehensive discussions – with reporting entities in particular, and with the private sector generally – to get views and comments. These views are generally taken into account in rolling out new processes or requirements, or in amending existing ones.

Balance with Privacy Rights

162. The PCMLTFA strikes a careful balance between the privacy rights of Canadians and the needs of law enforcement and national security agencies. The Act upholds the principles outlined in the Canadian Charter of Rights and Freedoms (part of the Canadian Constitution), where Section 8 establishes a constitutional protection against unreasonable search and seizure, and the Privacy Act, which regulates the dissemination of personal information collected by government agencies. As a result, the PCMLTFA contains significant provisions specifically designed to balance the obligation to submit reports with an obligation to strictly control the release of information obtained from submitted reports.

Assessments

163. Canada's AML/CFT regime has undergone three separate, independent evaluations in recent years. Two of the evaluations – one performed by the Office of the Auditor General (OAG[15]) and the other by EKOS Research Associates, Inc., an independent research group – occurred in 2004[16]. The last assessment was a parliamentary review that a committee of the Senate of Canada carried out in the summer of 2006; its interim report was tabled in October 2006 (see Section 6.1 of the report for further information).

Parliamentary Review of the PCMLTFA

164. Section 72 of the PCMLTFA calls for a parliamentary review of the administration and operation of the Act five years after the legislation was passed. Therefore, in the summer of 2006, the Standing Senate Committee on Banking, Trade and Commerce held hearings in which witnesses from both the private sector and federal public service provided comments on Canada's AML/CFT regime and its effectiveness.

165. The Senate Committee tabled a report[17] that highlighted the need for the AML/CFT regime to meet domestic requirements, as well as the importance of meeting international obligations to ensure that the world is "safer and more secure." The report reiterated the importance of an appropriate balance between providing law enforcement and security agencies with the proper information to fight money laundering and terrorist financing, and protecting the privacy rights of Canadians. The review was conducted in the knowledge that the federal government had proposed legislative changes stemming from a consultation paper released by the Department of Finance in June 2005. The

---

15 To ensure accountability and transparency, the Office of the Auditor General (OAG) independently audits federal government departments and agencies, most Crown corporations, and many other federal organizations. The OAG reports publicly up to four times a year to the House of Commons on matters that the Auditor General believes should be brought to the attention of the House. In addition, the OAG testifies before parliamentary committees on the Office's audits.

16 See report at: http://www.fin.gc.ca/activty/pubs/nicml-incba_e.pdf.

17 *Stemming the Flow of Illicit Money: A Priority for Canada*. Parliamentary Review of the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act*. Ottawa: Standing Senate Committee on Banking, Trade and Commerce, October 2006.

recommendations made in the Senate report reinforced the proposed amendments to the PCMLTFA (see below).

Recent Initiatives

166. In June 2005, the federal government issued a consultation paper "*Enhancing Canada's Anti-Money Laundering and Anti-Terrorist Financing Regime*". Extensive consultations took place with financial intermediaries and professional groups following the release of the paper. A description of the key amendments to the PCMLTFA enacted on December 14, 2006 can be found in Section 3 of the report.

167. Further to the above amendments, complementary initiatives are planned (for instance, FINTRAC is working to provide more frequent and more valuable feedback to reporting entities and FINTRAC will issue guidance for new requirements including the reporting of suspicious attempted transactions, the implementation of the risk-based approach and the treatment of politically exposed persons and for new reporting sectors)[18]..

The Institutional Framework for Combating Money Laundering and Terrorist Financing

b) Key Partners in the AML/CFT Regime

168. The current AML/CFT regime is grounded in the "National Initiative to Combat Money Laundering" (NICML), which was established in 2000. The original partners of the NICML included the following.

Department of Finance

169. Along with broad responsibility for regulation of the financial sector, the Minister of Finance has had – since 1999 – responsibility for Canada's AML/CFT regime (originally known as the NICML). However, as noted, a number of key departments and agencies in the federal government are responsible for implementing different aspects of the regime.

170. As the lead organization, the Department of Finance develops AML/CFT policy, including the PCMLTFA and its associated regulations. The department coordinates all activities under the AML/CFT regime, including consultations with stakeholders. It does so in conjunction with other government departments and agencies, provincial governments, the private sector – including industry associations – and non-governmental bodies. The department also participates in strategic domestic and international activities that support the Canadian government's AML/CFT commitments. Specifically, the department leads the Canadian delegation to the FATF, the Caribbean Financial Action Task Force and the Asia/Pacific Group on Money Laundering.

Financial Transactions and Reports Analysis Centre (FINTRAC)

171. FINTRAC, Canada's financial intelligence unit was established in July 2000 under the PCMLTFA to help detect and deter money laundering and terrorist financing activity. FINTRAC is an independent government agency that reports to Parliament through the Minister of Finance. It operates as an independent agency at arm's length from law enforcement, security and other agencies to which it discloses information (see further developments in Section 2.5 of the report).

18 In addition, an AML/CFT advisory committee was created in late 2007, and comprises both public and private sector representatives. This body will work to enhance cooperation and coordination (see Section 6.1 of the report).

Department of Justice

172. A single minister, holding the twin titles of Minister of Justice and Attorney General of Canada, heads the Department of Justice. Criminal law, as a statute of national jurisdiction exclusively under the constitutionally legislative authority of Canada, includes criminal offences and criminal procedure. Authority to develop that law and procedure is given to the minister of justice. The minister is responsible for the Criminal Code of Canada and the development of criminal offences, as well as all laws on criminal procedure. The minister is responsible for the Mutual Legal Assistance in Criminal Matters Act and the Extradition Act.

Public Prosecution Service of Canada (PPSC)

173. The PPSC is a federal government organization, created on December 12, 2006, pursuant to the *Director of Public Prosecutions Act*. The PPSC fulfills the responsibilities of the Attorney General of Canada in the discharge of his criminal law mandate by prosecuting criminal offences under federal jurisdiction and by contributing to strengthening the criminal justice system. The PPSC is an independent organization, reporting to Parliament through the Attorney General of Canada.

Public Safety and Emergency Preparedness Canada (PSEPC)

174. PSEPC is responsible for providing support to the minister of public safety on all matters of public safety and national security, including money laundering and terrorist financing. PSEPC support is multi-dimensional and touches on many aspects of Canada's AML/CFT regime. PSEPC provides the minister with policy development and advice on AML/CFT policies and programs. In addition, PSEPC also works with other regime partners – the RCMP, CSIS and CBSA – that are accountable to the minister on issues of horizontal or mutual interest. PSEPC chairs the Interdepartmental Working Group on Terrorist Listings, in support of the minister's statutory responsibilities to recommend entities to be listed under the Criminal Code.

175. The Minister of Public Safety, with the Minister of Revenue, is also responsible for a critical aspect of Canada's AML/CFT regime under the Charities Registration (Security Information) Act (CRSIA) to prevent the use of charities for terrorist financing.

Canada Revenue Agency (CRA)

176. One of the CRA's responsibilities is to ensure that each person pays the taxes associated with all of his or her income and activities. If FINTRAC discloses information suspected of being relevant to the investigation or prosecution of a money laundering offence or terrorist activity financing offence to law enforcement, and also determines that the information is relevant to an offence of evading or attempting to evade taxes or duties under an Act of Parliament, it will disclose the same information to the CRA. The information received from FINTRAC may lead the CRA to initiate a new enforcement action or serve as additional information in support of an ongoing enforcement action.

177. The CRA's mandate to administer the Income Tax Act in respect of registered charities gives it a responsibility to ensure that the tax benefits reserved for Canada's charities are not used to provide terrorist financing in the guise of charity. The enactment of the CRSIA as Part V of the Anti-Terrorism Act redefined the CRA's role and the importance of protecting the integrity of Canada's registration system for charities.

Canadian Security Intelligence Service (CSIS)

178. CSIS has a mandate to collect, analyze, and retain information or intelligence on activities that may on reasonable grounds be suspected of constituting threats to the security of Canada. CSIS is the Government of Canada's principal advisor on national security. CSIS's role in the regime is to receive FINTRAC disclosures regarding suspected threats to the security of Canada and to gather intelligence,

which may be passed to the RCMP for potential criminal proceedings. CSIS also provides voluntary information reports to FINTRAC.

Royal Canadian Mounted Police (RCMP)

179. As the national police force – and as the provincial or local police force, in many jurisdictions across Canada – the RCMP plays a fundamental role in Canada's AML/CFT regime. The RCMP investigates money laundering and terrorist financing cases and acts as a liaison in exchanging criminal intelligence with international police forces. RCMP liaison officers around the globe assist Canada in pursuing AML/CFT cases.

180. In response to the September 11, 2001 terrorist attacks on the U.S., the RCMP Financial Intelligence Branch was created to address the issue of terrorist fundraising. This intelligence/investigative body was established to support national security efforts to identify financial intelligence and enforcement opportunities related to terrorist financing, as well as to provide direction and support to field units. An Internet investigation team was established as part of the branch to investigate terrorist fundraising on the Internet.

181. Finally, the RCMP plays a significant training and awareness-raising role among AML/CFT partners and the private sector, and in international fora. Indeed, the RCMP has provided direct technical assistance and training to police forces in developing countries to help them conduct AML and terrorist financing investigations and enhance their investigative techniques.

Canada Border Services Agency (CBSA)

182. The PCMLTFA requires that all large amounts of currency and monetary instruments imported or exported to or from Canada, including those transported by mail, be reported to a border services officer (BSO). In addition, BSOs now have the responsibility to enforce the physical cross-border reporting initiative, which includes the authority to examine baggage and conveyances, and to question and search individuals for unreported or falsely reported currency and monetary instruments. CBSA also plays a key role in denying admission to Canadian territory to non-citizens who pose security threats to Canada.

Office of the Superintendent of Financial Institutions (OSFI)

183. OSFI regulates and supervises federally regulated financial institutions, which comprise banks, federally regulated insurance companies, cooperative credit associations, and federally regulated trust and loan companies. It administers financial institution governing statutes (the Bank Act, the Insurance Companies Act, the Trust and Loan Companies Act, and the Cooperative Credit Associations Act). OSFI issues guidance to federally regulated financial institutions, as well as warning notices regarding entities that it believes may be of concern to the business community and the public.

Other Participants in AML/CFT Efforts

184. In addition to the nine key partners in the AML/CFT regime discussed above, other departments also participate in the fight against money laundering and terrorist financing.

Department of Foreign Affairs and International Trade

185. The Department of Foreign Affairs and International Trade (DFAIT) has responsibility for international elements of Canada's efforts to address money laundering and terrorist financing. The Minister of Foreign Affairs is responsible for the designation of entities and individuals in Canada associated with terrorist activities listed by the United Nations 1267 Sanctions Committee or under Resolution 1373 of the United Nations Security Council. This designation effectively freezes their

assets and prohibits fundraising on their behalf. DFAIT is also the primary interlocutor and negotiator for Canada in terms of international conventions and treaties that address money laundering, terrorist financing and other related public safety issues, such as bribery, corruption or illicit drugs.

Industry Canada

186. The Minister of Industry is responsible for the Canada Business Corporations Act, under which companies can federally incorporate their business with Industry Canada. When a business does so, the department collects information about the enterprise, including the business name and address, and information about the directors.

Office of the Privacy Commissioner of Canada

187. The Office of the Privacy Commissioner plays an important role in ensuring that the necessary safeguards protecting privacy are upheld. The Privacy Commissioner is an officer of Parliament who reports directly to the House of Commons and the Senate and who regularly provides views on Canada's AML/CFT regime. The Privacy Commissioner has the ability to audit FINTRAC and financial institutions etc. to ensure privacy laws are respected.

Public Works and Government Services Canada, Seized Property Management Directorate

188. The Seized Property Management Directorate is responsible for the management and disposition of assets – including movable property, real estate, cash and securities – that have been seized or forfeited for illicit drug trafficking and money laundering offences. It also acts as a holding facility for currency and monetary instrument seizures.

Provincial Bodies

189. A number of provincial department and agencies, regulators and self-regulatory organizations have a role to play in the fight against money laundering and terrorist financing. These organizations include the following (further information is provided in Sections 2, 3 and 4 of the report):

- Provincial, territorial and municipal law enforcement agencies, such as the Ontario Provincial Police, la Sûreté du Québec and city police forces, who participate as part of various IPOC units.
- Provincial Crown prosecutors and courts.
- Provincial and territorial financial sector regulators, such as the Financial Services Commission of Ontario, the Ontario Securities Commission, l'Autorité des marchés financiers du Québec and the British Columbia Gaming Commission.
- Self-regulatory organizations, such as the Law Society of Upper Canada, the Investment Dealers Association and Canadian Institute of Chartered Accountants.

c) Approach concerning risk (see Section 3.1 of the report)

Application of AML/CFT obligations to certain sectors

190. In Canada, certain financial institutions as defined by the FATF Recommendations are not covered by the AML/CFT regime since Canada considers that these entities pose little or no threat of money laundering/terrorist financing. Canada's risk based approach is centred around the principle that financials sectors are brought into the AML/CFT regime if there is a proven risk of ML/TF. This differs from the FATF approach to risk as defined in the Methodology where a list of activities and operations must be covered by the AML/CFT regime unless there is a proven low risk of ML or TF (see Section 3.1 of the report for further analysis).

Risk-based approach taken by financial institutions

191. The government takes risks into account at various levels for regulatory purposes. For example, the PCMLTFA requires reporting entities to file reports with FINTRAC for cash transactions of CAD10 000 or more. However, a specific risk assessment identified legitimate cash-intensive businesses, such as big box stores and grocery store chains, whose large cash transactions would not have to be reported to FINTRAC. Further, reporting entities are not required to identify clients that are publicly listed companies in Canada, since such companies already have to meet comprehensive disclosure and other filing requirements set by provincial securities regulators.

Use of a Risk-Based Approach in Supervision of Compliance by Competent Authorities

192. The competent authorities use a risk-based approach when supervising reporting entities for compliance with the legislation. FINTRAC and OSFI have taken a risk-based approach in developing and implementing their supervisory programs (see Section 3.1 of the report).

d) Progress since the last mutual evaluation or assessment

193. Since the last mutual evaluation report (1997), Canada has implemented a large number of developments in its AML/CFT regime both in terms of statutory amendments and structural changes. The most high-profile development was the enactment of the Proceeds of Crime (Money Laundering) and Terrorist Financing Act. This report discusses these changes in detail.

2 LEGAL SYSTEM AND RELATED INSTITUTIONAL MEASURES

Laws and Regulations

2.1 Criminalisation of Money Laundering (R.1 & R.2)

2.1.1 Description and Analysis

Recommendation 1

194. In Canada, all criminal offences must be set out in national law, as passed by the Parliament of Canada. Most criminal offences are found in the Criminal Code[19]. However other federal laws, including a number of profit motivated criminal offences (for example drug offences) are established in other federal laws, such as the Controlled Drugs and Substances Act[20].

195. *Criminalisation of ML on the basis of the UN Conventions*. The Vienna and Palermo conventions require countries to establish as a criminal offense the following intentional acts: conversion or transfer of proceeds; concealment or disguise of the true nature, source, location, disposition, movement or ownership of or rights with respect to proceeds; and the acquisition, possession or use of proceeds (Article 3(1)(b)(i)-(ii) of Vienna; Article 6(1)(a)(i)-(ii) of Palermo). This obligation is subject to the fundamental/constitutional principles and basic concepts of the country's legal system (Article 2(1), Vienna convention; Article 6(1), Palermo convention).

196. In Canada, the money laundering offence, which can be found under section 462.31 of the Criminal Code (CC) is part of a broad proceeds of crime regime designed to cover all obligations in the 1988 Vienna Convention and the 2000 Palermo Convention to criminalize the concealment or laundering of proceeds of crime and the possession of such proceeds or criminal instrumentalities. Section 462.31 encompasses acts of using, transferring the possession of, sending or delivering to any person or place, transporting, transmitting, altering, disposing of or otherwise dealings with, in any manner and by any means, any property or any proceeds of any property. The prohibited activity must be undertaken with an intent to conceal or convert that property or those proceeds, and knowing or believing that all or a part of that property or of those proceeds was obtained or derived directly or

19 R.S.C. , 1985, c. C-46 as amended-See http://laws.justice.gc.ca/en/C-46/index.html.

20 S.C. 1996, Chap. 19, see http://laws.justice.gc.ca/en/c-38.8/229593.html.

indirectly as a result of the commission of a designated offence. A designated offence means *(a) any offence that may be prosecuted as an indictable offence under the Criminal Code or any other Act of the Parliament, other than an indictable offence prescribed by regulation or (b) a conspiracy or an attempt to commit, being an accessory after the fact in relation to, or any counselling in relation to, an offence referred to in paragraph a)* (see s. 462.3 (1) CC). The possession of proceeds of crime is covered in section 354(1) of the Criminal Code. That section makes it an offence to knowingly possess money or property derived directly or indirectly from any indictable Canadian criminal offence or any foreign offence, that had it been committed in Canada would have been an indictable offence in Canada. There is also an offence covering the importation of property derived from foreign crimes into Canada (s.357).

197. The elements of Canada's primary money laundering offence are for the most part criminalised in line with all of the requirements of the Vienna and Palermo Conventions. However, in one aspect the Canadian money laundering offence in Section 462.31 requires an additional mental element that is not required under either Convention. Namely, Section 462.31 requires that the person handling property or proceeds of property has the intent to conceal or convert same. ("Every one commits an offence who uses, transfers the possession of, sends or delivers to any person or place, transports, transmits, alters, disposes of or otherwise deals with, in any manner and by any means, any property or any proceeds of any property ***with intent to conceal or convert that property or those proceeds***, knowing or believing that all or a part of that property or of those proceeds was obtained or derived directly or indirectly as a result of (*a*) the commission in Canada of a designated offence; or (*b*) an act or omission anywhere that, if it had occurred in Canada, would have constituted a designated offence" (emphasis supplied).

198. The Conventions require the conversion or transfer of property to be an offence where the defendant knows that the property involved is the proceeds of crime and does so for one of the following two purposes: (1) concealing or disguising its illicit origin; *or* (2) for the purpose of helping any person who is involved in the commission of the predicate offence to evade the legal consequences of his or her action (Palermo, Article 6(1)(a)(i) and Vienna, Article 3(1)(b)(i)). However, section 461.31 sets out only one purpose element (for the purpose of concealing or disguising its illicit origin) instead of the two alternatives required by the Convention. Canada notes that in the alternative the relevant conduct may be covered by s.354, though the assessment team believes that will not be the case for many of the factual scenarios criminalised by s.462.31. This is a minor technical deficiency that could inhibit some prosecutions.

199. *Property that represents the proceeds of crime*. As indicated above, the money laundering offence extends to property or proceeds of property that was obtained or derived directly or indirectly as a result of the commission of a designated offence. The concept of "property" is broadly defined in section 2 of the Criminal Code and meets the FATF requirements. Under this section, property includes "*(a) real and personal property of every description and deeds and instruments relating to or evidencing the title or right to property, or giving a right to recover or receive money or goods, and (b) property originally in the possession or under the control of any person, and any property into or for which it has been converted or exchanged and anything acquired at any time by the conversion or exchange"*.

200. The Criminal Code includes a wide definition of possession in subsection 4(3). It provides that a person possesses anything when he has it in his personal possession or knowingly (i) has it in the actual possession or custody of another person, or (ii) has it in any place, whether or not that place belongs to or is occupied by him, for the use or benefit of himself or of another person. Where one of two or more persons has anything in his custody or possession, with the knowledge and consent of the rest, it shall be deemed to be in the custody and possession of each and all of them.

201. It is not necessary that a person is convicted of a predicate offence when proving that property is the proceeds of crime, only proof that the property emanates from a criminal acquisition is sufficient (beyond a reasonable doubt is the standard of proof). This principle has been confirmed by case law.

Further clarity is provided in the forfeiture provision in subsection 462.37(2) CC: *(2) where the evidence does not establish to the satisfaction of the court that the designated offence of which the offender is convicted, or discharged under section 730, was committed in relation to property in respect of which an order of forfeiture would otherwise be made under subsection (1) but the court is satisfied, beyond a reasonable doubt, that that property is proceeds of crime, the court may make an order of forfeiture under subsection (1) in relation to that property.* The targeted property is subject to forfeiture without a conviction for the predicate offence.

202. *Predicate offences for ML*. Canada essentially applies an all crime approach to its money laundering scheme by including all indictable offences *i.e.* those offences subject to imprisonment for more than six months, as designated (or predicate) offences (see the definition above) with some exceptions. Summary conviction offences as those with a fine of not more than two thousand dollars or imprisonment for up to six months or to both. For example, the financing of terrorism is an indictable offence subject to up to 10 years in prison.

203. In addition, the Canadian offence classification system includes a hybrid offence classification approach to some offences. That approach provides that the offence may be treated as a less serious summary conviction offence or a more serious indictable offence at the discretion of the prosecutor. For example, theft can be an indictable offence with varying jail terms or a summary conviction offence depending on the amount stolen. Section 34 of the Interpretation Act (that provides interpretation of legislation) applies to hybrid offences, providing: "*(1) where an enactment creates an offence, (a) the offence is deemed to be an indictable offence if the enactment provides that the offender may be prosecuted for the offence by indictment; (b) the offence is deemed to be one for which the offender is punishable on summary conviction if there is nothing in the context to indicate that the offence is an indictable offence; and (c) if the offence is one for which the offender may be prosecuted by indictment or for which the offender is punishable on summary conviction, no person shall be considered to have been convicted of an indictable offence by reason only of having been convicted of the offence on summary conviction"*. As a result, any hybrid offence is treated as an indictable offence until the prosecutor makes an election.

204. The offence of possession of property derived from a crime under Section 354 and Section 357 are essential elements in Canada's broader money laundering and proceeds of crime approach. The possession offence covers the possession of any property or thing, or any proceeds of any property or thing, where there is knowledge that all or any part of the property, thing, or of the proceeds was obtained directly or indirectly from: (a) the commission in Canada of an offence punishable by indictment; or (b) an act or omission anywhere that, if it had occurred in Canada, would have constituted an offence punishable by indictment. Again, the predicate offences for the offence of possession of property derived from crime cover all serious (indictable) offences in Canada. There is no excluded predicate offence for the offence of possession of property derived from crime. This offence, which is broad in scope, also covers factual circumstances that amount to possession of stolen property offences *e.g.* stolen motor vehicles, or simple cases of persons caught in possession of small quantities of drugs and cash. While the assessors were advised that a large majority of s.354 cases dealt with such conduct, a statistical breakdown of s. 354 offences prosecuted by the Attorney General of Canada indicated that none of those offences were cases where the particular charge was receiving of stolen property.

205. There is also a separate criminal offence, which is a designated offence for the purposes of the definition of proceeds of crime, in section 357 of the Criminal Code. Section 357 creates an offence where importing anything into Canada that a person obtained outside Canada by an act that, if it had been committed in Canada, would have been the offence of theft or an offence under Section 342 (theft, forgery, etc., of credit card) or 354 (possession of property obtained by crime). This is an indictable offence in Canada.

206. As mentioned earlier, the money laundering offence specifies that the predicate offence must be a designated offence. The definition of designated offences, in section 462.3 of the Criminal Code,

provides that some indictable offences, prescribed by regulation, will not be designated offences for the purposes of money laundering[21]. The following provides the list of excluded offences:

The indictable offences under the following Acts are excluded from the definition of "designated offence" in subsection 462.3(1) of the Criminal Code:

(a) Budget Implementation Act, 2000.
(b) Canada Agricultural Products Act.
(c) Copyright Act.
(d) Excise Act, except for the indictable offences under subsections 233(1) and 240(1).
(e) Excise Tax Act.
(f) Feeds Act.
(g) Fertilizers Act.
(h) Foreign Publishers Advertising Services Act.
(i) Health of Animals Act.
(j) Income Tax Act.
(k) Meat Inspection Act.
(l) Nuclear Safety and Control Act, except for the indictable offence under section 50 (offence to possess certain nuclear substances, etc.
(m) Plant Protection Act.
(n) Seeds Act.

207. Indictable offences in these 14 Acts have been excluded from the scope of relevant indictable offences for the purposes of Section 462.31 ML offences as these offences are penalized through other Acts. However, if charges were instituted under other federal laws, including the Criminal Code, and they were prosecuted by indictment, they would fall within the money laundering offence since all other indictable offences are covered by the money laundering offence[22]. The absence of provisions on copyright offences in the Criminal Code means that copyright related offences are not predicate offences for Section 462.31 ML, although offences involving trademarks and trade descriptions (Sections 406 to 410, Criminal Code) are predicate offences for Section 462.31 ML. Canada takes the position that Section 354 criminalizes possession of the proceeds of copyright offences. However, Section 354 covers only one portion of the three types of ML offences that Canada should criminalize under the relevant Conventions, and thus gaps still exist as Section 354 does not cover all varieties of ML offences contemplated by this Recommendation. Although this constitutes a minor technical failure and is a relatively small gap in the regime, this deficiency should be addressed by the Canadian authorities. To avoid any potential gaps of this sort, the assessors suggest the removal of the list of excluded offences and recommend that Canada include all indictable offences (including those prescribed by regulations) as predicate offences for Section 462.31 ML.

208. The scope of the offence category lists, as set out in the FATF 40 Recommendation's Glossary Description of Designated Categories of Offences, are covered as money laundering offences in the Criminal Code and offences in specific federal statutes. The FATF categories are cross-referenced to some of the Criminal Code or other indictable offences, in relevant federal laws, as follows:

- Participation in an organised criminal group and racketeering- *Criminal Code sections 467.11, 467.12 & 467.1.*
- Terrorism, including terrorist financing- *Criminal Code sections 83.02, 83.03, 83.94 83.12 and 83.18 to 83.231.*

[21] Regulations Excluding Certain Indictable Offences from the Definition of "Designated Offence". SOR/2002-63 see- http://canadagazette.gc.ca/partII/2002/20020213/html/sor63-e.html.

[22] Canadian provinces and territories also enact laws that contain provincial offence provisions. No province may enact a criminal law, with the result that none of the provincial offences are offences for the purposes of money laundering or possession of property derived from crime provisions in the Criminal Code.

- Trafficking in human beings and migrant smuggling- *Criminal Code section 279.01 and sections 117 & 118 of the Immigration and Refugee Protection Act.*
- Sexual exploitation, including sexual exploitation of children- *Criminal Code section 212.*
- Illicit trafficking in narcotic drugs and psychotropic substances -*Sections 5 to 7 of the Controlled Drugs and Substances Act.*
- Illicit arms trafficking- *Criminal Code sections 99 to 108.*
- Illicit trafficking in stolen and other goods- *Criminal Code sections 354 & 462.31.*
- Corruption and bribery- *Criminal Code sections 119 to 125; 426 and Section 3 of the Corruption of Foreign Public Officials Act.*
- Fraud- *Criminal Code sections 341, 342(3), 371, 374 to 376, 378, 380, 381, 385 to 394 and 396.*
- Counterfeiting currency- *Criminal Code sections 449 to 460.*
- Counterfeiting and piracy of products- *Criminal Code sections 406 to 411.*
- Environmental crime- *Sections 272 to 274 and 276 of the Canadian Environmental Protection Act, 1999.*
- Murder, grievous bodily injury- *Criminal Code sections 229 to 240 and 264.1 to 273.*
- Kidnapping, illegal restraint and hostage-taking- *Criminal Code sections 279 to 283.*
- Robbery or theft- *Criminal Code sections 343 and 322 to 334.*
- Smuggling-*Sections 153 to 160 of the Customs Act.*
- Extortion- *Criminal Code section 346.*
- Forgery- *Criminal Code sections 57, 342 & 342.1 369 to 378.*
- Piracy- *Criminal Code sections 74 & 75.*
- Insider trading and market manipulation- *Criminal Code section 382.1.*

209. *Extraterritorial predicate offences*. Jurisdiction to prosecute the money laundering and possession of property offences under Canadian law is established so long as the foreign conduct would have been an offence had it occurred in Canada (and whether or not the offence constitutes an offence in the foreign country). This explicit extension of jurisdiction is permitted under the general rule found in subsection 6(2) of the Criminal Code, which states that no person can be convicted of an offence committed outside Canada unless federal law explicitly extends jurisdiction to do so.

210. As is the case with money laundering, Canadian courts may assert criminal jurisdiction over acts taking place in another state if they are connected to other acts that take place in Canada in furtherance of criminal behaviour, or if the acts in the other state have some injurious consequence within Canada. For example, as defined in subsection 4(3) of the Criminal Code, possession of property derived from crime or the laundering of such property give rise to jurisdiction in Canada.

211. The leading Supreme Court of Canada case on jurisdiction is R. v. Libman, [1985] 2 S.C.R. 178, in which the Court held that "all that is necessary to make an offence subject to the jurisdiction of our courts is that a significant portion of the activities constituting that offence took place in Canada. As it is put by modern academics, it is sufficient that there be a "real and substantial link" between an offence and this country, a test well-known in public and private international law. (par. 74)". The Court stated that Canada "should not be indifferent to the protection of the public in other countries" (par.77).

212. The determination of what a "significant portion" or a "real and substantial link" will depend on the particular fact situation, but does not depend on an extensive physical connection between the offence and Canada[23]. In summary, if the crime giving rise to the possession of property occurred outside of Canada but the possession element of the offence occurs in Canada, the crime could be prosecuted in Canada.

[23] See Canada (Human Rights Commission) v. Canadian Liberty Net, [1988] 1 S.C.R. 626; United States of America v. Lépine, [1994] 1 S.C.R. 286 and R v. Hammerbeck (1993), R.F.L. (3d) 265, 26 B.C.C.A.

213. *Self-money laundering*. In Canada, an individual who launders their own proceeds commits a money laundering offence given the extensive definition of "person" and "property" in section 2 of the Criminal Code. Canadian case law supports this position[24].

214. *Ancillary offences*. Canada's Criminal Code includes ancillary or inchoate criminal offences. Section 21 CC criminalizes being party, which includes aiding and abetting, to the offence of money laundering[25]. Section 22 CC provides for a general counselling offence[26]. Section 23 CC provides for accessory after the fact. The *actus reus* and *mens rea* of an attempt are set out in Section 24(1) CC that creates liability for attempting to commit an offence regardless of whether it was, in fact, possible to commit the offence. It is a question of law whether an act or omission by a person who has the intent to commit an offence is mere preparation or an attempt to commit the offence. To illustrate how the courts normally draw the line between mere preparation and attempt, see the following two cases: R. v. Deutsch, [1986] 2 S.C.R. 2 and R. v. Sorrell and Bondett (1978), 41 C.C.C. (2d) 9.

215. Section 465 CC contains the relevant provisions on conspiracy. Section 465(1)(c) states that everyone who conspires with anyone to commit an indictable offence is guilty of an indictable offence and liable to the same punishment as that to which an accused who is guilty of the offence would, on conviction, be liable. Section 465(3) makes it an offence to conspire in Canada to do anything abroad referred to in section 465(1), if it is an offence under the laws of that place. Additionally, it is an offence under section 465(4) to conspire outside Canada to do anything in Canada referred to in 465(1). Canada explains that it is not a defence to a charge of conspiracy that an accused, having agreed to carry out the unlawful act with the intention to carry out the common design, later withdraws from the conspiracy, as the offence is complete upon the making of the agreement. Further to subsection 34(2) of the Interpretation Act, section 465 of the Criminal Code (conspiracy) would apply to the offences in the Act.

216. Section 463 CC sets out the sentence for anyone convicted of the inchoate offence. Section 464 provides for the offence of counselling offences that are not committed. Finally, to clarify any possible ambiguity in respect to the concept of designated offences for money laundering, Section 462.3 (b) CC refers to inchoate offences in the definition of "designated offences". Therefore, every indictable offence, including ancillary offences, is covered by the money laundering offence, unless they have been excluded by regulation as described above.

217. *Additional elements*. As discussed above, Canada's money laundering and possession of property offences establish jurisdiction so long as the foreign conduct would have been an offence if it had occurred in Canada. Whether or not the offence constitutes an offence in the foreign country is not taken into account. More specifically, the concept of "proceeds of crime" establishes the parameters of

---

[24] See R. v. Falahatchia (1995) 99 C.C.C. (3d) 420 (On C.A.); R. v. Cazzetta [2003] J.Q. N. 43 (Que C.A.).

[25] Section 21 (1) CC: "Everyone is a party to an offence who (a) actually commits it; (b) does or omits to do anything for the purpose of aiding any person to commit it; or (c) abets any person in committing it. (2) Where two or more persons form an intention in common to carry out an unlawful offence and to assist each other therein and any one of them, in carrying out the common purpose, commits an offence, each of them who knew or ought to have known that the commission of the offence would be a probable consequence of carrying out the common purpose is a party to that offence". For case law, see R. V. Fraser (1984), 13 C.C.C. (3d) 292 (B.C.C.A.) or R. V. Dunlop and Sylvester [1979] 2 S.C.R. 881 or R. V. Thatcher [1987] 1 S.C.R. 652.

[26] Section 22 CC: 22. (1) Where a person counsels another person to be a party to an offence and that other person is afterwards a party to that offence, the person who counselled is a party to that offence, notwithstanding that the offence was committed in a way different from that which was counselled. (2) Every one who counsels another person to be a party to an offence is a party to every offence that the other commits in consequence of the counselling that the person who counselled knew or ought to have known was likely to be committed in consequence of the counselling.

the nature of the property that may be relevant to a money laundering offence[27]. See also Sections 462.31 and 354(1) and Section 357 CC as described above).

Recommendation 2

218. *Natural persons that knowingly engage in ML activities*. Authority to prosecute a natural person has always existed in Canada. The criminal offences of money laundering and possession of property derived from crime clarify any ambiguity. They provide that the offence covers activity undertaken by "everyone". The Criminal Code defines "everyone" in section 2 in an expansive fashion to include an "organization". An "organization" is itself defined to mean a public body, body corporate, society, company, firm, partnership, trade union, municipality, or an association of persons that is created for a common purpose and has an operational structure. The concept includes natural and legal persons.

219. As regards knowledge, or intent, it is an essential element in all criminal offences, including the money laundering and possession of property derived from crime offences. Since these are criminal offences, the onus to prove the knowledge element beyond a reasonable doubt rests on the prosecution (known as the Crown in Canada). However, in Canada the prosecutor does not have to establish actual knowledge. A prosecutor can establish the required knowledge element by establishing that the accused was wilfully blind or reckless. In R. v. Sansregret, [1985] 1 S.C.R. 570, the Supreme Court held that recklessness and wilful blindness can be used to establish the criminal law requirement for intention. In addition, for the money laundering offence in Section 462.31 of the Criminal Code, further clarification was provided by an amendment adding the words "or believing" to the knowledge element in that offence[28].

220. *Inference from objective factual circumstances*. Canadian prosecutors may rely upon both direct and circumstantial evidence to prove their case in any criminal prosecution. The authority to use such evidence was recently canvassed by the Manitoba Court of Appeal in R. v. Jenner (2005), 195 C.C.C. (3d) 364 at paragraph 20: *"…It was contended that proof of knowledge as to the character of the substance would place upon the Crown a difficult, if not impossible, burden. I cannot agree with the contention. Proof of knowledge is no more difficult than the proof of intent in any criminal prosecution. Knowledge, like intent, is a state of mind. It cannot, generally speaking, be proved as a fact but can only be inferred from facts which are proved. A jury, on properly established facts, should experience no more difficulty in finding knowledge than it does in finding intent*".

221. The Ontario Court of Appeal, in R. v. Aiello (1978), 38 C.C.C. (2d) 485 affirmed 46 C.C.C. (2d) 128n (S.C.C.), opined, at page 488, on the same point: *"…The trial Judge in our view should have further directed the jury that it was not necessary for the prosecution to prove the required knowledge by direct evidence, but that it could be inferred from the surrounding circumstances, such as, for example, the finding of the drug on the accused person in his trouser pant leg, his evidence that he figured that it must be a drug, the circumstances in which, and the place where he had picked up the package*".

222. The ability to rely on circumstantial evidence in a ML case is more specifically enhanced by Section 462.39 CC, which provides that: "*…the court may infer that property was obtained or derived as a result of the commission of a designated offence where evidence establishes that the value, after the commission of that offence, of all the property of the person alleged to have committed the offence exceeds the value of all the property of that person before the commission of that offence and the court*

---

[27] Section 462.3 CC: "*in this Part, "proceeds of crime" means any property, benefit or advantage, within or outside Canada, obtained or derived directly or indirectly as a result of (a) the commission in Canada of a designated offence, or (b) an act or omission anywhere that, if it had occurred in Canada, would have constituted a designated offence*".

[28] An amendment in May 1997 added "belief" to the money laundering offence, so as to overcome the problem that "sting" operations could not be conducted by the police as the use of government money as "proceeds" meant that no offence was committed.

is satisfied that the income of that person from sources unrelated to designated offences committed by that person cannot reasonably account for such an increase in value".

223. *Criminal liability for legal persons*. Authority to prosecute a legal person exists in Canada. As indicated above, the scope of any relevant criminal offence is found in the specific money laundering and possession of property derived from crime offences. These offences refer to "everyone" and the Criminal Code defines "everyone" to include an "organization". Section 2 defines "organization" expansively to mean a public body, a body corporate, a society, a company, a firm, a partnership, a trade union or an unincorporated association.

224. Following recent modifications to the Criminal Code to deal with legal persons, corporations may be held criminally liable: (a) as a result of the actions of those who oversee day-to-day operations but who may not be directors or executives; (b) when officers with executive or operational authority intentionally commit, or direct employees to commit, crimes to benefit the organization; (c) when officers with executive or operational authority become aware of offences being committed by other employees but do not take action to stop them; and (d) when the actions of those with authority and other employees, taken as a whole, demonstrate a lack of care that constitutes criminal negligence.

225. Fines imposed against corporations that are found criminally liable can range from up to CAD100 000 for a prosecution on summary conviction, a less serious offence, to no set limit for indictable or more serious offences. The Criminal Code was also amended with respect to sentencing and the concept of corporate probation[29].

226. *Sanctions for ML*. Canada's possession of property derived from crime (Subsection 354(1) CC carries a maximum penalty of 10 years imprisonment if the property involved is a "testamentary instrument," or exceeds CAD5 000 in value (otherwise it is only a 2 year maximum), as does the separate offence of bringing into Canada property obtained by crime (Section 357). The Section 462.31 ML offence also carries a maximum penalty of 10 years, regardless of the value of the property involved. A person convicted of an attempt to commit such a crime or as an accessory after the fact may be subjected to a penalty of one-half of that available for actual committing the underlying offence (Section 463). If the charge is for counselling an offence that is not committed, the maximum penalty is the same as if the person was convicted of an attempt, namely one-half of that available for actual committing the underlying offence (Section 464). If the person is convicted of a conspiracy, the maximum penalty is five years imprisonment (subparagraph 465(1)(b)(ii)). It should also be noted that the proceeds of crime are forfeitable. If the property that would otherwise be forfeitable is no longer available for forfeiture, Section 462.37 provides for a fine in lieu of forfeiture alternative with consecutive jail time in default ranging from a maximum of six months to ten years depending on the amount of the fine.

227. All of the referenced terms of incarceration can apply to a natural person, but it is not possible to incarcerate a legal person. As a result, the Criminal Code deals with this reality in Sections 718.21 and 735(1) and imposes an additional fine ranging from a maximum of CAD100 000 for summary conviction offences to an amount determined by the court for the more serious indictable offences.

228. Limited information was given to the assessment team on ML sentencing (a sample of 28 ML sentences from 1993 to 2006 was provided and no example was given of a Section 462.31 ML sentence of a legal person). In the examples that were provided, penalties for Section 462.31 ML ranged from 6 months (for CAD29 000 laundered) to 10 years (conviction for laundering proceeds, conspiracy to launder, drug trafficking and CAD30 million laundered). No comprehensive statistics are available on Section 462.31 ML sentencing, nor on possession of proceeds cases and the data provided is a snap shot of cases that cover a long period of time. A lack of statistics on sanctions imposed on natural and legal persons means that the effectiveness of sanctions for ML cannot be properly assessed.

[29] See Section 718.21CC which sets out sentencing factors that the court must consider while sections 721, 730, 732.1, 734 and 735 updated other sentencing considerations for convicted corporations.

Statistics (Recommendation 32)

229. The following table provides the number of charges pursuant to Section 462(31) CC (ML offence) and the outcomes of the trials.

Year	2003/2004	2004/2005	2005/2006	**Total**
Charges laid down pursuant to S.462(31) CC	220	292	211	**723**
Guilty pursuant to S.462(31) CC	5	6	10	**21**
Committed for trial (ongoing case) pursuant to 462(31) CC	8	6	3	**17**

230. There is no figure on the number of Section 462.31 ML cases that are either self-money laundering or third-party money laundering.

231. The following table provides the number of charges pursuant to Section 354 (possession of property obtained by crime) and the outcomes of the trials. The assessment team was not provided with information to indicate how many of these cases were more in the nature of simple possession of stolen goods type offences as compared to possession of the proceeds of serious offences *i.e.* what is considered as traditional money laundering. Nor was data available on how many offences involved more than CCAD5 000 in assets. The team was advised that the data in the s. 354 table includes a large majority of minor possession offences involving either minor cases of possession of small quantities of drugs and cash or receipt of stolen goods. Canada analysed a sample of approximately 1 000 cases which showed a large majority were linked to funds derived from drug offences and a much smaller number were linked to thefts.

Year	2003/2004	2004/2005	2005/2006	**Total**
Charges laid down pursuant to S.354 CC	24 434	24 410	16 971	**65 815**
Guilty pursuant to S.354 CC	3 962	4 025	2 163	**10 150**
Committed for trial (ongoing case) pursuant to S.354 CC	587	579	249	**1 415**

232. The following table provides an overview of the number of charges laid by the RCMP's IPOC units in money laundering and possession of proceeds of crime cases. The other category includes weapons related charges, drug related charges, breach of probation and fraud charges, to name a few.

Charge Type	**Files**	**2001**	**2002**	**2003**	**2004**	**2005**	**2006**	**Total**
Possession of POC	Number	28	231	157	78	31	16	**541**
	Percent	52.8%	40.3%	52.3%	17.5%	10.8%	34.9%	**31.7%**
Money laundering	Number	4	319	109	57	97	25	**611**
	Percent	7.6%	55.7%	36.3%	12.8%	33.7%	54.4%	**35.8%**
Other	Number	21	23	34	311	160	5	**554**
	Percent	39.6%	4.0%	11.3%	69.7%	55.6%	10.9%	**32.5%**
TOTAL	Number	**53**	**573**	**300**	**446**	**288**	**46**	**1,706**
	Percent	**100%**	**100%**	**100%**	**100%**	**100%**	**100%**	**100%**

2.1.2 Recommendations and Comments

233. The anti-money laundering offences are comprehensive and Canada generally meets the requirements under Recommendations 1 and 2. The primary ML offence set forth in Section 462.31 is broad in its scope, but the assessors recommend that all indictable offences, including those prescribed by regulations, should be predicate offences for ML, since copyright offences are currently not covered by this provision. Conversely, the Section 354 possession of property offence covers property from all indictable offences, and the two offences should thus be consistent in their scope. The Section 462.31 offence is technically inconsistent with the relevant UN Conventions in that it injects an additional specific intent mental element that is not required by those Conventions. Section 462.31 should be rewritten to make clear that the perpetrator need not have the specific intent to conceal (or disguise), but that that instead that only "purpose" or result of the particular transaction must be such. In addition, Canada should craft language that makes sure Section 462.31 covers transfers and conversions that have as their purpose helping any person who is involved in the commission of a predicate offence or offences evade the legal consequences of his or her actions. Alternatively, Canada should consider removing the purpose element from Section 462.31 completely, thus making it consistent with s.354, albeit it broader than the Convention requirements.

234. The assessment team has concerns on whether prosecutions of ML offences have been effectively implemented. A reasonable number of charges are laid for section 462.31 ML offences (723 from 2003 to 2006) in a country where, based on the information made available, money laundering is considered to be a significant criminal problem. However, the number of convictions in that period for that offence is very limited, 21 from 2003 to 2006. In addition there are 17 charges currently committed to trial. This means less than 3% of Section 462.31 charges laid have resulted in convictions. There have been more than 65,000 charges laid under s.354 from 2003 to 2006, with 10 150 convictions for that offence. Another 1 415 charges are pending trial. The team was advised that this was because prosecutors either pursue predicate offences or a s.354 possession offence which they are more familiar with, and which is easier to prove as it does not require the additional intent element set forth in Section 462.31. Canada advised the assessment team that the volume of s.354 offences charged and convicted shows that it is aggressively pursuing the crime of money laundering. However, in summary, the team is concerned about the overall effectiveness of action taken to convict money launderers, due to the following considerations:

(a) The very low number of convictions for s.462.31 (which is the offence focussed on active money laundering).

(b) The information which suggests that the bulk of s.354 offences are not ML offences as contemplated by FATF (an examination of the Criminal Code shows that this offence, which was created in 1974, is closely linked to actions to be taken in relation to possession of stolen property – Canada also indicated in paragraph 152 above that s.354 (and also s.462.31) are offences dealing with illicit trafficking in stolen goods and other property) or that the charges laid under s.354 often involve minor offence.

(c) Other important government agencies that combat ML and TF are focused on s.462.31 e.g.FINTRAC can only make disclosures to law enforcement when it has reason to believe a TF offence or s.462.31 ML offence is implicated, but cannot make such a disclosure when a s.354 offence is suspected. Moreover, when FINTRAC receives law enforcement VIRS, it focuses its analytical resources on VIRS that involve s.462.31 offences, and not VIRS that involve s.354 offences. IPOC units lay more s.462.31 charges than s. 354 charges in spite of the 99 to 1 ratio in favour of s.354 that exists elsewhere.

235. (d) If the property is valued at less than CAD5 000 and does not involve a "testamentary instrument" the maximum penalty is 2 years as opposed to the 10 year sentence that is available for the more serious Section 354 offences as well as all Section 462.31 offences.

(e) Even if the assessment team where to credit s.354 offences as ML offences in all cases (which it does not), the fact remains that only 17% of s. 354 charges laid resulted in convictions or have been committed to trial, which is still very low.

236. The emphasis on and preference for pursuing the predicate crimes and the offence of possession of property obtained by crime, in addition to the lack of comprehensive data on investigations and prosecutions at federal and provincial levels, lead the evaluation team to conclude that the statutes available for countering ML are not being used as effectively as they could be. Canada should develop a more proactive approach to prosecuting the specific money laundering charge under s.462.31.

2.1.3 Compliance with Recommendations 1 & 2

Rec.	Rating	Summary of factors underlying ratings
R.1	LC	▪ The ML offence does not cover all designated categories of predicate offences (copyright related offences). ▪ Section 462.31 ML offence contains a purposive element that is not broad enough to meet the requirements of the Conventions or R.1. ▪ The number of convictions for Section 462.31 ML is very low, as is the percentage of convictions in comparison to charges laid.
R.2	LC	▪ The number of convictions for Section 462.31 ML is very low. ▪ Due to the lack of data on ML sentencing, is not possible to assess whether natural and legal persons are subject to effective, proportionate and dissuasive sanctions for ML.

2.2 Criminalisation of Terrorist Financing (SR.II)

2.2.1 Description and Analysis

237. *The terrorist financing offence*. In 2001, the Anti-terrorism Act (ATA) amended the Criminal Code to create three criminal offences related to the financing of terrorism. These amendments to the Criminal Code enabled Canada to implement international obligations under the UN Security Council Resolution 1373 and the UN International Convention for the Suppression of the Financing of Terrorism. The three terrorist financing offences under the Code are broadly defined and operate in an expansive fashion.

238. Section 83.02 of the Criminal Code makes it an offence to "wilfully and without lawful justification or excuse, directly or indirectly provide or collect property intending or knowing that it will be used, in whole or in part, to carry out a "terrorist activity" as defined in section 83.01(1) or any other act or omission intended to cause death or serious bodily harm to a civilian or to any other person not taking an active part in the hostilities in a situation of armed conflict, if the purpose of that act or omission, by its nature or context, is to intimidate the public, or to compel a government or an international organization to do or refrain from doing any act".

239.

240. Section 83.03 makes it an offence to "directly or indirectly collect property or to make available, provide, or invite a person to provide property or financial or other related services: (a) intending or knowing that they be used, in whole or in part, for the purpose of facilitating or carrying out a terrorist activity, or for the purpose of "benefiting" a person who is facilitating or carrying out a terrorist activity; or, (b) knowing that, in whole or part, they will be used by or will benefit a terrorist group".

241. Section 83.04 makes it an offence to "*use property, directly or indirectly, in whole or in part, for the purpose of facilitating or carrying out a terrorist activity*". It is also an offence under this section to possess property, intending or knowing that it will be used, directly or indirectly, in whole or in part, for the purpose of facilitating or carrying out a terrorist activity.

242. Under Section 83.01 of the Criminal Code, "terrorist activity" means:

> (*a*) an act or omission that is committed in or outside Canada and that, if committed in Canada, is one of the following offences:
>
> (i) the offences referred to in subsection 7(2) that implement the *Convention for the Suppression of Unlawful Seizure of Aircraft*, signed at The Hague on December 16, 1970,

(ii) the offences referred to in subsection 7(2) that implement the *Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation*, signed at Montreal on September 23, 1971,

(iii) the offences referred to in subsection 7(3) that implement the *Convention on the Prevention and Punishment of Crimes against Internationally Protected Persons, including Diplomatic Agents*, adopted by the General Assembly of the United Nations on December 14, 1973,

(iv) the offences referred to in subsection 7(3.1) that implement the *International Convention against the Taking of Hostages*, adopted by the General Assembly of the United Nations on December 17, 1979,

(v) the offences referred to in subsection 7(3.4) or (3.6) that implement the *Convention on the Physical Protection of Nuclear Material*, done at Vienna and New York on March 3, 1980,

(vi) the offences referred to in subsection 7(2) that implement the *Protocol for the Suppression of Unlawful Acts of Violence at Airports Serving International Civil Aviation*, supplementary to the *Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation*, signed at Montreal on February 24, 1988,

(vii) the offences referred to in subsection 7(2.1) that implement the *Convention for the Suppression of Unlawful Acts against the Safety of Maritime Navigation*, done at Rome on March 10, 1988,

(viii) the offences referred to in subsection 7(2.1) or (2.2) that implement the *Protocol for the Suppression of Unlawful Acts against the Safety of Fixed Platforms Located on the Continental Shelf*, done at Rome on March 10, 1988,

(ix) the offences referred to in subsection 7(3.72) that implement the *International Convention for the Suppression of Terrorist Bombings*, adopted by the General Assembly of the United Nations on December 15, 1997, and

(x) the offences referred to in subsection 7(3.73) that implement the *International Convention for the Suppression of the Financing of Terrorism*, adopted by the General Assembly of the United Nations on December 9, 1999, or

(*b*) an act or omission, in or outside Canada,

(i) that is committed

(A) in whole or in part for a political, religious or ideological purpose, objective or cause, and

(B) in whole or in part with the intention of intimidating the public, or a segment of the public, with regard to its security, including its economic security, or compelling a person, a government or a domestic or an international organization to do or to refrain from doing any act, whether the public or the person, government or organization is inside or outside Canada, and

(ii) that intentionally

(A) causes death or serious bodily harm to a person by the use of violence,

(B) endangers a person's life,

(C) causes a serious risk to the health or safety of the public or any segment of the public,

(D) causes substantial property damage, whether to public or private property, if causing such damage is likely to result in the conduct or harm referred to in any of clauses (A) to (C), or

(E) causes serious interference with or serious disruption of an essential service, facility or system, whether public or private, other than as a result of advocacy, protest, dissent or stoppage of work that is not intended to result in the conduct or harm referred to in any of clauses (A) to (C),

and includes a conspiracy, attempt or threat to commit any such act or omission, or being an accessory after the fact or counselling in relation to any such act or omission, but, for greater certainty, does not include an act or omission that is committed during an armed conflict and that, at the time and in the place of its commission, is in accordance with customary international law or conventional international law applicable to the conflict, or the activities undertaken by military forces of a state in the exercise of their official duties, to the extent that those activities are governed by other rules of international law.

243. In line with the UN Convention, safeguards have been incorporated into the ATA with respect to the terrorist financing offences, including the legal threshold of knowledge and intention. In addition, the Attorney General's consent is required to institute proceedings.

244. In Canada's criminal code, the provisions that criminalize terrorist financing use the term "property", as opposed to the term "funds" that is used in the TF convention. As seen in Sections 83.02, 83.03, and 83.04 of the Criminal Code, terrorist financing offences refer to "property", which is defined in section 2 as including *(a) real and personal property of every description and deeds and instruments relating to or evidencing the title or right to property, or giving a right to recover or receive money or goods, (b) property originally in the possession or under the control of any person, and any property into or for which it has been converted or exchanged and anything acquired at any time by the conversion or exchange"* (see Section 2.1 of the report). This definition is very broad and is consistent with the definition of "funds" in the Terrorist Financing Convention.

245. The TF Convention states that the terrorist financing offence need not require that the funds: (i) were actually used to carry out or attempt a terrorist act(s); or (ii) be linked to a specific terrorist act(s). The wording in the Canadian terrorist financing offence makes reference to the collection of property with the intention that it be used, or knowing that it will be used for terrorist activity. The threshold of criminal conduct is met here if there is an intention to carry out terrorist activity and therefore does not require that funds are actually used to carry out the activity. This is consistent with the requirements of the TF Convention and the Recommendation. The Code, unlike the TF Convention, does not make reference to specific acts of terrorism, the use of funds by a terrorist organisation or to an individual terrorist, but uses the broadly defined term "terrorist activity". Terrorist activity as defined in the code includes an act or omission, committed to achieve specific ends. The Code also requires that the act be concluded with intention to achieve specific listed outcomes. The Code does not make direct reference to a specific terrorist individual, but the existing terrorist offences in part II.1 of the Criminal Code, together with the definition and jurisdiction sections in s. 7 can be used to define and cover the issue. The terrorist offences in Part II.1 of the Code and the reference to "terrorist activity" are specifically designed to interrelate. A terrorist activity is an act or omission, in other words conduct. That conduct is undertaken by individuals and terrorist groups. Indeed "terrorist groups" are defined as an "entity". An "entity" is defined as a person and the definition includes an "organization". Section 2 of the Criminal Code reinforces this by providing an expansive definition of an "organization" as any legal person. Finally every criminal offence that could be committed is structured to cover natural and legal persons by the word "everyone". As a result a specific terrorist individual is included in every relevant offence.

246. Section 24 of the Criminal Code provides that "every one who, having an intent to commit an offence, does or omits to do anything for the purpose of carrying out his intention is guilty of an attempt to commit the offence whether or not it was possible under the circumstances to commit the offence." As such, the Criminal Code offences referred to above include attempts to commit them. Further, the definition of "terrorism offence" in the Criminal Code (see above) specifically includes attempts to commit them as part of the definition of this term.

247. The terrorism financing offences include a conspiracy or attempt to commit, being an accessory after the fact or counselling in relation to the offences. This covers "participating as an accomplice" in the Terrorist Financing Convention. Further, sections 21 (parties to an offence), 22 (counselling an

offence), 23 (accessory after the fact), and 465 (conspiracy) of the Criminal Code confirm that the specific offences include being an "accomplice".

248. Regarding organizing or directing others to commit an offence, section 83.03 in its prohibition of inviting others to provide property, financial or other services would cover most of this activity. Further, the offence of instructing to carry out activity for a terrorist group (section 83.21) and instructing to carry out terrorist activity (section 83.22) could cover as well the activity of organizing or directing others to commit terrorist financing offences.

249. Finally, the terrorist financing offences and the definitions of terrorist activity and terrorist group provide that individuals alone or as part of a group of persons that act intentionally to further criminal purposes would be covered.

250. *FT as a predicate offence for ML*. Terrorism offences, as indictable offences under the Criminal Code, are predicate offences to which Canada's proceeds of crime legislation apply. These offences fall within the definition of "designated offences" found in section 462.3 of the Criminal Code. A conspiracy, an attempt, being an accessory after the fact in relation to, or counselling in relation to, a terrorism offence are also "designated offences" that are subject to this regime.

251. The terrorist financing regime in the Criminal Code includes provisions on the freezing, seizure/restraint, forfeiture and disposition of property as well. They are found in sections 83.08-83.15 and link with the existing provisions on proceeds of crime and forfeiture of offence-related property (Part XII.2 and sections 490.1-490.9).

252. *Jurisdiction over FT offences*. The specific terrorism financing offences apply in Canada regardless of whether the person alleged to have committed the offence is in Canada or in a different country than that of the terrorist group or in which the terrorist activity has or will occur. In addition, terrorism financing offences could be prosecuted, under certain limitations as required by the general principle of international criminal law jurisdiction, even if these offences have taken place in another country (see Sections 3.73 to 3.75 of the Criminal Code).

253. Finally, of note is the expansive territorial reach of section 354 (possession of property obtained by crime includes act or omission outside Canada) and section 462.3 ("proceeds of crime" includes any property outside Canada derived from an act or omission occurring outside Canada).

254. *Inference from objective factual circumstances*. In Canada, the intentional element of terrorism offences may be inferred from objective factual circumstances that are themselves proven through admissible evidence.

255. It is a well-established principle of criminal evidence that "any fact from which may be inferred a fact in issue or a fact relevant to an issue is admissible; it is called "circumstantial evidence" (McWilliams' Canadian Criminal Evidence, 4th ed., 2003). As regards knowledge, or intent, it is an essential element in all criminal offences, including the money laundering and possession of property derived from crime offences. Since these are criminal offences, the onus to prove the knowledge element beyond a reasonable doubt rests on the prosecution (known as the Crown in Canada). However, in Canada the prosecutor does not have to establish actual knowledge. A prosecutor can establish the required knowledge element by establishing that the accused was wilfully blind or reckless. In R. v. Sansregret, [1985] 1 S.C.R. 570, the Supreme Court held that recklessness and wilful blindness can be used to establish the criminal law requirement for intention. The rules of evidence apply with equal force to proof by circumstantial evidence as to proof by direct evidence. The evidence in both instances must be equally credible, admissible and relevant[30].

[30] See Re R. v. Truscott [1967] 2 C.C.C. 285 (S.C.C.).

256. *Criminal liability of legal persons.* In Canada, criminal liability for terrorism offences, including financing of terrorist activities and groups, applies to "everyone", which includes "an organization", defined in section 2 of the Criminal Code (see Section 2.1 of the report).

257. Section 22.2 defines the liability of an organization as a party to an offence, where the offence is one that requires proof of fault other than negligence. The prosecution must prove that one of the "senior officers" at least had the intent in part to benefit the organization and either: (a) such officer acting within the scope of his authority was a party to the offence; (b) the senior officer had the requisite mens rea (mental element) for the offence, was within the scope of his authority and directed others to do the required act, or (c) the officer did not take reasonable measures to stop the commission of the offence by others. In addition, corporations may be held criminally liable for actions of employees who are their directing minds[31].

258. *Parallel criminal, civil or administrative proceedings.* There is no prohibition on such parallel proceedings in Canada. Section 11 of the Criminal Code provides that "no civil remedy for an act or omission is suspended or affected by reason that the act or omission is a criminal offence."

259. *Sanctions*. A person or organization that is convicted of a terrorist financing offence (sections 83.02, 83.03 or 83.04 of the Criminal Code) may be sentenced to up to 10 years imprisonment in Canada.

260. The actual sentence imposed will reflect the purpose and principles of sentencing set out in sections 718 and following of the Criminal Code. The purpose of sentencing is to contribute to respect for the law and maintenance of a just, peaceful and safe society by imposing just sanctions that denounce unlawful conduct, deter the offender and others from committing offences, separate the offenders from society where necessary, assist in rehabilitating offenders and provide reparation for harm done to victims or to the community. The fundamental principle of sentencing is that a sentence must be proportionate to the gravity of the offence and degree of responsibility of the offender.

261. The fact that the offence is a terrorist offence is an aggravating circumstance that should result in an increase in the sentence (section 718.2(a)(v) of the Criminal Code.)

262. In respect of criminal liability of legal persons (organizations), section 735 of the Criminal Code provides for fines in lieu of imprisonment in certain circumstances.

Statistics (Recommendation 32)

263. The RCMP's National Security branch maintains a summary of key activities and milestones which contain the following statistics for a two month period:

- Number of terrorist groups disrupted.
- Cases submitted for prosecutions.
- Number of active anti-terrorism financing investigations.
- Number of tactical intelligence packages disseminated to field units.
- Number of disclosures to FINTRAC.
- Number of hours spent listing terrorist entities, and the number of charities de-registered.

264. For example for the time period of 1 April – 30 June 2006, the following statistics were recorded:

Active Anti-Terrorist Financing Investigations in Canada –	52
Disclosures to FINTRAC	7
Number of requests responding to Foreign Governments –	72
Number of Files Successfully concluded	601

[31] See Canadian Dredge & Dock Co. v. The Queen, [1985] 1 S.C.R. 662.

Number of Terrorist Groups disrupted	6

265. Other mechanisms which are reported are monthly reports in a narrative format with respect to central coordination of Anti-terrorism financing investigations, anti-terrorism training and the coordination and monitoring the status of charities.

266. Regarding prosecutions, one person, Mohammad Momin Khawaja has been charged with 7 terrorism offences, including providing, inviting a person to provide, and making available property and financial services, to a terrorist group in the United Kingdom, intending or knowing that they would be used, in whole or in part, for the purpose of facilitating or carrying out terrorist activity, or for the purpose of benefiting the terrorist group or others who were facilitating or carrying out terrorist activity, contrary to Section 83.03(a) of the Criminal Code. This case has not been adjudicated yet.

267. A total of 20 individuals have been charged with terrorist offences in two cases, including three persons charged under, Section 83.03 of the Criminal Code. Neither of these cases have been adjudicated yet, and since 2001 there have been no other prosecution or convictions. Given the not insignificant number of investigations, and the more than 600 files successfully concluded, the lack of any convictions since 2001 indicates a lack of effectiveness, despite the two prosecutions that are now before the courts.

2.2.2 Recommendations and Comments

268. The definition of "terrorist activity" in the Criminal Code incorporates by reference to specific offences set out in the Code, acts committed in a large number of international conventions. Canadian authorities should give consideration to ways to rationalise the references currently found in disparate locations, without losing the applicability within their country of the additional acts defined in the conventions.

269. The statistics compiled by the RCMP provide a clear indication of an increase in levels of terrorist related activity in Canada, with a large number of investigations and files. Only three persons have been charged with terrorist financing and these charges have not yet been heard. Nobody has been convicted. Given these facts it does not appear that as yet the TF offence is being effectively used. The overall effectiveness of the TF offence and regime is an issue that the authorities will need to pay close attention to going forward.

2.2.3 Compliance with Special Recommendation II

Rec.	Rating	Summary of factors underlying ratings
SR.II	LC	▪ The lack of any TF convictions and the very limited number of prosecutions shows that the offence has not yet been fully and effectively used.

2.3 Confiscation, freezing and seizing of proceeds (R.3)

2.3.1 Description and Analysis

270. *Confiscation*. Canada's Criminal Code contains provisions that authorise the confiscation (hereinafter "forfeiture") of proceeds of crime while the Criminal Code and its Controlled Drugs and Substances Act (CDSA) each have provisions to forfeit "offence-related property," which is Canada's term used to cover "instrumentalities." Forfeiture of "proceeds of crime" is fully covered in Criminal Code in sections 462.37, 462.38, and 462.43. Forfeiture of "offence-related property" is accomplished under the Criminal Code sections 490.1 and 490.2 and the CDSA sections 16 & 17. Offence related property includes instrumentalities intended for use in the commission of specified crimes (see definition of "offence-related property," Criminal Code Section 2). Only simple possession of controlled substances, which is a standalone offence in the CDSA, is not included in that Act's definition of "offence related property." Forfeiture is available for all money laundering and terrorist financing offences, as well as direct forfeiture as an option for all predicate offences. Conviction for any indictable offence or a conspiracy or attempt to commit an indictable offence can give rise to

forfeiture (see definition of "designated offence," Criminal Code section 462.3(1)). Subsection 462.3(1) of the Criminal Code exempts, by regulation, certain offences arising under 14 designated Acts of Parliament from the money laundering predicates and hence also the forfeiture regime.

271. Subsections 462.37 (3) & (4) of the Criminal Code provides for a fine or imprisonment in lieu of forfeiture. Canada considers this alternative as the forfeiture of property of equivalent value. However, the fine in lieu option is discretionary as subsection 462.37(3) states "the court may" impose same rather than "shall." The fine in lieu option arises in a proceeds of crime case where counsel for the Attorney General applies for forfeiture, thus it is an option completely in the control of the prosecutor and one that is rarely pursued in practice as only CAD3.3 million has been collected through this method. Moreover, the court, in theory could, elect not to impose such a fine. Nor is it clear that "fines," which are generally deemed to be a form of punishment, are to be treated the same way as "forfeitures" would be under Canadian law. For example, it does not appear that Criminal Code section 491.1 could be used to disburse such a fine to victims. Fines in lieu of forfeiture can be imposed for the amount of proceeds of crime that have been dissipated or located outside Canada. If there are no assets to which such a fine can be applied the court "shall" impose a jail sentence. The fine is enforced as a civil judgement against any other property that the offender owns at that time or may acquire in the future. It does not apply to non proceeds property the perpetrator transferred to third persons before the fine was imposed. If the accused later obtains wealth or accesses hidden illicit wealth not discovered at sentencing, he or she can be forced to comply with the monetary fine previously imposed. The prosecutor would have to anticipate such a windfall in advance and take the extra steps in the prosecution to obtain such an order, which does not seem to be a very practical solution. It is not prosecution service policy to get such an order in all cases in which forfeiture is an issue, and likely is only done if proceeds are spent and the prosecutor learns that non-tainted assets exist before sentencing. Section 734.7 of the Criminal Code provides the Attorney General with the flexibility to enforce the fine rather than apply to the court to have the offender serve the mandatory time in default. The fine and imprisonment in lieu of forfeiture option is an awkward attempt to ameliorate the problem of dissipated forfeitable assets.

272. Section 2 of the Criminal Code broadly defines "property" to include all real and personal property of every description and deeds and instruments relating to or evidencing the title or right to property, or giving a right to recover or receive money or goods as well as property originally in the possession or under the control of any person, and any property into or for which it has been converted or exchanged and anything acquired at any time by the conversion or exchange. The definition of "proceeds of crime," in section 462.3(1) of the Criminal Code specifically includes any property, benefit or advantage obtained or "derived directly or indirectly" as a result of the commission of a designated offence. Thus, in light of the definitions of "property" and "proceeds of crime" Canada's forfeiture provisions appear to permit the forfeiture of "income, profits or other benefits" as proceeds of crime[32].

273. Property is forfeited to Canada, whether it is held by the criminal defendant or a nominee third party. The relevant Canadian forfeiture provisions focus on identity of the property as either the "proceeds of crime" or "offence-related property" as the deciding factor as to whether it can be forfeited, rather than the actions or relationship of a property's owner to the offence committed. However, the latter inquiry may be relevant to the issue of the "innocent ownership" in any challenges made to the restraint, seizures and forfeiture of property by purported *bona fide* third-party owners of property that might be subject to forfeiture.

274. *Seizure.* Canada has a wide range of search and seizure or restraint authorities in its criminal laws to assist in confiscation matters. Canada does not use the term "freezing" in its law with the only exception being terrorist property as described and provided for in section 83.08 of the Criminal Code. In Canada, "freezing" is simply accomplished via restraint orders.

---

[32] See the Quebec Court of Appeal decision of R. v. 170888 Canada Ltée, (1999), 135 C.C.C (3d)367.

275. *Search Warrants.* Criminal Code section 487 and section 11 of the CDSA permit the police or a "public officer" to obtain judicial warrants, on the basis of reasonable grounds to believe that in a building, place or receptacles items described in the warrant will be found, and gives one authority to enter, search and seize the things set out in the warrant. The things to be searched for may include anything "in respect of which" an offence against any Act of Parliament has been or is suspected of having been committed, anything that will afford evidence of an offence, and anything intended to be used to commit an offence, and any offence-related property. *See, e.g.* subsections 487(1)(a) through (c.1). Section 487 of the Criminal Code sets out a broad search and seizure authority in Canadian criminal law but other Acts, including the CDSA, have stand alone search warrant provisions as well. In spite of those provisions, in light of Canada's Interpretation Act and case decisions, a Criminal Code section 487 search warrant is available in the investigation of every criminal offence. The authority to issue a search warrant to search and seize almost "anything" does have some limitations. The most significant is that intangible items, such as money on deposit in a bank account or real property, cannot be seized under the authority of a search warrant[33].

276. These Criminal Code search warrants can be issued by a justice of the peace and are available at any relevant stage in the investigative process. In the course of any execution of a search warrant, section 489 of the Criminal Code authorises the peace officer executing a search warrant to seize other things not listed in the warrant which he or she discovers that are obtained from the commission of crime, used in the commission of crime or afford evidence of another offence under any Act of Parliament. The issuing court, may order the detention and preservation of the property for three months (see Subsection 490(2)). However, the detention period can be extended and it is automatically extended as soon as charges are instituted.

277. *Special search warrant for proceeds of crime*. Section 462.32 of the Criminal Code provides authority for counsel for the Attorney General (*i.e.* the crown prosecutor) to obtain a special search warrant to seize property that is subject to forfeiture, which includes the proceeds of crime, but is obtained from a Judge, as opposed to a Justice of the Peace. Once a special search warrant against proceeds of crime is obtained and executed, section 462.35 provides that any seizure is effective for six months after execution. This period of detention may be extended and such an extension is continued once a criminal charge is initiated where a forfeiture of the property may occur. Pursuant to subsection 462.32(2.1) a special search warrant's search authority, once issued, is effective throughout Canada. It is not possible to obtain a special search warrant to search and seize proceeds of crime that may be forfeitable pursuant to the relevant forfeiture provisions when the relevant thing (*i.e.* the property) is outside of Canada. The Attorney General is required to give undertakings for damages and costs when obtaining such warrants, which according to Canadian officials "has not presented any problems" because since 1993, Canada has paid less than CAD50,000 in undertakings.

278. *Restraint order provisions for proceeds of crime and offence related property.* Sections 462.33 and 490.8 of the Criminal Code, respectively, permit the Attorney General to apply for restraint orders to restrain forfeitable proceeds of crime and forfeitable offence-related property. Such restraint orders are *in personam* orders prohibiting the persons named in the order from disposing or dealing with any property specified in the order. The order, once issued before a judge, is effective throughout Canada but also applies to property all over the world, and the persons subject to, *i.e.* served with, the order will commit an indictable offence for knowingly breaching the order (see Subsections 462.33 (3.01), (3.1) and (11), and 490.8 (3.1) and (9). The restraining order, to be effective, must be served upon all relevant parties in Canada, and it applies only against such served persons. The Attorney General must provide undertakings for damages and costs when restraining forfeitable proceeds of crime, which, according to Canadian officials, has not presented any problems (Criminal Code section 462.33(7). No undertaking is required for the restraint of offence-related property (Criminal Code section 490.8).

[33] See *R. v. Banque Royale du Canada* (1985), 18 C.C.C. (3d) 98 (Que. C.A.).

279. For forfeitable property located abroad, with the exception of a restraining order served on a person in Canada who controls property located abroad, Canada, like most nations, would have to rely upon its treaty relationships to obtain the restraint or seizure of such foreign property.

280. *Seizure made ex parte*. An ordinary search warrant for evidence or offence related property, under either section 487 the Criminal Code or section 11 the Controlled Drugs and Substances Act, are in practice *ex-parte* applications. The regular Criminal Code search warrant provisions do not expressly state that the application may be made *ex-parte* as a matter of right[34]. The CDSA Section 11, as well as Criminal Code section 490.8, for the restraint of offence-related property, the special search warrant for proceeds of crime under Criminal Code section 462.32, the restraint order for proceeds of crime under Criminal Code section 462.33, and the CDSA's restraint order for offence related property under section 14, all specify that the application may be *ex-parte*. However, in the case of the seizure or restraint of proceeds of crime the provisions include an additional consideration for the issuing judge. Subsections 462.32(5) and 462.33(5) each provide that the issuing judge may require that the applicant Attorney General provide notice of the application to any person, unless giving such notice before the issuance of the warrant would result in the disappearance, dissipation or reduction in value of the property or otherwise affect the property so that all or a part thereof could not be seized pursuant to the warrant. The Attorney General's filed materials in support of the application must make showing of factors that justify an *ex-parte* hearing as a matter of course, or only after the issue is raised by the court. There were no statistics showing how often Canadian judges required the Attorney General to provide notice. Canada advised that the practice is that courts grant such orders *ex-parte*.

281. *Criminal Code search warrant.* Criminal Code section 487 search warrants are available to law enforcement officers to help trace assets subject to forfeiture (see above). A law enforcement officer applying for a search warrant must provide the issuing justice or judge with reasonable grounds to believe an offence has occurred and that there is evidence in the place to be searched. The officer need not disclose the entirety of the investigation but must disclose information which would tend to call into question the reliability of the grounds relied on to obtain the warrant. Law enforcement agents pointed out that in response to Canadian case law on the reliability of evidence in search warrants, the applications for regular search warrants have become very lengthy, and often hundreds, even thousands, of pages in length. In practice, there often is a full-disclosure of all evidence that might be relevant to the case, rather than just evidence relevant to the specific search in question. This extra detail, although possibly not legally required, is provided in an abundance of caution. Thus, in practice, this makes obtaining a search warrant a very time-consuming and labour-intensive process.

282. *A Criminal Code confirmation order.* Section 487.013 of the Criminal Code provides authority for law enforcement to obtain essential information confirming the existence of an account relationship from any financial institution, as defined in section 2 of the Bank Act or any other entity covered by the PCMLTFA. A law enforcement officer applying for a confirmation order must provide the issuing justice or judge with reasonable grounds to suspect an offence has occurred or will occur and that the financial institution's information will assist the investigation of the offence. The single restriction on the confirmation order is that the person or organization named in the order that is required to confirm information must not be a target of the investigation. Finally, section 487.017 creates an offence when the person subject to the confirmation order fails to produce the documents or data. Confirmation of an account relationship will allow a law enforcement official to aver that such records exist whenever they seek a search warrant or production order against the relevant entities.

283. *Criminal Code Production order.* Frequently there are cases where evidence is required, but the more invasive search warrant is unnecessary. The Criminal Code also provides for a less intrusive obligation to produce documents or data in section 487.012. Section 487.015 allows that party subject to a production order to apply to the court for an exemption if disclosure would breach legal privilege

[34] See *Nova Scotia (Attorney General) v. MacIntyre*, [1982] 1 S.C.R. 175 at 179-180 ("The issuance of a search warrant is a judicial act on the part of the justice, usually performed ex parte and in camera, by the very nature of the proceedings").

or the documents or data are not in the person's possession or control. Section 487.016 specifically provides that the person may not object to production on the basis of self incrimination while insuring that the documents or data may not be used against the producing person except for perjury charges. Finally, section 487.017 creates an offence when the person subject to the production order fails to produce the documents or data. The production order, similar to a confirmation order, provides that the person or organization named in the order to produce must not be a target of the investigation.

284. *A Criminal Code general warrant*. The Criminal Code confirmation order reveals the existence of an account relationship and a production order will result in the production of existing data and documents. A search warrant will allow for the seizure of things, including documents or data that exist in the place at the time the place is searched. The problem with all of these provisions is that they provide a means to obtain existing evidence, rather than anticipatory evidence that may come into existence at a known or reasonable time in the future. There are cases where the financial data or other information will come into existence at a period in the future. There are also cases where law enforcement may wish to undertake a surreptitious search and inspection. The Criminal Code addresses these scenarios in its section 487.01 general warrant authority. The court issuing a general warrant must be satisfied, by information on oath in writing that an offence has or will occur and that information, but not necessarily evidence, concerning the offence will be obtained. Provided that the judge is satisfied that a general warrant is in the best interests of the administration of justice and that no other specific authority exists for would provide for a warrant, authorisation or order then the requested authority for the required technique, procedure or device to be used or thing to be done is authorised by the general warrant. Using this authority it is possible to obtain a general warrant for a financial monitoring order for a specified time into the future.

285. *Tax Information.* Section 462.48 of the Criminal Code provides a specific process to properly obtain the production of income tax information in a criminal investigation, at the investigatory stage. Such production is limited to investigations of drug, organised crime, money laundering offences with a drug or organised crime predicate, and terrorism offences. Hence, it is not available to trace assets pre-indictment in cases that do not involve organised crime, drug or terrorism charges. The importance of a Criminal Code production order for tax information in any investigation for the offences set out in subparagraph 462.48(1.1) is that the tax authorities, pursuant to section 241 of the Income Tax Act, are otherwise immune from criminal search warrants.

286. *Voluntary Disclosures and Privacy Laws*. Canada's professional law enforcement relies on cooperation from voluntary witnesses for much criminal investigation activity. This cooperation is reinforced by means of a safe harbour protection in respect to proceeds of crime in Criminal Code section 462.47, which states in the relevant part: "*. . . subject to section 241 of the Income Tax Act, a person is justified in disclosing to a peace officer or the Attorney General any facts on the basis of which that person reasonably suspects that any property is proceeds of crime or that any person has committed or is about to commit a designated offence.*[35]"

287. Subsection 7(2) of PIPEDA provides that an organization may elect to use "personal information" that it has reasonable grounds to believe could be useful in the investigation of a contravention of the laws of Canada, a province or a foreign jurisdiction that has been, is being or is about to be committed, and the information is used for the purpose of investigating that contravention. Subsection 7(3), or more specifically subparagraphs (c.1), (d) and (e), allow an organization to voluntarily disclose "personal information" without disclosing the fact of that disclosure to their customer.

288. Subsection 7(3) (c) of PIPEDA requires organizations to comply with subpoenas or warrants issued as well as any orders made by a court, person or body with jurisdiction to compel the production of information, or to comply with rules of court relating to the production of records. While

35. Section 241 of the *Income Tax Act* creates an offence for any Revenue Canada employee to disclose any income tax information to anyone absent a court order or specific but limited exceptions in the *Income Tax Act.*

PIPEDA was carefully constructed to still permit voluntary disclosures to law enforcement, and clearly does not prohibit same, several regulated private sector persons that met with the FATF assessment team wrongly thought that PIDEDA was at odds with the voluntary disclosure provisions in the Criminal Code, and the mandatory disclosures to FINTRAC that are required by the PCMLTFA. Law enforcement further opined that the enactments of PIPEDA and the PCMLTFA have had a chilling effect on the number of voluntary disclosures to law enforcement under the Criminal Code.

289. *Bona fide third party - immediate relief from seizure*. Subsection 489.1 provides that the seizing peace officer, if satisfied as to ownership of the thing and that its detention is not required for the investigation or other proceeding, may elect to return the thing they seized to the lawful owner or person lawfully entitled to possession of the thing, rather than detaining the thing after obtaining a detention order from the court. In that case the peace officer must obtain a receipt from the person to whom the officer returned the thing and file that receipt with the justice issuing the warrant. A search warrant directed to a public officer (i.e. a person who has been appointed or designated to administer or enforce the applicable federal or provincial laws and who is named in the warrant) is subject to subsection 489.1(2) with the result that anything seized by that public officer may not be returned, but rather the public officer must file a report or bring the thing to the court for the court's determination on detention or return. If the thing is required for a subsequent proceeding, such as a forfeiture application, the officer must, like any public officer, make a section 490 return to the court. This return is for the purpose of either seeking a detention order or allowing the court to determine its return.

290. *Post seizure judicial release*. Section 490 applies to all seized property other than seized or restrained proceeds of crime seized as a result of a special search warrant under section 462.32 of the Criminal Code and restraint order under section 462.33 of the Criminal Code. If an item is seized under the authority of section 14 of the CDSA, then the section 490 Criminal Code's process applies, with the exception of a controlled substance pursuant to sections 13 & 15 of the CDSA. Under Section 490 a person in possession at the time of seizure or the owner has a right to seek the return of the seized thing. In the case of the person in possession they may demonstrate hardship that may be caused by the continued possession of the thing by the state (see subsections 490(7) & (8)). The lawful owner or person lawfully entitled to possession of the seized thing may, at any time, institute an application for the return of the seized thing pursuant to subsection 490(10). The court considering any return application must consider if the seized thing is required for some other purpose, such as a forfeiture application (see subsections 490(9) & (11)). These provisions apply up until the time that the court considers any relevant forfeiture application.

291. *Release of offence related property*. There are special provisions for offence-related property, since that property may be forfeited upon conviction. It is also possible for the person in possession of offence-related property to successfully apply for the return of the seized thing due to a claim of hardship (see subsection 490(8). In that case, a criminal recognizance is an option for the court to consider, pursuant to subsection 490.9 (1), if the thing falls under the Criminal Code's definition of offence-related property. If the property is offence-related property under the CDSA's definition subsection 13 (6) of that Act also contemplates return under the supervision of a criminal recognizance. If the court elects to return seized or restrained offence-related property to the relevant person the court ordered recognizance can require the owner to preserve and retain the thing, making it available for the subsequent forfeiture application. The terms can include a requirement to surrender the thing in advance of the forfeiture application. Any failure to comply with the recognizance can lead to the forfeiture of the amount covered by the recognizance.

292. *Relief from a seizure or restraint of proceeds of crime.* Section 462.34(a) of the Criminal Code provides that any person with an interest in the seized or restrained property may apply to the court to return their seized proceeds of crime or vacate any restraint order against proceeds of crime. These applications must be brought upon notice to the Attorney General under Criminal Code section 462.34(2). The court may order return and the judge may impose a criminal recognizance, under Criminal Code section 462.34(4)(a). Alternatively, the court may simply return the property if it is

satisfied that the original order should not have been issued per section 462.34(6), or the applicant is an innocent owner in a case where the property is not required for any investigation or proceeding per section 462.34(6)(b). Things seized pursuant to a section 462.32 special search warrant may be immediately released to their lawful owner by the seizing agent under section 462.32(4.1) if certain mitigating factors are present.

293. Section 462.34 provides an immediate opportunity to apply to vary or vacate the special search warrant or restraint order. That authority is used in support of the more frequent application under section 462.34 to obtain access to the property for the purposes of the persons business, living and legal expenses under section 462.34(4)(c). The argument that such property, as property obtained from crime, may create an offence when it is placed in the hands of a third-party, such as legal counsel, is addressed by subsection 462.34(7). As a result, it is common to have the court deal with applications, against seized or restrained proceeds of crime, for the purposes of funding a person's business, living and legal expenses. Between 2000 and 2007 Canada seized or restrained CAD572.8 million in assets, while in the same period court ordered payouts for all business, living and legal expenses was CAD8.3 million. Nonetheless, the forfeiture statistics suggest that a significant proportion of property seized for forfeiture is not actually being forfeited.

294. There are checks and balances in the ability to seek such funding since the property is theoretically dissipated by such orders. Subsection 462.34(4) requires an order unless "… the judge is satisfied that the applicant has no other assets or means available for the purposes set out in this paragraph and that no other person appears to be the lawful owner of or lawfully entitled to possession of the property." This means that if the applicant has other assets or means or if there is a lawful owner of the relevant property the court cannot dissipate that property to fund the applicant's expenses. Of course, it is often difficult for the Attorney General to prove that the applicant has other assets in cases were the accused is particularly adept at hiding his or her criminal proceeds. The authority to seek funded legal expenses out of seized or restrained proceeds of crime is further circumscribed by subsections 462.34(5) to (5.2) of the Criminal Code. If there is a lawful owner (*i.e.* a victim) of the relevant property, the court should not dissipate that property to fund the applicant's expenses. Finally, the court may, but is not required to, consider the applicable legal aid tariff rate in releasing funds to cover legal expenses under Criminal Code Section 462.34(5).

295. *Forfeiture and third party relief.* In addition to the protecting the rights of *bona fide* third-parties in cases where seizure or restraint occurred, the same parties have rights at the time of a forfeiture application of offence-related property or proceeds of crime. Section 490.4 of the Criminal Code and section 19 of the CDSA require third-party protection in the case of forfeiture against offence-related property. Section 462.41 provides a similar protection for third-parties in the case of a forfeiture application against proceeds of crime.

296. All *bona fide* third-parties have a right to notice of the forfeiture application and the right to participate in that application. In addition, section 490.5 of the Criminal Code and Section 20 of the CDSA establish the right of these third parties to also seek relief from forfeiture if they did not appear at the original forfeiture application. In the same fashion section 462.42 of the Criminal Code creates an identical right of third-parties to seek relief from forfeiture of proceeds of crime if they did not appear at the original forfeiture application. Finally, in all cases, the forfeited property may not be sold for thirty (30) days to give all parties an opportunity to institute an appeal (see s. 490.7 of the Criminal Code or s. 22 of the CDSA for offence related property and section 462.45 of the Criminal Code for proceeds of crime).

297. *Victims of crime and forfeiture*. Victims may not have a direct and valid interest in the property that is targeted for forfeiture simply because their property had been laundered long before the seizure and forfeiture issues developed. Those victims have and interest in the criminal but not a specific interest in property targeted for forfeiture. As a result they will not have standing to challenge the forfeiture order. This issue is addressed by sections 738 and 740. It is further ameliorated by subsection 462.49 of the Criminal Code, which continues and gives priority to any Act of Parliament

respecting restitution to or compensation of victims. The Criminal Code does contain restitution to persons affected by crime provisions in sections 738 to 740. As a result, victim restitution and forfeiture effectively coexists in Canada.

298. *Authority to prevent or void actions.* Canada does have the authority, in any appropriate case, to void actions designed to frustrate the forfeiture of property. If the targeted asset is offence-related property, section 490.3 of the Criminal Code or section 18 of the CDSA can be used to set aside a conveyance that occurs after the seizure or restraint. In the case of proceeds of crime section 462.4 provides for the same authority. In addition, if the person receiving the relevant property knew or should have known that the property was proceeds of crime and the transfer occurred before the seizure or restraint that person commits the offence of possession of property derived from an indictable offence under section 354(1) of the Criminal Code. A convicted owner is also subject to a fine in lieu of forfeiture resulting from that owner's dissipation of the property.

Additional elements

299. Membership in a criminal organization is not an offence in Canada. Nor are all the assets of an organization engaged in criminal activity something that can be seized, restrained or forfeited, simply because it is owned by an organization found to be operating for criminal purposes. Those assets would have to be either offence-related property or the proceeds of crime from an offence committed by the organization before they can be subject to forfeiture.

300. Several Canadian provinces have enacted civil forfeiture laws[36]. Other legislation has been passed but not yet in force (Alberta's Victims Restitution and Compensation Act, 2001) or pending before a Legislative Assembly (Quebec's Bill 36 "An Act respecting the forfeiture, administration and appropriation of proceeds and instruments of unlawful activities"). Generally, these provisions allow proceeds of crime to be forfeited in a civil setting under a civil standard. In addition, for indictable offences under the Criminal Code, if an information has been laid against a person, and that person subsequently dies or absconds, a criminal court can issue an *in rem* forfeiture judgment against the proceeds of crime or offence-related property upon a showing beyond a reasonable doubt that the subject property is the proceeds of, or relates to, the offence charged in the information. *See* Criminal Code sections 462.38 and 490.2. Finally, after conviction on any designated offence, a criminal court can order the forfeiture of property that is shown, beyond a reasonable doubt, to be the proceeds any other indictable offence, even if the property is not the proceeds of the offence of conviction. *See* Criminal Code section 462.37(2).

301. On November 25, 2005 a significant revision to the criminal forfeiture provisions, created a reverse onus provision against some proceeds of crime. Subsection 462.37(2.01 to 2.08) of the Criminal Code apply to these cases. The provision covers organized crime offences and drug offences contrary to sections 5, 6 and 7 of the CDSA, including a conspiracy or an attempt to commit, being an accessory after the fact in relation to, or any counselling in relation to an offence under those sections if they were prosecuted by indictment.

Implementation Issues

302. Canadian forfeiture statistics reveal that between 2000 and 2007 Canada's property manager was responsible for the post seizure/restraint of CAD572.8 million in assets. In the same period the realized value of forfeited assets was only CAD203.93 million (roughly 36% of property sought for forfeiture has actually been realised). Canada informed the assessors that the property manager currently has another CAD325.5 million in assets under its management but it is unclear what portion of that amount includes recent seizures or what portion involves assets already captured in the forfeiture statistics. Forfeited funds are often maintained for appeals and other reasons well after they

[36] Remedies for Organized Crime and Other Unlawful Activities 2001, see http://www.e-laws.gov.on.ca/DBLaws/Archives/20050101/Statutes/English/01r28_e.htm; Manitoba The Criminal Property Forfeiture Act, 2004 see http://web2.gov.mb.ca/laws/statutes/ccsm/c306e.php; Saskatchewan, The Seizure of Criminal Property Act 2005, see http://www.qp.gov.sk.ca/documents/English/Statutes/Statutes/S46-001.pdf ; British Columbia , The Civil Forfeiture Act 2005.

are on the forfeiture side of the ledger so property under management figures could include large amounts of forfeited property. It appears that in the period 2000-2007, the RCMP's IPOC Units were responsible for approximately for 40% (CAD82.39 million) of Canada's total forfeitures. Thus, the IPOC Unit forfeiture data is the best model for measuring the overall effectiveness of Canada's forfeiture program, particularly as IPOC Units specialize in proceeds of crime investigations and therefore should be getting above-average results.

303. The value of the IPOC Unit seizures appears to be declining over the last 3 years, particularly if the 2004 figures are omitted, and certainly compared to the first three years of data. This is possibly due to the IPOC Unit's relatively recent focus on more labour intensive cases intended to dismantle criminal organizations, which naturally takes away resources from pure proceeds of crime recovery efforts that had been the initial focus of the IPOC Units. A better measure of effectiveness is the IPOC Units overall seizure to forfeiture ratio from 2000 to 2007. Considering that 96% of the IPOC Unit cases from 2000 through 2007 are already closed, it means the lag-time between seizures and forfeitures is not that significant and the cumulative figures are fairly up-to-date. The cumulative IPOC Unit forfeitures over the seven-year period is about 45% the value of the property initially seized or restrained for forfeiture. Over the past seven years Canada is averaging about CAD27 million a year in forfeitures, and over the last 4 years about CAD33 million a year, and has declined slightly over the last two years. If the IPOC units are losing or releasing 55% of restrained assets prior to forfeiture, and the forfeiture numbers are stagnating or declining over time, this suggests that effective is declining. Based on studies, IPOC representatives suggested the 55% seizure-forfeiture gap was potentially due to payment of attorney fees and living expenses of accused persons, and/or. plea bargains. IPOC representatives acknowledged that the seizure/forfeiture gap is still an area of concern. Lack of systemized forfeiture training may be a factor affecting the stagnation of forfeiture numbers.

304. The loss of potentially forfeitable assets, in theory, could be offset by fines in lieu of forfeiture. Section 462.37(3)(d) of the Criminal Code permits a court to substitute a fine for assets no longer available for forfeiture. Even assuming a court would later punish an accused for having successfully petitioned the same court for living or legal expenses under section 462.34(4), in IPOC Unit cases only CAD3.3 million of fines in lieu of forfeiture were "imposed" in the last six years, a small amount when compared to the close to CAD100 million of assets that were seized but not forfeited over that same time period. Further, it is unclear what portion of the CAD3.3 million was actually paid to the Crown. Finally, fines in lieu of forfeiture that are not paid to the Crown may result in higher sentences for the person convicted of the underlying offence. However, the government of Canada has not provided any IPOC Unit data or other law enforcement data indicating how often sentences have been increased for a failure to pay fine in lieu of forfeiture. Thus, it is very difficult to assume that this aspect of the law has been an effective and adequate deterrent to the judicially assisted wasting away of forfeitable assets that IPOC representatives and the statistical data has identified. According to the forfeiture data, it appears a great majority of the assets sought for forfeiture in Canada are not being forfeited.

305. Outside of the IPOC units, there seemed to be less emphasis on confiscation efforts in other law enforcement units or the Crown counsel in general. In an effort to fill some of the deficiencies of the criminal forfeiture regime, certain provinces are experimenting with specialized units and non-conviction based forfeiture regimes, but those programs are still in their infancy and their impact to date has been very limited. Several non-IPOC law enforcement units complained that IPOC units no longer have the resources to assist them with most of their forfeiture needs and feel that they do not have the expertise or resources to handle the forfeiture part of the case. IPOC representatives admitted that they have had to turn down work presented by other agencies and units because the increasing complexity of their cases and their limited resources require them to focus on other aspects of the cases. The IPOC units are hoping to address the assistance shortfall by providing training to other law enforcement agencies so that these entities could handle their own forfeiture matters. IPOC representatives have trained a few hundred law enforcement agents in the last couple of years, but the

scope of the training was limited and Canada has many thousands of agents that did not receive such training.

306. The IPOC Units have been asked to do more complex matters with limited resources. There also seemed to be very little if any coordinated or sophisticated training efforts in the forfeiture area. One legal expert mentioned that he gave at least six lectures to law enforcement groups per annum. It was unclear if he is the only prosecutor giving such lectures. In any event, at most this training is discretionary and not mandatory. Nor does there seem to be any one entity responsible for coordinating Canada's day-to-day forfeiture efforts, forfeiture policy, or forfeiture strategy, or even the collection of forfeiture data, outside of the federal property manager (the federal property manager manages seized assets derived from federal law enforcement cases, *i.e.* RCMP, but also from provincial police forces cases that led to prosecution at the federal level). Since virtually any police officer or prosecutor in Canada can become involved in a criminal case that gives rise to forfeiture, it was surprising there was not a more coordinated national approach to forfeiture efforts or training.

Statistics

307. The confiscation statistics provided by Canada are incomplete (clearly some provincial data was not captured as noted by prosecutors interviewed by the assessment team). Canada has not provided an accurate picture of what all agencies or provinces in Canada seize or forfeit in any given year, but instead has given statistics from various different sources in somewhat incompatible formats and seemingly focused only on "proceeds of crime and money laundering" cases. The scope of Recommendation 3 is slightly broader than that. Under the Vienna and Palermo Conventions possession of criminal proceeds offences relating to covered offences can be characterized as money laundering offences. However, it is highly unlikely that the bulk of Canada's "possession of criminal proceeds" cases resulted from either the organized criminal offences or the drug offences covered by those two treaties. What percentage of Canada's forfeiture involved drug cases, stolen property cases, fraud or organized crime cases can not be determined from the statistics provided by Canada. One thing is certain; Canada has a mostly conviction-based forfeiture system and had only 21 Section 462.31 money laundering convictions in 5 years. In the same five year period the charge and conviction figures show that Canada had 10 150 convictions for the possession of property derived from criminal offence, which could cover a range of different underlying offences.

308. The property manager reports that it managed or supervised the management of CAD572.8 million in seizures between 2000 and 2007. It further reports that it realized CAD203.93 million from forfeitures. Finally it reports that as of September 25, 2007 it currently manages or supervises assets having a value of CAD325.5 million. The amount of property under management by Public Works and Government Services in Table 13 does not help explain what is actually being forfeited in any one year, nor does it explain the actual value of the assets "added" in any one year as it is likely assets are managed for more than one year. Arguably, the steady growth in the amount of property under government management while forfeiture numbers are stabilizing or even decreasing over that time period actually suggests that such property is not being efficiently forfeited, but, instead, is held for long period of times. It would be interesting to see if criminal cases involving substantial amounts of forfeitable assets take longer than similar cases without such forfeitable assets considering the ability to access restrained proceeds of crime for legal fees and other expenses.

2.3.2 Recommendations and Comments

310. Canada should improve its mechanisms for collecting, maintaining and analyzing confiscation data. It should consider authorizing a study to identify why the IPOC Unit seizures and forfeiture numbers are decreasing, and why there is a large gap between the amount of property seized for forfeiture and the amount of property actually forfeited. Canada should consider ways to combat the dissipation of criminal proceeds and offence-related property to criminals for use as legal, business and living expenses even in non-victim cases. The Criminal Code should provide a specific process to properly obtain income tax information in the investigatory stage that is not limited to investigations of drug, organised crime, terrorist and money laundering offences with a drug, terrorist or organised crime predicate.

311. Canada should consider increasing funding to its IPOC units as they have some difficulties handling both major case responsibilities and every-day forfeiture responsibilities with the current resources allocated. Canada should consider creating mandatory specialized one or two day forfeiture and financial investigation training programs for all new law enforcement personnel and Crown counsel. Canada should create national or provincial entities that sets confiscation policies and standards and can develop and manage any training programs, as well as generally encourage the use of forfeiture in any criminal case in which an economic benefit was obtained by the accused by promoting confiscation.

2.3.3 Compliance with Recommendation 3

Rec.	Rating	Summary of factors underlying ratings

R.3	LC	▪ The fine in lieu forfeiture provision does not fully and effectively meets the requirement for equivalent value provisions and does not apply to property held by third parties. ▪ Based on the limited quantitative and qualitative information available, it does not seem that the confiscation and seizure regime is fully effective, particularly with respect to value based confiscation.

2.4 Freezing of funds used for terrorist financing (SR.III)

2.4.1 Description and Analysis

General

312. Canada's United Nations Act and its related regulations enable the Canadian government to implement the decisions contained in the resolutions of the United Nations Security Council. The United Nations Al-Qaida and Taliban Regulations (UNAQTR), and the Regulations Implementing the United Nations Resolutions on the Suppression of Terrorism (RIUNRST), were enacted under the authority of Canada's United Nations Act. These regulations allow Canada to list a terrorist individual or entity for the purpose of freezing the funds or assets owned or controlled by that individual or entity or its associates. A third listing mechanism exists under the Criminal Code for threats to Canada's domestic security. The Criminal Code explicitly defines a "terrorist group" and listed individual or entities are determined on the basis of this definition. In combination, these mechanisms allow Canada to list either domestic and foreign terrorist individuals or entities.

313. The decision to list a terrorist entity ultimately lies with the Governor-in-Council, with the exception of those entities listed by the UN 1267 Committee. UNSCR 1267 and successor resolutions are implemented in Canada through the United Nations Al-Qaida and Taliban Regulations (UNAQTR) which automatically incorporate into Canadian law, by direct reference, the list of individuals and entities who are designated by the 1267 Committee. Paragraph 4(b) of UNSCR 1267 is implemented in accordance with s. 4, 4.1, 5 and 5.7 of the UNAQTR. The primary difference between listing an entity pursuant to regulations under the United Nations Act and the Criminal Code is the evidentiary threshold required to support the listing. To list an individual or entity using the UNAQTR, there must be "reasonable grounds to believe" that the individual or entity is involved in terrorist activity. The evidentiary standard is stronger with respect to Criminal Code listings as the Governor-in-Council must have "reasonable grounds to believe that the entity was knowingly" involved in a terrorist activity.

Procedures to freeze terrorist funds or other assets in accordance with S/RES/1267(1999)

314. The United Nations Afghanistan Regulations (1999) gave effect to S/RES/1267(1999). Amendments were made to these regulations on 23 June 2006 and these regulations are now referred to as the United Nation Al-Qaida and Taliban Regulations (UNAQTR).

315. These regulations prohibit persons in Canada and Canadians outside Canada from having financial dealings with the Taliban and Usama Bin Laden and his associates or persons acting on their behalf (Section 4 of the UNAQTR). This includes all funds or assets that are directly or indirectly used, or intended to be used, by these designated individuals or entities. Persons designated by the United Nations 1267 Committee are automatically covered by the regulations.

Procedures to freeze terrorist funds or other assets in accordance with S/RES/1373(2001)

316. The Regulation implementing the United Nations Suppression of Terrorism Regulations (RIUNRST) gives effect to S/RES/1373(2001). The RIUNRST provides a list of individuals or entities for which there are reasonable grounds to believe they are involved in or associated with terrorist activities and prohibits persons in Canada and Canadians outside Canada from having financial dealings with these individuals or entities.

Listing procedures under the Criminal Code

317. The Criminal Code listing mechanism was developed in 2001 as part of the omnibus Anti-terrorism Act. The Anti-terrorism Act was developed to combat terrorism, while ensuring that human rights, such as the right to privacy, are respected. Part II.1 of the Criminal Code has provisions that prohibit the financing of terrorism which are designed to address threats to Canadian security. These provisions include the listing of individuals or entities for which there are reasonable grounds to believe that the individual or entity has knowingly carried out, attempted to carry out, participated in or facilitated a terrorist activity; or the entity is knowingly acting on behalf of, at the direction of or in association with an entity involved in a terrorist activity (Section 83.05 of the Criminal Code).

318. Listing under the Criminal Code allows assets to be frozen and subject to seizure, restraint and forfeiture through the automatic statutory authority in Section 83.08 of the Criminal Code.

Laws and procedures to examine and give effect to the actions initiated under the freezing mechanisms of other jurisdictions

319. The UNAQTR, the RIUNRST and the Criminal Code listing mechanisms provide Canada with the ability to respond to international listings through the United Nations, undertake joint listings and list both domestic and foreign individuals and entities.

320. In the case where intelligence relating to a proposed listing is received from another country, it is the responsibility of CSIS and/or the RCMP to determine the credibility of the information received. Both CSIS and the RCMP work with their international counterparts when collecting intelligence relating to a potential listing.

321. The process of listing under the Criminal Code begins with criminal and/or security intelligence reports on an entity disclosing the reasonable grounds to believe that the entity has knowingly carried out, attempted to carry out, participated in or facilitated a terrorist activity; or the entity is knowingly acting on behalf of, at the direction of or in association with an entity involved in a terrorist activity. The legislation provides for the Governor in Council to establish by regulation a list on which the Governor in Council may place any entity, on the recommendation of the Minister of Public Safety and Emergency Preparedness Canada.

322. The criminal and/or security intelligence reports are submitted to the Minister of Public Safety and Emergency Preparedness Canada for consideration. If the Minister has reasonable grounds to believe that the above test is met, the Minister may make a recommendation to the Governor in Council to place the entity on the list.

323. If the Governor in Council is satisfied that there are reasonable grounds to believe that the above test has been met, the entity may be placed on the list of individuals or entities. The listing of an individual or entity is published in the Canada Gazette and on the Public Safety and Emergency Preparedness Canada website under “Currently listed entities”. As of 31 December 2006, there were 40 entities listed pursuant to section 83.05 of the Criminal Code.

Funds subject to freezing actions

324. The freezing mechanism in place at Section 4 of the RIUNRST prohibits any person in Canada and Canadians outside Canada, to knowingly:

(a) Deal directly or indirectly in any property of a listed person owned or controlled directly or indirectly by that perso.
(b) Enter into or facilitate, directly or indirectly, any transaction related to a dealing referred in (a).
(c) Provide any financial or other related service in respect to the property referred in (a).

(d) Make any property or any financial or other related service available, directly or indirectly, for the benefit of a listed person.

325. Property is defined at Section 1 of the regulations and includes property of every description and documents relating to or evidencing the title or right to property, or giving a right to recover or receive money or goods, and includes any funds, financial assets or economic resources. This is in line with the FATF definition of "funds and other assets".

326. Section 4 and 4.1 of the UNAQTR have basically the same provisions for individuals and entities listed by the UN 1267 Committee, specifically the Taliban or a person associated with them, acting on their behalf or at their direction, Usama bin Laden or his associates, or by persons acting on their behalf or at their direction. In addition, a breach of either the UNAQTR or the RIUNRST gives rise to a criminal offence in Section 3 of the United Nations Act, which upon a summary conviction, can lead to fines of up to CAD100 000 and/or imprisonment up to one year. Imprisonment of up to 10 years can result on conviction on indictment.

327. The prohibitions outlined above, combined with the criminal offences of dealing in assets controlled or owned by listed individuals or entities, freezes all that individual or entity's assets within Canada and prevents Canadians outside of Canada from dealing with such property. Although the legal underpinnings are sound, the effectiveness of the freeze mechanisms are impacted by the degree to which information on the listed persons and entities is communicated to Canadians in general and the financial sector and other potential holders of assets of listed persons in particular.The names of listed persons are published in the Canada Gazette and on the Public Safety and Emergency Preparedness Canada website, and a range of financial intermediaries are required to conduct monthly checks for a "listed entity" in section 83.11. This covers a significant amount of assets but is not exhaustive of the persons who can "deal, directly or indirectly, in property." The assessment team believes that the enforcement provisions in the criminal code, the RIUNSRT, the UNAQTR and the United Nations Act are relatively difficult to enforce as they require that the Crown prove "knowledge" of a listing, and this is likely to be even more difficult for entities and persons that are not required to undertake monthly checks .

328. Section 83.08(1) and s. 83.03 of the Criminal Code have basically these same provisions for entities defined as a terrorist group or for terrorist activity. The definition of a terrorist group as it applies to the Criminal Code is defined as: (i) an entity that has as one of its purposes or activities facilitating or carrying out any terrorist activity, or (ii) a listed entity, and includes an association of such entities. For the purposes of the Criminal Code provisions property is defined at Section 2 of the Criminal Code and includes real and personal property, funds, financial assets and their substituted property.

329. In addition to the freeze provision, Sections 83.13 through 83.17 permit Canada to seize and forfeit property owned or controlled by Section 83.05 listed entities and property that has been or will be used to facilitate terrorist activity. These provisions can be used cases where assets slip through the section 83.08 freezing net, naturally assuming that the relevant Canadian officials are aware of the forfeitable property and the requisite terrorist nexus. The procedure set forth in Sections 83.13 through 83.17 is a judicial process that very much mirrors the processes set out in forfeiture matters under the Proceeds of Crime provisions located in Part XII.2 of the Criminal Code. This terrorist property seizure and forfeiture regime appears to be in rem and is not conviction-based. The standard of proof in terrorist property forfeitures under Part II.1 is a "balance of the probabilities" test, which is a civil standard. For violations of the RIUNRST and the UNAQTR regulations, the United Nations Act also provides for forfeiture of property dealt with in violation of that Act, and the conviction-based forfeiture scheme set forth in Part XII.2 of the Criminal Code appears to apply to such assets.

Communicating actions taken under the freezing mechanisms and guidance

330. There are several processes that are used to ensure that financial institutions and other individuals and entities are properly notified of a new listing or change to the UNAQTR, the RIUNRST and the Criminal Code. The listing of an individual or entity is published in the Canada Gazette (the official newspaper of the federal government) in conjunction with a press release issued by the Minister of Public Safety and/or the Minister of Foreign Affairs. The Regulations themselves require a continuing monitoring and determination of the existence of property in the possession or control of the institutions. And a failure to undertake the required monitoring is a criminal offence under the regulations and the United Nations Act.

331. To assist financial institutions to search against these listed terrorist names, OSFI, in cooperation with the Department of Public Safety and Emergency Preparedness and the Department of Foreign Affairs and International Trade maintains on its website a database, in various formats, of all terrorist names subject to Canadian laws, including known identifiers for those terrorists. Each time a new terrorist name is listed under Canadian law, or there are changes to existing information, OSFI notifies financial institutions by posting a notification to its website and also notifies all its e-mail subscribers. At the same time OSFI updates the databases with the listing or changes. Since October 1, 2001 OSFI has posted over 90 letters informing financial institutions and the public of updates to the terrorist lists.

332. OSFI also issues a monthly written reminder to federal financial institutions, as well as provincial regulators and SROs that financial institutions are required to file (by the 15th of the following month) a report with OSFI or the appropriate provincial regulator showing, in aggregate, the number of accounts and the dollar value of terrorist property frozen and reported to law enforcement.

333. FINTRAC provides advice and assistance to reporting entities through its website and through the efforts of its Compliance Officers in attending meetings with reporting entities and industry associations. During these outreach sessions and on its website, in particular in its Guideline 5 on Submitting Terrorist Property Reports, FINTRAC refers all reporting entities to OSFI's website, which contains a consolidated list of names.

334. Federally regulated financial institutions, and some other categories of financial institutions[37] are required to determine on a continuous basis whether they are in possession of terrorist property and must report to their regulator on a monthly basis on whether they are in possession of frozen assets. Nil reports are also required. OSFI reminds financial institutions of this obligation every month including their obligations to continuously search their customer names against the OSFI Consolidated List.

335. In addition, federally regulated financial institutions are expected to search their client names against newly listed terrorist names as soon as possible after those new names are posted. If a financial institution discovers terrorist assets it is required to report to the RCMP and CSIS immediately. Reporting entities to FINTRAC must also submit a Terrorist Property Report to FINTRAC if the assets are those of an entity listed under the Criminal Code. It is a criminal offence (section 83.12 of the Criminal Code) to fail to report to RCMP or CSIS.

336. The monitoring systems put in place by financial institutions vary considerably and proper screening against existing lists may take place in some institutions on a monthly basis only. The assessment team believes that this raises some issues of effective implementation of the freezing requirement. In addition, although OSFI provides guidance to federally regulated financial institutions (and forwards its Guidance to provincial regulators and SROs such as IDA in that area, no equivalent measures are in place for other financial institutions, e.g. MSBs, and the DNFBPs (in addition to outreach initiatives and advices and limited guidance provided by FINTRAC). For these entities, the

[37] This does not include MSBs as these entities are not authorised to offer accounts in Canada.

existing communication and guidance is insufficient. This may have an impact on Canada's ability to freeze terrorist funds or other assets without delay.

Publicly-known procedures for considering de-listing requests and for unfreezing the funds of de-listed persons

337. Any Canadian or person in Canada may apply to be delisted. There are clear processes for delisting those entities listed pursuant to the UNAQTR, the RIUNRST and the Criminal Code; (1) on application in writing by a listed individual or entity to the appropriate Minister; and, (2) an applicant may apply to a judge for judicial review of the Ministerial decision.

338. The Minister shall notify the petitioner, within 60 days after receiving the petition, of his or her decision on whether to consider the petition. Within 60 days after the date of receipt of the Minister's decision, the petitioner may apply to a judge for judicial review of the Minister's decision. The regulations or the Criminal Code provide more details of the procedure that has to be followed by the judge when reviewing the Minister's decision.

339. There is a two-year review process for Criminal Code listings by the Minister of PSEPC to ensure accuracy. Delisting procedures for each mechanism are set out in Sections 5.3 and following of the UNAQTR; Sections 2.1 and following of the RIUNRST; and Section 83.05(1) of the Criminal Code. Such procedures are in line with the FATF requirements.

Publicly-known procedures for unfreezing the funds or other assets of persons or entities inadvertently affected by a freezing mechanism

340. Section 5.6 of the UNAQTR, section 10 of the RIUNRST and section 83.07 of the Criminal Code allow for a person or entity to apply for a certificate stating that it is not a listed entity. If it is established that the applicant is not the person or entity referred to under the listing, the Minister has 15 days after receiving the application to issue a certificate.

341. Canadian law enforcement and intelligence agencies have procedures in place to verify identifiers. Verifying identifiers is done through open and classified sources. Full identifiers accompany all domestic listings. Identifiers for individuals may include date of birth, place of birth, country of residence, and address; whereas for entities, a fulsome description is made of the type of activities it engages in and its country of origin. Attempts are made to clarify aliases and alternative spellings of names especially when another country requests that Canada make an addition to its list.

Authorising access to funds or other assets

342. Under the UNAQTR and the RIUNRST, a person whose property has been affected by the freezing, may apply to the Minister for a certificate to exempt property from the freezing procedures if such property is necessary for basic or extraordinary expenses.

343. The Minister shall issue a certificate if the necessity of that property is established with Security Council Resolution 1452 (2002) of December 20, 2002: a) in 15 days after receiving the application if the property is necessary for basic expenses, if the Committee of the Security Council (or the CSC established under Resolution 1267 (19990 OF October 15, 1999, for property frozen pursuant to the UNAQTR) did not refuse the release of the property; and b) in 30 days after receiving the application if the property is necessary for extraordinary expenses, if the release of the property was approved by the Committee of the Security Council. This is set out in Section 5.7 of the UNAQTR and Section 10.1 of the RIUNRST.

344. It is different for property frozen pursuant to the Criminal Code. Pursuant to Section 83.09 of the Criminal Code, the Minister may authorise any person in Canada or any Canadian outside Canada to carry out a specified activity or transaction prohibited by the freezing under the Criminal Code. The authorisation may be subject to any terms and conditions that are required in the opinion of the Minister, including amending, suspending, revoking or reinstating the authorisation. In theory it is

possible to apply to the court to actually seize or restrain the same property. Such an application has never occurred since the provisions amount to an automatic statutory freeze. If the property was seized or restrained pursuant to an order issued under Section 83.13 of the Criminal Code, any person with an interest in the property may apply to have access to it to pay for reasonable living business and legal expenses. However subsection 462.34(6) (b) applies in such cases. The court considering the application must be satisfied that the property is not required for any proceeding. In light of section 83.08 the property is, in fact and law, required for another proceeding, namely the statutory freezing obligation in the criminal law. As a result the section 462.34 process has never been used in a terrorist property case.

Right to challenge freezing measures

345. Sections 5.4 and 5.5 of the UNAQTR, Sections 2.3 and 2.4 of the RIUNRST and provisions in Section 83.05 of the Criminal Code allow for listed entities to apply to a judge for judicial review if the Minister has given it notice that it will remain a listed entity. The judicial review process is stated in these sections and requires that the judge examine the application without delay and provides the applicant with a reasonable opportunity to be heard.

346. If the property was seized or restraint pursuant to an order issued under Section 83.13 of the Criminal Code, any person with an interest in the property may apply to have the property or part of it returned to him/her. In the case of a restraint order, the judge may revoke or vary the order or make the order subject to such reasonable conditions as the judge thinks fit. However no such property has ever been seized or restrained pursuant to a section 83.13 order.

Freezing, Seizing and Confiscation in other circumstances

347. The seizing and confiscation mechanisms as stated in Section 2.3 of the report also apply to cases of FT and terrorist-related funds. In addition to the civil seizure, restraint and forfeiture provisions described above, the normal seizure and restraint provisions for evidence, offence related property and proceeds of crime applies to all terrorist offences established in Part 11.1 of the Criminal Code.

348. For all offences in the Criminal Code, including all terrorism offences in Part 11.1, instrumentalities or, as the concept is described in Canada, “offence related property” provisions apply with the result that all instrumentalities of a terrorist offence are included in the definition. The Criminal Code definition of proceeds of crime, found in section 462.3, also applies to terrorism offences, under either the Criminal Code or as indictable offence in the United Nations Act. Those offences fall within Criminal Code section 462.3’s definition of a designated offence. Finally, it is relevant to consider, for both offence related property and proceeds of crime as they relate to terrorist offences, that the broad definition of “property” in s. 2 of the Criminal Code applies to the search, seizure, restraint and forfeiture provisions.

Rights of bona fide third parties

349. As described above, the UNAQTR, the RIUNRST and the Criminal Code have procedures in place for any person, to make an application to be delisted or to have their property unfrozen.

350. In addition, if the property was seized or restrained pursuant to an order issued under Section 83.13 of the Criminal Code, any person with an interest in the property may apply to have access to it to pay for their reasonable living business and legal expenses, to have the property or part of it returned to him/her. In the case of a restraint order, the judge may revoke or vary the order or make the order subject to such reasonable conditions as the judge thinks fit.

351. Before the forfeiture hearing of property seized or restraint pursuant to the Criminal Code, a judge may require notice to be given to any person who appears to have an interest in the property. Such person shall be entitled to be added as a respondent to the application (par. 83.14(7). If the judge

is satisfied that the person has an interest in the property and has exercised reasonable care to ensure that the property would not be used to facilitate or carry out a terrorist activity and is not a member of a terrorist group, the judge shall order that the interest is not affected by the forfeiture. The order shall declare the nature and extent of the interest in question (par. 83.14(8).

352. There are specific provisions to protect bona fide third party if the property was seized or restraint as proceeds of crime or offence related property.

Monitor compliance with the obligations under SR III and sanctions

353. Federal, provincial and municipal law enforcement authorities are responsible for enforcing the Criminal Code, UNAQTR and RIUNRST. Persons committing offences under these regulations are liable upon conviction to the penalties set out in the United Nations Act.

354. Reporting entities are required to submit Terrorist Property Reports to FINTRAC if they have property in their possession or control that they know is owned or controlled by or on behalf of a terrorist or a terrorist group. FINTRAC refers all reporting entities to the OSFI website, which contains a consolidated list of names. Reporting entities must also put in place policies and procedures that incorporate the verification of lists of terrorists and terrorist entities published in Canada. FINTRAC is responsible to ensure that all reporting entities comply with their AML/CFT obligations under the PCMLTFA and its associated regulations.

355. Section 74 of the PCMLTFA outlines the sanctions that can be imposed on reporting entities on conviction of a summary offence for non-compliance. Reporting entities are subject to fines of up to CAD500 000, imprisonment up to 6 months, or both[38]. Should the same entity be charged with any subsequent summary offence, that entity is liable for a fine up to CAD1 000 000, imprisonment up to 1 year, or both[39]. The PCMLTFA also provides sanctions for a person or entity charged for with an indictable offence for failure to adhere to compliance measures. If a person or entity is charged with an indictable offence for failing to meet compliance obligations, that person or entity is liable for a fine not more than CAD2 000 000, imprisonment for not longer than 5 years, or both[40].

356. Pursuant to section 78 of the PCMLTFA, any officer, director or agent of a reporting entity who directed, authorised, assented to, acquiesced in or participated in the commission of an offence is a party to and guilty of the offence and liable on conviction to the punishment provided for the offence, whether or not the reporting entity has been prosecuted or convicted.

357. Federal and provincial regulators are responsible for ensuring that their regulated financial institutions have procedures in place to continuously monitor and take action against designated entities. Except for OSFI, on-site inspections do not systematically include checks on financial institutions measures to comply with the regulations containing obligations to freeze funds or other assets as well as the prohibition on making funds available to the groups and individuals listed, and the monitoring measures generally are insufficient.

Additional elements

358. Canada has in place some of the measures set out in the Best Practices Paper for SRIII. In particular, there is appropriate communication and co-operation with foreign governments. However, the communication to the private sector, including monitoring of compliance is not sufficient and should be enhanced (with the exception of federally regulated financial institutions supervised by OSFI).

38 PCMLTFA, Section 75 (1)(a)(i).
39 PCMLTFA, Section 75 (1)(a)(ii).
40 PCMLTFA, Section 75 (1)(b).

359. As of December 2006, there has not been a request to free up frozen funds for basic or extraordinary expenses under the RIUNRST or the UNAQTR.

Statistics

360. This table shows the number of Listed Persons and Entities (as of December 2006):

UNAQTR	477
RIUNRST	36
Criminal Code	40

361. This table shows the number of Terrorist Assets Frozen in Accounts:

Date	N° of accounts	Total CAD
November 2001	28	360 000
February 2002	44	460 000
June 2002	16	350 000
September 2002	17	355 000
December 2002	15	335 000
April 2003	17	340 000
September 2003	17	340 000
March 2004	13	181 000
October 2004	14	144 000
April 2005	15	126 000
September 2005	7	68 800
August 2006	10	186 300

2.4.2 Recommendations and Comments

362. There needs to be more communication on listed persons provided to certain categories of financial institutions and other potential asset holders as well more clear and practical guidance to reporting entities (including DNFBPs and MSBs) that may be holding targeted funds or other assets concerning their obligations in taking action under freezing mechanisms. This would assist the private sector to understand the process to follow and the action to take in such cases (this does not apply to those types of institutions that already receive specific guidance, as noted above).

363. Canada should enhance the existing measures to monitor the compliance with the legislation governing the obligations under SRIII (except for federally regulated financial institutions supervised by OSFI).

2.4.3 Compliance with Special Recommendation III

Rec.	Rating	Summary of factors underlying ratings
SR.III	LC	▪ The actions taken to communicate the names of listed persons or entities do not cover all types of financial institutions and the lists are not effectively communicated to other types of asset holders. ▪ With the exception of guidance given to federally regulated financial institutions (and copied to provincial regulators/SROs), Canada has issued insufficient guidance to other financial institutions and DNFBPs that may be holding funds of other assets concerning their obligations in taking action under freezing mechanisms. This may have an impact on Canada's ability to freeze terrorist funds or other assets for such entities without delay; ▪ The existing measures to effectively monitor the compliance with the legislation governing the obligations under SRIII are insufficient (except for federally regulated financial institutions supervised by OSFI).

2.5 The Financial Intelligence Unit and its functions (R.26 & 30)

2.5.1 Description and Analysis

Recommendation 26

Functions and responsibilities of the FIU

364. *General.* Canada has established the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) as a national centre for receiving, analyzing and disseminating information concerning suspected money laundering or terrorist financing. The Canada FIU was created in 2000 under the Proceeds of Crime (Money Laundering) Act. FINTRAC's mandate was expanded to include the detection and deterrence of the financing of terrorism and other threats to the security of Canada in 2001 when FINTRAC's enabling legislation was amended and became the PCMLTFA.

365. FINTRAC is an 'administrative' FIU, meaning it does not have investigative powers. FINTRAC is an independent agency that acts at arm's length (it receives no explicit direction) from the recipients of its information and reports its activities to the Parliament of Canada through the Minister of Finance.

366. In addition to its core FIU functions, FINTRAC has a mandate to ensure compliance among financial institutions and other reporting entities with Canada's AML/CFT legislation and regulations (see Section 3.10 of the Report) and promote public awareness of money laundering and terrorist financing issues.

367. *Receiving disclosures of STRs and other types of reports*. FINTRAC receives from reporting parties the following types of reports:

- Suspicious transaction reports related either to money laundering or to terrorist activity financing regardless of dollar value (STRs).
- Terrorist property reports that report the existence of terrorist property in their possession or control, or information about a transaction or proposed transaction in respect of such property (TPRs).
- Large international electronic funds transfer reports involving CAD10 000 or more (EFTRs)[41].
- Large cash transaction reports of CAD10 000 or more (LCTRs).

368. In addition, CBSA provides the following reports to FINTRAC on behalf of individuals, and any entity who is importing or exporting currency or monetary instruments of CAD10 000 or more:

- Cross-border currency or monetary instruments reports (CBCMIRs) involving movements of CAD10 000 or more in currency or monetary instruments.
- Cross-border currency seizure reports (CBCSRs).

[41] Only financial entities, MSBs and casinos are required to report EFTRs.

369. In addition to the reports received from obligated reporting entities, FINTRAC receives information concerning suspicions of money laundering or terrorist financing voluntarily from the general public and various other sources, including law enforcement agencies, CSIS, CBSA, CRA and foreign FIUs. This additional information, referred to as 'voluntary information' or 'VIR', is included in FINTRAC's data holdings and is available to assist in its analytical work. FINTRAC provides acknowledgement of voluntary information received from law enforcement, CBSA, CRA and CSIS within approximately four weeks of its receipt through the delivery of response letters[42]. FINTRAC has received and continues to receive a significant amount of voluntary information from law enforcement and CSIS relating to both money laundering and terrorist activity financing (more than 2,500 voluntary reports since 2001).

370. *Conducting analysis of disclosures of STRs and other types of reports*. To assist in the analytical process, FINTRAC has developed policies and procedures, which identify criteria to be considered in the selection of cases for further analysis and provide guidance in determining that cases have met the legally prescribed disclosure threshold.

371. Once a case has been assigned to an analyst, that person will review and assess the information available to all the analysts (transactions, voluntary information, data from commercial and law enforcement databases, registries of companies, registries of personal property, business profile and open sources[43]) to identify and verify linkages between transactions, people and entities that may be indicative of money laundering and terrorist financing.

372. Once analysis demonstrates that there are reasonable grounds to suspect that the financial activity would be relevant to a money laundering or terrorist activity financing investigation (see below description in "*Disclosing intelligence*"), the analyst prepares the following: (1) an 'analytical report' that provides a description of the case, the analysis that took place, and sets out the rationale for disclosure; (2) a link analysis chart, a visual depiction of the linkages between key transactions, individuals and businesses; (3) a compilation of all relevant publicly available information that the analyst has used in developing the case; and (4) a 'disclosure statement' which sets out the 'designated information' that will be provided to the disclosure recipient. Additional detail on the 'designated information' that FINTRAC is able to disclose is provided below in '*FINTRAC disclosures'*.

373. The analytical report and disclosure statement go through a series of vetting and management approvals before a recommendation is presented to the FINTRAC Disclosure Committee, a FINTRAC Committee consisting of senior management representatives[44] that makes a recommendation to FINTRAC's Director concerning whether cases should be disclosed (*i.e.* whether the case meets the disclosure threshold) and if so, to whom (*i.e.* what is the appropriate police force or other agency in each case). Ultimately, it is the Director that approves disclosures. This review and approval process ensures that, prior to disclosing information, FINTRAC is satisfied that it has met two fundamental criteria. First, that the legislative threshold to disclose has been met and, second, that the information provided is what is allowed under the legislation. This threshold and the list of information that may

---

[42] If FINTRAC's preliminary analysis of the information shows that there is insufficient information to warrant a more comprehensive analysis, FINTRAC issues a letter indicting that FINTRAC is not currently in a position to communicate designated information and provides confirmation that the voluntary information has been incorporated into FINTRAC's database. If the preliminary analysis shows that there is sufficient information to warrant a more comprehensive analysis, FINTRAC will advise the provider, in writing, that FINTRAC is proceeding with the analysis of the information. If FINTRAC meets its threshold for disclosure following a more comprehensive analysis, it will disclose information to the provider of the voluntary information. If the threshold is not met, FINTRAC will follow up by sending the information provider a 'negative response' letter.

[43] 'Open source' refers to information that is available from sources that can be accessed by everyone such as the Internet, media articles etc.

[44] Currently, FINTRAC's Disclosure Committee consists of: the Director, all Deputy Directors, Assistant Directors (some on a rotational basis), Legal Counsel (in an advisory role) and any other persons appointed by the Director.

be provided are set out in sub-Sections 55(3), and 55(7), 55.1(1), 55.1(3), 56.1(1) and 56.1(5) of the PCMLTFA. However given the variety of circumstances seen in money laundering and terrorist financing schemes, FINTRAC makes its decision to disclose on a case-by-case basis.

374. All cases that culminate in a disclosure are coded and entered into a disclosure database. This also allows for the maintenance of a running tally of disclosures made to disclosure recipients. In addition, analysts entering case information check the original disclosure information for any inconsistencies or errors in logging or detailing case information. The assessment team was told that this database is also queried on every case opened by an analyst, which allows FINTRAC to link new cases to previous disclosures and potentially provide secondary or "follow-up" disclosures to law enforcement.

375. The time required to complete a disclosure will vary based on the complexity of the case. For complex disclosures that include thousands of transaction reports, more time is obviously necessary for FINTRAC to complete analysis of such cases. The assessors were told that FINTRAC has disclosed urgent cases in less than 48 hours (see further comments on effectiveness).

376. FINTRAC's case analysis can have a variety of starting points. In most cases, the initiator for a case to be developed is one particular information source. The majority of FINTRAC cases disclosed have been built with information contained in voluntary information provided by law enforcement, CSIS, or the public. In 2005/2006, queries submitted by foreign FIUs (FIUQs) were also frequent case originators. It is cross-referenced against all financial transaction and other data held by FINTRAC to identify transactions or patterns of transactions that may be indicative of money laundering or terrorist financing. Cases also originate from other sources such as STRs or open source information. However, the number of these types of cases has declined as the number of voluntary information reports from law enforcement have increased (see comments below on effectiveness).

377. *Disclosing intelligence*. Under the PCMLTFA, FINTRAC is authorised to disseminate financial information to domestic authorities for further action when it has reasonable ground to suspect that the information would be relevant and useful to the investigation or prosecution of a money laundering or terrorist activity offence. The following summarizes the various agencies that FINTRAC discloses to, and under what circumstances:

- Where FINTRAC has reasonable grounds to suspect that designated information would be relevant to investigating a money laundering or a terrorist activity financing offence, FINTRAC must disclose this information to the appropriate police force[45].
- Where there are reasonable grounds to suspect that designated information would be relevant to threats to the security of Canada[46], FINTRAC must disclose designated information to CSIS.
- FINTRAC also discloses to the CRA or the CBSA under certain circumstances. For these disclosures, FINTRAC must meet a dual test. First, FINTRAC must suspect that the designated information will be relevant to investigating or prosecuting money laundering or terrorist activity financing offence and then, for example, if FINTRAC also determines that the information is relevant to tax evasion, FINTRAC must disclose to CRA. Similarly, once the first test is met, and FINTRAC also determines that the information is relevant to determining if a person is inadmissible or relevant to certain offences under the *Immigration and Refugee Protection Act* or to the evasion of customs taxes or duties, FINTRAC must disclose to the CBSA.
- When FINTRAC has reasonable grounds to suspect that designated information would be relevant to the investigation or prosecution of a money laundering or terrorist financing

[45] PCMLTFA, 55(3).

[46] 'Threats to the security of Canada' is defined in the *Canadian Security Intelligence Service Act*, Section 2.

offence or a substantially similar offence, FINTRAC also has the authority to disclose information to foreign financial intelligence units with which it has entered into a Memorandum of Understanding (MOU) to govern such exchanges (see additional information about FINTRAC's international cooperation in Section 6.5 of the report).

378. FINTRAC analysts use a variety of indicators from a number of sources to determine whether a transaction is related to money laundering or terrorist financing (including indicators developed by the reporting entities themselves). FINTRAC has developed a reference guide of indicators with input from law enforcement units. However, the assessment team was told that these indicators are solely based on typologies and indicators issued by the FATF; the Egmont Group as well as AML guidelines issued by a number of FIUs to their reporting entities. They are not based on ML/TF trends developed by FINTRAC itself. Furthermore, a list of 13 of these indicators has been disclosed to the assessment team. In the assessment team's views, this list spots relatively basic and unsophisticated indicators.

379. During the on-site visit, the assessors were told by a law enforcement agency that FINTRAC may occasionally disclose ML/CF cases to the wrong police authority, which may delay the course of the investigation though FINTRAC indicated that it had never heard of such a case.

FINTRAC Disclosures

380. As stated previously and as set out in sub-Sections 55(7), 55.1(3) and 56.1(5) of the PCMLTFA, the information that FINTRAC can provide to a disclosure recipient is referred to as "designated information". The designated information includes key details that identify individuals or entities and their financial transactions. Designated information provided in FINTRAC's case disclosures includes any or all of the following:

- Name and address of company(ies) involved in the transaction(s).
- Name, address and type of business where the transaction(s) occurred.
- Location, date and time of the transaction(s).
- Type and value of the transaction(s) including the amount and type of currency or monetary instruments involved.
- Transaction, transit and account number(s).
- Name of importer or exporter, in the case of importation or exportation of currency or monetary instruments.
- Name and alias of person(s) involved in the transaction(s).
- Address of person(s) involved in the transaction(s).
- Date of birth.
- Citizenship.
- Passport, record of landing or permanent resident card number.

381. Disclosures may also contain publicly available information about transactions, persons or entities contained in the report as well as a visual display highlighting relevant linkages and money flows.

382. The decision to provide police and other recipients with designated information only when FINTRAC reaches its threshold, rather than to provide unrestricted access to FINTRAC's data holdings, reflects the fact that FINTRAC receives a large amount of varied financial information on persons and entities, the vast majority of which is legitimate and not relevant to any investigation or prosecution. By having FINTRAC disclose designated information, under specific circumstances (reaching the disclosure threshold), the assessors were told that lawmakers have struck a balance between the needs of police and other recipients to pursue ongoing and new investigations, and the privacy rights of Canadians guaranteed under the Canadian Charter of Rights and Freedoms. Instead of providing direct access to its data holdings, FINTRAC discloses cases that provide new leads to law enforcement authorities and other partners, either in support of ongoing investigations or in support of other intelligence related to new investigative targets.

383. Although delineating designated information assists in protecting the privacy of Canadians, the 2004 Report of the Auditor General of Canada and the Year Five Evaluation of the National Initiatives to Combat Money Laundering and Interim Evaluation of Measures to Combat Terrorist Financing, stated that the effectiveness of FINTRAC disclosures was limited by legislative restrictions that constrain the information that can be disclosed. This was seen to have a direct impact on law enforcement ability to effectively investigate ML and TF cases.

384. The two above-mentioned reports encouraged the government to re-examine the list of designated information and identify potential additions to the list with the objective of expanding the information available in FINTRAC disclosures while continuing to respect the privacy and Charter rights of Canadians. Designated information was enhanced as a result of amendments to the PCMLTFA which came into force on June 30, 2007. Since that date, FINTRAC may disclose the following, in addition to the original list of designated information identified above:

- The existence of pending criminal charges or of criminal records of the parties involved in or related to any transaction.
- The relationship or association of any person or entity to a corporations or any other entity referred to in the disclosure, if the transaction was/were made on behalf of a corporations or other entity.
- The name, address and telephone number of each partner, corporate director or officer of a corporation or other entity, its business number and its place of business, or principal location of activities.
- Whether the parties referred to in the disclosure have any beneficial or financial interest in the partnership, corporation or other entity.
- In disclosures where more then one person is involved in, associated with, or related in any manner to the money laundering and/or terrorist financing activity, the principal or controlling entity or individual involved in or related to the money laundering and/or terrorist financing activity.
- The number and type of reports or types of information a disclosure is based on.
- The number and type of reporting entities who filed the reports.
- A summary of indicators (*e.g.* rapid movement of funds and transactions inconsistent with customer profile).
- The reporting entity's reason for submitting a suspicious transaction report to FINTRAC.

385. *Production Orders*. When law enforcement or CSIS want additional information from FINTRAC that is not included in a case disclosure of designated information, they may seek a court order, which requires FINTRAC to provide them with additional information. In most cases, a production order will be served on FINTRAC after an initial disclosure has been made; however, under the Act, a disclosure of designated information is not a precondition to a production order.

386. A production order may include the transaction reports (STRs, LCTRs, etc,) and the case analysis report, which contains the facts on which the analysis is based, the detailed reasons for suspecting money laundering or terrorist financing (the rationale for disclosure), and any other information named in the order. These facts are gathered from the financial transaction reports received and publicly available information, among other sources. To get a production order, the police must satisfy a judge that there are reasonable grounds to believe that a money laundering or terrorist-activity financing offence has been committed by the person in respect of whom the police are seeking information or that that person has benefited from such an offence. In addition, the police must satisfy the judge that the information that they are seeking is likely to be of substantial value to the investigation of the offence. The judge may then issue a production order requiring FINTRAC to permit the police officer named in the order to examine, or be provided certified copies of, all information and documents described in the court order, subject to conditions the judge considers advisable in the public interest.

387. To date, FINTRAC has been served with only 14 production orders from law enforcement. Law enforcement authorities cite two basic reasons for the reluctance to apply for production orders. One is that the legislative threshold is high, the same as for a search warrant: the applicant must satisfy the court that there are "reasonable grounds to believe" an offence has been committed. A search warrant is preferable because it provides direct access to target information that could be used as evidence. Second, the information contained in FINTRAC disclosure is generally considered below the legislative threshold that a production orders requires.

Guidance on reporting

388. FINTRAC provides comprehensive guidance to reporting entities regarding the manner of reporting and the procedures that should be followed when reporting. FINTRAC has defined very structured reporting forms for STRs, LCTRs, EFTRs and CBCMIRs.

389. In order to ensure that FINTRAC is able to receive and process large volumes of reports quickly and efficiently, a mandatory requirement was established in the PCMLTFA Regulations, requiring reporting entities to submit reports electronically to FINTRAC when the sender 'has the capacity to do so'[47]. Today, approximately 99.9% of all reports are submitted electronically.

390. Given the IT requirements for submitting reports, FINTRAC works very closely with reporting entities, particularly the larger ones, with respect to the development and implementation of technical specifications. To assist with this, FINTRAC has created and hosts regular meetings of a technical support group for technology specialists within some of the major reporting sectors, to act both as a consultative body and to ensure that technical questions and issues on reporting to FINTRAC are addressed and communicated within the group. FINTRAC also developed and provided the software to reporting entities to allow them to encrypt and transmit batch files to FINTRAC.

391. In February 2006, FINTRAC launched an updated secure online report capture system, F2R, that provides reporting entities with a reliable mechanism to file reports through the Internet. This tool further facilitates the reporting of financial transactions for the many individuals and businesses that are obliged to do so under the PCMLTFA. This newly implemented reporting system has also been designed to increase data quality through new functions which return LCTRs and EFTRs to reporting entities for revision (*RRFA: Reports Return for Further Action*) when the required information is not included in the report. The new reporting system also has built in controls to ensure that more complete reports are provided to FINTRAC through the implementation of automatic, immediate error messages that go to reporting entities concerning any errors made in specific fields of their submitted transaction reports. The system does not accept the reports if certain key fields are not completed.

392. The assessment team believes that such IT tools can generate positive outcomes. However, during the on-site visit, the assessors were told on several occasions by reporting entities that the format of reporting forms is somewhat too rigid and reduces the capacity to communicate a maximum level of information. FINTRAC indicated to the assessment team that reporting entities were consulted during the development of the new reporting system in order to offer a product that meets reporting entities expectations and needs as well as FINTRAC's requirements. FINTRAC has also worked closely with reporting entities to explain the importance of including a clear and complete description of events and reasons for suspicion in the narrative portion of the form (section G), which has no space limitation.

[47] A reporting entity needs only have basic information technology infrastructure, such as a PC and connection to the Internet in order to be able to report electronically to FINTRAC.

Access to information

393. FINTRAC now has over 45 million reports in its data holdings, and data holdings continue to grow at the rate of approximately 15 million reports each year. All of the data on these reports is available for analysis within FINTRAC.

394. FINTRAC analysts have ongoing, direct access to many different commercially and publicly available databases (*e.g.* Registries of companies, Registries of Personal Property, and Business Profiles), as well as the Internet.

395. Under the PCMLTFA, FINTRAC has authority to collect information from databases maintained for law enforcement or national security purposes and in respect of which an agreement is entered into. FINTRAC currently has access to two major national police databases.

396. The first database is a computerized system that provides tactical information about crimes and criminals. It is an integral part of the RCMP's National Police Services (NPS) as it is the only national information-sharing system that links criminal justice and law enforcement partners across Canada and internationally. This database is responsible for the storage, retrieval and communication of shared operational police information to all accredited criminal justice and other agencies involved with the detection, investigation and prevention of crime. This database has been operational since 1972, and is located in the RCMP Headquarters complex in Ottawa, Ontario. It allows for over 80 000 law enforcement officers to connect to the central computer system within 3 185 police departments, RCMP detachments, and federal and provincial agencies across the country. This system has four data banks, Investigative, Identification, Intelligence and Ancillary (containing information not found in the other categories), which includes files and information such as: vehicles, persons and property.

397. The second database is the RCMP's automated information management system used to store, update and retrieve information on operational case records/occurrences being, or having been, investigated. This electronic indexing system is used by the RCMP operational units, some municipal police agencies, by Firearms Officers (FO) across Canada, and by other federal partners. The database captures data on individuals who have been involved in investigations under the Criminal Code, federal and provincial statutes, municipal by-laws and territorial ordinances. According to the RCMP, in addition to details of an event in a brief synopsis, the database contains limited information relating to investigations and criminal histories. Unlike the first database, which essentially contains factual information (*e.g.* charges and convictions), this database may also contain information provided by witnesses, victims and other associated subjects that can be highly subjective, as well as the names of the witnesses, victims, and acquaintances of the accused individual. It also contains information on occurrences and incidents that never resulted in charges.

398. FINTRAC continues to work with law enforcement and national security partners to identify databases, assess FINTRAC's interest in their content and if appropriate develop agreements for access.

399. FINTRAC has dedicated staff (Law Enforcement Liaison Officers) that are responsible for liaising and maintaining a relationship with FINTRAC's law enforcement partners. These liaison officers are responsible for delivering FINTRAC's disclosures to and obtaining feedback about these disclosures from law enforcement. They also facilitate law enforcement's provision of voluntary information to FINTRAC.

400. FINTRAC does not have access to information on the income of suspects of money laundering or terrorism financing activities. FINTRAC has no authority under the PCMLTFA to collect information from the CRA. FINTRAC has no direct or indirect access (i.e. cannot query) to databases maintained by the CSIS, which can provide information on suspects of terrorism financing activities, nor to databases maintained by the Canadian Customs Agency. However the assessment team was told that CSIS provides FINTRAC with general analysis of threats to the security of Canada that can help FINTRAC to analyze the reports it receives.

401. FINTRAC must rely on voluntarily information provided by the law enforcement authorities to carry out the analysis of the reports it receives. When receiving and analysing such reports, FINTRAC does not ask information directly or via its liaison officers to specific or local law enforcement agencies but limits itself to collect information from the two available law enforcement databases that are not fully integrated and not entirely complete.

Additional information from reporting parties

402. FINTRAC is not allowed by the PCMLTFA to ask additional financial information from reporting entities at the analytical stage. FINTRAC can return STRs to reporting entities because of missing information or other errors (*e.g.* some fields in the electronic form are not completed. Since the adoption of the secure online report capture system (F2R), this process has become more formalized and systematic under the "Reports Returned for Further Action" or RRFA. RRFAs are returned by FINTRAC to reporting entities that must complete insufficient data. Once the reporting entity has made the corrections required (*i.e.* has completed the missing field(s)), the STR is forwarded back to FINTRAC. However, at this stage, no substantive analysis of the report has been made yet. Therefore FINTRAC can only ask reporting parties to supplement an incomplete report but cannot obtain from the reporting entities additional information during the analytical process (for instance, FINTRAC cannot ask the reporting entity about other financial operations carried out in that institution by the same person which are not covered by the report but knowledge of which could help in fully understanding the ML mechanisms they might be using). Canada has advised that Section 8 of the Charter that sets out that "everyone has the right to be secure against unreasonable search and seizure" would not allow FINTRAC to request additional financial information to the reporting entities.

403. The assessment team was told that the legislated reporting requirements were developed in such a way as to ensure that FINTRAC has a broad and detailed amount of transaction information to link suspect transactions and develop intelligence products for the police forces and others. FINTRAC also relies on additional information from reporting entities it can get through other types of reports than STRs (*i.e.* its compliance work as well as from commercial databases and publicly available information).

404. The Suspicious Transaction Report includes a wide range of fields to be complete by the reporting entities (certain fields are mandatory – for all other fields the reporting entity has to make reasonable efforts to get the information). The report has been built by FINTRAC to oblige the reporting entities to provide FINTRAC with as many information as possible on the suspicious financial transactions (multiple suspicious transactions can be reported simultaneously) and the suspects of money laundering or terrorist financing activities. Amongst other things, mandatory fields on how the transaction was initiated (where the money came from) and on the disposition of the funds (where the money went) are included in the report. With respect to STRs, special attention is given to the section of the report dealing with the description of the suspicious activity regarding a transaction (Section G). The ideal response clearly and completely describes the factors or unusual circumstances which led the reporting entity to a suspicion of money laundering or terrorist financing, and provides as many relevant details as possible.

405. However, the assessment team does not consider such mechanisms sufficient to meet the FATF requirement. The current legal framework does not permit FINTRAC to go back at reporting entities to ask for additional potentially relevant information available within the financial sector. As FINTRAC has no authority to obtain additional financial information from the reporting entities, law enforcement authorities may be provided with incomplete pictures of the suspicious ML/TF cases, *i.e.* a partial description of the financial information.

Operational independence and autonomy

406. The PCMLTFA established FINTRAC as an independent agency and, as such, FINTRAC has a high level of operational independence and does not take direction concerning day-to-day operations from any external parties. The Director is appointed for a 5-year term, has supervision over, and direction of, FINTRAC's work and employees, and may exercise any power and may perform any duty or function of FINTRAC.

407. The Minister of Finance is responsible for FINTRAC and may direct FINTRAC on its strategic direction or matters that affect public policy. Similarly, the Director is required to keep the Minister informed of any matter that could materially affect public policy or the strategic direction of FINTRAC. The PCMLTFA prohibits the Director from disclosing any information to the Minister that would directly identify an individual who provided a report or information to FINTRAC, or a person or entity about whom a disclosure was provided by FINTRAC under the PCMLTFA.

408. In addition, FINTRAC is mandated to operate at arm's length from those to whom it discloses information and FINTRAC cannot take direction from police forces or other agencies that it discloses to.

Protection of the information

409. Information held by FINTRAC is securely protected and is disseminated only in accordance with the PCMLTFA. FINTRAC has a legislated mandate to ensure that personal financial information in its possession is protected and remains confidential. This piece of its mandate guides every aspect of FINTRAC's operations.

410. The PCMLTFA upholds the principles outlined in the Canadian Charter of Rights and Freedoms and the Privacy Act, and contains significant provisions specifically designed to protect the privacy of individuals.

411. FINTRAC employs a robust integrated security program that incorporates state of the art technology including both smart cards and biometric technology to control physical and computer access. Continuous improvement and vigilance of physical and electronic security systems ensure that FINTRAC maintains a high standard of information protection[48].

412. When delivering domestic disclosures, all information is handled in a highly secure manner. A FINTRAC Law Enforcement Liaison Officer hand delivers all outgoing disclosures to the appropriate law enforcement or intelligence agency recipient. The disclosure package is presented in both paper and electronic format to facilitate use by the receiving agency. All disclosure activity is logged, whereby the recipient signs for receipt of disclosures and both parties retain a receipt for their records. This process is practiced on a consistent basis and adheres to the Government of Canada's "Security Policy".

413. The protection of information is a paramount consideration in the decision to enter into an agreement with a foreign FIU for the exchange of information. As required by the PCMLTFA, these agreements contain specific provisions that commit those organizations to protect the information, to use it only for purposes related to the investigation or prosecution of money laundering or terrorist activity financing offences (or substantially similar offence), and to treat the information in a confidential manner. Further disclosure of the information to a third party is done only with FINTRAC's explicit consent. Disclosures to foreign FIU are made via the Egmont Secure Web (a

[48] For instance, all employees must obtain 'Top Secret' security clearance as a condition of employment. Staff operate under the 'need to know' principle, meaning that staff has access only to information they require in order to perform their specific duties. Measures to control physical access to FINTRAC offices include security staff, high security locks, electronic access control, closed circuit monitoring, electronic intrusion detection and monitoring.

secure communications channel used by most Egmont-member FIUs) or more secure means, if necessary.

Periodic reports

414. Part of FINTRAC's mandate is to enhance public awareness and understanding of matters related to money laundering and terrorist financing activity. Subsection 72(1) of the PCMLTFA requires the Director to prepare and submit on or before 30 September of each year an annual report on the operations of FINTRAC for the preceding year to the Minister of Finance. Subsequently, the Minister tables the report in Parliament.

415. FINTRAC's Annual Report contains a range of information regarding financial transaction reporting statistics, agency highlights, staffing matters, future priorities and performance summaries. FINTRAC has released Annual Reports since 2002. FINTRAC's Annual Report has evolved over its five publications. In the 2005 Annual Report, FINTRAC provided a sanitized money laundering case in an effort to further enhance the public's understanding of money laundering and FINTRAC's role in detecting it. In 2006, before Parliament, FINTRAC provided detailed televised testimony, on FINTRAC's business flow and how it produces financial intelligence. This material has subsequently been published on FINTRAC's website and replicated in the 2006 Annual Report, in order to reach a wider audience.

416. The Annual Report 2006 provides the following statistical tables: reports received by fiscal year and type; suspicious transaction reports by sector; disclosures and value of transactions; number of reporting entities represented in disclosures; percentage of case disclosures supported by each type of report; regional distribution of money laundering case disclosures; and agreements with foreign FIUs. With regard to ML/TF trends, it describes trends that FINTRAC has observed with respect to drug and fraud-related cases. One complex sanitized case is also presented that includes: description of the facts; a brief summary of the result of the case (such as number of arrests); where appropriate, a description of the inquiries made by the FIU; and, lessons learned. However, the assessment team believes that the FINTRAC Annual Reports could provide more statistical information (such as for instance the number of STRs sent to law enforcement authorities), typologies and ML/TF trends related information considering the number of ML/FT cases FINTRAC annually deals with and the amount of information FINTRAC at its disposal (out of 45 pages of the annual report 2006, only 12 pages are dedicated to statistical information, typologies and ML/TF trends). This is to be linked to the need for FINTRAC to improve its capacity to produce typologies works and studies on ML/TF trends in Canada.

Egmont Group membership

417. FINTRAC became a member of the Egmont Group in June 2002. Since that time it has participated actively in many of its activities, committees and working groups. Currently, FINTRAC's Director holds a seat on the Egmont Committee as Vice-Chair and is Chair of the Information Technology Working Group.

Egmont Group Statement of Purpose and its Principles for Information Exchange Between Financial Intelligence Units for Money Laundering Cases

418. FINTRAC takes into account both the Egmont Group Statement of Purpose and its Principles for information Exchange between Financial Intelligence Units[49].

[49] The Egmont principles stipulate that FIUs should be able to exchange information freely with other FIUs on the basis of reciprocity or mutual agreement and consistent with procedures understood by the requested and requesting party.

Recommendation 30 (Resources)

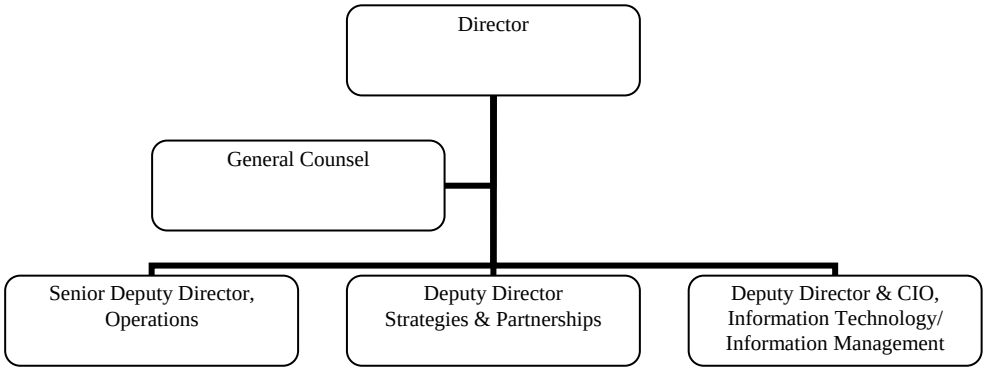
General

419. In 2000, FINTRAC was established as Canada's FIU with an initial annual budget of approximately CAD18 million and 70 employees. In 2001, FINTRAC was given additional responsibilities for combating terrorist financing as part of the Anti-terrorism Act, and the budget was increased to CAD42 million. In the 2006 Budget, the Government announced its priority to bolster existing capacity to combat money laundering and terrorist financing by providing incremental resources to the AML/CFT regime, including an additional CAD16.2 million and 102 employees to FINTRAC. The following table outlines FINTRAC's past, current and planned annual budget.

	2000-01	**2001-02**	**2002-03**	**2003-04**	**2004-05**	**2005-06**	**2006-07**	**2007-08**
Full-Time Employee (FTE)	70	135	150	189	184	180	265.4	271
Total Funding FINTRAC (CAD '000)	17 985	36 093	42 158	33 255	32 003	33 973	51 081	49 839

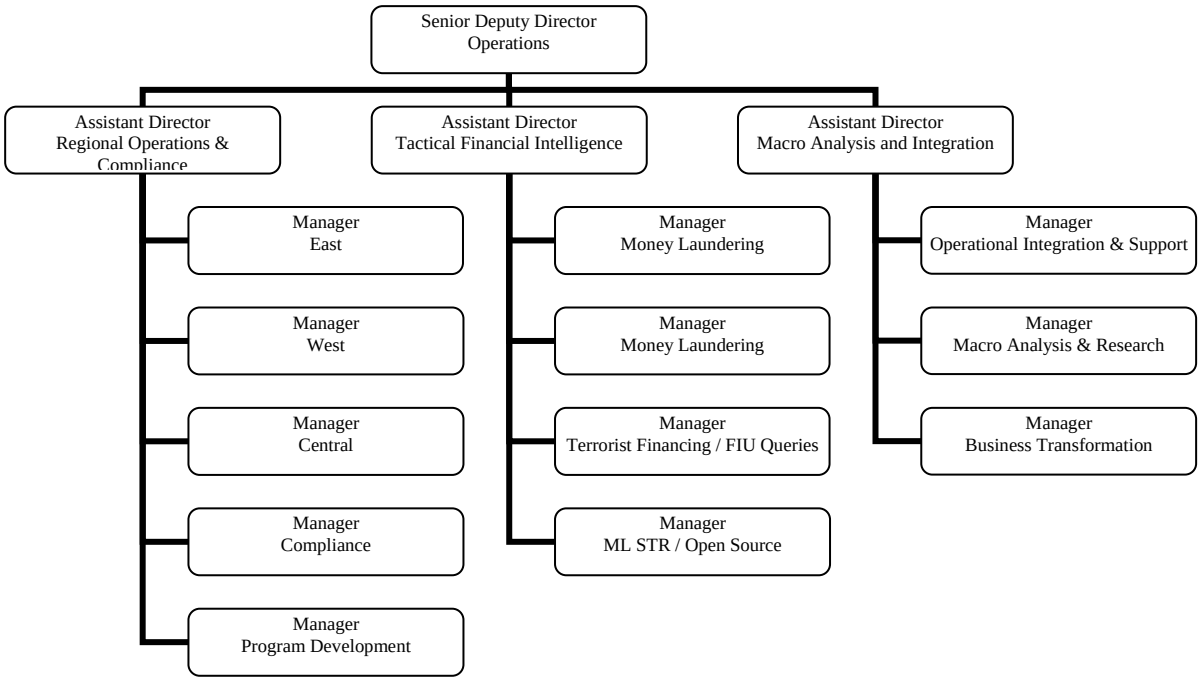
420. FINTRAC has three regional offices (Western, Central, and Eastern)[50] of approximately ten staff each with responsibilities for the various aspects of the national compliance program (policy interpretation, reporting entity assistance, risk assessment and examinations, data quality, timing and volume, reporting entity feedback and disclosures of non-compliance to law enforcement) as well as for liaison with law enforcement agencies (delivery of disclosures, receipt of voluntary information, and relationship management).

FINTRAC's Organizational Chart



421. *Operations Sector*. The Operations Sector (117 employees) is responsible for detection and deterrence activities with the support of the following three functions: Regional Operations and Compliance (ROC), Tactical Financial Intelligence (TFI) and Macro Research and Integration (MAI).

[50] Western – located in Vancouver, covers British Columbia, Alberta, Saskatchewan, and the Yukon; Central – located in Toronto, covers Ontario Manitoba, the Northwest Territories and Nunavut; Eastern – located in Montreal, covers Quebec, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland and Labrador.

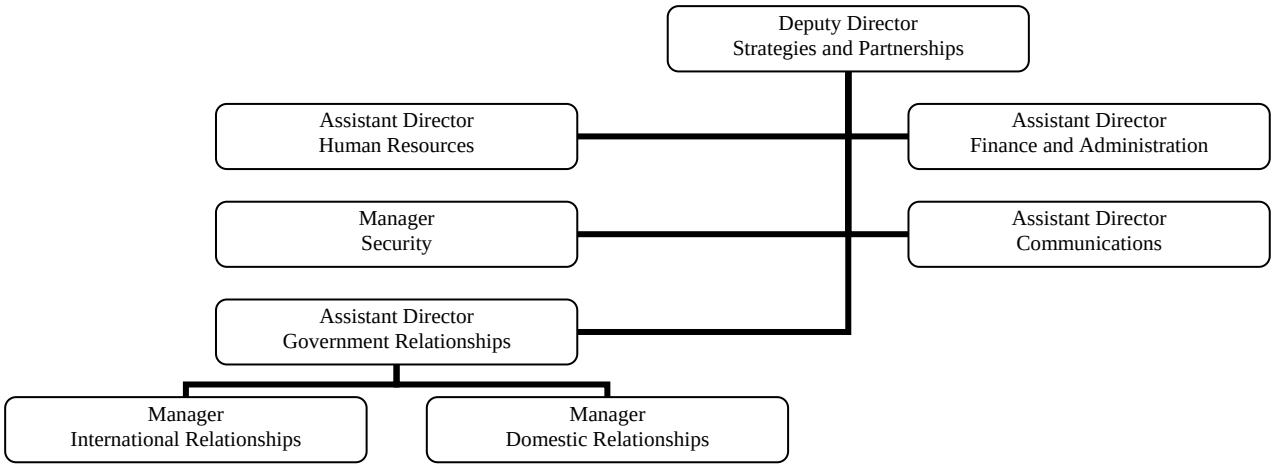


422. Regional Operations and Compliance (49 employees) is responsible for interpreting policy and regulations, providing advice and assistance to reporting entities; conducting risk assessment and examinations; monitoring data quality and volume; providing feedback to reporting entities; making disclosures of non-compliance to law enforcement; conducting regional liaison with disclosure recipients; and developing and implementing new programs.

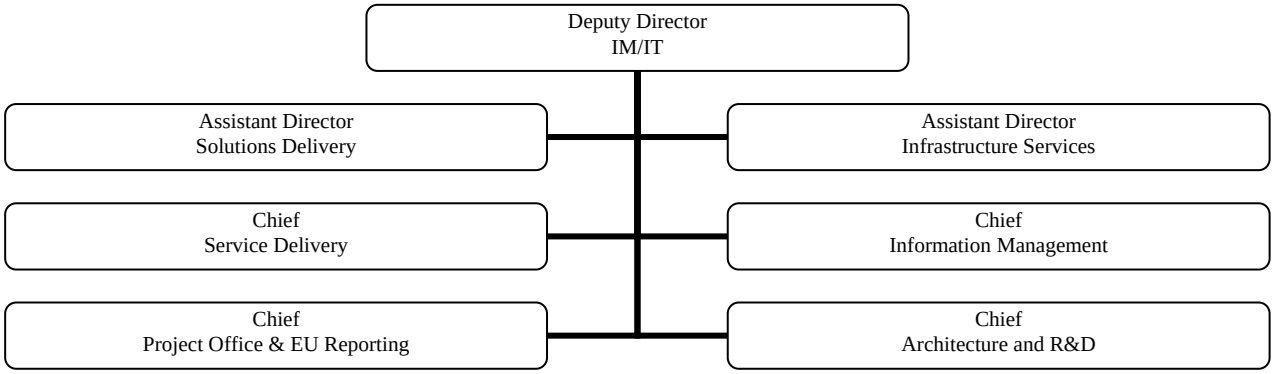
423. Tactical Financial Intelligence (36 employees) is responsible for developing cases and FINTRAC's disclosures. The Tactical Financial Intelligence Unit comprises four units. Three units are dedicated to the analysis of ML cases and the fourth unit deals with terrorist activity financing cases as well as FIU queries. The three ML units are structured to ensure FINTRAC's disclosures are provided in a most timely fashion. For example, one ML unit is set up to deal with the less complex cases. These cases often have fewer transactions and can be analysed within a short time frame and disclosed quickly. The second ML unit deals with more complex cases. This allows analysts to spend the necessary time on the preparation and analysis of these cases to ensure they are worked on immediately and disclosed in a timely manner. The third unit is set up to deal with cases generated by STRs and open source or media articles. The TF unit deals entirely with terrorist activity financing and threats to the security of Canada cases as well as with any queries FINTRAC receives from other FIUs. There is a manager in charge of each unit and a total of 36 analysts handle the workload.

424. Macro Analysis and Integration (29 employees) is responsible for operational integration and support (including handling of Voluntary Information and disclosures, and support on production orders), macro analysis and research (statistics and reports to support FINTRAC's operations, research and exploit available macro level information sources) and business transformation (i.e. development and review of business processes within Operations Sector and the development of user requirements in support of new systems development).

425. *Strategies and Partnerships Sector*. The Strategies and Partnerships Sector (63 employees) manages the key relationships that FINTRAC has with domestic and international partners, and is the primary conduit for ensuring that FINTRAC's views are put forward in the development of public policy and international standards and is responsible for establishing, maintaining and nurturing positive and productive relationships with critical partners such as law enforcement, other government departments and foreign FIUs relationships. This sector also supports corporate needs, including human resources, finance and administration, facilities management, and security. The Communications group is responsible for internal and external communications and public awareness.



426. *Information Management/Information Technology Sector*. The Information Management and Information Technology Sector (75 employees) provides support to FINTRAC's operations in five key areas: the receipt and processing of financial transaction reports, the provision of high quality financial intelligence products, the production of insightful strategic intelligence, compliance and the protection of personal information. This sector develops and applies information management and information technology methodologies that support and advance all of FINTRAC's objectives. It designs, maintains, implements, secures and supports IT infrastructure and system solutions to meet internal and external end user requirements.



427. *Legal Services*. FINTRAC's Legal Services unit is staffed by Department of Justice Canada lawyers who provide advice to FINTRAC on legal questions pertaining to FINTRAC's mandate and operations.

428. *Conclusion*. Canada decided to establish an FIU that would make maximum use of advanced technologies in its analytical and compliance work, allowing FINTRAC to effectively manage a very important and growing database and to analyse incoming reports within a short time frame. FINTRAC's analysts certainly benefit from support from advanced technologies as well as from many experts in the agency. As such, FINTRAC's analysts are significantly focussed on conducting analysis and developing cases for disclosure recipients. Much of the work done outside of the Tactical Financial Intelligence (TFI) unit directly supports this analytical work.

429. Taken into account the above-mentioned considerations and while the total number of staff seems more than adequate, the assessment team has concerns with regard to the number of staff dedicated to the analysis of potential ML/FT cases. Only 36 analysts out of 271 employees (13%) are responsible for developing cases and elaborating FINTRAC disclosures. It seems very challenging for these staff to deal with the amount of reports coming in (15 million reports in 2005-2006, including

nearly 30 000 STRs). Having regard to total resources, FINTRAC should review its internal resource allocation and use, and consider the best and most effective results are being achieved.

Professional standards

430. FINTRAC staff is a diverse group with relevant experiences and skills from both the public (41.7%) and private sectors (58.3%) such as the financial industry, accounting, law enforcement, customs, justice, and public safety. Also, FINTRAC relies upon, and leverages a multidisciplinary team of analysts with backgrounds in various reporting entity sectors, other government departments and international organizations.

431. Employees in the Operations sector bring a varied background of education, including undergraduate and graduate degrees as well as affiliations with professional associations such as Chartered Accountants, Certified Fraud Examiners, International Association of Crime Analysts, and International Association of Law Enforcement Intelligence Analysts.

432. More specifically for the Tactical Financial Intelligence sector, FINTRAC seeks analysts that have sound knowledge and understanding of complex financial manipulations, and a degree from a recognized university. FINTRAC analysts also have experience in using software to analyse data and previous experience in the Canadian or international sector in banking, securities, intelligence analysis, law enforcement, or law.

Standards concerning confidentiality

433. FINTRAC has implemented enhanced security measures and employees participate in security awareness sessions. A robust and effective security program, and a full suite of policies and procedures to protect privacy, and prevent unauthorised disclosures of information, are in place and are vigorously upheld. As mentioned above, FINTRAC employees must obtain a ‘Top Secret’ security clearance as condition of employment.

Training

434. Employees are able to undergo training and attend conferences on ML/TF issues. FINTRAC provides ongoing internal and external training opportunities to enhance analysts’ skills and development. New analysts complete a two-day Operations Orientation Session that covers the operational working and structure of FINTRAC including its legal framework and domestic and international relationships. Entry level analysts also take part in pertinent courses offered regularly, such as courses relating to tactical and strategic intelligence analysis, international AML/CFT standards, effective use of the Internet, and report writing.

Statistics

435. FINTRAC keeps a broad set of statistics, including statistics relating to the number and type of reports received by sector and other relevant information. FINTRAC also maintains statistics on disclosures, in order to track the amount, type, recipient, and foundational information such as the types of financial transaction reports that supported disclosures and the number of reporting entities represented in disclosures.

Effectiveness

436. The following table shows, by report types, the total reports submitted to FINTRAC, by fiscal year, since beginning to receive reports in November 2001:

Report Type	2001-2002[1]	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007[2]	Total
CBCSRs/CBCMIRs	--	650	29 369	75 821	54 506	19 914	**180 260**
LCTRs	--	226 918	2 792 910	3 658 462	6 003 493	3 119 156	**15 800 939**
EFTRs	--	1 859 237	6 689 626	7 077 675	8 887 097	4 814 423	**29 328 058**
STRs	3 772	17 358	14 794	19 113	29 367	18 431	**102 835**
Terrorist Property Reports	--	19	6	6	1	--	32
Total	3 772	2 104 182	9 526 705	10 831 077	14 974 464	7 971 924	45 412 124

[1] For the period of November 2001 to March 2002 (FINTRAC became operational in November 2001 and fully operational in March 2003).
[2] Fiscal year 06-07 statistics include only the first two Quarters (up to September 30, 2006).

437. The number of FINTRAC disclosures since 2001 is as follows:

	2001/2003	2003/2004	2004/2005	2005/2006	2006/2007*	**Total**
Number of disclosures	104	197	142	168	92	**703**

* Fiscal year 06-07 statistics include only the first two Quarters (up to September 30, 2006).

438. The following table breaks down FINTRAC disclosures, by recipient and fiscal year. The RCMP has received the largest number of FINTRAC disclosures. FINTRAC discloses to the RCMP both as the national police force, but also as the provincial police service for all Canadian provinces except Ontario and Quebec. Foreign financial intelligence units, CSIS, and other police forces, (including provincial services for Ontario and Quebec, and municipal services) all receive FINTRAC disclosures.

Disclosure Recipient	2001-2003	2003-2004	2004-2005	2005-2006	2006-2007[1]	Total	%
Royal Canadian Mounted Police	88	163	97	111	63	522	56%
Canadian Security Intelligence Service	23	38	22	21	9	113	12%
Foreign Financial Intelligence Unit	10	22	22	28	17	99	11%
Other Government Agency	3	1	2	4	3	13	1%
Other Law Enforcement Agency	28	66	34	38	27	192	20%
Total	**152**	**290**	**177**	**202**	**119**	**939**	**100%**

[1] Fiscal year 06-07 statistics include only the first two Quarters (up to September 30, 2006).

439. The number of disclosures to 'Other Government Agency' (CRA, CBSA) is reflective of the dual test that must be satisfied in order to disclose to these agencies. As a recipient of information from multiple law enforcement agencies, international counterparts and reporting entities, FINTRAC often identifies links between reports and other information, and this means that disclosures are sometimes made to more than one recipient (*i.e.* multiple police forces in one province, different levels of domestic law enforcement, domestic and international agencies at the same time).

440. The following table shows the number of STRs used in disclosures since 2001:

	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007[1]
Disclosures including STRs	89	117	78	108	62
Total disclosures made	104	197	142	168	92
Number of STRs in these disclosures	5 814	3 080	1 040	1 368	787
Total STRs received	**17 358**	**14 794**	**19 113**	**29 367**	**18 431**

[1] Fiscal year 06-07 statistics include only the first two Quarters (up to September 30, 2006).

441. The total number of STRs used in the cases disclosed has strongly decreased from 5 814 in 2002/2003 (33.5%) to 1 368 (4.6%) in 2005/2006.

442. The following table provides an overview of disclosures by fiscal year, in terms of numbers of disclosures made, the relative dollar amount and the number of transactions contained in the disclosure.

Fiscal Year	Number	CAD Amount	Transactions
2001-2003[1]	104	471 359 543	12 571
2003-2004	197	696 434 493	12 235
2004-2005	142	2 048 445 054	19 263
2005-2006	168	5 004 349 860	43 771
2006-2007[2]	92	2 265 046 135	25 706

[1] Too few disclosures were made in 2001-2002 to present separately. FINTRAC became operational (November 2001).

[2] Fiscal year 06-07 statistics include only the first two Quarters (up to September 30, 2006).

443. The above-mentioned tables indicate a very low number of disclosures in comparison with the total number of reports that FINTRAC receives. In 2005/2006, out of 14 974 464 reports received and out of 29 367 STRs, only 168 disclosures were sent to law enforcement authorities for further investigations (out of these 168 disclosures, 108 included STRs and these disclosures related to more than 43 000 transactions and contained 1 368 STRs). FINTRAC believes that the large number of transactions being disclosed is a positive indicator of the amount of financial data that FINTRAC delivers to law enforcement authorities.

444. FINTRAC disclosures are essentially based on cases generated by law enforcement authorities. The assessors were told that 80% of the cases disclosed by FINTRAC resulted from voluntary information from law enforcement or another recipient[51]. The remaining 20% of the disclosed cases concern new cases that are not already under investigation by law enforcement. This raises serious concerns with respect to the capability of FINTRAC to generate new ML/TF cases (as opposed to positively contributing to existing investigations) on the basis of the STRs it receives (*i.e.* the financial information provided by the private sector).

445. FINTRAC initiated a case disclosure feedback framework in November 2005, which was developed in cooperation with law enforcement agencies throughout Canada. The objective was (1) to enhance FINTRAC's understanding of how law enforcement uses its intelligence product; (2) to initiate steps to strengthen FINTRAC's disclosure process and product; and (3) to be able to report publicly, as a performance measure, the results of FINTRAC's disclosures to law enforcement.

446. Of the feedback forms received as of the end of September 2006, 85% of the responses indicate that the FINTRAC disclosure related to persons, businesses or entities of interest to their current investigation and 60% indicate that the FINTRAC disclosure provided leads on previously unknown persons, businesses or entities of interest. Overall, close to half of the responses indicate that the FINTRAC disclosure provided a major contribution to an ongoing investigation, while about 15% indicate that a FINTRAC disclosure triggered a new investigation. Approximately 15% of the responses also indicated that a FINTRAC disclosure had contributed to an investigation that is expected to be prosecuted.

[51] More than 2 500 voluntary reports were sent to FINTRAC since 2001 (the RCMP provides the majority of these reports).

447. The general view of some organizations that receive FINTRAC disclosures and that were met by the assessment team during the on-site visit is that the balance has been so far too strongly in favour of privacy concerns. The approach that prevailed until the amendment of the PCMLTFA in June 2007 – characterized as too "conservative" or "risk-averse" by some –led to insufficient information in disclosures, which reduced the usefulness for investigations (in particular, for new cases), and difficulty in obtaining production orders for more information.

448. In addition, law enforcement partners have expressed a need for more details (*i.e.* a narrative) on the analysis and rationale underlying FINTRAC disclosures in addition to the factual information that must be provided under the PCMLTFA (as revised). They argue that if more details were provided, this would reduce unnecessary duplication of intelligence effort (*i.e.* there would be no need to redo the analysis already conducted by FINTRAC), enhance availability of timely information, improve the usefulness of disclosures for investigations, and ultimately enhance the effectiveness of the AML/CFT regime.

449. A number of recipients initially indicated that the timeliness of disclosures should be improved to increase relevance to ongoing investigations. The assessors were told that FINTRAC has worked to decrease the time it takes to build a case and make a disclosure, and feedback since April 2006 has indicated an increasing satisfaction with timeliness of disclosures.

450. FINTRAC has an obligation to disseminate financial information to domestic authorities for further action when it has reasonable ground to suspect that the information would be relevant to the investigation or prosecution of a money laundering (Section 462.31) or terrorist activity offence seems to be too strictly implemented using a higher threshold that the one required by law. The assessors have concerns about the interpretation that is made by FINTRAC of the "threshold to disclose" level that might be reached to disclose. Assessors understood during the on site visit that certain financial transactions are not disclosed because they considered as not important enough to be investigated, even if law enforcement information is available. FINTRAC indicated however that all relevant transactions are transmitted to law enforcement as soon as the legal threshold is reached.

451. Based on all of these factors, the assessment team has serious concerns with regard to the added value of the information generated by FINTRAC on ML/TF cases. Importantly, during the on-site visit, the assessors were advised that since the creation of FINTRAC, no conviction for ML or TF has resulted from a FINTRAC disclosure[52]. Although FINTRAC has no role in investigation, prosecution or conviction of ML, TF and the predicate offences, the assessment team believes that this is an additional factor to consider when looking at FINTRAC's ability to produce intelligence that is able to be used in criminal investigations and prosecutions.

2.5.2 Recommendations and Comments

452. FINTRAC should be authorised to develop a more proactive approach for collecting data on suspicious cases of money laundering or terrorist financing and should consider more actively employ its liaison officers to interact with the law enforcement authorities. FINTRAC should be authorised to have access to more intelligence data from CSIS, CRA and the Canadian Customs Agency to reinforce its analytical work. FINTRAC should envisage employing liaison officers from these agencies.

453. FINTRAC should be able to obtain additional financial information from the reporting entities, especially during the analytical process.

[52] On 23 January 2008, Canada informed the assessors that one investigation resulted in a conviction for money laundering and was initiated as a result of a STR-driven FINTRAC disclosure case. In addition, FINTRAC indicated that in 22 cases, its disclosures supported investigations that resulted in convictions for ML, proceeds of crime, fraud and other offences.

454. While it will always take a certain level of judgment to decide what constitutes "reasonable grounds" for suspicion, an explicit framework helps produce consistent decisions among analysts and over time. Such indicators should be developed based on ML/TF trends elaborated by FINTRAC. FINTRAC should improve its capacity to produce typologies works and studies on ML/TF trends in Canada.

455. Canada should ensure that the format of reporting forms developed by FINTRAC provides some flexibility and allows the reporting parties to enter all the information in their possession (including annexes such as banking records) that could be relevant for further investigation.

456. Canada should clarify on what basis and criteria FINTRAC decides to which law enforcement authority disclose ML/TF cases. FINTRAC should timely provide law enforcement authorities with more comprehensive and clearer narratives of the cases it discloses.

457. So far, the number of disclosures made by FINTRAC to the CRA has been rather low. It is important that FINTRAC provide information to the CRA because often where cases do not meet the threshold for criminal prosecution, civil liability for unpaid taxes may be possible. FINTRAC and CRA seem to work on developing indicators that would allow FINTRAC to more readily determine whether the information it has in its possession would meet the test of being relevant to an offence of evading or attempting to evade taxes.

458. Canada should ensure that FINTRAC has sufficient analysts that are in charge of developing ML/TF cases and processing disclosures to law enforcement authorities for further investigations.

459. Canada should examine FINTRAC effectiveness in disclosing ML/TF cases to law enforcement authorities including whether all relevant information in FINTRAC possession is disclosed within the restrictions imposed by law, whether this information positively and timely participates in prosecuting ML and TF and whether FINTRAC discloses cases strictly in the circumstances imposed by law. Canada should also consider the use made of STRs and other forms of reports when disclosing cases and consider the current disproportionate reliance on voluntary information reports.

2.5.3 Compliance with Recommendation 26

Rec.	Rating	Summary of factors underlying ratings
R.26	PC	▪ FINTRAC has insufficient access to intelligence information from administrative and other authorities (especially from CRA , CSIS and Customs). ▪ FINTRAC is not allowed by the PCMLTFA to gather additional financial information from reporting entities. ▪ Effectiveness: (1) the number of staff dedicated to the analysis of potential ML/FT cases is low especially in comparison with the amount of reports coming in, which may have an impact on the number of cases that FINTRAC generate; (2) feedback from law enforcement authorities outlines the relatively limited added value of FINTRAC disclosures in law enforcement investigations; (3) the timeliness of FINTRAC disclosures to law enforcement authorities was raised as an issue at the time of the on-site visit; (4) 80% of the disclosures made by FINTRAC result from voluntary information from law enforcement; only 20% result from STRs which raises serious concerns with respect to the capability of FINTRAC to generate ML/TF cases on the basis of STRs or other reports it receives from the private sector; (5) so far, very few if any convictions for ML or TF have resulted from a FINTRAC disclosure which is an additional factor to consider when looking at FINTRAC's ability to produce intelligence to be used in criminal investigations and prosecutions.

2.6 Law enforcement, prosecution and other competent authorities – the framework for the investigation and prosecution of offences, and for confiscation and freezing (R.27, 28 & 30)

2.6.1 Description and Analysis

Recommendation 27

Law Enforcement authorities

460. Canadian efforts to combat organized crime and terrorism are shared by law enforcement agencies throughout the country. As such, Canadian law enforcement authorities are tasked with enforcing federal, provincial, territorial and municipals laws. Statistics indicate that in 2005, there were 229 police forces in Canada, with a total of 61 050 peace officers to enforce various statutes throughout the country. Canada has one national police force (RCMP), two provincial police forces in Ontario and Quebec (Newfoundland's provincial police force is focused largely in St. John's), 169 municipal, and 56 First Nations police forces.

461. While all Canadian police forces can investigate money laundering and terrorist financing offences, the Royal Canadian Mounted Police (RCMP) and, to a lesser extent, the provincial law enforcement authorities in Ontario (the Ontario Provincial Police) and Québec (Sûreté du Québec) undertake virtually all money laundering and terrorist financing investigations. While all police services in Canada are potential recipients of FINTRAC disclosures, the majority of disclosures are made to the RCMP, then CSIS and the Ontario Provincial Police (see table in Section 2.5).

RCMP

462. The RCMP is unique as it is a national, federal, provincial and municipal policing body. The RCMP is organized under the authority of the RCMP Act and is headed by a Commissioner. The RCMP is an agency of the PSEPC. It is divided into four regions and 15 Divisions plus the headquarters located in Ottawa.

463. The Royal Canadian Mounted Police enforces throughout Canada laws made by, or under the authority of the Canadian Parliament. Administration of justice within the provinces, including enforcement of the Criminal Code, is part of the power and duty delegated to the provincial governments. The RCMP provides police services under the terms of policing agreements to all provinces (except Ontario and Quebec), Yukon, the Northwest Territories and Nunavut, and under separate municipal policing agreements to 197 municipalities.

464. *Money Laundering and Proceeds of Crime*

465. The RCMP Proceeds of Crime Program falls under the Federal Policing Services program, which coordinates the RCMP's components in combating money laundering in relation to two federal government initiatives targeting money laundering and criminal proceeds of crime: the Integrated Proceeds of Crime Initiative (IPOC) and the AML/CFT regime.

466. The goal of the IPOC initiative is to contribute to the disruption and dismantling of targeted organized criminals and crime groups (see Section 1.2 of the report for more information on the IPOC Units). The IPOC initiative is currently comprised of 14 units located across Canada and has a total of 257 regular member police officers, 19 civilian members, 59 public servants and approximately 30 seconded provincial and regional police officers.

467. The AML/ CFT regime is led by the Department of Finance. The RCMP coordinates its activities through its Money Laundering Program and currently operates 12 money laundering units, located across Canada and within either Integrated or non-Integrated Proceeds of Crime Sections. The Money Laundering Program has a current workforce of 28 regular member police officers and four civilians.

468. The assessment team believes that the Integrated Proceeds of Crime Units (IPOCs) have demonstrated an ability to enforce proceeds of crime and ML offences and are effective at investigating proceeds of crime and ML offences despite insufficient resources (see also comments in relation to Recommendation 30).

National Security/Terrorist Financing

469. The RCMP has an integrated model for responding to National Security Investigations (NSI), which forms part of the overall Public Safety Anti-Terrorism (PSAT) initiative. The NSI centrally coordinates and directs all national security investigations, intelligence and policy. At the operational level in each province of Canada, NSI serves as the policy centre for the Integrated National Security Enforcement Teams (INSETs) and the National Security Investigation Sections (NSIS).

470. The NSI includes a unit in Ottawa called the Anti-Terrorist Financing Team which consists of the RCMP and CRA. The team is responsible for (1) monitoring and coordinating major ongoing investigational projects related to terrorist organizations focusing primarily on their financial and procurement infrastructures and (2) liaising on a routine basis with partner agencies such as FINTRAC, CSIS and CRA Charities Directorate. The unit has also hosted terrorist financing courses in 2005 and 2006.

471. National Security Operations Branch (NSOB) supports and coordinates all national security field operations by reviewing, analyzing and disseminating information from all sources, including international partners, the CSIS, third parties and RCMP field investigations. NSOB also prepares subject profiles, case briefs and briefing notes for senior management, ensures compliance with RCMP policy, and tasks RCMP liaison officers in support of RCMP National Security investigations.

472. The Anti-Terrorist Financing Team (ATFT) supports counter-terrorism strategies with respect to financial intelligence investigations, enforcement, and the listing process in respect to Terrorist Entities.

473. Using existing resources from NSIS, and complemented by PSAT funding, the RCMP created new Integrated National Security Enforcement Teams (INSETs). INSETs have two mandates: to increase the capacity for the collection, sharing and analysis of criminal intelligence among partners; and to enhance enforcement capacity with respect to criminal activities relating to national security.

474. Supplemented by several other agencies (*e.g.* Canada Border Services Agency, CSIS and Transport Canada), partners work closely in the collection and sharing of intelligence relating to the activities of terrorist groups or individuals. INSET units are located in Vancouver, Toronto, Ottawa and Montreal and total approximately 300 staff. In 2005/2006, the INSET Units concluded approximately 2 900 files.

Provincial Police Forces

475. *Ontario Provincial Police (OPP).* The OPP is comprised of over 5 500 uniformed members, 2 000 civilian employees and 850 Auxiliary members.

476. The OPP established the Ontario Provincial Police Asset Forfeiture Unit (AFU) as the group responsible for the application of all asset forfeiture legislation and the coordination of asset forfeiture initiatives within Ontario. The main activities of the AFU include the identification, investigation, and seizing of offence-related property and proceeds of crime, including the investigation of money-laundering activities resulting from the commission of designated offences found in Part XII.2 of the Criminal Code. The AFU also identifies assets as proceeds of crime, instruments, or conspiracies as defined under the Civil Remedies for Illicit Activities Act (Ontario). The AFU supports local investigative units with their investigation of the substantive criminal offence(s) by providing investigative expertise, training, case management, asset management, expert witness, and external agency liaison.

477. The AFU has developed a core of specialized investigators who investigate asset forfeiture to carry out these activities. To assist in the investigations, the AFU has a full-time forensic accountant. Also, the AFU uses a Currency Reading and Tracing System (CRATS) for searching and tracing seized Canadian or U.S. currency to determine its involvement in criminal offences.

478. With the expanding and changing criminal activity in Ontario, there is a parallel need for substantive investigations and related asset forfeiture investigations. The AFU reviews new trends in crime and law enforcement and adapts their specialized investigative resources accordingly.

479. *Sûreté du Québec*. The Sûreté du Québec (usually translated as "Quebec Provincial Police") is the provincial police force of Quebec, employing approximately 5,200 officers. The primary function of the Sûreté du Québec is to enforce provincial laws, some municipal bylaws, the criminal code, and many other laws throughout Quebec and to assist municipal police forces when needed. The Sûreté du Québec created the first team of investigators specialized in proceeds of crime in 1996. Until 2003, some 12 investigators were specifically assigned to proceeds of crime investigations. Since then, the Sûreté has adopted an integrated approach to organized crime investigations by incorporating a proceeds of crime focus in each major investigation.

480. In the last five years, the Sûreté has initiated or completed approximately 20 major investigations that had a significant proceeds of crime component. Overall in these five years, over CAD20 million dollars have been forfeited as a result of the work of the Sûreté du Québec and a number of criminal organizations have been dismantled.

Prosecution

481. The attorney general of Canada is the chief litigator for the Government of Canada. The Criminal Code establishes jurisdiction to undertake criminal prosecutions in Canada. Criminal prosecution responsibility is divided, by tradition and the law of criminal procedure, between the attorney general of Canada and provincial attorneys general. Generally the attorney general of Canada is responsible for undertaking money laundering prosecutions whenever the offences giving rise to the property being laundered are derived directly or indirectly from offences under criminal law other than the Criminal Code. The provincial attorneys general have the jurisdictional responsibility for money laundering prosecutions for offences found in the Criminal Code. The attorney general of Canada and the provincial attorneys general have concurrent jurisdiction over all terrorist financing prosecutions.

482. The attorneys general prosecute through public prosecution offices established under the authority of their federal or provincial departments. Public prosecutors, known as Crown counsel, are distributed throughout Canada and prosecute on the basis of the jurisdiction to prosecute set out in the Criminal Code. Each province and the attorney general of Canada has a delegated head of criminal prosecutions. Those heads of prosecution meet regularly to coordinate prosecution issues and help each other develop prosecution policies. Money laundering is a regular topic of discussion within the heads of prosecution group. The group has established a subcommittee, the National Liaison Committee on Proceeds of Crime, to coordinate prosecutions issues on money laundering.

483. Counsel for attorneys general have the authority to take over private prosecutions, issue stays of prosecution and generally manage the prosecution function in the Criminal Code. That function includes authority to approve charges. Under the money laundering prosecution authority, only the attorneys general – through their prosecution counsel – may apply for special search warrants, restraint orders, forfeiture orders and wiretap authorisations. Additional responsibilities associated with the PCMLTFA include attorney general applications for production orders and prosecutions related to new offences created within that Act, such as failure to report suspicious transactions.

484. There are 2 349 prosecutors, known as Crown Counsel, working for the ten provincial Attorneys General departments or in a provincial Director of Public Prosecutions office in the province. These prosecutors work in cities or towns throughout their provinces and they are assisted by other legal counsel, acting as standing agents, as the prosecution volume requires. Each of the provincial prosecution services has their own crown counsel prosecution manual and the distribution of money laundering or organized crime cases is managed within the operational structures of the provincial Attorneys General departments of Director of Public Prosecution office.

485. In addition, there are 411 federal prosecutors, now under the supervision of the Director of Public Prosecution in the Public Prosecution Service of Canada (PPSC). These prosecutors work in 13 regional prosecution offices and sub-offices, strategically distributed across Canada. There are also 800 standing agents working for the PPSC who are widely scattered across Canada and operating under the local supervision of the thirteen regional prosecution offices.

486. The federal prosecutor complement includes 70 prosecutors working on proceeds of crime and money laundering litigation in Canada. These include the federal prosecutors assigned to the 12 IPOC units in the RCMP as well as counsel who prosecute the cases generated by the IPOC units. The 70 PPSC prosecutors are dedicated to POC prosecution. They do not prosecute cases generated by NSIS or IBETS. In the larger provinces (Ontario, Quebec, British Columbia and Alberta, as well as in New Brunswick) special teams of crown counsel work with provincial investigative units that are assigned to undertake money laundering investigations.

487. *Measures to postpone or waive the arrest of suspected persons*

488. There is no specific legislative measure in place that allows a law enforcement official to postpone or waive the arrest of suspected persons and/or the seizure of the money for the purposes of identifying persons involved in such activities or for evidence gathering. Rather, the competent authorities have discretionary powers to determine when such enforcement action will be taken. It is important to note, that this power brings with it the responsibility to ensure that the discretion complies with the internal policies of the authority and is in the best interest of Canadians.

Additional elements

489. In Canadian law, there is no separate legislative framework that applies to special investigative techniques (SITs). Law enforcement is covered under the general legal framework of criminal law, as well as under legislation governing the establishment and conduct of police forces and other enforcement agencies. Within this framework, specific kinds of SITs are subject to specific legal requirements. It should be emphasized, as well, that laws providing for SITs, and law enforcement activity in using SITs, are subject to review by the courts under the Canadian Charter of Rights and Freedoms and in respect of compliance with other general requirements, such as those that govern abuse of process.

490. Some SITs, such as general undercover police operations, non-intrusive police observation techniques, and use of informants are not subject to specific provisions of statutory law addressing when and how they can be used. Nevertheless, general legal standards and common law requirements apply. Common law standards, such as the abuse of process doctrine, also come into play: police conduct which is unacceptable as an abuse of process is that which violates a community's sense of decency and fair play and police use of such techniques may lead to a judicial staying of proceedings against the accused. It should be noted that the use of SITs such as undercover operations are also governed by internal police policy and procedures. Comprehensive administration and accountability provisions addressing law enforcement activity is provided by laws addressing the establishment and organization of police forces, codes of conduct, and internal discipline (deontology), and public complaints.

491. Certain other SITs do have detailed provisions in law requiring prior judicial authorisation. These include, for example, interception of private communications and searches. Judicial authorisation requirements also apply to additional special procedures such as the taking of DNA samples, installation of tracking devices and installation of devices recording telephone numbers dialled (and the numbers from which calls are received).

492. In respect of SITs in which police would engage in illegal conduct, the Supreme Court of Canada has ruled that police have no inherent immunity from liability for unlawful conduct committed in good faith during the course of an investigation. The Supreme Court further noted that if immunity

were necessary, it was for Parliament to provide for it. On its face, this restrictive principle could apply, depending on the circumstances, to certain SITs. Parliament has, however, adopted provisions allowing law enforcement officers to engage in conduct that would otherwise be illegal for the purpose of investigations and enforcement, subject to controls and limitations. For example, measures under the Criminal Code provide a limited justification for designated law enforcement officers – and others acting at their direction – for acts and omissions that would otherwise be offences. The justification includes a fundamental requirement of "reasonable and proportional" conduct. Three factors are set out as relevant to determining reasonableness and proportionality: the nature of the act or omission, the nature of the investigation, and the reasonable availability of other means for carrying out enforcement duties. Certain conduct that would otherwise be an offence is justified only if a public officer has the prior written authorisation of a senior official responsible for law enforcement or in exigent circumstances. Certain other conducts, such as the intentional causing of death or bodily harm, obstruction of justice, or conduct that would violate the sexual integrity of an individual, are not justified.

493. Certain other exemptions and exceptions for specific law enforcement SITs that would otherwise be illegal are provided by separate legal provisions. For example, the Controlled Drugs and Substances Act (Police Enforcement) Regulations governs the use of controlled deliveries and reverse stings in drug investigations.

494. In the proceeds of crime context, provisions of the Criminal Code provide exceptions, respectively, for possession of property obtained by crime and for money laundering where this is done by a law enforcement officer – or a person acting under the direction of a law enforcement officer – for the purpose of an investigation or otherwise in the execution of the law enforcement officer's duties.

495. Canadian law enforcement undertakes co-operative investigations with appropriate authorities in other countries, especially with the US. Canadian authorities actively participate with foreign jurisdictions in both money laundering and criminal proceeds investigations. During these co-operative investigations, compliance with Canadian legislation is ensured. The participation of Canadian authorities is limited to its domestic legislative parameters, most notably with respect to the use of special investigative techniques.

Recommendation 28

496. Through authority in criminal law, law enforcement has the ability to compel production, to search persons or premises and seize or obtain documents, information or data while conducting ML, TF and underlying predicate offence investigations. The accessible information includes bank account records, customer identification records, and other records maintained by financial institutions and other persons through lawful process, as necessary, to conduct investigations of money laundering, terrorist financing and predicate offences.

497. Most of the procedures allowing law enforcement to compel production of, to search persons or premises and seize or obtain documents, information or data are found in the Criminal Code. The following list is describes several of the procedures frequently used by the police:

- Search warrant under s. 487 of the *Criminal Code* – search and seizure of evidence.
- Special search warrant seizures under s. 462.32 of the *Criminal Code* – search and seizure of proceeds of crime.
- Search warrant under s. 11 of the *CDSA* – search and seizure of evidence for a drug offence.
- Production order under s. 487.012 of the *Criminal Code* – production of documents or copies or preparation of a document.
- Production order under 487.013 of the *Criminal Code* – for financial and commercial information.
- General warrant under s. 487.015 of the Criminal Code.

- Order for gathering evidence under s. 83.28 of the *Criminal Code* (for terrorist offence only) – order the examination on oath or not of a person, order the person to bring any thing in their possession or control.
- Order for disclosure of information in respect of FINTRAC – for money laundering or terrorist activity financing offences only – for information or documents obtained by or on behalf of the Director of FINTRAC.
- Order for disclosure of income tax information under 462.48 of the *Criminal Code* – for a money laundering or possession of proceeds of crime offence, for a designated drug offence or a terrorism offence – tax information from Canada Revenue Agency.

498. Pursuant to paragraph 34(2) of the Interpretation Act, these procedures can be used while investigating suspected money laundering, terrorist financing, and all other offences of federal legislation, except if the legislation otherwise provides.

499. These procedures are issued by either a judge of the peace, a Provincial Court judge or a Superior Court judge. Before making an order, the justice or judge must be satisfied, on the basis of an ex parte application containing information on oath in writing, that there are reasonable grounds to believe that (a) an offence against this Act or any other Act of Parliament has been or is suspected to have been committed; (b) the documents or data will afford evidence respecting the commission of the offence; and (c) the person who is subject to the order has possession or control of the documents or data.

500. During the on-site visit, the assessment team was told that such threshold is difficult to reach in practice, especially under Article 487.013 of the Criminal Code for collecting financial and commercial information. The law enforcement authorities met were also unanimous with regard to the difficulty to get valuable information from FINTRAC (limited data contained in “designated information” (although new PCMLTFA requirements in force since June 30, 2007 address this issue), lack of narrative information, delays in responding - see conclusions in relation to Recommendation 26 in Section 2.5 of the report). The law enforcement authorities met during the on-site visit also identified other types of impediments to the conduct of ML/TF investigation including access to information in possession of lawyers and access to ownership information on legal persons.

501. The RCMP has demonstrated an advanced capability in terms of using special investigative techniques for money laundering and proceeds of crime investigations. An example is the 'store front' operation referred to as Project Eldon, which involved establishing and operating an import / export business that provided money laundering services to organized crime. This investigation was conducted over several years, including the time that it took to establish the business and technical infrastructure, and to infiltrate and dismantle an international organised crime group with extensive involvement in money laundering offences. The investigation relied primarily on undercover policing techniques and was supported, among other things, by electronic surveillance and computer crime investigation capability. The RCMP has indicated that further covert money laundering investigations will be conducted based on the experiences learned from Project Eldon.

502. Law enforcement agencies in Canada have a wide range of investigative powers and capabilities for use against organized and serious crime, including for the investigation of ML, TF and predicate offences. The evaluation team noted that while the Canadian undercover policing programme was used for the investigation of money laundering, to attack the upper most levels of organised crime, there is no provision for protecting the true identity of the undercover police officer - instead, the true identity of the officer must be revealed to the accused person. This situation arises due to there being no dedicated legislative regime for conducting undercover policing operations. When compared with internationally equivalent jurisdictions, this was considered to be a weakness for special investigative techniques that may be used for money laundering investigations.

503. Competent authorities have the powers to take witness statements for use in investigations and prosecutions of ML, TF, and other underlying predicate offences and related actions.

504. In money laundering and terrorist financing cases, witness statements are taken voluntarily in accordance with the Charter of Rights and Freedoms and the Canada Evidence Act. However, in terrorist financing investigations, witnesses are bound to provide a statement. There are legislative provisions outlined under Part II.1 of the Criminal Code (Terrorism) whereby an investigative hearing can take place for the purposes of gathering evidence, including the questioning of persons, in respect to a terrorism offence. Those offences are outlined under Section 2 of the Criminal Code and include the financing of terrorism offences (Sections 83.02, 83.03 and 83.04 of the Criminal Code).

Recommendation 30 – structure, staff and resources

Law Enforcement

505. The RCMP provides federal policing services in all provinces and territories and provincial/municipal policing services in three territories, eight provinces (except Ontario and Quebec), more than 200 municipalities, 165 Aboriginal communities, three international airports and numerous smaller airports. In total, the RCMP employs approx. 23 466 employees, of which 16 327 are peace officers.

506. One of the RCMP's division or directorate that is particularly relevant for combating criminal activity and money laundering is the Federal and International Operations (FIO) group. This group works to ensure the safety and security of Canadians and their institutions, domestically and globally, through intelligence-based prevention, detection, investigation, and law enforcement measures taken against terrorists, organized criminals, and other criminal activity. The strategic priorities are: (1) effective support of international operations; (2) reducing the threat and impact of organized crime and (3) effective delivery of federal programs.

507. FIO works closely with other activities for the national delivery of federal programs. The assistance of Criminal Intelligence Directorate is crucial to timely, effective and efficient service delivery. Technical Operations provides specialized investigative supports services which encompass and enhance research and development on techniques and tools to ensure FIO's ability to conduct high level investigations. Under the FIO umbrella is Drugs and Organized Crime, Border Integrity, International Policing and Financial Crime.

508. *Drugs and Organized Crime* focuses on combating Organized Crime as well as drug related social and economic harm to Canadians. It works to reduce supply of and demand for illicit drugs using an integrated approach involving measures for prevention, education, enforcement, counseling, treatment and rehabilitation.

509. *Border Integrity* is responsible for enforcement issues related to Canada's borders, and enforcement of more than 250 federal statutes in a variety of areas. It also builds partnerships with stakeholders throughout all segments of Canadian society to provide the best response(s) to policing concerns, whether by investigating criminal offences, assisting federal government departments, informing and seeking input from general community and implementing problem oriented policing.

510. *International Policing* enhances international cooperation at strategic and tactical levels between RCMP and foreign police and law enforcement agencies. It provides support and assistance, through the liaison officers, to Canadian law enforcement agencies in the prevention and detection of offences to Canadian federal laws, liaises with foreign criminal police agencies and related institutions, and coordinates activities related to Interpol. In accordance with Canada's foreign policy, it selects, trains and deploys Canadian police personnel on UN civilian police missions and provides logistical support to them and their families.

511. *Financial Crime* contributes to the security of the Canadian economy and seeks to protect Canadians and their governments from financial crimes perpetrated by organized crime and others. It reduces, controls and prevents business-related or white-collar crime, including fraud, false pretenses, and offences against the Government of Canada, corruption of public officials, insolvency process,

counterfeiting and others. It also oversees RCMP's contribution to the Integrated Proceeds of Crime (IPOC) partnerships against money laundering.

Proceeds of Crime Program

512. The Proceeds of Crime Program coordinates the RCMP's components in combating money laundering and terrorist financing in relation to 2 federal government initiatives targeting Money Laundering and Criminal Proceeds of Crime, being the IPOC and the AML/CFT regime (see comments above under Recommendation 27). The following table provides the funding available for the RCMP's Proceeds of Crime Program as a result of the IPOC and AML/CFT regime.

Funding arrangements for the RCMP Proceeds of Crime Program			
Year	**IPOC**	**AML/CFT regime**	**TOTAL**
2005-2006	CAD40 796 662	CAD4 900 000	CAD45 696 662
2004-2005	CAD38 838 869	CAD4 900 000	CAD43 738 869
2003-2004	CAD38 693 000	CAD4 900 000	CAD43 593 000
2002-2003	CAD36 848 960	CAD4 900 000	CAD41 748 960

513. In addition to the resources identified above that are directly linked to the Proceeds of Crime Program, the program has access to other technical investigational support from within the RCMP. These resources include police undercover operations, source/agent operations and support, electronic and physical surveillance, and forensic science support to name a few.

514. Further statistics in relation to the resources available to the RCMP were provided to the assessment team. The first table identifies resources available to the RCMP in the context of the National Initiative to Combat ML (NICML) established in 2000. In that context, the RCMP got 12 extra staff in December 2006. The second table makes inventory of the resources of IPOC Units in 2007.

RCMP Resources in the context of the National Initiative to Combat ML (NICML)					
YEAR	FUNDING	REGULAR MEMBERS	PUBLIC SERVICE	Civilian Member	TOTAL POSITIONS
2002-2003	CAD4 900 000	30	1	4	35
2003-2004	CAD4 900 000	30	1	4	35
2004-2005	CAD4 900 000	30	1	4	35
2005-2006	CAD4 900 000	30	1	4	35
2006-2007	CAD4 900 000	30	1	4	35
2007-2008	CAD6 962 000	42	1	4	47

IPOC Units Resources

515. As far as IPOC Units are concerned, RCMP has the same level of resources as of 1996 when the Units were set up. RCMP representatives insist on the fact that the type of investigations they carry out are more complex and require more time and resources than it was the case in the 1990's. In addition, the increase allowed in December 2006 (plus 12 staff) brings the resources to their level before the budget cuts that took place in the late 1990's. The evaluation team was informed that the RCMP received funding for an additional 1 000 positions to restore staffing in several programs where gaps had been identified: commercial crime; drug enforcement; federal enforcement services; customs and excise; immigration and passport, criminal intelligence; and technical operations. Initiatives, such as IPOC, were not identified for additional funding and positions could not be reallocated outside of the programs targeted.

516. Following September 11, 2001, the Government of Canada enhanced its terrorism response capabilities and improved the legislative framework for terrorist threats. The RCMP received funding to enhance analytical, intelligence sharing and operational technology; support protective operations; enhance security activities at airports, ports and borders; and focus on human resourcing for activities targeting cross-border criminal activities. The following enforcement units and funding were put in place to address National Security enforcement:

- Integrated National Security Enforcement Teams (INSETs) – CAD64M over 5 years.
- Integrated Border Enforcement Teams (IBETs) – CAD125M over 5 years.
- Financial Intelligence – CAD1M.
- Investigative Operations Support – CAD25M.
- Police Reporting and Occurrence System – CAD10M.
- Marine Security – CAD115M.
- National Ports Enforcement Teams – CAD11.5M over five years.
- Integrated Immigration Enforcement Teams –CAD18.7M over five years.

517. Despite the increase of budget, the RCMP lacks the resources that would allow it to focus on a larger spectrum of ML/TF investigations. The RCMP acknowledges that, due to resources constraints, it is essentially dedicates its resources to large and complex ML investigations related to organised crime groups.

Marine Security

518. The marine sector supports a vital trade gateway, connecting Canada to the world. In 2000, Canadian international marine trade, including traffic between Canada and the US, was valued at more than CAD100B, equalling one-eighth of the country's total trade, and employing more than 30 000 people.

519. The role of Canada's marine security includes the investigation of occurrences dealing with national security, organized crime and other federal statutes, such as those involving smuggling, illegal drugs and immigration. They also work with various Government departments as part of its integrated response to marine security, to help deter and detect any illicit and/or terrorist activity, cargo or people within Canadian waters. Budget 2004 included CAD115M for marine security issues and improvements to Canada's marine security.

National Ports Strategy

520. Through its National Ports Strategy, the RCMP strategically and tactically addresses criminal activities and terrorism at Canada's major marine ports. The objective is to take an intelligence-led, multi-disciplinary and integrated approach to prevent, deter and detect any illicit and/or terrorist activity, cargo or people at major marine ports that may pose a threat to national, US and global safety and security. The RCMP enforce federal statutes dealing with issues such as migrant smuggling, illegal drugs, illegal firearms.

National Ports Enforcement Teams (NPETs)

521. NPETs were established in 2003 to conduct investigations of federal offences relating to Canadian seaports. Comprised of partners from federal, provincial and municipal law enforcement agencies, NPETs are complemented by local management teams to resolve conflicts and identify roles and responsibilities. There are currently 24 RCMP members dedicated to NPETs, centered at Canada's three major ports. Commencing in 2003/04, CAD11.5M in funding over five years will be used to position investigators in major ports; increase training for marine intervention (*i.e.* ASB); and, conduct records checks of port employees for Transport Canada.

Airports

522. Airport Federal Enforcement Sections (AFES) are mandated to combat organized crime and terrorism by providing enforcement of numerous federal statutes, as well as assistance to various federal programs and departments. Since the inception of the AEFS system in 1999 the Airport Federal Enforcement Sections have seized over CAD460M worth of contraband, including drugs and weapons. A funding strategy is under development to expand the program at the Toronto site, as well as include other airports (*i.e.* Calgary and Ottawa).

Smuggling and Trafficking of Persons

523. Canada's long border, with high volumes of people and goods passing across, provides opportunity for the smuggling of contraband and prohibited goods. Challenges are also posed by expanding global migration by land, sea and air. In June 2002, Canada introduced the Immigration and Refugee Protection Act, creating new offences that directly address trafficking in human beings. In addition, as of November 2005, three new *Criminal Code* offences came into effect relating to trafficking in persons.

524. The Immigration and Passport Program (IPP) is being regionalized to meet evolving expectations and demands. The roll-out of the program continues, with the reallocation of funded positions to six locations – Vancouver, Calgary, the Greater Toronto Area, Ottawa, Montreal and Halifax. The focus of these teams will be to combat and disrupt organized migrant smuggling and the trafficking of persons, with more recent emphasis on those individuals and/or organizations posing a threat to the security of Canada. As of June 2006, the CBSA gained responsibility for criminal investigations related to migrant smuggling.

525. In addition to these regional teams, a new trafficking unit will be co-located with the Ottawa Immigration and Passport Section, focusing on the coordination of domestic and international trafficking investigations; interacting with foreign law enforcement agencies in support of Immigration and Passport teams; and, advocating education, prevention and awareness of these global problems[53].

526. A federal interdepartmental working group, consisting of 16 departments and agencies, is developing Canada's position on the UN Trafficking Protocol. The working group is responsible for co-ordinating federal activities to address trafficking including the development, promotion and implementation of a comprehensive anti-trafficking strategy, in keeping with Canada's international commitments.

527. Specialists from the RCMP have developed training material for the recognition of fraudulent travel documents. A collaborative effort is underway between BCDE and Interpol forensic analysts to improve Interpol's central databank for lost and stolen passports – Canada was selected as one of the countries to participate in this important pilot project.

---

[53] This unit has been formed and is fully functional. Information about the Human Trafficking National Coordination Centre (HTNCC) can be found at http://www.rcmp-grc.gc.ca/imm_pass/htncc_e.htm.

Prosecution

528. Until December 12, 2006 the Federal Prosecution Service of Canada was an integral branch of the Attorney General of Canada's function as part of the Canadian Department of Justice. On December 12, 2006 the Director of Public Prosecution Act came into force, resulting in the seamless transition of the Federal Prosecution Service into an independent public prosecutions office that reports to the Parliament of Canada through the Attorney General of Canada. The new Public Prosecution Service of Canada (PPSC) assumes carriage and control of all prosecution functions previously undertaken by the Federal Prosecution Services and the PPSC is tasked with all of the consultation and coordination responsibilities previously undertaken by the Federal Prosecution Service. The federal prosecutor complement includes 70 prosecutors working on proceeds of crime and money laundering litigation in Canada. These include the federal prosecutors assigned to the 12 IPOC units in the RCMP as well as counsel who prosecute the cases generated by the IPOC units. The 70 PPSC prosecutors are dedicated to POC prosecution

529. The provincial heads of prosecution manage and supervise all provincial crown prosecutors. As a result, this group of prosecution heads regularly meets to discuss and coordinate common prosecution issues. In the area of money laundering and proceeds of crime, there are two committees that have been created. The National Liaison Committee comprised of money laundering prosecutors, selected by and reporting to the heads of prosecution, meets yearly or more frequently to coordinate common issues relevant to money laundering prosecutions. The second committee is the Coordinating Committee of Senior Officials (CCSO) on Proceeds of Crime. It is also comprised of money laundering prosecutors and criminal law policy lawyers and reports to the Justice Deputy Ministers Committee (Federal, Provincial and Territorial).

530. The PPSC is also a partner in a national memorandum of understanding with the RCMP for the Integrated Proceeds of Crime Program. This integrated program includes a significant number of full time prosecutors, who are PPSC prosecutors, assigned to be members of the 12 IPOC investigative units. In addition, the program also funds PPSC prosecutors to actually prosecute the money laundering cases investigated by the IPOC units and general law enforcement. There is a regular series of meetings between the RCMP's national Proceeds of Crime program and the PPSC on money laundering and proceeds of crime. In addition, the PPSC has quarterly meetings with RCMP Federal Police Service to discuss and plan for investigative and prosecution issues, both in the proceeds of crime and general prosecution area.

531. There are also regional IPOC unit and PPSC regional office meetings, as mandated in the existing Memorandum of Understanding with the RCMP. These meetings resolve local problems and concerns that may develop in the proceeds of crime program. In addition, the PPSC will carry on the Federal Prosecutions Service's Cross Border Crime Forum meeting with law enforcement and the United States Attorneys Office. The Forum works on common prosecution issues, including proceeds of crime, with counterparts in the United States. The PPSC is a member of the International Association of Prosecutors and it attends that organization's annual meetings. Finally, the PPSC has counsel in its headquarters assigned to coordinate all proceeds of crime issues. That counsel conducts a quarterly video conference with all counsel in the IPOC units and the IPOC unit counsel have an IPOC common electronic mail room that is used daily to discuss money laundering and proceeds of crime issues between counsel.

Recommendation 30 – staff professional standards

Law Enforcement

532. Municipal, regional, and federal policing agencies conduct activities in accordance with the laws of Canada. To ensure enforcement and adherence to the laws and values of Canadian society, policing agencies have established professional and ethical codes of conduct. These matters are monitored through both internal and external processes, and may result in criminal judicial proceedings and/or internal disciplinary action.

533. The RCMP employs both regular (peace officers) and civilian members, who are subject to the provisions of the RCMP Act. The RCMP Act is a Federal statute, which governs the structure, operations, and ethical conduct of the membership. Members must pledge an Oath of Allegiance and an Oath of Secrecy pursuant to their engagement with the RCMP. The RCMP also employs public servants who take oaths of office and secrecy pursuant to the Public Service Act.

534. The Proceeds of Crime/Money Laundering investigative sections are integrated units tasked with conducting complex financial investigations. Professionals from the legal, accounting, asset management and taxation fields work with police investigators, from the RCMP and Regional/Municipal police services to conduct proceeds of crime/money laundering investigations. Each person assigned to the investigative unit is bound by the professional and ethical standards established by their respective organizations.

535. The Security of Information Act permanently binds all RCMP employees, which includes those assigned to the Proceeds of Crime/Money Laundering units and the National Security, who have access to special operational information to secrecy. Sensitive information obtained through the day-to-day operations of the Proceeds of Crime/ Money Laundering Units is classified using the RCMP security classification system. Access to this information is limited to those persons with the appropriate security clearance and who have an operational requirement to access the said information. Breaches with respect to classified, sensitive and or private information can be dealt with through criminal or internal disciplinary proceedings.

Prosecution

536. Prosecutors, as opposed to standing agents, are all full time appointment positions within the public service of Canada or a province. Each prosecutor must sign an oath of office and maintain their legal duty relative to solicitor client privilege. Just as full time prosecutors maintain privileged communications the same professional obligation applies to every standing agent. There are strong conflict of interest obligations and prohibitions against accepting outside work as legal counsel.

537. Every prosecutor, whether they work for a provincial Attorney General, director of public prosecutions or the federal Director of Public Prosecution, must be a full member of a provincial or territorial law society who is in good standing with that professional society. In addition they all operate independently of law enforcement and separate from the judiciary. Every prosecutor fully appreciates their responsibility as a quasi minister as described by Supreme Court of Canada and courts of appeal decisions. This role is best seen in the following excerpts from two cases: R. v. 1353837 Ontario Inc. and R.. v. Boucher[54].

Recommendation 30 – training

Law Enforcement

538. Since the inception of the Proceeds of Crime Program, the RCMP has taken the lead role in training investigators who specialize in these investigations.

---

[54] *The tradition of Crown counsel in this country in carrying out their role as "ministers of justice" and not as adversaries has generally been very high (R. v. 1353837 Ontario Inc., et al, February 24, 2005, C42378, at par. 34, per Laskin J.A. (Ont. C.A.)).* It cannot be over-emphasized that the purpose of a criminal prosecution is not to obtain a conviction; it is to lay before a jury what the Crown considers to be credible evidence relevant to what is alleged to be a crime. Counsel have a duty to see that all available legal proof of the facts is presented; it should be done firmly and pressed to its legitimate strength, but it also must be done fairly. The role of prosecutor excludes any notion of winning or losing; his function is a matter of public duty than which in civil life there can be none charged with greater personal responsibility. It is to be efficiently performed with an ingrained sense of the dignity, the seriousness and the justness of judicial proceedings. (R.. v. Boucher [1955] S.C.R. 16, at pp. 23-24; 100 C.C.C. 263, at p. 270.).

539. Specific eligibility requirements have been established in an effort to ensure that qualified and motivated personnel are hired by the RCMP. These requirements include specific language, education, physical and age restrictions. Upon completion of an extensive recruitment process which includes medical, physical and psychological testing the successful candidate attends the RCMP Training Academy situated in Regina, Saskatchewan for a five month training program. This training program is comprised of a number of courses including: Criminal Law, Firearms training, Driver training, Police Incident Reporting procedures, and witness/suspect interviewing techniques. This training provides the foundation for all aspects of policing within the RCMP.

540. Subsequent to the successful completion of this basic training, the candidate is given the legal authority to enforce the criminal laws of Canada. Human Resources Department will assess the needs of the RCMP and assign the new police officers to detachments throughout Canada. These police officers will further develop their policing skills through work experience and additional work related training. The "Proceeds of Crime" units seek experienced investigators who have developed their skills from both front line uniform and plain-clothes aspects of policing. To further enhance the skills of these investigators, the RCMP developed two training courses specific to "money laundering".

541. The RCMP currently offers a "Basic" and "Advanced" proceeds of crime investigators course. These courses, based at the RCMP's Centralized Training Facilities in Regina, Saskatchewan, follow the adult based learning model. Training is targeted primarily around RCMP proceeds of crime/money laundering personnel as well as employees of the initiatives partner agencies. Positions on these courses are based on the operational requirements of units and whenever possible, training is also given to non-program related investigators in order to increase both awareness and understanding of the program, while developing expertise for potential future proceeds of crime/money laundering investigators.

542. The Basic Proceeds of Crime course is offered to members of the RCMP assigned to the Proceeds of Crime program as well as employees of partner agencies. This course is seven days in length and concentrates primarily on the basic structure and methods used to investigate money laundering offences. A combination of experienced facilitators and a "problem base" method of instruction, allows participants to share their work experiences and explore different strategies in conducting these complex investigations.

543. In addition, municipal and provincial police partner agencies representatives have participated in these courses. The RCMP has also made efforts to educate other agencies, at both the federal and provincial levels. Federal agencies such as FINTRAC and the Competition Bureau have received training, while provincial agencies such as Revenue Quebec, have also been given the opportunity to partake in these courses. Internationally, the RCMP has trained six international law enforcement officers and continues to field requests from countries for this training.

544. The Advanced Proceeds of Crime Course is offered primarily to investigators, with approximately three years of proceeds of crime/money laundering experience and who have received the Basic Proceeds of Crime Course. Candidates are primarily from within the Proceeds of Crime/ Money Laundering Program and partner agencies. In addition, this training is also offered to seconded policing partners, both provincial and municipal, who have developed their expertise within their respective units. The course is also offered to other RCMP investigators. From January, 2001 to December, 2005, the RCMP has presented 20 Basic Proceeds of Crime courses and 8 Advanced Proceeds of Crime courses to close to 775 candidates.

545. To further meet the needs of the more complex investigations within the mandate of the RCMP, the RCMP has developed training programs which concentrated primarily on complex investigative techniques including wiretaps, search warrants, human source development and undercover police operations. The instructors for these training courses include police investigators and lawyers who are specialists in these areas. These techniques are used traditionally in drug investigations. With the

evolution of money laundering investigations, the RCMP has modified this training to demonstrate the application of these techniques within these types of investigations.

546. Within the money laundering/proceeds of crime investigators program, there are approximately 30 investigators who form an "Expert Witness Program" and provide "expert testimony" in criminal court pertaining to money laundering offences. To further supplement their experience, the RCMP provides a bi-annual expert and senior investigator's training workshop where these investigators share their knowledge on money laundering investigative techniques, trends and typologies.

Prosecution

547. All prosecutors must maintain their status as members of their relevant provincial or territorial law society. Every law society has a continuing legal education obligation for its members. In addition every Attorneys General department, including the federal Attorney General of Canada, and the Office of the Director of Public Prosecutions has a continuing legal education policy and extensive training courses in their manuals and procedures. In the case of federal prosecutors working for the Office of the Director of Public Prosecutions each must have an annual performance review report, which includes a specific component on continuing legal education.

548. Every year, the Director of Public Prosecution organizes the School for Prosecutors and the Advanced School for Prosecutors. Each school is an intensive seven-day training course on substantive law, policies and practice. Every year, approximately 30 prosecutors attend each school. Each provincial prosecution service has similar training obligations and programs.

549. The federal Department of Justice and the Office of the director of Public prosecutions has a formal Continuing Legal Education Policy, which requires each of its lawyers to take a minimum of 12 hours of training, or to teach for at least four hours, every year. The policy is based on a number of principles, one of them being that "Crown counsel are expected to maintain a high level of expertise by keeping abreast of developments in the law." The policy may be found on the Department's intranet site, under the heading Continuing Legal Education. Finally, every prosecutor's mandatory annual performance review includes a detailed consideration of the prosecutor's successful completion of their training obligations and their training plans for the next year.

550. Training initiatives dedicated to combat ML and TF seem limited in practice.

Additional elements

551. The National Justice Institute is dedicated to the development and delivery of educational programs for all federal, provincial and territorial judges.

552. The Institute has conducted a Criminal Law Seminar in March 2007 that has focused on financial Crimes. One of the agenda items dealt specifically with money laundering issues.

553. In addition, an RCMP senior investigator and a Department of Justice prosecutor traveled to Ottawa in 2004 and 2005 to provide training on money laundering investigations and prosecutions to the CBSA's Adjudications Division. Also, a senior investigator of the RCMP made a money laundering presentation to the Osgoode Hall Law School continuing development program on February 11, 2006.

Statistics

554. The following table provides an overview of the investigative work at the IPOC units in recent years.

Trends in All Files Opened, by Year and Predicate Offence								
	2002		2003		2004		2005	
Predicate Offence	#	%	#	%	#	%	#	%
Drug related	643	39.7%	606	35.7%	1288	42.1%	1511	45.3%

2.6.2 Recommendations and Comments

555. Canada should ensure that additional resources are allocated to law enforcement authorities to allow them to carry out a larger number of ML/TF investigations (including at provincial level) in addition to the biggest ML cases they can actually tackle.

556. Canada should also collect more data on current ML investigations (especially in Ontario and Quebec).

557. Canada should consider reviewing the possible existing impediments to ML/TF investigations (including access to information in possession of lawyers and access to ownership information on legal persons). Access to tax information, while provided for, could also be enhanced.

558. Canada should improve the educational and training programmes provided for judges and courts concerning ML and TF offences.

2.6.3 Compliance with Recommendations 27 & 28

Rec.	Rating	Summary of factors underlying ratings
R.27	LC	▪ The RCMP lacks the resources that would allow it to focus on a larger spectrum of ML/TF investigations.
R.28	C	▪ The Recommendation is fully met.

2.7 Cross Border Declaration or Disclosure (SR.IX)

2.7.1 Description and Analysis

Declaration system

559. Canada's mandatory cross-border currency reporting regime came into force in January 2003. Under Part II of the PCMLTFA, any person or entity is required to report to Canada Border Services Agency (CBSA) officers the importation or exportation of currency and monetary instruments of an amount of CAD10 000 or more. The requirements apply whether the currency or monetary instruments are brought across the border by the importer or exporter themselves, (*e.g.* carried in baggage) or imported or exported by mail, courier, rail or by any other means. This reporting requirement applies to the physical movement of money, not to funds transferred electronically.

560. Section 12 of the PCMLTFA establishes the requirement to report the cross-border movement of currency or monetary instruments over a set amount. The Cross-Border Currency and Monetary Instrument Reporting Regulations set out the reporting threshold and other modalities of the reporting obligations.

561. The regulations define the term "monetary instruments" as including, among other things, stocks, bonds, bank drafts, traveller's cheques or any other financial instruments in bearer form or in such form as title to them passes on delivery, and set the reporting threshold at CAD10 000 or its

equivalent in a foreign currency. The report must be made in writing using the forms designed by the CBSA – the Cross-Border Currency or Monetary Instrument Report (CBCMIR). Limited provisions exist to allow for reporting from remote locations. If there is no CBSA office in the vicinity, reporting may be done by telephone. The CBSA officer could request that the importer or exporter present themselves at a specified place for examination of the currency or monetary instruments.

562. The regulations also provide for certain exceptions from reporting, such as when currency or monetary instruments are brought into Canada aboard a commercial passenger conveyance (airplane, charter bus, cruise ships or ferry), and where Canada is a transit point rather than the final destination. It does not apply where the passenger disembarks and reports to CBSA. Also exempt are movements of currency by or on behalf of the Bank of Canada that the Bank is manufacturing for other jurisdictions, as well as stocks, bonds and debentures imported into Canada by courier or as mail, if the importer is a financial institution or a securities dealer as defined in section 1(2) of the PCMLTFA.

563. In practical terms, the system used to detect the physical cross-border transportation of currency varies among the modes of transportation as well as whether individuals are coming to or leaving Canada. For example, in the case of incoming flights to Canada, all passengers must complete a CBSA Declaration Card where they declare if they are in possession of currencies and monetary instruments of a value equal or greater than CAD10 000 and hand over this declaration to a CBSA officer who may ask additional questions. For outgoing flights, CBSA will use a mix of intelligence information and random searches to target flights where passengers will be asked whether they are transporting CAD10 000 or more.

Failure to declare

564. Subsection 12(4) of the PCMLTFA imposes an obligation to any person arriving or leaving Canada to answer truthfully any questions from CBSA officers in respect of the reporting of currency or monetary instruments. The PCMLTFA provides for a maximum fine of CAD500 000 and a maximum jail term of five years for failure to report or for failure to cooperate with the border services officer when a report is submitted. This would include refusing to answer questions posed by the border services officer or failing to open packages or containers.

565. The CBCMIR form requires individuals to report the value of currency and monetary instruments being exported or imported, the country from which the funds are being exported or imported and key identifying information. If an individual fails to report the currency or monetary instruments whose value is equal to or greater than the CAD10 000 threshold CBCMIR, the CBSA officer may seize the currency. The individual CBCMIR can recover the currency or monetary instruments on payment of a monetary penalty ranging from CAD250 to CAD5 000. If the CBSA officer believes there are reasonable grounds to suspect that the funds are the proceeds of crime or linked to terrorist activities, the funds cannot be recovered.

Stop or restrain currency or bearer negotiable instruments

566. When an individual fully complies with the requirement to report on currency above the threshold, a CBSA officer who has reasonable grounds to suspect that information contained in the report or any other information may be relevant to the investigation or prosecution of a money laundering or terrorist financing offence is permitted to immediately disclose this information to law enforcement authorities. The CBSA officer may also provide information to FINTRAC where the information could be useful in the detection, prevention or deterrence of money laundering or terrorist financing.

567. Section 18 of the PCMLTFA grants authority to CBSA to seize unreported currency or monetary instruments. All seizures are reported to FINTRAC. If the border services officer suspects the seized money to be proceeds of crime or funds for use in financing a terrorist activity, it is forfeited to the Crown. Otherwise the CBSA will release the funds upon payment of a penalty ranging from

CAD250 to CAD5 000. The PCMLTFA allows the person from whom the funds were seized, or their owner, to appeal the seizure.

568. Under section 14 of the PCMLTFA, when an individual or entity does not have all the information needed to complete a report, the CBSA can temporarily retain the money until a border services officer is satisfied that they have been reported or the importer/exporter has decided not to proceed with the importation/exportation. If CBSA is not provided further information for seven days (30 days for mailed or items sent by courier), the money is forfeited to the Crown.

Retention of information

569. Every person or entity is obliged to complete a CBCMIR on the importation or exportation of currency or monetary instruments of a value equal to or greater than CAD10,000 in Canadian dollars or its equivalent in foreign currency. CBSA sends the reports to FINTRAC, which incorporates them into its database for analysis. The schedules to the Cross-Border Currency and Monetary Instrument Reporting Regulations set out the information that must be provided in the mandatory reports, including identifying information on the person transporting, mailing or shipping the currency or monetary instruments, as well as information on the person or entity on behalf of which the importation or exportation is made. Information on the amount and type of currency or monetary instruments must also be provided.

570. When unreported currency or monetary instruments are seized, a seizure report is prepared by CBSA officials and forwarded to FINTRAC. The seizure report includes, among other things, identifying information on the importer or exporter, the funds seized and the circumstances of the seizure.

Information accessible to the FIU

571. CBSA forwards all Cross-border Reports submitted by importers or exporters as well as seizure reports to FINTRAC electronically. FINTRAC analyzes this information in conjunction with other reports in order to identify potential money laundering and terrorist financing activities. The border services officer will report through the Occurrence Reporting System (ORS) an explicative summary of the circumstances and detailed information on the occurrence, the individual or any other information that the officers evaluate to be of importance for the intelligence community. This report is submitted to the Intelligence Directorate by the Regional Intelligence Officer for analysis. The relevant information is then disclosed to FINTRAC.

Co-ordination among customs, immigration and other related authorities

572. Domestic authorities co-ordinate their activities to stop and restrain the illegal cross-border transportation of currency and other monetary instruments through a variety of different mechanisms: the IPOC Units, Integrated Border Enforcement Teams (IBETs), and the sharing of cross-border reporting information by CBSA.

573. Within IPOC units, CBSA Regional Intelligence Officers provide expertise and intelligence on CBSA matters linked to the border concerning proceeds of crime investigations. CBSA Regional Intelligence Officers also provide a service to border services officers by responding at the ports of entry to incidents related to forfeitures of currency that may be associated to organised criminal groups. In return, CBSA receives expert advice and intelligence information from the IPOC partners to assist in CBSA matters.

574. Integrated Border Enforcement Teams (IBETs) are a Canada/U.S. initiative set out in the Smart Border Accord. These Teams combine the intelligence and law enforcement expertise of various agencies (Canada Border Services Agency, Royal Canadian Mounted Police, U.S. Customs and Border Protection, U.S. Immigration and Customs Enforcement and U.S. Coast Guard) and use a coordinated approach to identify and stop the high-risk movement of people and goods between the

ports of entry on the Canada - United States border. The CBSA and RCMP jointly operate IBETs. They share the responsibility for collecting critical information to develop criminal intelligence to assist in investigations relating to national security or criminality such as organized crime and human smuggling.

575. In addition, the CBSA sends Cross-border Reports and Seizure Reports to FINTRAC for analysis (see description above).

International co-operation and assistance amongst customs, immigration and other related authorities

576. Section 38 of the PCMLTFA allows the CBSA to enter into information sharing agreements with other countries that impose similar requirements in respect of reporting the importation or exportation of currency or monetary instruments. The CBSA is currently negotiating with the United States to enter into such an agreement.

577. Canada has a partnership agreement with the United States under the Shared Border Accord, allowing the governments of both countries to better manage the flow of refugee claimants at their shared border. This agreement allows for exchange of information between the two countries on:

- Advance Passenger Information and agreed-to Passenger Name Records on flights between Canada and the United States, including in-transit flights in order to identify risks posed by passengers on international flights arriving in each other's territory.
- Data related to Customs fraud, and agreed upon customs data pursuant to NAFTA, as well as any additional commercial and trade data, for national security purposes.
- Advance information on designated individuals and organizations for the purpose of freezing of terrorist assets.
- Refugee and asylum claimants in order to ensure that applicants are thoroughly screened for security risks.
- Marine in transit containers arriving in Canada and the United States.
- Anti-terrorism efforts through the Cross-Border Crime Forum and Project Northstar.

578. Canada entered into a trilateral agreement with the U.S and Mexico called the Security and Prosperity Partnership (SPP) in June 2005. The Partnership is a trilateral effort to increase security and enhance prosperity among the three countries through greater cooperation and information sharing. It includes efforts to develop and implement a comprehensive North American strategy for combating transnational threats to the three countries, including terrorism, organized crime, illegal drugs, migrant and contraband smuggling, and human trafficking.

Sanctions

579. Section 74 of the PCMLTFA provides for a maximum criminal fine of CAD500 000 and a maximum jail term of five years for failure to report or to cooperate with the border services officer when a report is submitted, such as falsely or not answering questions posed by border services officers or failing to open packages or containers as requested.

580. Part II of the PCMLTFA also provides that non-reported currency or monetary instruments is seized. Where there is no suspicion that the funds are linked to money laundering or terrorist financing, the owner may retrieve the forfeited funds after payment of penalties from CAD250 to CAD5 000 set out in the regulations. The funds cannot be retrieved when such a suspicion exists. Under section 18 of the PCMLTFA, unreported currency or monetary instruments in respect of which a border services officer has reasonable grounds to suspect are related to money laundering or the financing of terrorist activities are seized and forfeited and cannot be retrieved by the importer or exporter, subject to the appeals provisions.

581. In instances where a CBSA officer intercepts a foreign national or non-Canadian citizen suspected of involvement in money laundering or terrorist financing activities, they are instructed to

forward the file to CBSA's Organized Crime Section (OCS) at National Headquarters. OCS then analyzes the file based on in-house databases and research tools, and will request, if necessary, support from the appropriate units of partner agencies in law enforcement and intelligence, as well as FINTRAC. Once a portfolio-wide analysis has been completed, OCS contacts the originating officer with an assessment to assist that officer in deciding upon the proper course of enforcement action, possibly in concert with law enforcement partners, depending on the specific details of the case.

Confiscation, freezing and seizing measures

582. Generally, the provisions in Canada in respect of the confiscation, freezing and seizing of proceeds of crime or funds for terrorist activities also apply to the cross-border movements of currency or monetary instruments. When there is suspicion that the funds may be related to money laundering or terrorist financing, the various provision described in Section 2.3 of this report apply, in respect of the restraining of funds through criminal or civil procedures. Provisions under the PCMLTFA, the Criminal Code and other criminal or civil procedures for the confiscation, freezing and seizing of terrorist funds also apply to the cross-border movements of currency or monetary instruments. The measures are described in detail in Section 2.4.

Unusual cross-border movement of gold, precious metals or precious stones

583. Section 110 of the *Customs Act* gives CBSA officers the authority to seize goods where he or she has reasonable grounds to believe that the *Customs Act* or regulations have been contravened with respect to those goods. Gold, precious metals and stones are goods that are required to be declared upon importation. In cases where they are not properly declared, the CBSA can seize them with terms of release. In addition, section 101 of the *Customs Act* gives officers the authority to detain goods until he or she is satisfied that they have been dealt with in accordance with the *Customs Act* or any act of Parliament that prohibits, controls or regulates the importation or exportation of goods. This provision would apply to rough diamonds that are dealt with under the *Export and Import of Rough Diamonds Act*. CBSA officers also have authority under s.489(2) of the *Criminal Code* to seize goods where he or she has reasonable grounds to believe that the goods have been: obtained through the commission of an offence; used in the commission of an offence; or, will afford evidence of an offence under the *Criminal Code* or any other Act of Parliament.

Data protection

584. Section 36 of the PCMLTFA prohibits the unauthorised disclosure by a customs officer of information contained in a Cross-border currency and monetary instrument report or other information obtained in the course of enforcing the reporting requirement. Information forwarded to FINTRAC is subject to the privacy safeguards applicable to other information received by FINTRAC under the PCMLTFA. The CBSA sends the completed reports electronically, in a secure manner, to FINTRAC (see also comments in relation to FINTRAC detention of information in Section 2.5 of the report).

Additional elements

585. Canada has implemented the measures outlined in the Best Practices Paper. A number of these measures have been described earlier. In addition, the following measures are also in place:

- The threshold that triggers the reporting requirement is less than the threshold suggested by the FATF (CAD10 000 is roughly equal USD10 000 or EUR6 600).
- CBSA uses canine units, scanners and other sophisticated equipment to detect currency.
- The Bank of Canada stopped issuing the CAD1 000 bank notes in 2000. The largest note in active circulation is the CAD100 note.
- CBSA performs risk assessments and uses intelligence information to target all modes of transportation and travellers.
- CBSA officers are trained to detect suspicious behaviour by identifying indicators that are taught in various training courses.
- CBSA regularly performs examinations of passengers, vehicles, cargos, etc.

586. The Canada Border Services Agency (CBSA) uses a variety of technological tools to help stop the entry of contraband and dangerous goods into Canada. The use of detection technology tools enables CBSA officers to conduct effective, non-intrusive inspections, allowing them to focus on high-risk individuals and goods.

587. In the past, the CBSA's detection tools were developed primarily for the identification of contraband commodities (*i.e.* narcotics, weapons, child pornography, etc.). Recently, new legislation, policies, and programs initiated in support of fighting terrorism placed greater focus on border security. An integral part of Canada's plans in the fight against terrorism includes providing the necessary resources to purchase detection equipment. The CBSA has spent over CAD70 million in the last few years on new technology to improve border security.

588. Some of key interdiction technologies are: Gamma-ray Imaging Program (VACIS – Vehicle and Cargo Inspection System); the Remote Operating Vehicle (ROV), X-Ray Program and Ion Mobility Spectrometry (IMS) Technology. The CBSA also utilizes many smaller handheld tools. For example, the Snake Eye Camera is a self-contained, lightweight video inspection system. The Merlin Density Meter is a hand-held non-intrusive detection device that can indicate the presence of hidden contraband by measuring the density of a surface or an object. Videoprobes are used to inspect narrow spaces for hidden contraband in the air and land modes. The CBSA utilizes Contraband Outfitted Mobile Examination Truck, Chemical Biological Radiological Nuclear (CBRN) Detection Teams as well as Detector Dog Service.

Resources

589. The CBSA is part of the Public Safety and Emergency Preparedness (PSEPC) portfolio and is an integral component of Canada's national security approach along with other portfolio partners such as the RCMP, CSIS, etc. The CBSA integrates complementary business lines to protect public security and facilitate and control the movement of people and goods. Employing approximately 10 000 public servants, for which 7 500 are border services officers, the CBSA operates at 1 369 service points across Canada and nearly 40 locations abroad.

590. The 7 500 border services officers located at Canada's point of entry, among many other duties, are responsible to enforce the reporting requirement of Part II of the PCMLTFA. CBSA Intelligence officers located either in the regions or at Headquarters provide information or intelligence concerning individuals and organizations suspected of involvement in money laundering or terrorist financing activities to the officers. Then, senior program officers located at Headquarters coordinate and provide functional guidance on the program policies and procedures and address any issues relevant to the program's enforcement or administration.

591. The CBSA's current budget for the Cross-Border Currency Reporting Program is CAD2.43M yearly. CBSA will receive an additional CAD3.5M yearly in order to expand its intelligence mandate, cross border currency reporting, currency dog teams and deal with the seizure appeals. This will bring the CBSA's allocation to CAD5.93M yearly.

592. CBSA employees have relevant experiences and skills in sectors such as the law enforcement, customs, immigration, justice, and public safety as well as backgrounds in other government departments and international organizations.

593. The CBSA has implemented enhanced security measures and employees participate in security awareness sessions. A security program, and a range of policies and procedures to protect privacy, and prevent unauthorised disclosures of information, are in place and are upheld. They include the application of the need-to-know principle, guiding principles for the handling of sensitive and classified information and application of measures surrounding the analysis and disclosure processes. In addition, the clearance level required for CBSA employees involved in these issues demonstrates

the importance attached to the confidentiality of sensitive financial and personal information that is obtained and analyzed by its employees.

594. New CBSA officers graduate from the Port of Entry Recruit Training program at the CBSA training facility in Rigaud, Québec. Among other things, they are taught how to recognize and investigate based on key indicators, intelligence information, and suspicious activities and are provided with a web-based training for cross border currency related infractions as well as information related to money laundering and terrorist financing. Adjudicators working on behalf of the Public Safety Minister receive a half-day training course from the RCMP and Crown Prosecutor on money laundering and terrorist financing activities. A handout of the RCMP indicators as well as a booklet prepared by the RCMP on Money Laundering is provided at the training session.

Statistics

595. Statistics are available on the number of CBCMIRs involving movements of CAD10 000 or more in currency or monetary instruments.

Effectiveness

596. The number of CBCMIRs and seizure reports since 2002/2003 is as follows:

Report Type	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007[1]	Total
Cross Border Currency Report	631	28 289	74 103	52 626	19 289	174 938
Seizure Report	19	1 080	1 718	1 880	625	5 322
Total	650	29 369	75 821	54 506	19 914	180 260

[1] Fiscal year 06-07 statistics include only what was received from CBSA up to September 30, 2006. CBSA receives CBCMIRs, captures the information electronically and transfers it to FINTRAC.

597. In 2005-06, 18% of FINTRAC's case disclosures were supported by cross-border currency and seizure reports.

598. Since the program implementation in January 2003, there have been over 5 000 currency seizures totalling more than CAD132 million. Approximately CAD34 million has been forfeited to the Crown, and penalties have been assessed in excess of CAD2 million. Over 500 seizures have resulted in forfeiture as suspected proceeds of crime or funds for the use of terrorist activities. Border services officers have collected over 100 000 cross-border currency reports.

599. Seizures related to cross-border currency transportation are classified into four levels based on the degree of concealment, previous seizures and the source of currency or monetary instruments. In levels one to three, a fine must be paid prior to release of the seizure. When seizures are made based on the suspicion it stems from proceeds of crime or terrorist financing (the fourth level), there are no terms of release. The following table describes the four levels of seizure related to cross-border currency interdictions and the fines that must be paid prior to the release of the seizure.

Level	APPLICATION	FINE
I	Applied when an individual or entity • has not concealed the currency or monetary instruments, • has made a full disclosure of the facts concerning the currency or monetary instruments on their discovery, and • has no previous seizures under the Act;	CAD250
II	Applied when an individual or entity • has concealed the currency or monetary instruments, other than by means of using a false compartment in a conveyance, or who has made a false statement with respect to the currency or monetary instruments, or • has a previous seizure under the Act, other than in respect of any type of concealment or for making false statements with respect to the currency or monetary instruments; and	CAD2500
III	Applied when an individual or entity • has concealed the currency or monetary instruments by using a false compartment in a conveyance, or • has a previous seizure under the Act for any type of concealment or for making a false statement with respect to the currency or monetary instruments.	CAD5000
IV	Applied when • CBSA Officers, who suspect on reasonable grounds that non-reported currency or monetary instruments are proceeds of crime or terrorist finances.	No terms of release

600. Since 2003, the RCMP has been asked to provide investigational assistance in 147 Level IV seizures conducted by CBSA officials. The following table provides a yearly breakdown of requests from CBSA to the RCMP's Money Laundering Program for assistance in these seizures.

Reports of Canada Border Services Agency (CBSA) Callouts				
	2003	2004	2005	Total
Number of Callouts	72	53	22	**147**

601. Since 2003, the Adjudications Division has seen numerous challenges of these enforcement actions. Level IV forfeiture enforcement actions tend to be highly litigious. Since 2003, of the 6 007 enforcement actions taken by the CBSA (at September 30, 2006), 666 of those actions have been appealed to the Recourse Directorate. Of those 666 appealed actions, only 55 have been cancelled and all funds have been returned. There are currently 45 active cases before the courts.

602. In 2004, the largest number of currency and proceeds of crime seizures (732) were made at customs points of entry located in the Pacific region, representing 45% of all seizures made. Customs officers in the Greater Toronto Area made 367 seizures, while officers in the Québec region made 338, officers at Niagara Falls/Fort Erie made 85, those in Windsor/St. Clair made 39, Prairie region made 27, Northern Ontario made 24 seizures and the Atlantic region made 4 interceptions. Combined, the Pacific, Quebec and the three regions of southern Ontario intercepted the bulk of all unreported currency and proceeds of crime totalling CAD42 301 608 million, accounting for 96% of the national total. In most cases, currency and proceeds of crime interceptions involved citizens of Canada, China and the United States. Canadians were involved in 10% (165) of the seizures totalling CAD4.1 million; citizens of China accounted for 21% (345) of the seizures totalling CAD7.6 million, and citizens of the United States were involved in 25% (401) of the interceptions yielding CAD18.1 million.

603. The following table shows the number and value of seizures made by type of currency for the year 2004.

Currency Type Seized	Number of Seizures	Value of Currency
Banker's drafts	26	CAD919,046
Bonds	3	CAD141,456
Cheques	54	CAD2,503,720
Currency	1450	CAD39,062,887
Money orders	20	CAD350,494
Other instr. in bearer form	1	CAD1,360
Stocks	1	CAD12,300
Traveller's cheques	60	CAD998,874
Treasury bills	1	CAD24,180
TOTAL	**1,616**	**CAD44,014,317**

Source: Cross-Border Currency and Proceeds of Crime Report 2004, Canada Border Services Agency.

604. This table shows the interceptions made in 2004, by referral type. The final two columns indicate the value and percentage (relative to the total) of seizures that were related to proceeds of crime.

Referral Type	Number of Seizures	Total Value of Currency Seized CAD	Value of which are Level IV – Proceeds of Crime CAD	Percent of Total
Selective referrals	1 382	**34 635 545**	7 412 250	21.4%
Lookouts	75	**5 284 884**	4 343 478	82.2%
Random referrals	38	**956 416**	374 202	39.1%
Targeting	17	**292 124**	29 787	10.2%
Canine indicators (DDS)	29	**753 210**	224 538	29.8%
Export examinations	56	**1 589 496**	633 796	39.9%
U.S. Customs referrals	5	**197 818**	44 284	22.4%
Other	14	**304 825**	0	0.0%
TOTAL	**1 616**	**44 014 318**	**13 062 335**	29.7%

2.7.2 Recommendations and Comments

605. Canada has a comprehensive system to protect the physical cross border transportation of currency and monetary instruments of a value of CAD10 000 or more and the law enforcement authorities have a clear understanding of the procedures that are in place in Canada for implementing SRIX. A range of methods and technologies are employed at the border to enhance capability relating to cross border currency enforcement. The legal authority for this is supported by a strategic and operational response that demonstrates close cooperation between agencies, especially enforcement agencies from the United States.

606. The effectiveness of Canada's cross border currency enforcement is demonstrated in the significant volume and value of currency seizures – 5 130 currency seizures totalling more than CAD132 million since January 2003. Seizures have been result of a broad range of enforcement methods, across a broad range of monetary instruments and currency, at various entry points into Canada - all of which indicates a broad enforcement response by Canadian authorities.

607. The assessment team however believes that competent authorities should further invest in the detection and investigation of out-going cross-border transportations of cash or any negotiable bearer instrument.

2.7.3 Compliance with Special Recommendation IX

Rec.	Rating	Summary of factors underlying ratings
SR.IX	C	▪ The Recommendation is fully met.

3. PREVENTIVE MEASURES - FINANCIAL INSTITUTIONS

Overview of legal and regulatory framework

PCMLTFA and its Regulations

608. To combat money laundering, the Canadian federal government enacted the Proceeds of Crime (Money Laundering) Act which received Royal Assent on June 29, 2000. To help fight terrorism, it enacted the Anti-Terrorism Act (Bill C-36) which came into force on December 24, 2001 and amended the Proceeds of Crime (Money Laundering) Act, which became the Proceeds of Crime (Money Laundering) and Terrorist Financing Act (PCMLTFA).

609. The basis for the AML/CFT preventive legislation in Canada is the PCMLTFA that consists of five parts:

- Part I sets out record keeping requirements and requires the reporting of suspicious and prescribed financial transactions.
- Part II creates the obligation to report to Customs the importing or exporting of currency or monetary instruments of a value equal to or greater than CAD10 000 or its equivalent.
- Part III establishes FINTRAC as an independent agency to collect, analyze, assess and disclose designated information on financial transactions to assist in the detection, prevention and deterrence of money laundering and the financing of terrorist activities, while protecting Canadian's privacy.
- Part IV authorises the Governor in Council to make regulations.
- Part V creates offences, including the failure to report suspicious financial transactions and the prohibited use of information under the control of FINTRAC.

610. The PCMLTF Regulations implement a portion of Part I of the Act by requiring the financial institutions and financial intermediaries that are subject to the Act to identify their customers, keep certain records, report large cash transactions and international electronic funds transfers of CAD10 000 or more to FINTRAC and develop an internal compliance regime.

611. The PCMLTF Suspicious Transaction Reporting Regulations implement the remainder of Part I of the Act by requiring financial institutions and financial intermediaries to report financial transactions where there are reasonable grounds to suspect that they are related to money laundering or terrorist financing activities.

Recent amendment of the PCMLTFA and its Regulations

612. The Department of Finance issued a consultation paper in June 2005 outlining policy proposals to enhance the AML/CFT regime. These proposals included a series of new requirement such as the obligation to identify beneficial owners of client entities and to conduct enhanced due diligence for correspondent banking relationships and politically exposed persons. The adoption of a new registration scheme for money services businesses and of an administrative monetary penalties scheme was also proposed.

613. In October 2006, the Minister of Finance tabled Bill C-25, which proposed amendments to the PCMLTFA to expand the customer due diligence and transaction reporting requirements for financial institutions and financial intermediaries, set out a framework for the registration of money services businesses and extend the list of information that FINTRAC may disclose to law enforcement and

intelligence agencies. This Bill received Royal Assent in December 2006. However, a series of successive regulations is due to be adopted for the PCMLTFA to be fully effective.

614. Some new provisions of the PCMLTFA came into force on February 10, 2007 including technical amendments and information sharing in respect of cross border reporting regimes, FINTRAC record retention time limits, information sharing on charities and terrorist financing and a review of the Act by Parliament and the Office of the Privacy Commissioner. A "carve out" for suspicious transaction reporting by legal counsel also took effect.

615. On March 10, 2007, in the format of a pre-publication in the Government Gazette, the Canadian Department of Finance opened two proposed regulations (*Proceeds of Crime (Money Laundering) and Terrorist Financing Registration Regulations* and *Regulations Amending Certain Regulations Made Under the Proceeds of Crime (Money Laundering) and Terrorist Financing Act*) to consultation[55]. The consultation period ended on April 9, 2007. Quite a large number of financial institutions, financial sector associations and professional associations sent representations regarding the feasibility of the proposed amendments and possible coming-into-force dates for the new provisions. Overall, the assessors were told that stakeholders were supportive of the proposed enhancements to Canada's regime. However, with regard to the proposed registration system, some of them have suggested modifications to the proposed amendments to reduce the compliance burden[56].

616. On June 27, 2007, the *Regulations Amending Certain Regulations Made Under the PCMLTFA* were enacted and published in the Canada Gazette (Part II). A second package of regulatory amendments, the *Proceeds of Crime (Money Laundering) and Terrorist Financing Registration Regulations* was published, which sets out a framework for the registration of MSBs.

617. Additional amendments are necessary for the regulations to implement fully the legislation. For instance, amendments to the PCMLTF Regulations and PCMLTF Suspicious Transaction Reporting Regulations were pre-published on June 30, 2007 to address some of the measures that still need to be adopted. The proposed amendments extend coverage of the PCMLTFA to three non-financial professions (see Section 4.1 of the report). A proposed PCMLTF Administrative Monetary Penalties Regulations also set out specific measures for an administrative monetary penalties scheme. These proposed amendments were open to consultation until August 2007[57].

---

[55] Draft regulations in Canada must be pre-published in Part I of the Canada Gazette, before they can be made. Pre-publication in Part I of the Canada Gazette gives various interested groups and individuals, as well as Canadians in general, a final opportunity to review and comment on a proposed regulation at the last stages of the regulation-making process, before it is enacted and published in Part II of the Canada Gazette. Pre-publication also gives interested parties, and those stakeholders previously consulted at the beginning of the regulatory process, the opportunity to see whether the final draft proposal is in keeping with previous consultation drafts and to comment on the implementation timeline.

[56] The regulatory impact analysis of the *Proceeds of Crime (Money Laundering) and Terrorist Financing Registration Regulations* of 7 June 2007 states the following: "for example, as requested by a group of money services businesses, amendments to the Regulations exempt the sector from customer due diligence requirements when they enter into a service agreement with a publicly traded company or public body. Other exemptions to the client identification and record-keeping requirements have been added to alleviate the compliance burden for securities dealers and other sectors. As proposed by banks and credit unions, the definition of politically exposed foreign persons has been limited to fewer family members and the timeframe for the identification of such persons has been extended. Following discussions with banks, the record-keeping requirements applicable to financial entities for funds transfers of CAD 1 000 or more have been limited to international electronic funds transfers and domestic SWIFT MT103 transfers. Likewise, the obligation to keep a record of the address of the beneficiary for such transfers has been removed from the amendments to the Regulations. Many sectors have expressed their concerns regarding the amount of information that would have to be collected on partnerships and other entities if the published amendments were to come into force. To reduce this compliance burden, the amendments to the Regulations no longer require persons and entities to obtain information on the partners or directors of an entity other than a corporation".

[57] The amendments were enacted on 26 December 2007 and come into force in December 2008, see http://www.fin.gc.ca/news07/07-105e.html.

618. The present report takes into account (for analysis and rating purposes) the amended version of the PCMLTFA dated February 10, 2007. The report also takes into account (for analysis and rating purposes) the provisions of the PCMLTF Regulations that have been in force since June 30, 2007 (*i.e.* in relation to correspondent banking relationships, shell banks and a broader set of information released in FINTRAC disclosures). However, the provisions of the PCMLTF Regulations and the PCMLTF Suspicious Transaction Reporting Regulations also published on June 27, 2007 that will enter into force on June 23, 2008 (such as information to collect on beneficiaries and the politically exposed foreign person's related requirements) have not been analysed by the assessors. However, the existence of such provisions has been taken into account when drafting the recommendations given to Canada to improve its AML/CFT regime. Annex 1 of the report provides an inventory of the changes brought to the Canadian AML/CFT regime since December 2006.

Enforceability of AML provisions issued by competent authorities

619. There are 14 legislative bodies in Canada: the Parliament of Canada, and the legislatures of 10 provinces and three territories. Statutes enacted by these legislative bodies are primary legislation. Regulations are made under a statute or an Act by the government department or ministry administering that Act (see Part IV of the PCMLTFA) and are another form of law. This is the generally-recognized hierarchy of authority: the Constitution, human rights legislation, other legislation, regulations, case law from higher courts, other case law, treaties/international law and doctrine.

620. FINTRAC (for all reporting parties), OSFI (for Federally Regulated Financial Institutions) and IDA (for securities dealers) have developed guidelines to assist reporting entities understanding their obligations under the Act and associated regulations. During consultations on the proposed Regulations, stakeholder groups have identified the need for guidelines to assist persons and entities understanding their obligations under upcoming regulatory changes.

621. Repeated reference is made in this section of the report to various types of guidance issued by regulatory agencies with respect to the financial sector's AML/CFT obligations and the regulators' approach to compliance. The extent to which such guidance can be deemed to be "other enforceable means" is central to the evaluation of the financial sector preventive measures and the following summary reflects the view taken by assessors on the main forms of guidance.

622. Within the FATF, "other enforceable means" refers to guidelines, instructions or other documents or mechanisms that set out enforceable requirements with sanctions for non-compliance, and which are issued by a competent authority (*e.g.* a financial supervisory authority) or an SRO. The sanctions for non-compliance should be "effective, proportionate and dissuasive".

OSFI guidance

623. In relation to AML/CFT issues, OSFI has issued two pieces of guidance. Firstly, there is the Guideline E-13 entitled "Legislative Compliance Management", dated March 2003, which is a general guideline on managing regulatory risk that "*conveys OSFI's expectations of federally regulated financial institutions regarding controls through which they manage regulatory risk inherent in their activities worldwide"*. Second, there is Guideline B-8 entitled "Deterring and Detecting Money Laundering and Terrorist Financing", published originally in April 2003 and amended in November 2004 after publication of the Basel Committee paper "Consolidated KYC Risk Management". B-8 is applicable to domestic and foreign banks, trust & loan companies and life insurance companies, referred to collectively as federally-regulated financial institutions (FRFIs) although the text focuses more on banking related matters. OSFI advised the assessors that B-8 is scheduled for update and amendment after the introduction of the new regulations.

624. Based on the definition of "other enforceable means", the assessors have given consideration to a number of basic requirements when considering whether OSFI Guideline B-8 can be considered as "other enforceable means". These requirements are as follows:

1) *A document or mechanism that sets out enforceable requirements addressing the issues in the FATF Recommendations.* Guideline B-8 only addresses a very limited range of AML/CFT issues (essentially Recommendation 15 and to a lesser extent Recommendations 5, 6, 9, 22, 18 and 29). In relation to customer identification for instance, the Guidance essentially addresses some enhanced due diligence situations and suggests that beneficial ownership identification is particularly important. The most comprehensive part of the guideline deals with internal control procedures to prevent ML and TF (role and position of the CAMLO, oversight by the Board, compliance reporting processes, self-assessment program, independent procedures testing, etc.) in relation to Recommendation 15. Finally, the Guideline refers FRFIs to the website of FATF, FINTRAC and BIS and encourages them to familiarise themselves with the various standards contained therein. Looking at whether OSFI Guideline B-8 sets out enforceable means, the assessment team has considered:

   - *The nature of the document*: OSFI itself defines the guidelines it publishes (see OSFI website) as "*essentially best or prudent practices that it expects financial institutions to follow. Guidelines are used to set standards to govern industry activities and behaviour*". OSFI has indicated that its guidelines aim at *promoting* the adoption of policies and procedures designed to control and manage risk. Based on these clarifications and looking at the current form of such guidelines, they appear to be more similar to general advice than mandatory obligations and there is no contrary indication that the guidelines place mandatory obligations on FRFIs.
   - *The language of the document*: OSFI has intentionally opted for a gradation of the language in the B-8 Guidance (from FRFIs "must" to FRFIs "should consider" or FRFIs "are encouraged". Except on four occasions where the wording of the guidance is assertive (using a "must"[58]) the guidelines are generally worded in a permissive manner (FRFIs "should" do or "should consider"; OSFI "encourages", OSFI "recommends", OSFI "suggests") which do not adequately substantiate OSFI's expectations of FRFIs and leaves a great deal of discretion in the hands of the FRFIs. So, even if OSFI addresses the FRFIs' compliance with the Guideline in its regular on-site assessments, it is not clear which provisions of these guidelines could be considered as "requirements", most of them being "recommendations" or "best practice".

2) *The document/mechanism must be issued by a competent authority (e.g. a financial supervisory authority) or an SRO.* OSFI regulates and supervises federally regulated financial institutions and administers financial institution governing statutes. As a financial supervisory body, it is a competent authority.

3) *There are sanctions for non-compliance, which should be effective, proportionate and dissuasive and there is evidence that effective and dissuasive sanctions have been applied in practice.* When reviewing the compliance of FRFIs with the AML/CFT regime, OSFI explicitly includes in its scope and objectives the assessment of compliance with OSFI Guideline B-8. Sanctions are available to OSFI based on a failure of the financial institution to conduct its business in a safe and sound manner in relation to AML/CFT failings and OSFI Guidelines are enforceable to ensure "safety and soundness" within a financial institution. To encourage financial institutions to implement the AML/CFT provisions (including OSFI Guidance), OSFI's related supervisory powers are very much focused on early intervention

[58] 1. "*To identify their level of exposure to potential MLTFA and the associated risks, FRFIs must understand the nature of the risks associated with the different parts of their operations*"; 2. "*With respect to introduced business, FRFIs must obtain the necessary customer information for their records prior to, at, or at a reasonable time after, the time that the business is accepted*"; 3. "*The board of directors and senior management must be strongly committed to ensuring that measures designed to address risks associated with these activities (that are risky) are implemented*" and 4. "*Front-line staff plays an essential role in implementing anti- MLTFA measures and, therefore, must receive appropriate training to understand problems associated with MLTFA, the financial institution's anti- MLTFA policies, and the proper application of procedures*".

and OSFI strongly relies on a remedial program through the normal supervisory process to address compliance failures.

- *Applicable sanctions*. OSFI has a range of supervisory tools and sanctions at its disposal, including written interventions, staging, directions of compliance, placing terms and conditions in the FRFI's Order To Commence And Carry On Business (operating licence) and imposing an Administrative Monetary Penalties (AMP) under the OSFI Act.

- *Sanctions that have been applied*:

  (a) OSFI issues supervisory letters after each AML/CFT assessment. The letters contain "required actions" on compliance issues or "recommendations". In most cases, interventions in the form of "recommended action" (vs. "required action") have been applied for failing to implement OSFI Guidance B-8 as a result of OSFI inspections. OSFI issues "Recommended actions" to address deficiencies in risk management controls or *other supervisory requirement not directly related to a legal requirement*. However, when OSFI feels it necessary to deliver a stronger signal to the financial institution, they may use the term "require" as more prescriptive language when dealing with deficiencies under B-8. This may be because the lack of compliance with the B-8 provision resulted in a markedly weaker AML program overall. So, for example, OSFI will sometimes say they "require" a self-assessment and at other times "recommend" it. OSFI claims that there is indeed no procedural difference applied to the terms "requirement" and "recommendation" and that FRFIs work to quickly implement the necessary changes, whether required or recommended.

  (b) Beyond the supervisory letters, OSFI has a range of supervisory tools (including sanctions) at its disposal. Staging is a supervisory measure implemented by the Supervisory Sector of OSFI based on its overall view of the level of risk in the FRFI balanced against the effectiveness of the risk controls. It results in progressively more and more intense oversight and detailed intervention by OSFI on the issues that led to the Staging. It also results indirectly in a financial charge to the staged deposit-taking financial institutions as it attracts a higher OSFI assessment fee and may attract a higher deposit premium by CDIC. Cumulatively, in the period 2004-2006 inclusive, OSFI staged 4 financial institutions for AML/CFT control deficiencies (2 of them on this sole basis). The AML/CFT deficiencies giving rise to the staging were a mixture of regulatory non-compliance and non-compliance with B-8 requirements. The amount of OSFI and CDIC surcharges ranged from CAD 45 000 up to CAD 500 000.

  (c) Supervisory tools such as direction of compliance or prudential agreements (see Section 3.10 for further details) are available but have never been used for a failure to implement OSFI Guidance or even for any AML deficiencies. OSFI considers that such actions have never been necessary, as weaknesses have always been adequately addressed with measures taken under (a) and (b) above.

  (d) OSFI can issue Administrative Monetary Penalties (AMPs) but these penalties only apply in case of a contravention of a provision of a financial institutions Act (such as the Bank Act) or of a direction of compliance, terms and conditions or a prudential agreement (see OSFI ACT, art. 25). They cannot be administered directly in case of non-compliance with the PCMLTFA, its regulations or a fortiori OSFI Guidance.

625. In conclusion, sanctions for non-application of OSFI Guideline B-8 do not appear to be sufficiently effective, proportionate and dissuasive. OSFI essentially use written recommendations as a main supervisory tool and in some limited occasions, closer monitoring (only staging (to stage 1) was used in a limited number of cases although very serious deficiencies were identified in a number of assessments). These supervisory tools have been the only ones that OSFI has used so far for failure to implement Guideline B-8. Looking at the language of the guidelines and the sanctions that have been applied by OSFI, the assessors' believe that OSFI Guidelines cannot be considered as "other enforceable means".

IDA guidance

626. The IDA is the national self-regulatory organisation of the securities industry in Canada and regulates the activities of investment dealers in terms of both their capital adequacy and conduct of business. The IDA is the front-line regulator of full securities dealers. A number of provisions in provincial securities regulations recognize IDA rules as an alternative to provincial regulations, generally by explicitly granting or allowing the granting of exemptions from the provincial rules to members who abide by IDA rules.

627. The IDA regularly publishes By-laws, Regulations and Policies that set out detailed requirements to be implemented by its members in carrying out their business (such as opening account rules, recordkeeping requirements, etc. that are applicable in the AML/CFT context). IDA By-laws, Regulations and Policies use prescriptive language (securities dealers "must" do). Penalties for breaches of the By-laws, Policies and Regulations include a wide range of sanctions for registered employees and member firms and have been used by IDA in the past (see section 3.10 of the report). The assessors took the view that IDA By-laws, Policies and Regulations are legally enforceable and can be considered as "other enforceable means".

628. In the AML area more specifically, the IDA published "*Deterring ML activity, A Guide for Investment Dealers*" in October 2002. This Guide is intended to highlight the key elements for a Canadian investment dealer to consider in developing an effective AML program. The language of the document clearly states that securities dealers are encouraged to take certain AML/CFT measures. There is no sanction directly applicable for a failure to comply with an AML/CFT measures contained in the Guide. For the purpose of this report, this Guide is considered as non-binding guidance which is neither law, regulation nor other enforceable means as defined by the FATF.

FINTRAC guidance

629. Under the PCMLTFA (Section 40(e)), FINTRAC has responsibility for ensuring compliance, reporting, record-keeping and client identification requirements of the reporting parties. FINTRAC has therefore developed a series of guidelines defined by FINTRAC as "'helpful hints"[59] that do not remove the responsibility for reporting entities to be familiar with or comply with the PCMLTFA and related Regulations. Such guidelines have therefore been developed by a competent authority that deals with AML/CFT issues. The language of the FINTRAC Guidance is direct, forceful and explicit with clear direction and requirements and points out how criminal sanctions exist to tackle breaches on record-keeping requirements set out by the PCMLTFA and the PCMLTF Regulations. However, FINTRAC Guidelines in themselves do not impose any mandatory requirements with sanctions for non-compliance, and indeed state in the preamble to each guidance note that "*it is provided as general*

[59] The list of FINTRAC Guidance is as follows (as of June 2007): 2 – Suspicious transactions; 3A – Submitting Suspicious transactions Reports to FINTRAC Electronically; 3B - Submitting Suspicious transactions Reports to FINTRAC By Paper; 4 - Implementation of a Compliance regime; 5 -Submitting Terrorist property Reports; 6-Record keeping and Client Identification; 7A – Submitting Large Cash Transaction Reports to FINTRAC Electronically; 7B - Submitting Large Cash Transaction Reports to FINTRAC By Paper; 8A – Submitting Non-SWIFT Electronic Funds Transfers Reports to FINTRAC Electronically; 8B - Submitting SWIFT Electronic Funds Transfers Reports to FINTRAC Electronically; 8C - Submitting Non-SWIFT Electronic Funds Transfers Reports to FINTRAC By Paper and 9 – Alternative to Large Cash Transaction Reports to FINTRAC.

information only. It is not legal advice and is not intended to replace the Act and Regulations". Furthermore, under the PCMLTFA, FINTRAC cannot impose penalties or sanctions but only has the option of referring cases to law enforcement (see Section 3.10). For the purposes of this report, the requirements of such Guidelines cannot be considered as "other enforceable means".

3.1 Risk of money laundering or terrorist financing (R.5 – 8)

Application of AML/CFT obligations to certain sectors

630. As described in the FATF Recommendations, a country may decide not to apply certain AML/CFT requirements, or to reduce or simplify the measures being taken, on the basis that there is a low or little risk of ML or TF in a given business sector. The country may decide the extent to which certain measures need to be applied on a systemic basis by each general category of financial institution, as well as by various subsets within each industry.

631. In Canada, certain financial institutions that undertake financial activities, as defined by the FATF Recommendations are not currently covered by the AML/CFT regime. These sectors or activities[60] are as follows (excluding entities that are caught because they also engage in financial activities under the regime): financial leasing; factoring; finance companies (*i.e.* entities specialized in consumer lending, credit cards, equipment financing and small business loans that are not loan companies); providers of e-money; Internet payment providers[61]; and cheque cashiers[62] when only cashing cheques issued to denominated persons[63]. Canada considers that these entities pose little or no threat of money laundering/terrorist financing. It is worth noting that these different activities represent a not insignificant part of the financial sector: for instance, the three finance companies that are members of the ACFC (Association of Canadian Financial Corporations) serve 1.74 million customers and have CAD 8 billion in assets. This is still smaller than the banking sector which has 1.5 trillion in assets.

632. Canada's AML/CFT risk-based approach was described to the assessment team as follows[64]: the starting point is that government first looks at ML/FT risks to determine whether particular parts of the financial sector should be covered by AML/CFT legislation. Based on that risk assessment, decisions are then made to regulate or not that sector for AML/CFT purposes. Canada indicated that this general approach has applied with the exception of finance companies which approached the Department of Finance in 2001 to clarify that their risk of AML/CFT was low and they should not be caught by the regime. Based on this, a decision was made not to regulate the sector but subsequent voluntary reporting of suspicious transactions has resulted in that sector remaining under monitoring by competent authorities in order to ensure that emerging risks are addressed if necessary.

633. When considering in more details the process that takes place to assess ML/TF risks, the assessment team was told that risk assessments are presented and discussed at meetings involving relevant departments and agencies, including the RCMP, the Department of Justice and FINTRAC. The assessment team was advised that the Department of Finance looks at the sector structure (types

60 That came to the knowledge of the assessors.

61 Internet payment and e-money providers are only subject to the Act if they also offer funds remittance or transmission services and, as such, would be considered money services businesses.

62 Cheque cashing businesses that also offer money remittance services are included in the definition of MSBs under the PCMLTFA and are therefore subject to the requirements of the PCMLTFA.

63 Credit card issuers are covered by the AML/CFT regime. The assessment team was advised that VISA, Mastercard and American Express are the only general purpose credit cards available in Canada. As a result of VISA and Mastercard internal rules, credit cards are only issued by regulated and supervised financial institutions, both for PCMLTFA and prudential purposes. Finance companies that are not caught under the PCMLTFA can also issue general purpose credit cards (in addition to stored value cards) but do so through subsidiaries that are regulated for AML/CFT and prudential purposes.

64 At the different stages of the evaluation process, the assessment team was provided with varying descriptions of processes in place in Canada to assess ML/TF risks. Some information in that Section was provided in January 2008.

of products and clients involved, etc.) and takes into consideration risk analysis carried out at national and international level. However, no formal minutes or documentation were kept in respect of the decisions to regulate or not a given sector for AML/CFT purposes and consequently the risk assessments underlying the decisions, if any, could not be obtained by the assessment team. Limited documentation was provided for a risk assessment conducted on financial leasing (see below). The following paragraph illustrates how sectors were not included within the coverage of the PCMLTFA.

634. Importantly, Canada subsequently clarified that its risk based approach is centred around the principle that financial sectors will be brought into the AML/CFT regime only if there is a proven risk of ML/TF.

635. Canada's approach to risk is not in line with the FATF approach to risk as defined in the Methodology where a list of activities and operations must be covered by the AML/CFT regime unless there is a proven low risk of ML of TF. Canada has taken the opposite approach to extend coverage of the PCMLTFA only to activities for which there is a proven ML/TF risk. This approach is even more problematic since the risk assessment process carried out by Canada to reach conclusions on the exposure of certain sectors to ML/TF risks is either non-existent or very fragmented and ad-hoc. In the cases where such a process has taken place, the risk assessment has provided clear indicators that certain sectors were at risk (based in particular on studies carried out by the RCMP). Despite this, the decision has been taken not to cover these sectors from the AML/CFT framework (this is the case for financial leasing, stored value cards and white label ABMs – see Section 4.4 of the report). In other scenarios, no proper risk analysis has been carried out or at least there is no evidence that such analysis has taken place. However, based on the general assumption that these sectors present low ML/TF risks or that ML or TF activities can be prevented and detected in these sectors through other entities subject to the PCMLTFA, the decision has been taken not to bring them under the PCMLTFA coverage (this applies to finance companies, factoring, cheque cashiers, Internet payment and e-money providers).

636. A clear example of the approach taken is provided by the financial leasing sector, as a distinct activity, "due to the relatively low money laundering and terrorist risks involved". The assessors were referred to a study undertaken by the Department of Finance ("Financial leasing industry in Canada and ML") but this was only an undated discussion draft. This paper clearly identifies the risks attached to financial leasing activities and suggests some options to regulate the sector to address its vulnerabilities vis-à-vis ML (such as amending the criminal code). The paper concludes that further consultation is necessary before taking a decision to regulate the sector for AML/CFT purposes. However, no further action has been taken by competent authorities to follow-up the conclusions of the report and at the time of the on-site visit, no further steps had been taken to include the financial leasing sector in the scope of the Act despite the demonstrated risk of money laundering (as underlined in the paper) attached to this sector.

637. Finance companies have not been subject to any risk assessment and, as a sector, they remain unregulated. There is the perception that since they do not take deposits, they are not in a position to launder money when in fact, sub-prime lending offers many opportunities through taking out loans and then using illegal funds for repayment. It is worth mentioning that three big finance companies have formed a professional association (ACFC, Association of Canadian Financial Corporations) and decided to implement AML/CFT standards on a voluntary basis; they also regularly send voluntary STRs to FINTRAC.

638. According to another undated document entitled "Risk Assessment Issues" (presented more as a policy paper) received post evaluation in response to assessors' requests for additional information on risk assessments, certain areas such as factoring, stored value cards or e-money, Internet payment providers and financial leasing are either under consideration or have been assessed as low risk. However, the document did not fully address assessors' request to see the risk assessment itself.

639. In general, the assessors believe that the justifications underlying decisions to exclude certain categories of financial institutions or activities from the AML/CFT regime are either insufficient or non-existent and that the approach applied by Canada to do so is the opposite of the agreed approach by the FATF in the 40 Recommendations.

640. Canada should rely on a more comprehensive, thorough and formal risk assessment process. This should typically involve meetings and discussions with any relevant AML/CFT stakeholders (Department of Finance, FINTRAC, OSFI, RCMP, Department of Justice, etc.) as it is already the case but also representatives of different sectors of each industry and with their trade associations; a review of money laundering investigations, prosecutions, and convictions in each industry and consideration of law enforcement views; and consideration of international standards (including those of the FATF). Most importantly, the underlying principle should be that the financial activities referred to in the FATF standards should be covered unless there is a proven low risk of ML/TF.

Risk-based approach taken by financial institutions

641. Canada uses a risk-based approach throughout its financial sector AML/CFT regulations. The regulations identify lower risk sectors, products and customers (in close co-operation with the private sector) and determine the related measures that should be in place. The government has defined a common standard for most situations and allows reduced measures in certain specific lower-risk situations.

Use of a Risk-Based Approach in Supervision of Compliance by Competent Authorities

642. The competent authorities use a risk-based approach when supervising reporting entities for compliance with the legislation. FINTRAC and OSFI have taken a risk-based approach in developing and implementing their supervisory programs.

643. Under the PCMLTFA, FINTRAC is responsible for ensuring compliance with the PCMLTFA and its Regulations. The legislation permits FINTRAC to enter into agreements with regulators that supervise reporting entities. While FINTRAC does not devolve its responsibility for ensuring compliance to these regulators, it assesses the risks related to the regulator's supervisory activities and plans accordingly. For instance, FINTRAC may target relatively fewer compliance resources to a particular sector, such as federally regulated financial institutions, where a MOU with OSFI is in place.

644. When assessing the level of risk for reporting entities, FINTRAC looks at a range of factors, including such elements as open source information, reporting volumes, observations gleaned from outreach activities, voluntary information FINTRAC has received on non-compliance, results of compliance questionnaires completed by reporting entities, other database checks, information from regulators, quality and quantity assurance reviews, and the results of compliance examinations.

645. OSFI's supervisory powers are established through the OSFI Act. These set out the framework and limitations within which federally regulated financial institutions can operate in Canada. Within this framework, OSFI uses a risk-based approach to supervision to effectively allocate staff and resources, as well as to allow for private sector development and innovation. Under its supervisory framework, OSFI applies more supervisory resources when a financial institution's risk profile increases – when, for instance, the institution takes on new types of business or faces risks to its solvency.

646. OSFI uses a number of factors to determine the prioritization of AML/CFT assessments. These factors include: the size of the financial institution; the number of branches in Canada and the number of subsidiaries and branches outside Canada; the product mix and client base of each institution; and OSFI's overall view of the institution's compliance and risk management structure.

Scope of the PCMLTFA

647. Article 5 of the PCMLTFA defines the persons and entities to which the Act applies. The Act lists on the one hand, specific categories of entities regulated by federal or provincial acts and, on the other hand, persons or entities engaged in some specific businesses, professions or activities explicitly referred to in the text or further specified in the regulations. The list of persons or entities is as follows:

- Authorised foreign banks within the meaning of section 2 of the Bank Act in respect of their business in Canada, or banks to which that Act applies.
- Cooperative credit societies, savings and credit unions and *caisses populaires* regulated by a provincial Act and associations regulated by the Cooperative Credit Associations Act.
- Life companies or foreign life companies to which the Insurance Companies Act applies or life insurance companies regulated by a provincial Act.
- Companies to which the Trust and Loan Companies Act applies.
- Trust companies regulated by a provincial Act.
- Loan companies regulated by a provincial Act.
- Persons and entities authorised under provincial legislation to engage in the business of dealing in securities or to provide portfolio management or investment counselling services.
- Persons and entities engaged in the business of foreign exchange dealing.
- Life insurance agents and brokers.
- Persons or entities engaged in the business of "remitting or transmitting funds by any means or through any person, entity or electronic funds transfer network or issuing or redeeming money orders, traveller's cheques or other similar negotiable instruments" (namely money services businesses).
- Departments and agents of Her Majesty in right of Canada or of a province when it accepts deposit liabilities or sells or redeems money orders in the course of providing financial services to the public).

3.2 Customer due diligence, including enhanced or reduced measures (R.5-8)

3.2.1 Description and Analysis

Recommendation 5

648. Customer's identification measures in Canada are currently insufficient to meet the FATF standards[65]. The assessors believe that the current practice, in the bigger financial groups at least, may show better results and be *de facto* closer to the international AML/CFT requirements.

Anonymous and numbered accounts

649. There is no direct prohibition on opening anonymous accounts but basic CDD exists where financial institutions have been required since 1993 to obtain information on and ascertain the identity of all new account holders[66]. The assessment team was told that neither OSFI/FINTRAC nor law enforcement authorities in the course of an investigation have ever found an instance of a financial institution operating an anonymous account.

650. Numbered accounts are permissible. This would be the case for instance for corporate acquisitions where the premature circulation of information could jeopardize the transaction. In this case, the ordinary records of this account may only have a number with no name attached. However, even in those circumstances, Canada has informed the assessors that someone in the financial institution has to ascertain the existence of the corporation that is the account holder, and be able to link this account with the actual account holder. The compliance officer has in principle complete access to the customer's information. However, there are no detailed rules or guidance on how such

[65] The substantial compliance with Recommendation 5 should improve as the new regulations that Canada enacted on June, 27 2007 come into force on June, 23 2008.

[66] Under Section 9.2 of the PCMLTFA, financial institutions cannot open an account when the customer's identity has not been obtained. This provision will come in force in June 2008.

accounts should be managed by the financial institutions. The obligation for compliance officers to have access to CDD information is not clearly stated either.

651. In the securities area, certain firms may permit confidential accounts for appropriate reasons, such as a client's prominence or due to concerns for personal safety. The IDA Guidance on Deterring ML sets out that sufficient documentation identifying the underlying owners should be obtained and on file with the firm and available to appropriate compliance staff.

Account opening and CDD

652. *General*. The PCMLTF Regulations establish the circumstances where customer identification is required. Section 53 requires financial institutions to ascertain the identity of any individual in respect of whom they have to keep a large cash transaction record (for cash transactions of CAD 10 000 or more) at the time of the transaction. FINTRAC has developed guidance in relation to client identification for the following financial sectors: financial entities, MSBs, securities dealers, life insurance companies, brokers and agents and foreign exchange dealers. As far as customer identification requirements are concerned, FINTRAC guidelines expand very little on the provisions set out in the PCMLTFA and related regulations.

653. *Financial entities*[67]. Financial entities, as the backbone of the industry, have additional client identification requirements (Section 54 of the PCMLTF Regulations and FINTRAC Guideline 6G "*Record Keeping and Client Identification for Financial Entities*") in certain circumstances, namely:

- Signature cards[68]: the institution must identify any individual who signs a signature card. In cases where a business account which has more than three individuals authorised for it, the institution must identify at least three of the individuals.
- Where the account holder is an entity, the financial institution must, in addition to identifying the persons authorised to act with respect of the account, confirm the existence of the entity[69] and, in the case of a corporation, ascertain the name and address of the corporation and the names of its directors.
- Foreign currency exchange transactions in which an individual conducts a foreign currency exchange transaction of CAD 3 000 or more at the time of the transaction.
- electronic funds transfers[70] of CAD 3 000 or more.

654. *Trust companies*. Trust companies must identify any person who is the settlor of a personal trust (other than a trust created by a will) or who is authorised to act as a co-trustee of any trust (Section 55 of the PCMLTF Regulations). Trust companies must also confirm the existence of any entity (for corporations the name and address must also be ascertained) that is the settlor of an institutional trust. The existence of an entity that is authorised to act as the co-trustee of any trust and, in the case of a corporation, its name and address must be ascertained as well as all persons (up to three) who are authorised to give instructions with respect to the entity's activities as co-trustee.

655. *Life insurance companies, agents or brokers*. Life insurance companies, agents or brokers who receive CAD 10 000 or more for an annuity or life insurance policy over the duration of the product, must keep a client identification record (Section 56 of the PCMLTF Regulations and FINTRAC

---

67 In the PCMLTF Regulations,: "financial entities" are banks, credit unions, *caisses populaires*, trust and loan companies, agents of the Crown that accept deposit liabilities.

68 Signature card in respect of an account means any record that is signed by a person who is authorised to give instructions in respect of the account.

69 Entity" in the PCMLTFA means a body corporate, a trust, a partnership, a fund or an unincorporated association or organisation.

70 "Electronic funds transfer" means the transmission – through any electronic, magnetic, or optical device, telephone instrument or computer – of instructions for the transfer of funds, other than the transfer of funds within Canada. In the case of SWIFT messages, only SWIFT MT 100 and SWIFT MT 103 messages are included".

Guideline 6A "*Record Keeping and Client Identification for Financial Entities*"). When the transaction referred to above is conducted on behalf of an entity, the insurance company, broker and agent must also confirm the existence of every entity, and if such entity is a corporation ascertain its name and address, and the names of the corporation's directors within 6 months of creating this record[71].

656. *Securities dealers*. Securities dealers have to identify any individual who is authorised to give instructions for any account the dealer has to maintain a record for. In the case of a business account, the securities dealer does not have to identify more than three individuals who are authorised to give instructions for an account (Section 57 of the PCMLTF Regulations and FINTRAC Guideline 6E "*Record Keeping and Client Identification for Financial Entities*"). In addition, where the account is opened in the name of an entity, the securities dealer must confirm its existence and, in the case of a corporation, ascertain the name and address of the account holder and the name of its directors.

657. The identification procedures of securities firms start with the basic KYC requirements mandated by the PCMLTF Regulations. IDA Regulations, Policies and By-Laws add further requirements. IDA Policy 2 ("*Minimum Standards for Retail Account Supervision*") sets out precise requirements for opening new accounts. To comply with the "Know-Your-Client" rule each IDA Member must establish procedures to maintain accurate and complete information on each client. The first step towards compliance with this rule is completing proper documentation when opening new accounts. The IDA has elaborated a "*New Client Application Form*" that sets out the type of information that has to be obtained when opening new accounts. This includes, in particular, client's name, address and date of birth, client's social insurance number, client's occupation, client's employer details and insider information.

658. *MSBs*. In addition to remittance or transmission of CAD 3 000 or more by any means through any person, entity or electronic funds transfers network, MSBs are required to keep client information records if they have an on-going business relationship with a client and for the issuance or redemption of money orders, traveller's cheques or other similar negotiable instruments in excess of CAD 3 000 (Section 59 of the PCMLTF Regulations and FINTRAC Guideline 6C "*Record Keeping and Client Identification for MSBs*"). The money services business must confirm the existence of any entity for which it is required to keep client information record (for the purpose of an ongoing relationship). In the case of a corporation, the MSB must also ascertain the corporation's name and address and the names of its directors within this timeframe (see comments under "*timing of verification*").

659. The current requirements are insufficient to meet the FATF standards that identify the circumstances where financial institutions have to perform customer identification (criterion 5.2 of the Methodology). There is no requirement to carry out CDD measures when there is a suspicion of ML or TF or when financial institutions have doubts about the veracity or adequacy of previously obtained CDD data[72]. Financial entities only identify customers when carrying out occasional transactions that are cross-border wire transfers and above CAD 3 000[73]. This threshold is currently too high. With regard to the identification of domestic wire transfers, the assessors were advised that the competent authorities' interpretation of the provision "the remittance or transmission of CAD 3 000 or more by any means through any person, entity or electronic funds transfers network" is that the list of persons, entities and electronic funds transfers networks are part of a non-exhaustive list of illustrations of what can constitute the "any means" by which a transaction can be carried out and that gives rise to identification obligations. In their view, the expression "any means" would therefore include any type of electronic transfer funds system or network, be it domestic or international. The assessors' view is that the language is ambiguous, that electronic funds transfers is definitionally limited to cross-border

[71] PCMLTF Regulations enacted on 27 June 2007 and coming into force in June 2008 reduce this period from 6 months to 30 days (see 64(2)(d), 65(2)(c) and 66(2)(c) of the amended PCMLTF Regulations).

[72] Regulations enacted in June 2007 and coming into force in June 2008 addresses these deficiencies.

[73] Regulations enacted in June 2007 and coming into force in June 2008 addresses these deficiencies.

wire transfers and that therefore this is not sufficient. There is no direct, clear and unambiguous identification requirement for domestic wire transfers.

660. Financial institutions have to ascertain the identity of any individual for large transactions (CAD 10 000 or more). In FINTRAC Guidance ("*Guideline 7A: Submitting Large Cash Transaction Reports to FINTRAC Electronically*"), financial institutions have to make transaction report to FINTRAC in the following situations:

- The financial institution receives an amount of CAD 10 000 or more in cash in the course of a single transaction. Or
- The financial institution receives two or more cash amounts of less than CAD 10 000 each that total CAD 10 000 or more. Entities must make a large cash transaction report if their employee or senior officer knows the transactions were made within 24 consecutive hours of each other by or on behalf of the same individual or entity.

661. The assessment team believes that the 24 consecutive hour rule impedes the application of the FATF requirement (see C.5.2b) of the Methodology) since financial institutions should be able to detect smurfing activities with no limit in time between two or more operations that appear to be linked.

662. With regard to the obligation for financial institutions to ascertain the identity of customers for occasional non-cash transactions, requirements in line with the FATF standards are set in Sections 54(1)(b) and (c), 58(1)(b) and 59(a) of the PCMLTF Regulations.

Required CDD measures

663. Sections 64, 65 and 66 of the PCMLTF Regulations describe the measures that financial institutions are required to take for ascertaining the identity of an individual, corporation and entity other than a corporation, respectively.

664. Natural persons. The PCMLTF Regulations state that the identity of a person shall be ascertained when the person is physically present "by referring to the individual's birth certificate, driver's license, provincial health insurance card, passport or other similar document." "Other similar documents" include a record of landing, permanent resident card, an old age security card, a certificate of Indian status or a card with an individual's signature and photograph on it issued by any of the following (see FINTRAC Guideline 6G):

- Insurance Corporation of British Columbia.
- Alberta Registries.
- Saskatchewan Government Insurance.
- Department of Service Nova Scotia and Municipal Relations.
- Department of Transport and Public Works of Prince Edward Island.
- Service New Brunswick.
- Department of Government Services and Lands of Newfoundland and Labrador.
- Department of Transport of North West Territories;
- Department of Community Government and Transportation of Nunavut.

665. For a document to be acceptable for identification purposes, it must be valid and have a unique identifier number. Also, the document must have been issued by a provincial, territorial or federal government in Canada, or the equivalent in a foreign jurisdiction. When a reporting entity refers to a document to identify an individual, it must be an original and not a copy. Valid foreign identification, if equivalent to an acceptable type of Canadian identification document would also be acceptable (FINTRAC Guidance 6G).

666. The extent to which photographic identification is a requirement is not clear but certain identification documents, such as birth certificates and records of landing, would not contain the

bearer's photograph[74] (which may raise potential risk especially when relying on similar documentation for foreign customers).

667. For individuals not physically present, financial institutions, with the current exception of MSBs must ascertain the identity of the individual by confirming that a cheque drawn by that individual on an account at a financial entity has been cleared (Section 64(1) of the PCMLTF Regulations). This means a cheque that was written by the individual, cashed by the payee and cleared through the individual's account. It does not include pre-authorised payments as these are not cheques written by the individual. Life insurance companies, brokers and agents, securities dealers and departments and agents of Her Majesty in right of Canada or of a province can also ascertain the identity of their client by confirming that the individual holds an account in their name with a financial entity.

668. In the PCMLTF Regulations, the two distinct requirements – identification and verification of customer's identity - are covered by the requirement to "ascertain" customer's identity. In practice, this means that financial institutions must obtain certain data to establish the identity of the customer and verify it by referring to an identification document. It is worth noting that the verification requirement is clearly articulated in the PCMLTFA (Section 6.1) since "*reporting entities shall verify the identity of any person or entity*". Canadian financial institutions are not required to necessarily retain copies of the documentation upon which reliance is placed for verification of the customer's identity on the grounds that such a practice may not respect certain provisions governing privacy and customer protection.

669. In the case of non face-to-face business, the assessors were uncomfortable with the third party cleared cheque confirmation process as it was seen as a potential loophole for illegal use. As a sole means to confirm identity in non face-to-face situations, it is unreliable[75].

670. *Corporations*. When the account is opened, the reporting entity must confirm the existence of the corporation as well as the corporation's name and address and the names of its directors (Section 65 of the PCMLTF Regulations) by referring to the following documents (FINTRAC Guidelines 6G):

- The corporation's certificate of corporate status (including the list of the corporation's directors submitted with the application for incorporation).
- A record that has to be filed annually under provincial securities legislation. Or
- Any other record that confirms the corporation's existence. Examples of these include such other records as the corporation's published annual report signed by an independent audit firm, or a letter or a notice of assessment for the corporation from a municipal, provincial, territorial or federal government.

671. The record that is used to confirm a corporation's existence can be a paper or an electronic version. An electronic version of a record has to be from a public source. If the record is in paper format, the reporting entity has to keep the record or a copy of it. If the record is an electronic version, the reporting entity has to keep a record of the corporation's registration number, the type and source of the record (Section 65(2) of the PCMLTF Regulations).

---

[74] The General Guide to Account Opening and Customer Identification issued by the Basel Committee states that natural persons should be identified using "an official personal identification number or other unique identifier contained in an unexpired official document (*e.g.* passport, identification card, residence permit, social security records, driving licence) that bears a photograph of the customer".

[75] In the case of non face-to-face business, the regulations enacted in June 2007 and coming into force on June 23, 2008 strengthen Canada's non-face-to-face identification methods. In addition to the current third party cleared cheque method various acceptable combinations of identification methods are required for Canadian customers and when the client is a non-resident, face-to-face identification through an agent is required (see 64(1)(b), 64(1.1)(b), 64(1.2), 64(1.3), 64.1 and Schedule 7 of the amended PCMLTF Regulations**)**.

672. There is currently no requirement to identify through personal identification means shareholders of corporations who are beneficial owners (except for IDA supervised entities). Names of directors are obtained from the statutory returns[76].

673. *Entity other than corporation*. The existence of an entity other than a corporation (*e.g.* a partnership, an association or a trust) must be confirmed by referring to a partnership agreement, articles of association or any other similar record (which could include a declaration of trust in the case of a trust) that confirms the entity's existence. Trust companies must identify the settlor (who may be individuals, corporations or entities) and co-trustees of a trust (Section 55 of the PCMLTFA Regulations). In the context of the third party determination, Section 11 of the PCMLTF Regulations sets out the obligation to keep a record of the name, address and principal business and occupation of each of the beneficiaries that are known at the time that the trust company becomes a trustee for the trust. Section 66 of the PCMLTF Regulations sets out very general requirements to ascertain the existence of entities other than corporations and no specific documentation is required to verify the legal status of trusts.

Identification of persons acting on behalf of the customer

674. Financial entities must ascertain the identity of every person who signs a signature card in respect of an account that the financial entity opens, except in the case of a business account of which is signed by more than three persons authorised to act with respect to the account, if the financial entity has ascertained the identity of at least three of those people (Section 54(1)(a) of the PCMLTF Regulations for financial entities). Trust companies (Section 55(d)) and securities dealers (Sections 57(1) and 57(2)(a) must also identify every person – up to three – who is authorised to give instructions in respect of an account. The requirement to identify up to three persons who are allowed to give instructions in respect of an account is too restrictive since any person purporting to act on behalf of the customer should be identified and her/his authorisation to do so should be verified.

Third party determination

675. The PCMLTFA Regulations require financial institutions to determine whether their customers are acting on behalf of another person (see FINTRAC Guidelines 6A, 6C, 6E, 6G). These provisions are generally referred to as "third party determination" (Sections 8 to 11 of the PCMLTF Regulations).

676. Whenever a financial institution is required to keep a large cash transaction record (*i.e.* for cash transactions of CAD 10 000 or more), it must take reasonable measures to determine whether the individual who provides the cash is acting on the instructions of a third party. Whenever a financial institution opens an account, it must take reasonable measures to determine whether the account is to be used by or on behalf of a third party. Such measures also have to be taken by all financial institutions that are required to keep a client information record (MSBs, insurance companies, etc.).

677. Where the person or entity determines that the individual is acting on behalf of a third party, the person or entity shall keep a record that sets out (a) the third party's name and address and the nature of the principal business or occupation of the third party, if the third party is an individual; (b) if the third party is an entity, the third party's name and address and the nature of the principal business of the third party, and, if the entity is a corporation, the entity's incorporation number and its place of issue; and (c) the nature of the relationship between the third party and the individual who gives the cash or between the third party and the account holder. Where the person or entity is not able to determine whether the individual is acting on behalf of a third party but there are reasonable grounds to suspect that the individual is doing so, the person or entity shall keep a record that (a) indicates whether, according to the individual, the transaction is being conducted on behalf of a third party; and

[76] Section 11.1 of the PCMLTF Regulations enacted in June 2007 and coming into force in June 2008, requires financial institutions to take reasonable measures to obtain and keep information on the beneficial owners of corporations, including keeping a record of the name and occupation of all directors and the name, address and occupation of any person who owns or controls 25 per cent or more of the shares of the corporation.

(b) describes the reasonable grounds to suspect that the individual is acting on behalf of a third party. If an account is for or on behalf of future and unknown clients or employees of the individual or entity opening the account, the financial institution must keep a record indicating that the account is to be used by or for third parties who are not known at the time of account opening.

678. If a person is acting on behalf of a corporation, the financial institution must keep a copy of the part of official corporate records that contains any provision relating to the power to bind the corporation in respect of the transactions or in respect of the account, as the case may be (see Sections 14(b), 20, 23(1)(b), 26(b), 30(b) of the PCMLTF Regulations).

Identification of beneficial ownership

679. *General.* Apart from the third party determination requirement, there are significant gaps in the current requirements to establishing beneficial ownership. There is only the requirement to identify the person who is acting on behalf of another person. Financial institutions (except securities dealers) are neither required to understand the ownership and control structure of the customer nor obliged to determine who are the natural persons that ultimately own or control the customer. There is no requirement to identify the beneficiaries of life insurance contracts either. OSFI Guidance B-8 states that "*the FATF recommends that financial institutions "understand the ownership and control structure" of their customers. OSFI suggests that this principle is particularly important when dealing with privately owned companies, trusts and customers that may have more complex legal structures*". OSFI Guidance therefore imposes no requirement in this area. The question was raised during meetings with the Canadian Bankers Association about the methods banks would adopt to identify the beneficial owner in a complex scenario involving corporate shareholdings and whether they would drill down until they identified a personal beneficiary. It seems that in practice there is no identification of the natural person who ultimately owns or controls a customer or exercises ultimate effective control over a legal person or arrangement[77].

680. *Securities dealers*. When opening an initial account for a corporation or similar entity, IDA Members (Regulation 1300 on "Beneficial ownership of non-individual accounts") shall: (i) ascertain the identity of any natural person who is the beneficial owner, directly or indirectly, of more than 10% of the corporation or similar entity, including the name, address, citizenship, occupation and employer of each such beneficial owner, and whether any such beneficial owner is an insider or controlling shareholder of a publicly traded corporation or similar entity; and (ii) as soon as is practicable after opening the account, and in any case no later than six months after the opening of the account, verify the identity of each individual beneficial owner identified in using such methods as enable the Member to form a reasonable belief that it knows the true identity of each individual and that are in compliance with any applicable legislation and regulations of the Government of Canada or any province (Regulation 1300). This does not apply to: (i) a corporation or similar entity that is or is an affiliate of a bank, trust or loan company, credit union, caisse populaire, insurance company, mutual fund, mutual fund management company, pension fund, securities dealer or broker, investment manager or similar financial institution subject to a satisfactory regulatory regime in the country in which it is located (ii) a corporation or similar entity whose securities are publicly traded or an affiliate thereof.

681. When opening an initial account for a trust, an IDA Member shall: (i) ascertain the identity of the settlor of the trust and, as far as is reasonable, of any known beneficiaries of more than 10% of the trust, including the name, address, citizenship, occupation and employer of each such settlor and beneficiary and whether any is an insider or controlling shareholder of a publicly traded corporation or

[77] Under Section 11.1 of the PCMLTF Regulations enacted on 27 June 2007 and entering into force in June 2008, financial institutions are required to confirm the existence of an entity and to take "reasonable measures" to obtain information on the beneficial owners. It is also necessary to keep a record of information on all directors, all partners and owners of 25% or more of the shares of an entity. In so doing, financial entities are required to obtain the name, address, date of birth and occupation of all shareholders with more than 25% holdings.

similar entity. (ii) as soon as is practicable after opening the account, and in any case no later than six months after the opening of the account, verify the identity of each individual identified in using such methods as enable the Member to form a reasonable belief that it knows the true identity of each individual and that are in compliance with any applicable legislation and regulations of the Government of Canada or any province. This does not apply to a testamentary trust or a trust whose units are publicly traded.

682. In its Notice of June 7, 2004, IDA provides further guidance to securities dealers on beneficial ownership identification. The requirement is to identify natural persons owning a greater than 10% interest in a corporation or similar entity, or that are settlors or beneficiaries of trusts. Where interests are held through other corporations or entities, Members are required to determine the identities of those individuals whose net interest in the accountholder exceeds 10%. So for example, where Corporation A holds a 50% interest in a corporate client, the Member is required to identify any natural persons beneficially owning, again directly or indirectly, more than 20% of Corporation A. The requirement is keyed on ownership interest, not on voting control. Where a corporation subject to the requirement has a complicated ownership structure, Members will have to make reasoned judgments to determine who falls within the requirements through discussions with the corporation's representatives. Members should, in compliance with their general know-your-client obligations, obtain a good understanding of the control structure of corporate and other non-individual clients and the nature of their business or other purposes. Members should view with suspicion any indications that a corporation has been structured so as to conceal its true beneficial ownership or avoid any requirement to identify beneficial owners. Any such suspicions should result in additional enquiries before a decision is made to do business with the prospective client.

683. In relation to trusts, the requirement applies for both formal and informal trusts. Some trusts are structured such that the identity of the beneficiaries and/or level of their interest is not known or is subject to alteration under specific conditions; some trusts split different types of beneficial interests, for example between income and underlying assets. A Member is expected to make enquiries sufficient to enable it to understand the nature and details of the trust, but may rely on summary representations made by the settlor or trustee or attorneys for either, without having to examine lengthy and detailed constating documents. The Member should record the essential details including any reasons for the beneficiaries being unknown.

Purpose & intended nature of the business relationship

684. There are currently no requirements to obtain information on the purpose and intended nature of the business relationship[78].

685. Certain information obtained when completing the IDA "*New Client Application Form*" (such as client's occupation, type of business, account objectives) give helpful indications on the intended nature of the business relationship. The IDA Guide on "*Deterring ML Activity*" sets out that a firm's AML program should be designed to permit the firm to make a reasonable risk-based determination as to its customers, its customers' source of income and its expected activity.

Ongoing Due Diligence

686. There are currently no requirements to conduct ongoing due diligence on the business relationship (except for IDA members) although the need to identify customers for large cash transactions and electronic fund transfers provide certain automatic trigger points. OSFI Guideline B-8 (that only sets out recommended actions) states: "*where appropriate (for example, where the volume of transactions is high), FRFIs should consider whether monitoring activity could be strengthened by information technology solutions.*" The OSFI Guideline also stipulates that "*the policies and procedures should include measures to permit FRFIs to identify and report large cash transactions*

[78] Paragraph 14(c.1) of the PCMLTF Regulations, enacted in June 2007 and coming into force in June 2008, requires financial entities to keep a record of the intended use of the account.

(…). The policies and procedures should also include measures to monitor transactions". Many banks appear to have introduced transaction monitoring systems. IDA Policy 4 ("*Minimum Standards for Institutional Account Opening, Operation and Supervision*") states that supervisory procedures and compliance monitoring procedures should be reasonably designed to detect account activity that is or may be a violation of applicable securities legislation, including transactions raising a suspicion of ML or TF activity[79].

687. Financial institutions are not required to ensure that documents, data and information collected under the CDD process are kept up-to-date and relevant[80]. However, IDA Policy 2 requires the maintenance of accurate and current documentation to ensure that all recommendations made for any account are appropriate for the client and in keeping with the client's investment objectives.

Higher risk

688. There is currently no requirement in the PCMLFT Regulations to perform enhanced due diligence for higher risk categories of customer, business relationship or transaction[81].

689. OSFI requires FRFIs to understand the nature of the risks associated with the different parts of their operations. OSFI Guidance makes an inventory of risk categories such as products and services, customers, reliance on others and geographic consideration... Certain transactions have been prescribed as low risk which allow FRFIs some exemption from customer identification requirements. On the contrary, OSFI Guidelines suggest that *"certain customers may merit additional due diligence. Examples could include businesses that handle large amounts of cash, or that deal in luxury or high end consumer goods. Finally customers that hold important public positions (often referred to as "politically exposed persons") may require special attention."*

690. With regard to private banking, the Canadian Bankers Association believes that the form of private banking offered by Canadian banks is a lower risk business model since in their view private banking services are an extension of retail banking and brokerage services offered to primarily Canadian high net worth individuals. However, there is a clear recognition at international level that private banking services are a higher ML/TF risk category of business relationships that require enhanced scrutiny, irrespective of the nationality of the customer[82].

691. IDA Guidance ("*Deterring ML activity, a Guide for Investment Dealers*") identifies higher risk customers (such as offshore customers) and provides indicators in assessing the risk posed by particular customers or transactions (whether the customer is an individual, an intermediary, public, private, domestic or foreign corporation, a financial or non-financial institution, or a regulated person

---

79 Regulations enacted in June 2007 and coming into force in June 2008 require all reporting entities to conduct ongoing monitoring for the purpose of detecting suspicious transactions and keep client information up-to-date when a situation or client represents higher risks) (see Section 71.1 of the amended PCMLTF Regulations**).**

80 This has been addressed through December 2006 changes to the legislation and the regulations coming into force in June 2008 (see Section 71.1 of the amended PCMLTF Regulations, which must be read in conjunction with new section 9.6 of the PCMLTFA).

81 New provisions enacted in June 2007 and coming into force in June 2008 require reporting entities to have written policies and procedures to be used in assessing the risk of ML or TF and take, in the case of higher risk situations, reasonable measures to conduct ongoing monitoring, keep information up-to-date and take any other necessary measures to mitigate the risks. The new regulations include enhanced non-face-to-face methods that take into account the higher risk inherent to a non-face-to-face environment, especially when the customer is a non-resident (see Section 71, Section 71.1 and Sections 64(1)(b), 64(1.1)(b), 64(1.2), 64(1.3), 64.1 and Schedule 7 of the amended PCMLTF Regulations).

82 PCMLTF Regulations enacted on 27 June 2007 (Section 71) and coming into force in June 2008 require written policies and procedures to be used in assessing the risk of ML or TF offence under the compliance program to include, taking into consideration the type of client and the nature of the relationship between the person or entity and the client, the type of product, and the delivery channels for the product and the geographic location and any other relevant factor.

or entity; whether the customer has been an existing customer for a significant period of time; how the client became a customer of the firm; whether the business of the customer, or the particular type of account, is a type more likely to be involved in illicit activity (*e.g.* cash intensive businesses); etc.). For higher risk customers, investment dealers may carry out extra due diligence that may include credit checks, checking of outside databases through the Internet, verification of personal details and references or other more extensive background checks using external resources.

Lower risk

692. The PCMLTF Regulations provide for certain exemptions from the client identification and record-keeping requirements in certain specific circumstances of lower risk of money laundering or terrorist financing. These exemptions mean that, rather than reduced or simplified CDD measures, no CDD measures apply whatsoever for these cases, which is not in line with the FATF requirements that only permit reduced or simplified CDD in certain circumstances.

693. Sections 62 and 63 of the PCMLTF Regulations prescribe the exceptions to ascertaining identity of individuals and existence of entities. Section 9 prescribes the exceptions to third party determination. The assessment team was told that these exemptions were developed following extensive discussions between the Department of Finance, FINTRAC, the RCMP and the reporting entities. No more information was provided at the time of the on-site visit.

694. *General exemptions from CDD requirements*. The general exceptions (Section 63) are as follows:

- Once a reporting entity has ascertained the identity of an individual, it does not have to confirm their identity again if it recognizes the individual at the time of a future event that would otherwise trigger the identification requirement.
- Once a reporting entity has confirmed the existence of a corporation and confirmed its name, address and the names of its directors, it is not required to confirm that same information in the future;
- Once a reporting entity has confirmed the existence of an entity other than a corporation, it is not required to confirm that same information in the future.
- When the corporation is a securities dealer, the reporting entity is not required to ascertain the name of the directors.

695. *Specific exemption from CDD requirements*. In the insurance sector, more specific exceptions are proposed under the PCMLTF Regulations (Sections 62 & 63), again to address low risk situations, namely:

- The purchase of an immediate or deferred annuity that is paid for entirely with funds that are directly transferred from a registered pension plan or from a pension plan that is required to be registered under the Pension Benefits Standards Act, 1985, or similar provincial legislation.
- The purchase of a registered annuity policy in respect of an annuity referred to in subsection (5) or a registered retirement income fund.
- The purchase of an immediate or deferred annuity that is paid for entirely with the proceeds of a group life insurance policy.
- A transaction that is part of a reverse mortgage or of a structured settlement.
- The opening of a registered plan account, including a locked-in retirement plan account, a registered retirement savings plan account and a group registered retirement savings plan account.
- The opening of an employees profit sharing plan account or a deferred profit sharing plan account, unless the account is funded in whole or in part by contributions by a person or entity other than the employer. Or

- The opening of a dividend reinvestment plan account sponsored by a corporation for its investors, unless the account is funded in whole or in part by a source other than the corporation.

696. Financial entities, securities dealers and the insurance sector are not required to ascertain identity if:

- The person already has an account with the financial entity or the securities dealer, as the case may be. Or
- There are reasonable grounds to believe that the account holder is a public body or a corporation that has minimum net assets of CAD 75 million on its last audited balance sheet and whose shares are traded on a Canadian stock exchange or a stock exchange that is prescribed by section 3201 of the *Income Tax Regulations* and operates in a country that is a member of the Financial Action Task Force on Money Laundering (Section 62(2)(b)).

697. The second exemption raises concerns since the exemption is broad in scope (and "the reasonable grounds to believe" element introduces a weak and indefinite threshold). The assessors were told that a thorough risk assessment was conducted before deciding on this exemption. The decision was based on the fact that corporations with a minimum of CAD 75 million in net assets are already under considerable public scrutiny and regulation. There are numerous documents publicly available outlining their financial situation, ownership, structure and management. These corporations are also subject to provincial securities legislation as public issuers and are subject to sanctions if they provide false or misleading information. From the assessment team's point of view, the exemption in the securities industry to identify corporations that, among other criteria, operate in FATF countries is not satisfactory since it is only based on the principle of presumption of conformity. The assessors were told that the decision to exempt entities from FATF member countries is based on the fact that AML/CFT requirements and CDD measures in particular, can reasonably be expected to be stronger and more effective in these countries.

698. Finally, the identity requirement does not apply if the account holder or settlor is a pension fund that is regulated under an Act of Parliament or of the legislature of a province. The assessors were told that pension funds are subject to strict information disclosure requirements and to fines or imprisonment if these rules are violated. Financial entities are not required to ascertain identity in respect of (a) employees profit sharing plan accounts and deferred profit sharing plan accounts, unless the accounts are funded in whole or in part by contributions from a person or entity other than the employer; or (b) dividend reinvestment plan accounts sponsored by a corporation for its investors, unless the accounts are funded in whole or in part from a source other than the corporation. These plans are considered to be lower risk because they do not provide the opportunity for the members to place additional funds in the plan beyond small payroll deductions prescribed under the plan[83].

699. *Exemptions from third party determination*. The third party determination provision does not apply in respect of an account where the account holder is a financial entity or a securities dealer engaged in the business of dealing in securities in Canada. Also, in cases where the account holder is a person or entity engaged in the business of dealing in securities outside Canada only, securities dealers do not have to make a third party determination if any of the following conditions are met:

- The account is in a country that is a member of the FATF.
- The account is in a country that is not a member of the FATF, but, when opening the account, the security dealer gets written assurance from that account holder that the country where the account is located has implemented the FATF Recommendations concerning customer identification. Or

[83] Under regulations that have been enacted in June 2007 and come into force in June 2008, clients that want to make lump-sum payments to these plans will have to be identified in addition to the administrator of the plan (see Subsection 62(3) of the amended PCMLTF Regulations).

- The account is in a country that is not a member of the FATF and that country has not implemented the FATF recommendations concerning customer identification, but the securities dealer has ascertained the identity of all third parties relating to the account.

700. In addition, financial institutions do not have to make a third party determination for an account if the following conditions are met: (1) the account is opened by a legal counsel, an accountant or a real estate broker or sales representative; and (2) the reporting entity has reasonable grounds to believe that the account is to be used only for their clients.

701. The assessors were told that Canada has taken a risk-based approach in deciding to provide certain exemptions to third party determination. As such, all the exemptions are with respect to professionals in Canada that are subject to strict rules and codes of conduct and that are supervised by an SRO that can impose severe sanctions or, where the professional is not in Canada, is located in a FATF country or has identified its clients. The assessment team believes that despite these safeguards the exemptions to carry out third party determination bring in very far reaching exceptions that introduce potential gaps in the customer identification process and create some potential risky situations as far as ML and FT are concerned.

702. FATF Recommendations allow financial institutions to apply simplified or reduced CDD measures to customers resident in another country provided that the original country is satisfied that the other country is in compliance with and has effectively implemented the FATF Recommendations. Section 62(2)(b) and Section 9(5) as described earlier give financial institutions, in certain circumstances, the permission to exempt from CDD requirements or third party determination obligations certain customers resident in another country. However, Canada has not carried out a systematic country risk analysis to ensure that third countries in which customers of Canadian financial institutions are resident are in compliance with and have effectively implemented the FATF Recommendations.

703. CDD or third party determination exemptions are applicable where there is a suspicion of ML or FT or specific higher risk scenarios apply. This should be corrected.

Guidelines on the risk-based approach

704. Where financial institutions are permitted to determine the extent of the CDD measures on a risk sensitive basis, this should normally be consistent with guidelines issued by the competent authorities. At present, there are no detailed specific guidance measures that permit financial institutions to determine the extent of CDD measures on a risk sensitive basis.

705. OSFI Guideline B-8 refers institutions to the Basel Committee paper on Customer Due Diligence, issued in 2001, and encourages them to familiarise themselves with the standards outlined in the BCBS paper.

706. FINTRAC has issued a range of guidance, including “Implementation of a Compliance Regime” but this focuses primarily on the need to appoint a compliance officer, develop policies and procedures, conduct periodic reviews of policies and procedures and implement a training program. It does not specifically advise reporting entities on how to conduct a risk assessment, the risk-based approach to determination of vulnerabilities and the appropriate and proportional risk-based approaches to high-risk areas.

Timing of Verification

707. In line with the FATF requirements, financial institutions should be required to verify the identity of the customer and beneficial owner before or during the course of establishing a business relationship or conducting transactions for occasional customers. Subsections 64(2), 65(2) and 66(2) of the PCMLTF regulations set out the requirements for ascertaining the identity of individuals, corporations and other entities as follows:

Type of transactions or reporting party in charge of verification	Timelines to carry out verification
Verification of natural person identity	
Signature of a signature card on an account managed by a financial entity	Before any transaction other than an initial deposit is carried out on an account[84]
▪ Large cash transactions of CAD 10 000 or more ▪ Electronic fund transfers of CAD 3 000 or more ▪ Foreign currency exchange transactions of CAD 3 000 or more ▪ Issuance or redemption of money orders, traveller's cheques or other similar negotiable instruments	At the time of the transaction
Trust company	Within 15 days after the trust company becomes the trustee
Life insurance company or life insurance broker or agent	Within six months after the client information record is created[85]
Securities dealers	Within six months after the account is opened[86]
Verification of corporation identity (including directors) or entity other than corporation	
Financial entities	Before any transaction other than an initial deposit is carried out on an account[87]
Trust company	Within 15 days after the trust company becomes the trustee
Life insurance company or life insurance broker or agent	Within six months after the client information record is created[88]
Foreign exchange dealing	Within six months after client information record is created
Money Services Businesses	Within six months after the client information record is created[89]
Securities dealers	Within six months after the account is opened[90]

708. The regulations establish generally acceptable timelines for ascertaining customer identity in some scenarios and especially when such verification is carried out by financial entities (for verification of identity of natural persons, corporations and entities other than corporations). However, certain serious weaknesses exist for the verification of identity carried out by some financial sectors (such as securities and insurance sectors) and/or vis-à-vis certain types of customers (such as corporations or entities other than corporations). The Canadian authorities recognise the risks involved here and the PCMLFT Regulations shorten these timelines in certain circumstances. The assessors believe that the proposed 30 day timeline for corporations' verification in the MSBs, insurance and securities sectors is too long, especially in normal business circumstances.

709. IDA Policy 2 requires IDA members to have procedures in place to ensure supporting documents are received within a reasonable period of time of opening the account. Incomplete New Client Application Form and documentation not received must be noted, filed in a pending documentation file and be reviewed on a periodic basis. Failure to obtain required documentation

[84] In June 2008 credit card issuers will have to identify clients before the card is activated (see Sections 64(2)(b.2) of the amended PCMLTF Regulations).

[85] In June 2008 this timeline will be within 30 days (see Sections 64(2)(d) of the amended PCMLTF Regulations).

[86] In June 2008, before any transaction other than an initial deposit is carried out on an account (see Section 64(2)(a) of the amended PCMLTF Regulations).

[87] In June 2008, credit card issuers must identify the account holder before any card is issued on the account (see Sections 65(2)(a.1) and 66(2)(a.1) of the amended PCMLTF Regulations).

[88] In June 2008 this timeline will be within 30 days (see Sections 65(2)(c) and 66(2)(c) of the amended PCMLTF Regulations) .

[89] In June 2008 this timeline will be within 30 days (see Sections 65(2)(c) and 66(2)(c) of the amended PCMLTF Regulations).

[90] In June 2008 this timeline will be within 30 days (see Sections 65(2)(d) and 66(2)(d) of the amended PCMLTF Regulations).

within 25 clearing days must result in positive actions being taken. The nature of the positive action must be specified in the Member's written procedures.

710. For IDA Members, verification of the identity of the beneficial owners must be completed "as soon as practicable" after account opening, and in any case no longer than six months after the account is opened. Verification procedures must begin at the time of account opening. Delaying efforts to verify the identity of beneficial owners with a view only to the six-month deadline will be viewed by the Association as non-compliance with the regulation. IDA Sales Compliance reviews will examine Members' practices to ensure that verification efforts are begun on a timely basis and are diligently pursued. In keeping with their obligations under anti-money laundering regulations, Members should consider imposing higher standards for accounts posing a higher risk of use for money laundering or other improper activity, for example requiring prior verification of the identity of beneficial owners or maintaining closer supervision of account activity until beneficial ownership has been verified.

711. OSFI has advised FRFIs that with respect to loans, including mortgage loans, there is only one "transaction", which is the disbursement of the proceeds of the loan. OSFI expects institutions to verify the identity of individuals, corporations, and entities other than corporations that open accounts for the borrowing of funds prior to the disbursement of such funds, and to refrain from disbursing such funds until such identify is satisfactorily verified.

Failure to complete CDD

712. In situations where the financial institution has already commenced a business relationship but is unable to perform adequate CDD and establish beneficial ownership, FATF Recommendations require the business relationship to be terminated and consideration given to making a suspicious transaction report. However, the current regulations, in case of failure to satisfactorily complete CDD, are not in line with the FATF standards[91] as there is no explicit requirement to close an account when a financial institution fails to properly identify a customer. However, OSFI Guideline B-8 makes reference to closing accounts, namely *"FRFIs should consider terminating relationships with introducers that cannot, or fail to, provide the FRFI with the requisite customer identification and verification data that the FRFI is required to obtain under the PCMLTFA and Regulations"*. However, as mentioned before, financial entities are generally required to identify their customers at the outset and institutions that continue to operate the business relationship without ascertaining the customer's identity are liable to criminal penalties. FINTRAC has also identified the refusal of a customer to provide information or identification as one of the suspicious transaction indicators that would merit a suspicious transaction report.

713. In IDA Regulation 1300, if securities dealers are unable to obtain the information on the beneficial owner of non-individual accounts, they shall not open the account. If an IDA Member is unable to verify the identities of individuals within six months of opening the account, the Member shall restrict the account to liquidating trades and transfers, payments or deliveries out of funds or securities only until such time as the verification is completed. Similarly, any delays in verification that appear to result from lack of client cooperation should result in a careful assessment of the circumstances. Appropriate responses could include heightened supervision of account activity, filing of suspicious transaction reports with FINTRAC and/or closing of the account.

Existing Customers

714. Financial institutions are not required to apply CDD requirements to existing customers on the basis of materiality and risk and to conduct due diligence on such existing relationships at appropriate times[92].Subsection 63(1) of the PCMLTF Regulations only states that "where a person has ascertained

[91] Section 9.2 of the PCMLTFA that will enter into force in June 2008 prohibits financial institutions from opening an account when the customer's identity was not obtained.

[92] New requirements to come into force in June 2008 will apply the CDD requirements to existing customers on the basis of materiality and risk (see Section 71.1 of the amended PCMLTF Regulations**)**.

the identity of another person in accordance with section 64, the person is not required to subsequently ascertain that same identity again if they recognize that other person". The interpretation that Canada gives to that provision is that if the identity of a person was not ascertained in accordance with Section 64 (*e.g.* because they opened an account 20 years ago before CDD requirements were in place) and this person wants to open another account., this person, even though they are an existing customer, will have to be identified. The assessment team believes that this insufficiently addresses the requirement under Recommendation 5 (criterion 5.13).

Recommendation 6

715. *Legislative and regulatory requirements.* No specific legislative or other enforceable requirements in relation to PEPs are currently in force[93].

716. OSFI Guidance. The OSFI Guideline B-8 advises institutions that "certain customers may merit additional due diligence. Examples could include businesses that handle large amounts of cash, or that deal in luxury or high-end consumer goods. Finally, customers that hold important public positions (often referred to as "politically exposed persons") may require special attention". However, the guidance goes no deeper than this and banks, to a large extent, are left to decide how best to tackle the situation. The assessment team was told that OSFI has communicated its expectations to FRFIs in relation to PEPs and the need to have measures in place commensurate with the risks attached to PEPs although no binding requirement is currently in place.

717. In the insurance sector, although federally regulated life insurance companies are bound by OSFI Guidance B-8 (since the Guidance applies to all FRFIs), the CLHIA, the life insurance association, believes that Guideline B-8 is primarily intended to apply to the banking sector. As a consequence, the assessment team was advised that there is a perception that the guideline does not contain requirements that the insurance sector has to implement, for example no obligation to identify PEPs. The representatives of the association confirmed that no screening for PEPs actually takes place in the industry.

718. Discussions with the banking industry indicate that at least the larger banks have undertaken their own measures to help identify customers who may be PEPs, normally by investing in proprietary software solutions. However, this is not standard across the industry and indeed smaller banks indicated that they were not addressing the issue, largely as a result of cost factors. A similar position appears to exist for other types of financial institutions.

Recommendation 7

719. *Definition.* A correspondent banking relationship is defined in the PCMLTFA as a relationship created by an agreement or arrangement under which banks to which the Bank Act applies, cooperative credit societies, savings and credit unions and *caisses popularies*, companies to which the Trust and Loan Companies Act applies, and trust companies regulated by a provincial act or certain prescribed entities undertake to provide to a prescribed foreign entity services such as international electronic funds transfers, cash management, cheque clearing and any prescribed services.

720. *Legislative and regulatory requirements*. Canada enacted new requirements in June 2007 (that entered into force on June 30, 2007) that deal with correspondent banking related issues, and address many of the requirements of Recommendation 7. Section 9.4 (1) of the PCMLTFA came into force in June 2007 and requires every financial entity to take the following measures before entering into a correspondent banking relationship with a prescribed foreign entity: (1) obtain prescribed information about the foreign entity and its activities; (2) ensure that the foreign entity is not a shell bank as defined in the regulations; (3) obtain the approval of senior management; (4) set out in writing their

[93] New requirements in relation to PEPs that were introduced under amendments to the PCMLTFA (Section 9.3) and the PCMLTF Regulations will come into force on 23 June 2008.

obligations and those of the foreign entity in respect of the correspondent banking services; and (5) any prescribed measures.

721. New provisions in the PCMLTF Regulations in relation to correspondent banking have also been in force since June 30, 2007. These provisions require that every financial entity that enters into a correspondent banking relationship shall (Section 55 of the PCMLTF Regulations):

- Ascertain the name and address of the foreign financial institution by examining a copy of the foreign financial institution's banking licence, banking charter, authorisation or certification to operate from the relevant regulatory agency or certificate of corporate status or a copy of another similar document.
- Take reasonable measures to ascertain, based on publicly available information, whether there are any civil or criminal penalties that have been imposed on the foreign financial institution in respect of anti-money laundering or anti-terrorist financing requirements and, if so, to conduct, for the purpose of detecting any transactions that are required to be reported under the Act, ongoing monitoring of all transactions in the context of the correspondent banking relationship.

722. The same regulations state that every financial entity shall, when it enters into a correspondent banking relationship, keep a record in respect of the foreign financial institution containing the following information and documents (Section 15.1(2) of the PCMLTF Regulations):

- The name and address of the foreign financial institution.
- The names of the directors of the foreign financial institution.
- The primary business line of the foreign financial institution.
- A copy of the most recent annual report or audited financial statement of the foreign financial institution.
- A copy of the foreign financial institution's banking licence, banking charter, authorisation or certification to operate from the relevant regulatory agency or certificate of corporate status or a copy of another similar document.
- A copy of the correspondent banking agreement or arrangement, or product agreements, defining the respective responsibilities of each entity.
- The anticipated correspondent banking account activity of the foreign financial institution, including the products or services to be used.
- A statement from the foreign financial institution that it does not have, directly or indirectly, correspondent banking relationships with shell banks.
- A statement from the foreign financial institution that it is in compliance with anti-money laundering and anti-terrorist financing legislation in its own jurisdiction.

723. Finally, the Regulations require these types of financial institutions to take reasonable measures to ascertain whether the foreign financial institution has in place anti-money laundering and anti-terrorist financing policies and procedures, including procedures for approval for the opening of new accounts and, if not, for the purpose of detecting any transactions that are required to be reported to FINTRAC, take reasonable measures to conduct ongoing monitoring of all transactions conducted in the context of the correspondent banking relationship. All of these measures apply to all foreign financial institutions, regardless of country of origin. However, there is no requirement to assess the respondent institution's AML/CFT controls, and ascertain that they are adequate and effective. Nor are there requirements for the financial institutions to determine the reputation of the foreign financial entity (other than take reasonable measures to ascertain, based on publicly available information, whether there are any civil or criminal penalties that have been imposed on the foreign financial institution in respect of anti-money laundering or anti-terrorist financing requirements) or the quality of supervision of that entity.

724. *Payable through accounts*. The PCMLTF Regulations require that in situations where the customer of the respondent entity has direct access to the services provided under the correspondent banking relationship, the entity shall take reasonable measures to ascertain that:

- The respondent entity has performed the customer due diligence obligations, in accordance with the measures for ascertaining customer identity set out in the Regulations, in respect of those of its customers that have direct access to the accounts of the correspondent entity.
- The respondent entity has agreed to provide relevant customer identification data upon request to the correspondent entity.

725. The respondent entity must carry out customer identification based on the CDD requirements set out in the PCMLTF Regulations (as applicable from time to time). However the full set of CDD measures in the Regulations will not be in force until June 2008, and the current requirements are not in line with the FATF standards (see conclusions of the report in relation to Recommendation 5). Financial institutions are therefore not currently required to be satisfied that the respondent financial institutions have performed all the normal CDD obligations set out in Recommendation 5 on those of their customers that have direct access to the accounts of the correspondent financial institutions.

726. *OSFI Guidance*. Guidance to all banks and federally regulated trust & loan companies since 2002 has taken the form of a letter from OSFI, dated February 22, 2002 entitled "*Enhanced Due Diligence for Correspondent Accounts*". This letter advises recipients of the introduction of the USA PATRIOT Act and the prohibition on dealing with shell banks. The letter goes on to draw recipients' attention to the Basel Committee Paper *"Customer Due Diligence for Banks"* issued October 2001 and states, *"In light of these two initiatives, we believe that Canadian deposit taking institutions should be aware of the enhanced BIS standard for dealing with correspondent banking accounts and encourage them to adopt measures which will ensure that they do not enter into correspondent accounts with shell banks"*. There is also passing reference in OSFI Guideline B-8 about the risks involved in entering into correspondent relations with shell banks, namely; *"We draw the attention of FRFIs to the risks involved in dealing with "shell" banks…and in the light of applicable international standards, OSFI encourages all FRFIs to adopt measures which will ensure that they do not enter into correspondent relationships with shell banks"*.

727. Canada has indicated that Canadian financial institutions with correspondent banking relationships have branches or subsidiaries in the U.S. These financial institutions have applied to their Canadian operations the requirements of the 2002 US PATRIOT Act on correspondent banking relationships.

Recommendation 8

728. *Legislative and regulatory requirements.* At the time of the on-site visit, there were no specific legislative or other enforceable obligations addressing the risks posed by the application of new technological developments to the provision of financial services other than the fundamental identification requirements of each person or entity under the PCMLTFA, regardless of delivery channel.

729. Financial institutions are currently not required to have policies and procedures in place to address any specific risk associated with non face-to-face business relationships or transactions[94].

730. *OSFI Guidance*. OSFI Guideline B-8 currently encourages Canadian FRFIs to implement the customer due diligence standards set out in the Customer Due Diligence for Banks paper released by the Basel's Committee in 2001 in a manner that is appropriate with the size, the complexity and the

[94] New regulations that will enter into force in June 2008 include enhanced identification measures to ascertain the identity of a client who is not physically present (see Sections 64(1)(b), 64(1.1)(b), 64(1.2) 64(1.3), 64.1 and Schedule 7 of the amended PCMLTF Regulations).

nature of the entity's activities. This paper highlights the necessity for banks to have adequate measures to mitigate higher risks, including non-face-to-face transactions or relationships. The guidelines further require these institutions to have in place a non-face-to-face identification process that is as effective as when the client is physically present. The assessors were told that in the course of its examinations of correspondent banking operations, it has never seen any direct or indirect relationship with a shell bank.

731. The assessors were advised of an emerging technology known as "white label" automated teller machines, the development of which is being monitored by the Department of Finance, together with the use of stored value cards and Internet payment providers. "White label" automated teller machines, are operated by non-financial institutions and represent approximately 60% of the total number of cash dispensers in Canada. They are generally located in non-traditional places, including supermarkets and bars. The main concern is that they can be loaded by the owner and may create opportunities to 'place' illicit cash.

732. Interac has developed limited mechanisms to prevent the misuse of these machines, such as enhancing the process for accepting new members and strengthening the regulation of owners, but concerns reflected by the RCMP suggested that bar owners or other entertainment complexes that provide heavily cash-based services could in effect recycle their own money each night, supplementing it with other illegal funds. Discussions seem to take place with Interac to enhance existing mechanisms in respect of customer due diligence and record keeping. A number of gaps in Interac's existing CDD rules have been identified (*e.g.* the acquirer, or the Interac member that ultimately provides connection for an ATM to the Interac network, has to conduct CDD on their direct business partners only (the payments processor), but are not required to perform CDD on the ATM owner if he is not a direct partner). Discussions are ongoing to determine additional measures.

733. The Department of Finance has also conducted a preliminary analysis of the AML/CFT risks of the stored value card market and intends to examine in more detail the shortfalls in the client identification practices of these vendors. The RCMP acknowledge that such gift cards represent a serious money laundering option, especially in the absence of any money laundering control at retail locations. In addition, the Department of Finance has engaged a number of Internet payment providers to discuss the AML/CFT risks and the structure of that sector. These are positive moves at the Government level but there remains nothing in force at the financial institution level that requires them to implement policies and procedures addressing new technologies when face to face identification is not possible.

734. The current CDD measures in relation to non face-to-face business are rather weak (see comments in relation to Recommendation 5 – *Required CDD measures*) since the only measure for the reporting entities is to ascertain the identity of the individual by confirming that a cheque drawn by that individual on an account at a financial entity has been cleared[95].

735. Some large financial institutions met during the on-site visit seem to apply higher internal standards in this area. However, the assessment team met with a limited sample of financial institutions and was also told that in other institutions such higher standards were not in place yet.

3.2.2 Recommendations and Comments

736. *Scope issues*. Financial leasing, factoring, finance companies (entities specialized in consumer lending, credit cards, equipment financing and small business loans); providers of e-money; Internet payment providers; cheques cashiers when only cashing cheques issued to denominated persons are not currently included in the scope of the PCMLTFA, and are thus not covered by the CDD

[95] The PCMLTF Regulations (Section 64) introduce new non-face-to-face identification methods that are applicable to any person or entity covered by the PCMLTFA and are applicable to any non-face-to-face circumstances.

requirements. This is an important omission and Canada should take steps to bring them within the CDD requirements unless it can prove, based on a formalised and thorough risk assessment analysis that these categories of institutions are of lower ML/TF risks.

737. So far, financial institutions (except the securities dealers monitored by the IDA) have received very little guidance spelling out the measures to take to implement proper AML/CFT measures. FINTRAC guidance focuses primarily on meeting record keeping and reporting requirements and is not very detailed. OSFI Guidance is also very limited since it covers a limited range of requirements. It is important for financial institutions to have detailed and comprehensive guidance at their disposal as a tool to properly and uniformly implement the AML/CFT requirements.

738. *Recommendation 5*. With regard to numbered or confidential accounts, Canada should consider adopting detailed rules or guidance on the use of such accounts by financial institutions. Such rules should clearly set out the obligation for compliance officers to have access to CDD information.

739. New provisions will come into force in 2008 with regard to the circumstances where financial institutions have to perform customer identification. Canada should ensure that the new provisions are fully in line with the FATF requirements.

740. With regard to the identification measures for natural persons, Canada should ensure that only reliable CDD documentation is acceptable, especially in non face-to-face situations. Canada should consider introducing additional requirements for identifying foreign customers.

741. New provisions will come into force in June 2008 with regard to identification of beneficial owners. Canada should ensure that the new provisions are fully in line with the FATF requirements and are properly implemented by all financial institutions.

742. The requirement to identify up to three persons who are authorised to give instructions in respect of an account should be extended to any person purporting to act on behalf of the customer.

743. The PCMLTF Regulations, enacted in June 2007 and coming into force in June 2008 require financial entities to keep a record of the intended use of the account. Canada should ensure that such requirement is implemented by all financial institutions in line with the FATF standards. Based on the provisions adopted in June 2007 and coming into force in 2008, Canada should ensure that financial institutions fully implement the obligation to conduct ongoing due diligence on the business relationship and ensure all documents, data and information collected under the CDD process in line with the FATF standards (as it is already the case for securities dealers) are kept up-to-date and relevant.

744. In relation to ML/FT risks, Canada should ensure that financial institutions perform enhanced due diligence for higher risk categories of customer, business relationship or transaction once the new regulations enter into force in June 2008. This should be done in line with the FATF standards. Current scenarios of full exemptions from CDD and third party determination should be subject to simplified or reduced CDD. Where financial institutions are permitted to apply simplified or reduced CDD measures to customers resident in another country, this should be limited to countries that Canada is satisfied are in compliance with and have effectively implemented the FATF recommendations (*i.e.* Canada should not rely on presumption of conformity of FATF countries for instance). Canada should adopt explicit provisions that set out that such exemptions are not acceptable where there is a suspicion of ML or FT or specific higher risk scenarios apply. Canada should consider developing guidelines for financial institutions that are permitted to determine the extent of the CDD measures on a risk sensitive basis.

745. With regard to the timing of customer's identity verification, new regulations that will enter into force in June 2008 should be implemented in line with the FATF standards and Canada should

consider adopting shorten timelines in the insurance, foreign exchange, MSBs and securities sectors for corporations' or entities' identification, especially in normal business circumstances.

746. *Recommendation 6.* Canada should ensure that the new provisions enacted in June 2007 are fully in line with the FATF requirements and ensure that reporting entities implement measures that meet the FATF standards.

747. *Recommendation 7.* Canada should require financial entities to assess the respondent institution's AML/CFT controls and to ascertain that these controls are adequate and effective. Institutions should also be required to further determine the reputation of the foreign financial entity and the quality of supervision of that entity.

748. In the context of payable through accounts, financial institutions should be required to be satisfied that the respondent financial institutions have performed all the normal CDD obligations set out in Recommendation 5 on those of their customers that have direct access to the accounts of the correspondent financial institutions. Canada should ensure that reporting entities implement measures that meet the FATF standards.

749. *Recommendation 8.* Canada should ensure that the new provisions enacted in June 2007 are fully in line with the FATF requirements and ensure that reporting entities implement measures that meet the FATF standards.

3.2.3 Compliance with Recommendations 5 to 8

Rec.	Rating	Summary of factors underlying ratings
Rec.5	NC	*Scope issue* • The requirement to conduct CDD does not extend to all financial institutions as defined by the FATF (notably financial leasing, factoring and finance companies). *Numbered accounts* • *Although numbered accounts are permissible and used, there is no direct requirement to maintain them in such a way that full compliance can be achieved with the FATF Recommendations.* *When CDD is required* • There is no requirement to carry out CDD measures when there is a suspicion of ML or TF and when financial institutions have doubts about the veracity or adequacy of previously obtained CDD data. • Customer identification for occasional transactions that are cross-border wire transfers takes place for transactions above CAD 3 000. This threshold is currently too high and no equivalent requirement is in place for domestic wire transfers. *Required CDD measures* • The current customer identification measures for natural persons are insufficient, especially in relation to non face-to-face business relationships. *Identification of persons acting on behalf of the customer* • The requirement to identify up to three persons who are allowed to give instructions in respect of an account is too limitative. *Third party determination and identification of beneficial owners* • Except for IDA supervised entities, financial institutions are neither required to understand the ownership and control structure of the customer nor obliged to determine who are the natural persons that ultimately own or control the customer. *Purpose & intended nature of the business relationship* • There are currently no requirements (except for securities dealers) to obtain information on the purpose and intended nature of the business relationship.

Rec.	Rating	Summary of factors underlying ratings
		Ongoing Due Diligence • Except for securities dealers, there are currently no requirements to conduct ongoing due diligence on the business relationship although the need to identify customers for large cash transactions and electronic fund transfers provide certain automatic trigger points. • Except for securities dealers financial institutions are not required to ensure that documents, data and information collected under the CDD process is kept up-to-date and relevant. *ML/FT risks – enhanced due diligence* • There is no requirement to perform enhanced due diligence for higher risk categories of customer, business relationship or transaction. *ML/FT risks – reduced or simplified due diligence* • The current exemptions mean that, rather than reduced or simplified CDD measures, no CDD apply, which is not in line with the FATF standards. • Exemptions from CDD and third party determination bring in very far reaching exceptions that introduce potential gaps in the customer identification process (especially the exemptions apply to financial entities that operate in FATF countries based on presumption of conformity only). • There is no explicit provisions that set out that CDD or third party determination exemptions are not acceptable where there is a suspicion of ML or FT or specific higher risk scenarios apply. • Financial institutions, in certain circumstances, are given the permission to exempt from CDD requirements or third party determination obligations certain customers resident in another country. However, Canada has not carried out a systematic country risk analysis to ensure that third countries in which customers of Canadian financial institutions are resident are in compliance with and have effectively implemented the FATF Recommendations. *Timing of verification* • PCMLTF Regulations sets out unreasonable verification timelines to be carried out by certain financial sectors and/or in relation to certain customers. *Failure to satisfactorily complete CDD* • Financial institutions (except securities dealers in some circumstances) are not prevented from opening an account or commencing business relationship or performing a transaction and they are not required to make a suspicious transaction report. • In situations where the financial institution has already commenced a business relationship but is unable to perform adequate CDD and establish beneficial ownership, there is no requirement to terminate the business relationship and to consider making a suspicious transaction report.
Rec. 6	NC	• There were no mandatory legislative or other enforceable requirements in relation to PEPs at the time of the on-site visit.
Rec. 7	PC	• Financial entities are not required to assess the respondent institution's AML/CFT controls and to ascertain that these controls are adequate and effective. • Financial institutions are not required to determine the reputation of the foreign financial entity (other than take reasonable measures to ascertain whether there are any civil or criminal penalties that have been imposed on the foreign financial institution in respect of AML/CFT requirements) and the quality of supervision of that entity. • In the context of payable through accounts, the respondent entity is not required to perform all the normal CDD obligations set out in Recommendation 5 on its customers that have direct access to the accounts of the correspondent institution in line with the FATF standards. • The effectiveness of the measures in place cannot yet be assessed.
Rec. 8	NC	• There are no specific legislative or other enforceable obligations. addressing the risks posed by the application of new technological developments. • Financial institutions are not required to have policies and procedures in

Rec.	Rating	Summary of factors underlying ratings
		place to address any specific risk associated with non face-to-face business relationships or transactions. • No effective CDD procedures for non face-to-face customers are in place.

3.3 Third parties and introduced business (R.9)

3.3.1 Description and Analysis

750. *General*. The two scenarios of introduced business (where CDD is completed by someone who is neither an employee, nor a person in a contractual agency relationship) and outsourcing or agency relationships agreements (where the agent is to be regarded as synonymous with the financial institution *i.e.* the processes and documentation are those of the financial institution itself) exit in Canada. Under the Regulations, only two scenarios of introduced business are contemplated (Sections 56(2) and 57(5)). Outside these two situations, the assessment team was told that financial institutions are expected to either carry out the CDD process themselves or enter into an agency agreement with the entity authorised to act on their behalf[96].

751. *Regulatory provisions on agency relationships*. Section 6(2) of the PCMLTF Regulations addresses the issue of agency relationships. Where a person, other than a life insurance broker or agent, is an agent of or is authorised to act on behalf of another person or entity (banks, trust companies, etc.), it is that other person or entity rather than the agent or the authorised entity or person who is responsible for meeting the requirements under the PCMLTF Regulations. Based on that provision, FINTRAC and OSFI have developed further guidance, including with respect to persons or entities who may be appointed as agent but who are not subject to the regulations.

752. *Regulatory provisions on introduced business*. In the PCMLTF Regulations, only two provisions are applicable to the introduced business scenario (although in a very indirect way). Section 56(2) states that a life insurance company or life insurance broker or agent is not required to ascertain the identity of a person where there are reasonable grounds to believe that the person's identity has been ascertained by another life insurance company or life insurance broker or agent in respect of the same transaction or of a transaction that is part of a series of transactions that includes the original transaction. Section 57(5) states that a securities dealer is not required to ascertain the identity of a person who is authorised to give instructions in respect of an account that is opened for the sale of mutual funds where there are reasonable grounds to believe that the person's identity has been ascertained by another securities dealer in respect of (a) the sale of the mutual funds for which the account has been opened; or (b) a transaction that is part of a series of transactions that includes that sale. These are the only exceptions where reliance on a third party or introduced business is allowed without an agreement or arrangement (and where the outsourcing scenario applies). When these scenarios apply, there is no explicit requirement in the Regulations for financial institutions to obtain from the third party the necessary information concerning certain elements of the CDD process and satisfy themselves that copies of identification data are made available from the third party upon request without delay. The Regulations do not set out that the ultimate responsibility for customer identification and verification should remain with the financial institution relying on the third party.

753. *Existing guidance*. In FINTRAC guidance on record keeping and client identification, where reporting entities choose to rely on a third party (called "agent") to identify their customers, they should enter into a written agreement with the agent outlining what they expect the agent to do for them. The guidelines clearly states that even if reporting entities use an agent, they remain responsible for making sure the identification requirements are met. FINTRAC Interpretation Notice n°3 of January 17, 2006 sets out that all persons and entities subject to the PCMLTFA can rely on the use of the agent scenario to ascertain customer's identity; however the ultimate responsibility of ascertaining identity and making any third party determination remains with the person or entity and not their

[96] An amendment enacted in June 2007 and coming into force in June 2008 clarifies the requirements in respect of agency agreements.

agent. FINTRAC Interpretation Notices provide technical interpretation and positions regarding certain provisions contained in the PCMLTFA and related regulations.

754. OSFI Guideline B-10 ("*Outsourcing of Business Activities, Functions and Processes*") deals with outsourcing arrangements that are outside the scope of Recommendation 9. OSFI Guideline B-8 clearly refers to outsourcing record keeping or other functions (including customer identification) that form part of their obligations, or that utilize introducers to gather new business.. In this Guideline, FRFIs that outsource record keeping or other functions that form part of their PCMLTFA compliance regime, or that utilize introducers to gather new business (such as deposit brokers, mortgage brokers, correspondents, law firms, accounting firms, etc., including those outside Canada) are reminded that they retain full accountability for having customer identification and verification processes, and for obtaining customer records with respect to accounts opened through such sources. With respect to introduced business, FRFIs must obtain the necessary customer information for their records prior to, at, or at a reasonable time after, the time that the business is accepted. OSFI recommends that relationships with introducers be subject to written agreements to ensure that the responsibility for collecting and verifying customer identification information is clearly understood. FRFIs should consider terminating relationships with introducers that cannot, or fail to, provide the FRFI with the requisite customer identification and verification data that the FRFI is required to obtain under the PCMLTFA and the Regulations.

755. *Business practice*. As confirmed by the financial sector representatives during the on-site visit, introduced business mechanisms are broadly used by the industry in Canada. For instance, in practice, where banks are not able to verify the identity of a customer directly, verification is typically provided through a Canadian embassy, lawyers, and in the case of businesses, lawyers external to the business, accounting firms, referrals from another financial institution, or other types of agents for particular products or services that a financial institution provides. here is typically no formal contract between the bank and these other parties (there is no outsourcing arrangement). The banking sector believes that in some circumstances, a requirement to enter into contractual arrangements is operationally impractical, as banks would need to enter into multiple contracts with agents in every country in which clients reside or operate or in which signing officers reside or work. In this case, the introduced business scenario takes place (since financial institutions do not enter into formal outsourcing arrangements) although no measures in line with Recommendation 9 are in force.

756. In the securities sector, there are many situations in which businesses make use of agents to act on their behalf. The relationship between a dealer and individuals acting on its behalf may be a principal-agent relationship. IDA By-law 39 covers such relationships. In such cases the agent may be largely indistinguishable from an employee. By contrast, the term "introducer" has a variety of meanings in different contexts. In general, it suggests a pre-existing relationship between the introducer and the customer or prospective customer. It refers to a specific type of services relationship between dealers. IDA Members make use of accounting and law firms to conduct money laundering verification on their behalf using letters of instruction rather than contracts. For IDA, it is always essential that the terms of the relationship be clear. The principal is always responsible for the acts of its agent done within those terms and for keeping proper records of things done by the agent on its behalf.

757. Insurance companies invariably use introduced business too. In the life insurance field, independent brokers and agents are a separate reporting entity under the PCMLTFA and are permitted to identify customers under the PCMLTF regulations. The MSB sector relies largely on its own agents to promote and expand the business network and companies enter into agreements with agents as a general practice.

758. Trust companies utilise introducers to varying degrees to gather new deposit and loan business but remain well aware of their ultimate responsibility and accountability for having full customer identification and verification. Introducers fall under two categories, namely SRO and Non-SRO. Under the former category, they source new business through the IDA or the MFDA members who are

subject to the PCMLTFA. Non-SRO introducers include mortgage brokers and "Guaranteed Investment Certificate" (GIC) Agents/Brokers such as the FCIDB. Business introduced by this category is considered to have a somewhat higher risk profile relative to compliance because they are not directly subject to the PCMLTFA and therefore do not represent the same assurance of compliance. Risks are mitigated by requiring agent/broker certifications as required in signed agreements. In order for business to be accepted by trust companies, each introducer must have a signed agreement in place which specifies the customer information requirements and provides rights of audit to ensure the introducer has appropriate processes in place to meet trust company requirements.

759. *Conclusion*. Outside the very specific situations covered under Sections 56(2) and 57(5), no other introduced business scenarios are contemplated or controlled by the PCMLTF Regulations although the financial sector uses introduced business mechanisms (in addition to outsourcing or agency arrangements) as a business practice. However, no specific requirements as set out in Recommendation 9 apply to these scenarios (since Section 6(2) of the PCMLTF Regulations exclusively covers agency relationships type of arrangements that are outside the scope of Recommendation 9).

3.3.2 Recommendations and Comments

760. Since introduced business arrangements exist in Canada in other circumstances than those captured by Sections 56(2) and 57(5) of the PCMLTF Regulations, Canada should adopt provisions that address all aspects of Recommendation 9 and ensure that financial institutions implement them.

3.3.3 Compliance with Recommendation 9

Rec.	Rating	Summary of factors underlying ratings
Rec.9	NC	• In the only two scenarios where reliance on a third party or introduced business is legally allowed without an agreement or arrangement, the measures in place are insufficient to meet the FATF requirements. • In addition to the two reliance on third parties/introduced business scenarios contemplated by the Regulations, the financial sector uses introduced business mechanisms as a business practice. However, no specific requirements as set out in Recommendation 9 apply to these scenarios.

3.4 Financial institution secrecy or confidentiality (R.4)

3.4.1 Description and Analysis

761. *Access to information for competent authorities*. Section 8 of the Canadian Charter of Rights and Freedoms (the Charter) establishes a fundamental principle that everybody has the right to be secure against unreasonable search and seizure. This Charter protection has a direct impact on law enforcement's ability to seize information and evidence and generally, prior judicial authorisation is required before intrusions can be made upon individual privacy.

762. Section 5 of PIPEDA (which is Canada's data protection law) requires organizations to comply with specific obligations concerning the collection, use and dissemination of customers' personal information but Subsection 7(2) of PIPEDA provides that an organisation can elect to disclose personal information that it has reasonable grounds to believe could be useful in the investigation of a contravention of the laws of Canada, a province or a foreign jurisdiction that has been, is being or is about to be committed and the information is used for the purpose of investigating that contravention. Further subsections of PIPEDA allow an organisation to voluntarily disclose personal information without disclosing the fact to their customer and to comply with subpoenas, warrants and court orders to compel the production of court orders. Section 7(3)(c.1) allows organizations to disclose personal information to government institutions without the knowledge or consent of the individual and without judicial authorisation in certain specified circumstances related to law enforcement and national

security (especially the government institution must identified its lawful authority to obtain the information)[97].

763. The assessment team was told that law enforcement efforts are actually being thwarted by stringent interpretations of PIPEDA with respect to obtaining non-sensitive personal information on a voluntary basis from companies. This finding is also reflected in the Fourth Report of the Standing Committee on Access to Information, Privacy and Ethics that published a review of PIPEDA in May 2007[98]. The report mentions that in some occasions (for instance, a police officer may be in the early stages of an investigation, in which he or she is trying to determine if in fact a crime has occurred. He or she may have to solicit the assistance of a financial institution because he or she needs to know if that person used a credit card for instance and for this information he or she relies on paragraph 7(3)(c.1), which permits disclosure upon lawful authority), companies insist on seeing a court order from a law enforcement or investigative agency before disclosing any personal information pursuant to Section 7(3)(c.1). Some companies interpret "*lawful authority*" to mean that a warrant or court order is required before they comply. This interpretation may not be consistent with the intent of the drafting of the Act and seems overly restrictive. The Standing Committee agrees that there is a valid concern around what constitutes lawful authority for the purposes of disclosure under section 7(3)(c.1). The Committee agrees that clearly something other than judicial authorisation is required for the purposes of this section given that section 7(3)(c) provides for disclosure without knowledge or consent in compliance with a warrant or subpoena[99]. The RCMP indicated to the assessment team that this issue is not a concern as far as AML/CFT investigations are concerned and the RCMP has access to the information it needs to carry out such investigations. Nevertheless, the assessment team believes that further clarification should be brought to the Act to ensure that competent authorities have the ability to access information they require to properly perform their functions.

764. *Sharing of information between competent authorities.* The Canadian Privacy Act requires all federal departments, agencies and most Crown corporations to have lawful, authorised purposes for collection of the personal information of individuals. It also requires these departments, agencies and corporations to notify individuals of those purposes; restricts the purposes for which information collected can later be used or disclosed; and provides individuals a right of access to the personal information about them held by government institutions. The implementation of the Privacy Act does not seem to have caused problems as far as AML/CFT issues are concerned. More issues seem to arise from the PCMLTFA and the interpretation of FINTRAC of "designated information"[100] (see Section 2.5 of the report for further comments).

---

97 Section 7(3)(c.1) says: "*For the purpose of clause 4.3 of Schedule 1, and despite the note that accompanies that clause, an organization may disclose personal information without the knowledge or consent of the individual only if the disclosure is made to a government institution or part of a government institution that has made a request for the information, identified its lawful authority to obtain the information and indicated that (i) it suspects that the information relates to national security, the defense of Canada or the conduct of international affairs, (ii) the disclosure is requested for the purpose of enforcing any law of Canada, a province or a foreign jurisdiction, carrying out an investigation relating to the enforcement of any such law or gathering intelligence for the purpose of enforcing any such law, or (iii) the disclosure is requested for the purpose of administering any law of Canada or a province*".

98 Pursuant to its mandate under Standing Order 108(2), the Committee publishes Statutory Reviews of the Personal Information Protection and Electronic Documents Act (PIPEDA).
See http://cmte.parl.gc.ca/Content/HOC/committee/391/ethi/reports/rp2891060/ethirp04/05-rep-e.htm

99 The Committee believes that it is important, for both organizations and law enforcement agencies, that what is meant by "lawful authority" be clarified in section 7(3)(c.1). Moreover, the Committee feels that consideration should be given to changing the word "may" in the opening part of section 7(3) in order to make the provision mandatory as opposed to permissive.

100 FINTRAC obligation to disseminate financial information to domestic authorities for further action when it has reasonable ground to suspect that the information would be relevant to the investigation or prosecution of a money laundering or terrorist activity offence seems to be too strictly implemented using a higher threshold that the one required by law. The assessors have concerns about the interpretation that is made by FINTRAC of the "threshold to disclose" level that might be reached to disclose.

765. *Sharing of information between financial institutions.* The Bank Act contains provisions regulating the use and disclosure of personal financial information by banks. Most provinces have legislation dealing with consumer credit reporting. These acts typically impose an obligation on credit reporting agencies to ensure the accuracy of the information, place limits on the disclosure of the information and give consumers the right to have access to, and challenge the accuracy of, the information. Provincial laws governing credit unions typically have provisions dealing with the confidentiality of information relating to members' transactions. There are a large number of provincial acts that contain confidentiality provisions concerning personal information collected by professionals. Such provisions do not seem to inhibit the implementation of the FATF Recommendations.

766. Generally the banks are of the view that the PIPEDA has served Canadians well in protecting information collected, used and disclosed about them by private sector organizations and has provided the necessary structure to allow private sector organizations to effectively implement its requirements into their business operations. The assessment team was told that FRFIs can share information with foreign financial institutions where this information is required by Recommendations 7, 9 or Special Recommendation VII. The exchange of information in the context of SRVII has raised concern in the past in relation to Principle 4.1.3 of Schedule 1 of the PIPEDA[101]. In 2006, the Office of the Privacy Commissioner of Canada received a complaint against six Canadian financial institutions as a result of the disclosures by the Society for Worldwide Interbank Financial Telecommunication (SWIFT) of personal information to US authorities. The complainant was of the view the banks were responsible for the personal information that was transferred to SWIFT for processing of money orders and maintained that the disclosures were for an inappropriate purpose since they circumvented established approved processes for transferring data as set out in the PIPEDA. The Privacy Commissioner of Canada analysed the issue (see "Responsibility of Canadian financial institutions in SWIFT's disclosure of personal information to US authorities", PIPEDA case summary 365) and considered the contractual documentation that exists between SWIFT and the banks. She concluded that they are meeting their obligations under the Act, specifically, Principle 4.1.3, to ensure a comparable level of protection when processing wire transfers.

767. A comparable case was also discussed by the Privacy Commissioner of Canada in a context of outsourcing of financial services by a Canadian bank to the United States. While the PIPEDA does not prohibit the use of foreign-based third-party service providers, it does oblige Canadian-based organizations to have provisions in place, when using third-party service providers, to ensure a comparable level of protection. The Privacy Commissioner of Canada concluded that the Canadian Bank had in place a contract with its third-party service provider that provided guarantees of confidentiality and security of personal information and that an organization with a presence in Canada that outsources the processing of personal information to a U.S. firm cannot prevent its customers' personal information from being lawfully accessed by U.S. authorities. the Commissioner finally recommended that a company in Canada that outsources information processing to a third country should notify its customers that the information may be available to the U.S. government or its agencies under a lawful order made in that country.

768. Sharing information within corporate groups is another issue raised by the banking sector. Many corporations that have multiple separate subsidiary companies, as required by federal/provincial regulatory requirements nevertheless operate as one unit under a single management team. With AML requirements, the parent bank's compliance officers must look at the activities of each client across their dealings with the entire banking group, not just each entity separately. In the securities field too, related parties assessments must include information from all parts of the financial group, not each entity separately. The AML requirements require that information about individuals be available to

[101] Principle 4.1.3 sets out that "an organization is responsible for personal information in its possession or custody, including information that has been transferred to a third party for processing. The organization shall use contractual or other means to provide a comparable level of protection while the information is being processed by a third party".

compliance officers, which may result in the sharing of information. In this situation, the institutions must fully apply the PIPEDA provisions and insure that their customers are aware of and consent to that practice so as to satisfy PIPEDA's requirements not to share information with different parts of the corporate group. The banking sector has called for amendments to PIPEDA that would acknowledge these other legislative requirements and facilitate regulatory reporting[102].

3.4.2 Recommendations and Comments

769. Canada should verify that the implementation of the data protection law (PIPEDA) is not subject to excessively strict interpretations that might prevent law enforcement authorities accessing information in the course of investigations.

3.4.3 Compliance with Recommendation 4

Rec.	Rating	Summary of factors underlying ratings
Rec.4	C	• The Recommendation is fully met.

3.5 Record keeping and wire transfer rules (R.10 & SR.VII)

3.5.1 Description and Analysis

Recommendation 10

770. Section 6 of the PCMLTFA states that every reporting entity shall keep and retain prescribed records in accordance with the regulations.
