771. The requirement to retain records for a period of at least five years applies across the board to all reporting entities, although it seems a general practice to have a record retention policy and procedures in place to maintain records for at least seven years, largely for tax purposes. Section 69 of the PCMLTF Regulations states that all records that relate to signature cards, account operating agreements, client credit files and account application forms must be kept for at least five years after the date the account is closed. Client information records (i.e. client's name and address and the nature of the client's principal business or occupation), records of certificates of corporation status, records that ascertain the existence of a corporation or entity must be kept for at least five years after the last business transaction is conducted. In respect of all other records, the records must be maintained from the day on which they have been created.

772. Financial entities have to keep the following records:

- Large cash transaction records.
- Account opening records.
- Certain records created in the normal course of business.
- Certain records about the operation of an account (such as account statements).
- Foreign currency exchange transaction tickets.
- Certain records about transactions with non-account holders.
- The name and address of the client initiating a wire transfer for CAD 3 000 or more when the financial entity is acting as an MSB.
- Trust related records (trust companies)[103].

[102] See in particular the Canadian Bankers Association response to the Office of the Privacy Commissioner of Canada on PIPEDA, 7 September 2006.

[103] Receipt of funds records will have to be kept from June 2008 (see Sections 1(2), 36(1), 39(1) (these provisions were finalized on June 27, 2007) and 33.2 and 33.4 (these provisions were pre-published on June 30, 2007) of the amended PCMLTF Regulations).

773. *Large cash transaction record*. For any large cash transaction, the information to be kept in a large cash transaction record includes the following:

- The amount and currency of the cash received.
- The name of the individual from whom the financial entity received the cash and that individual's address and principal business or occupation[104].
- The date of the transaction.
- The purpose, details and type of transaction (for example, the cash was deposited, or the cash was used to buy traveller's cheques, etc.) including whether any other individuals or entities were involved in the transaction.
- How the cash was received (for example, in person, by mail, by armoured car, or any other way).
- If an account was affected by the transaction, include the following:
    - The number and type of any such account.
    - The full name of the client that holds the account.
    - The currency in which the account's transactions are conducted.

774. If the financial entity has to identify the individual, the large cash transaction record also has to contain the following information:

- The individual's date of birth.
- The type of document used to confirm the individual's identity, the document's reference number and its place of issue.

775. In the case of a deposit, the large cash transaction record also has to include the following:
776.

- The name of the client in whose account the amount is deposited. If the amount was deposited to more than one client's account, the record has to include the names of each client.
- The time of the deposit, if it was made during normal business hours, or an indication of "night deposit" for any such deposit made outside your normal business hours.

777. *Account opening records*. These records include those required when the financial entity opens an account, such as signature cards, copies of official corporate records (binding provisions) and other information[105].

778. *Certain Records Created in the Normal Course of Business.* Financial entities have to keep the following records:

- Account operating agreement.
- Debit or credit memos.
- Client credit files[106].

779. *Certain Records About the Operation of an Account.* Financial entities have to keep the following records relating to the operation of an account:

- A copy of every account statement.
- A deposit slip[107] for every deposit made to an account.

---

104 The regulations enacted in June 2007 and coming into force in June 2008 require that the person's date of birth also be recorded (see Subsection 1(2), of the amended PCMLTF Regulations).

105 Information in relation to the intended use of the account will have to be recorded from June 2008 (see Sections 14(c.1) and 23(1)(a.1) of the amended PCMLTF Regulations).

106 "Client credit file" means a record that relates to a credit arrangement with a client and includes the name, address and financial capacity of the client, the terms of the credit arrangement, the nature of the principal business or occupation of the client, the name of the business, if any, and the address of the client's business or place of work.

- Every cleared cheque drawn on or deposited to an account.

780. *Foreign Currency Exchange Transaction Tickets.* For every foreign currency exchange transaction financial entities conduct, regardless of the amount, they have to keep a transaction ticket. A transaction ticket means a record that sets out the following information:

- The date, amount and currency of the purchase or sale.
- The method, amount and currency of the payment made or received.

781. *Transactions of CAD 3 000 or More with Non-Account Holders.* Financial entities have to keep a record for every one of the following transactions that they conduct with a person or entity that is not an account holder:

- If they receive CAD 3 000 or more for the issuance of traveller's cheques, money orders or other similar negotiable instruments. In this case, they shall keep a record of the date, the amount received and the name and address of the individual who carried out the transaction. This record also must indicate whether the amount was received in cash, cheques, traveller's cheques, money orders or other similar negotiable instruments.
- If they cash CAD 3 000 or more in money orders. In this case, they must keep a record of the name and address of the individual cashing the money order. This record also must indicate the name of the issuer of the money order. Or
- If they remit or transmit CAD 3 000 or more by any means or through any individual, entity or electronic funds transfer network. In this case, keep a record of the name and address of the client who initiated the transaction[108].

782. *Trust-Related Records.* Every trust company shall also keep the following records in respect of a trust for which it is trustee: (a) a copy of the trust deed; (b) a record of the settlor's information record; and (c) where the trust is an institutional trust and the settlor is a corporation, a copy of the part of official corporate records that contains any provision relating to the power to bind the settlor in respect of the trust (Section 15(1)).

783. *Third Party Records.* In case of third party determination, financial entities have to keep a record of the following information:

- The third party's name, address and principal business or occupation.
- The incorporation number and place of incorporation if the third party is a corporation.
- In the case of a large cash transaction, the nature of the relationship between the third party and the individual who gives the cash. Or
- In the case of an account, the nature of the relationship between the third party and the account holder.

784. If financial entities are not able to determine that there is in fact a third party, but they have reasonable grounds to suspect that there are instructions of a third party involved, they have to keep a record to indicate the following:

- In the case of a large cash transaction, whether, according to the individual giving the cash, the transaction is being conducted on behalf of a third party. Or
- In the case of an account, whether, according to the individual authorised to act for the account, the account will be used by or on behalf of a third party.

---

[107] A "deposit slip" means a record that sets out the date of a deposit, the holder of the account in whose name the deposit is made, the number of the account, the amount of the deposit and any part of the deposit that is made in cash.

[108] For all these transactions, the date of birth will have to be recorded from June 2008 (see Sections 14(k), (l), (m), 30(c), (d) and(e) of the amended PCMLTF Regulations).

785. This record must also indicate details of why financial entities suspect the individual is acting on a third party's instructions.

786. Life insurers offering certain annuities or life insurance with a savings component or a cash surrender value must retain client information records, including the date of birth (Section 19).

787. Every securities dealer shall keep the following records:

- In respect of every account that the securities dealer opens, a signature card, an account operating agreement or an account application that (i) bears the signature of the person who is authorised to give instructions in respect of the account, and (ii) sets out the account number, where that person's identity was ascertained.
- Where the securities dealer opens an account in respect of a corporation, a copy of the part of official corporate records that contains any provision relating to the power to bind the corporation in respect of that account.
- Where the securities dealer opens an account in the name of a person or of an entity other than a corporation, a record of the name and address and the nature of the principal business or occupation of the person or entity, as the case may be.
- Every new account application, confirmation of purchase or sale, guarantee, trade authorisation, power of attorney and joint account agreement, and all correspondence that pertains to the operation of accounts, that the securities dealer creates in the normal course of business.
- A copy of every statement that the securities dealer sends to a client, if the information in the statement is not readily obtainable from other records that the securities dealer keeps and retains under the Regulations (Section 23).

788. Every money services business shall keep the following records:

- Every client information record that is created for the purpose of an ongoing business relationship between the money services business and a client.
- Where a client information record is in respect of a client that is a corporation, a copy of the part of official corporate records that contains any provision relating to the power to bind the corporation in respect of transactions with the money services business, if the copy of that part is obtained in the normal course of business.
- Where CAD 3 000 or more is received in consideration of the issuance of traveller's cheques, money orders or other similar negotiable instruments, a record of the date, the amount received, the name and address of the person who in fact gives the amount and whether the amount received was in cash, cheques, traveller's cheques, money orders or other similar negotiable instruments.
- Where money orders of CAD 3 000 or more are cashed, a record of the name and address of the person cashing the money orders and the name of the issuer of the money orders.
- Where CAD 3 000 or more is remitted or transmitted by any means or through any person, entity or electronic funds transfer network, a record of the name and address of the client who initiated the transaction (Section 30 of the PCMLTF Regulations).

789. The PCMLTF Regulations set out detailed rules to maintain records of account files and business correspondence. Canadian financial institutions are not required to necessarily retain copies of the documentation upon which reliance is placed for verification of the customer's identity. Reporting entities are expected to note down the type and reference number and place of issue of the identity document but the actual market practice in this area seems to vary. At a provincial level, financial entities are prevented in some cases from taking copies of personal health cards while other banks advised that they would routinely take and retain copies of photo identification, a practice that is supported if not actively encouraged by OSFI. Other banks advised that this practice was not feasible on the basis of practical storage issues.

790. In the PCMLTF Regulations, the obligation to retain records of transactions is limited to certain operations that are listed by type of financial institutions. This may create potential gaps (for instance, there is no obligation in the Regulations to keep a record of all types of business correspondence but only of a limited list of such correspondence).

791. Section 68 of the PCMLTF Regulations states that where any record is required to be kept, a copy of it may be kept (1) in a machine-readable form, if a paper copy can be readily produced from it or (2) in an electronic form, if a paper copy can be readily produced from it and an electronic signature of the person who must sign the record in accordance with the Regulations is retained.

792. Financial institutions must ensure that all records required to be kept under the PCMLTFA can be provided within 30 days (Section 70). Although this may describe an extreme scenario and despite that financial entities advised that they can normally comply in a much shorter timescale, the current rule does not meet the requirement to make CDD records available on a *timely* basis to competent authorities, especially in normal business circumstances.

793. IDA Regulation 200 sets out detailed record keeping requirements of business transactions. The Regulation does not require the various books and records to be kept in any prescribed form. It is expected, however, that the means of recording the information will be complemented by appropriate internal controls to guard against the risk of falsification and will make available clear and accurate information to the Financial Compliance within a reasonable length of time.

Special Recommendation VII

794. At present, Canada has no provisions that address the requirements in relation to SRVII[109].The only existing obligations in relation to electronic funds transfers in the PCMLTF Regulation are as follows:

- Financial entities shall ascertain the identity of every person who requests an electronic funds transfers of CAD 3 000 or more (Section 54(1)(b)) of the PCMLTF Regulations)[110]. The identity of such person shall be ascertained by referring to the person's birth certificate, driver's licence, provincial health insurance card, passport or any similar record (Section 64(1)(a)). The current threshold of CAD 3 000 (that only applies to cross-border transfers) is not in line with SR VII;
- Financial entities (Section 12(1)(b) & (c) and money services businesses (Section 28(1)(b) & (c)) are required to report incoming and outgoing international electronic funds transfers of CAD 10 000 or more to FINTRAC. Information to be reported includes the name, address and account number of the client ordering the electronic funds transfer.

795. There are currently no requirements for ordering financial institutions either to obtain or maintain full originator information or to include such information in cross border wire transfers. The assessors were told that, at present, only originating customer name and address are included in such transfers as the account number is considered to be private personal information.

796. While the assessors were told that financial entities and money services businesses are taking measures in identifying and handling wire transfers that are not accompanied by complete originator information, there is currently no regulatory or legal requirements to adopt risk-based procedures or conduct enhanced due diligence.

---

109 New provisions will come into force on 23 June 2008 (see Section 66.1 of the amended PCMLTF Regulations that must be read in conjunction with Section 9.5 of the amended PCMLTFA).

110 "Electronic funds transfer" means the transmission – through any electronic, magnetic or optical device, telephone instrument or computer- of instructions for the transfers of funds, other than the transfers of funds within Canada. In the case of SWIFT messages, only SWIFT MT 103 messages are included" (PCMLTF Regulations).

797. FINTRAC has a responsibility to ensure compliance with the legislative requirements under the PCMLTFA, including the customer due diligence and originator information inclusion requirements for wire transfers. Until the legislative changes take effect and formalise the requirement for full originator information, enforcement measures can only be on a best efforts basis without any formal powers of sanction or penalty.

798. The assessment team was advised that casinos process electronic funds transfers using their own internal corporate system, *i.e.* outside the banking sector. The team is not aware of any controls that exist, and no more details were provided despite the team's request (in this situation, casinos are considered as financial institutions since they conduct a business that is covered under the FATF definition of financial institutions).

3.5.2 Recommendations and Comments

799. *Recommendation 10*. Canada should ensure that all types of transactions (including business correspondence) carried out by financial institutions (except for IDA members) are subject to proper record keeping requirements that permit their reconstruction so as to provide, if necessary, evidence for prosecution of criminal activity. Canada should ensure that all customer and transactions records and information are available on a timely basis to domestic competent authorities.

800. *SR.VII*. Canada should ensure that the new provisions enacted in December 2006 and coming into force in June 2008 are fully in line with the FATF requirements and ensure that reporting entities implement measures that meet the FATF standards. Canada should ensure that the wire transfers operated by casinos outside the banking network are subject to equivalent requirements.

3.5.3 Compliance with Recommendation 10 and Special Recommendation VII

Rec.	Rating	Summary of factors underlying ratings
Rec.10	LC	*Scope issue* • The record keeping requirement does not extend to all financial institutions as defined by the FATF (notably financial leasing, factoring and finance companies); • Financial institutions must ensure that all records required to be kept under the PCMLTFA can be provided within 30 days which does not meet the requirement to make CDD records available on a *timely* basis to competent authorities, especially in normal business circumstances.
SRVII	NC	• Canada has not implemented SRVII.

3.6 Monitoring of transactions and relationships (R.11 & 21)

3.6.1 Description and Analysis

801. Under the PCMLTFA, there is currently no explicit provision requiring that financial institutions must pay special attention to all complex, unusual large transactions[111]. As noted earlier, there is no explicit obligation to conduct on-going monitoring of accounts or transactions under the current legislation.

802. Thus, such a requirement may only be indirectly deduced from the requirement to report to FINTRAC suspicious transactions that may be related to money laundering or terrorist financing, as well as the obligation to report large international electronic funds transfer reports involving CAD 10 000 or more (EFTRs) and large cash transaction reports of CAD 10 000 or more (LCTRs).

803. In its Guidelines, which are provided as general information only, FINTRAC provides indicators, both common and industry-specific, to financial institutions on how suspicious transactions

[111] The PCMLTFA as amended in June 2007 sets out new requirements in this area that will enter into force in June 2008.

can be detected. These indicators include, among others, patterns of unusually large or complex transactions with no economic purpose, such as :

- Transaction that seems to be inconsistent with the client's apparent financial standing or usual pattern of activities.
- Transaction that appears to be out of the ordinary course for industry practice or does not appear to be economically viable for the client.
- Transaction that is unnecessarily complex for its stated purpose.
- Activity that is inconsistent with what would be expected from declared business.
- Client who starts conducting frequent cash transactions in large amounts when this has not been a normal activity for the client in the past.
- Client who asks reporting entity to hold or transmit large sums of money or other assets when this type of activity is unusual for the client.

804. It is worth noting that some regulators or regulatory organizations have introduced additional recommendations or rules relating to the monitoring of unusual transactions:

- Concerning federally regulated financial institutions, OSFI states in very general terms in its Guidelines, that *"the policies and procedures should […] include measures to monitor transactions. These measures will help FRFIs to identify potentially suspicious transactions by using criteria that will enable them to detect unusual or abnormal activity"*. OSFI also encourages FRFIs to implement the Basel *Customer Due Diligence for Banks* paper *"in a manner appropriate to the size, complexity and nature of the institution's business activities"*.
- Concerning securities dealers firms, the IDA has issued regulations and policies related to the supervision of accounts (see Regulation 1300 and Policy n° 2) which contain precise rules relating to the performance by members of reviews aiming at detecting *"items for further investigation or an examination of unusual trading activity or both"*. The IDA Guide on "Deterring money laundering activity – A Guide for Investment Dealers" sets out that "a firm should adopt procedures setting forth appropriate parameters and methods of monitoring account activity so that unusual or suspicious transactions can be detected".

805. The assessors were not provided with any specific AML requirements (excluding FINTRAC non-binding guidelines) that included obligations relating to unusual transactions issued by primary supervisors to other sectors such as credit unions. However, the AMF, in Quebec, indicated that it was in the process of developing AML/CFT standards.

806. The assessors met with a number of large financial institutions, and in practice it seems that such institutions have adopted procedures and systems to detect and further examine complex, unusual large transactions in order to comply with their reporting obligations. Such transactions are usually identified by financial institutions in two different ways: 1) at the front line in executing the transaction for the client; and 2) through the use of software based on rules or profiles to monitor and identify unusual transactions. Unusual transactions are forwarded to corporate security and/or the AML compliance group for further analysis. Where the unusual transaction meets the test of reasonable grounds to suspect ML or TF, a suspicious transaction report is prepared and sent to FINTRAC.

807. Nevertheless, there is insufficient information available to determine whether this practice is universal and the current legislative and regulatory framework remains too general and implicit with respect to the monitoring of complex, unusual large transactions to meet the FATF requirements. In particular, there is no specific requirement that financial institutions examine the background and purpose of such transactions and, especially, set forth their findings in writing. Under the current

legislation, financial institutions are not required to keep a record of the STRs that they file with FINTRAC[112].

808. As a business practice, a number of financial institutions that detect such unusual transactions indicated that they would usually conduct further research on the customer's transactions in order to determine whether, based on the knowledge in hand, the threshold for determining suspicion has been met and hence an STR must be filed with FINTRAC. The section of the report describing the suspicious activity is very important as it explains what led the financial institution to believe there is something suspicious about the transaction. Financial institutions are expected to clearly and completely describe all of the factors or unusual circumstances which led them to a suspicion of money laundering or terrorist financing, and provide as many relevant details as possible to support this determination. Financial institutions are also required to describe what action, if any, was taken by them, as a result of the suspicious transaction, in addition to reporting to FINTRAC. Such action could include, for example, sending a report to law enforcement in addition to FINTRAC. Nevertheless, there are no provisions under the PCMLTFA and PCMLTFR requiring that such actions and their results be documented and kept available for competent authorities, especially if no STR is finally filed with FINTRAC[113].

809. Large financial institutions met by the assessment team such as banks generally appear to comply with this requirement on a voluntary basis. Moreover, concerning securities dealers, the IDA Rulebook requires in Policy n° 2 that *"evidence of supervisory reviews must be maintained. Evidence of the review, such as inquiries made, replies received, actions taken, date of completion etc. must be maintained for seven years and on-site for 1 year"*. But there is no evidence that this practice is generalized among the other types of financial institutions.

Recommendation 21

Special attention to business relationships and transactions with persons from or in countries which do not or insufficiently apply the FATF recommendations

810. Requirement to give special attention to business relationships and transactions with persons from or in countries which do not or insufficiently apply the FATF Recommendations. On every occasion that the FATF has invoked Recommendation 21 in the context of the NCCT (Non-cooperative Country and Territory) process, FINTRAC and OSFI have issued advisories asking financial institutions and reporting entities to pay special attention with respect to any business or affairs being transacted with persons or entities from identified countries or territories. Financial institutions are requested to take this into account directly or through any subsidiary or branch operations. In addition, competent authorities in Canada (including FINTRAC, OSFI and IDA) communicated on a regular basis with the reporting entities to provide regular updates and required financial institutions to pay "special attention by exercising appropriate due diligence and caution in conducting any transactions with such persons or entities"[114].

---

112 The PCMLTF Suspicious Transaction Reporting Regulations enacted in June 2007 that will come into force in June 2008 require reporting entities to keep a copy of every STR they file with FINTRAC for five years (Section 12.1).

113 As mentioned above and under Section 12.1 of the PCMLTF Suspicious Transaction Reporting Regulations financial institutions will be required from June 2008 to keep a record of every STR that they file with FINTRAC for five years. A Suspicious Transaction Report, and the related record includes detailed information about the person or entities involved, the nature and type of transaction and a description of the suspicious activity. The Regulations require details of suspicious attempted transaction reports to also be kept on file for five years. Under the new regime, financial institutions have to ensure that such records can be provided to a FINTRAC compliance officer within 30 days. Law enforcement representatives can access these records if they obtain a search warrant or production order from a court.

114 In October 2007 and consistent with the FATF action, OSFI and FINTRAC issued statements to indicate that Canadian financial institutions and reporting entities should give heightened attention to transactions to Iran.

811. Advisories describe how OSFI administers and interprets provisions of existing legislation, regulations or guidelines, or provide OSFI's position regarding certain policy issues. OSFI clearly states that advisories are not law and that readers should refer to the relevant provisions of the legislation, regulation or guideline, including any amendments that came into effect subsequent to the Advisory's publication, when considering the relevancy of the Advisory. The assessment team was told that failure to implement OSFI advisories could result in regulatory action by OSFI.

812. In FINTRAC and OSFI advisories, reporting entities are generally asked to exercise an enhanced level of scrutiny when dealing with transactions from or in NCCTs involving exercising appropriate due diligence and caution in conducting transactions.

813. Based on these advisories, FINTRAC has included the monitoring of transactions and enhanced due diligence with respect to NCCTs within its compliance verification structure although the advisories are not enforceable and failure to implement them cannot be subject to sanction. There is a section related to NCCTs in FINTRAC's Compliance Questionnaires. As well, it is standard practice in FINTRAC examinations of financial institutions to review the policies and procedures of an entity, with respect to enhanced due diligence with any jurisdictions that the FATF has identified as being of particular concern.

814. FINTRAC Guideline 2 on suspicious transaction reporting provides indicators for identifying suspicious transactions involving other countries, including "transactions involving countries deemed by the FATF as requiring enhanced surveillance". OSFI Guideline B-8 also addresses the need for federally regulated financial institutions to develop higher levels of due diligence when processing transactions connected to NCCTs.

815. When the FATF no longer has concerns regarding a particular jurisdiction, e.g. when NCCTs were de-listed or their status was otherwise changed, both FINTRAC and OSFI have issued further advisories to reporting entities to inform them on the change and request them to continue monitoring transactions from such a jurisdiction as long as it remains of concern.

816. For securities dealers, the IDA requires its members to heighten scrutiny of accounts and transactions from NCCT countries: it requires that its members give special attention to business relations and transactions with persons, including companies and financial institutions, from the NCCT list. The IDA requires that its members ensure strict adherence to the client identification and verification requirements of the Regulations under the PCMLTFA and that relevant sales and operational personnel are made aware of the countries and territories which have been identified as NCCTs.

817. *Measures to ensure that financial institutions are advised of concerns about weaknesses in the AML/CFT systems of other countries.* As regards countries (other than NCCT countries) which do not or insufficiently apply the FATF Recommendations, FINTRAC and OSFI Guidelines call for special vigilance when doing business with a range of entities, including those in countries with inadequate AML/CFT controls; located in offshore jurisdictions; located in countries with highly secretive banking and corporate law; or in countries known or suspected of facilitating money laundering activities. FINTRAC Guideline points out the International Narcotics Control Strategy Report, released by the U.S. Department of State, to assist reporting entities in undertaking a risk analysis of foreign dealings. OSFI also advises banks with correspondent banking operations to implement additional safeguards when dealing with banks operating in jurisdictions they consider to be of higher risk. The IDA advises its members to ensure proper application of the provisions under the PCMLTFA to clients in countries without adequate anti-money laundering regimes such as in the case of the FATF NCCTs list. With the exception of the general advice described above, financial institutions have not been advised of concerns about specific countries that do not or insufficiently apply the FATF Recommendations, or which have specific weaknesses in their AML/CFT systems(even if their system overall could be considered adequate). For example, such advice could result from a mutual evaluation within the FATF or within an FATF Style Regional Body).

818. *Requirement to examine the background and purpose of transactions and keep written records*. There is no explicit requirement for financial institutions to examine the background and purpose of those transactions that have no apparent economic or visible lawful purpose. Financial institutions are not required to document in writing the findings in relation to these transactions and to keep the later available for competent authorities and auditors.

Countermeasures

819. When counter-measures have been considered by FATF against some NCCTs, FINTRAC and OSFI have advised reporting entities to apply enhanced due diligence to financial transactions emanating from, or destined to the specified jurisdiction and viewed them as potentially suspicious. Reporting entities were urged to exercise an enhanced level of scrutiny when dealing with transactions involving the identified jurisdiction and undertake heightened customer identification due diligence measures to ensure that the principals or beneficial owners are identified. In FINTRAC non-binding advisories, financial institutions were advised that financial transactions emanating from, or destined to countries subject to FATF countermeasures had to be viewed by reporting entities as potentially suspicious.

820. The Minister of Finance, under the *Bank Act*, has the authority to approve the establishment of subsidiaries and branches of foreign financial institutions. In addition to requiring criminal checks and broad fit and proper tests, the Minister considers the "National Security" and "Canada's international relations and obligations" tests during the application process. The assessment team was told that this includes consideration of whether a country was found to be severely deficient in its implementation of AML/CFT standards by the FATF. However, there is no evidence that this mechanism has not been used in the context of countermeasures.

821. Canada also notes that it takes counter-measures against countries that pose specific economic and security risks to Canada through the *Special Economic Measures Act (SEMA)*. This legislation provides for a wide range of economic and financial measures against a foreign state, including: seizing or freezing assets of a foreign state, or of persons from that state, restricting or prohibiting Canadians from dealing in property of that state, from exporting, selling, importing, acquiring goods from that state or from providing or acquiring any financial or other services to or from that state. These mechanisms have not been used in a context of a country that continues not to apply or insufficiently applies the FATF recommendations[115].

3.6.2 Recommendations and Comments

822. *Recommendation 11*. In order to comply with Recommendation 11, Canada should ensure that the new provisions enacted in June 2007 are fully in line with the FATF requirements and ensure that reporting entities implement measures that meet the FATF standards.

823. *Recommendation 21*. The requirement to give special attention to business relationships or transactions with persons from or in countries which do not or insufficiently apply the FATF Recommendations should be included in an enforceable legal instrument applicable to all financial institutions. Effective measures should be put in place whereby financial institutions are advised of other countries that have specific weaknesses in their AML/CFT systems. This should be completed by a provision requiring that the background and purpose of such transactions having no apparent economic or visible lawful purpose be examined and the findings documented.

[115] For example, Canada used SEMA in December 2007 against Myanmar - on December 13, 2007, the *Special Economic Measures (Burma) Regulations* came into force in order to respond to the "abhorrent human rights and humanitarian situation in Burma".

3.6.3 Compliance with Recommendations 11 and 21

Rec.	Rating	Summary of factors underlying ratings
Rec.11	PC	• There is no explicit nor enforceable requirement for financial institutions to examine all complex, unusual large transactions under the current legislation (except for IDA members). Except for IDA members, the monitoring obligation is implied and indirect (it flows from reporting suspicious transactions, large international electronic funds transfer and large cash transactions) and it does not cover the full range of monitoring situations as stipulated in Recommendation 11; • There is no explicit requirement to examine the background and purpose of these unusual transactions (except for IDA members) • There is no requirement to keep record of financial institutions' findings in relation to complex, unusual large or unusual patterns of transactions.
Rec.21	PC	• There is no general enforceable requirement for financial institutions to give special attention to transactions or business relationships connected with persons from or in countries which do not or insufficiently apply the FATF Recommendations. • There are no effective measures in place whereby financial institutions are advised of other countries that have specific weaknesses in their AML/CFT systems • There is no requirement to examine the background and purpose of these transactions and to document the related findings.

3.7 Suspicious transaction and other reporting (R.13-14, 19, 25, 32 & SR.IV)

3.7.1 Description and Analysis

Recommendation 13 & Special Recommendation IV

824. *Suspicious transactions reporting obligation*. All financial institutions subject to the PCMLTFA are required to report to FINTRAC transactions of any amount for which there are reasonable grounds to suspect that the transaction is related to the commission of a money laundering offence or a terrorist financing offence (Section 7 of the PCMLTFA). The requirement applies to all persons and entities subject to Part I of the PCMLTFA, including the following financial institutions:

825.

- Financial entities: banks, credit unions, *caisses populaires*, trust and loan companies and agents of the Crown that accept deposit liabilities.
- Life insurance companies, brokers and agents.
- Securities dealers including portfolio managers and investment counsellors.
- Money services businesses including the business of foreign exchange dealing and alternative remittance systems, such as *hawala, hundi* and *chitti*.
- Canada Post for money orders.

826. However, as stated above in Section 3.1 of the report, several categories of financial institution, such as financial leasing, factoring, electronic money institutions, finance companies of customer credit, credit and debit cards companies are not subject to the PCMLTFA and, consequently, to any mandatory reporting requirement to FINTRAC.

827. In the PCMLTFA, the terms "money laundering offence" and "terrorist financing offence" refer directly to their definition in the Criminal Code which indicates that suspicious transaction reports must be made in relation to all the predicate offences to money laundering and terrorist financing. These offences include virtually all indictable offences under the Criminal Code or any other federal Act. The few exceptions are for offences such as those related to tax evasion or breach of copyright and some others that involve administrative and monetary penalty structure.

828. The PCMLTF Suspicious Transaction Reporting Regulations establish the form and manner for reporting, including the list of information to report and prescribe the reporting time limits. A Suspicious Transaction Report must be filed with FINTRAC within 30 days from the date the

suspicion was formed about the transaction. Failure to report a suspicious transaction could lead to up to five years imprisonment, a fine of CAD 2 million, or both.

829. FINTRAC's Suspicious Transactions Reporting guideline further elaborates on the requirement and explains that financial institutions should look at what is reasonable under the circumstances, including normal business practices and systems within the industry, to reach the "reasonable grounds to suspect" threshold. The guideline also provides an extensive list of general and sector specific indicators to help financial institutions assess the behaviour of the customer and their transactions.

830. A Suspicious Transaction Report must include detailed information about the person or entities involved, the nature and type of transaction and a description of the suspicious activity. Certain fields in the report must be filled on a mandatory basis, while others on reasonable efforts, which means that the financial institution must make every effort to obtain the information required in the report. If the information is available or can be obtained from the financial institution's records, it must be included in the report. The suspicious transaction report explains what led the financial institution to identify the transaction as suspicious (part G of the suspicious transaction report). Financial institutions are expected to describe clearly and completely all of the factors or unusual circumstances which led them to a suspicion of money laundering or terrorist financing, and provide as many relevant details as possible to support this determination. Financial institutions are also required to describe what action, if any, has been taken by them as a result of the suspicious transaction, in addition to reporting to FINTRAC. Such action could include, for example, sending a report to law enforcement in addition to FINTRAC, monitoring or closing the account.

831. *Attempted transactions and threshold.* There is no monetary threshold associated to the requirement to report STRs to FINTRAC, all suspicious transactions must be reported regardless of the amount of the transaction.

832. Under the current legislation, reporting entities are only required to report completed transactions to FINTRAC. FINTRAC Guideline 2 indicates that "*the requirement (…) to report a suspicious transaction applies only when the financial transaction has occurred. (…) If you decide or the client decides not to complete the transaction, there is no obligation to report it as a suspicious transaction to FINTRAC*".

833. Financial institutions can choose to report an uncompleted transaction and a suspicion about it directly to law enforcement and can also decide to report it to FINTRAC on a voluntary basis. As a matter of fact, IDA, in a notice of October 2001 about the "Implementation of Suspicious Transaction Reporting Regulations" strongly recommends that its members voluntarily report to either to FINTRAC or the police, of any approach that raises a suspicion of being related to criminal activity or money laundering. Nevertheless, the assessment team was told that by the banking sector that sending such reports is not a current practice in this sector.

834. The PCMLTF Regulations broaden the reporting requirement to the reporting of any suspicious attempted transactions related to money laundering or terrorist financing, but as the implementation of the measure requires IT developments both at FINTRAC and in financial institutions, it will not be in force until June 2008.

835. *Tax matters*. The PCMLTFA requires the reporting of all completed transactions, where there are reasonable grounds to suspect that they relate to the commission of a money laundering or a terrorist financing offence, regardless of the involvement in tax matters. Furthermore, the PCMLTFA allows FINTRAC to disclose information to the Canada Revenue Agency when it meets the dual test of firstly having reasonable grounds to suspect that the information contained in the disclosure would be relevant to money laundering or terrorist financing investigation and secondly, if FINTRAC also determines that the information is relevant to an offence of evading or attempting to evade paying taxes or fraudulently attempting to obtain a tax rebate, refund or credit.

836. *Additional elements*. The predicate offences for money laundering include the commission in Canada of a designated offence or an act or omission anywhere that, had it occurred in Canada would have constituted a designated offence.

837. *Statistics*. The number of STRs reported to FINTRAC is as follows:

	2001/2002	2002/2003	2003/2004	2004/2005	2005/2006	2006/2007	**Total**
STR	3 772	17 358	14 794	19 113	29 367	18 431	**102 835**

838. The following table indicates the number of STRs per fiscal year and by financial sector:

	2001/2002	2002/2003	2003/2004	2004/2005	2005/2006	2006/2007	**Total**
Banks	576	3 623	4 077	5 665	12 084	5 174	**31 199**
Caisses Populaires	1 045	3 357	1 946	3 151	4 918	5 185	**19 602**
Cooperative Credit Society	20	29	-	1	6	0	**56**
Life insurance brokers or agents	1	1	11	2	4	0	**19**
Life insurance companies	10	30	52	29	32	78	**231**
MSBs	1 207	6 962	5 165	6 176	8 090	5 826	**33 426**
Provincial Savings Office	5	61	17	202	336	114	**735**
Credit Unions	639	2 415	2 767	3 905	2 837	1 377	**12 940**
Securities dealers	42	169	80	74	83	48	**496**
Trust and loan companies	31	37	64	214	438	388	**1 172**
Total	3 576	16 684	14 179	19 419	23 910	18 190	**95 958**

839. The total number of STRs sent by the financial sector appears globally satisfactory (an average of 20 000 every year since 2004). Since FINTRAC first became operational, in fiscal year 2001-2002, it has received about one hundred thousand STRs from financial institutions (95 958), representing 97 % of the total of STRs received. The annual total number of STRs has been steadily increasing since 2001/2002.

840. The different categories of financial institutions have however contributed unequally to the total number of STRs received by FINTRAC, with the majority of STRs received from MSBs, followed by banks, *caisses populaires* and credit unions. On the other hand, securities dealers, life insurance companies and, even more noticeably life insurance brokers and dealers have sent limited numbers of STRs.

841. Based on further statistics made available to the assessment team (on Canada request, such statistics cannot be published), it appears that only a limited number of MSBs report STRs to FINTRAC considering the wide range of MSBs active in Canada. Most of the STRs filed are sent by the larger players of the sector.

842. The quality of the reports is improving, following the numerous information and training sessions delivered by FINTRAC to reporting entities. The electronic format of the STRs, although quite constraining (see comments in Section 2.5 of the Report), and the electronic feedback of missing

information on every report filed electronically, help financial institutions to meet their obligations in that respect. An extensive use of the section of the STR intended to receive comments describing the suspicious activity generally helps however to overcome the rather rigid format of the STRs.

843. Indicators of terrorist financing (*e.g.* terrorist listings, particular products and countries involved) have been used by reporting entities in the narrative section of a number of reports submitted to FINTRAC. However, FINTRAC was not able to provide to the assessors the approximate number of STRs reported which have involved suspected terrorist financing.

Recommendation 14

844. *Protection from criminal liability of reporting entities*. Section 10 of the PCMLTFA prescribes the immunity provisions for reporting entities. No criminal or civil proceeding lie against persons and entities for making a suspicious transaction report, a terrorist property report, a large cash transaction report or an electronic funds transfer report in good faith or for providing FINTRAC with information about suspicions of money laundering or of the financing of terrorist activities. In addition, Section 462.47 and 487.014 of the Criminal Code establishes a safe harbour defence for persons or entities disclosing a suspicion of money laundering to the police or the Attorney General.

845. *Tipping off*. Section 8 of the PCMLTFA specifies that no person or entity can disclose that they have made a suspicious transaction report, or disclose the contents of a report, with the intent to prejudice a criminal investigation, whether or not a criminal investigation has begun. Failure to comply with these requirements could result in up to two years imprisonment.

846. *Additional elements*. Subsection 58(2) of the PCMLTFA prohibits FINTRAC from disclosing any information that would directly or indirectly identify an individual who provided a report or information to FINTRAC, or a person or an entity about whom a report or information was provided. FINTRAC employees and contractors are subject to criminal penalties of up to five years in jail or a fine of CAD 500 000 or both, for unauthorised disclosure or use of information.

847. FINTRAC is subject to the Privacy Act that strictly regulates how federal institutions can use and disclose personal information collected about individuals. In addition, the PCMLTFA stipulates that one of FINTRAC's objectives is to ensure that the personal information under its control is protected from unauthorised disclosure. High standards of information privacy and security are important for FINTRAC and FINTRAC continually monitors its systems and recently made improvements to its security monitoring capabilities.

848. Based on the discussions that took place during the on-site visit, the assessment team came to the conclusion that no major issues arise in relation to the implementation of the requirement sunder Recommendation 14.

Recommendation 25 (only feedback and guidance related to STRs)

Guidance related to STRs

849. FINTRAC gives very detailed guidance related to STRs to assist financial institutions in implementing and complying with STR requirements. FINTRAC has developed standard reporting form for all types of existing reporting. Such guidelines are posted on the FINTRAC website.

850. In relation to STR requirements, FINTRAC has adopted two guidelines that deal specifically with STRs: Guideline 2: Suspicious Transactions provides information on identifying suspicious transactions, including common an sector-specific indicators related to money laundering and indicators related to terrorist financing. Guideline 3: Submitting Suspicious Transaction Reports to FINTRAC; delivers very detailed information on, among other things: timelines and format (electronic vs. paper) of the report, instructions for completing reporting forms including the type of information to deliver under each field of the reporting form, etc.

851. The industry bodies spoken to by the evaluation team expressed satisfaction at the guidance provided in relation to the reporting requirement.

Feedback

852. The ways FINTRAC may provide feedback includes the following general and specific elements:

- The Annual Report provides general feedback such as:
  - statistics on reports received
  - disclosures made
  - contribution of each type of report to these disclosures
  - a sanitized ML case
  - typologies and indicators of ML and TF
- Electronic feedback on every report filed electronically.
- Feedback session, at least once a year, to the Canadian Bankers Association (CBA) and the CBA Anti-Money Laundering Working Group.
- Annual presentation to ten of the largest providers of reports.
- Presentations to each reporting sector at least once a year.
- Meeting on a one-on-one basis with individual reporting entities to discuss any issues an entity may have.
- FINTRAC staff also make presentations at, and participate in, industry conferences attended by representatives of reporting entities.
- Macro analysis of patterns, typologies and trends (international, national, regional and sectoral) that characterize money laundering and terrorist activity financing.

853. FINTRAC provides financial institutions and DNFPBs with general and specific feedback.

General Feedback

854. FINTRAC provides feedback presentations to each reporting entity sector (*e.g.* at industry association conferences or other meetings) at least once a year. These feedback sessions include discussions of general reporting trends for the sector and how STRs and other reports from that sector contributed to FINTRAC's disclosures to law enforcement. Other issues, including quality of reporting, are also discussed.

855. Presentations are tailored specifically to either a reporting entity, or an association covering a group of reporting entities, by illustrating the percentage of reports they submitted versus other reporting entities and pinpointing the percentage of their reports that factored into ML and/or TF disclosures.

856. For example, FINTRAC meets at least once a year with the Canadian Bankers Association (CBA) and the CBA Anti-Money Laundering Working Group. CBA members provide approximately 65% of all reports received by FINTRAC. These feedback sessions are a minimum of half a day in duration and address everything from their membership's contribution to reporting (by report type), systematic quality or timing issues, and the way in which their member's reports contributed to ML and/or TF disclosures. FINTRAC tactical analysts participate to these sessions and present various sanitized ML and/or TF cases.

857. FINTRAC also provides similar presentations to about ten of the largest providers of reports. In 2005-06, FINTRAC staff prepared 17 presentations to be delivered to individual reporting entities and industry associations representing different types of reporting entities and in 2004-05, there were 20 such meetings.

858. FINTRAC provides reporting entities with information about internationally recognized trends and typologies. With time, the volume of STRs (and other reports) and the number of disclosures continue to increase considerably, allowing FINTRAC to identify patterns, typologies and trends based on its own work (international, national, regional and sectoral) that characterize domestic money laundering and/or terrorist activity financing.

859. FINTRAC's annual report is another way to provide feedback to reporting entities. For instance, the 2006 annual report presents a very complex sanitized ML case to demonstrate how it uses reports received from reporting entities and what FINTRAC includes in a disclosure to law enforcement. FINTRAC's annual reports also provide statistics on various types of reports received from reporting entities and on disclosures made to law enforcement and the contribution of each type of report to these disclosures. Annual reports also present indicators of ML and TF. Every year, FINTRAC's Annual Report is tabled before the Canadian Parliament in the fall, and is provided in hardcopy format to reporting entities, as well as posted on the FINTRAC's website.

860. There is a need for FINTRAC to publish more concrete and targeted information on ML and TF. The information published by FINTRAC is in general very descriptive and does not provide very in depth analysis. FINTRAC should be able to provide more comprehensive data on techniques and trends in specific sectors. The Annual Report 2006 for instance publishes one sanitised case; the assessors are of the view that more ML/TF cases should be made public in sanitized form in order to increase awareness and improve compliance and reporting. FINTRAC is in quite a unique position to develop and disseminate strategic intelligence but has not taken advantage so far to develop more substantive information.

Specific Feedback

861. FINTRAC automatically provides electronic feedback on every report filed electronically (over 99% of reports submitted to FINTRAC are filled electronically). This feedback highlights to reporting entities any data quality issues that are present or any potential data quality issues they may want to review on a report-by-report basis. FINTRAC also immediately advises a reporting entity if its report was accepted or rejected due to significant data quality issues. FINTRAC can also request that reporting entities re-submit reports received if certain data elements are missing.

862. Given the time sensitivity of STRs, FINTRAC will also provide direct verbal follow-up on the quality of the reports. However, the PCMLTFA prohibits FINTRAC from providing feedback on the outcome of the individual reports made to FINTRAC.

863. FINTRAC has developed comprehensive guidance and quite good general feedback for reporting entities. FINTRAC has initiated a series of feedback presentations for a number of large reporting entity sectors and entities. These presentations offered initial insights on reporting levels, the use of reports in our case disclosures, as well as some examples of sanitized cases. However, the general feedback concentrates more on large financial institutions.

Recommendation 19

864. The PCMLTFA requires reporting entities to submit reports to FINTRAC on large cash transactions and electronic funds transfers.

865. Section 9 of the PCMLTFA establishes a requirement for all persons and entities subject to Part 1 of the PCMLTFA to report to FINTRAC any transaction prescribed in regulations. Two types of reportable transactions are prescribed under the PCMLTF Regulations: large cash transactions and international electronic funds transfers.

866. Financial institutions (as well as accountants, casinos and real estate brokers and sales representatives) are required to report to FINTRAC the receipt of an amount in cash of CAD 10 000 or more in Canadian currency or its equivalent in foreign currency. Reportable cash transactions include

single transactions and two or more transactions by or on behalf of the same individual or entity that are conducted in a 24-hour period and that total CAD 10 000 or more, as described under section 3 of the PCMLTF Regulations. A Large Cash Transaction Report (LCTR) must be submitted to FINTRAC within 15 days of the transaction.

867. With respect to the large cash transaction reporting regime, an exception scheme – called the Alternative to Large Cash Transaction Reports to FINTRAC – is provided for in the PCMLTF Regulations. In order to assist reporting entities, FINTRAC has developed a guideline on the Alternative to LCTRs, Guideline 9, which is posted on the FINTRAC website.

868. Alternative to sending large cash transaction reports applies only to certain clients of financial entities (banks, credit unions, *caisses populaires*, trust and loan companies and an agent of the crown that accepts deposit liabilities) that are corporations. Criteria have to be met before financial entities can choose for the alternative to large cash transaction reports:

- The client of the financial entity is a corporation that carries on business within a list of business excluding business with high risk of ML or TF.
- The client of the financial entity must have an account with the financial entity or another financial entity for at least 24 months.
- The client deposited CAD 10 000 or more in cash at least twice a week, on average, for the preceding 12 months.
- The cash deposits are consistent with the usual practices of the business;
- Reasonable measures have been taken to determine the source of the cash for the deposits.

869. Where these conditions are met, financial entities are not obliged to submit large cash transaction reports to FINTRAC but have to:

- Send a report to FINTRAC about the business client for whom they are making this choice.
- Report certain changes about the business client to FINTRAC.
- Verify annually that conditions are met for each client and report this to FINTRAC.
- Maintain a list with the name and address of each client for whom they have chosen not to report large cash transactions.

870. Reportable information in a LCTR is listed in Schedule 1 to the PCMLTF Regulations. The record includes identifying and banking information on the person or entities involved, including persons on behalf of who the transaction is conducted and the purpose and details of the transaction.

871. Similar reporting requirements apply to deposit taking institutions and money services businesses (including foreign exchange dealers) in respect of outgoing and incoming international electronic funds transfers of CAD 10 000 or more (including single transactions and two or more transactions by or on behalf of the same individual or entity that are conducted in a 24-hour period and that total CAD 10 000 or more). These include both transfers made using the SWIFT system, as well as those using proprietary systems (non-SWIFT). An Electronic Funds Transfer Report (EFTR) must be filed within five working days of the transfer.

872. Since FINTRAC first became operational, in fiscal year 2001-2002, it has received about 16 million LCTRs and 29 million EFTRs.

873. The criminal penalty for failure to report a LCTR or EFTR could lead to a fine of up to CAD 500 000 for a first time offence and CAD1 000 000 for a subsequent offence.

874. FINTRAC devotes resources to improving the data quality, refining analytical tools and upgrading systems.

875. High standards of information privacy and security are important for FINTRAC, as already explained in section 2.5. FINTRAC continually monitors its systems and recently made improvements to its security monitoring capabilities.

Statistics

876. Statistics available at FINTRAC are generally very comprehensive (especially on STRs, LCTRs and EFTRs). However, this report delivers a limited range of them on Canada request and for confidentiality purposes.

3.7.2 Recommendations and Comments

877. All financial institutions covered by the definition of the FATF should be subject to the suspicious transactions reporting requirement unless a proven low risk of ML and FT is established in the sectors that are currently exempted. The different categories of financial institutions contribute unequally to the total number of STRs received by FINTRAC, this is an issue that FINTRAC should address further.

878. FINTRAC should develop more general feedback for smaller reporting entities. While legislation prevents FINTRAC from giving feedback on how it has used specific reports, FINTRAC should consider implementing more specific feedback mechanisms.

879. FINTRAC could consider disseminating more figures and data that do not breach applicable confidentially rules. This would certainly help increasing awareness and improving general compliance and reporting. FINTRAC should collect more data on the number of reports that it receives in relation to suspected terrorist financing.

3.7.3 Compliance with Recommendations 13, 14, 19, 25 and Special Recommendation IV

Rec.	Rating	Summary of factors underlying ratings
Rec.13	LC	▪ Some financial institutions as defined by the FATF (especially financial leasing, finance companies, providers of e-money) are not covered by the obligation to report; ▪ There is no requirement to report attempted transactions; ▪ The low numbers of STRs sent by certain financial sectors raise concerns in relation to the effectiveness of the reporting system.
Rec.14	C	▪ The Recommendation is fully met.
Rec.19	C	▪ The Recommendation is fully met.
Rec.25	LC	▪ There is not enough general feedback given outside the large financial institutions sector.
SR.IV	LC	▪ Some financial institutions as defined by the FATF (especially financial leasing, finance companies, providers of e-money) are not covered by the obligation to report; ▪ There is no requirement to report attempted transactions.

Internal controls and other measures

3.8 Internal controls, compliance, audit and foreign branches (R.15 & 22)

3.8.1 Description and Analysis

Recommendation 15

880. Currently, the PCMLTFA itself contains no specific requirement for the development and maintenance of an AML/CFT compliance regime by the reporting entities[116]. Such a requirement is

[116] Article 9.6 (1) of the PCMLTFA provides for a general compliance program requirement in force in June 2008. The compliance regime requirements will be expanded to include, among other things, a written

prescribed in Section 71 of the PCMLTF Regulations that requires every person or entity subject to the PCMLTFA to establish a compliance regime for complying with the PCMLTFA. The compliance regime must include, "as far as practicable", the following four core elements:

a. The appointment of a person who is responsible for the implementation of the compliance regime.
b. The development and application of compliance policies and procedures.
c. A review of those policies and procedures that is conducted as often as necessary to test their effectiveness by an internal or external auditor of the person or entity or, if it does not have such an auditor, by the person or entity itself (the proposed regulations require minimum review once every 2 years).
d. Where the person or entity has employees or agents or persons authorised to act on behalf of the person or entity, an ongoing compliance training program for those employees, agents or persons.

881. The "as far as practicable" illustrates the need to adopt more or less sophisticated or formal policies and procedures depending on the size of the business.

882. FINTRAC's Guideline 4 provides more specific direction on what is expected to be in place for each component of the compliance program based on the type and the size of the business of the reporting entity. Other financial sector regulators impose similar requirements on their respective supervised entities.

Internal Policies, Procedures and Controls

883. The current PCMLTF Regulations require reporting entities to develop and apply policies and procedures to comply with the anti-money laundering and anti-terrorist financing requirements imposed under Part I of the PCMLTFA. FINTRAC's Guideline 4 provides further details on what these policies and procedure should encompass, including policies and procedures that must show the business's commitment to prevent, detect and address non-compliance. In addition, such policies and procedures must incorporate, at a minimum, the reporting, record-keeping and client identification requirements applicable to the business and it is suggested that they specify situations where an enhanced level of caution is required. Nevertheless, it is not specifically required that rules regarding detection of unusual and suspicious transactions be included. However, when performing its compliance assessments, FINTRAC does inform reporting entities that they should have policies and procedures to identify and report suspicious transactions.

884. OSFI Guideline B-8 goes beyond the basic requirements laid down by the PCLMLTF Regulations and the FINTRAC Guidelines by specifying that "*the policies and procedures should include measures to permit the FRFIs to identify and report Large Cash Transactions. The policies and procedures should also include measures to monitor transactions*". The IDA rules specify that "*firms should have procedures in place that are designed to assist personnel in detecting unusual or suspicious activities*". The IDA has generally advised that AML/CFT policies and procedures should be integrated into a dealer's general compliance regime, for example in the guide "Deterring Money Laundering Activity", the IDA notes: *"a firm's existing policies and procedures for its various business functions should form the basis for its overall money laundering prevention program. This will assure that anti-money laundering compliance reaches all aspects of a firm's business. As an initial matter, a firm could consider reviewing and evaluating those procedures and, where appropriate, enhance them to address anti-money laundering issues"*.

885. The degree of detail and formality of the procedures and policies depends on the business's type of activities and on risk of exposure to money laundering and terrorist financing. Currently, it is not

assessment of the money laundering and terrorist financing risks through regulations enacted in June 2007 and in force in June 2008.

specified in the PCMLTF Regulations that such procedures and policies should be written and kept up to date[117], even if this requirement is considered by FINTRAC as being implicit. OSFI specifies in its Guideline B-8 that "*policies and procedures should be formally documented*". IDA requires "*written anti-money laundering procedures*" in its non-binding "*Deterring money laundering activity*" Guide.

886. According to FINTRAC Guidelines, the business's policies and procedures must be communicated, understood and adhered to by any employee who deals with clients and their assets or who could be affected by the requirements under Part1 of the PCMLTFA and its Regulations. They need enough information to process and complete a transaction properly as well as to identify clients and keep records as required. They also need to know when an enhanced level of caution is required in dealing with transactions, such as those involving countries or territories that have not yet established adequate anti-money laundering regimes consistent with international standards. Information about this, including updates to the list of NCCTs issued by the FATF is available on FINTRAC's website[118] and all of the advisories that FINTRAC has issued throughout the years can be found in the 'FINTRAC Advisories' section of the website[119]. Although directors and senior officers may not be involved in day-to-day compliance, they need to understand the statutory duties placed upon them, their staff and the entity itself.

Appointment of a Compliance Officer

887. Section 71 of the PCMLTF Regulations requires reporting entities to appoint a compliance officer who is responsible for the implementation of the compliance regime.

888. According to FINTRAC Guidelines, the compliance officer should have the authority and the resources necessary to discharge his or her responsibilities effectively. Depending on the type of business, the compliance officer should report, on a regular basis, to the board of directors or senior management, or to the owner or chief operator.

889. If the reporting entity is a small business, the appointed officer could be a senior manager or the owner or operator of the business. If the reporting entity is comprised of an individual, this person can appoint themselves as compliance officer or they may choose to appoint another individual to help them implement a compliance regime. In the case of a large business, the compliance officer should be from a senior level and have direct access to senior management and the board of directors. Further, as a good governance practice, the appointed compliance officer in a large business should not be directly involved in the receipt, transfer or payment of funds.

890. For consistency and ongoing administration of the compliance regime, the appointed compliance officer may choose to delegate certain duties to other employees, for example, the officer may delegate an individual in a local office or branch to ensure that compliance procedures are properly implemented and enforced at that location.

891. OSFI's Guideline B-8 states that the compliance officer should ensure that every division potentially exposed to money laundering or terrorist financing activities appoints an officer to ensure that these divisions implement their policies and procedures. These officers should report regularly on compliance issues and weaknesses in policies and procedures. The financial institution should also designate employees to be accountable for ensuring that policies and procedures intended for these branches are applied. The identification of the AML/CFT compliance officer (CAMLO) must be communicated to OSFI as part of the annual "OSFI-57: Return of Corporate Information" report (for domestic entities) and "OSFI-57A Return of Corporate Information (for foreign entities. In addition, an amended return must be filed disclosing the name of a new CAMLO should a new person be

---

117 The PCMLFT Regulations enacted on 27 June 2007 fill this gap. They require that compliance policies and procedures are written, approved by a senior officer and kept up to date (see Section 71 of the amended PCMLTF Regulations).

118 http://www.fintrac-canafe.gc.ca/intro-eng.asp.

119 http://www.fintrac-canafe.gc.ca/publications/avs/1-eng.asp.

appointed to the position during the year. OSFI Guideline B-8 advises that the CAMLO's mandate be enterprise-wide.

892. Other regulators of financial institutions in Canada have had similar requirements in place, that in some cases have preceded the PCMLTFA requirements. For example, every IDA member is required to designate its Chief Executive Officer, its President, its Chief Operating Officer or its Chief Financial Officer (or such other officer designated with the equivalent supervisory and decision-making responsibility) to act as an "Ultimate Designated Person", responsible for the conduct of the firm and employees. An "Alternate Designated Person" must also be approved to act as Chief Compliance Officer (see IDA By-Law No.38). Firms may be required to designate more than one Chief Compliance Officer depending on the scope and complexity of its business. Alternatively, the Ultimate Designated Person can also act as the Chief Compliance Officer. The responsibilities of the Ultimate Designated Person and Chief Compliance Officer include ensuring firm compliance with IDA and provincial Securities Act regulations, along with federal regulations, such as, the PCMLTFA.

893. Apart from the very generic wording in the FINTRAC Guidelines, there is no explicit requirement to ensure that the AML/CFT compliance officer has timely access to customer identification data and other CDD information, transactions records and other relevant information. The assessors were told that OSFI, in conducting its AML/CFT assessments, has never identified a situation where the CAMLO has not had timely access to all the information needed.

Review of the Compliance Policies and Procedures

894. Another component of a comprehensive compliance regime is a review of the reporting entity's compliance policies and procedures, as often as is necessary, to test their effectiveness.

895. Section 71 of the PCMLTF Regulations requires reporting entities to review their anti-money laundering and anti-terrorist financing policies and procedures "as often as necessary" to test their effectiveness by an internal or external auditor, or if there is no auditor, by the person or entity itself. FINTRAC's Guideline 4 provides a list of triggers that might suggest when a review is needed, such as changes in the legislation, the issuance of new products or services and non-compliance issues[120].

896. It is specified in FINTRAC Guideline 4 that the review is to be completed by an external or internal auditor, if the entity has one. It is indicated that the review could include interviews, tests and sampling. The scope and results of the review should be documented and deficiencies should be identified and reported to senior management or the board of directors. A request for a response indicating corrective actions and a timeline for the implementation of such actions must be sent with the report to senior management and both the request and the response should be documented.

897. FINTRAC's Guideline 4 also indicates that reporting entities must conduct a self-review when it is impossible to have an auditor. The person conducting the review has to be independent, "if feasible", of the reporting, record-keeping and compliance monitoring functions. The review has the same objectives as those conducted by an auditor and should be documented. It should address whether policies and procedures are in place and are being adhered to, and whether procedures and practices comply with legislative and regulatory requirements. It should include corrective measures and follow-up actions.

898. The scope and details of a review will depend, according the FINTRAC's Guideline 4, on the nature, size and complexity of the operations of the reporting entity.

899. Thus, there is no actual requirement for an independent audit function to test AML/CFT regime compliance for small financial institutions (including small MSBs)for which a simple self-assessment is admitted. Moreover, the review of the AML/CFT compliance has to be performed only "as often as

[120] Amendments to section 71 will require, as of June 2008 that this review be conducted every two years.

necessary" and the methods to be used to perform the review (including sample testing) are only quoted in the FINTRAC Guideline as an indication.

900. OSFI's Supervisory Framework considers internal audit to be a key risk management function and assesses it accordingly during the review cycle. Moreover, pursuant to OSFI's Guideline E-13 - Legislative Compliance Management (LCM), FRFIs are obligated to implement a compliance management control on an enterprise-wide basis to ensure that they have the ability to meet all regulatory requirements.

901. OSFI Guideline B-8 states that the independent audit of the AML/CFT Compliance Program should be conducted annually. The Guideline indicates that the review of the business's AML/CFT program should encompass three processes. First, FRFIs have to establish an internal compliance reporting process, which should demonstrate at a minimum conformity with all AML and CFT requirements. It should also review regularly compliance issues and identify and document any weaknesses. These weaknesses shall be reviewed with OSFI.

902. The second process is an annual self-assessment, which must evaluate on a group-wide basis the effectiveness of the AML/CFT procedures to identify the areas and types of risks and suggest corrective measures to address weaknesses and gaps in the risk management system. The results must be reported to senior management and the board of directors. The document should contain the scope of the review, the main elements of policies and procedures, as well as the extent to which policies and procedures comply with the PCMLTFA and its Regulations and OSFI's Guidelines.

903. The last process consists of independent procedures testing to be conducted by the internal audit department, compliance department, or by an outside party such as an external auditor. The testing must cover the entire operation of the entity and must be performed at least annually. The results should be documented and reported to senior management and the board of directors. The report should not only include steps to be taken to address weaknesses and gaps, but could also address areas such as the employees' knowledge of policies and procedures, systems for client identification, large cash transaction and suspicious transactions identification and reporting, and record keeping.

904. Together, the annual self-assessment and independent procedures testing, coupled with LCM requirement, create a control environment which, if implemented effectively, will identify weaknesses or compliance deficiencies in a timely fashion and permit corrective measures to be taken by the financial institutions' senior management and boards of directors. To reinforce the importance of a strong control framework, evidenced through measures such as policies, procedures and other controls, OSFI held information sessions for the industry on November 9, 2005 and October 17, 2006.

905. Other regulators of financial institutions in Canada require similar policies and procedures. In the securities industry for example, IDA By-law 29.27 requires member firms to establish and maintain internal procedures, policies and controls, including compliance procedures for monitoring and reporting adherence to all laws, rules, regulations, requirements, policies and procedures governing their business. The broad scope of the requirement covers AML/CFT laws and regulations. IDA members must establish a compliance monitoring system to prevent and detect violations, that includes a procedure for reporting results of its monitoring efforts to management and, where appropriate, the Board of Directors or its equivalent. Under IDA By-law 38 IDA the Chief Compliance Officer must, at a minimum, report annually to the Board of Directors or its equivalent on the state of compliance at the dealer. The Board of Directors is subsequently required to review the report and determine necessary actions to address any compliance deficiencies noted in the report. Another example can be found in Quebec where the designation of a Compliance Officer (CO) is required by Québec securities regulation and the compliance officer must have access to all necessary information to carry out his function.

906. Furthermore IDA "*Deterring money laundering activity*" Guide specifies that "except for very small firms", the audit should be at least annual and that firms should keep records of measures taken to correct any weaknesses identified in the audit.

Ongoing Compliance Training

907. Section 71 of the PCMLTF Regulations requires every reporting entity to provide ongoing training to their employees, agents or any other person authorised to act on behalf of the business.

908. As further explained in FINTRAC's Guideline 4, reporting entities must not only develop compliance policies and procedures, but ensure that these policies and procedures are understood by all employees within the organization and agents who have contact with customers, who see customer transaction activity, or who handle cash in any way understand the reporting, client identification and record-keeping requirements. This includes those at the front line as well as senior management. In addition, others who have responsibilities under the compliance regime, such as information technology and other staff responsible for designing and implementing electronic or manual internal controls should receive training. This could also include the appointed compliance officer and internal auditors.

909. Reporting entities must address standards for the frequency and method of training, such as formal, on-the-job or external. New people should be trained before they begin to deal with customers. All should be periodically informed of any changes in anti-money-laundering or anti-terrorism legislation, policies and procedures, as well as current developments and changes in money laundering or terrorist activity financing schemes particular to their jobs. Those who change jobs within the organization should be given training as necessary to be up-to-date with the policies, procedures and risks of exposure to money laundering or terrorist financing that are associated with their new job.

910. The method of training may vary greatly depending on the size of the business and the complexity of the subject matter. The training program for a small business may be less sophisticated and not necessarily formalized in writing. In line with FINTRAC guidelines and when assessing training needs, a reporting entity should consider the following elements:

- *Requirements and related liabilities:* the training should give those who need it an understanding of the reporting, client identification and record-keeping requirements as well as penalties for not meeting those requirements.
- *Policies and procedures:* the training should make the entity's employees, agents, or others who act on its behalf aware of the internal policies and procedures for deterring and detecting money laundering and terrorist financing that are associated with their jobs. It should also give each one a clear understanding of his or her responsibilities under these policies and procedures and of how their institution, organization or profession is vulnerable to abuse by criminals laundering the proceeds of crime or by terrorists financing their activities. Training should include examples of how the entity's particular type of organization could be used to launder illicit funds or fund terrorist activity.
- *Background information on money laundering and terrorist financing*: any training program should include some background information on money laundering so everyone who needs to understand what money laundering is, why criminals choose to launder money and how the process usually works. They also need to understand what terrorist financing is and how that process usually works. FINTRAC makes material available on its website that can provide help with training.

911. OSFI's Guideline B-8 further stipulates that employees of FRFIs should receive sufficient training. This training must encompass the policies and procedures of the entity, the techniques used by money launderers in financial institutions and current AML/CFT legislation and regulation. Special attention must be given to front-line staff.

912. When OSFI undertakes AML/CFT assessments it reviews the material produced by each financial institution to train its staff. The assessors were told that employee knowledge is ascertained through interviews, during on-site reviews and assessing the account opening process. It is expected that all new employees receive adequate training before dealing with customers and that continuing employees receive training appropriate to their responsibilities at least on an annual basis. In this regard, a number of recommendations and requirements have been given to improve the AML/CFT training given by financial institutions to assist employees in understanding money laundering and terrorist financing and its consequent reporting processes.

913. AML/CFT requirements have been included in the IDA's mandatory courses for those dealing with the public or holding supervisory positions. Those courses touch on conduct and practices handbook for securities industry professionals, partners, directors and senior officers' examination, branch managers' course and chief compliance officers course (under development).

914. In addition to mandatory courses, the IDA has a mandatory continuing education program and sets guidelines for acceptable continuing education course content, length and rigor (see IDA Policy 6). The guidelines recommend a process to aid firms in identifying appropriate suppliers and courses. The IDA requires that certain persons successfully complete a compliance course within a three-year cycle. These courses must review critical regulations and application, regulatory changes, rules relating to new products and ethics. Anti-money laundering laws and regulations and their implementation at the member is highlighted in the IDA Policy 6. As part of the audit process, the IDA will review member-developed compliance courses to ensure they satisfy the guidelines. IDA member firm AML/CFT training is reviewed during the IDA's sales compliance audits.

Screening procedures when hiring employees

915. There is currently no general enforceable requirement for Canada's financial institutions to screen candidates for employment.

916. Under OSFI's Supervisory framework, the FRFI's senior management and/or the board of directors are responsible for planning, directing and controlling the strategic direction and general operations. One of their key responsibilities includes developing sound business practices, culture and high ethical standards within the financial institution that help protect its reputation. This is primarily achieved by the developing of sound human resource policies associated with staff selection, hiring, retention, conflict of interest and code of conduct. As such, it is in the best interest of senior management and the board at the financial institutions to adopt appropriate and relevant screening procedures when hiring employees to ensure that potential employees have high ethical standards so as to minimize exposure by the financial institution or its clients to potential abuses or reputational risks issues. Consequently, as part of its supervisory role and in assessing the board and senior management control functions, OSFI would expect them to have adopted appropriate screening procedures at the financial institution to ensure high standards when hiring potential new employee. In this respect, OSFI has issued a draft Guideline (E-17) outlining principles to assist FRFIs in establishing policies and procedures regarding the conduct of assessments of their Responsible Persons (*i.e.* directors, senior officers, principal officers, chief agent or any person playing a significant role in the management of the financial institution) upon their initial appointment and at regular intervals. This Guideline will nevertheless remain limited to responsible persons and will not concern all employees.

917. As a practice, Canada's largest banks screen all new potential employees to determine if they have criminal records. Such screening is made possible by a Memorandum of Understanding between the Canadian Bankers Association and the RCMP. In addition, participating banks can screen the names of potential employees against a list of previous bank employees who may have been dismissed by another participating bank for undertaking unethical activities against the bank or its client.

918. The IDA also oversees the professional standards and educational programs that ensure the competence of securities industry employees. The IDA screens all investment advisors employed by

member firms to ensure that those entering the industry are of good character and have successfully completed all the required educational courses and programs. The IDA requires that member firm employees who deal with the public interest must be licensed. The IDA does this more as part of its mandate to protect the public interest and the integrity of the capital markets rather than as a service to members. The IDA has good access to information that its members may not have, such as reports from previous employers and occasionally other confidential information.

Recommendation 22

919. Section 15(4) of the Bank Act states that "subject to this Act, a bank has the capacity to carry on its business, conduct its affairs and exercise its powers in any jurisdiction outside Canada to the extent and in the manner that the laws of that jurisdiction permit." A similar provision is set out in the Insurance Companies Act (Section 15.4). However, Canadian financial institutions and any branches or subsidiaries are generally subject to the laws of the jurisdiction in which they are incorporated. The assessment team believes that the provisions as set out in the Bank Act and in the Insurance Companies Act are insufficient to address the specific requirements in the context of Recommendation 22.

920. Currently, the PCMLTFA and PCMLTF Regulations contain no specific enforceable provision requiring financial institutions to ensure that their foreign branches and subsidiaries observe AML/CFT measures consistent with home country requirements[121]. There is no legal obligation in the PCMLTFA and PCMLTF Regulations that, where the minimum AML/CFT requirements of the home and host countries differ, branches and subsidiaries in host countries are required to apply the higher standard, to the extent that local (*i.e.* host country) laws and regulations permit. Equally, there is no requirement that financial institutions be required to inform their home country supervisor when a foreign branch or subsidiary is unable to observe appropriate AML/CFT measures because this is prohibited by local (*i.e.* host country) laws, regulations or other measures.

921. As the home regulator, OSFI already expects FRFIs with international operations to implement enterprise-wide policies consistent with the Core Principles. One such policy would relate to the implementation of an enterprise-wide AML/CFT Programme, as outlined in its Guideline B-8. As such, OSFI expects the international operations of financial institutions to implement policies and procedures consistent with the domestic financial institutions enterprise-wide standards - regardless of whether the country is an FATF member or not.

922. The one exception to this would be where the AML/CFT standard in a particular jurisdiction is higher than or in addition to the enterprise-wide standard. Under those circumstances OSFI would expect the international operation in the particular jurisdiction, whether the operation is a branch of a domestic financial institution or a separate legal subsidiary, to implement AML/CFT standards that go beyond the enterprise-wide or group standards.

923. Moreover, Guideline B-8 states that FRFIs should ensure that subsidiaries having potential exposure to money laundering or terrorist financing activities follow the guideline.

924. OSFI examinations in financial institutions are performed on all parts of the FRFIs' enterprise-wide operations, including branches and subsidiaries located outside Canada. Deficiencies in any subsidiary or branch of the financial institution have been subject of deficiency letters by OSFI, or can trigger the issuance of a direction of compliance if the deficiency amounts to the commission of an unsafe or unsound practice in conducting the business of the institution. With respect to subsidiaries, OSFI's usual practice is to share any identified material weaknesses with host regulators. Furthermore, OSFI shares the results of its AML/CTF examinations with FINTRAC (except for information

[121] Some provisions in relation to Recommendation 22 have been adopted in the PCMLTFA in December 2006. They will enter into force in June 2008.

pertaining to non-Canadian subsidiaries) who, in turn, has the ability to impose legal sanctions with respect to compliance deficiencies.

925. To date OSFI has undertaken 6 separate reviews of the international operations of Canadian domestic banks to verify that AML/CFT policies and procedures are being implemented on an enterprise-wide basis.

3.8.2 Recommendations and Comments

926. *Recommendation 15.* The current requirements should be expanded, made more explicit and enforceable, in particular:

- Written policies and procedures should be explicitly required, and should be kept up to date, and their minimum mandatory content should include the detection of unusual and suspicious transactions.
- There should be an explicit requirement to ensure that the AML/CFT compliance officer has a timely access to customer identification data and other CDD information, transactions records and other relevant information.
- The requirement for an independent audit function (internal or external) to test on a regular basis the compliance of the AML regime should be strengthened for MSBs and small financial institutions, and made more explicit generally.
- Canada should impose screening procedures when hiring employees for financial institutions.

927. *Recommendation 22*. Canada should ensure that the provisions in relation to Recommendation 22 that will enter into force in June 2008 are in line with the FATF requirements and are properly implemented by all financial institutions.

3.8.3 Compliance with Recommendations 15 & 22

Rec.	Rating	Summary of factors underlying ratings
Rec.15	LC	• The requirement for internal controls does not extend to all financial institutions as defined by the FATF (notably financial leasing, factoring and finance companies). • There is no mandatory explicit requirement to maintain up to date internal procedures, policies and controls and such policies do not include the detection of unusual and suspicious transactions. • There is no explicit requirement to ensure that the AML/CFT compliance officer has a timely access to customer identification data and other CDD information, transactions records and other relevant information. • There is no mandatory requirement for an independent audit function to test AML/CFT regime compliance for small financial institutions (including some MSBs) for which a simple self-assessment is admitted. • There is no general requirement concerning screening procedures when hiring employees.

Rec.	Rating	Summary of factors underlying ratings
Rec.22	NC	• Currently, the PCMLTFA and PCMLTF Regulations contain no explicit provision requiring financial institutions to ensure that their foreign branches and subsidiaries observe AML/CFT measures consistent with home country requirements although foreign branches of Canadian financial institutions are Canadian entities under the Bank Act and the Insurance Companies Act that are subject to Canadian laws. • There is no requirement that particular attention be paid to branches and subsidiaries in countries which do not or insufficiently apply the FATF Recommendations. • There is no legal obligation in the PCMLTFA and PCMLTF Regulations that, where the minimum AML/CFT requirements of the home and host countries differ, branches and subsidiaries in host countries are required to apply the higher standard, to the extent that local (*i.e.* host country) laws and regulations permit. • There is no requirement that financial institutions be required to inform their home country supervisor when a foreign branch or subsidiary is unable to observe appropriate AML/CFT measures because this is prohibited by local (*i.e.* host country) laws, regulations or other measures.

3.9 Shell banks (R.18)

3.9.1 Description and Analysis

Establishment or continued operations of shell banks

928. The Bank Act does not permit the incorporation of a shell bank since all banks operating in Canada must have a physical presence. All banks incorporated in Canada must be listed in Schedule I or Schedule II of the Bank Act and such a listing must always include a reference to the place in Canada where the head office is situated. Section 237 of the Bank Act also provides that a bank incorporated in Canada must have, at all times, a head office within Canada that is specified in either the Bank's incorporating instrument or its by-laws.

Correspondent banking relationships with shell banks

929. Legislative amendments enacted in December 2006 and regulatory amendments that were brought into force on 30 June 2007 specifically address the issue of shell banks in Canada's AML/CFT legislative and regulatory texts. Section 9.4(2) of the PCMLTFA specifically prohibits Canadian financial entities from entering into a business relationship with shell banks. There is no prohibition to continue business relationships with shell banks.

930. Prior to these legislative changes, financial regulators had issued guidance and regulations in this area. OSFI, for example, has been providing guidance to all banks and federally regulated trust and loan companies in the area of correspondent banking since 2002. OSFI Guideline B-8 ''encourages FRFIs to pay special attention to business relationships with shell banks and to adopt measures that will ensure that they do not enter into correspondent banking relationships with shell banks''. The practice was first communicated in guidance sent to banks and trust and loan companies on February 22, 2002 encouraging them to adopt measures to ensure that they do not enter into correspondent banking relationships with shell banks and added to Guideline B-8 when it was subsequently revised. In the securities sector, the IDA has had a regulation in place since 2004 that prohibits member securities dealers from dealing with shell banks, with an exception for affiliates of banks subject to a suitable regulatory regime in their home jurisdiction.

931. It should be noted that as part of its assessment of a bank's correspondent banking business, OSFI verifies that the bank has adopted in writing such controls against dealing with shell banks and that it does not have any correspondent banking relationships with shell banks.

Possible use of respondent financial institutions accounts by shell banks

932. Under the December 2006 PCMLTFA provisions that entered into force on June 30, 2007, there is a compulsory requirement for financial institutions to satisfy themselves that respondent financial institutions in a foreign country do not permit their accounts to be used by shell banks. Section 15 of the PCMLTF Regulations adopted on June 27, 2007 and in force since June 30, 2007 requires every financial entity that enters into a correspondent banking relationship to obtain a statement from the foreign financial institution that it does not have, directly or indirectly, correspondent banking relationships with shell banks.

933. The assessors were advised that when OSFI reviews the files of the correspondent accounts, it expects to see evidence that the bank has conducted enhanced due diligence in managing the money laundering and terrorist financing risks associated with correspondent banking activities. OSFI looks for evidence that the bank has requested information and documentation from the respondent bank that verifies, among other things, that the respondent is a regulated bank, is not a shell bank and does not deal directly or indirectly with shell banks. The assessment team was told that OSFI has never encountered instances where one of its regulated institutions had correspondent relationships with a shell bank.

3.9.2 Recommendations and Comments

934. Canada should adopt a requirement for financial entities to terminate business relationships with shell banks as well as with any foreign financial institution that has, directly or indirectly, correspondent banking relationships with shell banks. Canada should ensure that the measures adopted in relation to shell banks are fully implemented by financial institutions.

3.9.3 Compliance with Recommendation 18

Rec.	Rating	Summary of factors underlying ratings
Rec.18	LC	• Financial entities are not required to terminate business relationships with shell banks, nor with any foreign financial institution that has, directly or indirectly, correspondent banking relationships with shell banks. • The effectiveness of the measures in place cannot yet be assessed.

Regulation, supervision, guidance, monitoring and sanctions

3.10 Supervision and oversight (R. 23, 30, 29, 17, 32, & 25)

3.10.1 Description and Analysis

Authorities/SROs roles and duties & Structure and resources - R.23, 30

General

935. The overall Canadian supervisory regime is complex due to the federal and provincial structure of government. However, AML/CFT compliance is in principle straightforward as FINTRAC is solely responsible. In order to assist it, FINTRAC has signed MOUs with certain regulators or supervisors to share information. In addition to this, some regulators have provisions under their own legislation or codes of conduct that impose similar requirements to, or which complement the key provisions in the PCMLTFA through separate enforcement powers (for example, OSFI advises FRFIs to have proper due diligence procedures; IDA requires securities dealers to properly identify beneficial owners). FINTRAC supervision provides the minimum standard; however, having regard to all the elements, it is not easy to get a complete overview of the supervision of AML/CFT compliance that is being applied in practice to each category of financial institution.

936. It is worth mentioning that the financial sectors which are currently not covered by the PCMLTFA (see Section 3.1 of the report) are generally subject neither to specific regulation nor to prudential supervision concerning AML/CFT issues. For example, for financial leasing, the industry is

represented by the Canadian Leasing and Finance Association (CLFA) which provides information on the industry and input into the policy-making process, but does not provide any regulatory oversight. Membership in the CLFA is voluntary. As stated above, it is only on a voluntary basis that some finance companies have decided to comply with minimum AML/CFT standards and they are not subject to any supervision in that area.

937. The following table generally summarizes the list of existing regulators per reporting entities:

Reporting Entities	Number of reporting Entities	Sector Particularities	Primary Regulator	AML/CFT Regulator
Banks	71	Biggest six hold 90% of assets	OSFI	FINTRAC
Credit unions and *caisses populaires*	1 250	Majority located in Quebec	Provincial authorities (*e.g.* AMF in Quebec)	FINTRAC
Life insurance companies	105 - federal 33 - provincial	Five largest are federally regulated and handle 64% of net premiums	OSFI - 90% of firms Provincial authorities - 10% of firms	FINTRAC
Life insurance brokers and agents	73 000	A significant number work for insurance companies	Provincial authorities (*e.g.* AMF, FSCO)	FINTRAC
Trust and Loan companies	81	Largest are banks' subsidiaries	OSFI and some provinces[1]	FINTRAC
Investment dealers firms[2]	208	Biggest 11 firms hold 71% of revenues. 6 of these are owned by the largest banks	IDA	FINTRAC
Mutual Fund dealers firms[2]	197	Only deal in mutual funds. Many of the largest are owned by the large banks.	MFDA AMF in Quebec	FINTRAC
Investment Counsel and Portfolio Management firms[2]	397	Activities limited to providing investment advice and counselling	Provincial authorities (*e.g.* AMF and OSC)	FINTRAC
Other securities firms[2]	309	Limited trading in securities	Provincial authorities (*e.g.* AMF and OSC)	FINTRAC
Money service businesses	700	A few large firms cover the large majority of the market	None	FINTRAC

Notes:

1 Ontario only permits the operation of federally regulated trust companies.

2 Some 90 000 securities participants are licensed/registered to sell securities in these firms and are subject to AML/CFT requirements.

OSFI: Office of the Superintendent of Financial Institutions.

AMF: L'Autorité des marchés financiers du Québec.

OSC: Ontario Securities Commission.

FSCO: Financial Services Commission of Ontario.

IDA: Investment Dealers Association of Canada.

MFDA: Mutual Fund Dealers Association of Canada

938. The basis on which the regulators (excluding FINTRAC) perform AML/CFT compliance supervision varies from one organization to another, as they are not specifically mandated by law to ensure compliance with PCMLTFA/PCMLTF Regulations:

- OSFI, for instance, as the prudential regulator of federal financial institutions is primarily concerned with ensuring safety and soundness which are key elements in its supervisory interventions in the AML/CFT area. If OSFI determines that a FRFI has failed to implement AML/CFT requirements in a manner that amounts to the commission of an unsafe or unsound practice it can apply a full range of supervisory enforcement actions including a "Direction of Compliance". It has adopted AML/CFT guidance (Guideline B-8) to help FRFIs to comply

with the various legal requirements. Failure to comply with B-8 gives rise to recommendations aimed at strengthening risk management controls.

- Under various provincial Acts governing financial institutions, compliance with federal law and regulation is a condition for obtaining and keeping a license. Thus regulators, even if they do not have direct jurisdiction to administer the PCMLTFA, are entitled to verify that the entities they supervise comply with it as they have, in a number of cases, the mandate to ensure compliance with any federal or provincial legislation. But some actually do not look specifically at those aspects in their compliance regime or look at it in a very cursory and limited way: for instance, average time spent by DICO, which is in charge of the supervision of credit unions in Ontario, to the review of AML/CFT compliance (*i.e.* the review of the financial institution report to FINTRAC) is two hours per inspection. Alberta Securities Commission compliance officers look only at the existence of procedures and policies but would not make sample testing to assess their effectiveness. For its part, FSCO, the Ontario provincial regulator for life insurance companies (4 provincially regulated) and agents[122], which has a memorandum of understanding with OSFI for the supervision of the four Ontario life insurance companies does not perform any on-site review for AML/CFT purposes in the other entities it supervises. Another example of limited on-site reviews performed by the provincial regulator is the control exercised by the AMF, the provincial regulator of Quebec of the *caisses populaires* of the Desjardin group, as it relies mainly on the controls performed by the Federation itself on its member entities.

- Other regulators, such as the IDA for investment dealers, have issued code of conducts or mandatory regulations establishing standards comparable to or higher than PCMLTFA and control the compliance of reporting entities with these standards.

939. Thus the role of the different regulators and SROs regarding the control of AML/CFT compliance may differ considerably, and, depending on their different levels (and in some cases absence) of involvement in that area, the different financial sectors are subject to disparate degrees of supervision for AML/CFT purposes.

940. The MSBs sector which comprises 700 identified reporting entities and possibly more than 20 000 branches or agents is only supervised by FINTRAC. FINTRAC has given priority to inspections in this sector after commencing its compliance reviews and has covered about 300 entities during the last four last fiscal years.

941. FINTRAC has entered in agreements with 12 regulators and SROs in the financial sector to exchange AML/CFT supervisory information, the most recent having been signed in February 2007. Information provided by these regulators to FINTRAC feeds into FINTRAC's risk assessment.

942. In general, under the MOUs, the regulators provide FINTRAC with the following information regarding their activities related to the compliance of the entities they regulate with the PCMLTFA: lists of entities that they plan to examine; a copy of their compliance review program; results of compliance reviews undertaken; copies of correspondence regarding deficiencies; descriptions of actions the regulator has required to be taken to correct deficiencies; and descriptions of corrective actions taken by entities.

943. The following table describes FINTRAC's MOU partners in the financial sector, the entities supervised by the regulator, and the process undertaken by the given regulator to carry out AML/CFT inspections.

[122] The definition of agents in the Insurance Act of Ontario is intended to capture all conduct for someone placing business with a life insurance company, whether the person is appointed by an insurance company or he/she is acting on behalf of the consumer.

Region	Regulator	Number of FIs Supervised by the Regulator	Regulator AML/CFT Inspections Methodology
Canada	Office of the Superintendent of Financial Institutions	71 Banks 46 Trust Companies 22 Loan Companies 96 Life Ins. Companies	Detailed exams in all sectors Risk based Examine one-quarter of regulated entities annually
Canada	Investment Dealers Association of Canada	208 securities firms	Risk based. One-third annual coverage.
British Columbia	Financial Institutions Commission of British Columbia (FICOM)	53 Credit Unions 2 Life Ins. Companies, 5 500 agents 7 Trust Companies	Risk & random. No set examination program with exams primarily selected by weaknesses identified in risk management system
Manitoba	Credit Union Deposit Insurance Corporation	58 Credit Unions	Risk based. 25% annual exam coverage
New Brunswick	New Brunswick Office de stabilisation de la Fédération des caisses populaires acadiennes	33 *Caisse Populaires*	Risk & random. All entities examined within 18-month exam cycle
New Brunswick	New Brunswick Department of Justice, Insurance Branch	2 Life Ins. Companies	Random, 3-year exam cycle
Newfoundland	Credit Union Deposit Guarantee Corporation of Newfoundland and Labrador	13 Credit Unions	All entities examined within a 2-year cycle
New Brunswick	New Brunswick Credit Union Federation Stabilization Board	23 Credit Unions	Risk & random. All entities examined within 18-month exam cycle
Nova Scotia	Nova Scotia Credit Union Deposit Insurance Corporation	34 Credit Unions	Risk & random, with each entity examined in 18-month cycle
Ontario	Deposit Insurance Corporation of Ontario	221 Credit Unions & *Caisses populaires*	Risk based, currently being refined. Conduct apprx. 70 exams annually, with 15-20 targeted
Québec	L'Autorité des marchés financiers du Québec	300 securities firms 600 *Caisses populaires* 28 Life Ins. Companies	Risk based
Saskatchewan	Saskatchewan Credit Union Deposit Guarantee Corporation	88 Credit Unions	Risk based, annual exams of each entity

944. FINTRAC provides these regulators with information related to the risk assessment undertaken by FINTRAC, results of FINTRAC's compliance actions and copies of correspondence between FINTRAC and the supervised entities.

945. It is to be noted that FINTRAC does not delegate its supervisory role through MOUs to other regulators. Information obtained by other regulators through their own supervisory activities, including examinations, is provided to FINTRAC under the MOU and is taken into consideration by FINTRAC during its risk assessment process. In addition to the audits and examinations performed by the regulators under their own supervisory framework, the results of which, with respect to AML/CFT relevant issues are provided to FINTRAC, FINTRAC conducts examinations in each sector, whether or not it is covered by an MOU. In fact, FINTRAC has conducted examinations in every sector covered by the PCMLTFA with the exception of financial institutions supervised by OSFI since FINTRAC fully relies on OSFI to conduct AML/CFT compliance initiatives.

946. Sanctions available under the PCMLTFA can only be administered by FINTRAC (see below-Recommendations 17 and 29).

947. In conclusion, beyond the centralized role of FINTRAC, it has been difficult for the assessment team to have a completely reliable overview of the efficiency of the supervision of AML/CFT compliance, except at the federally regulated level.

948. These preliminary remarks and observations will be illustrated and further developed in the following parts of this section, describing some of the main features and participants in the AML/CFT regime. The assessment team has opted for a sample approach whereby the AML/CFT supervision carried out by FINTRAC, OSFI and IDA, being the principal players, will be developed in more depth and detail when compared with the supervisory regimes implemented by SROs or provincial regulators where detailed and comprehensive information is not so readily available.

Overview of the main regulators acting in the AML/CFT area (with the exception of FINTRAC)

OSFI

949. OSFI is the prudential regulator for all banks, federally regulated trust and loan companies, federally regulated insurance companies, cooperative retail associations and cooperative credit associations and is given its responsibilities and authority by the OSFI Act and federal financial institution legislation.

950. FRFIs supervised by OSFI are subject to prudential regulation through legislated authorities and powers provided in the Bank Act, the Trust and Loan Companies Act, the Insurance Companies Act, and the Cooperative Credit Associations Act. The Office of the Superintendent of Financial Institutions Act provides the Superintendent with authority to assess controls designed to ensure that each FRFI is operated in a safe and sound manner and complies with its governing statute.

Securities regulators

951. *General*. The regulation of the securities industry is under provincial and territorial jurisdiction and is carried out through provincial/territorial securities regulatory authorities (SRAs). Self-regulatory organizations (SROs) and market infrastructure entities, such as exchanges and clearing agencies, supplement direct regulation by the SRAs in Canada's ten provinces and three territories. All SROs and market infrastructure entities set and enforce requirements that restrict access to the securities markets; however, some are for-profit organizations, others are not, and some have competitors while others are monopolies. The Canadian securities regulatory regime relies on these organizations and entities to help protect investors and promote fair, efficient and competitive capital markets. They develop standards of practice and business conduct, monitor their members' or participants' compliance with these standards and take appropriate enforcement actions against those who violate these requirements.

952. The current regulatory regime provides for parallel regulation of members and participants of these organizations and entities. For instance, SRAs make general rules for dealers, while SROs make rules that are consistent but may be more restrictive on the same subject matter; therefore, both SRAs and SROs may take enforcement actions against members. Some provinces and territories have delegated certain powers under their securities legislation to the SROs, such as registration and compliance[123].

953. Since there are different types of SROs and market infrastructure entities with varying functions and purposes, the nature and degree of the reliance of securities regulators on them may vary. For example, they rely heavily on certain SROs, such as the Bourse de Montréal Inc. (Bourse)[124], the

[123] The Alberta Securities Commission, the British Columbia Securities Commission and the Ontario Securities Commission have delegated certain registration functions to the Investment Dealers Association of Canada. The Autorité des marchés financiers (Québec) delegated registration and inspection functions and powers to the Investment Dealers Association of Canada.

[124] The Bourse is an exchange and also a recognized SRO in Quebec.

Investment Dealers Association of Canada (IDA), the Mutual Fund Dealers Association of Canada (MFDA) and Market Regulation Services Inc. (RS) to perform front-line regulatory functions.

954. The principle of reliance on SROs is well entrenched in Canadian securities legislation, for example, through explicit authorisation for the SRAs to recognize SROs[125]. In order to ensure the on-going reliance is appropriate, SRAs conduct regular oversight of SROs to evaluate their effectiveness, to confirm that they are acting in the public interest and to ensure that any conflicts of interest between the public and their members/users and any conflicts among members/users are properly managed. Legislation in many jurisdictions outlines this responsibility when regulators rely on SROs[126].

955. *IDA.* The IDA is a provincially recognized SRO in all provinces[127]. Recognition is done through an order of the SRA in the Province, generally subject to conditions set forth in or with the order. The IDA is the front-line regulator of investment dealers and a number of provisions in provincial securities regulations recognize IDA rules as an alternative to provincial regulations, generally by explicitly granting or allowing the granting of exemptions from the provincial rules to members who abide by IDA rules.

956. *MFDA.* The MFDA, established in June 1998, is the national SRO for the distribution side of the Canadian mutual fund industry. The MFDA regulates the operations, standards of practice and business conduct of its members and their representatives with a mandate to enhance investor protection and strengthen public confidence in the Canadian mutual fund industry. In general, the MFDA has a similar regulatory regime as the IDA, which includes rules and detailed requirements MFDA members must comply with, including particulars respecting business structures, capital requirements, insurance, books and records, client reporting, and business conduct. Subject to limited exceptions (for example, for firms for whom the mutual fund business is incidental to their primary business of advising), in British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, New Brunswick and Nova Scotia, a mutual fund dealer must be a member of the MFDA[128].

957. *OSC.* The following provides examples where SRAs regulate registrants directly. These examples pertain specifically to the case of securities regulation in the largest province, Ontario, by the Ontario Securities Commission (OSC).

958. Investment Counsel/Portfolio Managers (IC/PMs). This is the largest category of registrants reviewed directly by the OSC. IC/PMs have discretionary investment authority over client funds. The OSC considers them to be low risk for AML/CFT purposes since most advisers do not have access to client funds, trades are executed through an IDA member and assets are held by a custodian. As a result, the OSC only reviews policies and procedures relating to compliance with money laundering legislation and does only limited substantive testing such as the client identification procedures as part of its know-your-client testing procedures. To the extent that the policies and procedures are deficient,

---

125 For example, section 2.1 of the *Securities Act* (Ontario) states, in part, that "In pursuing the purposes of this Act, the Commission shall have regard to the following fundamental principles: ... 4. The Commission should, subject to an appropriate system of supervision, use the enforcement capability and regulatory expertise of recognized self-regulatory organizations". Section 21.1 of the Securities Act (Ontario) sets out the statutory authority to recognize SROs.

126 For example, section 2.1 of the Securities Act (Ontario) sets out the principle of "an appropriate system of supervision." Subsection 21.1(4) provides that "the Commission may, if it is satisfied that to do so would be in the public interest, make any decision with respect to any by-law, rule, regulation, policy, procedure, interpretation or practice of a recognized self-regulatory organization." Subsection 21.7(1) allows the Ontario Securities Commission to hear appeals from "a direction, decision, ruling or order" made by a recognized SRO.

127 With the exception of Prince Edward Island which has no authority in its Securities Act to recognize a SRO and there is a pending recognition application with New Brunswick.

128 While the MFDA is not formally recognized as an SRO by the *Autorité des marchés financiers* (AMF), it has entered into a co-operative agreement with the AMF and actively participates in the regulation of mutual fund dealers in Québec.

the OSC issues a deficiency notice as part of its field review deficiency report and provides a copy of the deficiency notice to FINTRAC periodically.

959. Scholarship Plan Dealers (SPDs). SPDs are relatively low risk for AML/CFT purposes because they deal with relatively small amounts of money from a large numbers of investors. Given the nature of the scholarship plans, the risk of money laundering was considered low. Money is locked in for a number of years. Although the money can eventually be withdrawn, only the amount net of enrolment fees would be returned.

960. Limited Market Dealers (LMDs). In Ontario, there are approximately 550 LMDs engaged in the business of selling "exempt" securities to accredited investors. The majority of LMDs do not receive money from clients. Client cheques are payable directly to the issuer of a security. In January 2006, 78 of those LMDs were registered both as mutual fund dealers and LMDs and therefore were subject to on-site compliance reviews by MFDA. LMDs are subject to on-site compliance reviews of OSC.

Credit Unions regulators

961. All credit unions and *caisses populaires* are provincially incorporated and almost exclusively regulated at the provincial level. The legislative and regulatory framework for credit unions and *caisses populaires* generally run parallel to that of federal financial institutions, such as banks. In addition, the provinces provide deposit insurance for members of credit unions or *caisses populaires*.

962. *Regulation in Ontario.* The Financial Services Commission of Ontario (FSCO), an arm's-length agency of the Department of Finance, regulates registration of credit unions and *caisses populaires* under the Credit Unions and *Caisses Populaires* Act, 1994. The Deposit Insurance Corporation of Ontario (DICO) has signed a Letter of Understanding (LOU) with the FSCO. DICO is responsible for conducting onsite verifications and reviews and copies of all on-site examinations reports are shared with FSCO.

963. *Regulation in Quebec*. The Autorité des marchés financiers (AMF), the integrated supervisor in Quebec, regulates *caisses populaires*, securities firms and insurance companies and agents, regulates *caisses populaires* under an Act respecting financial services cooperatives. Under this Act, the Desjardins federation, the joint supervisor of the *caisses populaires* with the AMF, must inspect the internal affairs of each *caisse populaire*, including that AML/CFT requirements are being followed, at least once every 18 months and must transmit to the AMF its findings.

Insurance regulators

964. Canadian insurance companies can be either federally or provincially incorporated. Branches of foreign insurance companies are regulated at the federal level only. Federally incorporated regulated life insurance companies dominate Canada's life and health sector. At the end of 2005 there were about 107 active life insurance companies operating in Canada and out of these, some 80 (which includes 30 foreign branches) were federally regulated, generating almost 92% of total life and health premium income. In addition the 3 largest federally regulated insurance companies and their life insurance subsidiaries account for 81% of the life and health sector's assets.

965. OSFI also prudentially supervises provincially chartered life companies regulated by three provinces; Manitoba, Ontario and New Brunswick under MOUs with those provinces. In 2005 these MOU's together cover 6 provincial companies. The remaining active provincial life insurers were incorporated in Quebec (17), British Columbia (2) and Alberta (1).

966. *Provincial Regulation*. In Ontario, FSCO licenses and regulates insurers that sell life and health insurance in the province of Ontario to ensure they comply with the provincial market conduct legislation. Life and health insurance products are sold to consumers directly by companies or through insurance agents. In Québec, the Autorité des marchés financiers supervises life insurers while the Chambre de la sécurité financière oversees insurance agents.

Recommendation 30 (Structure and resources of the supervisory authorities)

967. Due to the number of existing supervisors and regulators liable to intervene in the area of AML/CFT, a complete overview of their resources and efficiency would be quite complex, so for the purpose of this report, only the principal authorities, namely, FINTRAC, OSFI and IDA will be assessed in more detail.

968. With regard to the level of resources made available to the different supervisory authorities, there are contrasting situations. Generally, FINTRAC, as the primary regulator specifically empowered with ensuring compliance with PCMLTFA has resources that are too limited to ensure proper supervision in the AML/CFT area. It has to rely on other primary regulators in a number of cases (securities dealers, FRFIs, credit unions, etc.) who themselves do not always have sufficient resources to dedicate to the task.

969. Professional standards applicable to the staff of the main regulators and supervisors are quite comprehensive. The quality and frequency of training for combating ML and TF are also satisfactory as far as FINTRAC, OSFI and IDA are concerned. Again, the assessors believe that training of FINTRAC staff is essential to carry out properly its supervisory responsibility in a very diverse range of businesses.

FINTRAC

970. *Resources*. In its budget of May 2006, the Government of Canada announced its priority to bolster existing capacity to combat money laundering and terrorist financing by providing incremental resources to FINTRAC in the amount of CAD 16.2 million and 102 employees. FINTRAC has a total of 233 employees (as of September 30, 2006) and a current budget of almost CAD 51 million.

971. Although the total headcount may seem adequate, the deployment of staff between the different FINTRAC departments appears to be unbalanced, with the bulk being dedicated to IT management (FINTRAC was created as an FIU that would rely heavily on technology) and comparatively fewer human resources assigned to AML/CFT inspections, especially if compared with the vast number of entities that are subject to supervision.

972. Within FINTRAC, Regional Operations and Compliance (ROC), is responsible for the development, implementation and monitoring of the national compliance program. This includes interpreting policy and regulations, providing advice and assistance to reporting entities; conducting risk assessment and examinations; monitoring data quality, timing and volume; providing feedback to reporting entities; making disclosures of non-compliance to law enforcement; conducting regional liaison with disclosure recipients (*i.e.* law enforcement agencies); and developing and implementing new programs.

973. ROC is comprised of the Compliance and Program Development Units in Ottawa and three regional offices with responsibilities for compliance and for liaison with law enforcement. The Western regional office in Vancouver covers British Columbia, Alberta, Saskatchewan, and the Yukon. The Central regional office in Toronto covers Manitoba, the Northwest Territories, Nunavut, and Ontario. The Eastern regional office in Montreal covers Quebec, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland & Labrador.

974. ROC has a budget, for the fiscal year of 2006-07, of approximately CAD 5 million. ROC in Ottawa, which includes the Compliance and Program Development Units, as well as the Assistant Director's Office, has a total of more than 20 staff members. The three regional offices have approximately 10 staff members each.

975. With approximately 50 people dedicated to compliance, FINTRAC manages to perform about 150 examinations in financial institutions annually which has to be compared with an estimated

number of reporting financial entities exceeding 150,000 (not taking into account DNFBPs). However, it should be noted that the examinations are targeted at firms and in most cases, a single FINTRAC examination of a parent entity will cover a number of reporting entities, as the parent entity may cover hundreds of individual entities (for example, in a corporate entity securities dealers or an MSB). Therefore, FINTRAC exams cover significantly more than 150 reporting entities in a year, but there are no statistics on the exact number of entities effectively assessed.

976. Moreover, in order to optimize the allocation of its supervisory resources, FINTRAC has adopted a risk-based approach, based on the risk profiles both of the sector and the individual entities, which are regularly updated through the collection of information from a large range of various sources. Reporting entities are mainly selected for examination on the basis of the scores resulting from this approach, while 10% of the examined entities are selected randomly. The assessment team believes that FINTRAC has developed a sophisticated risk-based model that certainly helps FINTRAC to prioritise its supervisory functions.

977. From a technical resource perspective, ROC makes use of the FINTRAC Risk Assessment Tool (FRAT), database software that was developed in-house. This tool helps to ensure that Compliance Officers have access to accurate and up-to-date information, as well as ensuring the timely maintenance of reporting entity information and risk assessment information. This is an important element in meeting information management needs and helping to manage effectively FINTRAC's national compliance program. In addition, FINTRAC Compliance Officers are equipped with various types of technological hardware.

978. However, the FRAT does not cover all reporting entities, as it is mainly focused at the firm level: it covers about 26 000 entities. Moreover, under the risk-based approach, lots of entities included in the FRAT would never have an examination by FINTRAC, even if a limited number of examinations are selected randomly each year. In these conditions, it is the opinion of the assessment team that, unless FINTRAC can rely to a greater degree on primary regulators and SROs in the future, its current organisation and resources dedicated to supervision do not allow it to perform its compliance function in a totally effective way.

979. It is to be noted that ROC is currently expanding as the result of new legislative initiatives that were introduced by the Government of Canada in late 2006.

980. *Professional standards*. ROC is comprised of a diverse group of people with relevant experiences and skills from both the public and private sectors such as the financial industry, accounting, law enforcement, customs, revenue, and public safety. In general, Compliance Officers possess a university degree in such disciplines as the social sciences, accounting, commerce and administration. In addition, many FINTRAC employees are affiliated with professional associations such as Chartered Accountants and Certified Fraud Examiners.

981. ROC team members must conform to the enhanced security measures that FINTRAC has implemented. Like all other FINTRAC employees, compliance officers must obtain 'Top Secret' security clearance as a condition of employment.

982. Further to this, ROC team members receive Compliance Officer Authorisation Training, which assists in preparing the Compliance Officer for conducting examinations in the field, including on how to comport themselves in this kind of environment. A number of policies and procedures have also been developed to guide Compliance Officers, including one on the Professional Expectations for Compliance Officers which comprises fair treatment, courtesy and consideration, privacy and confidentiality, bilingual service, information.

983. Moreover, the following provisions apply to all FINTRAC compliance officers, who are the public face of FINTRAC :

- *Integrity*: perform their work with honesty, diligence, and responsibility; observe the law and make disclosures expected by the law and the PCMLTFA; not knowingly be a party to any illegal activity, or engage in acts that are discreditable to the organization; and respect and contribute to the legitimate and ethical objectives of the organization.
- *Objectivity:* not participate in any activity or relationship that impairs or will be seen as impairing their unbiased assessment; not accept anything that may impair or be presumed to impair their professional judgment; and disclose all material facts known to them that, if not disclosed, may distort the reporting of activities under examination.
- *Confidentiality:* be prudent in the use and protection of information acquired in the course of their duties; and not use information for any personal gain or in any manner that would be contrary to the law.
- *Competency:* engage only in those services for which they have the necessary knowledge, skills, and experience; perform compliance examinations in accordance with FINTRAC policies and procedures; and continually improve their proficiency and the effectiveness and quality of their services. Compliance Officers are required to pass a written course examination in order to become an authorised compliance officer. Compliance officers also then undergo an annual review to maintain their authorisation.

984. FINTRAC Compliance Officers are expected to apply and uphold these principles and rules in addition to the FINTRAC Code of Conduct and Ethics for all employees, available on FINTRAC's Intranet. This is consistent with the Code of Values and Ethics for the Public Service of Canada which came into effect in September 2003. In addition, there are severe penalties in place for any unlawful disclosure made by a FINTRAC employee.

985. *Training.* FINTRAC's Compliance Officers receive rigorous training. New team members receive Orientation training shortly after their arrival. This training focuses on the following: FINTRAC's Legal Framework; the Canadian AML/CFT Regime; International Efforts and Cooperation; Regional Operations and Compliance; Macro Analysis and Integration; Tactical Financial Intelligence (Analytical and Disclosure Process; Production Orders; Sanitized Cases); Macro Analysis and Integration (Strategic intelligence; Operational Statistics; Research and Analysis).

986. In addition, FINTRAC Compliance Officers also receive Compliance Officer Authorisation Training, a nine day comprehensive course that covers numerous areas relating to risk assessment and compliance examinations with cases study.

987. Following the successful completion of the training, all Compliance Officers are authorised in writing by FINTRAC's Director, which then permits them to perform examinations of reporting entities.

988. FINTRAC's Regional Operations and Compliance Section also holds training sessions twice yearly. These are usually a week long and address various subject matters relevant to the work undertaken by Compliance Officers. Team members also attend various AML/CFT conferences and a number are members of the Association of Certified Anti-Money Laundering Specialists (ACAMS).

OSFI

989. *Resources*. OSFI is the sole supervisor of banks and other federally incorporated financial institutions. The OSFI Act provides that the Minister of Finance is responsible for OSFI. It also provides that the Superintendent is solely responsible for exercising the authorities under the financial legislation and is required to report to the Minister of Finance from time to time on the administration of the financial institutions legislation. The Superintendent is given operational independence through an appointment for a fixed term of seven years.

990. The OSFI Act authorises the Superintendent to act independently in order to meet staffing and other resource requirements to fulfil the supervisory obligations. The Superintendent is authorised to

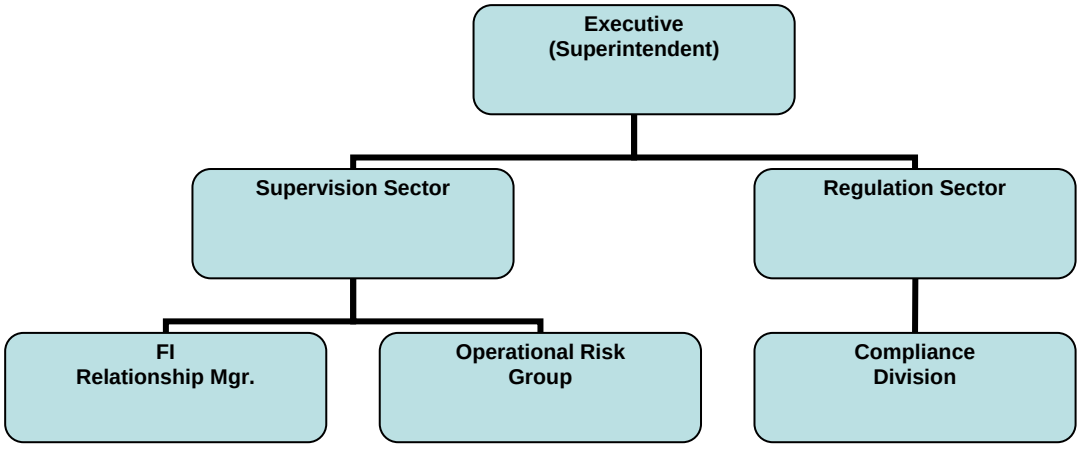
exercise the powers and perform the duties and functions of Treasury Board under the Financial Administration Act that relate to personnel management, including the determination of terms and conditions of employment and the responsibility for employer/employee relations.

991. OSFI's revenue attributable to the regulation and supervision of FRFIs is raised through asset-based, premium-based or membership-based assessments on the financial services industry, and a user pay program for selected services. In the fiscal year ended March 31, 2007, this revenue amounted to CAD 69.7 million. Assessments are allocated to industry sectors based on the approximate amount of time spent on supervising and regulating the industry. Costs are then assessed to individual FRFIs in each sector based on a formula, with a minimum or base level assessment for the smallest FRFIs. The assessments are required by law to be paid and there is no appeal on assessments allocated to FRFIs. Thus, OSFI's program of supervision and regulation of FRFIs is not funded by the government. This affords OSFI a further measure of operational independence from government.

992. OSFI has a staff complement of about 450 and is organized primarily into three sectors:

- The Regulation Sector (123 personnel) is primarily concerned with rule-making, administering registrations and approvals, compliance, and the supervision of pension plans.
- The Supervision Sector (162 personnel) is responsible for supervising and monitoring federally regulated financial institutions.
- The Corporate Services Sector (115 personnel) is responsible for administrative, human resources, systems and technical services.

993. The Compliance Division, which is a part of the Regulation Sector, is responsible for leading AML/CFT assessments of financial institutions in conjunction with the Supervision Sector. The following diagram illustrates the placement of the AML/CFT unit within the OSFI organizational structure:



994. In 2001 two factors contributed to OSFI's decision to allocate more resources to AML/CFT as well as introduce a specific AML/CFT assessment program: the passage of the legislation creating FINTRAC and the introduction of mandatory transaction reporting, and the events of September 11, 2001 with the implementation shortly thereafter of the requirement of financial institutions to search for listed terrorist and terrorist entities and to freeze their assets, with mandatory monthly reporting of frozen assets to regulators.

995. In September 2002, OSFI designated two fulltime employees from OSFI's Compliance Division to commence an AML/CFT assessment program. By 2006, the resources allocated to AML/CFT had grown to 10 employees, of which 8 perform on-site assessments. In addition to this, three employees were redeployed internally from the Supervision Sector in 2006 to support AML/CFT assessments of Canadian conglomerate banks.

996. This increase in staff allowed OSFI to extend its program of examinations into smaller institutions for the first time in 2005. With the current staffing level, it manages to perform 10 to 30 examinations per year, eventually covering a higher number of individual entities when subsidiaries are also concerned (40 entities covered in 2006 for a total number of missions of 13). Excluding from the 215 FRFIs subject to the PCMLTFA those that are otherwise part of conglomerate groups already included or which bear no inherent AML/CFT risk (*e.g.* reinsurers, restricted foreign branches), OSFI is supervising 135 reporting entities. OSFI has instituted a target frequency of about 3 years for institutions presenting higher inherent risk. This includes all conglomerate banks and most conglomerate life insurance companies, and is generally consistent with OSFI's regular prudential examination cycle. Smaller entities will be risk ranked using various ML/TF risk criteria unrelated to financial risk (capital, earnings, liquidity, etc.). Smaller entities that present medium to high inherent risk (due to their business profile matched against the AML/CFT criteria) will also be cycled through an assessment approximately every 3 years. The small, low- to no-risk entities will be the subject of regular monitoring with on site work taking place at longer intervals.

997. *Professional standards.* OSFI's minimum qualification for employment includes a degree from a recognized university or college in a relevant field and/or being a member in good standing in a professional organization. All OSFI employees are subject to a Code of Professional Conduct, and are also subject to an annual review to ensure compliance. The Code requires that OSFI staff act in a professional manner in undertaking their responsibilities. Among other things, the Code requires staff to treat all information obtained in the course of their work as confidential. This refers particularly to any information regarding the affairs of a financial institution and of persons dealing with them. Unauthorised disclosure of any information or use of information for personal reasons by OSFI staff is prohibited in accordance with section 22 of the Office of the Superintendent of Financial Institutions Act, the Privacy Act and employees' oaths of office and secrecy.

998. The Code also contains a Conflict of Interest Code to which staff must adhere. The Conflict of Interest Code minimizes the possibility of conflicts arising between an OSFI employee's private interests and the employee's public service duties and provides for the resolution of unavoidable conflicts in a timely fashion. Failure to comply with the Code of Professional Conduct or the Conflict of Interest Code can lead to appropriate disciplinary measures including termination of employment.

999. All new OSFI staff must pass an enhanced reliability check. At a minimum this involves a background check by law enforcement (RCMP), a credit check and a check of the employee's references to determine the employee's suitability. In situations where the employee will deal with information classified beyond the normal confidentiality level, the check will also include a more extensive review that is conducted by security intelligence officials.

1000. Finally, as part of the employment contract, OSFI employees are required to take an oath of allegiance to Her Majesty in Right of Canada, and each employee's performance is assessed annually to ensure that work is completed in a satisfactory manner.

1001. Taken together, all these controls ensure that OSFI employees are competent in undertaking their responsibilities, subject to high professional and ethical standards and treat information that they deal with during the course of their duties in a confidential manner.

1002. *Training.* All OSFI supervisory staff receive compulsory training on OSFI's Supervisory Framework. Most OSFI staff involved in AML/ CFT assessments were originally general supervisors before transferring to the Compliance Division.

1003. The staff in Compliance Division receive both formal and on-the-job training related to money laundering and terrorist financing. All staff assigned to AML/CFT assessments are experienced examiners and many have extensive industry experience.

1004. To date, six OSFI staff members (four of which are in the Compliance Division) have attended training at the Office of the Comptroller of the Currency (OCC) AML School in Washington, DC. In addition nine Compliance employees are members of the Association of Certified Money-Laundering Specialists (ACAMS) and three of these employees have qualified as Certified Anti-Money Laundering Specialists. OSFI employees have attended financial crime and AML/CFT conferences in Canada, the United States and Europe. In addition senior Compliance Division staff have made numerous presentations on the subject of AML/CFT at industry conferences in Canada and elsewhere.

IDA

1005. *Resources.* The Investment Dealers Association of Canada has four offices across Canada: Montreal, Calgary, Vancouver and its head office located in Toronto. Its 280 employees fulfill its mission of protecting investors and enhancing the efficiency and competitiveness of the Canadian capital markets. It has attracted a group of highly skilled professionals with collective experience in all facets of the securities industry, as well as expertise in various fields including law and accounting.

1006. The IDA Sales Compliance Department has an authorised staff complement of 48. The Enforcement Department has 83. It manages to review all reporting entities at least every five years, but the most important firms may be reviewed yearly.

1007. *Professional standards*. The IDA has a set of values that shapes the way its employees and members carry out their responsibilities and work with each other and the industry. The IDA maintains integrity by conducting itself in an honest and ethical manner and ensures a high degree of professionalism. It is dedicated to carrying out its duties in a timely and reliable fashion. It is accountable through a transparent process with open communication with stakeholders.

1008. The IDA also has a Code of Business Conduct, a Privacy Policy and a Whistleblower policy and process.

1009. *Training.* The IDA's training program for new Sales Compliance Officers includes AML training. The IDA Enforcement Department also organise seminars the AML/CFT topic.

MFDA

1010. *Resources.* The Mutual Fund Dealers Association of Canada has three offices across Canada: Calgary, Vancouver and its head office located in Toronto. Its 155 employees fulfill its vision of raising the standard of firm, fair and transparent regulation in Canada for the protection of investors through commitment to collaboration, staffing excellence and regulatory best practices. MFDA staff is comprised of highly skilled professionals with expertise in various fields including the securities industry, securities regulation, law and auditing and accounting.

1011. The MFDA Compliance Department is comprised of 52 compliance staff, the majority of which or members of a professional association. The Enforcement Department has 45 staff. The MFDA reviews all Members at least once every three years but may perform more frequent examinations if necessary.

1012. *Professional standards and training*. The MFDA has established policies and procedures for the conduct of its activities. These standards are continually reviewed and assessed annually by the MFDA and subject to oversight by the Canadian Securities Administrators. The MFDA had devoted significant resources to staff training and has conducted AML seminars for staff including sessions with FINTRAC.

1013. The MFDA also has a Code of Business Conduct, a Privacy Policy and a Whistleblower policy and process.

Other regulators

1014. During the on-site visit, several regulators asserted that they could not perform on-site reviews or in-depth AML assessments as they are not mandated to do so and lack resources. In particular, resources within the AMF, DICO and the MFDA are limited to deal with AML/CFT issues especially in carrying out supervisory visits and examinations.

Authorities' powers and sanctions (Recommendations 29 & 17)

Recommendation 29

FINTRAC

1015. FINTRAC has responsibility for ensuring compliance with the PCMLTFA. The PCMLTFA includes certain key provisions that assist FINTRAC in meeting its responsibility.

1016. FINTRAC has the right to enter any premises (other than a dwelling-house), to access any document, computer system or data and to reproduce any document under Sections 62(1) and 62(2) of the PCMLTFA, and records that are required to be kept by the reporting entity under the regulations must be retained in such a way that they are accessible to an authorised person (including a FINTRAC Compliance Officer, Section 70). However, this provision authorises a possible period up to 30 days to deliver the information, which seems somewhat excessive (see comments in Section 3.5 of the report). If consent is not granted by the reporting entity for a compliance officer to enter a dwelling, FINTRAC must obtain a warrant to allow a compliance officer to do so although to date this has not been necessary. Reporting entities located in dwelling houses represent a small percentage of the total number of reporting entities. To date, whenever consent has been requested by FINTRAC, it has been granted.

1017. In most circumstances, a FINTRAC compliance officer will contact the reporting entity to be examined a minimum of 30 days before an examination is to commence to allow adequate time for the reporting entity to prepare the requested records for examination. FINTRAC, however, still maintains the authority to conduct on-site compliance examination activities, with no advance notice to the reporting entity.

1018. Subsections 65(2) and 65(3) of the PCMLTFA also provide FINTRAC with an important tool to ensure effective supervision of financial institutions which enables it to exchange compliance information with federal and provincial agencies that regulate entities and individuals with obligations under the PCMLTFA. Subsection 65(10) allows FINTRAC to exchange information with foreign regulators regarding the compliance of reporting entities.

1019. In addition, Section 63.1 of the PCMLTFA provides FINTRAC with the authority to require reporting entities to provide any information that FINTRAC needs for compliance purposes. Reporting entities are therefore obliged to complete and return compliance questionnaires sent by FINTRAC.

1020. Finally, FINTRAC currently has no powers to sanction non compliant institutions and the only action it can take is to transmit the file to law enforcement for investigation related to the criminal sanctions provided by the PCMLTFA (see comments below)[129].

OSFI

1021. OSFI has no mandate under PCMLTFA to ensure compliance of FRFIs with the PCMLTFA. Its mandate, under the Office of the Superintendent of Financial Institutions Act is to supervise financial

[129] Part 4.1 of the PCMLTFA, Notices of Violation, Compliance Agreements and Penalties, provides for an administrative and monetary penalties regime for FINTRAC with reporting entities that do not comply with their AML/CFT obligations. The regulations implementing this regime were enacted in December 2007 and will come into force in December 2008.

institutions in order to determine whether they are in sound financial condition and are complying with their governing statute law and supervisory requirements under that law as well as to promote the adoption by management and boards of directors of financial institutions of policies and procedures designed to control and manage risk. OSFI also has specific powers of supervision under the governing statutes of all federal financial institutions.

1022. More specifically, Subsection 6(1) of the OSFI Act indicates the Superintendent's powers and duties in relation to the *Bank Act*, the *Trust and Loan Companies Act*, the *Cooperative Credit Associations Act* and the *Insurance Companies Act.* The supervisory powers of the Superintendent are uniform under these Acts. The Bank Ac (Articles 643 and 644), for instance, illustrates the Superintendent's power as follows: "*the Superintendent, from time to time, but at least once in each calendar year, shall make or cause to be made any examination and inquiry into the business and affairs of each bank that the Superintendent considers to be necessary or expedient to determine whether the bank is complying with the provisions of this Act and whether the bank is in a sound financial condition and, after the conclusion of each examination and inquiry, shall report on it to the Minister. (2) The Superintendent or a person acting under the Superintendent's direction (a) has a right of access to any records, cash, assets and security held by a bank; and (b) may require the directors, officers and the auditor or auditors of a bank to provide information and explanations, to the extent that they are reasonably able to do so, in respect of the condition and affairs of the bank or any entity in which the bank has a substantial investment. The Superintendent has all the powers of a person appointed as a commissioner under Part II of the Inquiries Act for the purpose of obtaining evidence under oath, and may delegate those powers to any person acting under the Superintendent's direction."*

1023. The indirect involvement of OSFI in ensuring AML/CFT compliance tends to place a limit on its powers. It is only insofar as incidences of AML non compliance can be considered as an unsafe or unsound practice in conducting the business of the bank, that the Superintendent may take enforcement actions and direct the bank or person to cease or refrain from pursuing the course of conduct or to perform such acts as in the opinion of the Superintendent are necessary to remedy the situation. Unlike FINTRAC, it cannot make a direct disclosure of non compliance with PCMLTFTA to law enforcement authorities.

1024. The assessment team was told that OSFI has never been denied access to any information or documentation it requests to conduct an AML/CFT assessment.

Securities regulators including IDA

1025. The SRAs are not mandated by PCMLTFA to ensure compliance of reporting entities with the AML legislative requirements. Nevertheless, they may also rely on the principle of "safe and sound business practice" and on the fact that compliance with the law and regulations is part of the fit and proper criteria that a financial entity must meet to be granted and to maintain registration or a license. In general, the investigation and enforcement powers of the SRAs are comprehensive but specific powers may vary among the provinces and territories. Generally, the SRAs have the power to compel testimony and evidence as well as large powers of sanction. There is also authority in some jurisdictions for the SRA to recover investigation and hearing costs.

1026. The IDA is given the authority to ensure compliance by financial institutions through the individual SRAs. For example, in the case of Ontario, section 21.1 of Ontario's Securities Act recognizes the IDA as a self-regulatory organization, and sets conditions that the IDA must meet. For example (this list is not exhaustive), the IDA shall enforce compliance by its members to IDA rules, provide prompt report and notification of any misconduct by its members to the SRA, advise the public and media of any disciplinary settlement hearing, provide monthly notifications to the SRA of all new investigations, operational reviews and similar matters.

1027. As the national self-regulatory organization of the Canadian securities industry, it has enforcement rules and regulations of member firms and their registered employees, including non-compliance with obligations that are similar to those of the PCMLTFA. These conditions can be found in the IDA By-Laws. The IDA reports all compliance deficiencies to FINTRAC and has on occasion provided extra notice of egregious cases.

1028. Concerning AML issues, the IDA may be considered to have more direct enforcement powers than some other regulators since it has its own set of enforceable by-laws, which sometimes go beyond FINTRAC's requirements and have been used previously to sanction some of its members.

Recommendation 17

FINTRAC

1029. Canada has designated FINTRAC as the authority responsible for determining if a violation has occurred and when appropriate for forwarding that information to law enforcement for investigation. The PCMLTFA outlines the sanctions that can be imposed on reporting entities if they fail to comply with their AML/CFT obligations. In addition, FINTRAC uses warning letters (deficiency letters) and can order action plans to enforce compliance.

1030. Under the current version of the PCMLTFA and its Regulations, FINTRAC itself has very limited powers of enforcement against reporting entities and their directors or senior management for failure to comply with or properly implement AML/CFT requirements. FINTRAC cannot impose penalties but only has the option of referring cases to law enforcement for investigation. The PCMLTFA provides for a series of criminal sanctions for contraventions of various provisions of the Act. This can lead to criminal penalties of up to CAD 2 million in fines and five years in prison for non-compliance.

1031. Until the recent amendments brought to the PCMLTFA enacted in December 2006, these sanctions were applicable in a limited range of cases, namely for the violations of: (1) the record keeping duties, (2) the duty to answer and comply with the request of an officer in the reporting of currency and monetary instruments during cross border movements; (3) the limitations related to disclosure and use of information; (4) the duty to assist and provide information to FINTRAC; (5) the obligation of retention of documents as it applies to legal counsel who claims privilege, as well as (6) the reporting obligations (STRs, TPRs and prescribed transactions). For instance, failure to implement a compliance program was not subject to sanctions under the law. The recent amendments have expanded the regime of criminal sanctions to the violations of most of the law and regulations provisions.

1032. Sanctions are applicable to any officer, director, or agent of the person or entity who directed, assented to, acquiesced in, or participated in its commission, as described in Section 78 of the PCMLTFA.

1033. Most of the sanctions provided by Sections 74 to 77 of the PCMLTFA are punishable (a) on summary conviction to a fine of not more than CAD 50 000 or to imprisonment for a term of not more than six months, or both, or (b) on conviction on indictment, to a fine of not more than CAD 500 000 or to imprisonment for a term of not more than five years, or both. Knowingly contravening to the obligation of reporting suspicious transactions or transactions suspected of being related to terrorist financing is an offence punishable (a) on summary conviction, (i) for a first offence, to a fine of not more than CAD 500 000 or to imprisonment for a term of not more than one year, or both, or (ii) for a subsequent offence, to a fine of not more than CAD 1 000 000 or to imprisonment for a term of not more than one year, or both, or (b) on conviction on indictment, to a fine of not more than CAD 2 000 000 or to imprisonment for a term of not more than five years, or both. Contraventions to the reporting of prescribed financial transactions are punishable (a) on summary conviction to a fine of not more than CAD 500 000 for a first offence and of not more than CAD 1 000 000 for each subsequent offence.

1034. Finally every person or entity that contravenes Section 8 is (a) guilty of an offence punishable on summary conviction, or (b) guilty of an indictable offence and liable to imprisonment for a term of not more than two years.

1035. In nearly 4 years, FINTRAC has disclosed 7 such cases of egregious non-compliance by reporting entities including financial institutions, to law enforcement agencies. In the event a disclosure is made, the responsibility falls to law enforcement to investigate and, where appropriate, pursue criminal sanctions for non-compliance. Disclosures have so far resulted in only one conviction for non-compliance with the PCMLTFA. The person convicted was also convicted for money laundering.

Non-Compliance Disclosures					
	2003/04	**2004/05**	**2005/06**	**2006/07***	**Total**
Number of disclosures	0	2	3	2	7

*As of end of the second quarter.

1036. In the absence of other powers of sanction and, especially, of administrative and monetary penalties, FINTRAC has favoured a "cooperative approach" to compliance, based on the principle "trust but verify" and deals with less severe non compliance issues by issuing deficiency letters, which require the reporting entity to respond with an action plan.

1037. In the majority of cases where FINTRAC has identified deficiencies in a reporting entity's compliance with the PCMLTFA, the entity takes corrective action based on a letter from FINTRAC that outlines these deficiencies.

1038. Once the detailed examination findings have been communicated to the reporting entity identifying the need for corrective action ("deficiency letter"), the reporting entity is required to submit a corrective action plan to FINTRAC. The action plan, which must be submitted in writing, must include timelines for correcting the identified deficiencies. If an action plan is received that does not adequately address the deficiencies identified during the examination, the FINTRAC Compliance Officer contacts the reporting entity compliance officer, both verbally and in writing, to request that they provide a new action plan in order to rectify the deficiencies in a timely manner. The written correspondence is sent to the senior executive of the reporting entity, with a copy to the reporting entity's compliance officer. The letter clearly outlines that the reporting entity is in non-compliance with its legislative obligations under the PCMLTFA.

1039. Should a reporting entity submit a further inadequate action plan, the reporting entity is clearly informed of the shortcomings and is required to re-submit an acceptable plan. The action taken by the reporting entity may influence FINTRAC's decision to refer to the non-compliance disclosure to law enforcement. The compliance officer then follows up with the reporting entity to ensure that the action plan is being undertaken in a timely manner and that deficiencies are being corrected appropriately.

1040. Where a reporting entity makes no demonstrable effort to address deficiencies identified by FINTRAC, FINTRAC can disclose such a case of non-compliance to law enforcement for investigation and prosecution.

1041. The current regime of sanctions administered by FINTRAC is clearly insufficient as it does not allow FINTRAC to apply a graduated and proportionate range of sanctions and limits the possibilities of imposing prompt corrective actions in cases where criminal sanctions would not apply. Thus, it cannot be considered as effective, proportionate and dissuasive[130].

[130] In order to enhance the effectiveness of the system and provide greater flexibility and authority for FINTRAC in ensuring compliance with the PCMLTFA and its regulations, it was decided to create an administrative and monetary penalties regime. Such a measure has been incorporated in the December 2007

OSFI

1042. The federal financial institutions' governing legislation gives OSFI the power to oversee financial institutions' AML/CFT risk management controls. OSFI has the power under the Office of the Superintendent of Financial Institutions Act to impose sanctions when the nature of the non-compliance is determined to be an unsafe and unsound practice.

1043. OSFI has a range of supervisory tools and sanctions at its disposal, including written interventions, staging (which involves higher CDIC – Canada Deposit Insurance Corporation – premiums), directions of compliance, placing terms and conditions in the FRFI's Order To Commence And Carry On Business (operating licence) and imposing an Administrative Monetary Penalties (AMP) under the OSFI Act. Section 25 of the OSFI Act sets out a range of administrative monetary penalties that OSFI can use. However, these AMPs, which were introduced in 2005, only apply in case of a contravention of a provision of a financial institutions Act or in case of non-compliance with any order or Direction of Compliance, any terms and conditions imposed, any undertaking given or any prudential agreement entered into under a provision of a financial institutions Act. Thus, they cannot be administered directly in cases of non-compliance with the PCMLTFA or its regulations which do not amount to unsafe or unsound practice, which would have justified such an intervention in any event. Stronger sanctions include the ability to go to court to obtain an order to stop the unsafe or unsound practice, or in extreme cases OSFI can remove a director from the board or senior officer for his or her position. These supervisory tools or sanctions are further detailed in the following paragraphs.

1044. OSFI issues Supervisory letters after each AML/CFT assessment. The letters contain "required actions" on compliance issues or "recommendations" as follows:

- "Required action" speaks to a deficiency that relates to non-compliance with a specific provision of the PCMLTFA. Failures to comply with Guideline B-8 are met with a "requirement for action" when it also involves a breach of the PCMLTFA or in some cases, when OSFI feels it necessary to deliver a strong signal to the financial institution.

- "Recommended action" speaks to a deficiency in risk management controls or other supervisory requirement not directly related to a legal requirement. Failures to comply with Guideline B-8 provisions that are not requirements under the PCMLTFA are in principle subject to recommended actions (for instance when a financial institution fails to have measures in place in relation to PEPs for which legal requirements are not in force yet).

1045. OSFI can also impose a more intrusive supervisory schedule on institutions, called Staging, which consists of raising the stage rating of a FRFI (normal stage, for no problem institutions being 0, the other stages ranging from 1 "early warning" to 4 "not viable/insolvency imminent"). Elevation from stage 0 to stage 1 results in more intense oversight by OSFI. It also results in a higher OSFI assessment fee and in an increase in their deposit insurance premiums charged by the Canada Deposit Insurance Corporation. Further increases in stage ratings attract additional deposit insurance premiums.

1046. If OSFI determines that directors or senior management of a FRFI have, or are about to, fail to comply with or properly implement AML/CFT requirements in a manner that amounts to the commission of an unsafe or unsound practice in conducting the business of the FRFI, or that would constitute a course of conduct that is an unsafe or unsound practice in conducting the business of the FRFI, the Superintendent has authority to issue unilateral instructions called Directions of Compliance under the FRFI's governing statute. For example subsection 645(1) of the Bank Act provides as follows: "*(1) where, in the opinion of the Superintendent, a bank, or a person with respect to a bank,*

---

amendments to the PCMLTFA that were enacted on 14 December 2006 and in a new set of regulations, the PCMLTF Administrative Monetary Penalties Regulation, enacted on 26 December 2007. These provisions will come into force in December 2008.

is committing, or is about to commit, an act that is an unsafe or unsound practice in conducting the business of the bank, or is pursuing or is about to pursue any course of conduct that is an unsafe or unsound practice in conducting the business of the bank, the Superintendent may direct the bank or person to (a) cease or refrain from committing the act or pursuing the course of conduct; and (b) perform such acts as in the opinion of the Superintendent are necessary to remedy the situation."

1047. The failure of a FRFI to comply with a Direction of Compliance is an offence under the financial institution's governing statute and is sanctionable under the OSFI Act.

1048. The Superintendent of OSFI also has the power to enter into a Prudential Agreement with a FRFI. For example section 644.1 of the Bank Act provides as follows: "*the Superintendent may enter into an agreement, called a "prudential agreement", with a bank for the purposes of implementing any measure designed to maintain or improve its safety and soundness."*

1049. In extreme cases, OSFI can remove directors or officers from office and take control of a financial institution. In addition, OSFI can require external auditors to extend the scope of their audit and request that the board of directors meet with the Superintendent.

1050. In summary, these measures constitute a progressively more intrusive array of supervisory measures that can be utilized to change undesirable behaviour by financial institutions in order to meet ongoing regulatory requirements and expectations.

1051. Concerning AML/CFT issues, the usual way of intervention is via written communication: the 78 assessments between 2002 and the end of the first quarter 2007 resulted in supervisory letters containing 247 required actions on compliance issues with PCMLTFA/PCMLTFR and 381 recommended actions to strengthen risk management controls.

1052. No measure of direction of compliance, terms or conditions imposed or prudential agreement was ever taken on AML/CFT issues. However, in the period 2004 – 2006 inclusive OSFI staged four financial institutions primarily for AML/CFT control deficiencies (one in 2004, 2 more in 2005 and the fourth in 2006). Further, a fifth assessment conducted in 2005 led to the institution, already at Stage 1, remaining there for an extended period of time. These stagings (to stage 1) led to OSFI and/or CDIC surcharges ranging from CAD 45 000 up to CAD 500 000.

1053. In addition, OSFI brings matters related to non-compliance with the PCMLTFA to the attention of FINTRAC immediately following each on-site assessment.

1054. Thus, OSFI has a wider range of possible enforcement actions or sanctions than FINTRAC. Nevertheless, even if these tools exist, sanctions remain rarely used which may be due to the fact that the "sound and safe business practice" principle on which OSFI's intervention is based, imposes a higher threshold than simple non compliance.

1055. It is worth mentioning that, when the proposed PCMLTF Regulations comes into force, the Administrative & Monetary Penalties scheme for non compliance with PCMLTFA will be administered only by FINTRAC and will not be accessible to OSFI or other regulators.

Securities regulators

1056. SRAs have a range of measures they can choose from to rectify circumstances where a market intermediary fails to meet ongoing requirements and protect the public. They include suspending or terminating the intermediary's license, imposing terms and conditions on the intermediary requiring for instance restrictions on the type or amount of business that the intermediary may conduct or the number of salespersons or advisers a firm may hire.

1057. Additionally, the SRAs may order that exemptions contained in the securities laws in the jurisdiction do not apply to the intermediary. This order is often made if an intermediary has been suspended or terminated in order to prevent the intermediary from conducting business based on registration and prospectus exemptions. In Ontario and Quebec, the SRAs also may order a registrant to submit to a review of practices and procedures and institute such changes as recommended by the SRA where the SRA has concerns about the practices and procedures of the intermediary.

1058. In certain other provinces, the SRA can appoint a person to review the business and conduct of a registrant or former registrant to determine whether the registrant is complying, or has complied, with the legislation in the jurisdiction, any decision made under that legislation or any requirement of an exchange or SRO to which the registrant belongs. An SRA also may order that a document be produced by a registrant if the SRA is satisfied that securities laws have not been complied with. Additionally, most SRAs may reprimand a registrant or issue a caution letter when the SRA determines that the behaviour of the registrant merits a reprimand or caution, for example, where the behaviour of the registrant is contrary to the public interest.

1059. Compliance officers and branch managers can be sanctioned for contravening a specific requirement to supervise conduct within the firm. In addition, pursuant to this power, an SRA can make an order against a person or company whose behaviour or inaction contributed to the violation, for example, a director, officer or partner of the registrant or parent company of the registrant, if the SRA concludes that it is in the public interest to do so. Certain SRAs have the authority to impose a financial penalty on a registrant for contraventions of securities laws. These SRAs and the other SRAs also have the authority to apply to the court for such an order, for example, where the court finds that there has been a violation of securities laws.

1060. Similarly, the IDA and MFDA may suspend a member's membership rights and privileges, suspend the approval of an individual and/or impose conditions on the continued membership of a member or approval of an individual if, for example, the member or individual fails to meet ongoing requirements, contravenes Canadian securities laws, or engages in any business conduct or practice that the SRO concludes is unbecoming or contrary to the public interest.

1061. The SROs can also impose sanctions against their members (and registered employees of members) for contraventions of SRO requirements, including AML and supervision requirements.

1062. The IDA and MFDA have the power to impose financial penalties on their members and approved individuals if the SRO determines that, for example, the member or individual fails to meet ongoing requirements, contravenes Canadian securities laws or engages in any business conduct or practice that the SRA concludes is unbecoming or contrary to the public interest.

1063. The IDA can discipline its member firms and their employees using a broad range of sanctions that are proportionate to the severity of the situation. For instance, IDA penalties can include fines, up to a maximum of the greater of CAD 1 million per contravention or an amount equal to three times the profit made or loss avoided by reason of the contravention for registered employees or fines up to a maximum of the greater of CAD 5 million per contravention or an amount equal to three times the profit made or loss avoided by reason of the contravention for member firms. The IDA can also suspend or ban individuals for life from registration as a broker, or suspend and expel firms from membership. The latter has the effect of closing down firms from operating in the securities industry.

1064. The IDA's Enforcement Process is an essential element in assuring investors that the IDA's member firms are effectively regulated and that each adheres to the highest standards of conduct. It is comprised of three stages that ensure that sanctions are proportionate to the severity of the situation. All matters presented to the Association are initially considered during the Complaint Review process. If this initial review indicates that further investigation is warranted, the matter is referred to Investigations staff. If the investigation finds sufficient evidence of a regulatory breach, the matter is subsequently referred to Enforcement Counsel for disciplinary action. The IDA's Enforcement

Counsel reviews the investigation file and, if appropriate, prepares charges, penalty recommendations and a settlement offer for the respondent. If Enforcement Counsel is successful in negotiating a settlement with the respondent, the settlement agreement is put before the Hearing Panel, which may accept or reject the settlement agreement. If a settlement offer is not successfully negotiated between Enforcement Counsel and the respondent, a Notice of Hearing and Particulars is issued and a contested hearing is held. Hearing Panels are comprised of two industry representatives and a member of the public who acts as Chair. The public members are not associated with any investment dealer and have legal training, usually as an experienced securities lawyer or retired judge.

1065. IDA hearings are generally open to the public. Notice is provided to the public in advance of any hearing and the IDA subsequently makes information on its disciplinary decisions public.

1066. In general, it has to be noted that, except for IDA which has effectively applied in a number of cases heavy sanctions to its members for non compliance with AML/CFT standards (for instance, CAD 600 000 fine and revocation of the firms membership along fines and suspensions applied to the firms directors for violation of IDA Regulation 1300.1 (a) which requires each member to use due diligence to learn and remain informed of the essential facts relative to every customer and to every order or account accepted and subsequent violation of the PCMLTFA requirements for verifying client identity), it has emerged from the meetings that the assessment team has had with professionals during its on-site visit, that these powers of sanction have generally not been used by SRAs or SROs in that area, as they have rarely issued specific rules or regulations related to AML/CFT and consider it to be mainly FINTRAC's responsibility.

Other regulators

1067. The other regulators are not entrusted with the responsibility of ensuring compliance with the PCMLTFA but, as already stated, some of them include controls related to AML/CFT requirements in their compliance programs, based on their various statutory powers: their intervention in that area is based either on the "safety and soundness" principle, or on the mandate given to them to ensure compliance with any federal law or regulation or still on codes of conduct or mandatory guidance that they have developed at their level for their regulated entities.

Recommendation 23 – Market entry and ongoing supervision

1068. The number of regulators, both federal and provincial, as well various SROs makes this a complex regulatory system.

1069. Although there is no systematic harmonization of the requirements in terms of market entry among the federal and provincial levels and among the different provinces, the information that the assessment team could obtain shows that the measures aimed at preventing criminals or their associates from holding a significant or controlling interest or holding a management function in a financial institution, as well as the "fit and proper" principle are widespread. However, provinces have variations in their supervisory treatment. For instance, for finance companies, not all provinces have adopted such a requirement in their respective Acts regulating the sector.

1070. Currently, MSBs are supervised by FINTRAC for AML/CFT purposes while not subject to registration or licensing.

1071. The following section will further elaborate on the requirements imposed by the main regulators or in the main sectors but they cannot be considered as exhaustive.

Financial institutions supervised by OSFI

1072. All applications to incorporate or register FRFIs must be approved by the Minister of Finance (who issues the letters patent) and Licences To Commence And Carry On Business must be approved by the Superintendent. Such approvals are required by the federal statutes governing the specific financial institution.

1073. Each application is subject to the proposed financial institution meeting a number of criteria, and submitting detailed information in support of the application.

1074. The suitability and integrity of individuals responsible for the oversight and management are important prudential concerns for OSFI. The integrity and suitability of owners, directors and senior managers are verified upon incorporation or authorisation of a FRFI. The Minister of Finance considers an applicant's character, integrity, business record and experience and the competence and experience of the directors and senior officers. To incorporate a FRFI in Canada, the major direct and indirect (*i.e.* all beneficial) shareholders (detaining above 10 % of the shares), and the directors and senior officers of the applicant, must submit personal information on themselves including place and date of birth, current address, curriculum vitae, etc. This information is used by OSFI to evaluate whether they have the required qualifications and expertise to manage or direct a financial institution's business and affairs. They must also submit a completed OSFI Security Information Form so that the RCMP and CSIS can conduct security assessments. There are similar requirements in respect of the senior officers of foreign financial institutions that make applications to establish branches in Canada.

1075. Whenever there is a change in ownership through the acquisition of significant interest of a federally regulated financial institution, it has to be submitted to the approval of the Minister who will rely on the same type of controls as those performed at the time of the initial incorporation.

1076. However, there is no specific legal obligation in federal financial institutions legislation for FRFIs to implement screening procedures for those who are hired, or appointed to the Board, after the initial incorporation or authorisation procedures are concluded. In May 2007 OSFI issued a draft Guideline E-17: Assessment of Responsible Persons by FREs[131]. The purpose of the Guideline is to ensure that FRFIs implement policies and procedures to ensure that those individuals responsible for the oversight and management of financial institutions (defined in the Guideline as "Responsible Persons") are evaluated, both initially and on a regular basis, with respect to suitability and integrity (*i.e.* Fit and Proper).

Securities dealers

1077. The SRAs and SROs regulate the activities of securities dealers and other intermediaries from both a prudential and market conduct basis, including registering qualified member firms and employees. Participants in this sector must meet stringent capital requirements, demonstrate an ability and willingness to conduct its business in a manner consistent with securities legislation, and SRO rule books and are subject to ongoing supervision.

1078. Canadian securities laws contain various fundamental provisions regarding the licensing of market intermediaries. They set out: (1) the requirements to be registered, (2) exemptions from the registration requirements and (3) certain basic standards and requirements for registrants (for example, the duty to deal fairly, honestly and in good faith with clients), as well as rights of registrants. These fundamental provisions generally are incorporated into securities statutes.

1079. Canadian securities laws also contain more detailed requirements respecting registration. These more detailed requirements generally are incorporated into subordinate instruments such as regulations and rules. These more detailed provisions also may establish additional exemptions from the registration requirements. In addition to the requirements in Canadian securities laws, the IDA and the MFDA rulebooks contain complementary requirements which apply to their members as a matter of contract.

1080. The Canadian Securities Administrators (CSA), the coordinating body of Canadian SRAs, has undertaken a project to modernize the regulation of securities registrants. The CSA's Registration

131 This includes FRFIs.

Reform Project is intended to update, streamline and harmonize the categories of registration and the regulation of securities registrants in Canada, effective July 2008.

1081. There are three important general criteria to the fit and proper standard that applicants for registration must meet to be considered acceptable for registration: (1) proficiency; (2) financial stability; and (3) suitability, a concept that encompasses but is not limited to integrity. The core principles and most of the detailed provisions for registration are set out in Canadian securities laws. If an SRO has been authorised by an SRA to carry out certain registration functions, additional requirements may be set out in the SRO's rules.

1082. To be registered, a securities intermediary must demonstrate: (1) the appropriate financial resources to carry on the proposed business, such as the minimum capital requirements are met; and there are additional capital resources available to meet the continuing demands of the business; (2) adequate operational systems and controls for the businesses it proposes to carry on, such as proper books and records, internal controls, risk management, and supervisory systems; (3) senior management, with the appropriate knowledge, resources, skills and ethical attitude (including a consideration of past conduct) necessary to perform their proposed roles; (4) directors with the appropriate knowledge, resources, skills and ethical attitude (including a consideration of past conduct) necessary to perform their proposed roles; and (5) substantial owners/shareholders with the appropriate resources and ethical attitude (including a consideration of past conduct) necessary to perform their proposed roles.

1083. While Canadian securities laws do not provide detailed minimum criteria of suitability for registration, a general fit and proper requirement applies. Canadian securities laws authorise the SRAs to refuse to register a person or company if the applicant is not suitable for registration or the proposed registration is objectionable. An SRA will examine the applicant's past conduct, including the applicant's criminal record, employment history, history with the SRA and other regulators, civil actions against the applicant making allegations relating to the applicant's integrity and any other information that the SRA believes may reflect upon the applicant's suitability. The IDA and MFDA consider criteria similar to those considered by the SRAs in deciding whether to grant membership status to a firm or to approve an individual.

Provincially supervised insurance companies, agents and brokers

1084. A number of life insurance companies (about 10 %), representing a limited share of the sector in terms of premiums, are provincially registered and regulated. The requirements applying to them could not be examined and assessed in detail but it may be generally assumed that the registration process is subject to a similar scheme to OSFI's one, relying on a complete review of the business case and of the individuals' files. It is worth mentioning that the Canadian Council of Insurance Regulators has engaged a process aiming at harmonizing practices among the different provinces.

1085. Insurance agents are licensed and registered provincially in Canada. For example, FSCO issues licences authorizing persons to conduct business as insurance agents. There are three classes of agent licences: Life Insurance (including accident & sickness), Accident & Sickness, General. Agents listed may hold a combination of the insurance licences listed above. An insurance licence is issued by FSCO for a two-year term. Any person who acts as an insurance agent without being licensed is guilty of an offence under the Insurance Act, and may be prosecuted for such violation.

Licensing or registration of money or value transfer services

1086. The current legislation does not provide for a registration regime for persons or entities that are engaged in the business of money service business or foreign exchange dealing, that is persons and entities engaged in the business of foreign exchange dealing, of remitting funds or transmitting funds by any means or through any person, entity or electronic funds transfer network, or of issuing or redeeming money orders, traveller's cheques or other similar negotiable instruments.

1087. The PCMLTFA currently requires these entities to abide by reporting, client identification, record-keeping and internal compliance requirements. FINTRAC has conducted significant outreach to identify MSBs, including presentations to community groups that use remittance services, searches of telephone records, reviews of ethnic newspapers, and advertising. The objective is to inform MSBs of their obligations and ensure they are included within the compliance program (i.e., Compliance Questionnaires, examinations, etc.).

1088. The sector is diverse, ranging from large multinational firms with many agents, which have developed strict checks before accepting their agents and oversight functions upon them, to individuals "operating in relative obscurity"[132], making the sector highly attractive to money launderers.

1089. In these conditions and in order to comply with FATF recommendations, Canada decided to create a registration regime in force in June 2008[133].

1090. To date, FINTRAC has been able to identify some 700 MSBs and foreign exchange dealers in Canada, largely located in major urban areas.

1091. FINTRAC has focused its examination resources in the MSBs sector with over 50% of all examinations over the last three years covering this sector. This reflects, in part, the risks associated with the MSB sector, as well as the absence of a flow of information from a primary regulator.

Ongoing supervision and monitoring – Recommendation 23

FINTRAC

1092. In order to effectively fulfill its role, FINTRAC has developed a National Compliance Program to ensure that reporting entities are complying with their obligations under the PCMLTFA. FINTRAC's compliance program makes use of risk management strategies to identify those sectors and reporting entities most in need of improving compliance. Efforts are focused on areas where there is the greatest risk of non-compliance and in which the failure to comply could have significant impact on FINTRAC's ability to detect and deter money laundering and terrorist financing.

1093. FINTRAC has developed the FINTRAC Risk Assessment Tool (FRAT) to assist compliance officers in assessing the risk of non-compliance by reporting entities and to centralize compliance information. When assessing the level of risk for reporting entities, FINTRAC looks at a range of factors, including such elements as open source information, reporting volumes, observations gleaned from outreach activities, voluntary information which FINTRAC has received on non-compliance, results from compliance questionnaires completed by reporting entities (see below), other database checks, information received from regulators, quality and quantity assurance reviews, and the results of compliance examinations.

---

[132] See "Enhancing Canada's Anti-Money Laundering and Anti-Terrorist Financing Regime" Consultation Paper, of June 2005.

[133] The PCMLTFA requires that all money service businesses register and creates a criminal penalty for operating an unregistered business. The application of the registration requirement includes informal money remitters commonly known as Hawala and is also applicable to departments and agencies of Her Majesty in Right of Canada, for example, postal orders. Section 11.11 of the PCMLTFA specifies persons or entities that are ineligible for registration, such those that have been previously convicted of a money laundering offence, a terrorist financing offence, an organized crime offence, any other criminal offence under the PCMLTFA and certain serious offences under the Controlled Drugs and Substances Act such as drug trafficking. FINTRAC is designated by the PCMLTFA to function as the Registrar and is responsible for accepting, denying, revoking and verifying applications for registration, maintaining the information contained in the registry and verifying compliance with the registration requirement. Registrants will have to inform FINTRAC of any material changes to their information within 30 days and renewal of registration will have to take place every 2 years or longer if prescribed by regulation

1094. Based on these risk factors, FINTRAC has assigned a general risk level to each reporting entity sector. This guides FINTRAC's overall compliance work (outreach, examinations, etc.) as in general, FINTRAC focuses more of its compliance resources on entities in higher risk sectors. FINTRAC also conducts assessments to rate the relative risk of non-compliance of entities and individuals within each sector. 26 000 entities are currently rated, which represents all big players and firms as well as some individuals.

1095. Compliance Questionnaires (CQs) are also used by FINTRAC to help focus examination resources, primarily for those entities at highest risk for non-compliance. FINTRAC developed the CQ as a tool to support its risk assessment and examination function. CQs are particularly useful as they can assist in assessing compliance levels in a large number of entities using relatively few resources.

1096. While the exact content of a CQ varies by sector, the CQ assists FINTRAC's Compliance team in assessing the risk of non-compliance within a particular entity by asking questions related to the size and scope of the reporting entity's operation, the institution where the entity does its banking (this information allows FINTRAC to cross-reference this entity with any reports that may have been filed by the bank), the entity's business lines, the implementation of a compliance regime, compliance policies and procedures, review of compliance policies and procedures and ongoing compliance training. CQs have proven to be an effective supervisory tool for FINTRAC.

1097. FINTRAC has sent over 3 000 CQs to financial institutions as of March 31, 2006. In 2006-07, FINTRAC is disseminating an additional 4 000 CQs to reporting entities (including DNFBPs) and 1 500 of these will be to the life insurance sector. The average response rate among financial institutions to CQs sent by FINTRAC is 89%: It should increase in the future since responding to these CQs is now mandatory as the amendment to the PCMLTFA, under section 63.1, which came into force in February 2007, requires reporting entities to "provide (…) the documents or other information with respect to the administration of Part 1 that [an] authorized person may reasonably require".

1098. In order to make it easier for reporting entities to respond to a CQ, they are now done electronically. Reporting entities receive a letter informing them that they have been selected to fill out a CQ. They are given a login and password and requested to go to FINTRAC's website to fill out the CQ on-line. In addition to facilitating responses, electronic forms assist FINTRAC Compliance Officers in scoring responses.

1099. Another key element that assists FINTRAC in its assessment of the risks of entities being non-compliant with their AML/CFT obligations is its consultation and coordination with other agencies that have responsibility for regulating entities covered under the PCMLTFA.

1100. The PCMLTFA permits FINTRAC to exchange compliance-related information with regulators at the federal and provincial levels. FINTRAC has signed Memoranda of Understanding to govern these information-sharing relationships (12 to date) with regulators of financial institutions. Under these MOUs, FINTRAC and the regulators on a regular basis exchange statistics, risk assessment information, examination results, and examination plans. FINTRAC also makes presentations and provide training to staff of MOU partners. In 2005-06, FINTRAC staff had 86 meetings with regulators and in 2004-05, 100 meetings of that type took place. The relationship with the regulators is still in its early stages, the first MOU having been signed in mid-2004 and the most recent in February 2007.

1101. As of September 30, 2006, FINTRAC had conducted almost 400 examinations of financial institutions, while its MOU partners had carried out more than 100 further examinations of financial institutions. These figures have to be compared to the total number of financial reporting entities which exceeds 100 000 (this figure includes individuals such as life insurance agents or securities dealers). However, FINTRAC examination may cover a large number of reporting entities (*e.g.* in the case of life insurance companies/agents and securities firms/dealers) and it is difficult to draw

definitive conclusions about supervisory coverage by comparing the reported examinations each year with the total number of reporting entities.

1102. The on-site portion of the examinations conducted by FINTRAC can, in practice, and depending on the size and complexity of the reporting entity, take anywhere from 3-4 hours to more than five days (in the case of a large, national reporting entity) to perform, which is somewhat less than average time spent by OSFI (see below). FINTRAC's examinations include sample testing of customers' transactions and files. The pre-examination stage, which can take weeks of preparation, consists of a review of documentation (including the results of audit reviews by FINTRAC MOU partners, a review of the entity's policies and procedures, etc.) that assists FINTRAC in scoping the on-site portion of the examination.

1103. A FINTRAC compliance examination will determine if the entity is meeting its obligations under the legislation. Areas of review can include:

- *Implementation of a compliance regime*: (1) The FINTRAC compliance officer will determine if a compliance officer has been appointed within the reporting entity and if this person is at the appropriate level and has the appropriate access to senior management; (2) The compliance officer will review the policies and procedures for compliance with the PCMLTFA that the reporting entity has established and assess them to determine if they are appropriate for the scope of the reporting entity's business and obligations under the PCMLTFA; (3) He will assess the entity's policies and procedures to determine their effectiveness. For example, large entities would be expected to have an annual external audit of their policies and procedures; (4) He will assess the on-going compliance training program that the entity has in place for any employees, agents or any other individual authorised to act on behalf of the reporting entity, including a review of such documentation as training materials, schedules, and agendas.
- *Reporting of all required transactions*: the compliance officer, who will have a detailed account of the entity's reporting history, will examine transaction records kept by the reporting entity to determine if a report (suspicious transaction, large cash transaction, electronic funds transfer or terrorist property) should have been filed by the entity.
- *Implementation of client identification requirements*: the compliance officer will examine records to determine if the reporting entity has identified its clients in a manner consistent with the PCMLTFA and regulations
- *Record keeping requirements*: the compliance officer will examine the reporting entity's records to determine if the entity has kept records in accordance with the PCMLTFA and regulations.

1104. So far, FINTRAC has concentrated most of its examination activities in the MSB, real estate, Credit union, *caisses populaires* and securities sectors: 86% of the examinations conducted by FINTRAC took place in these sectors.

1105. With regard to financial institutions, the following table shows the total examinations conducted by FINTRAC in each sector by fiscal year:

FINTRAC Examinations Conducted in Financial Institutions				
Sector	**2004-05**	**2005-06**	**2006-07 (as of end of Q2)**	**Total (by sector)**
Bank	0	1	0	**1**
CU/CP*	8	29	23	**60**
LI**	1	4	3	**8**
Securities	3	29	14	**46**
Trust & Loans	0	1	0	**1**
MSB	164*	56	43	**263***
TOTAL	**176**	**120**	**83**	**379**

**Note*: In fiscal year 2003-04, FINTRAC began to conduct examinations and completed a total of 26 examinations during the latter part of this time period. The focus of these examinations was largely on the MSB sector.

1106. At the end of 2005/06, FINTRAC had identified an average of 2.75 deficiencies, in general evenly spread across all categories: reporting, ascertaining identification, record keeping and compliance regime elements, as a result of its examinations.

OSFI

1107. FRFIs are subject to ongoing supervision by OSFI, based on its Supervisory Framework, a risk-based process to assess the safety and soundness of FRFIs developed in 1997/98, and released in 1999.

1108. The Framework evaluates the risk profiles of FRFIs, their financial condition, risk management processes and legislative compliance. The Framework evaluates inherent risks in the following areas: credit risk; market risk; insurance risk; operational risk; liquidity risk; legal and regulatory risk; and strategic risk. The Framework applies a risk-based supervisory approach to all types and sizes of FRFIs and which is administered on a consolidated basis. FRFIs are informed of OSFI's overall risk assessment, including a consolidated net risk rating. The risk assessment determines the type and extent of prudential supervisory work carried out on financial institutions.

1109. OSFI's AML/CFT methodology is broadly based on the approach taken in the Supervisory Framework. However, inherent risk measurement for AML/CFT purposes is based primarily on the product mix offered by financial institutions, together with the geographical spread of operations. For example, institutions which focus heavily on retail deposits and lending, or which offer correspondent banking services, or where insurance products have large cash values are ranked at higher risk than those that focus primarily on term insurance products or that have little or no deposit taking.

1110. OSFI considers inherent risks associated with money laundering and terrorist financing as a factor of operational risk as well as legal and regulatory risk. Therefore, at the highest level, issues such as weak AML/CFT controls can potentially harm the reputation of FRFIs. Although the Framework does not formally recognize reputation risk as an identified area of risk, OSFI typically treats reputation risk as a composite inherent risk arising from underlying risks, especially operational risk and legal & regulatory risk.

1111. The quality of risk management controls for prudential supervision is viewed from the following perspectives; operational management; financial analysis; compliance; internal audit; risk management; senior management and board oversight. Net risk is defined as inherent risks, mitigated by risk management control functions. Similarly, for AML/CFT purposes, OSFI examines the risk management controls exerted by the Board, senior management, compliance and internal audit when conducting AML/CFT assessments to conclude whether the inherent risks of ML/TF are being managed appropriately. Because this process differs from the analysis of traditional prudential risks to capital and earnings, OSFI has placed AML/CFT assessment into a separate unit (Compliance Division) and not in its Supervision Sector.

1112. OSFI supervises a large number of institutions that deal in a very significant amount of total assets and that offer a broad range of financial sector activities as shown by the following table.

Type of Federally Regulated Financial Institution	No. of federal institutions FRFIs	Total Assets (CAD 000) Q3 2006	%
Six largest Conglomerate Domestic[134] banks and affiliates	9	CAD1 990 039 189	69.4
All other Domestic Banks	13	CAD 37 044 174	1.3
Subsidiaries of Foreign Banks	21	CAD 120 204 087	4.2
Branches of Authorised Foreign Banks	24	CAD 48 262 271	1.7
Trust and Loan Companies	30	CAD 16 852 035	0.6
Trust and Loan Companies subsidiaries of	20	CAD 212 553 043	7.4

[134]. "Domestic " means the entity was incorporated in Canada by Letters Patent under the appropriate governing legislation and is not a subsidiary of a foreign bank.

Type of Federally Regulated Financial Institution	No. of federal institutions FRFIs	Total Assets (CAD 000) Q3 2006	%
Canadian banks			
Cooperative Credit Associations [1]	7	CAD 11 889 712	0.4
Cooperative Retail Associations	1	CAD 3 236 524	0.1
Three largest Conglomerate Domestic Life Insurance Companies and their affiliates	9	CAD 365 692 000	12.8
All other domestic Life Insurance Companies	30	CAD 45 506 966	1.6
Branches of Authorised Foreign Life Insurance Companies	41	CAD 16 291 088	0.5
Total	215	CAD 2 866 584 842	100

[1] 4th quarter 2005.

1113. Since 2002, OSFI has conducted on-site assessments to assess FRFIs AML/CFT programs. These assessments assess both the quality of AML/CFT risk management at such institutions, including their subsidiaries and branches both within and outside Canada, as well as their ability to comply with their obligations under the PCMLTFA and Regulations. The results of these assessments are shared regularly with FINTRAC. Quarterly meetings are also held with FINTRAC to, among other things, review these results.

1114. OSFI's current AML/CFT methodology was developed in 2002 and subsequently refined to reflect its experience in assessing financial institutions. OSFI has instituted a target frequency of about 3 years for institutions presenting higher inherent risk. This includes all conglomerate banks and most conglomerate life insurance companies, and is generally consistent with OSFI's regular prudential examination cycle. Smaller entities will be risk ranked using various ML/TF risk criteria unrelated to financial risk (capital, earnings, liquidity, etc). Smaller entities that present medium to high inherent risk (due to their business profile matched against the AML/CFT criteria) will also be cycled through an assessment approximately every 3 years. The small, low- to no-risk entities will be the subject of regular monitoring with on site work taking place at longer intervals.

1115. On-site assessments typically involve:

- Iinterviews with senior management of risk control functions (AML, Internal Audit, and Risk Management) and selected lines of business.
- Review of systems technology used to support transaction reporting to FINTRAC, including business rules and lines of accountability.
- review of account opening procedures and sample customer files in business lines selected for their exposure to ML and TF.
- Exit meeting to verbally communicate principal findings and recommendations in advance of the written supervisory letter.

1116. Moreover, OSFI also administers a program to support implementation of, and ensure compliance with, section 83 of the Criminal Code, section 7 of the PCMLTFA, FINTRAC Guideline 5, the Regulations Implementing the United Nations Resolutions on the Suppression of Terrorism (RIUNRST), United Nations Al-Qaida and Taliban Regulations (UNAQTR), the United Nations Democratic People's Republic of Korea Regulations and the regulations to implement the United Nations Security Council Resolution 1737 on Iran. Under this program OSFI includes in its AML/CFT assessment methodology a review of the policies and procedures in place at FRFIs to assure compliance with their obligations to search for terrorist and terrorist entities and freeze their assets and report thereon to the RCMP, CSIS and OSFI. OSFI has emphasised to all federal financial institutions that the terrorist name searches must be done on a regular basis to comply with the "continuous" search requirement in the UN regulations and the Criminal Code regulations. Generally, deposit taking institutions and large conglomerate life insurance companies are expected to perform a full search for listed persons' names at least weekly, with larger institutions, including the five largest conglomerate banks, scrubbing customer name databases as frequently as daily.

1117. The examination of a conglomerate bank takes on average 2 to 3 weeks of preparation and 3 weeks of on-site work involving a team of about six persons. On-site work comprises a review of AML/CFT policies and procedures and reports generated by or for risk management control functions, interviews with senior management of risk control functions and selected lines of business, review of system technology used to support transaction reporting to FINTRAC and review of account opening procedures and sample customer files in business lines selected for their exposure to ML and TF.

1118. OSFI supervises financial institutions on a consolidated basis. It regularly reviews the operations of conglomerate banking and insurance companies with significant operations outside Canada, and the AML/CFT assessment program is included in this approach. Since the inception of the AML/CFT assessment program OSFI has reviewed selected financial institutions' offshore operations to test the effectiveness of their enterprise-wide AML/CFT standards. From 2002 to date OSFI has conducted reviews, of varying scope, in subsidiary and/or branches of FRFIs located in the UK, Jamaica, Mexico, Cayman Islands, Jersey, and Guernsey.

1119. In recent assessments of conglomerate financial institutions with securities subsidiaries, and as part of its consolidated supervision responsibilities, OSFI has also tested the effectiveness of these standards in securities dealer subsidiaries of a number of banks. Such securities dealers are regulated by the IDA.

1120. OSFI conducted 73 AML/CFT assessments from November 2002 to December 2006, including 6 follow-up assessments on institutions identified as having significant weaknesses in AML/CFT controls. OSFI has also conducted 5 projects consisting of thematic work associated with cross-sector activity, or assessments of selected Canadian Bank subsidiary operations located outside Canada. In 2006, OSFI upgraded the quality of its assessment work and focused primarily on more labour intensive second generation AML/CFT assessments at Canada's 6 largest banks. These banks had previously been assessed in either 2003 or 2004. Although the total number of assessments conducted by OSFI in 2006 (13) was lower than in 2005 as a result, each assessment was far more significant in scope. Five of the 13 assessments conducted by OSFI in 2006 therefore covered a grand total of 40 FRFIs (comprising 12 banks, 5 life insurance companies and 23 trust and loan companies).

1121. In summary, the 2006 AML/CFT assessment program covered a total of 40 FRFIs, which in turn comprised 87% of the assets of all federally regulated deposit-taking institutions and about 75% of the assets of all FRFIs, gave both FINTRAC and OSFI quite a thorough view of the state of AML/CFT compliance and risk management controls in the federally regulated sector in Canada.

1122. In 2004, OSFI entered into a Memorandum of Understanding with FINTRAC under which OSFI and FINTRAC agreed to share information related to federal financial institutions' compliance with Part 1 of the PCMLTFA. The MOU was authorised under the Public Safety Act, which removed previous restrictions in the PCMLTFA on the ability of FINTRAC to share such information with financial regulators. It also removed similar restrictions under the Office of the Superintendent of Financial Institutions Act, which had prevented OSFI from sharing compliance information with FINTRAC. As a result of the MOU, the PCMLTFA and its Regulations, when combined with FINTRAC Guidelines and OSFI Guideline B-8 represent the primary instruments for reviewing the implementation of AML/CFT requirements in the federally regulated financial sector in Canada. FINTRAC now receives each examination findings letter sent to a FRFI and discusses each in detail at regularly scheduled quarterly meetings with OSFI, unless more urgent discussions are required. FINTRAC also sees all of the action plans.

1123. The following table summarizes the number of OSFI on-site AML/CFT assessments and projects from 2002 to 2006:

Type of actions	2002	2003	2004	2005	2006	Total
Assessments undertaken	5	12	11	29	10	67
Follow-up Assessments	0	0	1	2	3	6
Sub Total	**5**	**12**	**12**	**31**	**13**	**73**
Thematic Projects	0	0	2	2	1	5
Total Assessments and Projects	**5**	**12**	**14**	**33**	**14**	**78**
Required Actions	5	29	31	128	29	222
Recommended Actions	21	66	49	185	62	383
Total Actions	**26**	**95**	**80**	**313**	**91**	**605**

1. The following table summarizes the reasons for intervention that OSFI has made at FRFIs.

Subject	Required Action	Recommended Action	Total
AML/CFT Policy Development & Implementation	17	69	86
Self-Assessment Program Implementation	14	57	71
Independent Procedures Testing & Reporting	11	47	58
Role of the CAMLO	6	43	49
Total Oversight Recommendations	**48**	**216**	**264**
Training	16	26	42
Large cash transactions, Suspicious transactions and Electronic fund transfers	7	43	50
Customer Identification Issues	69	65	134
Other Business Line Specific Issues	26	18	44
Retention of records	2	2	4
Outsourcing	1	3	4
Terrorist Searching and Freezing	55	8	63
Total Operational Recommendations	**176**	**165**	**341**
Grand Total	**224**	**381**	**605**

1124. In 2005 OSFI improved the scope of AML/CFT assessments by including more detailed assessments of the various lines of businesses at the conglomerate banks (including lines believed to have a higher vulnerability to ML/TF) and a consistent focus on customer record keeping. The conglomerate reviews post-2005 are referred to as "second generation assessments".

IDA

1125. The IDA's Sales Compliance Department ensures that member firms implement policies and procedures to comply with all non-financial regulatory requirements, including those of the IDA, provincial securities acts and federal legislation including the PCMLTFA. The IDA's Sales Compliance staff conducts regular reviews and on-site examinations of member firms, focusing on issues of compliance, anti-money laundering due diligence, supervision, corporate finance and research, employee activities and internal controls; 70% of staff time is spent directly on member firm reviews.

1126. The Sales Compliance Risk Assessment Model helps identify, define, assess and weigh risks in respect to IDA member business activities and behaviour patterns to assist in determining the frequency, scope and principal focus of the individual Sales Compliance Reviews to be conducted for each firm. The objective of the Risk Assessment Model is to identify member firms having a higher than average probability of being found to be non-compliant. To achieve this, the Association runs both qualitative and quantitative evaluations for every dealer and combines their respective outcomes into a single Net Residual Risk score. With this information, the IDA ensures that its regulatory focus is placed on higher risk firms. These objectives are enhanced by the model's ability to indicate the comparable risk assessed for each member firm relative to all other firms under the jurisdiction of the IDA – and to subsets, or "peer groups," of firms engaged in comparable activities.

1127. Providing best practice guidance and rule interpretations is also part of Sales Compliance's work, as well as providing feedback on policy development to the Regulatory Policy Department.

1128. The IDA uses its sales compliance risk assessment model to assist in assigning firms to examination cycles. The cycles are: annual for high risk firms; every 18 months for large, integrated firms; 2 years for low risk firms; a five-year cycle is assigned to minimal risk firms, such as dealers of Alternative Trading Systems (which provide facilities through which other dealers and large institutions trade) and proprietary-trading only firms that have no clients and therefore do not present any risk to IDA rules.

1129. In other respects, the Enforcement Department of the IDA may undertake investigations into the conduct, business or affairs of its members and their employees. Investigations can also be undertaken on the basis of: a complaint received from a member of the public; a directive from the IDA's Board of Directors; a request from an SRA; or any information obtained or received by the IDA.

1130. The Investigator reviews the findings of the investigation and makes a recommendation as to whether there appears to be sustainable evidence that a breach of the Association's By-laws, Regulations or Policies has occurred. Files with insufficient evidence are closed and files with sufficient evidence are sent to the Association's Enforcement Counsel for prosecution.

1131. The IDA provides AML/CFT findings to FINTRAC under an MOU, and had previously provided such information voluntarily. The IDA provides FINTRAC with its review schedule, periodic compendia of deficiency findings involving AML/CFT issues and the remedial action taken by firms. The IDA also provides information to FINTRAC to assist it in the risk assessments it uses to determine what reporting entities it will audit.

1132. From 2001 to 2005 the IDA conducted 526 head office and 100 branch office reviews. Some separate reviews of large branches were also conducted, however, the IDA generally conducts branch reviews in conjunction with a head office reviews to understand how compliance controls are operating at all levels.

MFDA

1133. The activities of the MFDA's Enforcement Department are integral in providing firm, fair and transparent regulatory processes in enforcing the MFDA requirements that enhance investor protection. The activities of the Enforcement Department also directly support the MFDA's goal of participating in the Canadian securities regulatory framework, by developing and maintaining collaborative working relationships with other securities regulatory authorities and law enforcement agencies. The MFDA's Enforcement Department investigates when MFDA member firms and their registered persons breach its rules.

1134. The Enforcement Department receives referrals of the results of sales compliance examinations done by the MFDA Compliance Department, where the nature or extent of the examination results exceeds a threshold that the MFDA has established to identify areas where Enforcement action is required in addition to resolution through normal Compliance follow-up process. The MFDA has committed by letter to FINTRAC that it will report any such referrals that identify situations of non-compliance with AML detected during MFDA Sales Compliance examinations. To date, there have been no findings of conduct exceeding the threshold that would require reporting to FINTRAC under this arrangement.

OSC

1135. The OSC, in its reviews of registrant firms, assesses firms according to an internally developed risk management tool to help focus its resources on the relatively higher risk firms. A regular field review includes a review of the operations of the firm including, for example, detailed testing of portfolio management functions, trading functions, conflicts of interest, financial condition, money laundering, etc. Know your client and suitability reviews are done as part of testing of the portfolio management and trading functions. The review of money laundering is limited to ensuring there are policies and procedures in place to comply with money laundering legislation, and testing of client

identification procedures as part of know your client and suitability reviews. The OSC does not publicly disclose its review cycles.

DICO

1136. DICO conducts inspections of its members' compliance with AML/CFT legislation during its regularly scheduled on-site verifications and reviews. DICO inspects all member institutions on a regular basis with frequency determined by size, complexity and risk. At a minimum, each institution is reviewed at least once every three years. Inspections of the money laundering policy and anti-terrorism aspect of the inspection module is rather marginal and the controls in that area remain limited to a rapid examination of procedures and policies (2 hours on average), without sample testing of transactions or files but can take a longer timeframe should major deficiencies were noted. A copy of the report is also provided to FINTRAC.

1137. During the course of the review, should it come to the attention of the inspector that the member has failed to comply with the requirements of the Money Laundering Legislation review, DICO requires the member to provide an Action Plan to address the identified issue. The Action Plan is also provided to FINTRAC for their agreement. DICO will follow to ensure the Action Plan is implemented as set out.

AMF

1138. Under the AML Act, the Desjardins federation, the joint supervisor of the *caisses populaires* with the AMF, must inspect the internal affairs of each *caisse populaire*, including that AML/CFT requirements are being followed, at least once every 18 months and must transmit to the AMF its findings. AMF relies mainly on these reports and performs seldom on-site reviews at Desjardins *caisses populaires*, favouring a "second level" control on this sector.

FSCO

1139. FSCO licenses and regulates insurers that sell life and health insurance in the province of Ontario to ensure they comply with the provincial market conduct legislation. In Ontario, life and health insurance products are sold to consumers directly by companies or through insurance agents. All agents (as defined in the Insurance Act of Ontario) are required to be licensed with FSCO.

1140. FSCO monitors, investigates and takes appropriate regulatory action when there is non-compliance with legislation and regulations that relate to the regulated sectors. Non-compliance may result in enforcement action.

Comments from the assessment team in relation to Recommendations 29 & 17

1141. The previous developments illustrate the unequal degrees of regulation and supervision, depending on the sectors and provinces although OSFI is responsible for regulating well over 80% of the financial sector, by total assets.

1142. The number of examinations performed by FINTRAC appears to be small compared with the total number of reporting financial entities (more than 100, 000) although FINTRAC examination may cover a large number of reporting entities (*e.g.* in the case of life insurance companies/agents and securities firms/dealers). Even including examinations conducted by FINTRAC's MOU partners, which except for OSFI's are not always as detailed as FINTRAC's (see in this respect DICO's assessments which are generally made in 2 hours), the figures remain rather low, except for the banking and federally regulated trust and loan companies sectors which have a good supervisory coverage by OSFI.

1143. The securities sector seems to be regularly controlled, though on a lesser extent, as non IDA or MFDA members are regulated by provincial SRAs which do generally review policies and procedures but do not perform a thorough testing of AML controls in their on-site reviews.

1144. The on-site AML/CFT assessments conducted by OSFI since 2003 at the major life insurance companies have represented 90% of the industry measured by its assets but less than 10% of the supervised population. The supervision appears to be weak for life insurance agents as AML/CFT controls relies mainly upon FINTRAC's actions. In addition, despite the focus put on that sector, FINTRAC had managed to perform controls on only 60 credit unions and *caisses populaires* up to mid-2007, out of a total population of 1 250 reporting entities.

1145. It should also be noted that except for the main sectors like FRFIs, FINTRAC does not take into account the quality of the supervision by the primary regulators in its risk assessment tool, and the assessment tool is focussed significantly on the risk of non-compliance with the legislative and other requirements, as compared to the risk of money laundering and terrorist financing.

Statistics

1146. Canada provided statistics regarding the on-site examinations conducted by FINTRAC and its MOU partners relating to or including AML/CFT during the last three fiscal years. On the other hand, there was no statistics centrally available concerning the involvement of supervisors which have not signed an MOU with FINTRAC in AML/CFT compliance oversight (number of on-site reviews, sanctions taken). Such information would certainly be useful to help FINTRAC implement an effective risk-based compliance supervision program.

Guidelines – R.25 (Guidance for financial institutions other than on STRs)

FINTRAC

1147. FINTRAC provides Guidelines on its website for reporting entities and the general. Cumulatively, these Guidelines provide reporting entities with an understanding of all of their requirements and obligations under the PCMLTFA. Furthermore, these Guidelines all include a section on how to contact FINTRAC for more information if it is required.

1148. Aside from the Guidelines themselves, FINTRAC's website also contains information tailored specifically to the needs of the various reporting sectors. The information on the website for each of the sectors covers what needs to be reported, record keeping, ascertaining identification, third-party determination, and information on the compliance regime requirements and compliance questionnaires. For each reporting sector, the information can be found on FINTRAC's website.

1149. In addition, FINTRAC launched, in March 2005, an additional type of guidance in its FINTRAC Interpretation Notices (FINs), which are documents developed by FINTRAC to provide explanations and clarifications regarding certain provisions contained in the PCMLTFA and its Regulations. FINs are primarily used by FINTRAC staff, reporting entities and their legal counsel, and other individuals who have an interest in having clear interpretations of some key aspects of the PCMLTFA. To date, four FINs, have been developed, dealing with specific topics concerning money services businesses/foreign exchange dealers, accountants, securities dealers and banks. The following FINs are available on FINTRAC's website: (1) Criteria for determining if an entity is "Engaged in the Business of Money Services Business or Foreign Exchange Dealer" (Annex B10); (2) Accountants - Giving Instructions Versus Providing Advice (Annex B11); (3) Opening an Account for a Person or Entity Engaged in the Business of Dealing in Securities Only Outside of Canada (Annex B12); and (4) Large Cash Transaction and Electronic Funds Transfer Reporting Requirements: Two or More Transactions in a 24-Hour Period (The '24-Hour Rule') (Annex B13).

1150. FINTRAC is currently in the process of updating the guidelines and FINs to take into account amendments to the PCMLTFA and regulations.

1151. FINTRAC also undertakes an extensive outreach and assistance program for reporting entities that includes information sessions, presentations at industry conferences (in 2004-05 and 2005-06, FINTRAC participated in nearly 1 300 presentations involving more than 27,000 participants), articles

in trade magazines, and has developed and published sector-specific information sheets and pamphlets for distribution to reporting entities. FINTRAC provides these publications to reporting entities free of charge, and they are also available on FINTRAC's website. In addition, FINTRAC operates a call centre that is open 12 hours a day from Monday to Friday, to answer general inquiries about FINTRAC's operations, as well as more specific questions about reporting requirements and systems. In 2005-2006, FINTRAC received 3,253 inquiries through the call centre, mostly from reporting entities.

1152. In general, FINTRAC guidance is aimed at explaining and detailing the obligations that different sectors have under the PCMLTFA and its regulations. The Guidelines are supplemented by significant outreach activity undertaken by FINTRAC through regular meetings and presentations at conferences and meetings of industry associations. However, they give few indications on how tailoring them and putting them effectively into practice in the various financial sectors. Further guidance to assist their respective financial institutions in complying with AML/CFT requirements that may be detailed in various statutes may be provided by prudential regulators but it is not yet generalised (see life insurance sector, for example).

OSFI

1153. In early 1990, in support of the initiatives resulting from the 1989 G-7 Paris Summit, OSFI implemented for adoption by federal deposit-taking institutions, a Best Practices Paper to Deter and Detect Money Laundering. The key best practices contained in the paper focused on the following areas: (1) designating an officer within the financial institution to be responsible for compliance with the procedures; (2) implementing a system of formal internal controls procedures to deter and detect money laundering that included a source of funds declaration; (3) implementing a system of independent procedures testing; (4) implementing a record retention policy; (5) developing and providing appropriate training to financial institution staff on AML.

1154. In 1996, the Best Practices paper was converted to a formal OSFI guideline and revised to reflect changes implemented as a result of the promulgation of the Proceeds of Crime (money laundering) Act and Regulations. It also added further insights into deterring and detecting money laundering, such as the adoption of an annual Self Assessment Program, as well as a program of (voluntary) suspicious transaction disclosure to law enforcement.

1155. In addition the application of the guidance was extended to federal life insurers in 2001. In 2002 the guideline was further amended to add CFT requirements. Further changes are contemplated in the near future for the OSFI Guideline B-8, Deterring and Detecting Money Laundering and Terrorist Financing, which was last revised in November 2004. In addition, OSFI commenced offering information sessions to the industry in 2005 and continued to do so in 2006.

1156. It may be noted that this Guideline is more specifically suited to the banking sector than to life insurance companies The life insurance industry trade association (CLHIA) has developed in consultation with FINTRAC a guidance Manual intended for helping life insurance agents and brokers across Canada meet their AML obligations. CLHIA and LIMRA (Life Insurance Marketing and Research Association) have also developed jointly supporting on-line training lessons for Canada's life insurance agents and brokers. At the time of the evaluation the guidance Manual and the training lessons were not yet available. Representatives from OSFI have also spoken at a number of sessions on money laundering at various life insurance and banking sector industry educational events.

IDA

1157. The IDA provides regular notices to its members on developments in regulations, including the PCMLTFA, along with information on risks and trends. The IDA developed a guide, Deterring Money Laundering Activity: A Guide for Investment Dealers to help members effectively develop effective anti-money laundering programs in compliance with anti-money laundering and anti-terrorist financing obligations. In general, the guide discusses requirements under the PCMLTFA and refers to

guidance available from FINTRAC, know your client procedures, suspicious transaction reporting, monitoring of account activity, anti-money laundering training, audit program and relationship between introducing and carrying brokers.

1158. Representatives from the IDA have also spoken at a number of sessions on money laundering at various industry educational events.

3.10.2 Recommendations and Comments

1159. The Canadian AML/CFT supervisory structure has several significant weaknesses:

- The exclusion from the AML regime of a number of categories of financial institutions without proper and formalized prior risk assessments or without adequate justifications of low AML risks.
- Heterogeneous levels of AML compliance oversight in the different financial sectors, which is due to an insufficient level of compliance staff resources in FINTRAC compared to the number of reporting entities, and to variable levels of involvement by the various primary regulators (MSBs, life insurance intermediaries, some provincial credit unions and *caisses populaires*, etc.).
- The lack of adequate sanctions provided to FINTRAC under the PCMLTFA which is not compensated by the sanctions administered under their own statute by the other primary regulators (since the regime of administrative monetary penalties is not in force yet).
- The current absence of a registration regime for money service businesses and foreign exchange dealers (since the registration regime adopted in June 2007 will only be in force in June 2008).

1160. Canada could consider allowing FINTRAC to delegate formally its authority to examine financial institutions for AML/CFT compliance to its MOU partners and other primary regulators, so that the basis for their intervention in that area is sound and clear and in order to leverage existing examination resources and to avoid possible duplication of compliance inspections. Such a measure would also ensure a better knowledge by the AML compliance supervisor of the specifics of the sector. Such a delegation should go together with the settling by FINTRAC of objectives (frequency, coverage of risks) and common rules and standards for the conduct of examinations and inspections on its behalf by its partners.

1161. More generally, Canada should encourage the development of specific AML/CFT guidance by the various primary provincial regulators and a more active involvement in AML/CFT supervision. It could also envisage encouraging the creation of SROs in sectors which are less regulated, such as life insurance brokers or MSBs. It is essential too that sufficient resources be dedicated to the supervisory authorities responsible for AML/CFT oversight.

1162. The strengthening of the sanctions regime with the introduction of administrative and monetary penalties, as included in the amended PCMLTFA, should be a crucial enhancement for the effectiveness of the Canadian AML/CFT system. The delegation of the administration of these sanctions to the MOU partners could also be envisaged.

1163. Canada should ensure that market entry rules among the different provinces and sectors are compliant with FATF requirements.

1164. Finally, the creation of a registration regime for the MSBs will be an essential step in the necessary strengthening of the AML supervision of this highly risky sector.

3.10.3 Compliance with Recommendations 17, 23, 25, 29 & 30

Rec.	Rating	Summary of factors underlying ratings
Rec.17	PC	• With the exceptions of OSFI and IDA regulated institutions, only criminal sanctions are available to FINTRAC under the PCMLTFA for all other types of financial institutions and these are only applicable for the most serious failures, and need to be proved to the criminal standard. • OSFI only uses a limited range of actions/sanctions in the AML/CFT context (namely supervisory letters and in a limited number of cases, staging). • The lack of effective sanctions applied in cases of major deficiencies raises real concern in terms of effectiveness of the sanction regime, particularly taking into account that only one criminal sanction and a very limited number of administrative sanctions have been applied.
Rec.23	PC	• Exclusion from the AML/CFT regime of certain financial sectors (such as financial leasing, factoring, finance companies, etc.) without proper risk assessments. • For the financial institutions subject to the PCMLTFA, there is a very unequal level of supervision of AML/CFT compliance, with certain categories of financial institution appearing to be insufficiently controlled (MSBs, certain credit unions/*caisses populaires*, life insurance intermediaries…). This is due to the limited staff resources of FINTRAC dedicated to on-site assessments compared to the high number of reporting entities, which has not always been compensated by the involvement of the primary prudential regulators in AML/CFT issues. • "Fit and proper" requirements are not comprehensive. • At the time of the on-site visit, there was no specific obligation for FRFIs to implement screening procedures for persons who are hired, or appointed to the Board, after the initial incorporation or authorisation procedures are concluded. • There is currently no registration regime for MSBs.
Rec.25	LC	• There is a lack of specific guidelines intended for sectors such as life insurance companies and intermediaries.
Rec.29	LC	• FINTRAC has no power to impose administrative sanctions.

3.11 Money or value transfer services (SR. VI)

3.11.1 Description and Analysis

1165. *Definition*. Under the PCMLTF Regulations, "*money services business*" means a person or entity that is engaged in the business of remitting funds or transmitting funds by any means or through any person, entity or electronic funds transfer network, or of issuing or redeeming money orders, traveller's cheques or other similar negotiable instruments. It includes a financial entity when it carries out one of those activities with a person or entity that is not an account holder.

1166. To assist the private sector, FINTRAC Interpretative Note March 1, 2005 provides guidance on what it means to be "engaged in the business".

1167. A business is considered to be a MSB if any of the following applies: (1) the business issues or redeems money orders, traveller's cheques or other similar negotiable instruments for more than CAD1 000 with the same person on the same day; (2) the individuals running the business advertise (by means of newspaper, television, yellow pages, Internet, any other media, or by an interior or exterior sign) the fact that they engage in the activity; (3) the business holds a permit or licence related to the activity; (4) the business is registered as someone carrying on the activity; or reports the income of that activity as income from a separate business for tax purposes". Money services businesses include alternative money remittance systems, such as Hawala, Hundi, Chitti, etc.

1168. *Issue of registration/licensing*. At the time of the assessment, there were no federal licensing requirements in place for MSBs. Under the Canadian constitution, licensing of these types of businesses falls within the powers of the provincial governments. However, given that Canada's

AML/CFT legislation is a federal Act and after consultation with the provinces, Canada has moved to create a federal registration regime[135]. At the time of the on-site visit, some provinces regulated the sector, but only in relation to "payday" lending services and in respect of customer protection rules.

1169. FINTRAC has made use of different techniques in identifying MSBs and raising awareness in this sector, including: (1) searching telephone and business directories; (2) field research (walk/drive through neighbourhoods looking for commercial signs); (3) awarded contracts to conduct searches for advertisements in ethnic newspapers; and (4) held regional open house workshops on legislative obligations (all MSBs were sent an invitation). Generally speaking, FINTRAC's outreach activities with the MSB sector include overview presentations about FINTRAC, and presentations concerning reporting entities' obligations under the PCMLTFA and its associated regulations.

1170. With these measures, FINTRAC has been able to identify some 700 MSBs in Canada, largely located in major urban areas. The market is dominated by a few large firms but is also composed of a vast number of relatively small entities compared to other types of reporting entities in the financial sector. However, it has been very difficult to build a complete inventory of the sector since many money services are a part of other businesses such as travel agencies, small grocery stores and gas stations; and they might not advertise. Complicating the task further, these services go in and out of business at a high turnover rate.

1171. The MSB sector has generated more STRs than banks since 2001, with almost one third of all STRs received by FINTRAC coming from this sector. Nevertheless, detailed statistics show that only a limited number of MSBs (mostly the largest players) report STRs to FINTRAC. The following table shows the MSB sector compared with all reporting entities from 2002 to 2006:

	MSB	Total reporting entities	% of Total
Number of reporting entities	about 700	Over 300 000	0.2
Suspicious Transaction Reports	33 426	102 835	33
Large Cash Transaction Reports	214 247	15 800 939	1.4
Electronic Fund Transfer Reports	96 790	29 328 058	0.3

1172. One of the key challenges the larger players currently face is the selection of agents in which some of the bigger MSBs will conduct extensive checks on individual companies and criminal records checks on individuals but this does not apply in all cases. The key players met by the assessment team indicated that they would like the sector to be licensed as it would build market confidence and image.

1173. *Application of the FATF Recommendation*s. The MSB sector is subject to client identification, record keeping and reporting requirements under the PCMLTFA. However, the preventive measures currently applicable to financial institutions including MSBs in Canada (especially in relation to CDD, reporting of suspicious transactions or SRVII) present very serious weaknesses (see in particular Sections 3.2, 3.5 and 3.7 of the report). The MSB sector is therefore subject to a limited range of preventive measures that are not in compliance with international standards.

1174. *Monitoring.* FINTRAC is responsible for supervising the MSB sector for AML/CFT purposes[136]. *In order to* fulfill its responsibilities effectively under section 62 of the PCMLTFA, FINTRAC has established a compliance program. In particular, FINTRAC has made use of Compliance Questionnaires (CQs) (see Section 3.10 of the report). As part of its outreach activities,

[135] A registration system is due to come into force on 23 June 2008. Individuals and entities that engage in MVT services will be required to register with FINTRAC. The registration regime is designed to facilitate compliance with existing obligations under the PCMLTFA and to help FINTRAC supervise an otherwise unregulated sector. It will also create a new criminal offence for operating an unregistered MSB.

[136] Under regulations enacted in June 2007 and in force in June 2008, FINTRAC is responsible for accepting, denying, revoking and verifying applications for registration, maintaining the information contained in the registry and verifying compliance with the registration requirement.

FINTRAC has also had 149 meetings with entities in that sector since 2004-05, which involved over 400 participants (12% of FINTRAC outreach activities (presentations and meetings) over the last three years have been targeted at entities from that sector and 29% of all CQs having been sent to entities in the sector).

1175. The following table illustrates the percentage of positive responses to questions in the CQ about key compliance elements (as of the end of 2005-06):

AREA OF COMPLIANCE	MSB
Implemented Compliance Regime	85%
Designated Compliance Officer	75%
Implemented Compliance Policies & Procedures	91%
Review of Policies & Procedures	77%
Ongoing Compliance Training	71%

1176. The following table indicates the number of FINTRAC examinations conducted in the MSB sector:

Sector	2004-05	2005-06	2006-07 (as of end 09/06)	Total (by sector)
MSB	164	56	43	263*
All Other Financial Institutions	12	64	40	116
Total	176	120	83	379

Note: In fiscal year 2003-04, FINTRAC began to conduct examinations and completed a total of 26 examinations. The focus of these examinations was largely on the MSB sector.

1177. FINTRAC has, to a significant degree, focused its examination resources in the MSB sector, especially in the early years, with 69% of all its examinations of financial institutions having been conducted in that sector over the last 2.5 fiscal years (about 40% of the identified MSBs have been examined by FINTRAC) but clearly there is scope for further progress in this area although it should be noted that a single FINTRAC examination covers the parent entity and potentially may cover many agents of the MSB.

1178. *List of agents*. There is currently no legal requirement for each MSB to maintain a list of agents[137].

1179. *Sanctions applicable to MSBs failing to apply the AML/CFT requirements*. At the time of the on-site visit, under the PCMLTFA, FINTRAC could not impose penalties to MSBs failing to apply the PCMLTFA and its Regulations but only had the option of referring a case of non-compliance to law enforcement for investigation and prosecution (see Section 3.10 of the report)[138]. To date, FINTRAC has disclosed seven such cases of non-compliance to law enforcement agencies and one MSB operator has been convicted for non-compliance with the PCMLTFA and for money laundering. However, at the time of the on-site visit, the sanction regime available to FINTRAC was not effective, proportionate and dissuasive.

1180. *Additional element*. The Best Practices Paper for SRVI outlines five areas in which preventative measures should be considered, namely: licensing/registration; identification and awareness raising; AML Regulations; compliance monitoring and sanctions. In terms of compliance monitoring, a substantial body of work has already been conducted in this field by FINTRAC, along the

[137] The registration regime enacted in June 2007 and coming into force in June 2008 requires the MSBs to submit a list of agents to FINTRAC as part of the registration process (see Schedule 1 Part C of the PCMLTF Registration Regulations).

[138] The PCMLTFA enacted measures in December 2006 that come into force in December 2008 and introduce a new regime of sanctions.

recommended lines in the Best Practice Paper. Other elements were very partially in place at the time of the on-site visit although the overall implementation of the Best Practices Paper should significantly improve after the introduction of the regulatory changes under the PCMLTFA.

3.11.2 Recommendations and Comments

1181. Canada should ensure effective implementation of the registration system for MSBs in force in June 2008 and ensure that the requirements applicable to MSBs fully meet the FATF requirements.

3.11.3 Compliance with Special Recommendation VI

Rec.	Rating	Summary of factors underlying ratings
SR. VI	NC	• There is no registration regime for MSBs as contemplated by SR VI. • Overall, requirements and implementation of Recommendations 4-11, 21-23 and SR. VII is inadequate which has a significant negative impact on the effectiveness of AML/CFT measures for money transmission services.. • MSBs are not required to maintain a list of their agents. • The sanction regime available to FINTRAC and applicable to MSBs is not effective, proportionate and dissuasive.

4. PREVENTIVE MEASURES – DESIGNATED NON-FINANCIAL BUSINESSES AND PROFESSIONS

4.1 Customer due diligence and record-keeping (R.12) (applying R.5, 6 & 8-11)

4.1.1 Description and Analysis

Definitions and scope

1182. The PCMLTF Regulations currently cover casinos, real estate brokers and sales representatives, and accountants/accountant firms as reporting entities to FINTRAC. The AML/CFT preventive measures do not currently apply to lawyers, Quebec Notaries, BC Notaries nor to dealers in precious metals and stones[139].

1183. "*Casinos*" means a person or entity that is licensed, registered, permitted or otherwise authorised to do business under any of paragraphs 207(1)(a) to (g) of the Criminal Code and that conducts its business activities in a permanent establishment (i) that the person or entity holds out to be a casino and in which roulette or card games are carried on; or (ii) where there is a slot machine, which, for the purposes of this definition, does not include a video lottery terminal. It does not include a person or entity that is a registered charity as defined in subsection 248(1) of the Income Tax Act and is licensed, registered or otherwise authorised to carry on business temporarily for charitable purposes, if the business is carried out in the establishment of the casino for not more than two consecutive days at the time under the supervision of the casino.

1184. Gambling is permitted pursuant to the Criminal Code of Canada and regulated through provincial gaming legislation (along with its regulations, rules, directives, terms and conditions, and policies). Part VII of the *Criminal Code* makes it an offence to operate a commercial gaming enterprise. The two main exceptions to this prohibition are gambling activities conducted and managed by the province, or pursuant to a licence issued by the province. The *Criminal Code* does not contain any exceptions from the broad prohibition that would allow for the establishment of an Internet casino.

[139] The regulations enacted on 26 December 2007 extend coverage of the Act to these new sectors as of December 2008: legal counsel and legal firms, BC notaries public and notary corporations and dealers in precious metals and stones. See http://www.fin.gc.ca/news07/07-105e.html.

1185. Yet despite prohibitions against non-governmental Internet gambling, there are signs that the online gaming industry is growing in Canada and for some years now, a community in Quebec is hosting servers and has been selling "licences" for the operation of Internet gaming businesses. Interestingly, the RCMP advised it has limited capacity for handling illegal activity related to Internet casinos. Having tried previously to tackle the issue, they found they did not have the resources as the criminals were tracking investigations online and moving their servers off-shore. Internet casinos do not fall within the scope of the PCMLTFA.

1186. *Cruise ships*. Cruise ships operate out of Canadian waters and do offer casino facilities. As indicated by the Department of Transport, after the Caribbean and the Mediterranean, Alaska cruises through British Columbia's Inside Passage are the third most popular in the world. Large cruise vessels calling at Canada's ports are owned by foreign-based companies. Sailing under foreign flags, these vessels offer two basic types of extended cruises: the luxury cruise and the "pocket cruise", distinguished by vessel capacity of more or less than 150 passengers. Vancouver is the main hub in the Canadian cruise ship industry although Vancouver's share of this traffic is decreasing since 2001 to reach some 830 000 passengers in 2006.

1187. In March 1999, amendments to Canada's Criminal Code came into effect, easing restrictions on casino gambling aboard cruise ships. International cruise lines are now able to operate on-board casinos until they are within five nautical miles of a Canadian port of call (as compared to the 12 nautical mile limit for Canadian territorial waters). Previously, vessels had to close casinos as soon as they reached Canadian territorial waters. Some limitations exist: voyages must be at least 48 hours in length to offer gaming services, and passengers embarking in Canada cannot be scheduled to disembark without first calling at one or more non-Canadian ports. Cruise ships are not covered under the PCMLTFA as Canada believes that there is a limited capacity to misuse the casino facilities.

1188. **"***Accountant*" means a chartered accountant, a certified general accountant or a certified management accountant. Accountants and accountant firms are subject to the PCMLTFA when they:

a) Engage in any of the following activities *on behalf of* a person or entity:

- Receiving or paying funds.
- Purchasing or selling securities, real property or business assets or entities. Or
- Transferring funds or securities by any means.

b) Give instructions on behalf of any person or entity in respect of above activities.

c) Receive professional fees in respect of any activity referred to in a) or b).

1189. The Canadian Institute of Chartered Accountants (CICA) believes the accountant must be acting on behalf of a third party, i.e. to be an intermediary or a facilitator in the transaction. This means that the accountant has to be actually involved in the transaction, representing either the client or some third party.

1190. **"***Real estate broker or sales representative***"** means a person or entity that is registered or licensed under provincial legislation. Real estate agents are subject to the PCMLTFA when they engage in any of the following activities on behalf of any person or entity in the course of a real estate transaction:

- Receiving or paying funds.
- Depositing or withdrawing funds. Or
- Transferring funds by any means.

1191. *Real estate developers*. Home builders and real estate developers are two more sectors which the Government proposes to bring within the ambit of the PCMLTFA since they can carry out much the same role and activities as licensed real estate agents by selling homes directly to the public.

1192. *Lawyers and Quebec notaries* (who provide legal advice under the Quebec civil code) were exempted from complying with the provisions of the PCMLTFA in March 2003 when the Government revoked the regulatory provisions as they applied to legal counsel. This followed a legal challenge by the profession when the Government had initially proceeded to require mandatory suspicious and prescribed reporting, client identification, record keeping and internal compliance requirements of legal counsel when engaged in the following activities on behalf of a person or entity including the giving of instructions on behalf of any person or entity in respect of:

- Receiving or paying funds, other than those received or paid in respect of professional fees, disbursements, expenses or bail.
- Purchasing or selling securities, real properties or business assets or entities. Or
- Transferring funds or securities by any means.

1193. The professional legal bodies had argued that requiring lawyers to report information on their clients to the state is contrary to the right to solicitor-client privilege and the principle of an independent bar and judiciary.

1194. During the on-site visit, the legal profession acknowledged that there is a risk of money laundering in the "layering" stage in the business they conduct but seemed to imply money laundering was primarily a cash-based activity and that the Government was not explaining adequately where the risks lie in their discussions with the profession. The profession expressed willingness to the assessors to conduct identification and record keeping, while at the same time protecting access to that information but reporting remains an issue for them.

1195. The assessors were familiar with lawyer-client legal privilege argument but noted with interest that lawyers remain exempted when involved in the more routine purchase and sale of real property while real estate agents, engaged in exactly the same type of transaction, are required to report. The assessors were told that as a matter of business practice, the banking sector asks mortgage brokers and the legal profession to identify mortgage borrowers in accordance with the PCMLTFA at the closing of a real estate transaction.

1196. The amendments to the PCMLTF Regulations pre-published on June 30, 2007 propose to subject legal counsel and legal firms to Part I of the PCMLTFA when they engage in any of the following activities on behalf of any person or entity: (a) receiving or paying funds, other than those received or paid in respect of professional fees, disbursements, expenses or bail or (b) giving instructions in respect of any activity referred to in paragraph (a)[140].

1197. *BC Notaries* were not included in the PCMLTFA in 2001. They do not provide legal advice, undertake limited activities but they are allowed to hold trust accounts to carry out their duties and carry out real estate activities. While the number of BC Notaries is limited by statute to 332, they are at risk of being used for ML/TF. Regulations pre-published on June 30, 2007 extend coverage of the PCMLTFA to them when they act as financial intermediaries[141].

1198. *Trust and company service providers*. TCSPs are not separately recognised nor regulated as a separate business category operating in Canada although there was some acknowledgement during the on-site visit that there are businesses other than lawyers, accountants and trust companies that offer such services[142]. They do not fall under the scope of the PCMLTFA if they are not an entity or person otherwise covered by the legislation (trust and loan companies).

---

140 The PCMLTF Regulations were enacted in December 2007.

141 The PCMLTF Regulations were enacted in December 2007.

142 See for example businesses listed at:
http://ca.dir.yahoo.com/business_and_economy/business_to_business/corporate_services/incorporation_services

1199. *Dealers in precious metals and stones*. Dealers in precious metals and stones are not covered by the PCMLTFA. The profession has met with the Department of Finance to discuss their coverage by the AML/CFT regime. The proposed amendments to the PCMLTF Regulations pre-published on June 30, 2007 extend such coverage to them[143]. The assessors were told that the record keeping requirement is generally perceived as the most challenging issue due to the PIPEDA potential restrictions on customer's information retention and the very small size of the large majority of the retail businesses dealing precious metals and stones. The assessors were told that the industry would not oppose to any reporting requirement, in particular LCTRs since cash transactions are quite a limited practice in this sector (90% of the transactions seem to occur using a credit card).

Applying Recommendation 5

1200. No CDD requirements as set out in Recommendation 5 apply to Internet casinos, ship based casinos, lawyers and Quebec notaries, BC Notaries, trust and company service providers (except trust companies and accountants that may provide that type of services) and dealers in precious metals and stones.

1201. *Casinos*. Casinos are subject to special measures to identify the following individuals or entities (Section 60(b) of the PCMLTF Regulations):

- Any individual who signs a signature card in respect of an account that the casinos opens.
- Any individual who conducts a transaction with the casino for which a large cash disbursement record is required to be kept.
- Any individual carrying out foreign exchange transactions of CAD 3 000 or more or equivalent in foreign currency.
- Any individual conducting a large cash transaction.
- Any individual who conducts a transaction of CAD 3 000 or more for which an extension of credit needs to be kept.
- Any corporation or entity which opens an account.

1202. There is no requirement to carry out CDD measures when there is a suspicion of ML or TF and when financial institutions have doubts about the veracity or adequacy of previously obtained CDD data. There is no obligation to carry out customer identification for occasional transactions that are wire transfers[144]. The requirement to identify any individual for large cash transactions (above CAD10 000 which is a too high threshold) does not cover non-cash occasional transactions[145].

1203. Section 64 of the PCMLTF Regulations requires casinos to ascertain customer's identification by referring to the person's birth certificate, driver's licence, provincial health insurance card, passport or any similar record. FINTRAC Guidance 6F provides further indications on the type of documents to use (see Section 3.2 of the report for further developments).

1204. Casinos are subject to equivalent customer identification requirements as financial entities in relation to the identification of:

- Individual not physically present (Section 64(1(a)(ii) of the PCMLTF Regulations).
- Corporation or entity other than corporation (Sections 65 & 66of the PCMLTF Regulations).

143 The PCMLTF Regulations were enacted in December 2007.

144 Regulations enacted in June 2007 and which come into force in June 2008 will require that casinos identify clients in respect of these situations (see Section 60(b)(iv) of the amended PCMLTF Regulations).

145 Regulations pre-published in October 2007 will require casinos to identify clients, keep records and make reports with respect to all large disbursements regardless of the form of payment (e.g. chips, wire transfers, cash, etc.) (see Sections 42, 43(g), 44, 60(b)(i) and Schedule 8 of the PCMLTF Regulations, as amended by the regulations published in October 2007).

- Individuals acting on behalf of the customer (third party determination, Section 8 of the PCMLTF Regulations).

1205. Exceptions to ascertaining identity apply also to casinos: (1) if the customer has already an account (Section 62(2)(a) the PCMLTF Regulations); (2) if there are reasonable grounds to believe that the account holder is a public body or a corporation that has minimum net assets of CAD 75 million on its last audited balance sheet and whose shares are traded on a Canadian stock exchange or a stock exchange that is prescribed by section 3201 of the Income Tax Regulations and operates in a country that is a member of the FATF (Section 62(2)(a) the PCMLTF Regulations) or (3) for the opening of a business account for which the casino has already ascertained the identity of at least three persons who are authorised to give instructions in respect of the account (Section 60(a) of the PCMLTF Regulations).

1206. Casinos are not required to carry out customer identification in relation to: beneficial ownership; ongoing due diligence for accounts that the casinos open and higher risk categories of customers. Casinos are not required to collect information on the purpose and intended nature of the business relationship and on existing customers. There is no specific provision in the case casinos fail to complete CDD[146].

1207. The customer identification (natural or legal person) must be carried out before any transaction other than an initial deposit is carried out on an account.

1208. *Real estate agents and sales representatives.* Real estate agents and sales representatives are subject to customer identity verification (see Article 6.1 of the PCMLTFA) when they engage in any of the following activities on behalf of any person or entity in the course of a real estate transaction (Section 37 of the PCMLTF Regulations):

- Receiving or paying funds.
- Depositing or withdrawing funds. Or
- Transferring funds by any means.

1209. The PCMLTF Regulations also requires real estate brokers and sales representatives to ascertain the identity of their client when they receive §10,000 or more from the client in the course of a single transaction or two or more transactions carried out within a 24-hour period.

1210. In determining the identity of individuals, the PCMLTFA requires that brokers and sales representatives refer to a government issued identification document, such as a birth certificate, driver's license, passport, record of landing, permanent resident card or other similar record, and a provincial health card in certain provinces (see FINTRAC Guideline 6B of June 2005).

1211. When dealing with a corporation or any other entity, there is no specific requirement applicable to real estate agents and sales representatives to ascertain the identity of legal persons[147].

1212. The circumstances in which real estate agents and sales representatives have to carry out customer identification is too restrictive since they should be required to do so when they are involved

[146] Regulations which were enacted in June 2007 and come into force in June 2008, will close some of those gaps by requiring that casinos take reasonable measures to conduct ongoing monitoring; keep client information up-to-date in higher risk situations; and prohibiting casinos from opening an account if the identity of the client cannot be established (see Sections 71.1 and 53.2 of the amended PCMLTF Regulations).

[147] Section 59.2 of the PCMLTF Regulations enacted on 27 June 2007 and entering into force on 23 June 2008 requires real estate agents and sales representatives to confirm the existence and ascertain the name and address of every corporation/entity on whose behalf a transactions is conducted and the names of directors.

in transactions for a client concerning the buying and selling of real estate (see FATF Recommendation 12)[148].

1213. The CDD requirements applicable to real estate agents and sales representatives are substantially very basic and limited. They do not meet the FATF standards set out in Recommendation 5. Only Section 8 of the PCMLTF Regulations on third party determination (see Section 3.2 of the report "*Third party determination*" for a complete description of the provision) - that is applicable to every person or entity that is required to keep a large cash transaction report - applies to real estate agents and sales representatives. FINTRAC Guideline 6B for real estate agents and sales representatives states that what constitutes reasonable measures in making a third party determination will vary in accordance with the context in which they occur, and therefore could differ from one situation to the next. However, reasonable measures would include retrieving the information already contained in the agent's files or elsewhere within the business environment, or obtaining the information directly from the client.

1214. *Accountants and accountant firms*. Accountants are required to carry out customer identification when they (Section 34 of the PCMLTF Regulations):

a) engage in any of the following activities *on behalf of* a person or entity:
- Receiving or paying funds.
- Purchasing or selling securities, real property or business assets or entities. Or
- Transferring funds or securities by any means.

b) give instructions on behalf of any person or entity in respect of above activities

c) receive professional fees in respect of any activity referred to in a) or b).

1215. Accountants and accountant firms are subject to client identification obligations when they receive professional fees to engage in any of the activities listed above. This means that they would be subject to the client identification requirements when they engage in any of the activities mentioned above even if they were doing them on a volunteer basis. Activities of accountants or accounting firms other than those listed above, such as audit, review or compilation engagements carried out according to the recommendations in the Canadian Institute of Chartered Accountants (CICA) Handbook, do not trigger record keeping or client identification obligations. Giving advice to a client, in the context of your accountant-client relationship, is not considered providing instructions (FINTRAC Guidelines 6B of June 2005).

1216. The PCMLTF Regulations also requires accountants and accountant firms to ascertain the identity of their client when they receive CAD 10 000 or more from the client in the course of a single transaction or two or more transactions carried out within a 24-hour period.

1217. In determining the identity of individuals, the PCMLTFA requires that accountants refer to a government issued identification document, such as a birth certificate, driver's license, passport, record of landing, permanent resident card or other similar record, and a provincial health card in certain provinces (see FINTRAC Guideline 6B).

1218. When dealing with a corporation or any other entity, there is no specific requirement applicable to accountants/accountants firms to ascertain the identity of legal persons[149].

---

[148] This issue is addressed in the PCMLTF Regulations enacted on 27 June 2007 that will enter into force on 23 June 2008 (see Section 59.2 of the amended PCMLTF Regulations that must be read in conjunction with section 39 of the same regulations).

[149] Section 59.1 of the PCMLTF Regulations enacted on 27 June 2007 and entering into force on 23 June 2008 requires accountants and accountant firms to confirm the existence and ascertain the name and address of every corporation/entity on whose behalf a transactions is conducted and the names of directors.

1219. The circumstances in which accountants have to carry out customer identification are too restrictive since they should also be required to do so in the following circumstances (see FATF Recommendation 12):

- Management of bank, savings or securities accounts.
- Management of client money, securities and other assets (and not only purchasing or selling of these).
- Organisation of contributions for the creation, operation or management of companies.
- Creation, operation or management of legal persons or arrangements.

1220. The current CDD requirements applicable to accountants are substantially very basic and extremely limited. They meet a very limited range of requirements under Recommendation 5.

1221. Accountants and real estate agents and sales representatives must inform individuals concerning the collection of personal information about them. However, they do not have to inform individuals when they include personal information about them in any reports that they are required to make to FINTRAC (see FINTRAC Guideline 6B).

Applying Recommendation 6

1222. Canada has not implemented any specific AML/CFT measures concerning PEPs that are applicable to DNFBPs and discussions with the private sector representatives met by the assessment team suggest that this is not perceived as an area of high priority.

Applying Recommendation 8

1223. There are no specific legislative or other enforceable obligations for DNFBPs to take measures to prevent the misuse of technological developments in ML/TF schemes[150].

1224. The DNFBPs are not required to have policies and procedures in place to address any specific risk associated with non face-to-face business relationships or transactions[151].

Applying Recommendation 9

1225. There are currently no provisions for DNFBPs that address the issue of relying on intermediaries or third parties to perform elements of the CDD process (see Section 3.3 of the report). FINTRAC's current Guideline 6 indicates that DNFBPs may choose to use an agent/introducer or third party for customer identification purposes and, should they chose to do so, they need to enter into a written agreement with the agent/introducer which specifies what is expected from the agent/introducer. Where the DNFBP chooses to enter into such an agreement, it is ultimately responsible for ensuring that the identification requirements are met. This covers an outsourcing type of scenario that falls outside the scope of Recommendation 9.

---

150 The Regulations enacted in June 2007 and coming into force in June 2008 will require all reporting entities to conduct ongoing monitoring and keep client information up-to-date in higher risk situations, such as when new technologies are used to delivers products and services (see Sections 71 and 71.1 of the amended PCMLTF Regulations).

151 Section 64 of the PCMLTF Regulations enacted on 27 June 2007 (and due to enter into force on 23 June 2008) requires real estate agents and sales representatives, casinos and accountants/accountant firms to take specific customer identification steps if the person is not physically present at the time the business relationship is established.

Applying Recommendation 10

1226. No record keeping as described in Section 6 of the PCMLTFA apply to Internet casinos, ship based casinos, lawyers and Quebec notaries, BC Notaries, trust and company service providers (except trust companies) and dealers in precious metals and stones.

1227. *Casinos*. The record keeping requirements in relation to casinos are comprehensive. Casinos have to keep the following records: (1) large cash transaction records; (2) large cash disbursement records; (3) certain records about client accounts; (4) extension of credit records; and (5) foreign currency exchange transaction tickets. The record keeping requirements for the large cash transaction reports as well as the large cash disbursement records (Section 41 & 42 of the PCMLTF Regulations) are as follows:

	Large cash transaction reports	**Large cash disbursement records**
Type of transactions for which a record has to be kept	▪ The sale of chips, tokens or plaques. ▪ Front cash deposits. ▪ Safekeeping deposits. ▪ The repayment of any form of credit, including repayment by markers or counter cheques. ▪ Bets of currency. ▪ Sales of your casino's cheques.	▪ The redemption of chips, tokens or plaques. ▪ Front cash withdrawals. ▪ Safekeeping withdrawals. ▪ Advances on any form of credit, including advances by markers or counter cheques. ▪ Payments on bets, including slot jackpots. ▪ Payments to clients of funds received for credit to that client or any other client. ▪ Cashing of cheques or other negotiable instruments. ▪ Reimbursements to clients of travel and entertainment expenses.
Record keeping exemption	If the cash is received from a financial entity. (bank, credit union or caisse populaire; trust and loan company; or an agent of the Crown that accepts deposit liabilities)	-
Contents of the record[152]	▪ The amount and currency of the cash received. ▪ The name of the individual from whom you received the cash and that individual's address and principal business or occupation. ▪ The date of the transaction. ▪ The purpose, details and type of transaction (for example, the cash was used to buy chips, etc.), including whether any other individuals or entities were involved in the transaction. ▪ How the cash was received (for example, in person, by mail, by armoured car, or any other way). ▪ If an account was affected by the transaction, include the following: the number and type of any such account; the full name of the client that holds the account; and the currency in which the account's transactions are conducted.	▪ The name of the individual to whom the disbursement is made. ▪ That individual's address and principal business or occupation. ▪ The date and what kind of disbursement it is.
Extra record to keep for client identification	▪ The individual's date of birth. ▪ The type of document used to confirm the individual's identity, the document's reference number and its place of issue.	▪ The individual's date of birth. ▪ The type of document used to confirm the individual's identity, the document's reference number and its place of issue.

[152] Information on individual's date of birth will have to be kept from June 2008 (see the definition of "large cash transaction record" in 1(2) and paragraph 42(2)(d) of the amended PCMLTF Regulations. Please note that once the large disbursement reporting requirement comes into force (as introduced in the regulations that were published in October 2007), casinos will be required to keep a copy of the large disbursement report instead of a large cash disbursement record. However, the report also contains the date of birth of the person requesting the disbursement (see new Schedule 8, Part D, item 8 under PCMLTF Regulations).

1228. The record keeping requirements for client accounts are as follows (Section 43 of the PCMLT Regulations):

- *Account operating agreements*: an account operating agreement is any document that is received or created in the normal course of business and outlines the agreement between the casino and its client about the account's operation. If the casino has to identify the individual, the account operating agreement for that individual also has to contain the following information: (1) the individual's date of birth; and (2) the type of document used to identify the individual, its reference number and its place of issue. If the casino has identified the individual based on a cleared cheque, the account operating agreement has to contain the financial entity and account number of the account on which the cheque was drawn.
- *Deposit slips:* casinos have to keep a deposit slip for every deposit made to an account. A deposit slip means a record that sets out the date of a deposit, the amount of the deposit, and any part of it that was made in cash. A deposit slip also sets out the holder of the account in whose name the deposit is made and the number of the account.
- *Debit or credit memos*: casinos have to keep any debit or credit memo that they create or receive regarding an account in the normal course of business.
- *Accounts for corporations*: if the account is opened for a corporation, casinos have to keep a copy of the part of the official corporate records showing the provisions that relate to the power to bind the corporation regarding the account. This could be the articles of incorporation that set out those duly authorised to sign on behalf of the corporation, such as an officer, the comptroller, etc. If there were changes subsequent to the articles, then the board resolution stating the change would be included in this type of record.
- *Accounts for an individuals or entities other than corporations*: if the account is opened for an individual or any entity that is not a corporation, the casinos have to keep a record of the name, address and principal business or occupation of that individual or entity.
- *A signature card in respect of every account holder*: casinos have to keep a signature card in respect of any account they open, which must include the date of birth of the person, the type and number of the identification document used to identify the individual and its place of issue.

1229. Casinos have also to keep an extension of credit record for every extension of credit to a client of CAD 3 000 or more. This record has to indicate the following information: (1) the name of the client; (2) the client's address and principal business or occupation; (3) the terms and conditions of the extension of credit; and (4) the date and amount of the extension of credit (Section 43(d) of the PCMLTF Regulations).

1230. Third party record requirements in relation to third party determination are equivalent to these applicable to financial entities (see Section 3.5 of the report).

1231. Casinos are recommended to maintain an effective record keeping system to enable FINTRAC to have access to the records in a timely fashion. Such records have to be kept in such a way that they can be provided to FINTRAC within 30 days of a request to examine them (Section 69 of the PCMLTF Regulations and FINTRAC Guideline 6F).

1232. *Real estate agents and sales representatives and accountants*. Real estate agents and sales representatives and accountants have record keeping obligations when they engage in one of the activities described above (see this section of the report in relation to "Applying Recommendation 5") as well as for large cash transactions and third party determination (see Section 3.5 of the report that sets out the details of the record keeping requirements in the case of large cash transactions and third party determination). However, the circumstances in which real estate agents and sales representatives

and accountants have to keep record are not satisfactory since the list of activities covered is too restrictive (see this section of the report in relation to "*Applying Recommendation 5")*[153].

1233. Large cash transactions records must be kept for a period of at least five years following the date they were created. The records' retention rules are otherwise described in Section 69 of the PCMLTF Regulations and are equivalent to those applicable to financial entities (see Section 3.5 of the report). FINTRAC Guideline 6B recommend real estate agents and sales representatives and accountants to maintain an effective record keeping system to enable FINTRAC to have access to the records in a timely fashion. Such records have to be kept in such a way that they can be provided to FINTRAC within 30 days of a request to examine them. Records must be in a machine-readable or electronic form, as long as a paper copy can be readily produced. Also, for records that are kept electronically, an electronic signature of the individual who must sign the record has to be retained.

Applying Recommendation 11

1234. There is currently no explicit provision requiring that DNFBPs pay special attention to all complex, unusual large transactions that have no apparent or visible economic or lawful purpose. Similar to financial institutions, such a requirement may only be indirectly deduced from the requirement to report to FINTRAC suspicious transactions that may be related to money laundering or terrorist financing, as well as the obligation to report large international electronic funds transfer reports involving CAD 10 000 or more (EFTRs) and large cash transaction reports of CAD 10 000 or more (LCTRs).

4.1.2 Recommendations and Comments

1235. *Scope issues*. The assessors noted that Canada is working on addressing the outstanding scope issues and such an effort should continue in order to bring all DNFBPs in line with FATF Recommendations[154]. The participation of lawyers in the AML/CFT effort is essential since their current exemption leaves a very significant gap in coverage. The circumstances in which real estate agents and sales representatives and accountants have to carry out customer identification and keep records should be extended to be in line with the types of activities targeted under Recommendation 12[155].

1236. *Recommendation 5*. Canada should ensure that the entire set of requirements under Recommendation 5 apply to all non-financial professions.

1237. *Recommendations 6, 8, 9 and 11*. Canada should require the non-financial professions to implement requirements in relation to Recommendations 6, 8, 9 and 11.

1238. *Recommendation 10.* Canada should ensure that all types of transactions carried out by the non-financial professions are subject to proper record keeping requirement that permits their reconstruction so as to provide, if necessary, evidence for prosecution of criminal activity. Canada should ensure that all customer and transactions records and information collected by the non-financial professions are available on a timely basis to domestic competent authorities.

---

153 These circumstances are expanded in regulations enacted in June 2007 and coming into force in June 2008 (see Section 39 of the amended PCMLTF Regulations).

154 Canada enacted regulations on December 2007 to extend coverage of the PCMLTFA to the following sectors as of December 2008: legal counsel and legal firms, BC notaries public and notary corporations and dealers in precious metals and stones.

155 Canada indicates that the regulations coming into force in June 2008 will resolve this issue.

4.1.3 Compliance with Recommendation 12

Rec.	Rating	Summary of factors underlying ratings
R.12	NC	*Scope issue* • Lawyers, Quebec Notaries, BC Notaries, dealers in precious metals and stones, Internet casinos, ship based casinos and TCSPs are not captured by the PCMLTFA and therefore are not subject to the requirements under Recommendations 5, 6 and 8-11. *Application of Recommendation 5 to casinos* • The requirements applicable to casinos are insufficient in relation to: (1) when CDD is required; (2) required CDD measures; (3) identification of persons acting on behalf of the customer; (4) third party determination and identification of beneficial owners ; (5) purpose & intended nature of the business relationship ; (6) ongoing Due Diligence; (7) ML/FT risks and (8) failure to satisfactorily complete CDD. *Application of Recommendation 5 to real estate brokers and sales representatives and accountants* • The circumstances in which real estate agents and sales representatives and accountants have to carry out customer identification are too limitative. • The CDD requirements that real estate agents and sales representatives and accountants are subject to are substantially very basic and extremely limited. *Application of Recommendation 6 to casinos, real estate brokers and sales representatives and accountants* • Canada has not implemented any specific AML/CFT measures concerning PEPs that are applicable to DNFBPs. *Application of Recommendation 8 to casinos, real estate brokers and sales representatives, accountants* • There are no specific legislative or other enforceable obligations for DNFBPs to take measures to prevent the misuse of technological developments in ML/TF schemes. • The DNFBPs are not required to have policies and procedures in place to address any specific risk associated with non face-to-face business relationships or transactions. *Application of Recommendation 9 to casinos, real estate brokers and sales representatives and accountants* • There are currently no provisions for DNFBPs that address the issue of relying on intermediaries or third parties to perform elements of the CDD process outside the outsourcing type of scenario. *Application of Recommendation 10 to casinos, real estate brokers and sales representatives and accountants* • The circumstances in which real estate agents and sales representatives and accountants have to keep records are too limitative. • Real estate agents and sales representatives, casinos and accountants institutions must ensure that all records required to be kept under the PCMLTFA can be provided within 30 days which is not in line with the FATF requirement to make CDD records available on a timely basis to competent authorities. *Application of Recommendation 11 to casinos, real estate brokers and sales representatives and accountants* • There is currently no explicit provision requiring that DNFBPs pay special attention to all complex, unusual large transactions that have no apparent or visible economic or lawful purpose (the monitoring obligation is implied and indirect (it flows from reporting suspicious transactions, large international electronic funds transfer and large cash transactions) and it does not cover the full range of monitoring situations as stipulated in Recommendation 11). The other requirements under Recommendation 11 are not met either.

4.2 Monitoring transactions and other issues (R.16) (applying R.13-15, 17 & 21)

4.2.1 Description and Analysis

Applying Recommendation 13

1239. Every person or entity subject to Part I of the PCMLTFA is required to report to FINTRAC financial transactions for which there are reasonable grounds to suspect that the transaction is related to the commission of a money laundering or a terrorist financing offence (Section 7 of the PCMLTFA). Since 2002, reporting persons or entities have to send a terrorist property report to FINTRAC if they have property in their possession or control that they know is owned or controlled by or on behalf of a terrorist or a terrorist group. This includes information about any transaction or proposed transaction relating to that property. In addition to making a terrorist property report to FINTRAC about this type of property, there is also a requirement under the Criminal Code that applies to anyone in Canada and any Canadian outside Canada. Whether or not they are a reporting person or entity, they must disclose to the RCMP and CSIS, the existence of property in their possession or control that they know is owned or controlled by or on behalf of a terrorist or a terrorist group. Reporting entities are also required to report all cash transactions of CAD 10 000 or more.

1240. No suspicious transaction reporting requirement applies to Internet casinos, ship based casinos, lawyers and Quebec notaries, BC Notaries, trust and company service providers (except trust companies and accountants that may provide that type of services) and dealers in precious metals and stones.

1241. The PCMLTFA explicitly excludes, under Section 10.1, legal counsel and legal firms from STR and LCTR requirements "when they are providing legal services", which seems to be interpreted widely, as the profession considers that legal services cannot be in practice distinguished from financial services. It is worth mentioning that the Federation of Law societies is preparing a model rule on Client identification and verification requirements, which will be incorporated in the regulatory instruments of each law Society. It would apply when a lawyer acts as financial intermediary for a client and would include a provision stating that if a lawyer reasonably suspects that he might be assisting a client in dishonesty, fraud, crime or illegal conduct, he must withdraw from representation of the client and record the results of his reasonable suspicions.

1242. *Suspicious transactions reporting for casinos*. Under Article 5 of the PCMLTFA, casinos as defined in the regulations (see Section 4.1 of the report, "*definitions and scope*") are subject to the suspicious transactions reporting requirement. FINTRAC has elaborated indicators (Guideline 2 "*Suspicious Transactions*" of March 2003) for casinos to detect suspicious transactions.

1243. Under Section 40 of the PCMLTF Regulations, casinos are required to report to FINTRAC the receipt of an amount of cash of CAD 10 000 or more in the course of a single transaction unless the amount is received by a financial entity.

1244. *Suspicious transactions reporting for real estate agents and sales representatives*. Real estate agents and sales representatives have to submit STRs to FINTRAC according to Section 7 of the PCMLTF Suspicious Transaction Reporting Regulations when they engage in any of the following activities on behalf of any person or entity in the course of a real estate transaction: (1) receiving or paying funds; (2) depositing or withdrawing funds; or (3) transferring funds by any means. However, the circumstances in which they have to report suspicious transactions are not satisfactory since the list of activities covered is too restrictive (see comments in Section 4.1 of the report).[156]

[156] Canada indicated that the amendments to the PCMLTF Suspicious Transaction Reporting Regulations enacted in June 2007 and coming into force on 23 June 2008 extend these circumstances to any situation where real estate agents and sales representatives act as an agent in respect of the purchase or sale of real estate.

1245. *Suspicious transactions reporting for accountants and accountant firms*. Accountants and accountant firms are required to submit STRs to FINTRAC when they (Section 34 of the PCMLTF Regulations):

a) Engage in any of the following activities *on behalf of* a person or entity:
- Receiving or paying funds.
- Purchasing or selling securities, real property or business assets or entities. Or
- Transferring funds or securities by any means.

b) give instructions on behalf of any person or entity in respect of above activities
c) receive professional fees in respect of any activity referred to in a) or b).

1246. However, the circumstances in which accountants have to carry out customer identification are too restrictive (see comments in Section 4.1 "*definitions and scope*").

1247. The CICA has been active in developing comprehensive guidelines for compliance with the PCMLTFA (the guidelines were published in November 2004). These guidelines provide the CGAs with an overview of the obligations under the legislation and assist them developing a "knowledge base" from which the accountants can exercise their judgement in carrying out their obligation to report suspicious transactions. The assessors believe that such guidelines provide useful information to the profession.

1248. In practice, professionals face some difficulties to clearly determine which firms or individuals are subject to the requirement and what should be reported.

1249. With regard to accountants and real estate agents, it is worth noting that the effective implementation of the STR requirement is limited by the fact that these professions are only required to identify and ascertain identity of their clients in the case of large cash transactions.[157]

1250. *Provisions in relation to Recommendation 16 applicable to casinos, real estate agents and sales representatives and accountants/accountant firms*. The PCMLTFA requires the reporting of all completed transactions, where there are reasonable grounds to suspect that they relate to the commission of a money laundering or a terrorist financing offence, regardless of the involvement in tax matters. Attempted suspicious transactions are not yet covered by the Suspicious Transaction Reporting requirement[158].

1251. Casinos, real estate agents and sales representatives and accountants/accountant firms have to submit suspicious transaction reports to FINTRAC, containing specific information (see FINTRAC Guideline 3A). Once they have determined that there are reasonable grounds to suspect that the transaction is related to the commission of a money laundering or terrorist financing offence, their report, including all required and applicable information, must be sent within 30 calendar days. This 30-day reporting time limit begins when their employees first detect a fact about a transaction that constitutes reasonable grounds to suspect that it is related to the commission of a money laundering or terrorist financing offence. If such a fact is detected at the time of the transaction, the reporting timeline begins at the time of the transaction. However, if the fact is not detected at the time of the transaction, the 30-day time limit could begin at some time after.

---

157 Canada indicated that the amendments to the PCMLTF regulations enacted on 27 June 2007 and coming into force on 23 June 2008 require that all reporting entities identify their clients in respect of a suspicious transaction or a suspicious attempted transaction.

158 The PCMLTF Suspicious Transaction Reporting Regulations enacted on 27 June 2007 introduces an obligation to report attempted transactions as of 23 June 2008 (the requirement is in section 7 of the PCMLTFA. The PCMLTF Suspicious Transaction Reporting Regulations provide more details on the person or entities subject to the reporting requirement and on the information that must be reported).

1252. FINTRAC has elaborated indicators (Guideline 2 "*Suspicious Transactions*" of March 2003) for casinos to detect suspicious transactions including: (1) any casino transaction of CAD 3 000 or more when an individual receives payment in casino cheques made out to third parties or without a specified payee; (2) client requests a winnings cheque in a third party's name; (3) acquaintances bet against each other in even-money games and it appears that they are intentionally losing to one of the party; (4) client attempts to avoid the filing of a report for cash by breaking up the transaction; (5) client requests cheques that are not for gaming winnings; (6) client enquires about opening an account with the casino and the ability to transfer the funds to other locations when you do not know the client as a regular, frequent or large volume player; (7) client purchases large volume of chips with cash, participates in limited gambling activity with the intention of creating a perception of significant gambling, and then cashes the chips for a casino cheque; (8) client exchanges small denomination bank notes for large denomination bank notes, chip purchase vouchers or cheques; (9) client is known to use multiple names or (10) client requests the transfer of winnings to the bank account of a third party or a known drug source country or to a country where there is no effective anti-money-laundering system.

1253. Equivalent guidelines have been published by FINTRAC for the real estate agents and sales representatives as well as for accountants.

1254. *Statistics*. The following table indicates the number of STRs per fiscal year and by DNFBPs:

	2001/2002	2002/2003	2003/2004	2004/2005	2005/2006	2006/2007	**Total**
Accountants	7	20	20	40	20	12	**119**
Casinos	143	498	360	390	420	223	**2 034**
Legal counsel[159]	5	2	3	0	0	0	**10**
Real estate agents/sales representatives	2	8	6	6	12	1	**35**

1255. Some concern raised by the current STR requirement applicable to DNFBPs is the relatively low number of reports actually sent to FINTRAC by certain DNFBPs, in particular accountants and real estate brokers and sales representatives in spite of the outreach they have benefited from FINTRAC.

Applying Recommendation 14

1256. Section 10 of the PCMLTFA provides immunity provisions for reporting entities. No criminal or civil proceeding lie against a person or entity for making a suspicious transaction report, a terrorist property report, a large cash transaction report or an electronic funds transfer in good faith or for providing FINTRAC with information about suspicions of money laundering or the financing of terrorist activities.

1257. In addition to the immunity provision, Section 8 of the PCMLTFA specifies that no person or entity can disclose that they have made a suspicious transaction report, or disclose the contents of a report, with the intent to prejudice a criminal investigation, whether or not a criminal investigation has begun. Failure to comply with these requirements could lead to up to two years imprisonment.

Applying Recommendation 15

1258. Every person or entity subject to the Part I of the PCMLTFA, including DNFBPs, has to implement a compliance regime, *as far as practicable*, which means that, depending on the various size and activities of the reporting entities, a regime may be adapted. This includes the appointment of a person responsible for its implementation, the development and application of policies and procedures, a review of those procedures and policies to test their effectiveness by an internal or

[159] Legal counsel was removed from reporting obligations to FINTRAC in 2003.

external auditor or by the person or entity itself, *as often as necessary* and an ongoing compliance training program for the employees or agents (Section 71 of the PCMLTF Regulations, see Section 3.8 of the report)[160].

1259. Apart from the specific scope issues related to DNFBPs, the main deficiencies applicable to financial institutions apply also to DNFBPs, since the core obligations for both DNFBPs and financial institutions are based on the same general AML/CFT regime contained in the PCMLTF Regulations. The requirements to keep up to date internal procedures, that the policies include the detection of unusual and suspicious transactions and ensuring that the AML/CFT compliance officer has timely access to customer identification data and other CDD information, transactions records and other relevant information are only implicit. There is no mandatory requirement for an independent audit function to test AML/CFT regime compliance, even if certain provincial gambling Acts include such requirements. Measures exist in the casino industry to ensure the screening of key employees and employees with direct access to gaming facilities, so as to prevent criminals owning or controlling casinos. For some other categories of DNFBPs, there are entry requirements for the business or profession, but these do not amount to screening of employees as contemplated by R.15.

Applying Recommendation 21

1260. All reporting parties, including DNFBPs, received information from FINTRAC in relation to the NCCT process when that process was still under way (including the need to enhance the level of scrutiny in the case of counter-measures). However, there is no enforceable requirement to give special attention to transactions or business relationships connected with persons from or in countries which do not or insufficiently apply the FATF Recommendations, no effective measures in place whereby DNFBPs are advised of other countries that have specific weaknesses in their AML/CFT systems, and no requirement to examine the background and purpose of these transactions and to document the related findings.

4.2.2 Recommendations and Comments

1261. *Recommendation 13*. All DNFBPs as defined by the FATF should be subject in Canada to the suspicious transactions reporting requirement in all circumstances defined in Recommendation 16. The current incomplete coverage of certain DNFBPs has an impact on the effective implementation of the suspicious transactions report requirement. FINTRAC should address the issues raised by the low number of STRs provided by some non-financial professions (especially real estate agents and sales representatives and accountants).

1262. *Recommendation 15*. The current requirements should be expanded, specified and enforced, especially:

- The policies and procedures should be required to be written and their minimum mandatory content should include the detection of unusual and suspicious transactions for all DNFBPs.[161]
- There should be a requirement to ensure that the AML/CFT compliance officer has a timely access to customer identification data and other CDD information, transactions records and other relevant information.
- The requirement for an independent audit function (internal or external) to test on a regular basis the compliance of the AML regime should be strengthened.
- Canada should impose screening procedures when hiring employees to DNFBPs.

[160] The compliance regime requirements were expanded in regulations enacted in June 2007 which will come into force in June 23, 2008 (see Section 71 of the amended PCMLTF Regulations).

[161] Canada indicated thar the compliance regime requirements were expanded in regulations enacted in June 2007 which will come into force in June 23, 2008.

1263. *Recommendation 21*. The requirement to give special attention to business relationships or transactions with persons from or in countries which do not or insufficiently apply the FATF Recommendations should be included in an enforceable legal instrument applicable to DNFBPs. Effective measures should be put in place whereby DNFBPs are advised of other countries that have specific weaknesses in their AML/CFT systems. Finally a provision should be introduced requiring that the background and purpose of such transactions having no apparent economic or visible lawful purpose be examined and the findings documented.

4.2.3 Compliance with Recommendation 16

Rec.	Rating	Summary of factors underlying ratings
Rec.16	NC	*Scope issue* • Lawyers, Quebec Notaries, BC Notaries, dealers in precious metals and stones, Internet casinos, ship based casinos and TCSPs are not captured by the PCMLTFA and therefore are not subject to the suspicious transactions reporting requirements. *Application of Recommendation 13 to casinos, real estate brokers and sales representatives and accountants/accountant firms* • The circumstances in which real estate agents and sales representatives and accountants have to report suspicious transactions under the PCMLTFA are too limited. • Attempted transactions are not yet covered by the Suspicious Transaction Reporting requirement. • The relatively low numbers of STRs sent by real estate agents/sales representatives and accountants raise significant concerns in relation to the effectiveness of the reporting system in these sectors. *Application of Recommendation 15 to casinos, real estate brokers and sales representatives and accountants/accountant firms* • There is no explicit requirement to: (1) keep up to date internal procedures, (2) have policies to monitor for and detect unusual and suspicious transactions and (3) ensure that the AML/CFT compliance officer has timely access to customer identification data and other CDD information, transactions records and other relevant information. • There is no mandatory requirement for an independent audit function to test AML/CFT regime compliance. • Except for casinos, there are no requirements concerning screening procedures when hiring employees. *Application of Recommendation 21 to casinos, real estate brokers and sales representatives and accountants/accountant firms* • There is no general enforceable requirement for DNFBPs to give special attention to transactions or business relationships connected with persons from or in countries which do not or insufficiently apply the FATF Recommendations but only through general guidance or advisories sent on a case by case basis. • There are no effective measures in place whereby DNFBPs are advised of other countries that have specific weaknesses in their AML/CFT systems. • There is no requirement to examine the background and purpose of these transactions and to document the related findings.

4.3 Regulation, supervision and monitoring (R. 24-25)

4.3.1 Description and Analysis

Recommendation 24

1264. FINTRAC is responsible for ensuring that DNFBPs comply with their obligations under the PCMLTFA. In order to effectively use its powers to ensure compliance, FINTRAC has developed a comprehensive Compliance Program using a risk-based approach to ensuring compliance includes the development of comprehensive sector profiles and the active gathering of information on individual

reporting entities (see Section 3.10 of the report). However, given the very high number of persons or entities likely to be subject to the PCMLTFA as non-financial professions and the limited staff resources of FINTRAC dedicated to compliance, the assessment team is of view that FINTRAC is not in a position to ensure on its own an efficient monitoring of the effective application of AML/CFT legislation in these sectors. In these conditions, regulators and SROs have an important role to play to assist FINTRAC in ensuring compliance with the AML/CFT requirements.

1265. As already stated under Section 3.10 of the report, Subsections 65(2) and 65(3) of the PCMLTFA permit FINTRAC to exchange information with regulators for compliance purposes. As a result, FINTRAC works with regulators who, under their own powers, examine entities that are covered under the PCMLTFA. Information provided by these regulators to FINTRAC feeds into FINTRAC's risk assessment and assists FINTRAC to target the highest proportion of its compliance resources to the sectors and entities at highest risk for non-compliance. Where entities are covered by a regulator with a robust compliance program which includes examinations for issues related to compliance with the PCMLTFA (reporting, record-keeping, client identification, existence of a compliance regime), FINTRAC may decide to allocate fewer resources to examinations in that sector than in a sector that is not well regulated.

1266. Regarding DNFPBs, FINTRAC has currently entered only into 5 agreements with regulators of the gaming sector (see below). FINTRAC always reserves the right to examine the reporting entities covered by an MOU. For some regulators, if significant non-compliance is detected, they could issue sanctions under their respective legislation. In the case of other regulators, they will advise FINTRAC of the results and FINTRAC may complete an on-site examination of the reporting entity and take the appropriate action as necessary.

Casinos

General

1267. Under Section 207 of the Criminal Code, provinces have the responsibility to license, operate, and regulate legal forms of gaming, including the rules for gaming products and financial services available within the casinos. Gaming products include a wide variety of card games, roulette and slot machines. There are also a wide variety of financial services available at casinos, including some that resemble services provided by financial institutions. Depending on the province, casinos can open customer deposit or credit accounts, have facilities for transmitting and receiving funds transfers directly from other institutions, and offer cheque cashing and currency exchange services. These services are ancillary to their core activities, which is the sale and redemption of chips.

1268. Provinces permit the delivery of gaming services through one or a combination of the following operational models:

- *Commercial Casinos* – the province through a crown corporation or through service contracts with private corporations delivers gaming services at the casinos;
- *Charity casinos* – charities participate directly in the provision of the gaming activities at designated "charity" casinos or they are provided a direct grant from a fund generated from casino revenues;
- *First Nation Casinos* – based on either the charity or commercial casino models, First Nations operate casinos on First Nation land.

1269. The table below shows the distribution of casinos among categories and provinces.

Province	Commercial Casinos	Slots	Charity	First Nation	Seasonal	Total
Alberta	0	3	18	1	1	**23**
British Columbia	19	2	0	0	1	**22**
Manitoba	2	0	0	2	0	**4**
Nova Scotia	2	0	0	0	0	**2**
Ontario	4	17	5	1	2	**29**
Quebec	3	0	0	0	0	**3**
Saskatchewan	3	0	0	4	0	7
Yukon	1	0	0	0	0	1
TOTAL	**34**	**22**	**23**	**8**	**4**	**91**

1270. *Internet casinos*. Part VII of the *Criminal Code* makes it an offence to operate a commercial gaming enterprise. The two main exceptions to this prohibition are gambling activities conducted and managed by the province, or pursuant to a licence issued by the province. The *Criminal Code* does not contain any exceptions from the broad prohibition that would allow for the establishment of an Internet casino.

1271. Despite the legal prohibitions against online gaming, for a number of years the "Gaming Commission" of the Mohawk Territory of Kahnawake (Quebec) is hosting servers and has been issuing "licenses" for the operation of Internet gaming businesses. Licenses cost from CAD 5 000 to CAD 25 000 and it appears that there are now more than 400 "permit holders" operating Internet casino and gambling sites, with some reports suggesting that up to 60% of on-line casino gaming is passing through the Kahnawake based servers. In Canada, courts have explicitly rejected First Nations' claims to an inherent right to conduct gaming activities. The Quebec Minister of Public Security has spoken out against the operation of these online casinos, and in late 2007 one of the "licensees" that had offices in Montreal pled guilty to a charge of illegal gambling. However, no action has been taken against other "licensees". Despite this decision the Mohawks of Kahnawake continue to assert that they have jurisdiction to issue gaming licenses for gaming operations, and continue to host Internet casinos on their reserve.

1272. Having recognized the need to create a regulatory environment designed specifically for the interactive gaming industry, the Kahnawake community created the Kahnawake Gaming Commission which in turn enacted a "regulatory" framework for online gaming, under the "the Kahnawake Gaming Law" and the "Kahnawake Regulations Concerning Interactive Gaming". The measures were designed to ensure that all interactive gaming and gaming related activities conducted within, or from the Mohawk Territory of Kahnawake, satisfy three basic principles: (1) that only suitable persons and entities are permitted to operate within Kahnawake; (2) that the games offered are fair to the player; and (3) that winners are paid.

1273. However, these activities are not subject to AML/CFT regulations and Canada's federal and provincial governments are faced with substantial challenges in determining the appropriate course of action to be taken concerning Internet gambling. The industry has grown rapidly and huge revenues are generated. Canada must either enforce its prohibition effectively or introduce comprehensive AML/CFT regulation for the industry.

1274. *Cruise ships*. Cruise ships operate out of Canadian waters and do offer casino facilities (except within five nautical miles of a Canadian port). No AML/CFT measures apply to such casino gambling.

1275. Regarding the legal forms of casinos, the methods of licensing and registration depend on the operational model used. The measures in place to prevent criminals or their associates from holding or being the beneficial owner of a significant or controlling interest, holding a management function in, or being an operator of a casino are comprehensive (with the exception of Internet and ship based casinos).

Commercial Casinos

1276. Under section 207(1)(a) of the Criminal Code, provinces have the authority to operate gaming facilities or authorise a commission to operate gaming on their behalf. In practice, six provinces (British Columbia, Manitoba, Nova Scotia, Ontario, Québec, and Saskatchewan) have authorised casinos (including slot facilities) under section 207(1)(a) of the Criminal Code. Each has established a provincial gaming corporation to operate gaming within the province as described in the following table.

Province	Provincial Gaming Corporation
British Columbia	BC Lottery Corporation
Manitoba	Manitoba Lotteries Corporation
Nova Scotia	Nova Scotia Gaming Corporation
Ontario	Ontario Lottery and Gaming Corporation
Québec	Loto Québec
Saskatchewan	Saskatchewan Gaming Corporation

1277. In British Columbia, Nova Scotia and Ontario, the gaming corporations have contracted to private corporations to provide at least some of the day-to-day casino operations[162]. The contracts do not alleviate the crown corporations of their legal role of operator, as they are required to monitor the activities of the private corporations with whom they enter into contracts.

1278. To ensure the sound running of the casino industry, private gaming service providers must also disclose detailed corporate information to the provincial gaming regulator, including the structure, business relationships, and finances (including tax returns), as well as a documented history of criminal charges, civil proceedings, insolvency, gaming permits, and taxes.

1279. To ensure that criminals and their associates are unable to become involved in the casino industry, regulations under the provincial gaming legislation require that the following groups register with the regulator before becoming involved in gaming operations:

- The casino operator (private corporation).
- Executive members and key employees (*e.g.* the Chief Executive, Chief Financial, and Chief Operating Officers, floor managers, directors of security or any position that has direct gaming-related decision making responsibilities within the casino).
- And all other gaming employees (*e.g.* employees that have access to the casino floor or restricted areas of the casino as part of their regulator or continuing employment functions).

1280. An application for registration will be refused where there are reasonable grounds to believe that the applicant will not act as a supplier or gaming assistant in accordance with the law or with honesty and integrity. Suppliers are also required to meet high standards of financial responsibility.

1281. In assessing whether an applicant meets the requisite standards of honesty, integrity and financial responsibility, the applicant must disclose detailed information describing their past conduct, including work history, finances, criminal and civil proceedings, bankruptcies / insolvencies, as well as personal investments. In addition, information is required on interested persons of the applicant, including business partners, persons who have or may have a beneficial interest in the applicant's business, persons who exercise or may exercise direct or indirect control over the applicant's business, or persons who have or may have given direct or indirect financing to the applicant.

[162] The 17 slot facilities at racetracks (“racinos”) and 5 charity casinos in Ontario are operated by Ontario Lottery and Gaming Corporation while private corporations operate the four commercial casinos.

1282. On an ongoing basis, regulators must be notified if there is any change to the facility licensee's executive or key employees at the casino. Failure to disclose any changes to the regulator can result in sanctions, including the cancellation of registration and fine.

1283. The assessors were told that investigators from the provincial regulators undertake civil, criminal and credit history checks of individual registrants and conduct interviews with associates to ensure the information provided by a registrant is accurate. In cooperation with the RCMP, regulators query the Canadian Police Information Centre database for the disposition of charges for which a person had been fingerprinted (indicating they have a criminal record) and all outstanding charges currently before the courts. Local infraction checking is also conducted through any source that regulators deem appropriate.

1284. For corporations, investigators review the application information and evaluate the financial, business and criminal history of the corporation using information from international, national, provincial, state, county or municipal law enforcement or security agencies; police services and sheriff's offices; government ministries or regulatory agencies; banks, trust companies, brokerage houses, credit bureaus; professional or industry associations, licensing bodies or regulators; and former or current customers.

1285. The Provincial Gaming Corporations have developed corporate governance policies. For instance, the BC Lottery Corporation has corporate governance that refers to clearly defined processes with respect to the selection and composition of the board and senior management and the division of responsibilities, decision making and accountability among the Board, Senior Management and the Shareholder (Government of BC) to ensure the organization's short- and long-term success is consistent with its mandate and mission. The British Columbia Lottery Corporation practices and policies meet the Best Practice Guidelines on Governance and Disclosure for public sector organizations, which was issued by government in February 2005. The corporation has developed a Code of Conduct and Conflict of Interest Guidelines applicable to casinos' directors.

1286. In Manitoba, Québec and Saskatchewan, the crown corporations directly operate the commercial gaming facilities according to government and corporation standards, policies and procedures, including the establishment of new casino operations. Because they have been established to run the gaming in the provinces, they do not require gaming registrations or licenses. However, key gaming employees and gaming employees are required to register and must undergo a similar process as employees of private corporations. As well, Officers and Directors of the crown corporations are required to file a personal disclosure and are subject to a full background investigation prior to their involvement in gaming activities.

Charitable Casinos

1287. Under section 207(1)(b) of the Criminal Code, provinces have the authority to issue charitable gaming licenses to registered charities and religious organizations. Gaming takes place in established charity casinos operated by a private corporation in cooperation with the charity. Charity casinos are not allowed to operate without a participating charity.

1288. Of the 23 charity casinos operating in Canada, 17 are in Alberta. Religious and charity groups apply to the Alberta Gaming and Liquor Commission (AGLC) for 2-day[163] charitable gaming licences that allow the charity to assist in the operation of gaming at a casino. In return for their participation, charities receive a portion of the gaming proceeds to be used for an identified purpose.

1289. Private corporations own the charity casinos in Alberta. Each has a casino facility license with the AGLC that allows it to operate a gaming facility in conjunction with religious or charity group.

[163] Because licenses are only available for two-day events, compliance with the AML/CFT requirements under the PCMLTFA is the responsibility of the casino operator, not the charity.

The private corporation provides key operating personal including gaming employees, security and surveillance.

1290. Prior to obtaining a casino facility license, a corporation must undergo a multi-step screening process. The first step is providing the AGLC with an overview of the proposed casino. The AGLC then publicly advertises the proposal and solicits expressions of interest from other potential applicants to encourage the best possible proposal for a casino in a given market area. The ALGC evaluates the applications based on several factors, including financial footing of the applicant, proposed physical attributes and security features of the casino, and the applicant's understanding and compliance with relevant federal, provincial and municipal legislation and requirements.

1291. Once the market assessment is complete and the successful applicant is chosen, the AGLC will undertake a thorough due diligence investigation into the applicant and any other key persons associated with the applicant. According to the ALGC Casino Terms and Conditions and Operating Guidelines, the investigation is to ensure criminal interests, or those who otherwise would be a detriment to the integrity or lawful conduct of gaming in the province, are prevented from operating, having a financial interest in or having an association with a casino facility license. The ALGC can refuse to issue a casino facility license if they are not satisfied with the integrity of the applicants, individuals involved in the operation of the casino, or business associates, including the officers and directors of corporations controlled by the applicant, and their families. Part of the due diligence investigation on an applicant is a records check to determine whether anyone associated with the application has been charged or convicted with an offence under the Criminal Code, the Excise Act, the Food and Drugs Act or the Controlled Drugs and Substances Act.

1292. The Yukon uses a charity model similar to Alberta's and imposes the same stringent conditions. In Ontario's five "charity casinos", charities do not participate in the operation of casinos but are eligible to receive a percentage of the gaming proceeds from the designated casinos. The Ontario Lottery and Gaming Corporation, a crown corporation established by the province, owns and operates the charity casinos. Although considered charity casinos because of the fund raising component, Ontario's charity casinos are authorised under section 207(1)(a) of the Criminal Code.

First Nations Casinos

1293. First Nations casinos and slot facilities operate in Alberta, Manitoba, Ontario and Saskatchewan[164]. Subsection 35(1) of the Constitution Act, 1982, affirms and recognizes aboriginal rights in Canada. The Supreme Court of Canada in one ruling covering two cases R. v. Pamajewon and R. v. Gardiner Pitchenese and Gardiner (1996), 138 D.L.R. (4th) 204, ruled that gaming (or the regulation of gaming) was not integral to the cultures of the two First Nations claimants at the time of first European contact, which is the test for a claimed aboriginal right. As a result, the First Nations involved in the cases did not have the inherent right to regulate gambling on Indian reserves. Provincial legislation governs the operation of casinos on First Nation land. All First Nations casinos operate under either the charity model or the commercial model and are required to comply with the registration requirements of these models.

Compliance Risk Assessment and Examinations

1294. As of September 30, 2006, FINTRAC had conducted a total of 12 examinations in the commercial casino sector as follows:

[164] In Saskatchewan, First Nation gaming is conducted through an agreement between the provincial government and the Federation of Saskatchewan Indian Nations (FSIN). FSIN formed the Saskatchewan Indian Gaming Authority (SIGA) to operate the casino on its behalf.

FINTRAC Examinations Conducted in Casinos

	2004-05	2005-06	2006-07 (as of end Q2)	Total
Casinos	5	5	2	**12**

1295. As of the end of 2005-2006, the assessors were told that it had also sent 83 questionnaires regarding the implementation of an AML/CFT compliance regime (CQs) to reporting entities in the casino sector, all of which were returned, with globally high rates of positive responses to questions about key compliance elements.

1296. Moreover, to date, FINTRAC has signed five agreements with regulators having supervisory authority over casinos (see table below). Under these MOUs, the assessors were told that FINTRAC and these regulators regularly exchange statistics, risk assessment information, examination results, and examination plans.

Signed MOUs with Casino Regulators (to date)		
1	British Columbia Gaming Policy and Enforcement Branch (GPEB)	July 9, 2004
2	Saskatchewan Liquor and Gaming Authority (SLGA)	November 16, 2004
3	Alberta Gaming and Liquor Commission (AGLC)	December 20, 2004
4	Alcohol and Gaming Commission of Ontario (AGCO)	December 21, 2004
5	Nova Scotia Alcohol and Gaming Authority (NSAGA)	May 6, 2005

1297. These MOU partners had conducted additional 38 examinations in reporting entities for the fiscal years 2005-2006 and 2006-2007 (as of September 30, 2006). These examinations were not systematically dedicated to audit compliance with the PCMLTFA requirements.

Role of Provincial Regulators

1298. In addition to requirements under the PCMLTFA, casinos must comply with the provincial gaming legislation and regulations.

1299. Provincial gaming legislation imposes requirements on gaming service providers and gaming employees to ensure the integrity of the industry. These requirements include mandatory registration, internal control systems, and security and surveillance systems, gaming rules and permitted financial transaction. The legislation also identifies the regulator responsible for the administration of the legislation. The following table identifies the provincial regulator and the key gaming legislation within each province.

Province	Regulator	Primary Gaming Legislation
Alberta	Alberta Gaming and Liquor Commission	*Gaming and Liquor Act*
British Columbia	Gaming Policy and Enforcement Branch,	*Gaming Control Act*
Manitoba	Manitoba Gaming Control Commission	*Gaming Control Act*
Nova Scotia	Nova Scotia Alcohol and Gaming Authority	*Gaming Control Act*
Ontario	Alcohol and Gaming Commission of Ontario	*Gaming Control Act*
Québec	Loto Québec	*An Act Respecting Lotteries, Publicity Contests And Amusement Machines*
Saskatchewan	Saskatchewan Liquor and Gaming Authority	*The Alcohol and Gaming Regulation Act*

1300. Beyond the requirements in the PCMLTFA, most provinces have adopted AML/CFT measures into internal control procedures or provincial gaming legislation, which then become the responsibility of the provincial regulator to enforce, including:

Alberta

• Reporting large, suspicious, and large currency exchange transactions to FINTRAC; • Record-keeping of large cash and suspicious transactions; • Implementation of a compliance regime.	Section 5.9 of Alberta Casino Terms and Conditions and Operating Guidelines

British Columbia

• Reporting *Criminal Code* violations to the provincial regulator (which includes money laundering, possession of proceeds of crime and terrorist financing).	Section 86 of *BC Gaming Control Act*

Nova Scotia

• ID and record-keeping requirements for large cash transactions.	Section 248 of NS Casino Regulations

Ontario

• ID and record-keeping requirements for large cash transactions. • Record-keeping requirement for tracking multiple transactions of CAD 2 500 to an aggregate of CAD 10 000. • Compliance regime • Internal controls for AML/CFT requirements	Section 24, 27 and 28, Ontario Regulation 385/99 under the *Ontario Gaming Control Act*.

Saskatchewan

• Requirement for the Saskatchewan Gaming Corporation to maintain written procedures on recording large cash transactions.	Section 17 of the Saskatchewan Gaming Corporation Casino Regulations

1301. To ensure that casinos are complying with provincial gaming legislation, terms and conditions of registrations and internal control policies, regulators conduct regular and unscheduled audits, compliance reviews and investigate any alleged offences.

1302. The assessors were told that regulators perform audits at least annually to review the financial and reporting records, operating procedures and security systems in place. In addition, regulators conduct interviews with gaming employees to ensure they are familiar with all relevant legislation. Some provinces audit specifically for compliance with PCMLTFA. For example, British Columbia and Ontario have developed a module through which it determines compliance with all of the requirements for casinos under the PCMLTFA.

1303. When minor non-compliance issues are identified, the regulator will work with the casino to resolve the issue. However, when more significant non-compliance issues such as violations to a provincial gaming act are discovered, the regulator undertakes an investigation.

1304. Each province has established an investigative unit within its regulator. These units usually include former or active law enforcement officers with significant expertise in gaming and proceeds of crime investigations. Investigators work cooperatively with the gaming industry, other gaming agencies, law enforcement and other regulatory bodies to identify unlawful activity, and conduct timely and thorough investigations.

1305. Investigators are responsible for the investigation of gaming related complaints and allegations of illegal behaviour and will recommend charges relating to provincial gaming legislation. Law enforcement officials (either RCMP or municipal police forces), in cooperation and with the assistance of the investigative unit, will investigate and lay charges relating to offences found in the Criminal Code.

1306. In Ontario, for instance, the Casino Enforcement Unit provides 24-hour Ontario Provincial Police coverage in the casinos, and is responsible for conducting criminal investigations in relation to gaming inside the casino. The members of this unit liaise with casino security and surveillance staff and with the local police service according to formal protocol agreements. In addition, there are

Compliance Inspectors on-site at the casinos, who are responsible for monitoring the casino for compliance with the approved policies, procedures and internal controls.

1307. If an investigation concludes that there was a violation of the condition of licence or registration, regulators have the authority to impose administrative sanctions and prosecution.

1308. Administrative sanctions may include a warning; refusal to issue or renew a license; suspension or cancellation of a license; imposition of conditions on a license; the imposition of a fine; or other administrative settlements. Regulators can apply additional monetary or other penalties for offences that are contrary to provincial gaming legislation or the Criminal Code. Regulatory or criminal infractions may also result in administrative sanctions, including the cancellation of registration.

1309. In conclusion, casinos in Canada, except for Internet and ship based casinos, are globally subject to a reasonably comprehensive regulatory and supervisory regime. However, it is difficult to express a global opinion regarding the adequacy and effectiveness of the AML/CFT compliance supervision as it may vary a lot from one province to another. While FINTRAC is in principle the sole regulator of casinos for AML/CFT, based on a risk-based approach, the quality of supervision may nevertheless vary from one casino to another depending on whether its provincial supervisor has signed an MOU or not with FINTRAC and whether it performs or not controls in that area. As the provincial regulators are not directly responsible for ensuring compliance with PCMLTFA, their involvement in AML/CFT activities is unequal: some of them, like Alberta or Ontario have incorporated in their own regulatory framework detailed AML/CFT rules, covering most or all of the PCMLTFA requirements, while others, like Manitoba have not included such rules in their compliance program. The methodology and the frequency of examinations may also differ: Saskatchewan Liquor and Gaming Authority, for instance, has no AML/CFT compliance assessment methodology, while Alberta Gaming, Liquor Commission and Alcohol and Gaming Commission of Ontario perform regular and detailed audits. Moreover, the assessment team was not provided with any data or statistics regarding possible sanctions taken by these regulators on the ground of AML/CFT non-compliance issues.

Other DNFBPs covered by the PCMLTFA

1310. Due to the large number of potential entities within the accountants and real estate sectors (in total, about 146 000 accountants and accounting firms and 100,000 licensed real estate agents could be covered under the PCMLTFA if they perform certain activities), FINTRAC is not in a position to monitor closely their compliance with PCMLTFA requirements, even if a large majority of these persons or entities are not actually concerned (as they are not engaged in the specific activities covered by the requirements) and despite the risk-based approach for compliance adopted by FINTRAC.

1311. FINTRAC's compliance program makes use of risk management strategies to identify those reporting entities most in need of improving compliance (see comments below). In order to assist FINTRAC's Compliance team in assessing the risk of non-compliance within particular entities, almost 3 000 CQ had been sent, as of the end of 2005-06, to reporting entities in the accountants and real estate sectors. A further 1 500 have been forwarded to the accountants sector in early fiscal 2006/07, and an additional 1 500 are planned for the real estate sector later in the fiscal year.

1312. Due to the potentially large number of entities within the accountants and real estate sectors and high turnover, continued awareness raising campaigns/outreach are required to ensure obligations are understood. It should be noted that FINTRAC is committed to ongoing outreach with these sectors. As of the end of September 2006 FINTRAC had conducted 139 outreach meetings/presentations with the accounting sector with nearly 2200 participants and 272 meetings/presentations with the real estate sector, with more than 15 000 participants). However, the response rates to Compliance Questionnaires remains relatively low for accountants (75%) and real estate brokers (63%), compared to 89% for financial institutions and 100% for casinos.

1313. The results measured by the positive responses regarding compliance regime are somewhat lower than those for financial institutions or casinos: for instance, only 58% of responding accountants have declared having implemented a compliance regime and 34% an ongoing compliance training program in their entity. This can be partially explained by the fact that, for example, a number of accountants receiving a CQ are not engaged in any of the activities covered under the PCMLTFA (such as receiving or paying funds; purchasing or selling securities, real estate, business assets or entities; or, transferring funds or securities).

1314. As of September 30, 2006, FINTRAC had conducted a total of 26 examinations in the accounting sector, and a total of 95 examinations in the real estate sector. The assessment team was not given any detailed information about the results of these examinations.

	2004-05	2005-06	2006-07 (as of end Q2)	Total
Accountants	0	19	7	26
Real Estate	9	52	34	95

1315. Quite obviously, such a limited number of on-site examinations made by FINTRAC compared with the number of potential reporting entities cannot be considered as sufficient to ensure an effective monitoring of compliance even if FINTRAC targets its examinations based on a comprehensive risk assessment. It should be completed by interventions of provincial regulators or SROs. However, these institutions are not in charge of ensuring AML/CFT compliance and, as for the other sectors examined above, their level of involvement in that area, the regulatory basis on which they rely and the methodology adopted may strongly differ from one province or sector to another.

Provincial Regulation of DNFBPs

Accountants

1316. As mentioned earlier in the report, there are three designations of accountants, all of whom are represented by a national association: Canadian Institute of Chartered Accountants (CICA), Certified General Accountants Association of Canada (CGA) and the Society of Management Accountants of Canada (CMA). It is the role of the provincial institutes and associations to ensure that accountants are complying with the rules of professional conduct and corresponding by-laws to ensure that accountants are protecting the public interest.

1317. *Canadian Institute of Chartered Accountants*. For the purpose of outlining the monitoring and supervisory regime, focus will be placed on CICA, the group of accountants with the most likelihood of undertaking the types of financial transactions covered by the PCMLTFA.

1318. The CICA has developed a Guide (originally published in 2002 and updated in 2004) to assist CAs and CA firms in understanding the obligations imposed by the PCMLTFA. It indicates that CAs should be mindful of the possibility of money laundering and risks of becoming a party to the offence by failing to take the appropriate action. Early in 2006, the CICA established an Anti-money laundering advisory Committee whose objectives are to provide advice to Department of Finance on proposed changes to AML regime and to provide advice to CICA staff for updating the 2004 Guide. It is currently elaborating detailed guidance regarding the activities which should be considered as covered by the AML/CFT regime. Rules of professional conduct specifically address “unlawful activity” and establish the minimum level of ethical conduct for accountants.

1319. Provincial institutes of Chartered Accountants work in partnership to develop and enforce national standards, which are not relating specifically to money laundering but are designed to protect the public interest and maintain the good reputation and integrity of the CA profession. To help ensure that accountants are complying with the rules of professional conduct, provincial institutes undertake inspections of all members in public practice.

1320. Each year, approximately 25% of all firms in private practice are inspected. The selection of firms is made on an ongoing, cyclical, basis. New firms are selected within the first year of operation while other offices are normally selected every four years from the date of their last inspection. The inspection primarily focuses on the firm's quality control system and a review of current engagement files and related financial statements in order to assess adherence to professional standards. If inspection reveals significant shortcomings, the matter is referred to the professional conduct committee.

1321. After assessment, the committee may conclude that a breach of the rules of professional conduct has taken place and a charge or charges should be laid. In this event a formal hearing is held before the CICA discipline committee. The discipline committee has the authority to summon witnesses and require the production of evidence relevant to the case. The discipline committee has the power to impose administrative fines; suspend or expel a member; restrict a firm's practice; and publicize the decision of the committee. All cases that result in a finding of guilty of professional misconduct are made publicly available on provincial institutes' websites. Details of cases are made available to law enforcement authorities to assist in their investigation. No further information was provided to the assessment team on actions taken in relation to non-compliance with AML/CFT obligations.

1322. In addition to the role of the provincial accounting institutes and associations, the Canadian Public Accountability Board (CPAB) plays an oversight role of its member firms to ensure the integrity of financial reporting of publicly listed companies by promoting high quality, independent auditing. CPAB conducts inspections of public accounting firms that audit publicly listed companies to ensure compliance with professional standards and participation requirements. Firms with 50 or more clients that are publicly listed companies are inspected annually while those with less than 50 will be inspected on a three-year cycle. CPAB has entered into MOUs with the provincial accounting oversight bodies under which those institutes will inspect the smaller firms on behalf of CPAB. Where appropriate, CPAB imposes sanctions and restrictions on public accounting firms that publicly listed companies and, where necessary require remedial action, including referring matters to provincial accounting organizations for discipline purposes or to securities regulators.

1323. *General Accountants Association of Canada*. The Certified General Accountants Association of Canada has developed a Code of ethical principles and rules of conduct designed to protect the public and ensure that CGAs maintain the highest ethical standards. Specific provisions prohibit members from participating in or providing services to any activity that the member knows or which a reasonably prudent person would believe to be unlawful.

1324. Provincial associations have adopted the Canadian Association's standards of conduct contained in the Code of ethical principles and rules of conduct. In the case of breach of professional conduct as defined by the Code, members are subject to disciplinary action through the member's Provincial association or Ordre professionnel. Every registered public practitioner is required to have a peer review or audit at least every three years and to have a Policies and procedures Manual.

Real Estate Agents

1325. *General*. In addition to AML/CFT compliance supervision by FINTRAC, real estate agents are subject to monitoring by provincial regulators to ensure compliance with the provincial real estate legislation. In addition, real estate agents have industry associations that represent them at the local, provincial and federal levels. The associations also provide awareness and information on AML/CFT requirements for the real estate industry through training and workshops. The following section describes the compliance and oversight activities of the provincial regulators and the industry associations in the real estate industry.

1326. *Regulators*. Provinces are responsible for the regulation of real estate industry professionals. Provincial real estate legislation establishes the regulatory function within an agency or council in seven provinces (Alberta, British Columbia, Newfoundland and Labrador, Nova Scotia, Ontario,

Québec and Saskatchewan). In the other six provinces and territories (Manitoba, New Brunswick, Prince Edward Island, Northwest Territories, Yukon Territories and Nunavut), the government performs these activities directly.

1327. The responsibility of the regulator includes licensing of professionals (including admission exams and education requirements); setting and enforcing standards of conduct and business practices; and administering the provincial real estate acts and the bylaws and rules that have been established by the provincial regulating body.

1328. *Audit and investigation*. To ensure that real estate agents are complying with their requirements under provincial real estate legislation, regulators in Alberta, British Columbia, Nova Scotia, Ontario, Québec and Saskatchewan use a risk-based approach to determine which firms are selected for audit. In determining risk provinces include factors such as the size and location of the firm, deficiencies in accountant reports and previous audits and the amount of trust monies held. In addition, the regulator chooses some firms on a random basis for audit.

1329. Regulators provide courtesy audits to new brokers. A courtesy audit is an educational resource to ensure that new brokers are aware of the provisions of provincial real estate legislation as it applies to brokerage accounting. During the process, an auditor reviews the agent's books and records and provides assistance to make appropriate changes.

1330. During the audit, the auditor may review books and records, policies and procedures, trust and other account details and samples of open and closed files. Firms are required to keep records for a minimum of three years. Serious concerns discovered during an audit are forwarded to an investigation unit. Investigators determine whether there has been conduct that deserves sanction. Investigators have the power to collect all evidence relevant to the investigation, including interviews with the complainant and the industry member. The investigator has the authority to inspect or examine the books, documents and accounts (including the trust accounts) of any broker. In addition, industry members are required by the provincial real estate acts to cooperate with investigations, including responding to questions and providing requested documentation. If evidence of criminal activity is obtained during an investigation, it can be forwarded to law enforcement for a criminal investigation.

1331. Following an investigation, the regulator has the power to impose sanctions, including administrative penalties; suspension of the license to practice; and prosecution in the courts. It is worth noting that in provinces where the regulator does not conduct regular audits, each firm is required to submit reports from a public accountant verifying that transactions and accounts are being managed in accordance with provincial legislations.

1332. The assessment team did no get evidences that such audits and investigations are dedicated to check compliance with the AML/CFT requirements.

Dealers in Precious Metals and Stones

1333. Dealers in precious metals and stones do not have an established regulator. The Jewellers Vigilance Canada (JVC) has established a code of ethics and standards of practice to guide the professional behaviour of jewellers. Although it does not play an enforcement function, Jewellers Vigilance Canada provides members information and training on AML/CFT issues and has developed a crime prevention training package for members of the jewellery industry. In addition, Jewellers Vigilance Canada works closely with the RCMP to provide them educational support on the jewellery industry and information pertaining to specific crime. JVC also works closely with the Department of Finance on the new regulations covering the sector.

Lawyers and BC Notaries

Legal Counsel

1334. *General.* As described in Section 1.3, access to the profession and professional conduct for legal counsel is regulated and supervised at the provincial/territorial level of government through self-regulatory organizations (SRO). Each SRO is empowered through provincial/territorial legislation to regulate the profession to ensure a competent and ethical bar and authorises the SRO to educate, license and regulate the conduct, capacity and competence of legal counsel. Only members of an SRO can practice law in a given jurisdiction.

1335. There are nine provinces and three territories governed by the common law tradition and each jurisdiction has separately empowered SROs (law societies). The province of Québec follows the civil law tradition and has two separate SROs for the legal profession, the Barreau du Québec and the Chambres des notaires du Québec.

1336. Due to the differences between the civil and common law traditions, only notaries in Québec provide legal advice and are thus considered legal counsel. In the common law provinces, except British Columbia, licensed legal counsel only provide notary services. In British Columbia, a separate self-regulatory organization licenses 332 individuals to provide notary services and supervises the profession. These notaries are not considered legal counsel and the protections afforded under solicitor-client privilege do not apply.

1337. Legal counsel in Canada can be a member of multiple jurisdictions. In doing so, they must abide by the rules and conditions placed on them by the law society of that province/territory. In addition, each law society is a member of the Federation of Law Societies of Canada, the national coordinating body. In total the 14 SROs regulate Canada's lawyers and notaries.

1338. SRO by-laws and Rules of Professional Conduct set out the professional and ethical obligations for their members, including conduct and procedures relating to trust accounts and cash prohibition. Members failing to meet these obligations are subject to the SRO's disciplinary process. Each SRO has procedures and resources for dealing with professional misconduct and for taking action when appropriate. The SROs have the authority to impose fines, suspend the member from practicing, impose conditions on the member's practice and in serious cases, disbar the member.

1339. Each provincial and territorial law society, including both SROs in Québec, have implemented rules of professional conduct that prohibit legal counsel from accepting CAD 7 500 or more in cash in connection with a single client file or matter. This in essence limits the ability of criminals to place cash into the financial system through legal counsel. These rules are binding on the profession and enforceable by each provincial/territorial SRO. The SROs have incorporated the compliance examination of the cash prohibition rule into their standard compliance procedures pertaining to trust accounts. The standard compliance procedures include the use of an annual attestation by members indicating that they have not accepted cash of CAD 7 500 or more as well as spot and random audits of members' files and trust account statements. While the frequency of full audit varies amongst SROs, generally, each legal counsel undergoes an audit of their practice every three years, with every legal counsel being required to file annual reports to the appropriate law society. The cash prohibition rule has only been fully implemented in all jurisdictions since March 20006 and thus at the time of publication of the MEQ has not yet been subject to an annual report in all jurisdictions.

1340. There is no AML/CFT supervision *per se* as far as legal counsel is concerned.

British Columbia Notaries

1341. As indicated above, notaries in the province of British Columbia are supervised and regulated by a separate SRO. They are not considered legal counsel. The profession is governed by the British

Columbia Notaries Act, however, for the purposes of AML/CFT requirements, there is no authority for monitoring and ensuring compliance of BC notaries[165].

Recommendation 25 (Guidance for DNFBPs other than guidance on STRs)

1342. Guidance available to casinos, real estate agents/sale representatives and accountants is generally comprehensive and rather detailed.

1343. *Guidance for casinos, real estate agents/sale representatives and accountants*. FINTRAC provides casinos, real estate brokers and sales representatives, and accountants with specific guidance concerning the implementation of a compliance regime (Guideline 4), and record keeping and client identification (Guideline 6).

1344. FINTRAC has also developed a number of other resources to assist reporting entities in understanding their obligations under the PCMLTFA. These include Sector Specific Information Sheets and various pamphlets, which can be found on FINTRAC's website. Furthermore, a nine-minute video was produced to inform reporting entities of their legal obligations and helps explain FINTRAC's role. The video is accessible on FINTRAC's website and has also been distributed to reporting entities on DVD.

1345. Finally, FINTRAC also directs the operations of a call centre and a toll-free telephone line to serve the public and reporting entities. The service is available for 12 hours each day, from Monday to Friday.

1346. In addition to the guidance provided by FINTRAC, the industry associations and regulators in some provinces also provide AML/CFT guidance to their members.

1347. *Guidance for accountants*. As described above, CICA has developed a guidance document to assist CAs in their understanding of the requirements under the PCMLTFA and to outline the responsibilities of CAs flowing from those requirements. Ongoing money laundering information is provided through the CICA monthly magazine sent to all members called the CA Magazine. Articles inform members of ongoing changes to legislation, report on recent money laundering conferences and training, and inform on trends and cases.

1348. *Guidance for real estate agents*. Real estate industry associations at the local, provincial and federal levels provide members with significant guidance on their AML/CFT requirements under the PCMLTFA. The Canadian Real Estate Association (CREA) is comprised of provincial real estate associations and local boards throughout the country and is concerned with improving real estate practices across Canada. A key focus of CREA's activities is to educate members on federal issues, including providing awareness and requirements of real estate professionals on AML/CFT issues.

1349. In addressing this, CREA has developed an AML/CFT Internet site for members of the real estate industry called "*the Canadian Real Estate Money Laundering Compliance Centre*". Through this site, real estate agents (brokers and sales representatives) have access to online training, the procedures that real estate agents must have in place to be compliant with the PCMLTFA, as well as direct access to FINTRAC large cash, suspicious and terrorist property reporting forms.

1350. Continuous learning is a requirement of maintaining a real estate license in most provinces. To meet this requirement, provincial real estate associations have made available courses on money laundering that give real estate agents an awareness of the susceptibilities of the industry and their requirements under the PCMLTFA. In addition, a component of the required course to obtain a real estate license focuses on money laundering. Local boards work closely with local agents and promote the training available from the federal and provincial associations. In addition, local boards organize

[165] Canada indicated that BC Notaries are covered by regulations enacted in December 2007 and coming into force in December 2008.

discussions and presentations on topics of interest to their members. For example, the Ottawa Real Estate Board arranged for the RCMP and FINTRAC to give presentations to better inform members of their requirements under the PCMLTFA.

1351. *Other initiatives*. In order to provide advice and assistance to, as well as maintain relationships with the 91 casinos, FINTRAC has had 73 meetings with the majority of the reporting entities from that sector since 2004/2005. These meetings, in a number of cases, would have involved more than one reporting entity. These meetings and presentations are with, or are attended by, all levels of the organization in question. A total of 542 casinos' employees attended these meetings.

1352. In order to provide advice and assistance and maintain relationships with accountants and real estate brokers, FINTRAC had 411 meetings with these sectors since 2004/2005. 2 186 accountants and 15 316 real estate agents attended these meetings.

4.3.2 Recommendations and Comments

1353. *Recommendation 24*. Canada should ensure that supervisory action (especially on-site examinations) vis-à-vis casinos, but more importantly with respect to all other DNFBPs is strongly reinforced. The role, functions and monitoring powers of other regulators and SROs in ensuring compliance of DNFBPs with the AML/CFT requirements should be clarified. Canada should consider revisiting the supervision issue as a whole and give further consideration on whether FINTRAC should be the only authority in charge of ensuring compliance with the AML/CFT requirements (see conclusions in Section 3.10 of the report). The Department of Finance or FINTRAC should collect detailed information about the AML/CFT regulation and supervision role and action of all the provincial regulators/SROs in order to get a complete overview of the current situation.

1354. The sanction regimes applicable to DNFBPs, including casinos, should be reinforced and Canada should ensure that the sanctions available for failures to apply AML/CFT requirements are effective, proportionate and dissuasive.

4.3.3 Compliance with Recommendations 24 & 25

Rec.	Rating	Summary of factors underlying ratings
Rec.24	NC	*Scope issue* • Lawyers, Quebec Notaries, BC Notaries, dealers in precious metals and stones, Internet casinos, ship based casinos and TCSPs are not captured by the PCMLTFA and not subject to FINTRAC supervision. *Supervision of casinos* • The sanction regime available to FINTRAC is currently inadequate (see conclusions in relation to Rec. 17). Provincial regulators may have administrative sanctions at their disposal but there is no evidence that these are dissuasive, effective and proportionate, since no data or statistics regarding sanctions taken by these regulators on the grounds of AML/CFT non-compliance issues have been made available to the assessment team. *Supervision of other DNFBPs* • Limited staff resources deprives FINTRAC from closely and efficiently monitoring DNFBPs' compliance with the PCMLTFA requirements especially in sectors/provinces where the primary regulators or SROs are not or insufficiently involved in AML/CFT compliance supervision. • The sanction regime available to FINTRAC is currently inadequate (see conclusions in relation to Rec. 17). Provincial regulators may have administrative sanctions at their disposal but there is no evidence that these are dissuasive, effective and proportionate, since no data or statistics regarding sanctions taken by these regulators on the ground of AML/CFT non-compliance issues have been made available to the assessment team.
Rec.25	LC	• Lack of sufficiently sector-tailored guidance - see factors in Sections 3.7 & 3.10 of the report.

4.4 Other non-financial businesses and professions – Modern secure transaction techniques (R.20)

4.4.1 Description and Analysis

Considering applying AML regime to other non-financial businesses and professions at risk of being misused for ML

1355. As part of the development of the amendments to the PCMLTFA and in preparation of the Government of Canada June 2005 Consultation Paper, research and analysis was conducted on the domestic money laundering and terrorist financing risks and the operational feasibility of expanding the coverage of the Act to other non-financial businesses and professionals that are not explicitly subject to the FATF Recommendations.

1356. A number of new sectors were discussed, including auto dealers and auction houses. They have been targeted for further examination and ongoing monitoring. A lack of perceived risk led the Government to conclude that the application of PCMLTFA measures to these sectors was not warranted at this time.

"White label" automated banking machines

1357. White label ATMs in Canada provide alternative source of cash dispensing vis-à-vis traditional ATMs owned and operated by banks, other financial institutions and cash back debit services offered by retailers at the point of sale. In Canada, most deposit taking financial institutions have their own branded ATMs located throughout the country. These ATMs prominently display the logo of the financial institutions. A "white label" or no name ATM, which are usually located in non-traditional places (bars, shops, etc.), while branded, display no major financial institution labels on the actual ATM. After 1997, independent operators were allowed to operate ATMs, not owned by major financial institutions. In 2006, a little more than half of the 51 000 ATMs in operation in Canada were "white label".

1358. White-label ATMs are owned and operated by non-financial institutions. They are not under federal jurisdiction because they are not considered as financial institutions. However, concerns have been raised due to the unregulated nature of the business and the fact that the white label owner or operator can load these machines himself, thus creating an opportunity to "place" illicit cash into the financial system.

1359. Interac is the organization responsible for the development and operation of a national network of two shared electronic financial services: Shared Cash Dispensing at automated banking machines and Interac Direct Payment ("IDP"), Canada's national debit service. In June 1996, the Competition Tribunal ordered that Interac must broaden its membership to non-financial institutions and allow these non-financial corporations to deploy automated teller machines (ATMs).

1360. The Government's approach to date has been to rely on safeguards put in place by the Interac Association and on financial institutions holding the settlement account of the owner of the ATMs. When a small or unknown corporation applies for membership, Interac carries out corporate and other searches (*e.g.* background and bankruptcy checks). In 2003, Interac amended its regulations in order to enhance the safety and soundness of the network and assure the integrity of its system. The regulations increased due diligence requirements for all financial and non-financial organisations involved in the delivery of Interac services and strengthened inventory control procedures for ATMs and point-of-sale terminals. The regulations emphasized Interac members' accountability and responsibility for all their downstream business partners in order to address fraudulent attacks against their systems. Interac has developed new measures in the following areas:

- *New member process*: changes to the new member process to include an enhanced review of the business plans and enhanced background searches.
- *Regulations governing acquirers*: acquirers provide access to the Interac network and process ATM transactions for White Labels. Acquirers are required to conduct due diligence tests on business partners with whom they have a direct business relationship, such as independent sales organizations. Acquirers will have to actively monitor ATMs for fraudulent activity.

1361. However, there is currently no supervision of the acquirers themselves: the Shared Cash Dispensing service is built on a decentralized model with the individual members wholly responsible for their own business and their performance. Regulation and requirements regarding the monitoring of transactions by a third party (in order, for instance, to detect atypical profiles of transactions on certain ATMs such as withdrawals significantly above the norm in volume or value , or at atypical times, cash replenishments by the owner non consistent with his activity etc.) should be implemented.

1362. The assessors were told that the Department of Finance, the RCMP, FINTRAC and Interac continue to examine the AML/CFT risks created by white label machines and measures to address these risks. Measures could include a prohibition on self-loading and self-servicing of the ATM, and/or requiring a source of funds declaration from machine owners. The industry is committed to addressing any ML related risks and recognises that any gap poses a reputation risk. In addition, there is a clear recognition from the industry that these risks need to be addressed whether by industry or regulatory solutions. Possible measures contemplated include enhanced due diligence requirements on acquirers, including the requirement to obtain more information from the machine owner or operator, such as the source of funds, enhanced record-keeping (bearing in mind that every transaction from every machine is recorded and kept by the acquirer for a minimum of 7 years in order to comply with tax laws) and compliance enforcement.

1363. The legislative framework currently in place provides certain safeguards. For instance, the Minister of Finance has the authority under the Canadian Payments Act to designate and oversee a payment system, if it is in the public interest to do so. When a system is designated, the Canadian Payments Act requires that a copy of every rule be sent to the Minister of Finance and gives the Minister of Finance the power to disallow the whole or a part of a rule, as well as the power to issue guidelines and directives. In determining whether a system should be designated, a number of factors are considered, including the safety, efficiency, competitiveness and the best interests of the financial system. Further work needs to be done to address the risks of ML and TF with the industry. The risk issues are being addressed through further discussions with the industry.

1364. The assessment team believes that the current measures do not adequately address the risks and that it is important that the authorities undertake further action, possibly with the objective of introducing a registration and monitoring system for the owners of the ATMs.

Stored Value Cards

1365. Another new trend that is currently monitored is the use of stored value cards. An increasing number of these cards are put in circulation by certain financial institutions and a growing number of retailers. The assessment team was told that there is anecdotal evidence that stored value cards have been used to carry funds into and out of Canada.

1366. *Requirements of financial services provided via the Internet*

1367. Internet payments are an emerging area in Canada, with the largest industry player being PayPal. Finance is currently involved in discussions with PayPal and other Internet Payment Processors (IPPs) in an effort to better understand their business models and determine where the transactions are domiciled, who their client base are and whether the services offered by IPPs to Canadians carry money laundering and terrorist financing risks. In addition, Finance commissioned a research study by an outside consultant on this issue and is reviewing the findings of that study.

Real estate developers

1368. The sales of new homes or buildings are covered by the PCMLTFA and its regulations to the extent that home builders rely on a real estate broker or sales representative to sell the property. However, many real estate developers use an in-house employee to conduct the same work. The purchase of a new property often involves progress payments over the construction of the house or building, which offers criminals opportunities to place illicit funds in the system[166].

Reducing reliance on cash and secure automated transfer systems

1369. Canada's clearing and settlement system is secure and efficient, enabling consumers and businesses to make and receive payments and transfer funds throughout the country quickly and reliably. This has fostered a greater reliance and early adoption of non-cash payment mechanisms.

1370. The Canadian Payments Association operates national clearing and settlement systems that facilitate this flow of funds and mitigate risk to payment system participants. Its membership consists of financial institutions, which are reporting entities under the PCMLTFA.

1371. The Canadian Payments Act sets out the legal framework for the Canadian Payments Association, including its mandate, the types of organizations that are eligible for membership, the role of the Board of Directors and oversight responsibilities for the Minister of Finance. A key element of the Canadian Payments Association's mandate is facilitating the development of new payment methods and technologies.

1372. On average, some 20.6 million non-cash payment items, representing CAD 164 billion in transactions, were cleared and settled through the Canadian Payments Association's Automated Clearing Settlement System and Large Value Transfer System each business day during 2005. These include cheques, wire transfers, direct deposits, pre-authorised debits, bill payments and point-of-sale debits.

1373. Canadians have been early adopters of new banking technologies. Since the launch in 1986 of the Interac Association, the operator of the national debit card network, Canadians have been one of the highest per capita users worldwide of debit cards. According to the Bank for International Settlements, Canadians made 3.1 billion debit card transactions in 2005, or 95 transactions per person, worth over CAD 137.5 billion.

1374. MasterCard and Visa operate the principal credit card networks in Canada. In 2005, Canadians made 1.9 billion credit card transactions, or 60 transactions per person, worth CAD 209.5 billion according to the Bank for International Settlements. Other credit card networks operating in Canada include American Express, Discovery Card and Dinner's Club.

Discontinuation of the CAD 1 000 note

1375. On May 12, 2000 the Bank of Canada stopped issuing CAD 1 000 bank notes and began to withdraw them from circulation. The announcement followed the federal government's approval of an amendment to the Bank of Canada Notes Regulations to eliminate the CAD 1 000 note as part of the fight against money laundering and organized crime. This decision was recommended by the Department of Finance in consultation with the Bank of Canada, the federal Solicitor General, the Royal Canadian Mounted Police, and other Canadian law enforcement agencies.

1376. At that time, the Bank of Canada indicated that after it stopped issuing CAD 1 000 notes, the notes already in circulation would remain legal tender and would retain their full face value.

[166] The Department of Finance views this situation as a gap and, Canada indicated that, for this reason, Finance pre-published new regulations in October 2007 to subject the sector to the same requirements as real estate brokers and sales representatives.

Individuals are free to hold and use the notes for as long as they want. This is true for all Bank of Canada notes that are no longer issued, such as one- and two-dollar notes.

1377. The CAD 1 000 notes were withdrawn from circulation over time with the help of financial institutions, which return the notes to the Bank of Canada as they are deposited or exchanged by the public. All CAD 1 000 notes returned to the Bank of Canada are destroyed.

1378. The withdrawal of the CAD 1 000 note had little impact on Canada's currency system and its ability to meet the needs of businesses and individuals. The note was rarely used for cash transactions. In 1999, for example, there were about 3.8 million CAD 1 000 notes in circulation, representing less than 0.3% of all notes in circulation. As of October 31, 2006, 1.4 million CAD 1 000 notes were in circulation. The largest note in active circulation is the CAD 100 note.

4.4.2 Recommendations and Comments

1379. The authorities are engaged in considering the need to extend the AML/CFT requirements to a number of key areas, and this work should clearly proceed as quickly as possible. On the basis of comments by law enforcement, the money laundering risk appears to have been appropriately identified; however, insufficient AML/CFT measures have been implemented to address the risk for these businesses and products (especially "White Label" ATMs). Canada should take additional action to address this issue as soon as possible.

4.4.3 Compliance with Recommendation 20

Rec.	Rating	Summary of factors underlying ratings
Rec.20	C	• The Recommendation is fully met.

5. LEGAL PERSONS AND ARRANGEMENTS & NON-PROFIT ORGANISATIONS

5.1 Legal Persons – Access to beneficial ownership and control information (R.33)

5.1.1 Description and Analysis

Transparency concerning the beneficial ownership and control of legal persons

1380. The principal form of legal person in Canada is a company/corporation. Canadian corporate law (both federal and provincial) permits private, public and unlimited liability companies. The principle federal law is the Canada Business Corporations Act (CBCA); however, the laws of Alberta, Saskatchewan, Manitoba, Ontario and New Brunswick reflect most provisions of CBCA. The majority of corporations operating in Canada are incorporated under Ontario business corporation law but a substantial number of companies are incorporated under the laws of Alberta, Quebec and British Columbia and the federal jurisdiction. Given the similarity in systems, the assessment team focused primarily on the federal CBCA.

1381. The CBCA requires the following information on incorporation:

- Name of the corporation and descriptions of the business activities and intended clients.
- Provincial or territorial location and civic address of the registration office.
- Descriptions of the shares, classes of shares and the maximum share capital that the corporation may issue.
- Description of any limits on share transfer (companies will provide this information if they are registering as a private corporation and so will not have to comply with the registration and

prospectus filings requirements and other related procedures set out in the CBCA and provincial/territorial securities law[167]).

- Number of directors of the corporation and the name and residential addresses of the directors of the company.
- Names and addresses of the incorporators, who must be least 18 years of age and not in a state of bankruptcy.
- Additional rules and regulations that will govern the conduct of the company members and directors.

1382. CBCA also requires corporations to file an annual return with details such as the name of the corporation, the date of incorporation and any changes in corporate information, and to file notice of any changes to directors or the address of the registered office within 15 days. Broadly similar requirements exist in Ontario and Quebec.

1383. There is no requirement to list identifying information relating to shareholders when filing incorporation documentation. No information on the beneficial owners (as defined by the FATF) of the company being established is collected. The information provided in the incorporation process is reviewed by staff at the applicable corporate registries to ensure that the entity meets the legal requirements for incorporation, but there is no requirement in legislation for those registries to verify the accuracy of the information provided.

1384. Corporations are also required by the CBCA to prepare and maintain records at their registered office or at any other place in Canada designated by the directors and be available for inspection by directors, shareholders, creditors and incorporation authorities. These records must include a register of directors, officers and shareholders (including a list of the names and addresses of all shareholders by class of shares) and be available to directors, shareholders and creditors. Inspection of these records under the CBCA has to be supported by an affidavit that the information used shall be only in respect of the company's affairs. Also the CBCA requires that in the annual information circular companies should identify the shareholders who hold the largest number of shares. However, it is important to note that there is no requirement that the ultimate beneficial owners of shares be identified in the corporate records of private companies and, moreover, there is no legal requirement to indicate in these records if, or when, a transfer of shareholding has occurred. Public companies are, on the other hand, required to disclose on the company's information circular any shareholder who beneficially owns, directly or indirectly, or controls or directs, voting securities carrying 10% or more of the voting rights attached to any class of shares. This requirement is, however, limited to the persons who are the immediate holders of the beneficial interest and not the ultimate beneficial owners as required by Recommendation 33.

Access by competent authorities to information on the beneficial ownership and control of legal persons

1385. Regulatory, taxation, intelligence agencies, supervisory and law enforcement authorities (including Police, CRA, FINTRAC and securities regulatory authorities) have a variety of powers that enable them to secure information about the control and ownership of legal persons in Canada both from publicly available sources and through a variety of coercive measures. Regulatory and supervisory authorities also maintain records on persons who are the beneficial owners of their regulated/supervised institutions. For example, information is obtained by OSFI on persons that hold 10% of more of the shares in federally regulated banks & insurance companies, and the Director of Corporations Canada and securities regulators obtain information on persons that hold 10% or more of the shares in listed companies.

[167] To qualify as a private company, there must be fewer than 50 shareholders and shares must not be offered to the public.

1386. Coercive measures include production orders, search warrants in justifiable circumstances and court ordered inspections in others. Law enforcement authorities may also take statements from witnesses. Securities regulatory authorities have a wide range of powers to secure information including the authority to compel production of information, compel testimony and evidence, as well as other powers. For publicly available information those authorities may search the appropriate corporate registries in addition to other publicly available data bases relating to corporations for any relevant information.

1387. Through its regulatory reviews, civil audits and investigative actions, and information filed in tax returns, the CRA has access to a large amount of information. However, this does not extend to beneficial shareholder information. In addition, throughout the conduct of its administration, the CRA is bound by its own legislation and policies regarding the disclosure of information. The provision of information is permissible if the sharing of such information can reasonably be regarded as necessary for the administration or enforcement of the applicable Act, specifically the Income Tax Act or Excise Tax Act. This agency is constrained with regards to the information (and the circumstances) in which it can share information uncovered in the course of its administration of the tax statutes. For example, it can only share information with the RCMP when an information/indictment has already been laid. To obtain information via court order, the RCMP must prove that the information will be of substantial value to the case.

1388. As mentioned earlier in this report (see Section 2.5), FINTRAC is limited in the nature of information it is able to provide to law enforcement authorities[168]. In addition, the financial institutions that report to FINTRAC are not required by law to obtain information relating to the beneficial owner of legal arrangements. Under the PCMLTFA, the requirement is to establish the existence of the legal person, but not the ultimate beneficial owner (see Section 3.2 of the report).

1389. Law enforcement has a number of powers to gather information on control and beneficial ownership of legal persons from a variety of sources as outlined in this section, and also may use powers to access further information from non-public sources in the course of investigations. However, these powers are constrained insofar as several entities and persons that ought to be repositories of this type of beneficial owner information (*i.e.* company services providers, financial institutions and registries) do not currently maintain this sort of information. This is likely to affect the ability of the authorities to access accurate and current information on the ultimate beneficial owners and controllers of legal persons on a timely basis.

Bearer shares

1390. While s 24(1) of the CBCA provides that shares of a Canadian corporation must be in registered form and without nominal or par value, ss 48(1) and 187(9) of the CBCA appear to permit bearer shares to be issued by corporations. Similar provisions recognising the use of bearer shares also exist in the Manitoba Corporations Act (though not in Ontario). The CBCA provisions appear to establish that bearer shares remain a legal means of taking an ownership interest in a Canadian company. CBCA section 54 in particular indicates that securities (including shares) are fungible and that delivery may be effected either in bearer form or in registrable form. But there is no legal mechanism to require disclosure of the person or entity which holds, or is the beneficial owner of, bearer shares of any particular corporation incorporated under the CBCA.

1391. The assessment team were advised by Canadian officials, who had in turn been advised by various corporate share registrars, custodians/trustees, and securities participants in general, that they had not seen bearer shares in practice. However, it should be noted that it is most unlikely that bearer shares issued in private corporations would pass through registrars or custodians anyway, and the assessment team is not aware as to how broad a sample of private sector representatives provided

[168] Fintrac can disclose a broader set of information to law enforcement since 30 June 2007.

information. In practice it is likely that the number of bearer shares may be quite limited, but it is important that the right to issue such shares exists, and there are no mitigating measures.

Additional elements

1392. Outside the information contained in the corporate registry documents of corporations, which contains limited information on shareholders as indicated above, there are limited mechanisms to ascertain beneficial ownership information for corporations in the Canada.

5.1.2 Recommendations and Comments

1393. Although the authorities may be able to get some information on legal or beneficial ownership of a limited class of companies, such as public companies or certain classes of financial institution, these only constitute a small percentage of the total number of companies, and also those which appear to be lower risk. Canada's general corporate registry and information collection system does not focus on obtaining information relating to the beneficial owner or controller of bodies corporate in Canada. The information maintained (including changes in information) relates almost solely to persons and other corporations that are the immediate owners or controllers of a company through shareholdings.

1394. The assessors noted that the federal companies registry did not seem to be focussing on the issues relating to money laundering and the financing of terrorism and were not implementing any special measures in this regard. For example, the registry did not cross-reference applications for company formations against the terrorist lists issued by the other agencies of Government. Measures such as these could act to mitigate to some extent the threat that arises through the use of legal persons to perpetrate terrorist financing.

1395. Canada should ensure that competent authorities have access to accurate and current information on the ultimate beneficial owners and controllers of all legal persons on a timely basis. The current powers of the competent authorities are hampered to the extent that the repositories of information from which the authorities could obtain beneficial ownership information do not maintain beneficial ownership information, and for authorities such as CRA there are statutory barriers to the sharing of the information that is held with law enforcement or other competent authorities.

1396. The Canadian CBCA appears to allow for the ownership of companies through the use of bearer shares (as does the Manitoba legislation, though not Ontario) although it is likely that these shares have limited use in practice. Nonetheless, there do not appear to be any special measures in place, in particular with private corporations, to ensure that disclosure of beneficial owners of these shares so that they cannot be exploited by money launderers or those who would finance terrorism.

5.1.3 Compliance with Recommendation 33

Rec.	Rating	Summary of factors underlying ratings
Rec.33	NC	• There is no requirement to ensure adequate transparency, for instance there is no obligation that information on the beneficial ownership of shares in legal persons is required to be collected by either the corporate registry, within corporate records held by legal persons or by lawyers, accountants or TCSPs. • While law enforcement and other authorities have sufficient powers, those powers are not adequate to ensure the existence of adequate, accurate and timely information on the beneficial ownership of legal persons, which can be accessed or obtained in a timely fashion by competent authorities. • There are no measures to ensure that bearer shares are not misused for ML, particularly for private corporations.

5.2 Legal Arrangements – Access to beneficial ownership and control information (R.34)

5.2.1 Description and Analysis

General

1397. Under the Constitution of Canada, property and civil rights are a matter of provincial legislative jurisdiction. Except for the province of Quebec, all provinces are common law jurisdictions and have trust law which requires three essential components: a settlor, a trustee, and beneficiaries. Essentially, the establishment of a trust results in a transfer of proprietary rights. The trust property can be any form of property whether real or personal, tangible or intangible. In general terms, a settlor transfers legal title of specific property to a trustee but beneficial ownership to specified beneficiaries[169].

1398. In Québec, the fiducie results from an act whereby a person transfers property from his or her patrimony to another patrimony that he or she constitutes; the property is appropriated for a particular purpose and a trustee undertakes to hold and administer it (Article 1260 of the Civil Code). As a legal arrangement, the fiducie in Quebec is similar to the trust as defined above. The assessment team was not provided with information on measures taken to ensure adequate transparency concerning the beneficial ownership and control of fiducie in Québec.

1399. There are a number of different kinds of trusts in Canada with a range of purposes, but there is no general legal requirement that a trust be evidenced in writing. For those trusts that are evidenced in writing a trust instrument, such as a declaration or trust agreement (including a deed), setting out the rights and obligations of the trustees and beneficiaries, and in some cases certain third parties, is usually employed as the appropriate vehicle. Provincial legislation provides for the rules to be followed by trustees. Trusts are not separate legal entities however. Trustees are persons responsible for the trust property; hence, the trustee is liable for the obligations incurred in the name of the trust.

1400. A number of persons offer services to establish and administer trusts on behalf of trustees in Canada and they include: trust companies, lawyers and accountants (for the most part). Other trust and company service providers exist in Canada (which is discussed in Section 4.1 of the report) but limited information was available on the extent of the role of such service providers in the business of establishing or servicing trusts. There is no legal requirement that obliges these trust providers to collect information on the settlor, trustees and beneficiaries notwithstanding that as a matter of practice they would normally collect this information as vital to the establishment of a trust. However, for those entities which fall within the definition of "financial institution" under the PCMLTFA (to a large degree trust companies would be so defined), there are specific provisions requiring the collection of information relating to settlors, trustees and beneficiaries (see Section 3.2 of the report).

1401. Some pooled investment funds, such as mutual funds, or pension plans use trusts as vehicles to administer the funds on behalf of their beneficiaries. These types of trusts are frequently referred to as "pooled funds" or "pension trusts" (usually managed by a trust company or a board of trustees). In Canada, pension trusts are regulated by the federal government or by provincial governments. OSFI supervises federally regulated pension plans. These plans and the other investment plans noted fall within the definition of a "financial entity" within the PCMLTF and are therefore required to collect beneficial owner information. Income trusts are sometimes referred to as publicly-traded flow-through entities because they can flow income and the associated tax liabilities to their investors. These income trusts are registered and regulated by securities exchange commissions.

[169] Although the *Civil Code* in Québec provides for the creation of a "trust", the definition used differs from a common law trust because there is no division of ownership interest.

Prevention of the unlawful use of legal arrangements

1402. There are limited measures in place to prevent the unlawful use of trusts and fiducie in Canada. For instance, there is no system of central registration of trusts and there is no legal requirement for the recording of trusts and for maintaining the trust instrument by the settlor or any other party to the trust. The main situations where a legal obligation arises to maintain relevant information on trusts (i.e information on settlors, trustees, beneficiaries and protectors) are (a) where the trustee is also a "financial entity" such as a trust company under the PCMLTF regulations and (b) where the trust is required to lodge a tax return with the CRA. The examiners noted however that with respect to trust companies, the information requirements under the PCMLTF require the collection of "third party" information. But the term "third party" as defined in those regulations does not extend to cover the full scope of "beneficial owner"as defined in the FATF Recommendations. If a trust receives income, the trust is required to lodge a tax return with the CRA, and the information in that return may contain certain beneficial ownership/control information depending on the nature of the trust in question, but not necessarily.

Access by competent authorities to information on the beneficial ownership and control of legal arrangements

1403. Under certain conditions, trustees on behalf of a trust have to file income tax and information returns with CRA. In these returns, trusts are required to provide specific information on the name of the trust, type of trust, amounts of income and property for tax purposes, including amounts paid or payable to beneficiaries, whether the trust holds foreign property in excess of CAD 100 000 and the name, address and telephone number of trustees, executor, liquidator, or administrator. For the initial return, a trust must attach a copy of the trust document or will, and a list of assets at death (unless filed with the deceased final personal income tax return). The trust document or will contains information on the beneficiaries of the trust.

1404. Throughout the conduct of its investigations, the CRA is bound by the confidentiality provisions outlined within the Income Tax Act and the Excise Tax Act to ensure that tax information is used only for its intended purpose of administering or enforcing the applicable act. However, CRA is able to provide voluntary information reports to FINTRAC on ongoing investigations. These could include information about trusts. However the CRA may only disclose taxpayer information in the case of investigations relating to the administration of the Income Tax Act, the Canada Pension Plan, the Unemployment Insurance Act or the Employment Insurance Act, which then limits its usefulness.

1405. In addition to the information that is proactively disclosed to FINTRAC by federal tax authorities, law enforcement also has the powers to compel production of tax information on trusts held by the CRA in certain circumstances. There are two statutory exceptions that allow the CRA to provide taxpayer information to the RCMP. In both cases, the information being sought must be relevant to the substantive offences being investigated.

1406. First, the CRA will provide tax information to the RCMP where criminal proceedings, either by indictment or on summary conviction, have been commenced by the laying of an information or the preferring of an indictment under an Act of Parliament. Second, the CRA will also provide taxpayer information on trusts to the RCMP pursuant to a judicial order. This section authorises ex parte applications by the RCMP that are supported with a sworn affidavit. The judge must find that the information being sought will be of substantial value to the investigation.

1407. In addition, law enforcement may also approach trustees to ask for the voluntary provision of information on their control, ownership and activities. Law enforcement also has access to powers to compel the production of information from trustees themselves or information about trusts (via production orders or search warrants). There are no specific provisions in trust legislation that protects information from law enforcement apart from the usual confidentiality restrictions that the government imposes upon itself, e.g., the Privacy Act, section 241 of the Income Tax Act or the Personal

Information Protection and Electronic Documents Act for trusts engaged in business activities. Production orders or warrants may also be used by law enforcement to compel the production of information on the formation of a trust from the office of a lawyer that created the trust, provided that the information is not subject to legal professional privilege. Applications of this nature have been very rare. Law enforcement may also conduct interviews with persons connected with the trust as witnesses or suspects.

1408. If additional information from FINTRAC is required, law enforcement may seek a production order against FINTRAC. Law enforcement can obtain information from reporting entities through voluntary cooperation or various court orders described in Section 2.3 of the report (Recommendation 3). However given the fact that the reporting entities do not cover what could potentially be a significant portion of the persons providing trust services (i.e. lawyers and TCSPs), the law enforcement authorities may be handicapped in obtaining leads which can arise from the reporting regimes imposed on reporting entities.

1409. The assessment team believes that the agencies that receive information on legal arrangements (namely the CRA and FINTRAC) have significant limitations on their ability to disclose information. Tax information from certain trusts and law enforcement powers provide the means to access certain information on beneficial ownership and control of certain trusts. However, overall the mechanisms to obtain and have access in a timely manner to beneficial ownership and control of legal arrangements, and in particular the settlor, the trustee, and the beneficiaries of express trusts, are significantly weakened by the lack of legal record-keeping requirements and the limitations on information exchange.

5.2.2 Recommendations and Comments

1410. Canada relies on the investigatory powers of law enforcement to obtain or have access to information concerning the beneficial ownership and control of trusts and fiducie in Québec. These powers are generally sound and widely used. However, the system is only as good as the information that is available to be acquired. In the case of trusts, limited, partial information is available within the jurisdiction, and even where certain information is recorded by agencies such as CRA or FINTRAC, they can only share this information with law enforcement authorities in very limited circumstances, and the information may not be up to date. Canada should implement measures to ensure that adequate, accurate and timely information is available to law enforcement authorities concerning the beneficial ownership and control of trusts and fiducie in Québec.

5.2.3 Compliance with Recommendation 34

Rec.	Rating	Summary of factors underlying ratings
Rec.34	PC	• There are limited and indirect legal requirements to obtain, verify, or retain information on the beneficial ownership and control of trusts and fiducie in Québec; • While the investigative powers are generally sound and widely used, there is minimal information that is adequate, accurate and timely concerning the beneficial owners of trusts and fiducie in Québec that can be obtained or accessed by the competent authorities in a timely fashion. Where some information is held, such as by CRA, there are limits on the circumstances in which information on trusts can be shared.

5.3 Non-profit organisations (SR.VIII)

5.3.1 Description and Analysis

General

1411. The NPO sector in Canada is substantial and is comprised of various types of registered charities and corporations in relation to education, health, faith, human rights, social justice, environment, arts and culture, and sports and recreation. There are:

- More than 82 500 registered charities.
- An estimated 63 000 additional NPO corporations operating in Canada.

1412. Registered charities (which receive in excess of USD 5.5 BN annually) represent a significant portion of the financial resources of the NPO sector accounting for approximately 68% of all revenues and 95% of all donations. In addition, they account for a substantial share of the sector's foreign activities: 75% of international organisations in Canada are registered charities. In 2004, over 22 million Canadians made a financial donation to a charitable or other non-profit organisation.

Review of the non-profit sector

1413. Canada has conducted several reviews of the NPO sector, and the potential risks of terrorist financing. First, in 1999 the Senate examined "the international threat environment with particular reference to terrorism as it relates to Canada", including the issue of fundraising and it found that registered charities in Canada were particularly susceptible to abuse in this regard because of the credibility and deniability such status affords. Second, an inter-departmental group reviewed the adequacy of its laws and regulations as they relate to non-profit organizations in considering its anti-terrorism legislation. Lastly, in 2004 a five-year Regulatory Reform Action Plan for the Charities Directorate was announced based on the result of a comprehensive review of the regulatory framework for the non-profit sector in Canada undertaken as a joint voluntary sector and government initiative.

1414. In September 2004 Canada reviewed the adequacy of its laws and regulations in relation to risks of terrorist financing posed within the NPO sector as part of its obligations to the FATF. A report entitled "*A Review of the Canadian Non-Profit Organisation Sector* (A Discussion Paper for the FATF Working Group on Terrorist Financing)" was presented to the FATF WGTYP the following year.

Charitable registration

1415. All charities are required to apply to the CRA for registration and abide by the provisions of the Income Tax Act (IT*A). Charities that fail to meet these legal requirement*s can be de-registered. To qualify for charitable registration, an organisation must be established for charitable purposes and devote its resources to charitable activities. The charity must also be resident in Canada and cannot use its income for the benefit of its members. There are four kinds of recognised charitable purposes: relieving poverty, advancing education, advancing religion and providing certain other community benefits (including, homes for the elderly, hospitals, disaster relief efforts). To qualify for registration a charity must meet a "public benefit" test. An organisation must show that its activities and purposes are legal and (1) provide a tangible benefit to the public, (2) benefit the public or a significant portion of the public, and (3) do not serve a political purpose.

1416. A registered charity can be one of three entities: (1) a charitable organisation (which comprise 90% of registered charities), (2) a public foundation (which comprise 5% of the charities and generally funds the charitable activities of other charities), or (3) a private foundation (comprising the remaining 5% controlled by a group of related persons which can carry out charitable activities or fund the charitable activities of others).

1417. An organisation will not be registered under the Income Tax Act (or its existing registration will be revoked) when there are reasonable grounds to believe it is connected to terrorism. Most often, the regular rules and procedures under the Income Tax Act can be used to deny or revoke registration. To assist in cases where highly classified information must be used to substantiate a charity's links to terrorism, the Charities Registration (Security Information) Act was enacted as part of the Anti-terrorism Act. This legislation establishes a ministerial process whereby sensitive information can be used to determine whether to deny (or revoke) a charitable registration. In reviewing new applications and existing registered charities, the CRA requests information from the RCMP and CSIS when there are concerns an organization may be connected to terrorism.

Supervision, monitoring and data collection

1418. At the federal level, law enforcement and intelligence agencies monitor and investigate charities suspected of providing support for terrorist activities. In addition, the CRA closely monitors registered charities. Organisations seeking registration are required to apply to the CRA's Charities Directorate. Applicants use a standard form, which requires them to provide the organisation's current legal name, a list of the directors or trustees, key financial data and a detailed description of the organisation's programs. This description includes the location of the activities, the identity of the intended beneficiaries and the mechanisms to ensure that the organisation retains control of its resources. Applicants must also include copies of the governing documents under which they operate, such as certificates of incorporation or organisational by-laws.

1419. The Charities Directorate's compliance program is largely based on information from the annual returns, internal analysis of trends in the charitable sector, complaints from the public and tips from informants. The CRA is also authorised by statute to release certain other information regarding registered charities to the public. This includes: (1) the organization's governing documents and other prescribed information provided on applying for registration; (2) the notification of registration issued by the CRA; (3)the names of the persons who at any time were the charity's directors; and (4) any notice of the grounds for revocation of registration issued by the CRA. Certain other information, such as the addresses of trustees and directors, is reported to the CRA but remains subject to confidentiality rules

1420. These supervisory mechanisms appear to be effective for charities even though limited to the latter (and not applicable to other non profit organisations). Existing corporation law mechanisms under the Canada Corporations Act, which are administered or maintained by Industry Canada are utilized such as a mandatory submission of specific corporation information and requirements that compel corporations to maintain corporation records and financial reports available for inspection. If potentially illegal activities are detected by Industry Canada, it is standard practice to refer these matters to law enforcement. Canadian provinces generally have reporting and supervision mechanisms of a similar nature under their corporation laws.

1421. Canada also has a number of "umbrella organizations" that provide guidance and varying degrees of oversight such as the Canadian Council of Christian Charities which offers its members a certification program. Charities, which participate in this program, can display a special "seal of approval". Certification requires that the member organization has an independent board, audited financial statements, and that it has adopted the Council's "Code of Ethical Fundraising and Financial Accountability".

1422. Similarly, the Canadian Centre for Philanthropy encourages its members to adopt its "Ethical Fundraising and Financial Accountability Code". The 500 charities that have adopted this Code are committed to responsibly managing the funds that they receive and reporting their financial affairs accurately and comprehensively. The Association of Fundraising Professionals also encourages its members to adopt a code of ethics, a donor's bill of rights and put in place a mechanism to register complaints. Other charitable organizations with chapters or branches in Canada also play an important role in ensuring that high standards of accountability are observed by their affiliates.

1423. The specialized supervisory and monitoring measures under the CRSIA do not apply to the other parts of the NPO sector. This sector is estimated to be almost of comparable size to the registered charities sector, but the Canadian risk reviews suggest that it is far less significant in terms of risk profile. There is acknowledged coverage as regards outreach and data collection (insofar as the CRA does obtain substantial information as regards the operations of NPOs). However, if an entity does not register under the ITA, then there are no similar supervisory measures.

Sanctions

1424. The ITA provides CRA with the ability to apply a range of interim sanctions against registered charities that are non-compliant. These include financial penalties and/or the temporary suspension of certain privileges such as the ability to issue tax receipts. The scope of activities that can be subject to sanctions range from, but are not limited to, certain business activities, unjustly enriching principals of the organization, gifting resources to non-eligible recipients and furnishing false statements with respect to tax receipts. The severity of the penalty increases with subsequent infractions and may ultimately lead to revocation.

1425. Out of a pool of 82 500, about 2 000 charities have their registrations revoked each year. These are mostly organizations that have ceased operations or have failed to file annual returns. CRA conducts comprehensive field audits of about 800 registered charities each year. Recent experience suggests that, on average, about 10 charities a year lose their registrations as a result of serious non-compliance issues, including dubious fund-raising schemes, political activities, lack of proper books and records, and improper personal benefit. In addition, registered charities that have failed to demonstrate sufficient control over their foreign operations have been de-registered.

1426. Under the CRSIA, a special mechanism has been established to deny an organization's application for registration (or revoke its existing registration) when terrorist connections are suspected. As outlined above, the CRSIA establishes a ministerial process whereby sensitive information can be used to determine whether to deny (or revoke) charitable registration.

Record keeping requirements

1427. In the process of applying for registered status, a charity must provide key financial data to the CRA, including information on the mechanisms to ensure that the organization retains control of its resources. Once registered, a charity must annually provide the CRA with a copy of its financial statements and a return providing information on its board of directors, its sources of revenue, its types of expenditures and its general operations. A charity is required to maintain such records for a period of six years from the date of the last taxation year to which they relate. A revocation of a charity's registration could take place where the record keeping requirements are not met.

Information gathering and domestic co-operation

1428. Cooperation exists between law enforcement and intelligence and security agencies and other key agencies including the CRA, CSIS, RCMP and FINTRAC.

1429. Departments and agencies share information and cooperate in the charitable registration process. In reviewing new applications and assessing compliance, the CRA is able to obtain information held by the RCMP and CSIS that may reveal an organization's ties to terrorist groups.

1430. As part of the CRA, the Charities Directorate is subject to the Income Tax Act's stringent provisions on the confidentiality of taxpayer information. However, the ITA does permit the Directorate to share its information when such disclosures can reasonably be regarded as necessary to

enforce the ITA or the Charitable Registration (Security Information) Act[170]. The CRA can share information about a registered charity or an organization that has applied for such status with law enforcement and intelligence agencies where there are reasonable grounds to suspect that information held by the CRA might be relevant to the investigation of a terrorism offence under the Criminal Code or to threats to the security of Canada[171].

1431. The measures implemented by the CRSIA relate to the reliance on security information with regards to a decision whether to permit an entity to be registered or continue to be registered as a charity. There is no automatic trigger between the decision to issue a certificate under the CRSIA and the process leading to listing and/or freezing procedures. However, the measures implemented by CRSIA are supported by formal liaison agreements between the CRA and authorities responsible for conducting investigations which lead to the commencement of listing and/or freezing procedures (*i.e.* the RCMP and CSIS) and CRA information that is shared for purposes of CRSIA may be used to further investigations that could lead to commencing such procedures.

Access to information

1432. During the course of TF investigations, the RCMP will access the publicly available information as provided by the Canadian government registries and/or regulatory bodies and any additional information that can permissibly be obtained from the CRA. It may also seek information directly from the entity or individual under suspicion using existing law enforcement powers. The RCMP must abide by legislation that dictates the legal process, *i.e.* obtain search warrant or production order, under which information pertinent to a criminal investigation may be obtained. Through these methods, law enforcement is able to access all available information on the administration and management of an NPO in the course of an investigation.

1433. Under section 462.7 of the Criminal Code, and subject to section 241 of the Income Tax Act any person may make a disclosure to the Attorney General or a peace officer where a reasonable suspicion exists that property is the proceeds of crime or that the person has committed or is about to commit a designated offence. Section 241 of the Income Tax Act also provides an avenue for the law enforcement authorities to obtain information from the CRA where it is proven that a terrorism offence is being investigated is underway and that the information sought is likely to be of substantial value to the investigation.

Sharing of information

1434. Intelligence agencies have expertise and capability to examine NPOs that are suspected either being exploited by or actively supporting terrorist activity or terrorist organizations. CSIS investigates NPOs as part of their terrorist investigations and will disclose information to the police or other jurisdiction in the same manner as for any other investigations. Additionally, the CSIS Financial Analysis Unit works closely with the Charities Directorate of CRA in reviewing renewals and applications for charitable status. This unit, as the primary contact, conducts the research related to the requests and formulates the response on behalf of the CSIS.

1435. FINTRAC conducts analysis of the information it receives from reporting entities and other government departments and has made disclosures that have included information about the suspicious activities of NPOs. As of July 2005, FINTRAC had made over 120 case disclosures of suspected terrorist activity financing and other threats to the security of Canada. NPOs, both foreign and domestic, have figured in over one-third of the case disclosures related to suspected terrorist activity financing, with slightly more Canadian NPOs represented in these disclosures than foreign ones.

---

[170] To assist in the administration and enforcement of the CRSIA, an amendment has been made to the PCMLTFA to allow FINTRAC to disclose information to the CRA on suspected cases of terrorist financing involving charities.

[171] Amendments to section 241 of the Income Tax Act brought in force on February 10, 2007.

FINTRAC is however currently unable to make disclosures to the CRA and may only disclose a limited amount of information (see comments on "designated information" in Section 2.5 of the report).

1436. The CRA is constrained under section 241 of the Income Tax Act as regards the circumstances in which it can voluntarily share taxpayer information though there are a number of exceptions to the general rule that confidentiality must be maintained. One such exception is set out in s.241(3.2) which allows the disclosure to any person of certain information related to registered charities such as governing documents, names of directors, financial statements etc. Other information on registered charities or on other tax payers, including other NPOs, can be disclosed as part of criminal proceedings that have commenced (s.241(3)). Equally, defined classes of information relating to registered charities and any other NPO that has sought registration (though not all taxpayer information) can be shared with law enforcement, intelligence agencies and FINTRAC for purposes of investigating terrorism (including terrorist financing) in prescribed circumstances *i.e.* reasonable grounds to suspect the information would be relevant to an investigation of whether a terrorism (including TF) offence may have been committed (s.241(9)). In addition, under s.241(9.1) any information about a registered charity or an NPO that has applied for such status (other than individual Canadian donors information) which the CRA has provided to CSIS or the RCMP for purposes of administering or enforcing the CRSIA can also be used by those agencies for purposes of investigating terrorism. Finally, s.241 allows the release of all taxpayer information, without any restriction, pursuant to a court order or CSIS warrant.

1437. The assessment team believes that the CRA maintains an extensive information collection regime for all NPOs for taxation purposes. The team notes that a broader amount of information can be shared with respect to registered charities and NPOs that have sought registration than other types of taxpayers (including other NPOs). However, except in cases where it is acting under the authority of a court order or a CSIS warrant, the CRA can only share a broad class of tax payer information relating to all NPO with law enforcement when criminal proceedings have commenced, and a more limited class of information with FINTRAC when the requirements of s.241(9) are met. The requirements of s.241 thus impose some limitations on the type of information to be obtained, or the circumstances in which it can be obtained by FINTRAC or law enforcement, which may limit the investigative value of the information..

International requests

1438. Formal and informal mechanisms are used to provide and receive international information regarding the terrorist-support activity in the NPO sector. These are the same channels that are used by law enforcement, intelligence organizations and judicial authorities to share information on terrorist financing and money laundering activities (see Section 6.5 of the report).

Law Enforcement Cooperation

1439. Police forces in Canada regularly provide informal assistance to police forces from other countries. Generally, police are able to provide information or documentation that is publicly available or which may be obtained on a voluntary basis. This usually involves direct communication between police forces and may include transmission of information through Interpol.

Cooperation between Financial Intelligence Units

1440. For its part, FINTRAC also can exchange information relevant to the investigation or prosecution of a money laundering or terrorist financing offence involving non-profit organizations with international counterparts. To provide information, however, FINTRAC must have a memorandum of understanding with the counterpart FIU, which governs how the information will be used and protected. Further information about FINTRAC and its information sharing agreements are available in Sections 2.5 and 6.5.

Judicial Cooperation

1441. The International Assistance Group (IAG) of the Department of Justice is the focal point where all Mutual Legal Assistance Treaties (MLATs) requests are processed. The IAG has received MLAT requests for information related to NPOs suspected of terrorist financing or other forms of terrorist support. The IAG has applied the same process as for any other MLAT requests. The process is explained in Section 6.3 of the report.

5.3.2 Recommendations and Comments

1442. Canada has taken considerable steps to implement SR VIII in relation to registered charities, which it considers to be the sector most at risk, based on the risk assessment studies it has done. A large segment of the NPO population is not covered by the current measures using the risk based approach, but Canada should continue to monitor the risks in these other sectors. Canada should improve the existing co-ordination mechanisms between competent authorities, especially between the CRA and the parties responsible for listing and freezing applications. Again, Canada should review the capacity of CRA and FINTRAC to share information with law enforcement authorities related to the non-profit sector.

5.3.3 Compliance with Special Recommendation VIII

Rec.	Rating	Summary of factors underlying ratings
SR.VIII	LC	• The existing co-ordination mechanisms between competent authorities, especially between the CRA and the parties responsible for listing and freezing applications is insufficient to fully address the risk in some segments of the NPO sector.

6. NATIONAL AND INTERNATIONAL CO-OPERATION

6.1 National co-operation and coordination (R.31 & 32)

6.1.1 Description and Analysis

Recommendation 31

1443. The lead for policy and coordination in the AML/CFT area rests with the Department of Finance. The Department of Public Safety and Emergency Preparedness (PSEPC) takes a lead role in coordinating the Government of Canada's response and activities related to terrorist listings.

1444. Canada has developed several structures which are aimed at ensuring proper coordination in AML/CFT matters.

Department of Finance Committee Structures

1445. *Interdepartmental Assistant Deputy Minister (ADM) Steering Committee (ISC) and Working Group*. The ADM Steering Committee has representation from the key departments and agencies within the federal AML/CFT regime – FINTRAC, OSFI, PSEPC, RCMP, CSIS, CBSA, CRA, and the Department of Justice. The ISC meets a minimum of twice a year and serves as a forum for the discussion of policy and operational issues relative to the regime. This ADM Steering committee also serves as a forum for a high level assessment of the effectiveness of the regime and discussion of issues of strategic importance. In addition, there is a working level group that undertakes activities as directed by the committee through regular meetings (about 10 times annually), as required. This working level committee's work includes the development of new policy, legislative and regulatory proposals, the co-ordination of audits and evaluations of the effectiveness the regime, discussion of funding pressures and operational challenges among the partners and their potential impact on results.

1446. *Informal Group*. The Department of Finance originally established the Informal Group in 2002 to facilitate an integrated federal/provincial response to events in financial markets related to investor confidence. Some of the more recent issues that the Informal Group has dealt with include enforcement issues in capital markets, challenges posed by hedge funds and enhancements to Canada's AML/CFT regime.

1447. *Heads of Agencies*. The Governor of the Bank of Canada chairs the Heads of Agencies group, which meets three to four times each year. The group brings together regulators, such as OSFI and the chairs of the provincial securities commissions, as well as the Department of Finance, to exchange information regarding financial market regulatory developments.

1448. *Federal-Provincial-Territorial Financial Sector Policy Officials Meetings*. The Department of Finance chairs meetings of federal, provincial and territorial financial sector policy officials twice each year. The range of issues discussed is very broad and evolves with current developments. Although these meetings are generally focused on information sharing, they also serve to identify areas where coordinated intergovernmental action is required.

PSEPC Committee - Interdepartmental Coordinating Committee (ICC)

1449. The ICC is a working level group created in 2001, to address operational and administrative issues relating to the listing of terrorist entities pursuant to Security Council Resolutions 1267 and 1373, as well as under the Criminal Code. It is currently chaired by the Counter Terrorism Policy and Coordination Division within PSEPC and is attended by representatives of the Department of Finance, RCMP, CSIS, OSFI and DFAIT. The ICC meets on a monthly basis or as needed. The committee provides a forum for departments and agencies to assess operational challenges and requirements to implement the listing regime and the efficiency and effectiveness of that regime.

1450.

Department of Justice Prosecution Coordination Structure

1451. The new Public Prosecution Service of Canada (PPSC) assumes carriage and control of all prosecution functions previously undertaken by the Federal Prosecution Services and the PPSC is tasked with all of the consultation and coordination responsibilities previously undertaken by the Federal Prosecution Service. The PPSC continues the three times a year coordination meeting with the heads of prosecutions in the provinces. In the area of money laundering and proceeds of crime, there are two committees that have been created. The National Liaison Committee, comprised of money laundering prosecutors, meets yearly or more frequently to coordinate common issues relevant to money laundering prosecutions. The second committee is the Coordinating Committee of Senior Officials (CCSO) on Proceeds of Crime. It is also comprised of money laundering prosecutors and criminal law policy lawyers and reports to the Justice Deputy Ministers Committee (Federal, Provincial and Territorial). The PPSC is also a partner in a national memorandum of understanding with the RCMP for the IPOC.

Additional Co-ordination Initiatives

1452. *Canada Drug Strategy (CDS).* The CDS aims to strike a balanced, integrated approach to reducing both the demand for and the supply of drugs through integrated efforts of a number of federal organizations including the RCMP, Correctional Service of Canada, CBSA, Department of Justice, Drug Treatment Courts, Federal Prosecution Service, Foreign Affairs Canada. The programme of work includes law enforcement activities aimed at disrupting activities surrounding the production and supply of illicit substances, as well as substance abuse programs for Federal inmates.

1453. *First Nations Organized Crime Initiative (FNOC).* The First Nations Organized Crime Initiative assists First Nations police services in addressing organized crime and cross-border criminality. It enables sustained participation in multi-agency law enforcement activities. Furthermore, it provides training and opportunities for intelligence gathering and sharing.

1454. *Integrated Border Enforcement Teams (IBETs).* Established after September 11, 2001, the Integrated Border Enforcement Team (IBET) program is an intelligence-led cooperative that supports national security investigations associated to the Canada/US border and investigates cross-border illegal activities, between the Ports of Entry (POE). The RCMP and the Canadian Border Services Agency work with U.S. Customs and Border Protection, the US Bureau of Immigration and Customs Enforcement, and the US Coast Guard to share information and work together daily with other local, state and provincial enforcement agencies on issues relating to national security, organized crime and other criminality transiting the Canada/US border between the POE.

1455. Integrated Proceeds of Crime Initiative (IPOC). See description in Section 2.6 of the report.

1456. *National Coordinating Committee on Organized Crime (NCC).* The NCC, a body composed of federal, provincial and territorial (FPT) government senior officials, prosecutors, and representatives from the law enforcement community, identifies key issues for action and develops national strategies and initiatives to address them. The NCC has three main responsibilities: (1) to identify issues and policy priorities related to the problem of organized crime; (2) to advise FPT Deputy Ministers on the development, coordination and implementation of policies, legislation and programs aimed at combating organized crime; and (3) to encourage coordination of anti-organized crime activities among various players at the regional and local level.

1457. *Governance of Initiatives*. Initiatives such as FNOC, IBET, IMET, IPOC and NCC operate under a similar governance structure, with both a Partners Advisory Committee and a Senior Governance Committee. The Partners Advisory Committee is composed of representatives from each of the partner organizations at the Director and Senior Analyst levels. These committees meet several times a year or more frequently to address urgent issues. These working groups focus on a myriad of issues, including communications, research, evaluation and risk management and emerging issues, and have been established to support decision-making by the ADM Steering Committee.

Additional elements

1458. Finance is the primary lead in terms of consultations with stakeholders, and has a close working relationship with industry regulators and associations that represent the reporting entities. Finance also maintains a list of stakeholders to ensure that they are adequately consulted and informed of any new legislative and regulatory changes. A recent example is the release of Finance's consultation paper, "Enhancing Canada's Anti-Money Laundering and Anti-Terrorist Financing Regime" in June 2005, which led to over 50 written submissions and nine months of face-to-face consultations with stakeholders throughout the country. These consultations played a significant role in the drafting of the new legislation that was passed in December 2006, and the resulting changes to regulations and industry guidance. FINTRAC and OSFI, in particular, play an essential role with the Department of Finance, in liaising with the private sector to ensure their commitment to and compliance with the AML/CFT regime.

1459. Further, law enforcement maintains its own contacts with the private sector in order to ensure a supportive environment. There is an ongoing dialogue with the Canadian Bankers Association and with specific large banks.

1460. *AML/CFT Advisory Committee (AC).* One of the recommendations coming from domestic assessments of the Canadian regime was the creation of a new AML/CFT Advisory Committee. The AC had its first meeting in November 2007[172].

[172] With the aim of increasing outreach, cooperation and coordination, the new Advisory Committee comprises both public and private sector representatives. The AC consists of members of the key departments and agencies, in addition to representatives from each sector of the reporting entities. It is chaired by the Department of Finance and has high-level representation from approximately 30 members.

1461. Federal partners interact regularly with each other and with external stakeholders in relation to AML/CFT issues. The federal partners primarily use the interdepartmental working group led by the Department of Finance. The group meets regularly and, although no minutes of the meetings are kept, participants acknowledge that it provides an effective means of discussing common issues. However, at more operational level, the assessment team found signs of friction, especially between FINTRAC and the law enforcement authorities. Some signs of reluctance to share information remain which has an impact on the effectiveness of the implementation of the AML/CFT regime.

Recommendation 32

1462. Canada reviews quite extensively the effectiveness of the AML/CFT system on a regular basis and through different authorities and bodies.

1463. Canada's system of government has numerous means by which to ensure that its policies and programs are effectively meeting their intended goals, and Canada's anti-money laundering and counter-terrorist financing regime has been subjected to these checks and audits. This included an in-depth audit by the Office of the Auditor General[173], an independent government agency that ensures that government programs are effectively using public funds for their intended purpose. The AML/CFT regime has also been evaluated by a private research group[174] as a condition for a renewal of funds by the Treasury Board. Lastly, as stipulated under the PCMLTFA, the regime s recently underwent a five year review by a committee of the Senate[175] to review administrative and operational effectiveness and efficiency since the legislation was originally passed. Section 72(1) of the consolidated legislation mandates that such a review take place every five years by a committee of the House of Commons, of the Senate, or of both Houses.

1464. In the first review, the results of the 2004 OAG report were favourable. However, the auditors highlighted three areas for further consideration:

- The PCMLTFA limits the information that FINTRAC can disclose to law enforcement and security agencies as a result of Charter and privacy rights. This inhibits to some degree the usefulness of disclosures in generating new investigations.
- The partners involved in the initiative could enhance coordination through the introduction of an overarching advisory committee to discuss issues of common interest and develop approaches for dealing with emerging issues.
- Accountability mechanisms to monitor the impact and usefulness of the intelligence that FINTRAC provides law enforcement and security agencies could be enhanced.

1465. Overall, the AML/CFT system was viewed positively by EKOS that made the following key recommendations:

- Reporting entities require feedback from FINTRAC concerning the impact of their reports.
- Additional funding should be allocated to meet specific needs, such as IT renewal at FINTRAC and expansion of investigation capacities for the RCMP and CBSA.
- Information in FINTRAC disclosures could be expanded to increase the value to law enforcement and security agencies.

---

173 "Observations and Recommendations." Chapter 2 – Implementation of the National Initiative to Combat Money Laundering. 2004 Report of the Auditor General of Canada at: http://www.oag-bvg.gc.ca/domino/reports.nsf/html/20041102ce.html.

174 "Year Five Evaluation of the National Initiative to Combat Money Laundering and Interim Evaluation of Measures to Combat Terrorist Financing. Final Report" EKOS Research Associates Inc. November 30, 2004. p. iv.

175 "Stemming the Flow of Illicit Money: A Priority for Canada." Parliamentary Review of the Proceeds of Crime (Money Laundering) and Terrorist Financing Act. Standing Senate Committee on Banking, Trade and Commerce. October 2006. p. 27.

- Updating the logic model and evaluation framework should be undertaken, among other things, to ensure outcomes and cost effectiveness of the program.

1466. The Senate Committee tabled a report, "Stemming the Flow of Illicit Money: A Priority for Canada", on October 5, 2006, which highlighted the need for the AML/CFT regime to meet domestic requirements, but also the importance of meeting international obligations in order to ensure that the world is "safer and more secure". The review was conducted with the understanding that there were proposed legislative changes underway stemming from a consultation paper released by the Department of Finance in June 2005. Recommendations and the Government's response included:

- Creating a registration system for money service businesses.
- Require dealers of precious metals and stones to report suspicious transactions and other prescribed reports to FINTRAC.
- Require customer identification in non-face-to-face transactions.
- Use a risk-based approach to determine the level of client-identification and record keeping for reporting entities.
- Oblige lawyers to follow client-identification, record keeping and reporting requirements, while still respecting solicitor-client privilege, the Canadian Charter of Rights and Freedoms, and the Quebec Charter of Human Rights and Freedoms.
- Enable FINTRAC to disclose to law enforcement and intelligence agencies the rationale for the disclosure and any other publicly available information.
- Determine the likelihood and extent of money laundering and terrorist financing activities that could be taking place with emerging modes of financial services delivery, like white label ATMs and Internet banking.
- Require feedback from law enforcement and security agencies to FINTRAC on the value of their disclosures. As well, FINTRAC should provide feedback to reporting entities on the usefulness of their reports in the fight against money laundering and terrorist financing.
- Require the reporting of suspicious attempted transactions.
- Examine whether the reporting threshold of CAD 10 000 is appropriate to activities in Canada and consistent with other countries.
- Ensure that FINTRAC is adequately funded to carry out its mandate under the PCMLTFA.
- Ensure that the RCMP has the required financial resources and expertise to investigate cases of money laundering and terrorist financing.
- Ensure appropriate oversight of FINTRAC.

1467. In response to these evaluations, the responsible government departments and agencies have been working to ensure that the recommendations made in each of these three evaluations were followed-up and that the appropriate changes to the regime were made.

1468. Canada's AML/CTF regime will be subject to a further third party evaluation in fiscal year 2009-2010 in order to secure continued funding. Similarly, Treasury Board also recommended, following the 2006 increase in funding for FINTRAC, the RCMP, CBSA and the Department of Justice in Budget 2006, that the evaluation framework be re-assessed to see if it is capturing the results of the regime appropriately. This new evaluation framework must be completed by October 2007. In addition, an assessment of the impacts of data collection and disclosures provided under Canada's AML/CFT regime on Canadians' privacy will be conducted.

6.1.2 Recommendations and Comments

1469. Canada has developed quite a large number of initiatives to improve co-operation mechanisms among the different stakeholders taking part in the fight against money laundering and terrorist financing. However, from the discussions that took place during the on-site visit, the assessment team believes that interagency cooperation between the FIU and law enforcement authorities is not fully effective and needs to be enhanced, in order to optimise Canada's capacity to investigate ML and TF

cases. Canada should consider encouraging more bilateral (ad-hoc and more formalised) contacts among agencies.

1470. The assessment team welcome the setting up of an AML/CFT Advisory Committee that allows private and public stakeholders to discuss emerging AML/CFT issues and support implementing the existing standards. It is important that private sector and provincial stakeholders are fully involved in the consultation process, including regional and provincial organisations that have important connections with practitioners in their respective sectors.

6.1.3 Compliance with Recommendation 31

Rec.	Rating	Summary of factors underlying ratings
Rec.31	LC	• Interagency cooperation between the FIU and law enforcement authorities is not fully effective and needs to be enhanced.

6.2 The Conventions and UN Special Resolutions (R.35 & SR.I)

6.2.1 Description and Analysis

Ratification and implementation of conventions

1471. Canada signed the Vienna Convention on December 20, 1988, and ratified the Convention on July 5, 1990. Canada signed the Palermo Convention on December 14, 2000 and ratified the Convention and its Protocols on May 13, 2002. Canada signed the United Nations International Convention for the Suppression of the Financing of Terrorism on February 10, 2000, and ratified the Convention on February 19, 2002.

1472. The provisions of the Palermo and Vienna Conventions relating to the ML offence have been almost entirely implemented; however there are two small deficiencies, the ML offence does not cover all designated categories of predicate offences/all indictable offences since Canada has a threshold approach to criminalising money laundering (including indictable offences such as offences under the Copyright Act which carry a penalty of up to 5 years imprisonment). Also, Section 462.31 ML offence contains a purposive element that is not broad enough to meet the requirements of the Conventions or Recommendation 1 (see conclusions in Section 2.1). Most of the provisions of the CFT Convention have also been fully implemented. However, Article 18(1)(b) of the Terrorist Financing Convention requires countries to implement efficient measures to identify customers in whose interest accounts are opened is insufficiently implemented. Canada's implementation of Recommendation 5 currently does not include adequate measures to ascertain the identity of beneficial owners through CDD procedures (see discussion in relation to Recommendation 5)[176].

Implementation of the U.N. Security Council Resolutions

1473. Canada implemented UNSCR 1267 (1999) by adopting the United Nations Afghanistan Regulations in November 1999. These regulations, which were renamed the United Nation Al - Qaida and Taliban Regulations in June 2006, incorporate by reference the list of individuals and entities maintained by the 1267 Committee for the purpose of freezing, seizing or confiscating the funds or assets owned or controlled by those listed individuals and entities. They also implement successor resolutions 1333, 1390, 1452, 1526 and 1617. Canada implemented UNSCR 1373 (2001) in October 2001, with the adoption of the Canadian UN Suppression of Terrorism Regulations, which in 2006 were renamed the Regulations Implementing the United Nations Resolutions on the Suppression of Terrorism.

[176] Canada indicated that shortfalls have been addressed in regulations enacted in June 2007 and coming into force on 23 June 2008. Such regulations have not been assessed by the assessors.

1474. Canada has fully implemented S/RES/1267(199) and its successor resolutions as well as UNSCR 1373(2001).

Additional elements

1475. Canada ratified the Inter-American Convention against Terrorism on December 2, 2002. It appears Canada has implemented the 2002 Inter-American Convention against Terrorism, with the possible exception of Article 4(b) of that Convention.

6.2.2 Recommendations and Comments

1476. Canada should ensure that the ML offence does cover all designated categories of predicate offences and Canada should consider removing the purpose element from Section 462.31 of the CC to be in line with the UN Conventions (see Section 2.1 of the report). Canada should enact stronger measures to customer identification so as to be more compliant with Article 18(1)(b) of the CFT Convention[177].

6.2.3 Compliance with Recommendation 35 and Special Recommendation I

Rec.	Rating	Summary of factors underlying ratings
Rec.35	LC	*Implementation of the Palermo and Vienna Conventions:* • Canada has ratified the Palermo and Vienna Conventions and implemented them with some omissions however (the ML offence does not cover all required categories of predicate offences and Section 462.31 ML offence contains a purposive element that is not broad enough to meet the requirements of the Conventions); *Implementation of the CFT Convention:* • Article 18(1)(b) of the Convention, which requires countries to implement efficient measures to identify customers in whose interest accounts are opened is insufficiently implemented. Canada's implementation of Recommendation 5 does not include adequate measures to ascertain the identity of beneficial owners.
SR.I	LC	*Implementation of the CFT Convention:* • Article 18(1)(b) of the Convention, which requires countries to implement efficient measures to identify customers in whose interest accounts are opened is insufficiently implemented. Canada's implementation of Recommendation 5 does not include adequate measures to ascertain the identity of beneficial owners.

6.3 Mutual Legal Assistance (R.36-38, SR.V, R.30 & 32)

6.3.1 Description and Analysis

Recommendation 36 & Special Recommendation V

Scope of assistance allowed

1477. Canada has extensive formal and limited informal means of providing mutual legal assistance (MLA) to requesting countries. Canadian police, directly or through Interpol, can provide assistance on the basis of a simple request but only where the evidence or information can be obtained without a court order. However, since 2006, the RCMP is more restricted in both the amount and type of informal information they can provide to foreign law enforcement partners without formal arrangements. Often, this forces the requesting law enforcement partners to resort to the much slower

[177] Canada indicated that shortfalls have been addressed in regulations enacted in June 2007 and coming into force on 23 June 2008. Such regulations have not been assessed by the assessors.

and more cumbersome formal legal assistance processes. This may over-burden the formal MLA process.

1478. Where the evidence can only be gathered pursuant to a court order, Canada's Mutual Legal Assistance in Criminal Matters Act ("MLACMA" or "the Act") is the domestic legislation that enables a Canadian court to issue orders compelling the production or authorizing the seizure of evidence at the request of a treaty partner. Canada is a party to 34 bilateral mutual legal assistance treaties, and as mentioned previously in Section 6.2.1 of the MER, Canada is also a party to multilateral treaties such as the Vienna, Palermo and Terrorist Financing Conventions.

1479. Under the MLACMA, the following mechanisms can be used to obtain evidence in compliance with Recommendation 36 (Criterion 36.1 (a) through (f)): search warrants; productions orders (typically used to compel production of evidence from disinterested third-parties such as banks, phone companies and other telecommunications service providers and to compel statements); any other warrant available under Canada's Criminal Code (such as a warrant for a number recorder on a telephone line); video or audio-link of a witness in Canada to proceedings in a foreign jurisdiction; an order for the lending of exhibits which have been tendered in Canadian court proceedings; an order for the examination of a place or site in Canada; the transfer of a sentenced prisoner (with his or her consent) to testify or assist in an investigation; service of documents; the enforcement of orders made by a court of criminal jurisdiction for the restraint, seizure or forfeiture of property situated in Canada; enforcement of foreign criminal fines; and enforcement of foreign criminal restraint and forfeiture orders.

1480. Canadian courts can also issue compulsory process for the evidence of witnesses and the production of documents in response to a request from a court in the foreign state via the letters rogatory process, but in such cases Canada cannot use the other compulsory means that are available to Treaty partners under the MLACMA.

1481. The tools most commonly used to obtain evidence on behalf of a requesting state are evidence gathering orders and search warrants. In order for a Canadian judge to issue a MLACMA search warrant or evidence gathering order, he or she must be satisfied that there are reasonable grounds to believe that "an offence under the foreign law has been committed" and that evidence of the commission of the offence will be found in Canada. The request for assistance must provide sufficient information to satisfy the judge on these two points. However, while treaty parties have access to the full slate of Canadian law enforcement tools to seek information and evidence, obtaining such orders appears, in practice, to be quite burdensome. To obtain simple production orders, in addition to the usual content required for executable MLA requests, the requesting state must provide Canada both a detailed explanation as to why it believes any evidence is located in Canada, and how such evidence will be relevant to proving elements of the foreign criminal case.

1482. Canada has a centrally-coordinated MLA regime involving: the Department of Justice which acts as a gatekeeper; Crown prosecutors who present the requests to Canadian Courts for execution; the Judiciary, and, on occasion, law enforcement agents who execute the Canadian court's compulsory orders. The MLACMA includes extensive judicial oversight of the process of collecting evidence for foreign governments. For example, no evidence that was obtained through compulsory orders obtained under MLACMA may be sent to a requesting state without judicial authorisation. The Department of Justice, while charged with guiding MLA requests through the MLA process, has very little control over the speed with which the MLA process is completed and has to rely upon the diligence of prosecutors, and the expectation that judges appreciate that timely responses to MLA requests are central to international criminal assistance. Undue delays in responding to MLA requests can hinder the ability of the requesting authorities to bring an accused to trial, given the short legal deadlines that often exist. This, in part, may explain the high number of abandoned requests in Canada's MLA regime.

1483. Canada can respond to a letters rogatory request from a foreign court addressed to a court in Canada. Assuming the letter rogatory contains sufficient information, counsel with the Department of Justice will bring an application before a Superior Court in Canada under the Canada Evidence Act for an order compelling the testimony of a witness or for the production of documents.

1484. Canada will also provide what assistance it can in response to a non-treaty letter of request. However, the scope of such assistance is limited to what can be provided without a court order since the evidence gathering powers in the MLACMA are available only to treaty partners and designated entities.

Conditions for refusal

1485. Where assistance is provided pursuant to a Treaty, the treaty itself restricts the use that can be made of the evidence concerning the matters set out in the letter of request. Where evidence has been gathered in Canada on behalf of a requesting state under the MLACMA, before the evidence can be sent to the requesting state, a judge must, by order, authorise the transmittal of the evidence. Affected parties may ask the judge to impose conditions on the sending of the evidence to the requesting state. In the majority of cases, sending orders are unconditional. In the few instances where a judge does impose conditions on the sending of the evidence, they are usually restricted to protecting the interests of those from whom evidence has been obtained. In this regard, a typical condition would be that the evidence be returned at the conclusion of all proceedings in the requesting state.

1486. Canada does not require that there be judicial proceedings underway in order to provide legal assistance. The exception is in cases where assistance is provided pursuant to a letters rogatory request and where a treaty request is made for the enforcement of foreign orders for restraint, seizure and forfeiture. In order for a letters rogatory request to be executed, there must be a matter pending before the court in the foreign jurisdiction, and therefore pre-trial investigatory assistance would not be available in the absence of a treaty. In the case of requests for the enforcement of foreign orders of restraint or seizure, the person must be charged with an offence which is also an indictable offence in Canada. In the case of requests for enforcement of a forfeiture order, the person must have been convicted of an offence which would be an indictable offence in Canada, if it had occurred in Canada. This latter situation is the only instance where Canada requires evidence of a conviction in order to provide assistance.

1487. Except in the case of requests for the enforcement of foreign orders of restraint, seizure and forfeiture, Canada does not require dual criminality in order to provide assistance and does not seek to include dual criminality as a requirement in the mutual legal assistance treaties that it negotiates. The analysis of whether dual criminality is established is conduct-based. That is, if the conduct is criminalized in both countries, it will be concluded that this criterion is satisfied, whether or not the denomination or the precise constituent elements of the respective offences are identical.

1488. Canada's MLATs typically contain a provision allowing for the refusal of a request for mutual assistance on the basis that it would be contrary to Canada's public interest to execute the request. Canada may use this provision to delay the execution of a request if execution would compromise a Canadian investigation.

1489. *Fiscal matters.* Canada does not impose a restriction on mutual legal assistance in criminal matters requests in Canada on the sole ground that the offence is also considered to involve fiscal matters. The MLACMA does not contain any reference to such limitations and it is not contained in Canada's bi-lateral treaties.

1490. *Secrecy.* According to the IAG, requests to Canada for mutual legal assistance will not be refused on the grounds of laws that impose secrecy or confidentiality requirements on financial institutions or DNFBP. Records of financial institutions are obtainable in Canada under the MLACMA and the PCMLTF does not contain any restrictions in that regard either.

1491. Where legal professional privilege, known in Canada as solicitor-client privilege, affects evidence sought in Canada and it is not waived, the evidence will not be ordered, produced or sent. The search of law offices in Canada is subject to many restrictions and close judicial oversight (see Lavallee, Rackel and Heintz v. Canada (Attorney General); White, Ottenheimer and Baker v. Canada (Attorney General; R. v. Fink [2002] S.C.C. 61).

Process for executing requests

1492. The Department of Justice is responsible for the implementation of mutual legal assistance agreements and the administration of the MLACMA. The IAG carries out the functions assigned to the Minister of Justice under the MLACMA and provides advice to the Minister regarding his or her responsibilities under the statute. The IAG is designated as Canada's Central Authority in mutual assistance agreements. It is located at the headquarters of the Department of Justice in Ottawa. The MLA process is thus a centrally coordinated process.

1493. The MLACMA establishes a two-phase process for the gathering of evidence, which is briefly summarized as follows. The first phase is performed by counsel at the IAG. As the Minister's delegates, counsel at the IAG receive, review, approve and arrange for the execution by competent Canadian authorities of mutual legal assistance requests made to Canada by treaty partners or designated entities in criminal matters. The IAG ensures that all mutual legal assistance requests comply with treaty provisions and any other international or domestic standards that may be applicable. Canada did not provide any statistics on how long this stage generally lasts.

1494. Once a request has been approved, the second or judicial phase is triggered. It is at this stage that an application must be made to court for an order compelling the production of evidence or authorizing its seizure. Canada is a federal state with prosecutorial authorities at both the federal and provincial level. An approved request from a foreign state will be sent to either the regional office of the federal Department of Justice or to the office of the relevant provincial Attorney General depending upon the nature of the offence under investigation or prosecution in the requesting state. If the offence relates to drug trafficking, immigration, tax evasion, or another matter that is prosecuted by federal officials in Canada, the request will be sent to a regional office of the Department of Justice. If the offence is one that would be prohibited by Canada's Criminal Code, the request will be sent to the office of the provincial Attorney General in the province where the evidence is believed to be located. After the evidence has been gathered or seized pursuant to orders obtained under MLACMA, a second application must be made to a superior court judge for an order authorizing the transmittal to the requesting state of the gathered evidence.

1495. The MLA work of the IAG is handled by six of the 16 IAG lawyers, with the other ten lawyers focusing on extradition. The 6 paralegals and support staff are divided into extradition and mutual legal assistance teams. The IAG works in close cooperation with federal and provincial investigative and prosecutorial officials in executing incoming requests and in the process of making requests to other countries. In the major urban centres of Vancouver, Toronto and Montreal, the regional offices of the federal Justice Department also maintain teams of lawyers dedicated to handling both extradition and mutual assistance requests. The British Columbia Regional Office of the Department of Justice in Vancouver executes all incoming requests for assistance which are to be executed in that province. In Ontario and Quebec, the provincial Attorneys General similarly maintain teams dedicated to the execution of incoming requests.

1496. Canada has posted two experienced Canadian criminal counsel abroad. Two liaison positions have been established in Europe: one in Brussels for the European Union, and the other in Paris dealing primarily with extradition and mutual assistance requests to and from France.

1497. Canada did not provide information (as requested) about the actual or average length of time it takes to respond to money laundering assistance requests. In the absence of such data, the effectiveness of the system cannot be assessed.

1498. Statistics provided reveal that in the last five years Canada received 167 MLA requests (143 requests for evidence in money laundering cases). 46 of the total MLA requests were withdrawn by the requesting state (41 of these were ML MLA requests), which is about 25% of the total. Information on the reasons for these withdrawals is unknown to the team and Canada. Canada executed and complied 90 of the remaining 121 total MLA requests, currently leaving 31 outstanding requests which are presumed to be more recent requests.

Application of Recommendation 28 to request for mutual legal assistance

1499. The powers of competent Canadian authorities required under Recommendation 28 are available for use in response to requests for mutual legal assistance. Canada's mutual legal assistance measures apply equally to money laundering, terrorism and financing of terrorism offences. Where the request is made pursuant to a treaty, the offence must be one covered by the treaty. If there is no treaty, and the request is one by letter rogatory, then there are serious limitations. Under the MLACMA, there is the power to compel a witness to provide a statement other than at trial, which is not provided to Canadian police in domestic investigations, except for the investigation into a terrorism offence (see section 83.28 of the Criminal Code).

Mechanisms for determining the best venue for prosecution

1500. While there is no statute that applies to the determination of which country is best equipped to prosecute a matter, there is case law that sets forth the criteria that govern the exercise of discretion by Canadian prosecutorial authorities. The Supreme Court of Canada decision in *U.S.A. v. Cotroni* sets forth the test for when Canadian citizens should be prosecuted in Canada or abroad for their alleged criminal conduct. The determination of where a person may be prosecuted depends to a large extent on where the person is arrested. In cases where there has been a joint investigation involving Canadian police and their foreign counterparts, Canadian police do take part in consultations with their counterparts about the ultimate point of arrest. In cases where a person is arrested in Canada, who might simultaneously face the possibility of a Canadian and foreign prosecution based on the same conduct, there may be a request made to Canada for extradition[178]. There may be consultation between Canadian and foreign prosecution authorities on the appropriate territorial jurisdiction for the prosecution. Many of Canada's extradition treaties specifically provide for such consultation. Ultimately, the Courts in Canada leave the decision to prosecute or extradite in the hands of the Prosecution Service and the Department of Justice.

Additional elements

1501. As noted above, the powers to compel the production of evidence or authorise its seizure at the request of foreign authorities under the MLACMA are available only when the request is made pursuant to treaty or by a designated entity. Such requests must be made to Canada's central authority by the central authority of the requesting state or designated entity and if made directly police-to-police an MLACMA request is subsequently required to actually process the court order. Not all of the criminal investigatory tools are available for a judge who is considering a letter rogatory request, which limits the methods for obtaining evidence to the more limited production orders. Subsection 3(2) of the MLACMA specifically recognizes and maintains normal police to police contacts and arrangements. Where a foreign police agency provides evidence to its Canadian counterpart of the commission of an offence under Canadian law, Canadian police may choose to obtain an order under the Criminal Code or other domestic legislation to obtain the evidence for the Canadian investigation and may then be able to share that evidence with foreign authorities.

[178] Article 6 of the Canadian Charter of Rights and Freedoms protects the "right to remain in Canada for Canadian citizens", in cases where a Canadian citizen might either be prosecuted in Canada or extradited in relation to the same alleged conduct, the appropriate Attorney General within Canada (either federal or provincial) will perform an assessment based on factors identified under Canadian case law in order to determine whether prosecution in Canada is a "realistic" option in all of the circumstances.

1502. The discussions regarding Recommendation 36 (Criteria 36.1 – 36.6) also apply to mutual legal assistance requests related to terrorist acts and the financing of terrorism as they are offences in Canada.

Recommendation 37 & Special Recommendation V

1503. Except where direct enforcement of foreign orders for restraint or forfeiture of assets is requested, Canada does not require dual criminality for execution pursuant to the MLACMA.

1504. Canada does require dual criminality for extradition. However, because Canada uses a conduct oriented test, Canada will extradite where the conduct in issue would be a serious offence if it had been committed in Canada regardless of the fact that all of the elements of the foreign offence are non-congruent with all the elements of an offence in Canada (see section 3(2) of the Extradition Act).

1505. The discussions regarding Recommendation 37 (Criteria 37.1 – 37.2) also apply to mutual legal assistance requests related to terrorist acts and the financing of terrorism as they are offences in Canada.

Recommendation 38 & Special Recommendation V

1506. Under the MLACMA, Canada can directly enforce foreign orders for the restraint, seizure and forfeiture of assets on receipt of a request from a treaty partner or designated entity (see MLACMA sections 9.3 and 9.4). An order made by a court of criminal jurisdiction can be filed with the court in Canada and enforced as though it were an order of a Canadian court where the person has been charged in the requesting state or by the designated entity with an offence that would be an indictable offence were it to have been committed in Canada. This means, for example, that the owner or person in possession may challenge the order or apply to the Canadian court for the payment of legal, living and business expenses from the seized or restrained property. The property remains under the Canadian court's control while the foreign proceedings continue.

1507. With respect to foreign forfeiture orders, they may be filed and enforced as though they had been issued in Canada where the order has been issued by a court of criminal jurisdiction and the person has been convicted in the requesting state of an offence that would be an indictable offence were it to have been committed in Canada. The Minister of Justice must refuse a request for the enforcement of a foreign forfeiture order where the Minister has reasonable grounds to believe the request has been made for the purpose of punishing a person by reason of their race, sex, religion or other prohibited grounds. The Minister must also refuse where, in his or her opinion, giving effect to the order would prejudice an ongoing investigation, would impose an excessive burden on Canadian government resources, might prejudice Canada's security or where refusal of the request is in the public interest. Enforcing foreign restraint orders and forfeiture judgments can be cumbersome since the enforcement of such orders depends more upon the sufficiency of the foreign requests than would be the case in requests for legal assistance seeking evidence. The requesting state has to provide very detailed information regarding the grounds for the restraint, almost to a level of detail ordinarily reserved for obtaining domestic restraint in the first instance, even though under MLACMA the Canadian courts are not supposed to look behind the foreign order, but simply enforce same as if it were an order issued by a Canadian court. See MLACMA Section 9.3(4). Enforcing forfeiture orders has been done successfully, but it seems that the number of successful requests is not numerous: only four times in five years. Canada was unable to demonstrate to the assessors the effectiveness of the assistance it provides to foreign governments in confiscation matters.

1508. Although Canada initially provided statistics on the number of MLA requests it handled in a 5-year period, and then later provided some information on the success rate of those requests, it did not provide information about the average time in which MLA requests were executed in general or with regards to the relatively few forfeiture matters it handled nor explained any of the results Only 40% of forfeiture requests over the last five years were executed. In the absence of more compelling

MLA and extradition statistical data, the assessment of the MLA system's effectiveness is based on other information that was made available to the assessors. Canada on average has shared a little under CAD 100 000 in forfeited funds a year with its foreign partners. Considering that Canada forfeits about CAD 33 million in assets per annum, this international sharing figure seems low.

1509. Canada's MLA provisions for confiscation seem to encourage duplicative and potentially conflicting litigation in Canada. Presumably, Canada would not enforce forfeiture orders from foreign states that did not permit affected innocent owners the opportunity to challenge a confiscation order in the requesting state as the MLACMA gives the Minister relatively broad discretion to refuse to execute MLA requests if they are not in the interest of Justice. Nonetheless, Canada's MLA provisions, via MLACMA Section 9.4(9), incorporates Sections 462.41(3) and 462.42 of the Criminal Code, which permit any person, other than the accused, who is affected by a foreign restraint, seizure or forfeiture order to fully challenge the validity of the same in Canada and raise the "innocent owner" defence in Canada. There is no presumption of validity of the foreign order under Canadian law nor does MLACMA recognize that third-party property rights may have already been adequately protected by similar procedures in the foreign jurisdiction. This lack of comity results in the potential duplication of legal decisions made abroad, superimposes Canada's version of forfeiture onto foreign forfeiture regimes and proceedings, and creates the possibility of conflicts with the laws of requesting state and previous legal decisions made in the requesting state. A foreign judge handling a foreign forfeiture case would always be in better position to determine who is or is not an innocent owner, but Canada reserves the right to possibly hear or rehear that issue in Canada. Similarly, a Canadian judge can reduce a foreign forfeiture order of offence related property based upon "the proportionality" of the forfeiture to the offence giving rise to forfeiture and that claim can be brought by the accused. See MLACMA Section 9.4(9) incorporating Section 490.41(3) of the Criminal Code. This issue would normally be litigated in the requesting state.

1510. This duplication of the opportunity to make challenges in international confiscation matters increases the chances that defendants can bring lengthy legal battles in Canada. Proceeds of crime restrained for foreign governments may be released by a Canadian court to pay for legal fees and living expenses of the foreign criminal defendant under Canadian law prior to property being forfeited under the foreign law even if that would not be permitted under the applicable foreign law. This has the potential of undermining the criminal or forfeiture processes taking place abroad. The statement that the Section 462.34 financial hardship provisions apply to foreign forfeitures is odd given the fact that the innocent owner and proportionality provisions of the Criminal Code are expressly incorporated into the MLACMA, but the Criminal Code provisions that permit the release of frozen proceeds to pay for attorney fees or business and living expenses provisions are not as there is no specific reference to Section 462.34 of the Criminal Code in the MLACMA. Compare Section 9.3(4) with Section 9.4 (6) and (9).

1511. Canada can enforce foreign criminal orders for restraint, seizure or forfeiture, as described above, as long as they relate to the proceeds of crime or offence-related property. MLACMA does not provide for the enforcement of orders against property that is the equivalent value of forfeitable property, but has the power to enforce an order for "the payment of a fine" imposed in respect of an offence by a "court of criminal jurisdiction". Canada treats value based forfeiture judgements as fines. This means generally that Canada cannot enforce preliminary orders from legal systems that allow Courts to issue restraining orders in anticipation of an equivalent value forfeiture judgment until after the requesting state has actually obtained a final forfeiture judgement. The problem with this approach is that some jurisdictions, including Canada, do not have restraint mechanisms that can be used to place pre-judgement holds on non-tainted assets in anticipation of obtaining a fine or a value-based forfeiture judgement. Moreover, while the MLACMA has provisions that authorize Canadian courts to enforce foreign pre-judgment orders that seize or restrain proceeds or offence related property in anticipation of a forfeiture judgement against such identified proceeds or offence related property, the MLACMA does not provide similar authority for the enforcement of pre-judgment restraint or seizure orders obtained for anticipated fines or value-based forfeiture judgments.

1512. The IAG as Canada's central authority works closely with other central authorities and with investigative agencies. The timing of the execution of searches and seizures may be coordinated if Canada is provided with sufficient notice of the impending action in the requesting state. In situations where Canadian police are in a position to apply for orders under the Criminal Code for seizure, they may coordinate their actions with foreign counterparts. However, Canada has no formal arrangements or mechanisms were the confiscation experts in one country regularly meet with their Canadian counter parts. Confiscation coordination is ad hoc at best, and has been problematic with at least one major treaty partner. Canada does not seem to involve specialized confiscation points of contact, but, instead, seems to rely upon a central authority competence in confiscation law that rarely is present in most central authorities throughout the world.

1513. At the Federal level, Canada has not established an asset forfeiture fund that allows dedicated use of forfeited assets in a systematic way. Canada advised the assessment team that it had considered an asset forfeiture fund at a federal level to promote law enforcement, health education or other appropriate purposes, and decided against it, although Canada did not detail the process of their consideration. Forfeited funds can be shared with domestic and foreign law enforcement partners and the recipients themselves determine how those funds may be used or spent. There are riders on forfeited funds that the Federal government shares with the provinces requiring that the shared funds be used law enforcement, criminal justice and drug education purposes. Forfeited funds that are not shared eventually go into the general treasury and are spent by the Canadian Parliament as it sees fit.

1514. The Seized Property Management Act, which outlines Canada's proceeds of crime and offence related property asset management regime, includes authority to share anything forfeited to Canada in section 9(d) of that Act. Essentially, this provision allows Canada to share the "proceeds of disposition" (*i.e.* the money realised from the sale of forfeited assets). The Seized Property Management Act also specifically recognizes international sharing in section 11of the Act. Sharing must occur in accordance with the Act and the applicable Regulations.

1515. The Canadian Sharing Regulations allow Canada to share with a foreign government that participated in an investigation or prosecution that resulted in the forfeiture or provided information relevant thereto. There also must be a reciprocal forfeiture agreement with Canada for such sharing to be authorised. Canada has entered into many asset sharing arrangements with foreign states and is negotiating a number of additional agreements. Canada shares net proceeds after the forfeited items are liquidated, and cannot share an item in specie, that is, give the item to the other government to place into official use.

Additional elements

1516. As mentioned above, foreign orders for forfeiture must have been made by a "court of criminal jurisdiction" in order to be eligible to be enforced under the MLACMA. As most non-conviction based confiscation systems are "civil" in nature Canada cannot enforce such orders, even though many foreign Courts issuing such judgment are enforcing criminal laws and may in fact be acting under their criminal jurisdiction. This inability to enforce foreign *in rem* judgments does not apply in several Canadian provinces which have enacted comprehensive civil forfeiture legislative regimes. Canada indicated that constitutional issues eliminated this as a federal option, as only provinces have the competence to run civil court systems.

1517. The discussions regarding Recommendation 38 (Criteria 38.1 – 38.3) also apply to mutual legal assistance requests related to terrorist acts and the financing of terrorism as they are offences in Canada.

Statistics

1518. Inadequate statistics are maintained by the Department of Justice on some matters relevant to the effectiveness and efficiency of Canada's extradition and mutual legal assistance activities in

combating money laundering and terrorist financing. The IAG electronically records the receipt of a request, the requesting country, the nature of the request and when the file is closed. Special note is made of mutual assistance requests related to terrorism, money laundering and proceeds of crime.

1519. Canada responds to requesting countries immediately to confirm receipt of requests. The IAG is in regular contact with its counterparts to provide timely information regarding the execution of requests for assistance. Information was sought on the average time within which a request for assistance is executed but the data was not provided.

1520. The following table indicates the mutual legal assistance requests received and made by Canada for all offences from 2001-2006:

	Requests incoming	**Requests outgoing**	**Total**
2001-2002	387	140	**527**
2002-2003	406	104	**510**
2003-2004	311	84	**395**
2004-2005	318	77	**395**
2005-2006	350	84	**434**

1521. The following table indicates the mutual legal assistance requests received and made by Canada relating to money laundering, terrorism and financing of terrorism from 2001-2006:

	Requests involving money laundering – incoming	**Requests involving money laundering – outgoing**	**Requests involving terrorism – incoming**	**Requests involving terrorism – outgoing**	**Requests involving financing of terrorism – incoming**	**Requests involving financing of terrorism – outgoing**
2001-2002	22	38	5	5	2	0
2002-2003	32	15	8	2	3	0
2003-2004	28	14	6	4	1	0
2004-2005	23	32	4	1	2	0
2005-2006	38	14	4	4	1	0

1522. Canada indicated that the total number of mutual legal assistance requests received in all categories for the period between 2001 and 2006 is 167 and as follows:

MONEY LAUNDERING

Requests receive	143
Requests executed	78
Requests withdrawn/abandoned	41
Requests still active	24

RESTRAINT/FORFEITURE

Requests received	10
Requests executed	4
Requests withdrawn/abandoned	3
Requests refused	1
Requests still active	2

TERRORIST FINANCING

Requests receive	14
Requests execute	8
Requests withdrawn	2
Requests still active	4

1523. The following table indicates the value of the forfeited goods shared with other states:

Year	Value of forfeited goods
2002	CAD 153 000 (shared with Foreign States)
2003	CAD 18 500 (shared with Foreign States)
2004	CAD 270 000 (shared with Foreign States)
2005	CAD 54 000 (shared with Foreign States)
2006	N/A

6.3.2 Comments and Recommendations

1524. Canada has some problems with providing efficient MLA assistance. Canada should keep better MLA statistics than were provided to the assessors. Canada should consider options for streamlining judicial assistance such as streamlining processes to get financial and business records for foreign criminal investigations and consider devising a system that requires less judicial oversight of such matters. Not all involuntary production of business records or testimony should require judicial inquiries or oversight. For example, only if a party raises a valid legal objection to a production order should there be a need for judicial intervention.

1525. Canada should consider ways to give foreign confiscation requests more weight and become less subject to Court interference with the foreign criminal process. For example, Canada could make forfeiture assistance contingent upon the requesting state having a process that permits affected third-parties to challenge the forfeiture and that the proceedings in the foreign state otherwise comport with the Canadian concepts of due process, and then let the AG make that initial determination and place the burden upon the party challenging the foreign request to show that the requesting state's process for challenging a forfeiture falls below Canadian Constitutional standards. Canada should consider devising a way of executing foreign value based forfeiture judgments and related freeze, seizure or restraint orders to the same extent it can encumber proceeds and offence related assets before a foreign forfeiture judgment is obtained. Or, in the alternative, within the parameters of Canada's Constitutional framework, provide for pre-conviction restraint of an accused's assets for the payment of any potential fine, thereby protecting those assets from dissipation before the foreign court issues the fine, or value based forfeiture judgment.. Canada should create an informal process for the coordination of international confiscation cases jointly with the RCMP, the IAG and the prosecution service entities that execute MLA requests and their counter-parts in foreign governments so that these case can be handled more expeditiously and by persons who are experts in forfeiture law.

1526. Canada should allocate more resources to the authorities in charge of processing MLA requests.

6.3.3 Compliance with Recommendations 36 to 38 and Special Recommendation V

Rec.	Rating	Summary of factors underlying ratings
Rec.36	LC	• There are concerns about the ability of Canada to handle MLA requests in a timely and effective manner and effectiveness of the current regime cannot be demonstrated due to the lack of adequate data.
Rec.37	C	• The Recommendation is fully met.
Rec.38	LC	• There are doubts about the effectiveness of the measures in place under Recommendation 38: there is limited evidence of effective confiscation assistance as only four cases have been successful in last 5 years and international sharing statistics indicate that while asset sharing with foreign states is possible, it rarely occurs. Canada executes requests to enforce corresponding value judgments as fines, which has limitations and cannot be enforced against property held by third parties.
SR.V	LC	**Regarding compliance with Recommendation 38** • All elements missing in R. 38 are missing for SR.V; • There are concerns about the ability of Canada to handle MLA requests in a timely and effective manner and effectiveness of the current regime cannot be demonstrated due to the lack of adequate data.

6.4 Extradition (R.39, 37 & SR.V)

6.4.1 Description and Analysis

Recommendation 39 & Special Recommendation V

1527. *ML as an extraditable offence*. The money laundering offence is an extraditable offence under Canada's Extradition Act. Money laundering is a criminal offence under the Criminal Code and thus the dual criminality aspect of extradition can usually be met.

1528. The Minister of Justice is responsible for the implementation of extradition agreements, the administration of the 1999 Extradition Act ("Act"), including the processing of requests for extradition or provisional arrest under the Act or an applicable agreement. The Act provides that if certain preconditions are met a person may be extradited: 1) for the purpose of prosecution, 2) for the purpose of imposing a sentence on the person, or 3) for the purpose of enforcing a sentence already imposed on the person. Canada is party to 50 bilateral extradition treaties and has designated a number of countries as extradition partners.

1529. Canada's assistance under the Act may be engaged on the basis of 1) an extradition treaty between Canada and the state or entity making the request, 2) a multilateral agreement to which both Canada and the requesting party are signatories and which contains a provision on extradition, 3) a specific agreement entered into between Canada and the requesting state or entity with respect to a person or persons in a particular case, and 4) a general designation of the requesting state or entity as an "extradition partner" under the Act thereby allowing the extradition partner full coverage under the provisions of the Act notwithstanding the absence of an extradition treaty. In addition to a number of members of the Commonwealth, Canada has designated as extradition partners, two non-commonwealth countries, Costa Rica and Japan, as well as the International Criminal Court, and International Criminal Tribunals concerned with the prosecution of persons responsible for violations of international law in Rwanda and in the Former Yugoslavia.

1530. A request for provisional arrest may precede a formal request for extradition. Provisional arrest refers to a request for the apprehension of an individual, generally in circumstances of urgency or a similar ground of public interest, prior to the preparation of the documentary material upon which the formal extradition will be requested. A provisional arrest request may be made through Interpol.

1531. The Minister of Justice has the discretion to approve an application for a provisional arrest warrant if satisfied that a) the offence in question is subject to certain minimum penalty requirements set out in the Act, and 2) the extradition partner will make a formal request for the extradition of the person within a given time-period (specified by the treaty, other agreement or the Act) subsequent to the person's provisional arrest. Once a formal extradition request is received, the Minister of Justice may issue an authority to proceed. An authority to proceed authorises an extradition hearing to be held in order to consider whether the person should be committed for extradition.

1532. Once approved, the IAG forwards the request and all supporting material to the regional office of the Department of Justice in the jurisdiction where the person sought is believed to be located. That regional office will assign legal counsel to initiate and assume conduct proceedings before a judge to seek an order for the committal for extradition of the person. Regional counsel will also represent the extradition partner and the Minister of Justice throughout any appeal or judicial review proceedings.

1533. The person whose extradition is sought appears at the extradition hearing and participates through his legal counsel or directly. The Canadian offence that corresponds to the conduct supported by the foreign request will be identified by IAG counsel and named in a document called an Authority to Proceed ("ATP"), which is filed with the Canadian court before judicial proceedings begin. In the case of a person sought for the purpose of prosecution, the judge will determine if the evidence provided by the extradition partner is such that the person would be committed for trial in Canada if

the conduct had occurred in Canada and the corresponding offence had been charged in Canada. In the case of a person sought for the imposition or enforcement of a sentence the judge will determine if the person has been convicted with respect to conduct that corresponds to the Canadian offence listed in the ATP. Where the person sought for extradition has been convicted in the foreign State in absentia, the matter will be treated in Canada has though it were a request for prosecution rather than imposition or enforcement of a sentence.

1534. The Extradition Act allows evidence to be presented at the extradition hearing in a variety of ways: 1) in the usual manner applicable to Canadian domestic proceedings such as through the testimony of witnesses, or 2) in reliance on the provisions for the introduction of evidence set out in an applicable extradition arrangement, or 3) by means of a "record of the case". Evidence gathered in Canada must satisfy the rules of evidence under Canadian law in order to be admitted.

1535. The Extradition Act renders admissible at the extradition hearing a document called the Record of the Case, which summarizes the evidence available to the extradition partner for use in the prosecution, notwithstanding the fact that this document contains evidence otherwise inadmissible in Canadian domestic proceedings, as long as certain safeguards are respected. This includes having a judicial or prosecuting authority of the extradition partner certify that the evidence summarized is available for trial and is either sufficient to justify prosecution or gathered in accordance with their law. If the presiding judge is satisfied with the evidence, he or she will order the person detained pending the Minister of Justice's decision whether to surrender the person. Otherwise, the person will be discharged and released.

1536. The judicial phase of the extradition process is a determination only that the evidence is sufficient to warrant that the person be extradited. The ultimate decision with respect to whether the person will in fact be surrendered to the extradition partner is that of the Minister of Justice. At this phase of the process the Minister of Justice will consider any representations from the person or the person's counsel with respect to why the person should not be extradited or concerning any conditions to which the surrender order should be subject. In reaching a decision on surrender the Minister of Justice will be obliged to weigh the submissions of the person against Canada's international obligations with respect to extradition. The Minister of Justice in reaching his or her decision must respect the rights of the person sought as guaranteed by the Canadian Charter of Rights and Freedoms.

1537. If the person sought for extradition is serving a sentence in Canada, the Minister of Justice may order temporary surrender so that the person can face prosecution or appeal proceedings in the courts of the extradition partner and then be returned to Canada to serve the remainder of his or her outstanding sentence here. While the Minister of Justice relies upon advice from the IAG, he or she decides personally in each case. When the Minister of Justice agrees to surrender the person, the IAG helps coordinate arrangements for the actual transfer of the person to authorised agents of the requesting state or entity.

1538. *Extradition of nationals*. Canada can extradite its own nationals subject to the discretionary ground of refusal set out in section 47 of the Extradition Act or the relevant extradition agreement. Any actions taken by Canadian authorities in relation to a foreign request for extradition will be governed by the Canadian Charter of Rights and Freedoms. The Charter is a part of Canada's Constitution, which is the supreme law of Canada. The Charter guarantees certain rights and freedoms. For example, Section 6 of the Charter gives Canadian citizens "the right to remain in Canada." This means that where the person sought for extradition is a Canadian citizen and the offence for which extradition is requested is one that is capable of being prosecuted in Canada, the relevant Canadian Attorney General (either federal or provincial) must perform an assessment of whether prosecution in Canada is a "realistic" option. The assessment, known as a "Cotroni assessment", is based on factors that were enumerated in a decision from the Supreme Court of Canada called U.S.A. v. Cotroni [1989] 1 S.C.R. 1469. Historically, the result of most of these assessments has been to favour extradition.

1539. *Delays to process extradition requests*. The Extradition Act sets out time lines for specific steps to ensure minimal delays. For example, it is expected that extradition cases are to take priority at courts. The Extradition Act contains provisions calling for early dates to be set in extradition matters. The Department of Justice Canada has also created specialized teams throughout the country to help deal more swiftly and efficiently with requests for extradition and mutual legal assistance.

1540. The Extradition Act sets out time lines for specific steps in the extradition process to ensure minimal delay. Extradition cases are to take priority in accordance with section 21(3) of the Extradition Act: "The judge shall set an early date for the extradition hearing, whether that date is in or out of the prescribed sessions of the court." Extradition appeal cases are to take priority in accordance with section 51 of the Extradition Act: "An appeal under this Act shall be scheduled for hearing by the court of appeal at an early date whether that date is in or out of the prescribed sessions of that court."

1541. The use of the diplomatic channel is not mandatory in Canada as the Department of Justice is designated by Statute as the Central Authority for the implementation of extradition agreements, the administration of the Extradition Act and requests for extradition made under them. A few of Canada's more recent extradition treaties reflect this by providing for direct transmission of extradition requests between Canada's Department of Justice and Canada's treaty partner's appropriate authority. However, per international convention and the great majority of Canada's extradition agreements, extradition requests generally continue to be conveyed through diplomatic channels.

1542. *Statistics*. Canada provided the number of formal extradition requests it has received in a five year period from 2001 to 2006 and data showing the number of completed and abandoned incoming MLA requests, but did not provide any data on how long those requests were pending, or explain why requests were abandoned or denied. Only 24 of 106 persons requested for extradition over the last five years (less than 25%) have been returned to the requesting state.

1543. The following table indicates the number of extradition requests received and made by Canada for all offences from 2001-2005:

	Incoming requests	Outgoing requests	Total
2001	148	52	**200**
2002	187	37	**224**
2003	200	41	**241**
2004	178	36	**214**
2005	183	31	**214**

1544. The following table indicates the number of extradition requests received and made by Canada relating to money laundering, terrorism and financing of terrorism from 2001-2005:

	Requests involving money laundering – incoming	Requests involving money laundering – outgoing	Requests involving terrorism – incoming	Requests involving terrorism – outgoing	Requests involving financing of terrorism – incoming	Requests involving financing of terrorism – outgoing
2001	9	4	4	0	2	0
2002	5	2	3	0	0	0
2003	9	1	1	0	2	0
2004	17	2	1	0	0	0
2005	14	1	3	0	0	0

1545. There were 58 incoming requests relating to money-laundering and TF, but there were 106 persons sought for extradition as follows:

Money Laundering: Total of 103 persons sought for extradition[179]

- 23 individuals were returned to the Requesting State.
- The requests for 28 individuals were abandoned or withdrawn.
- For 52 individuals, the cases are still pending (that is, either the person has still not been located or the case is still at some stage of the extradition process, including the judicial, ministerial and appellate stages).

Terrorist Financing: Total of 3 persons sought for extradition

- 1 returned.
- 1 request withdrawn.
- 1 still ongoing.

1546. Recommendation 39 (Criteria 39.1 – 39.4) also applies to extradition proceedings related to terrorist acts and the financing of terrorism as they are offences in Canada.

Additional elements

1547. Persons cannot be extradited based only on warrants of arrests or judgements. There must be an assessment of the evidence, which takes place in the course of the judicial phase, which is followed by the Ministerial phase of the extradition proceedings.

1548. The simplified procedure of extradition of consenting persons who waive formal extradition proceedings will speed up the process and is set out in sections 70 -71 (consent) and section72 (waiver of extradition) of the Extradition Act For purposes of waiver, a description of the evidence (record of the case) is sufficient and certain ministerial acts are waived. Some of the cumbersome Ministerial approvals are dispensed with as well.

Recommendation 37 (dual criminality relating to extradition) and Special Recommendation IV

1549. With respect to extradition, dual criminality is required. Dual criminality requires that the conduct constitute an offence in both countries and that it be punishable by a prescribed period of incarceration. By default, as provided in the Extradition Act, in most cases, for the offence to be extraditable, it must carry a maximum penalty of at least two years of imprisonment. However, particular treaties may fix a lower sentence as a minimum, as does the Canada-U.S. treaty, for example. Canada uses a conduct test and will only extradite where the conduct in issue constitutes an offence that carries the relevant sentence minimum. However, it is not necessary that the offence under Canadian law have the same name or precise constituent elements as the foreign offence.

6.4.2 Recommendations and Comments

1550. Canada should maintain better extradition request data and should consider doing a critical evaluation of the extradition process.

[179] Of the 52 matters on 24 May 2007, there were only 32 requests still pending.

6.4.3 Compliance with Recommendations 37 & 39 and Special Recommendation V

Rec.	Rating	Summary of factors underlying ratings
Rec.37	C	• The Recommendation is fully met.
Rec.39	LC	• Insufficient statistical data was provided to make a thorough assessment, particularly the assessment of the delay element, but even the limited data provided indicates that obtaining extradition from Canada quickly may be difficult.
SR.V	LC	**Regarding compliance with Recommendation 39** • No meaningful statistical data provided to assess delay element (effectiveness issue).

6.5 Other Forms of International Co-operation (R.40, SR.V & R.32)

6.5.1 Description and Analysis

Obligation to provide the widest range of international co-operation

Law enforcement authorities

1551. Law enforcement authorities in Canada regularly provide informal assistance to police forces from other countries, in accordance with the laws of Canada. Generally, Canadian police are able to provide information or documentation that is publicly available or those that can be obtained on a voluntary basis. This usually involves direct communication between the police forces and may include transmission of information through Interpol.

1552. The RCMP is able to provide international cooperation to their foreign counterparts under Interpol, the international Liaison Officer (LO) program, MLAT and Extradition requests. The RCMP has formal arrangements that it can enter into with foreign counterparts for exchange of information, such as, Memoranda of Understanding (MOU) or Letters of Agreement (LOA). When sensitive information in the national interest is shared with or released to other governments, departments or organizations not covered by the Security Policy and Standards of the Government of Canada, the RCMP must ensure, through written agreements, *e.g.* MOU, that appropriate safeguards are established for the safekeeping of the information.

1553. The RCMP, in accordance with the Privacy Act, will share information related to domestic national security information with appropriate international agencies depending on that agency's "need and right to know" and in considering how such information would help further a criminal investigation. The RCMP includes with all outgoing written correspondence, messages and documents shared with other foreign agencies the required caveats that concern the ownership and the classification of the shared information. The RCMP may, with the Minister of PSEPC's prior approval, enter into a written or oral arrangement, or otherwise cooperate, with foreign security and intelligence organizations. This does not apply to foreign law enforcement agencies or organizations. National Security Investigations Section (NSIS) of the RCMP will be the point of contact for all foreign intelligence agencies in matters of national security.

1554. The RCMP Liaison Officer program was established to train and deploy highly skilled and multi-lingual regular members to strategic locations throughout the world. Partnering with international law enforcement agencies, foreign governments and Canadian embassies, the role of a LO is to maintain a link between Canadian law enforcement and the law enforcement agency of a host country to prevent and detect criminal offences against Canadian federal laws. Currently there are 35 RCMP liaison officers in 25 different locations in three geographic regions: Asia-Pacific/South Africa; Europe-Middle East-Africa; and Western Hemisphere.

1555. Mutual Legal Assistance Treaty (MLAT) requests and Extradition requests from participating countries are other mechanisms in which information is exchanged between international law enforcement agencies. A review of the money laundering investigational files indicate that through the

use of MLATs, Canada Law Enforcement provided the evidence/support for the restraint and eventual forfeiture of assets in the United States, Cuba, Antigua, the Cayman Islands, Switzerland and Luxembourg.

1556. The RCMP receives numerous requests to provide additional training internationally. Training has been provided to representatives from many countries including Columbia, Dominican Republic, Jamaica, Cuba, Austria, Czech Republic, Russian Federation, Peru, Venezuela, Hong Kong, Kenya, Panama, Bogotá, Pakistan, Bahrain, and Guatemala.

FINTRAC as an FIU

1557. FINTRAC is authorised to share information about suspected money laundering or terrorist financing with a foreign financial intelligence unit or similar foreign entity if a Memorandum of Understanding is signed between the two organisations. FINTRAC is authorised to receive information from these similar foreign entities when no MOU is signed between the two organizations. According to the PCMLTFA, the Minister of Finance or FINTRAC, with approval of the Minister may enter into a written agreement with a similar foreign entity for the exchange of information that there are reasonable grounds to suspect would be relevant to investigating or prosecuting a money laundering offence or a terrorist activity financing offence, or an offence that is substantially similar to either offence.

1558. When deciding to pursue an MOU with a similar foreign entity (hereafter FIU), FINTRAC considers a number of factors, including the following: Canadian foreign policy; FINTRAC's operational priorities; the FIU's enabling legislation; other jurisdictional legislation relating to curbing money laundering or terrorist financing; the privacy/access laws that exist in the jurisdiction (physical, IT and others); the jurisdictions participation in the FATF or FATF Regional-Style Bodies; the FIUs standing in the Egmont Group and adherence to the Egmont Principles of Information Exchange; and the measures that the FIU has in place to protect information. FINTRAC's signed MOUs are consistent with the Egmont Group Model MOU Template.

1559. Requests for information from MOU partners are normally received through the Egmont Secure Website (ESW) a secure communication channel used by most Egmont-member FIUs. Once an FIU query (FIUQ) is received FINTRAC sends an acknowledgment of receipt email via ESW. A copy of the FIUQ is made and immediately assigned to an analyst in order to determine if FINTRAC has transaction information related to the FIUQ. If so, analysts use all information available to them to build a case in response to the query. If FINTRAC does not have financial transaction information relating to the query received, a negative response is provided to the querying FIU. As a matter of practice, the assessment team was told that all queries are dealt with at least on a preliminary basis within 30 days or sooner for an urgent request. Negative responses are generally provided within five days of receipt of the query.

1560. The threshold for disclosing to foreign counterparts is the same as for domestic police forces, and once the analysts are of the view that the threshold has been met, the disclosure is worked through the same approval process described earlier with respect to domestic disclosures. Similarly, in its disclosures to foreign FIUs, FINTRAC provides the same designated information as it does domestically (see Section 2.5).

1561. If FINTRAC is in a position to disclose designated information in response to a FIUQ it is sent via ESW (provided the FIU has a current security certificate, to ensure the information that is being sent is encrypted). One of the stipulations of the MOU between FINTRAC and its foreign counterparts is that any information provided to the foreign agency may only be used for its intended purpose (investigation or prosecution of a money laundering or terrorist financing offence), and the information may not be further disseminated to any third party without the explicit prior consent of FINTRAC. FINTRAC also adheres to these stipulations regarding the information received from foreign FIUs.

1562. FINTRAC currently has 44 MOUs in place and continues to actively negotiate additional MOUs.

International Fora

1563. Canada has responded to the challenges of international cooperation by posting experienced Canadian criminal counsel abroad. Two liaison positions have been established in Europe: one in Brussels for the European Union, and the other in Paris, to coordinate Federal Prosecution Service (FPS)[180] (see Section 6.3 of the report).

Supervisors co-operation

1564. *FINTRAC.* Until the new provisions were enacted in December 2006, the PCMLTFA did not allow FINTRAC to exchange compliance-related information with its foreign counterparts. PCMLTFA now allows FINTRAC to enter into information sharing arrangements or agreements under new section 65(2) with any agency in a foreign state that has responsibility for verifying AML/CFT or with an overseas organization with respect to compliance information relating to any reporting entity under the Act as well as the assessment of risk relating to the institution's level of compliance.

1565. FINTRAC advised the examiners that at this time the organisation had not entered into any arrangements or agreements of this nature. In addition, FINTRAC has MOUs with most of the Canadian financial sector supervisors both at a federal and provincial level to receive compliance information from these agencies. Given the fact that FINTRAC is the supervisory agency as regards AML/CFT compliance issues and the wide range of institutions under AML/CFT obligations in Canada, to a large extent, FINTRAC would rely on the information received from federal and provincial regulatory agencies to meet requests for information from supervisory counterparts. However, the actual mechanisms for sharing are still in discussion.

1566. *OSFI*. Under the OSFI and Bank Act, the Superintendent of Financial Institutions is empowered to share information relating to banks with other agencies that are involved in the regulation of financial institutions provided that the Superintendent is satisfied that the information will be held by those agencies on a confidential basis.

1567. Although not required by law, OSFI generally shares information with overseas regulators via MOU. OSFI MOUs refer specifically to sharing information relating to terrorism and financial crimes. Financial crimes are specifically defined as money laundering, unauthorised banking, investment or insurance business and all other violations of law on financial markets. The crime of financing terrorism would not seem to be included as "…violations of law on financial markets".

1568. OSFI demonstrates effectiveness based on its co-operation in conducting cross border examinations in a number of countries in which its licensees have subsidiaries. Assistance has been rendered to OSFI in the absence of formal MOUs. However cross border examinations of institutions in Canada would be subject to a formal MOU requirement.

1569. *Provincial regulators*. Four provincial Securities Regulators (Ontario, Quebec, Alberta and British Columbia) are signatories under IOSCO's Multilateral Memorandum of Understanding Concerning Consultation and Co-operation and the Exchange of Information. However, the MOU examined did not refer to the exchange of information relating to AML/CFT. The definition of "laws

[180] The Federal Prosecution Service, through the National Security Group, is responsible for developing operational policy related to the prosecution of terrorism offences, providing legal advice to investigative bodies (*e.g.* Royal Canadian Mounted Police, Canada Border Services Agency (CBSA), etc.) in relation to the investigation of terrorism offences, and conducting prosecutions of terrorism offences involving the national interest and supporting prosecutions conducted by the provincial Attorneys General.

and regulations" under the MOU is expressly limited to issues relating to securities. However, this does not preclude securities regulators to exchange AML/CFT compliance information should their securities legislation permit it.

1570. The Ontario Securities Commission has its Office of Domestic and International Affairs that deals with overseas governments and regulators. Its governing statute at section 153 does also specifically refer to wide powers of the Commission to share information internationally with foreign regulators, stock exchanges, SRO and law enforcement authorities. This may permit the OSC to share information even in the absence of a MOU. The IDA has broad powers to share information with other regulatory and police agencies whether or not a formal information sharing agreement is in place. In Québec, section 297 and following of the *Securities Act* refer to broad powers of the *Autorité des marchés financiers* for sharing information with foreign and national authorities, including securities regulators, police forces, the Minister of Revenue or any other department, body or organization with whom the *Autorité des marchés financiers* may enter into an agreement to facilitate the administration or enforcement of securities and fiscal legislation as well as penal or criminal legislation.

1571. In the case of Credit Unions, there are several supervisors. In the case of the Deposit Insurance Corporation of Ontario, the Credit Union and *Caisses Populaires* Act does not provide DICO with the express power to share information (whether AML/CFT related or otherwise) cross border. In the case of the Financial Services Commission of Ontario the governing statute also seems to have this shortfall (there is no statutory authority for the Superintendent to share information under his general powers and duties in Section 5 of the Financial Services Commission of Ontario Act, 1997). Desjardins Group also plays a supervisory role in the case of its group of credit unions. Whilst Desjardins has demonstrated outreach to other jurisdictions to assist in development of Co-operative movement, the assessors did not see any basis for or evidence of the sharing of information with other supervisory counterparts on a cross border basis. Canada indicated that all credit union supervisors can exchange compliance information with international counterparts although there is no legal framework that explicitly authorises the exchange of such data.

1572. The assessors take the view that the main avenue for the cross-border sharing of supervisory information relating to AML/CFT compliance issues would be through FINTRAC, the main AML/CFT supervisory authority although there is no barriers to OSFI, the OSC, the IDA or the AMF sharing AML/CFT supervisory information with foreign counterparts. This mechanism of directing AML/CFT information through FINTRAC appears necessary given in particular the absence of legal framework for certain provincial regulators that explicitly authorises them to exchange AML/CFT compliance information with foreign counterparts.

Gateways and channels for prompt and constructive exchanges of information

Law enforcement authorities

1573. Canada became a member of International Criminal Police Organization in 1949, and the RCMP was delegated the responsibility for administering and operating the National Central Bureau (Interpol Ottawa). Interpol Ottawa is located at RCMP National Headquarters and forms part of the International Liaison Program. Interpol Ottawa works closely with the Canadian Central Authority and serves as the link between official Canadian and international law enforcement agencies. Interpol Ottawa is the central coordination point for the Canadian law enforcement community in pursuing criminal investigations abroad, establishing rapid contact with foreign police agencies and liaison officers, transmitting requests for information required in investigations to NCBs in other countries and assisting on judicial proceedings. Interpol Ottawa provides information on various organized crime groups and their activities, criminal activity with international ramifications, and provides money laundering information for use in countering international money laundering.

FINTRAC as an FIU

1574. FINTRAC has developed and implemented a process to obtain feedback from its partner FIUs about the query process and disclosures. The assessment team was told that FINTRAC has generally received positive feedback and is currently considering how best to respond to comments and to further strengthen these relationships.

Supervisors co-operation

1575. While FINTRAC as AML/CFT compliance supervisor now has legislative authority to share supervisory information, it must do so via agreement or arrangements with its international supervisory counterparts. FINTRAC has not entered yet into arrangements or agreements of this nature (although Canada indicated that FINTRAC is currently negotiating with several counterparts abroad) and therefore a serious issue arises as to the effectiveness of the system and the perceived inability at this point for an international supervisory counterpart to receive supervisory information relating to AML/CFT in sectors outside of those supervised by OSFI, IDA, the OSC and the AMF.

1576. Whilst OSFI is able to share AML/CFT compliance information on its FRFIs under the MOU that it executes with supervisory counterparts (and even possibly in the absence of such a MOU under the OSFI Law), the IOSCO MOU is restricted in terms of the information that can be shared and in several cases (not including the Ontario Securities Commission and the AMF in Québec the regulators themselves do not appear to have an inherent jurisdiction to share information on a cross border basis. The same situation appears to exist in the case of other provincial regulators.

Spontaneous exchanges of information or upon request

Law Enforcement authorities

1577. As described earlier in this Section, the RCMP is able to assist foreign counterparts with both spontaneous and more formally administered requests for information. These exchanges are subject to the RCMP information sharing protocols (see comments latter in this Section on controls and safeguards).

FINTRAC as an FIU

1578. As stipulated in the PCMLTFA, FINTRAC is authorised to exchange information, either spontaneously or upon request, in relation to money laundering offences, terrorist activity financing offences and offences that are substantially similar. Although FINTRAC can receive information about money laundering and the underlying predicate offence, FINTRAC can only provide information relevant to the money laundering offence (not about the underlying predicate offence). Since June, 30 2007, FINTRAC is able to share a larger amount of designated information, including "*the grounds on which a person or entity made a report under section 7* (i.e. *a suspicious transaction report) about the transaction or attempted transaction and that the Centre considers relevant in the circumstances*". An MOU between FINTRAC and the foreign agency must be in place to govern this exchange.

Supervisors co-operation

1579. FINTRAC's powers to share supervisory information will be dependent on the terms of the agreements or arrangements that would be established between FINTRAC and its supervisory counterpart. As these have not yet been established it is not clear whether information will be provided on a spontaneous basis as well as upon request.

1580. Information exchange will occur with OSFI in practice within the context of an MOU. However provided that the requirements of the Bank and OSFI laws are met, there would be no bar to

spontaneous information exchange. The MOU provides that for the most part, information requests must be made in writing but that in cases where expedition is required, then the request should be followed up in writing. The assessors also consider that the OSFI laws are framed widely enough for OSFI to share information even in the absence of a MOU.

1581. Similarly under the Securities Act of Ontario, the OSC can receive and provide information broadly with regulators and law enforcement. There is no legal limitation as to whether the information must be the subject to a request or whether it may be shared on a spontaneous basis. Canada indicated that the same holds true for the Autorité des marches financiers in Québec.

1582. The IDA has broad powers to share information with other regulatory and police agencies whether or not a formal information sharing agreement is in place.

1583. The assessors noted limitations as regards other provincial securities regulators whose information sharing is based on the IOSCO MOU. In addition there was no express power of provincial credit union supervisors to share AML/CFT information internationally.

Authorisation to conduct inquiries on behalf of foreign counterparts

Law Enforcement authorities

1584. The RCMP can use a number of criminal intelligence and police databases to conduct inquiries on behalf of foreign counterparts. The information contained in those systems is governed by different sharing protocols that aim at protecting the right to privacy of the individuals mentioned in the different databases.

FINTRAC

1585. FINTRAC is able to conduct inquiries on behalf of foreign counterparts in relation to with which it has an MOU. In such cases, FINTRAC is able to access its databases of all report types. FINTRAC is also able to access federal and provincial databases maintained for purposes related to law enforcement information or national security, and in respect of which there is an existing agreements, and to publicly available information, including commercially available databases, in developing the case. The threshold and limitations on designated information for disclosing the results of inquiries conducted on behalf of foreign counterparts is the same as previously discussed for domestic disclosures.

Supervisors co-operation

1586. Provided that there is an agreement or arrangement in place, FINTRAC may make queries relating to AML/CFT supervisory information on behalf of international counterparts and relate their findings to the requesting authority. FINTRAC has overarching powers to carry out inspections and otherwise obtain information from of financial institutions that are covered by the PCMLTFA. Additionally, it may rely on information received from domestic supervisors to respond to queries from these overseas counterparts.

1587. Both OSFI and the Ontario Securities Commission can make enquiries on behalf of international partners as regards AML/CFT issues and communicate these findings to the counterpart supervisor. In the case of other securities regulators, such exchanges may not be possible in the absence of express power to share AML/CFT information internationally.

1588. OSFI is not an investigatory body per se, and would be limited by its governing law to conducting investigations which relate to obligations under their own governing statutes.

Exchanges of information without disproportionate or unduly restrictive conditions

Law Enforcement authorities

1589. The RCMP is committed to exchanging information with foreign counterparts in circumstances that help to effectively combat money laundering and terrorist financing. The RCMP handles requests in accordance with all Canadian laws and its own internal procedures and protocols for information sharing. These procedures and protocols provide clear guidelines for proportionate classification of material along with the necessary conditions that must be enforced on protected, classified material.

1590. The RCMP also uses Interpol and the RCMP International Liaison Officer Program to help facilitate the flow of information between international policing agencies.

FINTRAC as an FIU

1591. FINTRAC's legislation requires that an MOU be signed and that a legal threshold be met to exchange information related to suspected money laundering and terrorist financing with an MOU partner. It is important to note that disclosures to MOU partners are similar to disclosures to domestic law enforcement and national security agencies.

Supervisors co-operation

1592. The exchange of supervisory information is not made subject to disproportionate or unduly restrictive conditions. FINTRAC's main criteria with regards to supervisory information is that there is an appropriate agreement or arrangement in place and that the compliance information will be kept confidential and used only for the purposes of ensuring compliance and measuring risks. In OSFI's case, the criteria are that the recipient agency is a supervisory agency and that the agency will keep the information confidential. In the case of the OSC the powers are broader. Other provincial regulators would have to rely on FINTRAC acting as a conduit for the exchange of information internationally.

Cases involving fiscal matters

1593. Under the PCMLTFA, FINTRAC may disclose designated information to an MOU partner when it has reasonable grounds to suspect that this information would be relevant to investigating or prosecuting a money laundering or a terrorist activity financing offence, or that is substantially similar to either offence. Whether or not the query involves fiscal matters, FINTRAC will consider disclosing information as long as the query also involves money laundering and/or terrorist financing activity matters.

1594. For OSFI, once an MOU is in place with another regulator, information is shared as permitted under the MOU subject to the conditions contained therein.

Existence of secrecy or confidentiality requirements

Supervisors co-operation

1595. The supervisory authorities in Canada including FINTRAC, OSFI, the provincial supervisors and SROs all have very clear and broad power to access information from their supervised entities, which may then be passed on to overseas counterparts through the appropriate channels provided that the statutory or administrative preconditions are met (*e.g.* the execution of an information sharing agreement or arrangement). In the case of supervisory authorities that do not have the appropriate power to share directly, such information exchange would be likely to occur through FINTRAC. The assessors did not consider that secrecy or confidentiality laws would have affected the ability of the relevant supervisors to co-operate with their counterparts, through the abovementioned avenues.

Controls and safeguards

Law Enforcement authorities

1596. The RCMP supports the concept of integrated policing through the exchange of criminal intelligence and information with external partners. The RCMP also recognizes this exchange and sharing process is governed by federal legislation, Ministerial Treasury Board Directives, Ministerial directives, and RCMP policies, and various specific caveats and conditions. There are fundamental protocols and Best Practices the RCMP uses to ensure that criminal intelligence and information that is shared with foreign partners and agencies is used only in an authorised manner. The RCMP have policies that help guide it to appropriate decisions for handling requests and sharing or exchanging criminal intelligence and information with foreign partners and agencies. The large majority of RCMP information is subject to security classification. The security level of the information in question will govern many aspects of information sharing or exchange process with external partners.

1597. RCMP documents containing police information or criminal intelligence also include standard caveats that provide further direction on how, and with whom, the document can be shared. These caveats generally outline conditions that are binding on the recipient, regarding the use and disclosure of the information contained in the document.

FINTRAC as an FIU

1598. Consistent with Canada's privacy legislation, FINTRAC undertakes strict safeguards to protect the confidentiality of the information collected through the PCMLTFA. This principle of protecting information is also applied to information received from other competent authorities. A confidentiality clause in FINTRAC's MOU template stipulates that all information exchanged will be subject to strict controls and safeguards to ensure that the information is used only in an authorised manner and treated in a confidential manner and will be protected by FINTRAC and the foreign authority by the same confidentiality as provided by the legislation of the country of the receiving Authority for similar information received from domestic sources.

Supervisory authorities

1599. FINTRAC as AML/CFT supervisor is subject to the safeguards indicated above. In OSFI's case, the criterion is that the recipient agency is a supervisory agency and that the agency will keep the information confidential. In the case of the OSC the powers appear to be broader.

Additional elements

1600. The RCMP may, with the Minister of PSEPC's prior approval, enter into a written or oral arrangement, or otherwise cooperate, with foreign security and intelligence organizations. As such, there are working arrangements and understandings between the RCMP and those intelligence agencies in respect to the sharing of information. Information received from any of these agencies will be treated to the standard care maintained by the agency which generated the document and any other conditions they wish to impose.

1601. Other arrangements with foreign agencies are established and maintained as long as they remain compatible with Canada's foreign policy towards the country or international organization in question.

1602. OSFI does not have authority to deal with non-counterparts in respect of confidential information on supervised financial institutions. However, OSFI can and does assist both domestic and foreign regulators where non-confidential information is involved. For examples, OSFI has an active program of tracking alleged unauthorised banking and insurance activity in Canada and elsewhere. Information received as part of this activity is freely and regularly exchanged with law enforcement,

other regulators, prosecutors (domestic and foreign), supervised financial institutions, and others. Where appropriate OSFI also posts this information to its web site.

Statistics

1603. *FIU*. FINTRAC keeps adequate statistics concerning the number of formal request for assistance made to or received by the FIU from foreign counterparts, including the number of spontaneous referrals. No statistics are kept on the number of requests granted or refused and the time requested to respond.

1604. *Supervisory authorities*. OSFI keeps statistics on the number of formal requests for assistance made or received.

Data on other forms of international co-operation

1605. The following tables provide summary information about FINTRAC exchange of information with foreign FIUs (up to date as of October 17, 2006). The number of disclosures made by FINTRAC to foreign FIUs continues to increase.

	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007[1]	**Totals**
Spontaneous Disclosures	2	3	0	4	9	**18**
Disclosures in response to a Query	8	19	22	27	13	**89**

[1] Fiscal year 06-07 statistics include data up to October 17, 2006.

1606. At the time of the on-site visit, FINTRAC had received 264 requests from foreign FIUs and sent 46 requests to its counterparts (in Australia, Barbados, Bahamas, Belgium, Denmark, Japan, UK and USA).

1607. The number of queries from FINTRAC (46 since 2000-2001) to foreign FIUs is relatively low, taking into account that the majority of these queries were sent to one neighbouring country. FINTRAC has signed up to now 44 MOUs with foreign FIUs. Nevertheless, a wide range of these MOUs has been signed in 2005 (9) and 2006 (16). This could partly explain the low number of requests until now.

1608. The following tables provide an overview of requests received and made by OSFI to foreign counterparts.

Regulator's Country receiving request	**Reason**
Jamaica	Review of Canadian bank's subsidiary operations conducted by OSFI
Mexico	Review of Canadian bank's subsidiary operations conducted by OSFI
Cayman Islands	Review of Canadian banks' subsidiary operations conducted by OSFI
Jersey	Review of Canadian bank's subsidiary operations conducted by OSFI
Guernsey	Review of Canadian bank's subsidiary operations conducted by OSFI
Regulator's Country making request	
UK	Status of Canadian Banks' AML/CFT programs
Germany	Provide Results of OSFI's AML Review of German Bank's Canadian operations
USA	Provide Results of OSFI's AML Review of US Bank's Canadian operations

1609. No information exchanges (in either direction) have been refused. No statistics are kept by OSFI on the time requested to respond to a request initiated by its counterparts.

6.5.2 Recommendations and Comments

1610. *FINTRAC as a supervisory authority*. FINTRAC, if it is to act as a conduit for overseas supervisors to obtain information relating to AML/CFT compliance within the Canadian system, should rapidly enter into agreements with key supervisory counterparts in order to allow proper information sharing. This is necessary in order for FINTRAC to be in a position to render assistance to supervisory counterparts. This requirement is even more critical as a number of Canadian regulatory bodies (not including OSFI, the OSC, the IDA and the AMF) have not been given the explicit power to share AML/CFT information with overseas regulatory counterparts.

1611. Canadian Authorities may wish to consider removing the requirement in the PCMLTFA for formal arrangements or agreements between FINTRAC and foreign supervisory counterparts in order to provide international assistance on a more prompt and effective basis.

1612. Canadian Authorities should ensure that the MOUs established between FINTRAC and Canadian regulatory authorities make appropriate reference to the use of the information received in international requests. If there are requirements for the governing laws of the regulators to be changed to allow for international exchange of information, then this should be implemented.

6.5.3 Compliance with Recommendation 40 and Special Recommendation V

Rec.	Rating	Summary of factors underlying ratings
Rec.40	LC	*FINTRAC as a supervisory authority* • FINTRAC has the legal capacity to exchange information with foreign counterparts but has not yet put the arrangements and agreements in place.
SR.V	LC	**Regarding compliance with Recommendation 40** *FINTRAC as a supervisory authority* • FINTRAC has the legal capacity to exchange information with foreign counterparts but has not yet put the arrangements and agreements in place.

7. RESOURCES AND STATISTICS

7.1 Resources and Statistics (R. 30 & 32)

1613. The text of the description, analysis and recommendations for improvement that relate to Recommendations 30 and 32 is contained in all the relevant sections of the report *i.e.* all of Section 2, parts of sections 3 and 4, and in section 6. There is a single rating for each of these Recommendations, even though the Recommendations are addressed in several sections. Section 7.1 of the report contains only the box showing the rating and the factors underlying the rating.

Rec.	Rating	Summary of factors underlying ratings
Rec.30	PC	*In relation to the FIU*: • The number of staff dedicated to the analysis of ML/TF cases is too low, especially considering the amount of reports coming in. *In relation to law enforcement agencies:* • The RCMP lacks resources to properly undertake ML/TF investigations. *In relation to the Department of Justice* • There seems to be very little if any coordinated or sophisticated training efforts in the forfeiture area. • The authorities in charge of processing MLA requests lack resources. *In relation to prosecution agencies:* • Insufficient training is provided for combating ML and TF. *In relation to supervisors:* • FINTRAC current internal organisation and resources dedicated to supervision are insufficient to allow it to perform its compliance function effectively.
Rec.32	LC	• Incomplete statistics are kept in relation to ML investigations. • Incomplete statistics are kept in relation to ML sentencing. • Statistics on confiscation are incomplete. • There is no data available on the time requested to respond to extradition and MLA requests. • No statistics are kept by OSFI on the time to respond to a request initiated by its counterparts.

7.2 Other relevant AML/CFT measures or issues

N/A

7.3 General framework for AML/CFT system

N/A

TABLES

Table 1. Ratings of Compliance with FATF Recommendations

The rating of compliance vis-à-vis the FATF Recommendations should be made according to the four levels of compliance mentioned in the 2004 Methodology (Compliant (C), Largely Compliant (LC), Partially Compliant (PC), Non-Compliant (NC), or could, in exceptional cases, be marked as not applicable (NA).

Forty Recommendations	Rating	Summary of factors underlying rating
Legal systems		
1. ML offence	LC	▪ The ML offence does not cover all designated categories of predicate offences (copyright related offences). ▪ Section 462.31 ML offence contains a purposive element that is not broad enough to meet the requirements of the Conventions or R.1. ▪ The number of convictions for Section 462.31 ML is very low, as is the percentage of convictions in comparison to charges laid.
2. ML offence – mental element and corporate liability	LC	▪ The number of convictions for Section 462.31 ML is very low. ▪ Due to the lack of data on ML sentencing, is not possible to assess whether natural and legal persons are subject to effective, proportionate and dissuasive sanctions for ML.
3. Confiscation and provisional measures	LC	▪ The fine in lieu forfeiture provision does not fully and effectively meets the requirement for equivalent value provisions and does not apply to property held by third parties. ▪ Based on the limited quantitative and qualitative information available, it does not seem that the confiscation and seizure regime is fully effective, particularly with respect to value based confiscation.
Preventive measures		
4. Secrecy laws consistent with the Recommendations	C	▪ The Recommendation is fully met.
5. Customer due diligence	NC	*Scope issue* ▪ the requirement to conduct CDD does not extend to all financial institutions as defined by the FATF (notably financial leasing, factoring and finance companies). *Numbered accounts* ▪ Although numbered accounts are permissible and used, there is no direct requirement to maintain them in such a way that full compliance can be achieved with the FATF Recommendations. *When CDD is required* ▪ There is no requirement to carry out CDD measures when there is a suspicion of ML or TF and when financial institutions have doubts about the veracity or adequacy of previously obtained CDD data. ▪ Customer identification for occasional transactions that are cross-border wire transfers takes place for transactions above CAD 3 000. This threshold is currently too high and no equivalent requirement is in place for domestic wire transfers. *Required CDD measures* ▪ The current customer identification measures for natural persons are insufficient, especially in relation to non face-

Forty Recommendations	Rating	Summary of factors underlying rating
		to-face business relationships. *Identification of persons acting on behalf of the customer* ▪ The requirement to identify up to three persons who are allowed to give instructions in respect of an account is too limitative. *Third party determination and identification of beneficial owners* ▪ Except for IDA supervised entities, financial institutions are neither required to understand the ownership and control structure of the customer nor obliged to determine who are the natural persons that ultimately own or control the customer. *Purpose & intended nature of the business relationship* ▪ There are currently no requirements (except for securities dealers) to obtain information on the purpose and intended nature of the business relationship. *Ongoing Due Diligence* ▪ Except for securities dealers, there are currently no requirements to conduct ongoing due diligence on the business relationship although the need to identify customers for large cash transactions and electronic fund transfers provide certain automatic trigger points. ▪ Except for securities dealers financial institutions are not required to ensure that documents, data and information collected under the CDD process is kept up-to-date and relevant. *ML/FT risks – enhanced due diligence* ▪ There is no requirement to perform enhanced due diligence for higher risk categories of customer, business relationship or transaction. *ML/FT risks – reduced or simplified due diligence* ▪ The current exemptions mean that, rather than reduced or simplified CDD measures, no CDD apply, which is not in line with the FATF standards. ▪ Exemptions from CDD and third party determination bring in very far reaching exceptions that introduce potential gaps in the customer identification process (especially the exemptions apply to financial entities that operate in FATF countries based on presumption of conformity only). ▪ There is no explicit provisions that set out that CDD or third party determination exemptions are not acceptable where there is a suspicion of ML or FT or specific higher risk scenarios apply. ▪ Financial institutions, in certain circumstances, are given the permission to exempt from CDD requirements or third party determination obligations certain customers resident in another country. However, Canada has not carried out a systematic country risk analysis to ensure that third countries in which customers of Canadian financial institutions are resident are in compliance with and have effectively implemented the FATF Recommendations. *Timing of verification* ▪ PCMLTF Regulations sets out unreasonable verification timelines to be carried out by certain financial sectors and/or in relation to certain customers. *Failure to satisfactorily complete CDD* ▪ Financial institutions (except securities dealers in some circumstances) are not prevented from opening an account or commencing business relationship or

Forty Recommendations	Rating	Summary of factors underlying rating
		performing a transaction and they are not required to make a suspicious transaction report. ▪ In situations where the financial institution has already commenced a business relationship but is unable to perform adequate CDD and establish beneficial ownership, there is no requirement to terminate the business relationship and to consider making a suspicious transaction report.
6. Politically exposed persons	NC	▪ There were no mandatory legislative or other enforceable requirements in relation to PEPs at the time of the on-site visit.
7. Correspondent banking	PC	▪ Financial entities are not required to assess the respondent institution's AML/CFT controls and to ascertain that these controls are adequate and effective. ▪ Financial institutions are not required to determine the reputation of the foreign financial entity (other than take reasonable measures to ascertain whether there are any civil or criminal penalties that have been imposed on the foreign financial institution in respect of AML/CFT requirements) and the quality of supervision of that entity. ▪ In the context of payable through accounts, the respondent entity is not required to perform all the normal CDD obligations set out in Recommendation 5 on its customers that have direct access to the accounts of the correspondent institution in line with the FATF standards. ▪ The effectiveness of the measures in place cannot yet be assessed.
8. New technologies & non face-to-face business	NC	▪ There are no specific legislative or other enforceable obligations addressing the risks posed by the application of new technological developments. ▪ Financial institutions are not required to have policies and procedures in place to address any specific risk associated with non face-to-face business relationships or transactions. ▪ No effective CDD procedures for non face-to-face customers are in place.
9. Third parties and introducers	NC	▪ In the only two scenarios where reliance on a third party or introduced business is legally allowed without an agreement or arrangement, the measures in place are insufficient to meet the FATF requirements. ▪ In addition to the two reliance on third parties/introduced business scenarios contemplated by the Regulations, the financial sector uses introduced business mechanisms as a business practice. However, no specific requirements as set out in Recommendation 9 apply to these scenarios.
10. Record keeping	LC	*Scope issue* ▪ The record keeping requirement does not extend to all financial institutions as defined by the FATF (notably financial leasing, factoring and finance companies). ▪ Financial institutions must ensure that all records required to be kept under the PCMLTFA can be provided within 30 days which does not meet the requirement to make CDD records available on a *timely* basis to competent authorities, especially in normal business circumstances.
11. Unusual transactions	PC	▪ There is no explicit nor enforceable requirement for financial institutions to examine all complex, unusual large transactions under the current legislation (except for IDA members). Except for IDA members, the monitoring obligation is implied and indirect (it flows from reporting suspicious transactions, large international electronic funds transfer and large cash transactions) and it does not cover the full range of monitoring situations as stipulated in Recommendation 11.

Forty Recommendations	Rating	Summary of factors underlying rating
		▪ There is no explicit requirement to examine the background and purpose of these unusual transactions (except for IDA members). ▪ There is no requirement to keep record of financial institutions' findings in relation to complex, unusual large or unusual patterns of transactions.
12. DNFBP – R.5, 6, 8-11	NC	*Scope issue* ▪ Lawyers, Quebec Notaries, BC Notaries, dealers in precious metals and stones, Internet casinos, ship based casinos and TCSPs are not captured by the PCMLTFA and therefore are not subject to the requirements under Recommendations 5, 6 and 8-11. *Application of Recommendation 5 to casinos* ▪ The requirements applicable to casinos are insufficient in relation to: (1) when CDD is required; (2) required CDD measures; (3) identification of persons acting on behalf of the customer; (4) third party determination and identification of beneficial owners ; (5) purpose & intended nature of the business relationship ; (6) ongoing Due Diligence; (7) ML/FT risks and (8) failure to satisfactorily complete CDD. *Application of Recommendation 5 to real estate brokers and sales representatives and accountants* ▪ The circumstances in which real estate agents and sales representatives and accountants have to carry out customer identification are too limitative. ▪ The CDD requirements that real estate agents and sales representatives and accountants are subject to are substantially very basic and extremely limited. *Application of Recommendation 6 to casinos, real estate brokers and sales representatives and accountants* ▪ Canada has not implemented any specific AML/CFT measures concerning PEPs that are applicable to DNFBPs. *Application of Recommendation 8 to casinos, real estate brokers and sales representatives, accountants* ▪ There are no specific legislative or other enforceable obligations for DNFBPs to take measures to prevent the misuse of technological developments in ML/TF schemes. ▪ The DNFBPs are not required to have policies and procedures in place to address any specific risk associated with non face-to-face business relationships or transactions. *Application of Recommendation 9 to casinos, real estate brokers and sales representatives and accountants* ▪ There are currently no provisions for DNFBPs that address the issue of relying on intermediaries or third parties to perform elements of the CDD process outside the outsourcing type of scenario. *Application of Recommendation 10 to casinos, real estate brokers and sales representatives and accountants* ▪ The circumstances in which real estate agents and sales representatives and accountants have to keep records are too limitative. ▪ Real estate agents and sales representatives, casinos and accountants institutions must ensure that all records required to be kept under the PCMLTFA can be provided within 30 days which is not in line with the FATF requirement to make CDD records available on a timely basis to competent authorities.

Forty Recommendations	Rating	Summary of factors underlying rating
		Application of Recommendation 11 to casinos, real estate brokers and sales representatives and accountants ▪ There is currently no explicit provision requiring that DNFBPs pay special attention to all complex, unusual large transactions that have no apparent or visible economic or lawful purpose (the monitoring obligation is implied and indirect (it flows from reporting suspicious transactions, large international electronic funds transfer and large cash transactions) and it does not cover the full range of monitoring situations as stipulated in Recommendation 11). The other requirements under Recommendation 11 are not met either.
13. Suspicious transaction reporting	LC	▪ Some financial institutions as defined by the FATF (especially financial leasing, finance companies, providers of e-money) are not covered by the obligation to report. ▪ There is no requirement to report attempted transactions. ▪ The low numbers of STRs sent by certain financial sectors raise concerns in relation to the effectiveness of the reporting system.
14. Protection & no tipping-off	C	▪ The Recommendation is fully met.
15. Internal controls, compliance & audit	LC	▪ The requirement for internal controls does not extend to all financial institutions as defined by the FATF (notably financial leasing, factoring and finance companies). ▪ There is no mandatory explicit requirement to maintain up to date internal procedures, policies and controls and such policies do not include the detection of unusual and suspicious transactions. ▪ There is no explicit requirement to ensure that the AML/CFT compliance officer has a timely access to customer identification data and other CDD information, transactions records and other relevant information. ▪ There is no mandatory requirement for an independent audit function to test AML/CFT regime compliance for small financial institutions (including some MSBs) for which a simple self-assessment is admitted. ▪ There is no general requirement concerning screening procedures when hiring employees.
16. DNFBP – R.13-15 & 21	NC	*Scope issue* ▪ Lawyers, Quebec Notaries, BC Notaries, dealers in precious metals and stones, Internet casinos, ship based casinos and TCSPs are not captured by the PCMLTFA and therefore are not subject to the suspicious transactions reporting requirements. *Application of Recommendation 13 to casinos, real estate brokers and sales representatives and accountants/accountant firms* ▪ The circumstances in which real estate agents and sales representatives and accountants have to report suspicious transactions under the PCMLTFA are too limited. ▪ Attempted transactions are not yet covered by the Suspicious Transaction Reporting requirement. ▪ The relatively low numbers of STRs sent by real estate agents/sales representatives and accountants raise significant concerns in relation to the effectiveness of the reporting system in these sectors. *Application of Recommendation 15 to casinos, real estate brokers and sales representatives and accountants/accountant firms* ▪ There is no explicit requirement to: (1) keep up to date internal procedures, (2) have policies to monitor for and detect unusual and suspicious transactions and (3) ensure that the AML/CFT compliance officer has timely access to

Forty Recommendations	Rating	Summary of factors underlying rating
		customer identification data and other CDD information, transactions records and other relevant information. ▪ There is no mandatory requirement for an independent audit function to test AML/CFT regime compliance. ▪ Except for casinos, there are no requirements concerning screening procedures when hiring employees. *Application of Recommendation 21 to casinos, real estate brokers and sales representatives and accountants/accountant firms* ▪ There is no general enforceable requirement for DNFBPs to give special attention to transactions or business relationships connected with persons from or in countries which do not or insufficiently apply the FATF Recommendations but only through general guidance or advisories sent on a case by case basis. ▪ There are no effective measures in place whereby DNFBPs are advised of other countries that have specific weaknesses in their AML/CFT systems. ▪ There is no requirement to examine the background and purpose of these transactions and to document the related findings.
17. Sanctions	PC	▪ With the exceptions of OSFI and IDA regulated institutions, only criminal sanctions are available to FINTRAC under the PCMLTFA for all other types of financial institutions and these are only applicable for the most serious failures, and need to be proved to the criminal standard. ▪ OSFI only uses a limited range of actions/sanctions in the AML/CFT context (namely supervisory letters and in a limited number of cases, staging). ▪ The lack of effective sanctions applied in cases of major deficiencies raises real concern in terms of effectiveness of the sanction regime, particularly taking into account that only one criminal sanction and a very limited number of administrative sanctions have been applied.
18. Shell banks	LC	▪ Financial entities are not required to terminate business relationships with shell banks, nor with any foreign financial institution that has, directly or indirectly, correspondent banking relationships with shell banks. ▪ The effectiveness of the measures in place cannot yet be assessed.
19. Other forms of reporting	C	▪ The Recommendation is fully met.
20. Other NFBP & secure transaction techniques	C	▪ The Recommendation is fully met.
21. Special attention for higher risk countries	PC	▪ There is no general enforceable requirement for financial institutions to give special attention to transactions or business relationships connected with persons from or in countries which do not or insufficiently apply the FATF Recommendations. ▪ There are no effective measures in place whereby financial institutions are advised of other countries that have specific weaknesses in their AML/CFT systems. ▪ There is no requirement to examine the background and purpose of these transactions and to document the related findings.
22. Foreign branches & subsidiaries	NC	▪ Currently, the PCMLTFA and PCMLTF Regulations contain no explicit enforceable provision requiring financial institutions to ensure that their foreign branches and subsidiaries observe AML/CFT measures consistent with home country requirements although foreign branches of Canadian financial institutions are Canadian entities under the Bank Act and the Insurance Companies Act that are subject to Canadian laws.

Forty Recommendations	Rating	Summary of factors underlying rating
		▪ There is no requirement that particular attention be paid to branches and subsidiaries in countries which do not or insufficiently apply the FATF Recommendations. ▪ There is no legal obligation in the PCMLTFA and PCMLTF Regulations that, where the minimum AML/CFT requirements of the home and host countries differ, branches and subsidiaries in host countries are required to apply the higher standard, to the extent that local (*i.e.* host country) laws and regulations permit. ▪ There is no requirement that financial institutions be required to inform their home country supervisor when a foreign branch or subsidiary is unable to observe appropriate AML/CFT measures because this is prohibited by local (*i.e.* host country) laws, regulations or other measures.
23. Regulation, supervision and monitoring	PC	▪ Exclusion from the AML/CFT regime of certain financial sectors (such as financial leasing, factoring, finance companies, etc.) without proper risk assessments. ▪ For the financial institutions subject to the PCMLTFA, there is a very unequal level of supervision of AML/CFT compliance, with certain categories of financial institution appearing to be insufficiently controlled (MSBs, certain credit unions/*caisses populaires*, life insurance intermediaries…). This is due to the limited staff resources of FINTRAC dedicated to on-site assessments compared to the high number of reporting entities, which has not always been compensated by the involvement of the primary prudential regulators in AML/CFT issues. ▪ "Fit and proper" requirements are not comprehensive. ▪ At the time of the on-site visit, there was no specific obligation for FRFIs to implement screening procedures for persons who are hired, or appointed to the Board, after the initial incorporation or authorisation procedures are concluded. ▪ There is currently no registration regime for MSBs.
24. DNFBP - regulation, supervision and monitoring	NC	*Scope issue* ▪ Lawyers, Quebec Notaries, BC Notaries, dealers in precious metals and stones, Internet casinos, ship based casinos and TCSPs are not captured by the PCMLTFA and not subject to FINTRAC supervision. *Supervision of casinos* ▪ The sanction regime available to FINTRAC is currently inadequate (see conclusions in relation to Rec. 17). Provincial regulators may have administrative sanctions at their disposal but there is no evidence that these are dissuasive, effective and proportionate, since no data or statistics regarding sanctions taken by these regulators on the grounds of AML/CFT non-compliance issues have been made available to the assessment team. *Supervision of other DNFBPs* ▪ Limited staff resources deprives FINTRAC from closely and efficiently monitoring DNFBPs' compliance with the PCMLTFA requirements especially in sectors/provinces where the primary regulators or SROs are not or insufficiently involved in AML/CFT compliance supervision. ▪ The sanction regime available to FINTRAC is currently inadequate (see conclusions in relation to Rec. 17). Provincial regulators may have administrative sanctions at their disposal but there is no evidence that these are dissuasive, effective and proportionate, since no data or statistics regarding sanctions taken by these regulators on the ground of AML/CFT non-compliance issues have been

Forty Recommendations	Rating	Summary of factors underlying rating
		made available to the assessment team.
25. Guidelines & Feedback	LC	▪ There is a lack of specific guidelines intended for sectors such as life insurance companies and intermediaries. ▪ There is not enough general feedback given outside the large financial institutions sector.
Institutional and other measures		
26. The FIU	PC	▪ FINTRAC has insufficient access to intelligence information from administrative and other authorities (especially from CRA , CSIS and Customs). ▪ FINTRAC is not allowed by the PCMLTFA to gather additional financial information from reporting entities. ▪ Effectiveness: (1) the number of staff dedicated to the analysis of potential ML/FT cases is low especially in comparison with the amount of reports coming in, which may have an impact on the number of cases that FINTRAC generate; (2) feedback from law enforcement authorities outlines the relatively limited added value of FINTRAC disclosures in law enforcement investigations; (3) the timeliness of FINTRAC disclosures to law enforcement authorities was raised as an issue at the time of the on-site visit; (4) 80% of the disclosures made by FINTRAC result from voluntary information from law enforcement; only 20% result from STRs which raises serious concerns with respect to the capability of FINTRAC to generate ML/TF cases on the basis of STRs or other reports it receives from the private sector; (5) so far, very few if any convictions for ML or TF have resulted from a FINTRAC disclosure which is an additional factor to consider when looking at FINTRAC's ability to produce intelligence to be used in criminal investigations and prosecutions.
27. Law enforcement authorities	LC	▪ The RCMP lacks the resources that would allow it to focus on a larger spectrum of ML/TF investigations.
28. Powers of competent authorities	C	▪ The Recommendation is fully met.
29. Supervisors	LC	▪ FINTRAC has no power to impose administrative sanctions.
30. Resources, integrity and training	PC	*In relation to the FIU*: ▪ The number of staff dedicated to the analysis of ML/TF cases is too low, especially considering the amount of reports coming in. *In relation to law enforcement agencies:* ▪ The RCMP lacks resources to properly undertake ML/TF investigations. *In relation to the Department of Justice* ▪ There seems to be very little if any coordinated or sophisticated training efforts in the forfeiture area. ▪ The authorities in charge of processing MLA requests lack resources. *In relation to prosecution agencies:* ▪ Insufficient training is provided for combating ML and TF. *In relation to supervisors:3* ▪ FINTRAC current internal organisation and resources dedicated to supervision are insufficient to allow it to perform its compliance function effectively.
31. National co-operation	LC	▪ Interagency cooperation between the FIU and law enforcement authorities is not fully effective and needs to be enhanced.
32. Statistics	LC	▪ Incomplete statistics are kept in relation to ML investigations. ▪ Incomplete statistics are kept in relation to ML sentencing.

Forty Recommendations	Rating	Summary of factors underlying rating
		▪ Statistics on confiscation are incomplete. ▪ There is no data available on the time requested to respond to extradition and MLA requests. ▪ No statistics are kept by OSFI on the time to respond to a request initiated by its counterparts.
33. Legal persons – beneficial owners	NC	▪ There is no requirement to ensure adequate transparency, for instance there is no obligation that information on the beneficial ownership of shares in legal persons is required to be collected by either the corporate registry, within corporate records held by legal persons or by lawyers, accountants or TCSPs. ▪ While law enforcement and other authorities have sufficient powers, those powers are not adequate to ensure the existence of adequate, accurate and timely information on the beneficial ownership of legal persons, which can be accessed or obtained in a timely fashion by competent authorities. ▪ There are no measures to ensure that bearer shares are not misused for ML, particularly for private corporations.
34. Legal arrangements – beneficial owners	PC	▪ There are limited and indirect legal requirements to obtain, verify, or retain information on the beneficial ownership and control of trusts and fiducie in Québec. ▪ While the investigative powers are generally sound and widely used, there is minimal information that is adequate, accurate and timely concerning the beneficial owners of trusts and fiducie in Québec that can be obtained or accessed by the competent authorities in a timely fashion. Where some information is held, such as by CRA, there are limits on the circumstances in which information on trusts can be shared.
International Co-operation		
35. Conventions	LC	*Implementation of the Palermo and Vienna Conventions:* ▪ Canada has ratified the Palermo and Vienna Conventions and implemented them with some omissions however (the ML offence does not cover all required categories of predicate offences and Section 462.31 ML offence contains a purposive element that is not broad enough to meet the requirements of the Conventions). *Implementation of the CFT Convention:* ▪ Article 18(1)(b) of the Convention, which requires countries to implement efficient measures to identify customers in whose interest accounts are opened is insufficiently implemented. Canada's implementation of Recommendation 5 does not include adequate measures to ascertain the identity of beneficial owners.
36. Mutual legal assistance (MLA)	LC	▪ There are concerns about the ability of Canada to handle MLA requests in a timely and effective manner and effectiveness of the current regime cannot be demonstrated due to the lack of adequate data.
37. Dual criminality	C	▪ The Recommendation is fully met.
38. MLA on confiscation and freezing	LC	▪ There are doubts about the effectiveness of the measures in place under Recommendation 38: there is limited evidence of effective confiscation assistance as only four cases have been successful in last 5 years and international sharing statistics indicate that while asset sharing with foreign states is possible, it rarely occurs. Canada executes requests to enforce corresponding value judgments as fines, which has limitations and cannot be enforced against property held by third parties.
39. Extradition	LC	▪ Insufficient statistical data was provided to make a thorough assessment, particularly the assessment of the delay element, but even the limited data provided indicates that obtaining extradition from Canada quickly may be

Forty Recommendations	Rating	Summary of factors underlying rating
		difficult.
40. Other forms of co-operation	LC	*FINTRAC as a supervisory authority* ▪ FINTRAC has the legal capacity to exchange information with foreign counterparts but has not yet put the arrangements and agreements in place.
Nine Special Recommendations	**Rating**	**Summary of factors underlying rating**
SR.I Implement UN instruments	LC	*Implementation of the CFT Convention:* ▪ Article 18(1)(b) of the Convention, which requires countries to implement efficient measures to identify customers in whose interest accounts are opened is insufficiently implemented. Canada's implementation of Recommendation 5 does not include adequate measures to ascertain the identity of beneficial owners.
SR.II Criminalise terrorist financing	LC	▪ The lack of any TF convictions and the very limited number of prosecutions shows that the offence has not yet been fully and effectively used.
SR.III Freeze and confiscate terrorist assets	LC	▪ The actions taken to communicate the names of listed persons or entities do not cover all types of financial institutions and the lists are not effectively communicated to other types of asset holders. ▪ With the exception of guidance given to federally regulated financial institutions (and copied to provincial regulators/SROs), Canada has issued insufficient guidance to other financial institutions and DNFBPs that may be holding funds of other assets concerning their obligations in taking action under freezing mechanisms. This may have an impact on Canada's ability to freeze terrorist funds or other assets for such entities without delay. ▪ The existing measures to effectively monitor the compliance with the legislation governing the obligations under SRIII are insufficient (except for federally regulated financial institutions supervised by OSFI).
SR.IV Suspicious transaction reporting	LC	▪ Some financial institutions as defined by the FATF (especially financial leasing, finance companies, providers of e-money) are not covered by the obligation to report. ▪ There is no requirement to report attempted transactions.
SR.V International co-operation	LC	**Regarding compliance with Recommendation 38** ▪ All elements missing in R. 38 are missing for SR.V. ▪ There are concerns about the ability of Canada to handle MLA requests in a timely and effective manner and effectiveness of the current regime cannot be demonstrated due to the lack of adequate data. **Regarding compliance with Recommendation 39** ▪ No meaningful statistical data provided to assess delay element (effectiveness issue). **Regarding compliance with Recommendation 40** *FINTRAC as a supervisory authority* ▪ FINTRAC has the legal capacity to exchange information with foreign counterparts but has not yet put the arrangements and agreements in place.
SR VI AML requirements for money/value transfer services	NC	▪ There is no registration regime for MSBs as contemplated by SR VI. ▪ Overall, requirements and implementation of Recommendations 4-11, 21-23 and SR. VII is inadequate which has a significant negative impact on the effectiveness of AML/CFT measures for money transmission services. ▪ MSBs are not required to maintain a list of their agents.

Forty Recommendations	Rating	Summary of factors underlying rating
		▪ The sanction regime available to FINTRAC and applicable to MSBs is not effective, proportionate and dissuasive.
SR VII Wire transfer rules	NC	▪ Canada has not implemented SRVII.
SR.VIII Non-profit organisations	LC	▪ The existing co-ordination mechanisms between competent authorities, especially between the CRA and the parties responsible for listing and freezing applications is insufficient to fully address the risk in some segments of the NPO sector.
SR.IX Cross Border Declaration & Disclosure	C	▪ The Recommendation is fully met.

Table 2: Recommended Action Plan to Improve the AML/CFT System

AML/CFT System	Recommended Action (listed in order of priority)
1. General	
2. Legal System and Related Institutional Measures	
Criminalisation of Money Laundering (R.1 &, 2)	▪ Canada should cover all designated categories of predicate offences. ▪ Canada should amend Section 462.31 ML offence (in relation to the intent mental element) in order to fully met the requirements of the Conventions or Recommendation 1. ▪ Canada should ensure that the statutes available for countering ML are effectively used. ▪ Canada should develop a more proactive approach to prosecuting the specific money laundering charge under s.462.31.
Criminalisation of Terrorist Financing (SR.II)	▪ Canada should pay attention to the overall effectiveness of the TF offence and regime and ensure that the TF offence is effectively used.
Confiscation, freezing and seizing of proceeds of crime (R.3)	▪ Canada should review the fine in lieu forfeiture provision to be in line with the FATF requirements. ▪ Canada should ensure that the confiscation and seizure regime is fully effective, particularly with respect to value based confiscation.
Freezing of funds used for terrorist financing (SR.III)	▪ There needs to be more communication on listed persons provided to certain categories of financial institutions and other potential asset holders as well more clear and practical guidance to reporting entities (including DNFBPs and MSBs) that may be holding targeted funds or other assets concerning their obligations in taking action under freezing mechanisms. ▪ Canada should enhance the existing measures to monitor the compliance with the legislation governing the obligations under SRIII (except for federally regulated financial institutions supervised by OSFI).
The Financial Intelligence Unit and its functions (R.26 & 30)	▪ FINTRAC should be able to obtain additional financial information from the reporting entities, especially during the analytical process. ▪ FINTRAC should be authorised to have access to more intelligence data from CSIS, CRA and the Canadian Customs Agency to reinforce its analytical work. ▪ Canada should examine FINTRAC effectiveness in disclosing ML/TF cases to law enforcement authorities. ▪ Canada should ensure that FINTRAC has sufficient analysts that are in charge of developing ML/TF cases and processing disclosures to law enforcement authorities for further investigations.
Law enforcement, prosecution and other competent authorities (R.27 & 28)	▪ Canada should ensure that the RCMP gets sufficient resources that would allow it to focus on a larger spectrum of ML/TF investigations.
Cross Border declaration or disclosure (SR.IX)	▪ There are no recommendations for this section.
3. Preventive Measures – Financial Institutions	
Risk of money laundering or terrorist financing	▪ Canada should rely on a more comprehensive, thorough and formal risk assessment process. The underlying principle should be that the financial activities referred to in the FATF standards should be covered unless there is a proven low risk of ML/TF.
Customer due diligence, including enhanced or reduced measures (R.5 to 8)	*In relation to Recommendation 5:* ▪ With regard to numbered or confidential accounts, Canada should consider adopting detailed rules or guidance on the use of such accounts by financial institutions. Such rules should clearly set out the obligation for compliance officers to have access to CDD information.

AML/CFT System	Recommended Action (listed in order of priority)
	▪ New provisions will come into force in 2008 with regard to the circumstances where financial institutions have to perform customer identification. Canada should ensure that the new provisions are fully in line with the FATF requirements. ▪ With regard to the identification measures for natural persons, Canada should ensure that only reliable CDD documentation is acceptable, especially in non face-to-face situations. Canada should consider introducing additional requirements for identifying foreign customers. ▪ New provisions will come into force in June 2008 with regard to identification of beneficial owners. Canada should ensure that the new provisions are fully in line with the FATF requirements and are properly implemented by all financial institutions. ▪ The requirement to identify up to three persons who are authorised to give instructions in respect of an account should be extended to any person purporting to act on behalf of the customer. ▪ The PCMLTF Regulations, enacted in June 2007 and coming into force in June 2008 require financial entities to keep a record of the intended use of the account. Canada should ensure that such requirement is implemented by all financial institutions in line with the FATF standards. ▪ Based on the provisions adopted in June 2007 and coming into force in 2008, Canada should ensure that financial institutions fully implement the obligation to conduct ongoing due diligence on the business relationship and ensure all documents, data and information collected under the CDD process in line with the FATF standards (as it is already the case for securities dealers) are kept up-to-date and relevant. ▪ In relation to ML/FT risks, Canada should ensure that financial institutions perform enhanced due diligence for higher risk categories of customer, business relationship or transaction once the new regulations enter into force in June 2008. This should be done in line with the FATF standards. Current scenarios of full exemptions from CDD and third party determination should be subject to simplified or reduced CDD. Where financial institutions are permitted to apply simplified or reduced CDD measures to customers resident in another country, this should be limited to countries that Canada is satisfied are in compliance with and have effectively implemented the FATF recommendations (*i.e.* Canada should not rely on presumption of conformity of FATF countries for instance). Canada should adopt explicit provisions that set out that such exemptions are not acceptable where there is a suspicion of ML or FT or specific higher risk scenarios apply. Canada should consider developing guidelines for financial institutions that are permitted to determine the extent of the CDD measures on a risk sensitive basis. ▪ With regard to the timing of customer's identity verification, new regulations that will enter into force in June 2008 should be implemented in line with the FATF standards and Canada should consider adopting shorten timelines in the insurance, foreign exchange, MSBs and securities sectors for corporations' or entities' identification, especially in normal business circumstances. *In relation to Recommendation 6*: ▪ Canada should ensure that the new provisions enacted in June 2007 are fully in line with the FATF requirements and ensure that reporting entities implement measures that meet the FATF standards. *In relation to Recommendation 7:* ▪ Canada should require financial entities to assess the respondent institution's AML/CFT controls and to ascertain

AML/CFT System	Recommended Action (listed in order of priority)
	that these controls are adequate and effective. ▪ Institutions should also be required to determine the reputation of the foreign financial entity (other than take reasonable measures to ascertain whether there are any civil or criminal penalties that have been imposed on the foreign financial institution in respect of AML/CFT requirements) and the quality of supervision of that entity. ▪ In the context of payable through accounts, the respondent entity should be required to perform all customer identification in line with the FATF standards. ▪ Canada should ensure that reporting entities implement measures that meet the FATF standards. *In relation to Recommendation 8:* ▪ Canada should ensure that the new provisions enacted in June 2007 are fully in line with the FATF requirements and ensure that reporting entities implement measures that meet the FATF standards.
Third parties and introduced business (R.9)	▪ Since introduced business arrangements exist in Canada in other circumstances than those captured by Sections 56(2) and 57(5) of the PCMLTF Regulations, Canada should adopt provisions that address all aspects of Recommendation 9 and ensure that financial institutions implement them.
Financial institution secrecy or confidentiality (R.4)	▪ There are no recommendations for this section.
Record keeping and wire transfer rules (R.10 & SR.VII)	*In relation with Recommendation 10:* ▪ Canada should ensure that all types of transactions (including business correspondence) carried out by financial institutions (except for IDA members) are subject to proper record keeping requirements that permit their reconstruction so as to provide, if necessary, evidence for prosecution of criminal activity. ▪ Canada should ensure that all customer and transactions records and information are available on a timely basis to domestic competent authorities. *In relation with SRVII:* ▪ Canada should ensure that the new provisions enacted in December 2006 and coming into force in June 2008 are fully in line with the FATF requirements and ensure that reporting entities implement measures that meet the FATF standards. ▪ Canada should ensure that the wire transfers operated by casinos outside the banking network are subject to equivalent requirements.
Monitoring of transactions and relationships (R.11 & 21)	*In relation with Recommendation 11:* ▪ Canada should ensure that the new provisions enacted in June 2007 are fully in line with the FATF requirements and ensure that reporting entities implement measures that meet the FATF standards. *In relation with Recommendation 21:* ▪ The requirement to give special attention to business relationships or transactions with persons from or in countries which do not or insufficiently apply the FATF Recommendations should be included in an enforceable legal instrument applicable to all financial institutions. ▪ Effective measures should be put in place whereby financial institutions are advised of other countries that have specific weaknesses in their AML/CFT systems. This should be completed by a provision requiring that the background and purpose of such transactions having no apparent economic or visible lawful purpose be examined and the findings documented.

AML/CFT System	Recommended Action (listed in order of priority)
Suspicious transaction reports and other reporting (R.13-14, 19, 25 & SR.IV)	*In relation with Recommendation 13 & SRIV* ▪ All financial institutions covered by the definition of the FATF should be subject to the suspicious transactions reporting requirement unless a proven low risk of ML and FT is established in the sectors that are currently exempted. ▪ Canada should ensure that the different categories of financial institutions contribute more equally to the total number of STRs received by FINTRAC. *In relation with Recommendation 14* ▪ There are no recommendations for this section. *In relation with Recommendation 19* ▪ There are no recommendations for this section. *In relation with Recommendation 25* ▪ FINTRAC should develop more general feedback for smaller reporting entities.
Internal controls, compliance, audit and foreign branches (R.15 & 22)	*In relation to Recommendation 15* ▪ The current requirements should be expanded, made more explicit and enforceable, in particular (1) written policies and procedures should be explicitly required, and should be kept up to date, and their minimum mandatory content should include the detection of unusual and suspicious transactions; (2) there should be an explicit requirement to ensure that the AML/CFT compliance officer has a timely access to customer identification data and other CDD information, transactions records and other relevant information; (3) the requirement for an independent audit function (internal or external) to test on a regular basis the compliance of the AML regime should be strengthened for MSBs and small financial institutions, and made more explicit generally; (4) Canada should impose screening procedures when hiring employees for financial institutions. *In relation to Recommendation 22* ▪ Canada should ensure that the provisions in relation to Recommendation 22 that will enter into force in June 2008 are in line with the FATF requirements and are properly implemented by all financial institutions.
Shell banks (R.18)	▪ Canada should adopt a requirement for financial entities to terminate business relationships with shell banks as well as with any foreign financial institution that has, directly or indirectly, correspondent banking relationships with shell banks. ▪ Canada should ensure that the measures adopted in relation to shell banks are fully implemented by financial institutions.
The supervisory and oversight system - competent authorities and SROs Role, functions, duties and powers (including sanctions) (R.23, 30, 29, 17 & 25)	*In relation to Recommendation 17, 23 & 29* ▪ Canada should ensure a proper and effective implementation of the regime of administrative and monetary penalties and ensure that competent authorities put in place effective, proportionate and dissuasive sanctions. ▪ Canada should implement a more equal level of supervision of AML/CFT compliance vis-à-vis certain categories of financial institution (MSBs, certain credit unions/*caisses populaires*, life insurance intermediaries…). ▪ Canada should ensure that "fit and proper" requirements are in place. ▪ Canada should adopt screening procedures for persons who are hired, or appointed to the Board, after the initial incorporation or authorisation procedures are concluded. ▪ Canada should implement the registration regime for MSBs. *In relation to Recommendation 25* ▪ Canada should provide more specific guidelines for sectors such as life insurance companies and intermediaries.

AML/CFT System	Recommended Action (listed in order of priority)
Money value transfer services (SR.VI)	▪ Canada should ensure effective implementation of the registration system for MSBs in force in June 2008 and ensure that the requirements applicable to MSBs fully meet the FATF requirements.
4. Preventive Measures –Non-Financial Businesses and Professions	
Customer due diligence and record-keeping (R.12)	▪ All DNFBPs as defined by the FATF should be subject to the AML/CFT regime. ▪ The circumstances in which real estate agents and sales representatives and accountants have to carry out customer identification and keep records should be extended to be in line with the types of activities targeted under Recommendation 12. *In relation to Recommendation 5:* ▪ Canada should ensure that the entire set of requirements under Recommendation 5 apply to all non-financial professions. *In relation to Recommendations 6, 8, 9 and 11:* ▪ Canada should require the non-financial professions to implement requirements in relation to Recommendations 6, 8, 9 and 11. *In relation to Recommendation 10:* ▪ Canada should ensure that all types of transactions carried out by the non-financial professions are subject to proper record keeping requirement that permits their reconstruction so as to provide, if necessary, evidence for prosecution of criminal activity. ▪ Canada should ensure that all customer and transactions records and information collected by the non-financial professions are available on a timely basis to domestic competent authorities.
Suspicious transaction reporting (R.16)	*In relation to Recommendation 13:* ▪ All DNFBPs as defined by the FATF should be subject in Canada to the suspicious transactions reporting requirement in all circumstances defined in Recommendation 16. *In relation to Recommendation 15:* ▪ The current requirements should be expanded, specified and enforced, especially: (1) the policies and procedures should be required to be written and their minimum mandatory content should include the detection of unusual and suspicious transactions for all DNFBPs; (2) there should be a requirement to ensure that the AML/CFT compliance officer has a timely access to customer identification data and other CDD information, transactions records and other relevant information; (3) the requirement for an independent audit function (internal or external) to test on a regular basis the compliance of the AML regime should be strengthened; (4) Canada should impose screening procedures when hiring employees to DNFBPs. *In relation to Recommendation 21*: ▪ The requirement to give special attention to business relationships or transactions with persons from or in countries which do not or insufficiently apply the FATF Recommendations should be included in an enforceable legal instrument applicable to DNFBPs. ▪ Effective measures should be put in place whereby DNFBPs are advised of other countries that have specific weaknesses in their AML/CFT systems. ▪ Finally a provision should be introduced requiring that the background and purpose of such transactions having no apparent economic or visible lawful purpose be examined and the findings documented.

AML/CFT System	Recommended Action (listed in order of priority)
Regulation, supervision and monitoring (R.24-25)	▪ All DNFBPs as defined by the FATF should be subject to the AML/CFT regime. ▪ Canada should ensure that supervisory action (especially on-site examinations) vis-à-vis casinos, but more importantly with respect to all other DNFBPs is strongly reinforced. ▪ The role, functions and monitoring powers of other regulators and SROs in ensuring compliance of DNFBPs with the AML/CFT requirements should be clarified. ▪ Canada should consider revisiting the supervision issue as a whole and give further consideration on whether FINTRAC should be the only authority in charge of ensuring compliance with the AML/CFT requirements. ▪ The sanction regimes applicable to DNFBPs, including casinos, should be reinforced and Canada should ensure that the sanctions available for failures to apply AML/CFT requirements are effective, proportionate and dissuasive.
Other designated non-financial businesses and professions (R.20)	▪ There are no recommendations for this section.
5. Legal Persons and Arrangements & Non-Profit Organisations	
Legal Persons – Access to beneficial ownership and control information (R.33)	▪ Canada should adopt further requirements to prevent the unlawful use of legal persons in relation to ML and TF. ▪ Canada should ensure that competent authorities have access to accurate and current information on the ultimate beneficial owners and controllers of all legal persons on a timely basis. ▪ Canada should adopt measures to ensure that bearer shares are not misused for ML, particularly for private corporations.
Legal Arrangements – Access to beneficial ownership and control information (R.34)	▪ Canada should ensure that competent authorities have access to accurate and current information on the ultimate beneficial owners and controllers of all legal arrangements on a timely basis. ▪ Canada should implement measures to ensure that adequate, accurate and timely information is available to law enforcement authorities concerning the beneficial ownership and control of trusts and fiducie in Québec.
Non-profit organisations (SR.VIII)	▪ Canada should improve the existing co-ordination mechanisms between competent authorities, especially between the CRA and the parties responsible for listing and freezing applications.
6. National and International Co-operation	
National co-operation and coordination (R.31)	▪ Canada should enhance interagency cooperation between the FIU and law enforcement authorities.
The Conventions and UN Special Resolutions (R.35 & SR.I)	▪ Canada should ensure that the ML offence does cover all designated categories of predicate offences and Canada should consider removing the purpose element from Section 462.31 of the CC to be in line with the UN Conventions. ▪ Canada should enact stronger measures to customer identification so as to be more compliant with Article 18(1)(b) of the CFT Convention.
Mutual Legal Assistance (R.36-38, SR.V)	▪ Canada should ensure that MLA requests are handled in a timely and effective manner. ▪ Canada should consider ways to improve the mechanisms to respond to foreign confiscation requests.
Extradition (R.39, 37, SR.V)	▪ Canada should ensure that extradition requests are handled in a timely and effective manner.
Other Forms of Co-operation (R.40, SR.V)	▪ FINTRAC should rapidly enter into agreements with key supervisory counterparts in order to allow proper information sharing.
7. Resources and Statistics	
Resources of Competent Authorities (R.30)	*In relation to the FIU*: ▪ FINTRAC should increase the number of staff dedicated to the

AML/CFT System	Recommended Action (listed in order of priority)
	analysis of ML/TF cases. *In relation to law enforcement agencies:* ▪ Canada should increase the resources of the RCMP in relation to ML/TF investigations. *In relation to the Department of Justice* ▪ Canada should put in place more sophisticated training efforts in the forfeiture area. ▪ The authorities in charge of processing MLA requests should be given more resources. *In relation to prosecution agencies:* ▪ More training should be provided for combating ML and TF. *In relation to supervisors:* ▪ Resources of FINTRAC to carry out its supervision duties should increase.
Statistics (R.32)	▪ Canada should collect more statistics in relation to ML investigations. ▪ Canada should collect more statistics in relation to ML sentencing. ▪ Canada should collect more statistics on confiscation. ▪ Canada should collect more data on the time requested to respond to extradition and MLA requests. ▪ OSFI should collect more statistics on the time to respond to a request initiated by its counterparts.

Table 3: Authorities' Response to the Evaluation

Relevant sections and paragraphs	Country Comments
General	Legislative amendments to the PCMLTFA passed in December 2006 and associated regulations enacted in June 2007 and December 2007 will address a substantial number of deficiencies identified in this report. Please see Annex 1 for a detailed list of legislative and regulatory amendments to Canada's AML/CFT regime that came into force after June 2007 and have not been considered in this evaluation. Canada's regulations allow a period of time between enactment and coming into force to provide an opportunity for businesses and sectors to modify systems.
Section 2.5	Recommendation 26 Canada believes that a partially compliant rating does not adequately reflect Canada's legal reality and FINTRAC's sophisticated organisation. First, it should be noted that, in order to safeguard Canadians' rights under the *Canadian Charter of Rights and Freedoms,* FINTRAC has no investigative powers. FINTRAC is not able to request further information directly from reporting entities for analysis purposes as this activity corresponds to investigative powers. There is therefore a clear constitutional impediment to requesting additional information and this should have been properly reflected in the analysis. Second, FINTRAC is effective in receiving, analysing and disclosing information to competent authorities: • FINTRAC has one of the most sophisticated FIU information technology systems in the world. Its unique technology-driven approach to analysis permits effective analysis of large volumes of transactions by its 36 tactical financial analysts. As the report notes in para 371, total staff at FINTRAC is "more than adequate". • The report notes in para 388 that FINTRAC disclosures provide added value to recipients in terms of identifying new leads and contributing to investigations. • The timeliness of disclosures is an issue that has been addressed by FINTRAC, as indicated in feedback received since 2006 and has also been improving, as noted in para 391. • Disclosures related to voluntary information (VIRs) demonstrate FINTRAC's responsiveness to the investigative priorities identified by law enforcement. • Like many FIUs, FINTRAC is not responsible for investigation or prosecution of cases. As such, it is not appropriate that its effectiveness be measured on the basis of convictions for ML/TF.
Section 2.5	Recommendation 30 Canada believes that a partially compliant rating does not adequately reflect the situation of resources in Canadian authorities, in particular those of FINTRAC. FINTRAC has one of the world's most sophisticated FIU IT systems, which supports the analysis of STRs and other transactions. 35 analysts conduct the analysis of financial transactions to develop FINTRAC disclosures. The work of these analysts is supported by FINTRAC's 80 information technology staff through, for example, the electronic filing of all report data, matching software that links incoming reports to current/former cases and other reports in the system based on a variety of data elements (*e.g.* name, account number, address, etc.), and tools that permit efficient database searches and case compilation. FINTRAC designed its compliance program based on a sophisticated risk-based model and has staffed the appropriate number of compliance officers to carry out the supervisory activities required to discharge its mandate of ensuring compliance with the PCMLTFA. As the report notes in para 371, total staff at FINTRAC is "more than adequate".
Sections 3.1-3.2	Recommendation 5 Canada believes that a non compliant rating clearly fails to recognize the broad-based record-keeping and client identification measures that have been in place in Canada since 2002. In addition, OSFI, the IDA and FINTRAC have issued and enforced guidance on implementation. Regulatory amendments enacted in June 2007 introduce enhanced customer due diligence provisions that come fully into force in June 2008. These provisions will further reinforce compliance with this recommendation and address most deficiencies identified.

Relevant sections and paragraphs	Country Comments
Section 3.2	Recommendation 6 Regulatory provisions enacted in June 2007 which come into force in June 2008 address the deficiencies identified.
Section 3.2	Recommendation 8 Rregulatory provisions enacted in June 2007 which come into force in June 2008 address the deficiencies identified.
Section 3.3	Recommendation 9 Canada believes that the report fails to recognize that there are only two specific situations where no written agreements are necessary for Canadian financial institutions to rely on another entity to identify their customers. When reliance is done through written agreements, Canada believes that these relationships fall outside the scope of Recommendation 9. In addition, a clarifying provision in the regulations enacted in June 2007 which come into force in June 2008 will address deficiencies identified.
Section 3.5	Special Recommendation VII Legislative and regulatory provisions enacted in June 2007 which come into force in June 2008 address deficiencies identified.
Section 3.6	Recommendation 11 Regulatory provisions enacted in June 2007 which come into force in June 2008 address the deficiencies identified.
Section 3.6	Recommendation 21 Regulatory provisions enacted in June 2007 which come into force in June 2008 address the deficiencies identified.
Section 3.8	Recommendation 22 Canada believes that the report fails to recognize that the Bank Act currently applies to bank branches outside Canada. As the PCMLTFA applies to banks, it also *de facto* applies to foreign bank branches. Legislative amendments enacted in December 2006 and coming into force in June 2008 will make it explicit that the PCMLTFA applies to foreign branches and subsidiaries.
Section 3.10	Recommendation 23 Canada believes that a partially compliant rating does not adequately reflect the supervisory situation in Canada. OSFI and FINTRAC have been effectively enforcing AML/CFT requirements for years. FINTRAC designed its compliance program based on a sophisticated risk-based model and has staffed the appropriate number of compliance officers to carry out the supervisory activities required to discharge its mandate of ensuring compliance with the PCMLTFA.
Section 3.10	Recommendation 17 Legislative amendments enacted in December 2006 and regulatory provisions implementing an administrative monetary penalty regime enacted in December 2007 which come into force in December 2008 address the gaps in compliance with this recommendation.
Section 3.11	Special Recommendation VI MSBs have been subject to broad-based reporting, CDD, and record keeping requirements since 2001. These obligations are being further expanded in regulations enacted in June 2007 which come into force in June 2008. There has been effective compliance monitoring of the sector by FINTRAC. Legislative amendments enacted in December 2006 and regulatory provisions enacted in June 2007 will establish an MSB registration regime as of June 2008.
Section 4.1	Recommendation 12 Casinos, accountants and real estate agents have been subject to some CDD and record-keeping requirements since 2001. Regulations enacted in June 2007 which come into force in June 2008 will expand requirements for these sectors. New regulations enacted in December 2007 and coming into force in December 2008 cover additional DNFBP sectors, thereby further addressing deficiencies identified. Regarding Internet and cruise ship casinos, it should be noted that Internet casinos

Relevant sections and paragraphs	Country Comments
	are illegal under the Criminal Code and enforcement action has been taken. There are no Canadian flagged ships operating casinos and shipboard casinos are subject to restrictions to limit access and abuse.
Section 4.2	Recommendation 16 Casinos, accountants and real estate agents have been subject to suspicious transaction reporting requirements since 2001. Regulations enacted in December 2007 which come into force in December 2008 will expand these requirements to cover additional DNFBP sectors, thereby further addressing deficiencies identified.
Section 4.3	Recommendation 24 Supervision mechanisms have been in place since 2001 for the casino, real estate and accounting sectors. Legislative amendments enacted in December 2006 and regulatory provisions enacted in December 2007 which come into force in December 2008 will further address deficiencies.

ANNEX 1

Legislative and regulatory Changes to the Canadian AML/CFT regime

Amendment	Legislation Enacted	Regulations Enacted	Measure Fully In Force
Extending record retention time period for FINTRAC	Dec 14, 2006	n/a	Feb 10, 2007
Enhanced information sharing on non-profit organisations	Dec 14, 2006	n/a	June 30, 2007
Enhanced FINTRAC disclosure information	Dec 14, 2006	June 27, 2007	June 30, 2007
Prohibition against correspondent relationships with shell banks	Dec 14, 2006	June 27, 2007	June 30, 2007
Correspondent banking due diligence requirements	Dec 14, 2006	June 27, 2007	June 30, 2007
Explicit prohibition on opening accounts for unidentified customers	Dec 14, 2006	n/a	June 23, 2008
Application to foreign branches or subsidiaries	Dec 14, 2006	n/a	June 23, 2008
Non-face-to-face CDD measures	n/a	June 27, 2007	June 23, 2008
Use of an agent or mandatary for customer identification (clarifying provision)	n/a	June 27, 2007	June 23, 2008
Beneficial owner requirements	n/a	June 27, 2007	June 23, 2008
Enhancing CDD and Record Keeping	Dec 14, 2006	June 27, 2007	June 23, 2008
PEPs requirement for financial institutions	Dec 14, 2006	June 27, 2007	June 23, 2008
Special attention to complex and unusual transactions (*i.e.* risk assessment)	Dec 14, 2006	June 27, 2007	June 23, 2008
Reporting suspicious attempted transactions	Dec 14, 2006	June 27, 2007	June 23, 2008
Special attention to business from countries of risk (*i.e.* risk assessment)	Dec 14, 2006	June 27, 2007	June 23, 2008
MSB registration	Dec 14, 2006	June 27, 2007	June 23, 2008
Wire transfers travel rule	Dec 14, 2006	June 27, 2007	June 23, 2008
Enhancing measures for casinos, accountants and real estate, including: • Enhanced CDD and record-keeping. • Non face to face measures. • Use of agent and mandatary. • Special attention to transactions.	Dec 14, 2006	June 27, 2007	June 23, 2008
Inclusion of Lawyers, BC Notaries and Jewellers, including measures on: • CDD and record-keeping. • Non face to face measures. • Use of agent and mandatary. • Special attention to transactions. • Triggers for STR reporting (except lawyers). • Coverage by FINTRAC to ensure compliance.	Dec 14, 2006	Dec 2007	Dec 2008
Administrative Monetary Penalties provisions	Dec 14, 2006	Dec 2007	Dec 2008
Application to businesses and professions at risk (real estate developers)	n/a	Feb 2008	Feb 2009

FINANCIAL ACTION TASK FORCE

The Financial Action Task Force (FATF) is an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction. The FATF Recommendations are recognised as the global anti-money laundering (AML) and counter-terrorist financing (CFT) standard.

MUTUAL EVALUATION OF CANADA: 6TH FOLLOW-UP REPORT

Note by the Secretariat

I. INTRODUCTION

1. The third mutual evaluation report (MER) of Canada was adopted in February 2008[1].

2. Canada was placed in the regular follow-up process, and reported back to the FATF in February 2009, February 2011, October 2011, October 2012 and February 2013. [2]

3. Canada first applied for removal from the follow-up process in February 2009. The follow-up report then noted that Canada had made real progress in several areas to improve its compliance with the FATF Standards and had in particular reached an adequate level of compliance with Recommendations 23 and 26. However, the Plenary deemed the progress reported in relation to Recommendation 5 to be insufficient. As pointed out in the report, a number of deficiencies remained in relation to this Recommendation, including in key areas such as beneficial ownership, ongoing due diligence and actions to be taken with respect to higher and lower risk scenarios. The Plenary thus determined that all the criteria for the removal from the follow-up process were not met (See first follow-up report in Annex 1).

4. In June 2012, Canada committed to apply again for removal in February 2013, considering that a number of amendments to the Proceeds of Crimes (Money Laundering) and Terrorist Financing Regulations (PCMLTFR) then in preparation would address most remaining issues in relation to Recommendation 5 by that date.

5. The amendments to the PCMLTF Regulations were approved on 31 January 2013 by the federal Cabinet and became public on that date. They were formally published in the *Canada Gazette* on 13 February 2013[3] and came into force on 1 February 2014. Canada decided on this one-year transition period to allow the reporting entities reasonable time to adjust their systems, policies and practices to the new CDD measures.

6. The FATF *Process and Procedures* provides that a jurisdiction should have *"an effective AML/CFT system in force"* to exit follow-up. Because the 2013 amendments aimed at addressing the remaining Recommendation 5 deficiencies only came into force on 1 February 2014, the February 2013 5th follow-up report by Canada was an interim report. It contained an analysis of the amendments to the PCMLTF Regulations that were published on 31 January 2013, and their impact on Canada's compliance with Recommendation 5 once they are in force. Canada indicated that it would apply to move from regular follow-up to biennial updates in February 2014.

2 First follow-up available in Annex I, other reports have not been published.

3 www.gazette.gc.ca/rp-pr/p2/2013/2013-02-13/pdf/g2-14704.pdf. A consolidated version of the amended PCMLTFR is available: http://laws-lois.justice.gc.ca/eng/regulations/SOR-2002-184/.

7. This report is drafted in accordance with the procedure for removal from the regular follow-up, as agreed by the FATF Plenary in October 2008 and subsequently amended[4]. It contains a detailed description and analysis of the actions taken by Canada in respect of the core and key Recommendations rated partially compliant (PC) or non-compliant (NC) in the mutual evaluation. The procedure requires that a country "*has taken sufficient action to be considered for removal from the process – To have taken sufficient action in the opinion of the Plenary, it is necessary that the country has an effective AML/CFT system in force, under which the country has implemented the core[5] and key[6] Recommendations at a level essentially equivalent to a Compliant (C) or Largely Compliant (LC), taking into consideration that there would be no re-rating*"[7]. Canada was rated PC or NC on the following Recommendations:

Core Recommendations – NC or PC ratings
R.5 (NC)
Key Recommendations – NC or PC ratings
R.23 (PC), R.26 (PC)
Other Recommendations – PC ratings
R.7, R.11, R.17, R.21, R.30, R.34
Other Recommendations – PC ratings
R.6, R.8, R.9, R.12, R.16, R.22, R.24, R.33, SRVI, SRVII

8. As prescribed by the Mutual Evaluation procedures, Canada provided the Secretariat with a full report on its progress. The Secretariat has drafted a detailed analysis of the progress made for Recommendations 5, 23 and 26, and has prepared a summary of actions taken on other recommendations (see section VI), but has not done a detailed analysis of them[8]. A draft report was provided to Canada for its review, and comments received. Comments from Canada have been taken into account in the final draft. During the process, Canada has provided the Secretariat with all information requested.

9. As a general note on all applications for removal from regular follow-up: the procedure is described as a *paper based desk review*, and by its nature is less detailed and thorough than a mutual evaluation report. The analysis focuses on the Recommendations that were rated PC/NC, which means that only a part of the AML/CFT system is reviewed. Such analysis essentially consists of looking into the main laws, regulations and other material to verify the technical compliance of domestic legislation with the FATF standards. In assessing whether sufficient progress had been made, effectiveness is taken into account to the extent possible in a paper based desk review and

4 Third Round of AML/CFT Evaluations Processes and Procedures, par. 41 www.fatf-gafi.org/media/fatf/documents/process%20and%20procedures.pdf.

5 The core Recommendations as defined in the FATF procedures are R.1, SR.II, R.5, R.10, R.13 and SR.IV.

6 The key Recommendations are R.3, R.4, R.26, R.23, R.35, R.36, R.40, SR.I, SR.III, and SR.V.

7 FATF Processes and Procedures par. 39 (c).

8 See Annex 2 for the presentation by Canada of measures taken to address deficiencies on non-core and non-key.

primarily through a consideration of data provided by the country. It is also important to note that these conclusions do not prejudge the results of future assessments, as they are based on information which was not verified through an on-site process and is not, in every case, as comprehensive as would exist during a mutual evaluation.

II. MAIN CONCLUSIONS AND RECOMMENDATIONS TO THE PLENARY

10. As highlighted by the 5th follow-up report, the amendments to the PCMLTF Regulations that came into force on 1 February 2014 constitute a significant improvement of Canada's level of compliance with Recommendation 5, in particular in most of the key areas that had been identified in the first follow-up report: the deficiencies identified in relation to beneficial ownership and ongoing due diligence have been substantially addressed, and substantial progress has been made in relation to enhanced measures. A number of minor or very minor issues (in relation to scope, numbered accounts, circumstances in which CDD is required, identification of the persons purporting to act on behalf of the customers, beneficial ownership and enhanced measures), and two issues of more significance (in relation to exemptions and failure to complete CDD) remain to be addressed. It was therefore concluded that, overall, the Canadian AML/CFT regime has reached a level of compliance essentially equivalent to an LC with Recommendation 5.

11. On Recommendations 23 and 26, the 2009 1st follow-up report concluded that Canada had made real progress, and taken positive action to remedy the most significant deficiencies, including on effectiveness. It was therefore considered that there had been sufficient progress to conclude that Canada had implemented Recommendations 23 and 26 at an adequate level of compliance. The 5th follow-up report concluded that Canada had made continuous progress and significant improvement could be noted with regard to the effectiveness of the adopted measures.

12. It is recommended to remove Canada from the regular follow-up process.

III. OVERVIEW OF CANADA'S PROGRESS

A. OVERVIEW OF THE MAIN CHANGES SINCE THE ADOPTION OF THE MER

13. In 2011, a 10-year evaluation of Canada's AML/CFT regime (the Regime) was released[9]. The evaluation covered the period 2000-2010, and made recommendations regarding the further improvement of the Regime including:

- the continuation of the Regime with at least the same level of resourcing
- the conduct of a public opinion survey to determine the level of public awareness of the ML/TF threat and the actions of the Regime
- the creation of an Interdepartmental Working Group to identify future steps for continuing to improve the Regime's compliance with international commitments, information sharing, concerns of reporting entities, data and statistics, and the Regime's management framework.

9 www.fin.gc.ca/treas/evaluations/amlatfr-rclcrpcfat-eng.asp.

14. These recommendations served as a basis for a five-year Parliamentary review of the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act* (PCMLTFA), which was published in 2013[10].

15. Regarding the adaptation of the legal framework, Canada took key measures in the fields of Customer Due Diligence (CDD), and freezing of assets of corrupt officials. More details are available in the next section.

16. Canada also took a series of measures in order to strengthen its Financial Intelligence Unit (FIU), the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC). Priority was given to reinforce the compliance program of FINTRAC, with the provision of additional resources, and its private sector outreach program. A new range of administrative sanctions is now at FINTRAC's disposal. FINTRAC's ability to share financial intelligence with law enforcement authorities has also been expanded. Closer coordination has also been developed in relation to the supervisory activities of the Office of the Superintendent of Financial Institutions (OSFI), the prudential regulator of federal financial institutions.

17. Regarding Designated Non-Financial Businesses and Professions (DNFBPs), the application of the AML/CFT regime was expanded to additional businesses and professions, notably British Columbia Notaries and dealers in precious metals and stones. With respect to legal counsel and legal firms, client identification due diligence and record-keeping obligations were introduced in 2008. However, these provisions are currently inoperative as a result of a court ruling and related injunctions. The Supreme Court of Canada recently granted leave to the Government of Canada to appeal the ruling.

B. THE LEGAL AND REGULATORY FRAMEWORK

18. Since the adoption of the MER in 2008, Canada has completed key AML/CFT legislative steps:

- Amendments were made to the PCMLTFA and to the *Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations* (PCMLTFR) in 2008 shortly after Canada's MER. These amendments included measures in relation to the circumstances in which CDD has to take place[11].
- Further amendments to the PCMLTFR were made in 2013, aimed at addressing the remaining deficiencies in relation to Recommendation 5, on beneficial ownership, on the purpose and nature of the business relationship, on enhanced due diligence and ongoing due diligence, and on exemptions. Those amendments came into force on 1 February 2014, and are detailed in the next section.

19. The PCMLTF Administrative Monetary Penalties (AMP) Regulations[12] came into force in December 2008. The Regulations provide FINTRAC with the power to apply monetary penalties (civil penalties) to any financial institution and DNFBPs subject to the AML/CFT regime, for non-

10 www.parl.gc.ca/Content/SEN/Committee/411/banc/rep/rep10mar13-e.pdf.

11 See Annex 1, First follow-up report.

12 http://laws-lois.justice.gc.ca/eng/regulations/SOR-2007-292/index.html.

compliance with the PCMLTFA. 19. With regard to financial countermeasures, amendments creating Part 1.1 of the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act (PCMLTFA)* were introduced through Budget 2010 to provide the Minister of Finance with the power to take targeted legally enforceable, graduated and proportionate financial countermeasures with respect to jurisdictions or foreign entities that lack sufficient or effective AML/CFT controls. These measures can be taken either on the basis of a call by an international organization, such as the FATF, or a unilateral decision based on domestic considerations. These measures could range from requiring reporting entities to enhance current customer identification and due diligence requirements under the PCMLTFA to restricting or prohibiting transactions with identified foreign jurisdictions or entities. The necessary legislative changes have received Royal Assent in 2010, and will be brought into force when accompanying regulations are completed.

20. Canada implemented a federal registration regime for money service businesses (MSBs) which has been in force since June 2008. Money services businesses have to register with FINTRAC.

21. The 2010 federal Budget[13] announced that tax crimes would be made a predicate offence for money laundering. The Criminal Code regulations were amended to reflect this change and have been in force since July 2010.

22. The Freezing Assets of Corrupt Foreign Officials Act (FACFOA)[14] was created and adopted in law on March 23, 2011 to allow the Canadian government to rapidly freeze the assets of politically exposed foreign persons (PEFPs) at the written request of a foreign state, where that state is experiencing political turmoil and freezing such assets is in the interest of international relations. Since its introduction, this legislation has been used to freeze the assets of, for example, certain Tunisian and Egyptian officials.

IV. DETAILED ANALYSIS OF PROGRESS MADE IN RELATION TO CORE RECOMMENDATION 5 *(RATED NC)*

23. The basis for the AML/CFT preventive legislation in relation to financial institutions and DNFBPs in Canada is the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act* (PCMLTFA), which was amended in December 2006[15]. The Regulations that implement part of the Act and that are relevant to Recommendation 5 are the PCMLTF Regulations (PCMLTFR)[16].

24. Canada was found Non-Compliant in relation to Recommendation 5 in its MER, which also noted that a number of amendments to the PCMLTFA and the PCMLTFR were being prepared.

25. These amendments were analysed in Canada's first follow-up report, which concluded that they strengthened Canada's customer due diligence framework, notably by introducing measures in relation to the circumstances in which CDD has to take place (including in non face-to-face scenarios), beneficial ownership, customer identification for occasional transactions that are cross-border wire transfers, collecting information on the purpose and intended nature of the business

13 See Annex 5 in www.budget.gc.ca/2010/pdf/budget-planbudgetaire-eng.pdf.

14 http://laws-lois.justice.gc.ca/eng/regulations/SOR-2011-78/index.html.

15 http://laws-lois.justice.gc.ca/eng/acts/P-24.501/index.html.

16 http://laws-lois.justice.gc.ca/eng/regulations/SOR-2002-184/index.html.

relationship and measures to be taken in case of failure to complete CDD. Although Canada had strengthened its AML/CFT regime with the new regulatory requirements that entered into force in June 2008, the new provisions did not fully address the MER concerns, and some important deficiencies remained. This may be in part due to the fact that the regulations were passed very early in the mutual evaluation process, at which time the set of Recommendation 5 deficiencies in the MER were not known to Canada. There remained a significant set of deficiencies, including in several key areas: beneficial ownership; higher risk/enhanced CDD and ongoing due diligence.

26. On January 31, 2013, further amendments to the PCMLTFR, which were mainly aimed at addressing the remaining deficiencies in relation to Recommendation 5 (but also apply to DNFBPs), entered into Canadian law. These amendments came in force on 1 February 2014 and bring progress in relation to a number of deficiencies, including in the key areas identified in the first FUR:

- The circumstances in which CDD is required (cases where financial institutions have a suspicion of ML or TF);
- Beneficial ownership identification;
- Collecting information on the purpose and intended nature of the business relationship;
- Ongoing due diligence;
- Enhanced measures in higher risk scenarios;
- Exemptions (not allowed any more in cases of a suspicion of ML or TF)

27. The detailed analysis below assesses the impact this series of amendments have on Canada's level of compliance with Recommendation 5.

a) Scope - The requirement to conduct CDD does not extend to all financial institutions (notably financial leasing, factoring and finance companies)

28. In Canada's MER[17], the assessors noted that *"certain financial institutions that undertake financial activities, as defined by the FATF Recommendations are not currently covered by the AML/CFT regime. These sectors or activities[18] are as follows (excluding entities that are caught because they also engage in financial activities under the regime): financial leasing; factoring; finance companies (i.e. entities specialized in consumer lending, credit cards, equipment financing and small business loans that are not loan companies); providers of e-money; Internet payment providers[19]; and cheque cashiers[20] when only cashing cheques issued to denominated persons[21]."* The assessors

17 Mutual evaluation report of Canada, 2008, paragraph 631.

18 *"That came to the knowledge of the assessors."*

19 *"Internet payment and e-money providers are only subject to the Act if they also offer funds remittance or transmission services and, as such, would be considered money services businesses."*

20 *"Cheque cashing businesses that also offer money remittance services are included in the definition of MSBs under the PCMLTFA and are therefore subject to the requirements of the PCMLTFA."*

21 *"Credit card issuers are covered by the AML/CFT regime. The assessment team was advised that VISA, Mastercard and American Express are the only general purpose credit cards available in Canada. As a result of VISA and Mastercard internal rules, credit cards are only issued by regulated and supervised financial*

considered that the approach taken by Canada to create these exemptions was not in line with the FATF Methodology: only those activities for which there is a proven ML/TF risk are covered by the PCMLTFA, whereas under the FATF Methodology a list of financial activities and operations must be covered by the AML/CFT regime unless there is a proven low risk of ML of TF.

29. Some progress was noted in Canada's first follow-up report, notably the development of an AML/CFT risk assessment methodology and the application of this methodology to two sectors (factoring and leasing companies), which concluded that these sectors are low risk. The basis for excluding leasing companies raised a number of issues; however, given the lack of FATF guidance in this area and the uncertainties as to precisely what are the criteria or elements that justify an exclusion, it was considered very difficult in the framework of the follow-up process to come to a definitive conclusion as to whether the conclusions meet the "proven low risk" threshold set out in the standard. Canada's first follow-up report noted that a relatively minor set of other sectors (e.g. finance companies), remain outside the scope of the AML/CFT regime although they have not yet been subject to a proper risk assessment. The MER also noted that some segments of these sectors are included in the scope of the PCMLTFA since such financial services may be also carried out by entities already covered by the AML/CFT regime. Canada indicated that risk assessments of the other sectors that remained outside of the scope of the AML/CFT regime were planned.

30. Canada has informed that it is currently working on a broader risk assessment of these and other sectors. Specifically, on June 18, 2013, Canada published its Action Plan on Transparency of Corporations and Trusts in support of the G-8 countries' commitment to demonstrate leadership in improving their respective regimes to prevent the illegal use of corporations and trusts. Canada's G-8 Action Plan commits to developing a new money laundering and terrorist financing risk assessment framework and conducting a formal assessment of these risks domestically to better inform the development and implementation of effective policies and operational approaches to mitigate risks.

31. Canada has already begun working towards the commitments set out in the Action Plan. An interdepartmental Risk Assessment Working Group led by the Department of Finance has been established and the Terms of Reference were approved in spring 2013. In addition, the Department of Finance has initiated the development of an ML/TF threat assessment as an initial step towards a complete risk assessment.

32. **Conclusion**: some progress has been made since the adoption of the MER in relation to deficiency a) although, as noted above, a final conclusion could not be reached as to whether the conclusions regarding leasing companies meet the "proven low risk" threshold set out in the standard. As stressed in Canada's first FUR, the set of sectors that remain outside the scope of the AML/CFT regime and that have not yet been the subject of a proper risk assessment is not a major deficiency in the context of Canada.

---

institutions, both for PCMLTFA and prudential purposes. Finance companies that are not caught under the PCMLTFA can also issue general purpose credit cards (in addition to stored value cards) but do so through subsidiaries that are regulated for AML/CFT and prudential purposes."

b) Although numbered accounts are permissible and used, there is no direct requirement to maintain them in such a way that full compliance can be achieved with the FATF Recommendations

33. In its MER[22], Canada explained that although there was no explicit prohibition on opening anonymous accounts, basic CDD requirements on all new accounts holders since 1993 had in practice prevented the existence of anonymous accounts. However, in relation to numbered accounts, which are permissible in Canada, the assessors noted that *"there are no detailed rules or guidance on how [numbered] accounts should be managed by the financial institutions. The obligation for compliance officers to have access to CDD information is not clearly stated either."* It was thus recommended[23] that Canada should *"consider adopting detailed rules or guidance on the use of [numbered] accounts by financial institutions. Such rules should clearly set out the obligation for compliance officers to have access to CDD information"* so as to ensure compliance with the FATF Standards.

34. The first FUR concluded that this deficiency had been partially addressed through the following measures. First, a new section 9.2 of the PCMLTFA, which came into force in June 2008, clearly provides that no account can be opened if the financial institution cannot establish the identity of the client. Second, the OSFI B-8 Guidelines were revised in 2008[24], and the following provision was included: "*if FRFIs [*Federally Regulated F*inancial Institutions] provide services, such as account numbering or coding services, which effectively shield the identity of a client for business reasons (e.g., a corporate acquisition where the premature circulation of information could jeopardize the transaction), or where client identity is withheld for proprietary reasons, FRFIs must ensure that the client has been appropriately identified and the information is accessible by the Chief Anti-Money Laundering Officer."* The language of the OSFI Guidelines was strengthened in 2008, and its content is in line with what was recommended in Canada's MER. However these guidelines cannot be considered to be enforceable means, and it was noted in the first FUR that the deficiency concerning the access of compliance officers to CDD information was not addressed.

35. In preparing this follow-up report, Canada has not reported further progress with respect to deficiency b).

36. **Conclusion**: deficiency b) has been partially addressed. However, as noted in Canada's first FUR the remaining issue is *"relatively minor"*. Canada notes that this issue (no requirement in law or other enforceable means for financial institutions to ensure the access of the AML/CFT compliance officer to the CDD information collected in relation to numbered accounts) is in relation to an example from the 2004 Methodology, which is no longer explicitly part of the 2012 Standards.

22 Mutual evaluation report of Canada, 2008, paragraph 649.

23 Mutual evaluation report of Canada, 2008, paragraph 738.

24 www.osfi-bsif.gc.ca/Eng/Docs/b8.pdf

c) When CDD is required - there is no requirement to carry out CDD measures when there is a suspicion of ML or TF and when financial institutions have doubts about the veracity or adequacy of previously obtained CDD data

i. When there is a suspicion of ML or TF

37. As noted in Canada's first FUR, section 53.1 of the PCMLTFR, which came into force in June 2008, requires financial institutions to take reasonable measures to ascertain the identity of every client who conducts a transaction that is required to be reported to FINTRAC, i.e. when there is a suspicion of ML or TF, except in the following circumstances: (1) if the financial institution has already identified the individual as required; (2) if the financial institution believes that doing so would inform the individual that it is submitting a STR; or (3) the transaction being reported is an attempted transaction.

38. Section 53.1 constituted an improvement but did not fully address the deficiency: Canada requires financial institutions to take *reasonable measures* to conduct CDD in case of a suspicion of ML or TF, whereas under the FATF Standards taking reasonable measures is only applicable with respect to the obligation to verify the identity of the beneficial owners. However, it was noted in the first FUR that the language of FINTRAC Guideline 6[25], although not binding, clearly provides that financial institutions have to identify every client who conducts a suspicious transaction. Canada was thus invited to adopt similar direct language in the PCMLTFR. Canada has not reported any action in that regard but advises that the provision was drafted so as to not conflict with the restriction against tipping-off which is codified in the FATF Standards *("if the institution believes that performing the CDD process will tip-off the customer or potential customer, it may choose not to pursue that process.").*

39. Regarding the lack of requirement to conduct CDD in relation to suspicious *attempted* transaction, an amendment to section 53.1 of the PCMLTFR, which came into force on 1 February 2014, requires financial institutions to take reasonable measures to ascertain the identity of every natural person or entity who conducts *or attempts to conduct* a transaction that should be reported to FINTRAC. This amendment addresses the issue relating to attempted transactions.

ii. When financial institutions have doubts about the veracity or adequacy of previously obtained CDD data

40. As noted in Canada's first FUR, subsection 63(1.1) of the PCMLTFR, which came into force in June 2008, requires financial institutions to reconfirm the client's identity in situations where it has ascertained the client's identity but it has doubts about the information collected. This measure only applies to customers that are natural persons (and not to legal persons or arrangements). Despite this remaining issue, Canada's first FUR concluded that this element of deficiency c) had been substantially addressed.

41. **Conclusion**: significant progress has been achieved but deficiency c) has not been fully addressed. The amendments to Section 53.1 of the PCMLTFR have remedied one of the remaining issues that related to the obligation for financial institutions to conduct CDD when they have a

25 www.fintrac-canafe.gc.ca/publications/guide/guide6/6-eng.asp.

suspicion of ML or TF. The only remaining deficiency will be the requirement to take *reasonable measures* to conduct CDD in case of a suspicion of ML or TF, which is relatively minor.

d) When CDD is required - Customer identification for occasional transactions that are cross-border wire transfers takes place for transactions above CAD 3 000. This threshold is currently too high and no equivalent requirement is in place for domestic wire transfers.

42. Satisfactory progress was reported in Canada's first FUR in relation to this deficiency. The new paragraphs 59(1)(b) - for MSBs - and 54(1)(b) - for financial entities - of the PCMLTFR, which came into force in June 2008, reduced the threshold from CAD 3 000 to CAD 1 000 for the identification of the clients who conduct wire transfers. The record-keeping and client identification regulatory provisions apply to MSBs when they remit or transmit funds of CAD 1 000 or more, domestically or internationally. For financial entities, the provision applies to electronic funds transfers.

43. **Conclusion**: as noted in Canada's first FUR, deficiency d) has been addressed.

e) Required CDD measures - The current customer identification measures for natural persons are insufficient, especially in relation to non face to-face business relationships.

44. In Canada's MER[26], the main weakness noted in relation to customer identification measures was that, in the case of individuals not physically present, financial institutions, except MSBs, had to ascertain the identity of the individual by confirming that a cheque drawn by that individual on an account at a financial entity had been cleared, i.e. a cheque that was written by the individual, cashed by the payee and cleared through the individual's account. The assessors indicated that they were *"uncomfortable with the third party cleared cheque confirmation process as it was seen as a potential loophole for illegal use. As a sole means to confirm identity in non face-to-face situations, it is unreliable"*.

45. A number of positive measures have been taken to address this issue through amendments to section 64 of the PCMLTFR that came into force in June 2008. The third party cleared cheque confirmation process can still be used but needs to be combined with at least one other identification method (for instance referring to an independent and reliable identification product that is based on personal information in respect of the person and a Canadian credit history of the person of at least six month's duration).

46. **Conclusion**: as noted in Canada's first FUR, deficiency e) has been addressed.

f) Identification of persons acting on behalf of the customers - The requirement to identify up to three persons who are allowed to give instructions in respect of an account is too limitative

47. The FATF Standards require that, when conducting CDD measures in relation to legal persons or arrangements, financial institutions should verify that *any* person purporting to act on behalf of

[26] Mutual evaluation report of Canada, 2008, paragraph 667.

the customer is so authorised, and take reasonable measures to verify the identity of that person. Two issues were identified in the context of the mutual evaluation. First, there is no explicit obligation for financial institutions to verify that the person purporting to act on behalf of the customer is so authorized. Second, in accordance with the PCMLTFR,

- in the case of business accounts in relation to which more than three persons are authorised to act, financial entities (and securities dealers until June 2008) only have to ascertain the identity of *at least three* of these persons.
- where an entity was authorized to act as a co-trustee of a trust, trust companies only had to ascertain the identity of *up to three* persons authorized to give instructions with respect to the entity's activities as co-trustee.

48. In June 2008, the repeal of subsection 57 (2) from the PCMLTFR removed the possibility for securities dealers to identify at least three of the persons authorized to act in relation to a business account.

49. In preparing this report, Canada reported that paragraph 54(1)(a) and subparagraph 55(d)(ii) need to be understood in the context of the risk-based approach. Financial institutions are expected to adjust the number of persons the identity of whom they need to ascertain according to the risk, with, in any case, a minimum of three persons for financial entities and a maximum of three for trust companies. It is not certain whether the FATF Standards strictly require that financial institutions should identify and verify the identity of *every* person purporting to act on behalf of the customer and therefore whether the Canadian approach in relation to financial entities is acceptable. The fact that, in higher risk scenarios, trust companies would not be required to ascertain the identity of all the persons authorized to give instructions with respect to the entity's activities as co-trustee is clearly a deficiency, although it is minor.

50. Canada has not reported further progress with respect to deficiency f).

51. **Conclusion**: deficiency f) has been partially addressed. The remaining issue is minor.

g) Third party determination and identification of beneficial owners - except for IDA [Investment Dealers Association] supervised entities, financial institutions are neither required to understand the ownership and control structure of the customer nor obliged to determine who are the natural persons that ultimately own or control the customer

52. Some progress was noted in Canada's first FUR. In accordance with section 11.1 of the PCMLTFR, which came into force in June 2008, financial entities, securities dealers, life insurance brokers and companies and MSBs have to take *reasonable measures*, when confirming the existence of an entity, to obtain and, if obtained, to keep a record of:

- *for corporations*: the name and occupation of all directors of the corporation and the name, address and occupation of all persons who own or control, directly or indirectly, 25% or more of the shares of the company;

- *for entities other than corporations* ("entity" as defined under the PCMLTFA means a body corporate, a trust, a partnership, a fund or an unincorporated association or organisation): name, address and occupation of all persons who own or control, directly or indirectly, 25% or more of the entity.
- *for trusts*: section 55 of the PCMLTFR requires trust companies to identify and verify the identity of the settlers and co-trustees of trusts. Section 11 requires trust companies to identify the beneficiaries that are known at the time the trust company becomes a trustee for the trust. Trust companies are the only category of financial institutions allowed to act as trustees for a trust. As regards other financial institutions that provide accounts or business relationships to a customer who is a trustee of a trust, Canada relies on the general section 11.1 obligation (see second bullet point).

53. These measures were considered insufficient in the first FUR, which noted that the following important issues remained:

- The requirement to "take reasonable measures to obtain information on beneficial owners when confirming the existence of the entity" is weaker than the FATF Standards which require that financial institutions should "identify the beneficial owner and take reasonable measures to verify the identity of the beneficial owner". The lack of a requirement to verify the information collected, combined with the need to only take reasonable measures to identify, was considered to be a *"particularly important"* issue.
- In relation to customers that are trusts, although clear identification obligations apply to trust companies, other financial institutions were subject to the generic requirement under which a trust is defined to be a "entity". These financial institutions were then obliged to identify persons that own or control 25% or more of the entity, which could cover trustees (as the persons in control), but whether settlors were covered was not clear. Furthermore, a beneficiary does not "control" the trust, and it is not clear whether a beneficiary would "own" the trust. It was thus not certain that the new provisions fully covered the deficiency.
- No specific measures had been taken to address the fact that corporations can issue bearer shares.

54. The amendments to Section 11.1 of the PCMLTFR, which came into law on 31 January 2013 and into force on 1 February 2014, addressed a number of those issues.

55. Subsections 11.1 (1) and (2) provide that financial entities, securities dealers, life insurance companies and life insurance brokers or agents are required to *"obtain the following information:*

> *(1) (a) in the case of a corporation, the names of all directors of the corporation and the names and addresses of all persons who own or control, directly or indirectly, 25 per cent or more of the shares of the corporation;*

(b) in the case of a trust, the names and addresses of all trustees and all known beneficiaries and settlors of the trust;

(c) in the case of an entity other than a corporation or trust, the names and addresses of all persons who own or control, directly or indirectly, 25 per cent or more of the entity; and

(d) in all cases, information establishing the ownership, control and structure of the entity.

(2) Every person or entity that is subject to subsection (1) shall take reasonable measures to confirm the accuracy of the information obtained under that subsection."

56. First, these subsections create an obligation to identify the beneficial owner as well as to collect information establishing the ownership, control and structure of the entity, and to take reasonable measures to verify this information. Second, all financial institutions subject to this section will have to identify all trustees and known beneficiaries and settlors of the trust, and to take reasonable measures to verify this information.

57. Subsection 11.1(4) further provides that if financial institutions are *"not able"* to obtain the abovementioned information or confirm its accuracy, they have to *"take reasonable measures to ascertain the identity of the most senior managing officer of the entity"* and treat the entity as high risk and apply enhanced CDD measures. Subsection 11.1(4) is not in line with the 2003 Standards, in particular the requirements dealing with cases of failure to complete a part of the CDD measures. Consistent with the 2003 Standards, where financial institutions are unable to identify the beneficial owners or confirm their identity, they *"should not open the account, commence business relations or perform the transaction; or should terminate the business relationship; and should consider making a suspicious transactions report"*. However, in such situations, subsection 11.1(4) does not require financial institutions to take any of these measures. Despite this, the issues relating to failure to complete CDD are dealt with below – see deficiencies q) and r) – and subsection 11.1(4) is not considered to be an issue under deficiency g) for the purpose of this report.

58. It should be noted that Canada explains that subsection 11.1(4) is aimed at reflecting the multiple-step approach to the identification of the beneficial ownership of legal entities that was introduced in the 2012 Standards (paragraph 5(b)(i) of the Interpretive Note to Recommendation 10)[27]. This report does not assess the measures with respect to the 2012 Standards. However, a preliminary analysis, which does not prejudge the results of Canada's Fourth Round mutual evaluation, raises a number of doubts about whether the subsection would be in line with paragraph 5(b)(i) of the Interpretive Note to Recommendation 10:

[27] See paragraph 5(b)(i) of the Interpretive Note to Recommendation 10, *The FATF Recommendations*, 2012. Financial institutions should first identify the natural persons who ultimately have a controlling ownership interest in a legal person; second, to the extent that there is doubt as to whether the person(s) with the controlling ownership interest are the beneficial owner(s) or where no natural person exerts control through ownership interests, they should identify the natural persons (if any) exercising control of the legal person or arrangement through other means; third, where no natural person has been identified, financial institutions should identify and take reasonable measures to verify the identity of the relevant natural person who holds the position of senior managing official.

- it is not certain that the two-step Canadian approach followed in the amended section 11.1 covers all the elements of the three-step 2012 FATF Standards approach (in particular, that "other means" beneficial owners are captured by section 11.1);
- it is not clear whether the obligation to *take reasonable measures to ascertain the identity* of the most senior managing officer is in line with step 3 of the 2012 FATF Standards approach to establishing the beneficial ownership of legal persons.
- it is unclear how subsection 11.1(4) would apply to trusts.

59. Canada has not reported progress in relation to the third remaining issue identified in the first FUR, i.e. the fact that corporations can issue bearer shares, thus making it difficult to determine the beneficial owner. However, as noted in Canada's MER, "*it is likely that these shares have limited use in practice*."[28]

60. **Conclusion**: the amendments to section 11.1 of the PCMLTFR brought Canada into substantial compliance with the 2003 FATF standard on the identification of beneficial ownership.

h) Purpose & intended nature of the business relationship - there are currently no requirements (except for securities dealers) to obtain information on the purpose and intended nature of the business relationship.

61. Some progress was reported in the first FUR: paragraphs 14(c.1) and 23(a.1) of the PCMLTFR, which came into force in June 2008, require financial entities and securities dealers to keep records that set out the intended use of new accounts. However, the insurance and MSBs sectors were out of the scope of the requirement. Furthermore, this obligation was potentially more limited than what the FATF Standards require (information should be obtained on the purpose and intended nature of the *business relationship*, which is a broader notion than an account).

62. As part of the 2013 amendments to the PCMLTFR, a new section 52.1 requires that "Every person or entity that enters into a business relationship under these Regulations shall keep a record that sets out the purpose and intended nature of the business relationship". The amendments also introduce a definition of "Business relationship" in section 1 which covers any relationship of a financial institution with a client to "conduct financial transactions or provide services related to those transactions and, as the case may be, (a) if the client holds one or more accounts with that person or entity, all transactions and activities relating to those accounts; or (b) if the client does not hold an account, only those transactions and activities in respect of which any [financial institution] is required to ascertain the identity of a person or confirm the existence of an entity under these Regulations." These new provisions therefore address the two remaining issues as noted in Canada's first FUR in relation to deficiency h).

63. **Conclusion**: the amendments that create section 52.1 of the PCMLTFR and introduce a definition of business relationships in section 1 of the PCMLTFR, address deficiency h).

[28] Mutual evaluation report of Canada, 2008, paragraph 1396.

i) Ongoing Due Diligence - except for securities dealers, there are currently no requirements to conduct ongoing due diligence on the business relationship although the need to identify customers for large cash transactions and electronic fund transfers provide certain automatic trigger points.

j) Ongoing Due Diligence - except for securities dealers financial institutions are not required to ensure that documents, data and information collected under the CDD process is kept up-to-date and relevant.

64. As noted in the first FUR, Section 9.6 of the PCMLTFA, which came into force in June 2008, requires all businesses covered by the Act to (1) adopt a compliance program; (2) develop policies and procedures for assessing ML/TF risks; and (3) if some higher risks are identified following this risk assessment, take enhanced measures for (i) identifying clients, (ii) keeping records and (iii) monitoring financial transactions. Section 71.1 of the PCMLTFR, which also came into force in June 2008, specifies the nature of these enhanced measures ("prescribed special measures"), which include taking reasonable measures to keep client and beneficial ownership identification information up-to-date and taking reasonable measures to conduct ongoing monitoring for the purpose of detecting suspicious transactions. The first FUR concluded that these requirements were not in line with the FATF standard, which requires that ongoing due diligence should be conducted on all business relationships (not only in higher risk scenarios).

65. The amendments to the PCMLTFR that came into force on 1 February 2014 introduced sections 54.3 (financial entities), 56.3 (life insurance sector), 57.2 (securities dealers), 59.01 (MSBs) and 61.1 (departments or agents of Her Majesty in Right of Canada or of a Province that sell or redeem money orders), which require these financial institutions to *"(a) conduct ongoing monitoring of its business relationship with that person or entity; and (b) keep a record of the measures taken and the information obtained under paragraph (a)."* The amendments also define "business relationships" (see definition above) and "ongoing monitoring" (*"monitoring on a periodic basis based on the risk assessment undertaken in accordance with subsection 9.6(2) of the Act and subsection 71(1) of these Regulations, by a person or entity to which section 5 of the Act applies of their business relationship with a client for the purpose of (a) detecting any transactions that are required to be reported in accordance with section 7 of the Act; (b) keeping client identification information and the information referred to in section 11.1 and 52.1 up to date; (c) reassessing the level of risk associated with the client's transactions and activities; and (d) determining whether transactions or activities are consistent with the information obtained about their client, including the risk assessment of the client"*).

66. Sections 54.3, 56.3, 57.2, 59.01 and 61.1 thus require all financial institutions covered by the Canadian AML/CFT framework to conduct ongoing monitoring on their business relationships. Consistent with the definition of "ongoing monitoring", this obligation includes both conducting ongoing due diligence and keeping CDD information up-to-date.

67. **Conclusion**: deficiencies i) and j) were addressed by the amendments to the PCMLTFR.

k) ML/FT risks - enhanced due diligence - there is no requirement to perform enhanced due diligence for higher risk categories of customer, business relationship or transaction.

68. As was noted in the first FUR, subsection 9.6(2) of the PCMLTFA, which came into force in June 2008, now requires financial institutions to develop and apply policies and procedures to assess the risk of a ML or TF activity financing offence, and subsection 9.6(3) requires them to take *"prescribed special measures for identifying clients, keeping records and monitoring financial transactions in respect of the activities that pose the high risk"*. Section 71.1 of the PCMLTFR, which also came into force in June 2008, specifies that the prescribed special measures are the development and application of written policies and procedures for (a) taking reasonable measures to keep client identification information and beneficial ownership information up to date; (b) taking reasonable measures to conduct ongoing monitoring for the purpose of detecting suspicious transactions; and (c) mitigating the risks identified. The first FUR thus concluded that measures (a) and (b) *"are not enhanced due diligence measures as foreseen in the FATF Recommendations but are, on the contrary, CDD measures that should be mandatory for all customers or transactions"*.

69. The amendments to the PCMLTFR that came into force on 1 February 2014 modify section 71.1 and the notion of "prescribed special measures". These measures are:

(a) *"taking enhanced measures based on the risk assessment undertaken in accordance with subsection 9.6(2) of the Act to ascertain the identity of any person or confirm the existence of any entity"*, in addition to the standard customer identification measures; and

(b) *"taking any other enhanced measure to mitigate the risks identified in accordance with subsection 9.6(3) of the Act, including, (i) keeping client identification information and the information referred to in section 11.1* [beneficial ownership information] *up to date, and (ii) in addition to the measures required in sections 54.3, 56.3, 57.2, 59.01, 59.11, 59.21, 59.31, 59.41, 59.51, 60.1 and 61.1* [ongoing monitoring requirements], *conducting ongoing monitoring of business relationships for the purpose of detecting transactions that are required to be reported to the Centre under section 7 of the Act* [suspicious transactions]*"*.

70. Under (a), prescribed special measures will have to include enhanced customer identification and verification measures.

71. However, the way (b) is worded is ambiguous, since the prescribed special measures should also cover *"any other enhanced measure to mitigate the risks"*, but these enhanced measures include in (i) and (ii) requirements that should apply to *any* business relationships (not only in high risk scenarios). Canada explains that *"it is a fundamental principle of legal interpretation that statutory provisions should not be interpreted in such a way that would lead to absurdity or internal inconsistency.* 'Absurdity' *includes situations where the wording in question contradicts the remainder of the provision"*. Canada adds that "*given that both the chapeau of s.71.1 and 71.1(b) specifically require reporting entities to implement enhanced measures, it would give an absurd result if "standard" measures were considered to be enhanced for the purposes of s.71.1"*. Therefore, for Canada, *"it would be clear to all regulators and courts in Canada, as well as stakeholders, that*

s.71.1(b)(i) and (ii) refer to enhanced measures, in accordance with the purpose of s.71.1." In order to remove any ambiguity in the nature of this part of the prescribed special measures, Canada is encouraged to clarify the meaning of (i) and (ii) e.g. through guidance.

72. **Conclusion**: the amendments to section 71.1 brought substantial progress in relation to deficiency k). Canada is encouraged to clarify the meaning of paragraph 71.1(b) of the Regulations, e.g. in guidance, so as to confirm that deficiency k) has been fully addressed.

l) ML/FT risks - reduced or simplified due diligence - the current exemptions mean that, rather than reduced or simplified CDD measures, no CDD apply, which is not in line with the FATF standards.

m) ML/FT risks - reduced or simplified due diligence - exemptions from CDD and third party determination bring in very far reaching exceptions that introduce potential gaps in the customer identification process (especially the exemptions apply to financial entities that operate in FATF countries based on presumption of conformity only).

73. The PCMLTFR provides for a number of exemptions from the client identification and record-keeping requirements in certain specific circumstances but does not establish a simplified or reduced CDD regime. These exemptions are mainly contained in sections 9 and 62 of the PCMLTFR. It should also be noted that sections 19 and 56 of the PCMLTFR create a form of exemption by requiring that life insurers only conduct CDD in relation to the purchase of an immediate or deferred annuity or a life insurance policy for which the client may pay CAD 10,000 or more over the duration of the annuity or policy.

74. The Glossary of the 2004 Methodology authorizes countries to exempt some financial institutions or activities from the application of some or all of the AML requirements in two situations:

- *"when a financial activity is carried out by a person or entity on an occasional or very limited basis (having regard to quantitative and absolute criteria) such that there is little risk of money laundering activity occurring"; or*
- *"in strictly limited and justified circumstances, and based on a proven low risk of money laundering, a country may decide not to apply some or all of the Forty Recommendations to some of the financial activities stated above".*

75. In the context of its mutual evaluation, Canada explained that the exemptions relate to low risk transactions, products or customers and were developed following extensive discussions between the Department of Finance, FINTRAC, the Royal Canadian Mounted Police (RCMP) and the reporting entities. However, the assessors indicated that no more information had been provided at the time of the on-site visit, which means that a low risk of ML had not been *"proven"* as required by the Methodology. It was therefore recommended in the MER that the transactions, products and customers exempted from the application of CDD measures should be subject to a simplified or reduced CDD regime.

76. In the first FUR, Canada explained that sections 9.6 of the PCMLTFA and 71.1 of the PCMLTFR (which both came into force in June 2008) on risk assessment and risk mitigation "overrule" the exemptions contained in the PCMLTFR, which results in a requirement for financial institutions to

apply enhanced CDD measures in cases of a higher ML/TF risk even in the situations covered by the exemptions. However, the first FUR concluded that the exemptions remain per se applicable as long as the account is not identified as high risk, which is not in line with the FATF Standards or the recommendation set out in the MER. Furthermore, the list of exemptions contained in section 9, and more importantly section 62, had been expanded following the mutual evaluation.

77. In preparing this report, Canada has indicated that the exemptions under section 62(2) of the PCMLTFR apply predominantly to highly regulated and limited products which can only be used by individuals located within Canada, or to accounts opened on behalf of domestic entities that are regulated under the PCMLTFA or other federal/provincial law. Canada has also mentioned that most of the exemptions to CDD requirements deal with registered financial products, which have tax implications for Canadians and are highly regulated. Client information is collected by the Canada Revenue Agency for tax purposes, and this is why Canada considers unnecessary for financial institutions to collect it or to be required to collect it under the PCMLTFA. However, as noted above, the FATF standard clearly provides that exemptions from CDD requirements need to be based on a "proven low risk" of ML/TF, a term that intentionally sets a high standard for the justification of exemptions. Canada indicates that it is currently working on a broader risk assessment of these and other sectors, that could provide the justification for the exemption.

78. The amendments to the PCMLTFR that came into force on 1 February 2014 introduce subsection 62(5), which provides that the exemptions contained in subsections 62(1) to (3) do not apply when the financial institution is required to take reasonable measures to ascertain the identity of the natural persons who conduct or attempt to conduct suspicious transactions (i.e. no exemption in cases of suspicious transactions). Canada explains that subsection 62(5) creates a general monitoring obligation which also applies to exempted transactions, and as such submits these to a form of simplified CDD regime. It is however unclear what in practice an obligation to monitor exempted transactions for the purpose of detecting suspicions of ML or TF would consist of and whether it can amount to a simplified CDD regime, which, under the FATF Standards, should comprise, although in a simplified form, the four standard CDD requirements as described in Recommendation 5.

79. **Conclusion**: section 9.6 of the PCMLTFA introduced some CDD obligations in relation to the transactions, products and customers subject to CDD and third party determination exemptions. Subsection 62(5) introduced by the 2013 amendments to the PCMLTFR creates further CDD obligations. However, the nature of these requirements is not in line with the Standards, and it should also be noted that Canada has created new exemptions since the adoption of the MER. Therefore, the amendments that came into force on 1 February 2014 are not sufficient to address deficiencies l) and m).

n) ML/FT risks - reduced or simplified due diligence - there is no explicit provisions that set out that CDD or third party determination exemptions are not acceptable where there is a suspicion of ML or FT or specific higher risk scenarios apply.

80. Subsections 62(1) to (3) of the PCMLTFR contain lists of types of transactions, products and customers in relation to which the CDD (and third party determination) obligations do not apply. The amendments to the PCMLTFR that entered into law on 31 January 2013 and came into force on

1 February 2014 introduce subsection 62(5) which provides that these exemptions do not apply when the financial institution is required to take reasonable measures to ascertain the identity of the natural persons who conduct or attempt to conduct suspicious transactions.

81. In relation to the other part of deficiency n) (i.e. there are no explicit provisions that set out that CDD or third party determination exemptions are not acceptable where specific higher risk scenarios apply), Canada explains that *"most of the exemptions deal with registered financial products, which have tax implications for Canadians and are highly regulated, or domestic entities that are regulated under the PCMLTFA or other federal/provincial law"* and therefore "*specific high risk scenarios (such as PEPs) are not applicable in this case"*.

82. **Conclusion**: Subsection 62(5) of the PCMLTFR, which came into force on 1 February 2014 will address deficiency n).

o) ML/FT risks - reduced or simplified due diligence - financial institutions, in certain circumstances, are given the permission to exempt from CDD requirements or third party determination obligations certain customers resident in another country. However, Canada has not carried out a systematic country risk analysis to ensure that third countries in which customers of Canadian financial institutions are resident are in compliance with and have effectively implemented the FATF Recommendations.

83. The FATF Standards (INR5, 2003 Recommendations) provide that where countries allow financial institutions to apply simplified CDD measures to customers from any other jurisdiction, they must be satisfied that the jurisdiction is in compliance with and has effectively implemented the FATF Recommendations. As noted in the MER and the first FUR, the exemptions listed in the PCMLTFR are not explicitly limited to situations where the customer resides in Canada, even though, as noted by Canada, a number of them would apply to *"highly regulated and limited products which can only be used by individuals located within Canada, or to accounts opened on behalf of domestic entities that are regulated under the PCMLTFA or other federal/provincial law"*.

84. Some exemptions explicitly apply to customers that operate in foreign countries:

- Paragraph 62(2)(m) provides that CDD requirements do not apply when *"there are reasonable grounds to believe that the account holder is a public body or a corporation that has minimum net assets of $75 million on its last audited balance sheet and whose shares are traded on a Canadian stock exchange or a stock exchange that is prescribed by section 3201 of the Income Tax Regulations and operates in a country that is a member of the Financial Action Task Force on Money Laundering.*
- Subsection 9(5) states that the obligation to identify the third party (and not to determine whether the customer is acting on behalf of a third party), does not apply to customers of securities dealers that are "*engaged in the business of dealing in securities only outside of Canada (...) and where (a) the account is in a country that is a member of the Financial Action Task Force; (b) the account is in a country that is not a member of the Task Force referred to in paragraph (a) but has implemented the recommendations of the Task*

> *Force relating to customer identification and, at the time that the account is opened, the securities dealer has obtained written assurance from the entity where the account is located that the country has implemented those recommendations; or (c) the account is in a country that is not a member of the Task Force referred to in paragraph (a) and has not implemented the recommendations of the Task Force relating to customer identification but, at the time that the account is opened, the securities dealer has ascertained the identity of all third parties relating to the account as described in paragraph 64(1)* [which includes identification requirements for customers in non face-to-face situations]".

85. Therefore, as noted in the MER, section 62(2)(m) (previously section 62(2)(b)) and section 9(5) rely on a presumption that countries in which customers that may be exempted from CDD measures operate have implemented the FATF Standards. However, Canada had not carried out a systematic country risk analysis to ensure that third countries in which customers of Canadian financial institutions are resident are in compliance with and have effectively implemented the FATF Recommendations.

86. No specific progress was reported in this area since the first FUR. However, as noted above, in view of the preparation of this follow-up report, Canada indicated that risk assessments are conducted through its Illicit Financing Advisory Committee which will inform Directive and Regulations issued under Part 1.1 of the PCMLTF Act. When in force, Part 1.1 will provide the Minister of Finance with the power to take targeted legally enforceable, graduated and proportionate financial countermeasures with respect to jurisdictions or foreign entities that lack sufficient or effective AML/CFT controls. These measures can be taken either on the basis of a call by an international organization, such as the FATF, or a unilateral decision based on domestic considerations, and could range from requiring reporting entities to enhance current CDD requirements under the PCMLTFA to restricting or prohibiting transactions with identified foreign jurisdictions or entities. In addition, guidance is provided through FINTRAC advisories and OSFI notices encouraging enhanced CDD with respect to clients and beneficiaries involved in transactions with high risk jurisdictions.

87. **Conclusion**: deficiency o) has been addressed, though the relevant legislation is not yet in force.

p) Timing of verification - the PCMLTF Regulations set out unreasonable verification timelines to be carried out by certain financial sectors and/or in relation to certain customers.

88. In Canada's MER[29], the assessors noted that the PCMLTFR established generally acceptable timelines for ascertaining customer identity, but that certain serious weaknesses remained in relation to the identity verification carried out by a number of financial sectors (in particular, securities and life insurance) and/or vis-à-vis certain types of customers (entities, including corporations).

[29] Mutual evaluation report of Canada, 2008, paragraph 708.

89. As noted in the first FUR, a number of amendments to sections 64, 65 and 66 of the PCMLTFR, which came into force in June 2008, reduced the timelines for verifying the identity of customers of life insurers (from 6 months to 30 days), customers of securities dealers (from 6 months to before any transaction other than an initial deposit is carried out on the account for natural persons and 30 days for entities); and customers of MSBs that are entities (from 6 months to 30 days). The conclusion was that the new timelines adequately address the deficiency identified in the MER.

90. **Conclusion**: deficiency p) has been adequately addressed.

q) Failure to satisfactorily complete CDD - financial institutions (except securities dealers in some circumstances) are not prevented from opening an account or commencing business relationship or performing a transaction and they are not required to make a suspicious transaction report.

91. Some progress in this area was reported in Canada's first FUR. A new section 9.2 of the PCMLTFA, which came into force in June 2008, prohibits reporting entities from opening an account for a client if it cannot ascertain the identity of the client in accordance with the prescribed measures. However, the first FUR concluded that this provision had only partially addressed deficiency q). In particular, it was noted that there is no obligation in law or regulation for financial institutions to consider making a suspicious transaction report in cases where the identity of the client cannot be established and properly verified. Canada explains that there is however such a requirement in FINTRAC guidance. Section 9.2 of the PCMLTFA only prohibits reporting entities from opening an account in such situations, which is more limited than the FATF requirement to also prohibit reporting entities from commencing a business relationship or performing a transaction.

92. Canada has not reported further progress. However, Canadian officials indicate that:

- It is not possible in Canada to include a legal obligation to *consider* doing something.
- *"The common law legal principle of a positive obligation applies. Specifically, this means that where law or regulation sets out a positive obligation on stakeholders to comply with a specific provision, failure to comply with this obligation means that stakeholders are in violation of the law. There is no need to specifically indicate in the law what happens if stakeholders cannot comply with the obligation, as it is well understood that it is not legal to go ahead with a transaction or account opening if the obligation in question is not fulfilled."*

93. However, other common law countries have introduced such obligations. Furthermore, section 9.2 of the PCMLTFR is an indication that Canada can introduce this type of requirement, although Canada notes that this is an exception which was aimed to address the FATF concerns.

94. **Conclusion**: deficiency q) has been partially addressed.

r) Failure to satisfactorily complete CDD - in situations where the financial institution has already commenced a business relationship but is unable to perform adequate CDD and establish beneficial ownership, there is no requirement to terminate the business relationship

95. Canada has not reported specific progress in this area. However, Canadian officials indicate that the two explanations given in relation to deficiency q) are also relevant with respect to deficiency r). The comments made above in relation to these explanations are reiterated.

96. **Conclusion**: deficiency r) has not been addressed.

RECOMMENDATION 5 – OVERALL CONCLUSION

97. In the year that followed the adoption of its MER, Canada took a number of positive steps to address some of the deficiencies identified in relation to Recommendation 5 through the adoption of new provisions both in the PCMLTFA and the PCMLTFR. However, as noted in the first FUR, a significant set of deficiencies had not been addressed. In particular, several remaining issues were noted in the following key areas: beneficial ownership (deficiency g); higher risk/enhanced CDD and lower risk/exemptions (deficiencies k to o); and ongoing due diligence (deficiencies i and j).

98. Since the first FUR, Canada has made a number of amendments to the PCMLTFR which aim at addressing most of the remaining issues that were noted in the first FUR. These amendments entered into law on 31 January 2013 and came into force on 1 February 2014. They significantly improve Canada's level of compliance with Recommendation 5. In particular, the remaining issues in relation to beneficial ownership and ongoing due diligence are addressed, the amendments also substantially remedy the weaknesses with respect to the enhanced CDD obligations and bring some progress in relation to the exemptions from the CDD obligations.

99. In total, the following issues remain to be addressed:

- six minor or very minor issues, in relation to deficiencies a (scope), b (numbered accounts), c (when CDD is required), f (identification of persons purporting to act on behalf of the customers), g (beneficial ownership) and h (enhanced measures);
- two issues of more significance, in relation to, respectively, deficiencies l, m and o (exemptions), and q and r (failure to complete CDD).

100. This means that Canada has reached a level of compliance essentially equivalent to an LC with Recommendation 5.

V. DETAILED ANALYSIS OF PROGRESS MADE IN RELATION TO KEY RECOMMENDATIONS 23 AND 26 (RATED PC)

101. Based on the first FUR, it was concluded that Canada had made real progress and had taken positive action to remedy the most significant deficiencies. It was thus considered that there had been sufficient progress to conclude that Canada had implemented Recommendations 23 and 26 at a level equivalent to a C or an LC. It was also recommended to continue monitoring progress, especially with regard to the effectiveness of the adopted measures.

Recommendation 23 – description and analysis

a) Exclusion from the AML/CFT regime of certain financial sectors (such as financial leasing, factoring, finance companies, etc.) without proper risk assessments.

102. See the analysis above in relation to Recommendation 5 a) (par. 25 and s.).

b) For the financial institutions subject to the PCMLTFA, there is a very unequal level of supervision of AML/CFT compliance, with certain categories of financial institution appearing to be insufficiently controlled (MSBs, certain credit unions/caisses populaires, life insurance intermediaries…). This is due to the limited staff resources of FINTRAC dedicated to on-site assessments compared to the high number of reporting entities, which has not always been compensated by the involvement of the primary prudential regulators in AML/CFT issues.

FINTRAC – AML/CFT supervisor for all reporting entities[30]:

103. Canada reports that the number of FINTRAC staff has increased in the compliance section from 49 to 87 staff (from the time of the on-site visit in 2007 to March 31, 2013). FINTRAC was re-structured in the fall of 2008 with employees from other sectors in FINTRAC moving to the compliance section.

Table 1. **Evolution of FINTRAC staff – Compliance and direct enforcement activities**

Fiscal Year (As of April 1st)	Full Time Equivalents in FINTRAC's Compliance Program	Full Time Equivalents in FINTRAC's Direct Enforcement Activities
2008-09	60	34
2009-10	56	34
2010-11	64	40
2011-12	79	52
2012-13	87	67

104. FINTRAC also received additional funding in 2010 (an additional CAD 8 million/USD 7.652 million in annual funding announced in Federal Budget 2010) and CAD 5 million (USD 4.782 million) of this on-going funding was specifically ear marked to enhance FINTRAC's compliance program.

105. *National Compliance Program[31]*. Canada indicates that its compliance program focus evolved from a guidance/outreach approach to a formal risk-based approach (RBA) Compliance

30 In order to assist it, FINTRAC has signed MOUs with certain regulators or supervisors to share information. In addition to this, some regulators have provisions under their own legislation or codes of conduct that impose similar requirements to, or which complement the key provisions in the PCMLTFA through separate enforcement powers (for example, OSFI and IDA) (Mutual evaluation report of Canada, 2008, paragraph 935).

31 Mutual evaluation report of Canada, 2008, paragraphs 1092 to 1106.

Enforcement Program. As the RBA has shifted towards greater enforcement, it has undergone an appreciable overhaul. This has resulted in a revamped risk based compliance program which began in 2010 and continues to be modernized. The analysis completed in determining sectors of high and low risk feed into determining the number of reporting entities in each sector that will have compliance examinations conducted by FINTRAC.

106. In terms of coverage, FINTRAC's financial conglomerates and large reporting entities strategies ensure that the key industry players with large market shares are examined regularly given the inherent risks that are associated with their size and respective business models, as well as the consequences of any potential non-compliance. A share of compliance enforcement activities is also directed at randomly selected reporting entities to maximize coverage, validate benchmarks, and promote compliance more generally.

107. A number of new tools are utilized by FINTRAC to determine sectors that pose a high risk of being abused for ML/TF, including Compliance Assessment Reports, desk reviews and IT tools:

108. *Use of Compliance Assessment Report*. Canada indicates that Compliance questionnaires have been replaced with a new enforcement tool, the Compliance Assessment Report (CAR). As part of their obligations to report on their compliance with the PCMLTFA, reporting entities must complete the CAR when requested to do so by FINTRAC.

109. Canada mentions that CARs allow FINTRAC not only to validate the existence of reporting entities but also to better profile reporting entities within a sector. Canada adds that CARs have helped expand the coverage, and more importantly, in a manner that is tailored and cost effective. Early results are showing that CARs help raise awareness and deter non-compliant behaviour. CAR results have also been leveraged to initiate desk and on-site exams.

110. Canada reports that in 2012-2013, 4, 008 CARs were issued across several sectors in order to help assess compliance regime obligations. These sectors were selected on the basis of risk considerations.

Table 2. **Compliance Assessment Reports Sent by FINTRAC – Break Down By Sector**

Sector	Activity Sector	2010/11	2011/12	2012/13	Total
Accountants	Accountants	n/a	1 480	n/a	**1 480**
Dealers in Precious Metals and Stones	Dealers in Precious Metals and Stones	n/a	1 500	2 000	**3 500**
Financial Entities	Banks	18	n/a	n/a	**18**
	Credit Unions / Caisses Populaires	n/a	n/a	302	**302**
	Trust & Loan Companies	11	8	48	**67**
Life Insurance	Life Insurance (including agents and brokers)	33	1 559	829	**2 421**
Real Estate	Real Estate	n/a	1 479	n/a	**1 479**
Money Service	Money Service Businesses	n/a	n/a	50	**50**
Securities	Securities Dealers	n/a	n/a	779	**779**
Total		**62**	**6 026**	**4 008**	**10 096**

111. Despite the addition of two new sectors in 2012-2013 (MSBs and securities), the total number of CARs has dropped from 6,026 to 4,008. This is partly due to an extensive coverage of the accounting and real estate sectors in 2011/12.

112. *Desk Examinations*. Canada indicates that FINTRAC has developed new approaches to conducting compliance examinations, including desk reviews, which were implemented in 2009. The requirement to provide information for a desk review is covered by the compliance measures under Section 63.1 of the PCMLTFA and failure to provide information for a desk review is subject to the Administrative Monetary Penalties (AMP) regime.

113. Canada informs that FINTRAC applies examination types (desk/onsite) commensurate with such factors as risk, complexity, and type of reporting entity. Canada reports that the desk examination initiative has allowed FINTRAC to optimize the use of its resources, tailored its compliance enforcement activities, and helped increase the total number of examinations conducted in a given fiscal year, while not decreasing the value of examinations and findings.

114. *New IT tools*. Canada reports that as of January 2012, IT systems have been put in place to support the examination program, CAR program, and the distribution of compliance workload.

115. *Compliance Research Laboratory*. Canada informs that FINTRAC has established a dedicated research environment used to develop and maintain a compliance risk model, which is used to direct the allocation of resources in the most efficient manner. Ongoing development focuses on further increasing the quality of incoming report data to support the intelligence function. This includes an enhancement of the validation rules for incoming reports (May 2014), and the implementation of a facility through which the agency can monitor large volumes of incoming reports and directly address issues with volumes, timing and data quality (August 2014).

116. *Major Reporters Team*. In July 2013, FINTRAC announced the creation of a major reporters team within its National Compliance Program. The team will be responsible for managing FINTRAC's relationship with the largest of the reporting entities in the banking sector. Given their economic footprint and the volume of transactions they facilitate, major reporters play a unique and important role in the detection, deterrence and prevention of money laundering and terrorist financing. For Canada, it represents an important milestone in FINTRAC's ongoing efforts to monitor and enhance compliance.

Table 3. **Overview of FINTRAC's compliane activities**

Compliance Activities by FINTRAC		Fiscal Year					
		2008/09	2009/10	2010/11	2011/12	2012/13	Total
Enforcement Activities	Money Services Business Registration Actions *	799	240	568	396	778	**2 781**
	Compliance Assessment Reports (CAR) Sent	n/a	n/a	62	6 026	4 008	**10 096**
	Examinations **	455	691	684	1 069	1 157	**4 056**

Compliance Activities by FINTRAC		Fiscal Year					
		2008/09	2009/10	2010/11	2011/12	2012/13	Total
	Administrative Monetary Penalties - Notices of Violations Issued ***	n/a	14	7	7	13	**41**
	Non-Compliance Disclosures	19	3	1	4	0	**27**
Other Key Compliance Activities	General Inquiries ****	6 445	3 728	4 365	6 763	5 993	**27 294**
	Policy Interpretations	n/a	n/a	258	450	245	**953**
	Reports Returned for Further Actions	2 115	2 283	1 537	48	630	**6 613**

Total		**10 357**	**7 100**	**7 521**	**14 790**	**12 847**	**52 615**

* This includes initial registrations, registration renewals, registration denials, and registration revocations.
** This includes desk and on-site examinations conducted by FINTRAC.
*** FINTRAC has the authority to issue administrative monetary penalties since December 30, 2008.
**** This reflects only the volume of calls received by FINTRAC's Call Centre.

117. Canada reports that in 2012-13, FINTRAC completed 1,157 compliance examinations. This was a 69% increase from 684 examinations completed in 2010-11. This significant increase was due, in large part, to both the recruitment of additional resources to meet the Government of Canada Budget 2010 commitments and to the implementation of the new risk-based compliance strategy.

118. Canada also mentions that CARs, the newly introduced Compliance Assessment Reports (see paragraph 106), were not designed to be used for all sectors as they are not always the most appropriate method. For example, all casinos undergo an on-site examination on a regular cycle. Therefore, CARs have not been used for this sector. In 2012–2013, 4008 CARs were issued across several sectors in order to help assess compliance regime obligations.

Table 4. **Overview of FINTRAC's examinations**

Sector	Activity Sector	N° of reporting entities in Fiscal 2012/13 (primary population*)	FINTRAC Examinations**					
			2008/09	2009/10	2010/11	2011/12	2012/13	Total
Accountants	Accountants	3 829	21	48	20	0	25	114

Total		**31 180**	**455**	**691**	**684**	**1 069**	**1 157**	**4 056**

* The reporting entities' population can be separated into the primary and secondary reporting entities populations. The difference between the primary population and the secondary population lies in the fact that the Act is structured in such a way that there are instances where both an employer and an employee will be subject to the provisions of the Act; in such case, the employer is seen as the primary reporting entity and the employee as the secondary. These instances occur in the accountant, BC notary, dealers in precious metals and stones, life insurance, real estate and securities sectors.
** Does not include other compliance enforcement activities, such as CARs. The number of examinations conducted may include multiple examinations on the same reporting entity.
*** Does not include FRFIs assessed by OSFI.

119. Canada specifies that, as recommended in the MER, FINTRAC has launched a more intensive compliance review of the money services business (MSB) and credit unions/*caisses populaires* sectors:

- the number of examinations in the MSB sector was stable from 2008 to 2010 (an average of 210 examinations each year). Due to the evaluated risks, the number of examinations of the sector considerably increased in 2011/2012 when 426 examinations were conducted on MSBs and was brought back to 222 in 2012/2013 (this includes both desk and on-site examinations). FINTRAC also launched CARs to the MSB sector (50 in 2013).
- FINTRAC has also increased the examinations of the credit unions/*caisses populaires* sector (more than 4 times higher in 2012/2013, as compared to 2008/2009, with a peak in 2011/2012). Canada indicates that the number of on-site visits is proportional to the assessed risk in the credit union/*caisses populaires* sector.

120. As for the decrease in the number of examinations in the life insurance sector (from 28 in 2008/2009 to 5 in 2011/2012, and then 13 in 2012/2013), Canada explains that this is correlated to the level of risk of the sector. Canada adds that life insurance has nevertheless been subject to continuing appropriate supervisory activities including:

- examinations of key market players/companies, including Canada's top financial conglomerates' life insurance companies by OSFI;
- a number of "broker/intermediary" examinations by FINTRAC;
- CARs being issued to the entire sector, including agents, brokers/intermediaries, and companies. Table 2 shows that the number of CARs sent to life insurance providers reached 1,559 in 2011/2012 and 829 in 2012/2013, as compared to 33 in 2010/2011.

OSFI (Office of the Superintendent of Financial Institutions) – primary regulator of banks and other federally-regulated financial institutions (FRFIs):

121. OSFI is a member of the Basel Committee on Banking Supervision and the International Association of Insurance Supervisors, and applies their Core Principles of supervision throughout its supervisory activities, including AML/CFT supervision. As discussed more fully in the MER, OSFI has been conducting AML/CFT supervision in the FRFI sector since 2004.

122. Canada informs that since the MER on-site, OSFI's AML supervisory unit has been transferred to OSFI's Supervision Sector and its assessment program more integrated into OSFI's overall supervisory framework. For example, in 2011-12, OSFI conducted 17 on-site AML/CFT assessments Three of these assessments were conducted at conglomerate financial groups with multiple FRFIs and other financial entities in each group (OSFI's supervisory expectations include a requirement to apply findings across financial groups, as applicable). The other 14 assessments were: 9 banks; 7 trust companies; and two loan companies. From April 2012 to March 2013, OSFI conducted 13 on-site AML/CFT assessments. Three of these assessments were conducted at conglomerate financial groups with multiple FRFIs and other financial entities in each group. The other 10 assessments were: 6 banks and 4 trust companies.

123. The FRFI sector includes Canada's largest banks and life insurance companies, which have a dominant market share domestically. They also have major banking and life insurance subsidiaries and branches in the USA, the Caribbean, Latin America and Asia. OSFI's AML/CFT assessment program is directed at these and other FRFIs which OSFI considers to be at the highest risk of ML and TF, and includes an assessment planning cycle[32]. OSFI applies its AML/CFT supervision to foreign branches and subsidiaries using a risk- based approach. FRFIs are assessed more frequently

[32] All FRFIs subject to the PCMLTFA (i.e. banks, trust companies, loan companies and life insurance companies) have been risk-rated according to inherent risk exposures to ML and TF of business activities, location of business activities and business strategies and structures. This inherent risk rating is used to determine OSFI's AML/ATF assessment planning cycle. The methodology groups FRFIs into three risk categories as follows:

- Higher (A) inherent risk – assessed every 3 years (including all conglomerate banking groups)
- Medium (B) inherent risk – assessed every 4 years (including all conglomerate life insurance groups)
- Lower (C) inherent risk – assessed every 5 years

than the planned cycle, irrespective of risk rating, when, for instance, a FRFI's program is found to have major deficiencies and it is determined that a re-assessment may be warranted outside of the assessment planning cycle.

124. Under the MOU with FINTRAC, OSFI provides FINTRAC with a copy of its examination (findings) letters, as well as the responses to them by FRFIs, and also reports to FINTRAC on all follow-up work. OSFI consults FINTRAC on an on-going basis to ensure that any concerns FINTRAC has are factored in to the monitoring program applied to the FRFI.

125. There were 59 low to very low risk FRFIs which were assessed by FINTRAC during 2011-2012 using their compliance assessment reports process.

126. In 2010, FINTRAC announced it would commence direct compliance examinations of FRFIs supervised by OSFI. This program began in 2011 but was discontinued. Despite attempts to reduce any potential or perceived burden on entities, the results of this approach in 2012 were unsatisfactory, as they evidenced a duplication of supervisory and compliance efforts. In 2013, OSFI and FINTRAC signed a concurrent assessments/examination framework,. Under this approach, OSFI will continue to focus on risk management processes and controls needed to ensure compliance; and FINTRAC will focus on the quality, volume and timing of reports submitted by FRFIs as part of their PCMLTFA obligations

General structure of the AML/CFT supervisory regime

127. In considering Canada's compliance with Recommendation 23 (and subsequently with Recommendation 24), the MER questioned the choice made by Canada to very much concentrate the AML/CFT supervisory functions in FINTRAC, considering the high number of reporting entities to be covered in the context of a federal state and different financial sectors. However, aside from the concurrent examination approach between OSFI and FINTRAC, and a list of MOUs signed by FINTRAC and provincial regulators[33], no further information has been provided by Canada.

128. One suggestion in the MER was that FINTRAC should delegate formally its compliance examination authority[34] to its MOU partners and other primary regulators (essentially to leverage existing examination resources and avoid possible duplication of compliance inspections). This was considered but not undertaken due to the importance for Canada to ensure consistent application of the regulations and legislation by reporting entities, and ensure clear accountability by retaining FINTRAC as the lead responsible competent authority with appropriate and specific Administrative Monetary Penalties (AMPs) powers under the PCMLTFA.

129. The MOU between FINTRAC and OSFI enables the two agencies to achieve coordinated supervision of FRFIs. Current arrangements and the new concurrent assessment approach substantially increase efficiency and reduce the regulatory burden on those businesses with reporting obligations. FINTRAC currently has 18 Memoranda of Understandings with provincial

33 See Annex 1 to the Fifth follow-up report.

34 As permitted under Section 43(5) of the PCMLTFA.

regulators[35] which enable the sharing of their examination findings at agreed upon intervals. These results can influence the scope of subsequent FINTRAC examinations.

130. **Conclusion**: from the various elements provided by Canada, it can be concluded that this deficiency has been largely addressed. FINTRAC has strengthened its compliance staff in charge of supervising reporting entities, which is a positive step to improve the balance of supervision between all sectors. At the same time though, the scope of reporting entities under the responsibility of FINTRAC has expanded. FINTRAC should therefore ensure that its resources develop in relation to its specific needs. It has to be noted that the application of a risk-based compliance approach as well as the development of new and better suited compliance tools should also enable FINTRAC and sector supervisors to better target the institutions posing higher risks and requiring enhanced supervision and onsite-examinations.

131. However, risk assessments of each of the reporting sectors would be needed to get a comprehensive view on the nature and level of risks to which Canada is exposed, and to make sure that FINTRAC's compliance resources and activities are optimally applied to the different reporting sectors. This would in particular give a stronger basis to evaluate if, overall, the sectors and institutions presenting higher risks benefit from the required level of attention from FINTRAC, including through onsite examinations.

132. Canada informed the Secretariat that FINTRAC conducts risks assessments for each reporting sector and these exercises inform the compliance activities conducted. Canada adds that it is currently working on a broader risk assessment of these sectors. An interdepartmental Risk Assessment Working Group led by the Department of Finance has been established and the Terms of Reference were approved in Spring 2013. In addition, the Department of Finance has initiated the development of an ML/TF threat assessment as an initial step towards a complete risk assessment. The interdepartmental Risk Assessment Working Group has met 4 times to date and will be meeting on a regular basis until the project is completed. The results of this ML/TF risk assessment will further inform FINTRAC's risk-based compliance program, as well as inform all other public and private sector organizations contributing to Canada's AML/CFT regime.

133. On the basis of the information available, with particular regard to sectors identified in the MER as appearing insufficiently supervised:

- As a result of a risk evaluation of the money services business activities, the number of desk and on-site examinations doubled in 2011/2012.
- As far as credit unions/*caisses populaires* are concerned, progress has been made with a number of on-site examinations in 2011/2012 6 times higher than in 2008/2009. FINTRAC has conducted 878 examinations over 4 years for a reporting sector that includes 870 reporting entities. It better reflects the level of risk of the sector.
- Based on the overall level of risk of life insurance, the sector has been subject to other, more appropriate compliance activities than examinations,

[35] See Annex 1 to the Fifth follow-up report.

including the extensive issuance of CARs. In addition, key life insurance market participants were subject to examinations.

c) "Fit and proper" requirements are not comprehensive - at the time of the on-site visit, there was no specific obligation for FRFIs to implement screening procedures for persons who are hired, or appointed to the Board after the initial incorporation or authorisation procedures are concluded.

134. OSFI Guideline E-17 – *Background Checks on Directors and Senior Management of FREs*[36] came into effect in January 2009 and requires FRFIs supervised by OSFI to implement on-going fit and proper standards for directors and senior officers of FRFIs. E-17 sets out screening requirements including criminal background checks that must be done prior to appointment. The guidance also requires each FRFI to have policies for updating all fit and proper assessments of senior officers and directors at regular intervals (no longer than 5 years).

135. OSFI's authority to require FRFIs to conduct screening procedures for those who are hired, or appointed to the Board, after the initial incorporation or authorisation procedures are concluded, lies in its prudential mandate under federal financial sector legislation in Canada. All the OSFI AML assessments referred to above contained a module focussing on compliance with E-17, and remedial measures were required by OSFI in most cases, in order to ensure that FRFIs were implementing the measures contained in the guideline.

136. **Conclusion**: Canada has not taken any further action to ensure that market entry rules among the different provinces and sectors are compliant with FATF requirements[37]. The MER points out the lack of harmonisation of the requirements in terms of market entry among the federal and provincial levels and among the different provinces. This deficiency has not been addressed.

d) There is currently no registration regime for MSBs.

137. Canada implemented a federal registration regime for MSBs which has been in force since June 2008. Money services providers have to register with FINTRAC. The registration obligation applies to businesses engaged in foreign exchange dealing activities, remitting or transmitting funds by any means or through any person, entity or electronic funds transfer network; or issuing or redeeming money orders, traveller's cheques or other similar negotiable instruments (except for cheques payable to a named person or entity). It also applies to alternative money remittance systems (such as Hawala, Hundi or Chitti).

138. Applicants for registration have to provide identifying information as well as other specific business information (location of the business, organisational structure of the business, information about the compliance officer, about the agents etc) to FINTRAC. Any change to that information has to be notified to FINTRAC within 30 days and the registration has to be renewed every two years.

36 www.osfi-bsif.gc.ca/Eng/Docs/E17_final.pdf and Mutual evaluation report of Canada, 2008, paragraph 1076.

37 Mutual evaluation report of Canada, 2008, paragraph 1163.

Table 5. **Number of MSBs that have registered**

Year	2008/09	2009/10	2010/11	2011/12	2012/13
# of MSBs registered	803	954	955	890	788

Note. Canada informs that the variation in the number of registered MSBs from year to year is primarily attributable to market-related dynamics in a sector where entry and exit are relatively frequent.

139. Canada also mentions that FINTRAC has developed and published a pamphlet that explains the legal obligations of MSBs in eight languages (Arabic, Chinese, Farsi, Punjabi, Spanish and Vietnamese, as well as French and English) to better communicate with this important business sector.

140. **Conclusion**: This deficiency has been addressed.

Recommendation 23 – Overall conclusion

141. From the various elements provided by Canada, it seems that FINTRAC has strengthened its compliance staff in charge of supervising reporting entities, which is a positive step to better balance the level of supervision between all sectors falling under the remit of FINTRAC. At the same time though, the scope and number of reporting entities under the responsibility of FINTRAC has expanded in terms of sectors covered (to dealers in precious metal and stones, and BC notaries)[38]. FINTRAC should therefore ensure that its resources continue to be sufficient in relation to its specific needs.

142. It has to be noted that the application by FINTRAC of a risk-based compliance approach as well as the development of new and better suited compliance tools and the conclusion of an agreement with OSFI to improve supervisory coordination should also enable FINTRAC to better target institutions posing higher risks and requiring enhanced supervision and onsite-examinations.

143. Regarding the particular sectors identified in the MER as appearing insufficiently supervised: as a result of a risk evaluation of the money services business activities, the number of desk and on-site examinations doubled in 2011/2012. As far as credit unions/*caisses populaires* are concerned, progress has been made with a number of on-site examinations in 2012/2013 4 times higher than in 2008/2009. Based on the overall level of risk of life insurance, the sector has been subject to other, more appropriate compliance activities than examinations, including the extensive issuance of CARs.

144. The deficiency regarding the "fit and proper" requirement has not been addressed, as Canada has not taken any further action to ensure that market entry rules among the different provinces and sectors are compliant with FATF requirements.

145. Canada has implemented a federal registration regime of MSBs since June 2008.

146. This means that Canada has implemented Recommendation 23 at an adequate level of compliance.

[38] The comparison in terms of number of reporting entities between the situation at the time of the MER and 2011/2012 is difficult to make as it seems that the distinction between primary and secondary reporting institutions (see table 4) was not applied in 2007/2008.

Recommendation 26 – description and analysis

*a) FINTRAC has insufficient access to intelligence information from administrative and other authorities (especially from CRA [Canada Revenue Agency], CSIS [*Canadian Security Intelligence Service*] and CBSA [Canada Border Services Agency]).*

147. Canada indicates that in 2008, FINTRAC obtained access to the Canadian Police Information Centre (CPIC) database. CPIC is a national repository of police information that amounts to a shared resource within Canadian law enforcement. Currently, CPIC handles in excess of 120 million queries and stores 9.6 million records in its investigative data banks.

148. In 2009, FINTRAC took part in Canada's National Integrated Interagency Information (N-III) initiative, which focused on improving the access, collection, use and distribution of information among federal, provincial and municipal partners involved in public safety and security. The N-III initiative included the development of a Police Information Portal (PIP) that facilitates information sharing among police agencies across the country. It also introduced the Public Safety Portal (PSP)), which allows federal departments and agencies to query law enforcement databases in accordance with their legislated mandates. FINTRAC obtained access to national law enforcement databases under the N-III initiative in February 2010. FINTRAC analysts utilize the CPIC and the PSP through the identification of individuals, their criminal involvement/activities, known associates and to assist in identifying additional financial intelligence that is relevant to FINTRAC disclosure recipients. Canada informs that access to these databases allows analysts to search data from over 40 000 contributors from police agencies across Canada.

149. Canada states that FINTRAC connection to these new information sharing tools is a positive step to facilitate access to information used by law enforcement authorities such as the RCMP or the CBSA.

150. Canada adds that FINTRAC successfully negotiated access to additional law enforcement and security databases that will provide valuable new sources of information to further assist the FINTRAC's financial intelligence products in the detection, prevention and deterrence of money laundering and the financing of terrorist activities.

151. **Conclusion**: several positive steps have or are being taken, and the deficiency has been substantially addressed. FINTRAC's expanded connections with law enforcement authorities has broadened its access to intelligence information, especially in the field of law enforcement and national security. FINTRAC now has indirect access to the CSIS database through a querying process which allows FINTRAC to determine whether CSIS has information on individuals or entities that may pose a terrorist financing threat. The positive or negative results of such queries assist FINTRAC in reaching or not reaching their disclosure threshold. FINTRAC will also get access to similar information as the CBSA.

152. No information was provided regarding FINTRAC's direct or indirect access to the CRA database, as recommended in the MER.

b) FINTRAC is not allowed by the PCMLTFA to gather additional financial information from reporting entities.

153. Canada advises that the Canadian Constitutional framework does not permit FINTRAC to go back to reporting entities and ask for additional information on the STR they have filed. However, Canada considers that in most cases, the STR provides clear and comprehensive information, and requests for additional elements would not be applicable.

154. Canada indicates that within FINTRAC, a formal framework of information exchange is in place between the department responsible for compliance issues and the department in charge of analyzing information from reporting entities, called the analytical sector. Under this mechanism, the analytical sector provides awareness-raising information on compliance issues. Canada also informs that since June 2010, FINTRAC's analytical sector has issued Intelligence Notices to its compliance sector. These notices range from non-compliance issues involving data quality and missing information to suspicions of non-reporting by reporting entities. These notices can be submitted on any of the following types of reports that FINTRAC receives: Suspicious Transactions Reports (STRs), Large Cash Transaction Reports (CAD 10,000/USD 9,548 or more in cash in the course of a single transaction), Electronic Funds Transfers Reports (EFTRs), Terrorist Property Reports, and Casino Disbursements Reports (of CAD 10,000 or more whether paid in cash or not, in the course of a single transaction).

155. An Intelligence Notice can be issued for individual reports or a block of reports. Intelligence notices help inform the prioritization of Compliance Program activities.

156. Canada considers that this framework assists FINTRAC's compliance sector in improving the quality and completeness of reports received from reporting entities, and further strengthening the report database.

157. **Conclusion**: the information sharing mechanism put in place by FINTRAC seems to be a useful tool to enhance coordination which may help improve the quality and usefulness of information provided by reporting entities, which in turn could help limit further the need for additional information on STRs. However these measures are indirect and there is still no possibility for FINTRAC to collect additional financial information from the reporting entity. The deficiency has not been adequately addressed.

c) Effectiveness - the number of staff dedicated to the analysis of potential ML/FT cases is low especially in comparison with the amount of reports coming in, which may have an impact on the number of cases that FINTRAC generate.

158. The total number of employees at FINTRAC has increased significantly since the 2008 MER. FINTRAC counted 384 full-time employees in 2012/2013, as compared to 271 in 2007/2008. FINTRAC staff working on tactical analysis (responsible for developing cases and disclosures) amounted to 71 full-time employees as of September 2013, as compared to 36 at the time of the MER.

159. In 2012/2013, FINTRAC received 79 294 STRs, as compared to 50 354 in 2007/2008[39]. It made 919 disclosures in 2012/2013, as compared to 210 in 2007/2008[40]. A disclosure can contain multiple STRs, information from the several other reports FINTRAC receives, and information from the various databases and open source materials available to FINTRAC to undertake value-added analysis.

Table 6. **Number of STRs received each year by FINTRAC**

Year	Number of STRs received
2007-08	50 354
2008-09	67 740
2009-10	64 240
2010-11	58 722
2011-12	70 392
2012-13	79 294

Sources: FINTRAC Annual Reports 2012 and 2013

160. **Conclusion**: This deficiency has been largely addressed. FINTRAC's analytical capacities have been doubled, while in the same period, the number of STRs received by FINTRAC has gone up by 57% and the number of disclosures is more than 4 times higher in 2013 than in 2008. This shows that the substantial increase in staff number led to considerable progress in the Centre's quantitative contribution to investigations.

161. General conclusions on the number of cases generated by FINTRAC have to be drawn in relation not only to the number of disclosures made by FINTRAC but also to the use of STRs received by FINTRAC, the added value of FINTRAC's disclosures in investigations and the ML or TF convictions based on FINTRAC disclosures. Given the limited scope of this desk-based follow-up report, it is not possible to draw final conclusions regarding progress made by FINTRAC to generate cases.

162. In any event, Canada should ensure that its resources always meet its actual needs and that activities related to the analysis of potential ML/FT cases are in the hands of an adequately staffed agency.

d) Effectiveness - feedback from law enforcement authorities outlines the relatively limited added value of FINTRAC disclosures in law enforcement investigations.

163. Canada mentions that FINTRAC has used feedback from its disclosure feedback forms (DFF) to improve disclosures, and has strengthened relationships through continued outreach and regular

39 FINTRAC Annual Report 2013 www.fintrac-canafe.gc.ca/publications/ar/2013/1-eng.asp#s8.4 – The other reports included Electronic Funds Transfers Reports (EFTRs), Large Cash Transaction Reports (LCTRs), Cross-Border Currency Reports/Cross Border Seizure Reports.

40 FINTRAC Annual Report 2013 www.fintrac-canafe.gc.ca/publications/ar/2013/1-eng.asp#s8.4.

dialogue at all levels (from analysts to Director) with the RCMP, CRA, CBSA and other law enforcement or national security agencies across Canada. From 2008-2009 to 2012-2013, FINTRAC received 2106 disclosure feedback forms from domestic and international disclosure recipients and within this time period the response rate for disclosure feedback forms increased from 17% (2008-2009) to 32% (2012-2013). These have highlighted areas in which FINTRAC can take steps to strengthen its disclosure products.

164. Partners have for example indicated in the past that a detailed, narrative overview of the financial transactions in a case is very useful. Based on this feedback, FINTRAC indicates that it now provides a comprehensive narrative overview of the transactions and designated information with the majority of cases disclosed to law enforcement. Based on the feedback from partners, FINTRAC also includes a relationship chart of the parties to the transactions which disclosure recipients find very useful. FINTRAC also provides its partners with an enhanced disclosure package, containing multiple document formats.

165. Canada states that FINTRAC receives positive feedback from law enforcement and security partners on the usefulness, relevance and timeliness of case disclosures. Increasingly, law enforcement agencies are providing the Centre with information concerning their highest priority investigations. This enables FINTRAC to assist in cases that are of the highest priority to its investigative partners and to be of greater assistance to their work.

166. Canada indicates that a number of initiatives have been taken to improve FINTRAC's ability to produce high quality intelligence to be used in investigations and prosecutions. Examples of initiatives taken to specifically improve the quality of disclosures include:

- Legislative provisions in force since June 2008 allow disclosures to be enriched with a greater range of information on financial transactions. Additional reporting sectors (Dealers of Precious Metals and Stones, British Columbia Notaries) and report types (Casino Disbursement Reports) have increased the range of information disclosed to FINTRAC's partners;
- FINTRAC has developed additional augmented disclosure products that increase the focus and timeliness of disclosures to its partners, resulting in improved communication with disclosure recipients. FINTRAC has streamlined its disclosure process, primarily through changes to its case approval process[41];
- FINTRAC continues to conduct operational meetings and discussions with disclosure recipients to discuss investigative priorities, analytical processes,

[41] Previously, all disclosures were approved in a five-step process in the following order: Manager of Analysis, Legal Services, Assistant Director Financial Analysis and Disclosures and Deputy Director and final approval by the Disclosure Committee (usually meeting once a week). FINTRAC has now adopted a risk-based approach regarding the decision-making process involved for disclosures. Disclosures are approved by the Manager and Assistant Director, Financial Analysis and Disclosures in low-risk cases. Compulsory legal review of each case and final approval by Disclosure Committee is no longer mandatory, resulting in faster dissemination. If required, disclosures may still be forwarded to Legal Services for review and only when the disclosure is considered a high-risk, the Disclosure Committee will have final approval.

the development of indicators, and to provide assistance regarding the use of FINTRAC disclosures.

167. Canada underlines that FINTRAC ensures alignment with law enforcement and national security regime partners' priorities through participation in the Canadian Association of Chiefs of Police and its committees dealing with organized crime and national security, as well as the Canadian Integrated Response to Organized Crime committee. A highlight for FINTRAC in past years was the formal recognition by the Canadian Association of Chiefs of Police that FINTRAC's financial intelligence "*should be made an integral part of all organized crime investigations*." For Canada, this endorsement is indicative of the role that FINTRAC has played in these types of cases in recent years. It also reinforces the important role of financial intelligence in certain types of complex investigations.

168. *Disclosures to the RCMP* - Canada states that the RCMP has noted that initiatives undertaken by FINTRAC since the MER (including streamlined approval process and more direct ongoing dialogue with partners) have enhanced the value-added of FINTRAC's disclosures to the RCMP and others. Canada indicates that FINTRAC has disclosed useful intelligence and new leads on persons or businesses of interest to the RCMP. Regarding their partnership with FINTRAC, the RCMP states that: *"FINTRAC is considered a key partner and has provided valuable financial intelligence on an ongoing basis that contributed to terrorist financing investigations." FINTRAC through their disclosures identified new linkages/nexus between entities and/or individuals through financial transactions which surfaced new avenues of investigation. FINTRAC has always responded in a timely fashion to our priority Voluntary Information Records."* - RCMP Anti-Terrorist Financing Team, National Security Criminal Operations, Headquarters, Ottawa[42]

Table 7. **FINTRAC disclosures to the RCMP**

Year	Number of distinct disclosures	Number of disclosure packages* (includes disclosures sent to multiple RCMP recipients)
2008-2009	392	710
2009-2010	363	617
2010-2011	459	883
2011-2012	494	914
2012-2013	580	1,088
Total	2 288	4 212

*Note that the number of disclosure packages sent to the RCMP includes disclosures being sent to multiple individual recipients within the RCMP. Individual cases may therefore have been disclosed a number of times.

42 Quoted in FINTRAC's Annual Report 2012 www.fintrac-canafe.gc.ca/publications/ar/2012/1-eng.asp?a=5#s5.

Table 8. **FINTRAC disclosures to other domestic law enforcement and national security agencies**

Year	Municipal Police	Provincial Police	CRA	CSIS	CBSA
2008-2009	164	58	157	59	82
2009-2010	136	119	125	78	42
2010-2011	143	162	136	120	82
2011-2012	153	167	136	107	89
2012-2013	182	198	150	164	144
Total	**778**	**704**	**704**	**528**	**439**

169. *Disclosures to the CRA* - Canada states that based on the MER recommendations and after tax evasion was made a predicate offense in 2010/2011, FINTRAC has been able to build more cases for disclosure to the CRA. According to information from Canada, the CRA notes that the information provided in disclosures received since April 2008 is detailed, timely and very useful.

170. The majority of the disclosures received from FINTRAC were reviewed and assessed by the Special Enforcement Program (SEP), a group responsible for auditing those suspected of being involved in illegal activities. Until March 2013 compliance action on FINTRAC referrals was completed by the SEP. Due to organizational changes, the SEP has been discontinued and this work is now being completed by auditors within the Small and Medium Enterprises Directorate (SMED). The Criminal Investigations Program (CIP) continues to receive and analyze all FINTRAC disclosures for intelligence and potential criminal investigations before referring them to the SMED workload development area.

171. *Disclosures to the CSIS.* Canada indicates that CSIS has noted that the quality of the information and analysis contained in disclosures - 164 in 2012/2013 - reflects the growing number of reporting entities, case complexity, and FINTRAC's maturity as an organization.

172. *Disclosures to CBSA*. Canada quotes the CBSA expressing their satisfaction on FINTRAC disclosures (144 received in 2012/2013): "*As a result of the information provided, we were able to recommend to Citizenship and Immigration Canada that our subject be deemed inadmissible to Canada based on s. 37(1) of the Immigration and Refugee Protection Act. We have also indicated that the subjects who are permanent residents be scrutinized further should they apply for citizenship.*" – *CBSA*[43]

173. **Conclusion**: information and data provided by Canada reflect that coordinated measures have been taken by FINTRAC to enhance the overall quality of its disclosures and better support law enforcement and national security investigations: use of feedback from disclosure recipients, better tailored disclosure process, dialogue with law enforcement authorities about their expectations and alignment with their priorities, better use of financial intelligence etc. This has resulted in a general

[43] Quoted in FINTRAC Annual Report 2012 www.fintrac-canafe.gc.ca/publications/ar/2012/1-eng.asp?a=5#s5.

level of satisfaction expressed by some law enforcement and national security authorities about FINTRAC's contribution to their investigations. This deficiency has been substantially addressed.

e) Effectiveness - the timeliness of FINTRAC disclosures to law enforcement authorities was raised as an issue at the time of the on-site visit.

174. Canada indicates that FINTRAC has significantly improved the timeliness of disclosures: since the MER, the average case disclosure turnaround time has decreased by approximately 84%. FINTRAC's broad review and revision of its disclosure process has allowed for routine disclosures to be approved more quickly, provided access to new data sources, increased the number of analysts, and led to more effective information systems and adjustments made in response to feedback from partners.

175. FINTRAC has also developed disclosure feedback forms (DFFs)[44], which it sends with each disclosure. Recipients of FINTRAC's disclosures have indicated on the DFFs that the information provided was timely and useful. For example, the RCMP says that *"FINTRAC provided us with timely information. The information helped us identify the financial institutions and the bank accounts that were used by the subjects. This information will be used to obtain judicial authorizations".* - [Translation] – RCMP, "C" Division, POC [45]

176. **Conclusion**: based on the information provided by Canada, it seems that progress made with regard to the timeliness of FINTRAC disclosures to law enforcement authorities has been confirmed. This deficiency has been addressed.

f) Effectiveness - 80% of the disclosures made by FINTRAC result from voluntary information from law enforcement; only 20% result from STRs which raises serious concerns with respect to the capability of FINTRAC to generate ML/TF cases on the basis of STRs or other reports it receives from the private sector.

Table 9. **FINTRAC disclosures and the number of reports received since 2008/2009**

Years	2008-2009	2009-2010	2010-2011	2011-2012	2012-2013
Number of disclosures	556	579	777	796	919
Number of reports received (all types of reports) *	24 264 077	24 826 336	19 266 541	18 529 956	19 746 005

*. STRs, LCTRs, EFTRs, Terrorist Property Reports, and Casino Disbursements Reports, see paragraph 153.

Variation in reporting volumes can be due to many factors, which, among others, include economic trends, market share of various reporting entities and the fact that two reporting entities changed their process with respect to EFT reporting.

44 See paragraph 163.

45 Quoted in FINTRAC Annual Report 2012 www.fintrac-canafe.gc.ca/publications/ar/2012/1-eng.asp?a=5#s5.

Table 10. **Number of STRs used in disclosures since 2008/2009**

	2008-09	2009-2010	2010-2011	2011-2012	2012-2013
STR	4 060	4 100	4 339	4 273	4 739

178. These figures show that the number of FINTRAC disclosures has significantly increased between 2009 and 2013 (+65%), but the number of STRs used has not evolved in the same proportions (+16%).

179. It should be noted that, in addition to STRs, FINTRAC receives many other types of reports which provide value added when conducting analysis and making disclosures.

Table 11. **Distribution of case originators per fiscal year**

Originator	2008-2009	2009-2010	2010-2011	2011-2012	2012-2013
Proactive					
Open Source	3%	3%	3%	1%	2%
Report Profiling	5%	3%	0.4%	1%	0%
STR	13%	8%	8%	9%	8%
Total Proactive	**21%**	**14%**	**11%**	**12%**	**10%**
VIR (Voluntary Information Record)	**59%**	**63%**	**65%**	**64%**	**69%**
FIUQ (Foreign FIUs queries)	**20%**	**22%**	**24%**	**24%**	**21%**
Other	**0%**	**1%**	**0.3%**	**0%**	**0%**

Note: the total of each column will not always equal 100% due to the rounding of numbers.

180. In 2012/2013, 69% of the disclosures made by FINTRAC resulted from voluntary information provided by law enforcement authorities, and 8% from STRs. At the time of the MER, the proportions were respectively 80% and 14%. The proportion of VIRs (Voluntary Information Records) started decreasing after the MER which seemed to reflect a better balance between the different sources of cases, but it is now increasing again and represents more than two third of total disclosures. In addition, the proportion of proactive disclosures stemming from STRs has also gone down, and has decreased since the MER (from 14% to 8% in 2012/2013), while the proportion of proactive disclosures in total has also halved since 2008-09.

181. **Conclusion**: on the basis of the figures provided, it seems that further efforts have to be developed to ensure that initial progress made during the period 2008/2009 can be further enhanced. FINTRAC has reviewed its approach to STRs, and ensured that the processes and capabilities in place have and will continue to lead to an effective use of STRs on a continuous basis, resulting in more cases being generated from this category of reports. The deficiency has been partially addressed.

182. Canada advises that STRs, Electronic Funds Transfers Reports (EFTRs), Large Cash Transaction Reports (LCTRs), and other reports and information received by FINTRAC are an extremely valuable source of financial intelligence. A total of 407,835 of those reports were included in cases disclosed between 2007 and 2011. Of that number, 60% were EFTRs, followed by LCTRs at 36%, STRs at 33%, Cross-Border Currency Reports (CBCRs) at 0.6% and Casino Disbursement Reports (CDRs) at 0.5%. Interestingly, the percentage of cases containing at least one STR is similar to the percentage of cases including at least one EFTR or LCTR. This is significant since the volume of the STRs submitted to FINTRAC is much lower than that of EFTRs and LCTRs. STRs are particularly useful for providing additional information related to individual behaviour and transactional activity[46].

183. Approximately 88% of the total STRs submitted to FINTRAC between November 2001 and August 2010 were from three main business sectors: banks and trusts/loans, money services businesses (MSBs) and credit unions/*caisses populaires*[47]. Although high volumes of STR reporting does not necessarily correlate to high quality STRs, it could be useful to consider launching further initiatives to raise awareness of reporting entities with low reporting volumes, explain the importance and the benefits of their contribution to the process, and encourage them to fill STRs reports, as and when appropriate.

g) Effectiveness - so far, very few if any convictions for ML or TF have resulted from a FINTRAC disclosure which is an additional factor to consider when looking at FINTRAC's ability to produce intelligence to be used in criminal investigations and prosecutions.

184. As noted above (par 165 and s.), the RCMP and CSIS have informed that FINTRAC disclosures are making significant contributions to new and ongoing investigations for money laundering and terrorist financing, and these disclosures are increasing significantly. Law enforcement indicates that FINTRAC disclosures provide information that advance investigations. Canada reports that of the disclosures produced proactively by FINTRAC in 2012/2013, 84% were considered relevant to an investigation and 72% were considered useful.

185. Canada reports that the RCMP receives the most significant number of FINTRAC's case disclosures of financial intelligence and that FINTRAC intelligence contributes to AML/CFT investigations by the RCMP. Canada adds that it is now standard procedural practice for all RCMP investigative bodies in Canada to use FINTRAC intelligence[48]. In addition, Canada informs that civil forfeiture is another avenue used by federal, provincial and municipal police forces in Canada.

186. **Conclusion**: Based on information provided by Canada, it seems that FINTRAC intelligence, is used in cases of ML/TF investigation. However, and in the context of this desk-based review, it is not possible to check the degree and the extent to which FINTRAC intelligence is used by investigation

46 Trends in Canadian Suspicious Transaction Reporting, April 2011 www.fintrac-canafe.gc.ca/publications/typologies/2011-03-eng.asp#s2.

47 Trends in Canadian Suspicious Transaction Reporting, April 2011 www.fintrac-canafe.gc.ca/publications/typologies/2011-03-eng.asp#s2.

48 See Toronto Police Service in FINTRAC Annual Report, 2013 p. 17

agencies, and there is no information available as to ML or TF convictions resulting from a FINTRAC disclosure. The deficiency has been partially addressed.

Recommendation 26 – conclusion

187. Based on the information provided by Canada, it seems that FINTRAC has expanded its access to information from other national authorities, especially CSIS and CBSA. But there was no progress made regarding FINTRAC's ability to require additional information from reporting entities.

188. As far as effectiveness of FINTRAC is concerned, given the limited scope of this desk-based follow-up report, it is not possible to draw final conclusions regarding progress made by FINTRAC to generate cases. In any event, Canada should ensure that its resources always meet its actual needs and that activities related to the analysis of potential ML/FT cases are in the hands of a sufficiently staffed body.

189. FINTRAC has taken measures to enhance the overall quality of its disclosures and better support law enforcement investigations. Although satisfaction is expressed by some law enforcement authorities, it seems difficult to draw some general conclusions as to the extent to which FINTRAC's disclosures positively contributed to the success of the investigations. Further efforts will be needed to ensure that initial progress on the proportion of STRs used by FINTRAC to generate ML/FT cases will be sustained. It is hoped that over time positive progress will be reported on the level of ML/TF convictions resulting from a FINTRAC disclosure.

190. This means that Canada has implemented Recommendation 26 at an adequate level of compliance.

VI. SUMMARY OF KEY ACTIONS TAKEN BY CANADA TO ADDRESS THE DEFICIENCIES IN RELATION TO NON-CORE AND NON-KEY RECOMMENDATIONS RATED PC OR NC

191. The scope of the present 6th FUR report is limited to the progress made in relation to the core and key Recommendations that were rated as PC or NC in the MER, i.e. Recommendations 5, 23 and 26.

192. In the 2009 FUR, significant progress was acknowledged for Recommendations 6, 8, 12, 16, 17, 22, 24, 30, SR VI, and SR VII and more limited progress was noted for Recommendations 7, 9, 11, 21, 33, and 34.

193. In particular,

- requirements for financial institutions in relation to Politically Exposed Foreign Persons (PEFPs) were introduced in June 2008 through amendments to the PCMLTFA and PCMLTFR, and specified the enhanced customer identification and due diligence requirements for this category of clients;
- non face-to-face CDD measures were introduced by the PCMLTFR in June 2008;

- the amended PCMLTFA explicitly requires financial institutions to ensure that their subsidiaries and branches located in a country that is not a member of the FATF, develop and apply policies and procedures that are consistent with Canadian requirements for record keeping, verifying identity and maintaining a compliance regime when the local laws permit it;
- a federal registration regime for money service businesses (MSBs) has been in force since June 2008. Money services providers have to register with FINTRAC;
- new provisions to the PCMLFTA came into force in December 2008 and extended the scope of the AML/CFT regime:
    - British Columbia (BC) Notaries Public and notary corporations (hereafter referred to as BC Notaries) are subject to the PCMLTFA when they engage in any of the following activities on behalf of any person or entity: (a) receiving or paying funds, other than in respect of professional fees, disbursements, expenses or bail; or (b) giving instructions in respect of any activity referred to in paragraph (a);
    - Dealers in precious metals and stones (DPMS) are subject to the PCMLTFA if they engage in the purchase or sale of precious metals, precious stones or jewellery in an amount of $10,000 or more;
    - Credit union centrals have been brought under the PCMLTFR for all their activities;
- the PCMLTF Administrative Monetary Penalties (AMP) Regulations came into force in December 2008. The Regulations provide FINTRAC with the power to apply monetary penalties (civil penalties) to any financial institution and DNFBPs subject to the AML/CFT regime, for non-compliance with the PCMLTFA.

194. Since the 1st FUR, Canada has continued to take actions with a view to address the remaining deficiencies. However, in the context of this report, no further analysis has been conducted of measures taken to address the deficiencies in relation to other Recommendations rated PC (R.7, R.11, R.17, R.21,R.30, R.34), or NC (R.6, R.8, R.9, R.12, R.16, R.22, R.24, R.33, SRVI, SRVII). In October 2012, Canada provided updated information on initiatives taken to make progress on these Recommendations. A detailed description of those initiatives taken since the 2008 MER may be found in Annex 2.

195. Below is a short summary of the key measures taken by Canada.

Amendments to the PCMLTFR

196. While the amendments to the PCMLTFR which came into force on 1 February 2014 were largely aimed at addressing the remaining deficiencies in relation to Recommendation 5 and

customer due diligence requirements, Canada considers that these amendments will have positive implications for its compliance with a number of other non-core and key Recommendations. In particular, the regulations will positively impact Canada's compliance with Recommendations 6, 7, 8, 11, 12, 16, 21, 22, 33 and 34.

Scope of the AML/CFT regime

197. Canada reports that new provisions of the PCMLTFA came into force n July 2010 and extended the AML/CFT regime to credit union centrals. However TCSPs remain completely exempted from the AML/CFT framework as they were assessed as low risk[49].

198. With respect to legal counsel and legal firms[50], Canada advises that new Regulations imposing client identification due diligence and record-keeping obligations on legal counsel came into force on 30 December 2008. However, these provisions are currently inoperative as a result of a court ruling and related injunctions. In October 2013, the Supreme Court of Canada granted leave to appeal the ruling.

Sanctions regime

199. Canada reports that FINTRAC's criteria for public naming of reporting entities that have been subject to an administrative monetary penalty changed in June 2013. Under the new criteria, a person or entity subject to an administrative monetary penalty is named publicly if one of the following criteria is met: the person or entity has committed a very serious violation; or the base penalty amount is equal to or greater than CAD 250,000 (USD 233,987), before adjustments are made in consideration of the person or entity's compliance history and ability to pay; or repeat significant non-compliance on the part of the person or entity. Since 2009/2010, FINTRAC has issued 41 notices of violation, and made public on its website a list of 27 administrative monetary penalties, including 19 relating to money service businesses.

Resources of law enforcement and investigative authorities

200. Based on information provided by Canada, since 2008-2009 FINTRAC's resources has increased in the compliance section from 49 to 87 staff, and staff responsible for developing cases and disclosures amounted to 71 full-time employees in 2013, as compared to 36 in 2008[51]. FINTRAC also received additional funding in 2010 and part of this ongoing funding was specifically earmarked to enhanced FINTRAC's compliance programme.

201. Canada also states that:

- in July 2012, the RCMP Federal Policing adopted a new organisation model, to allow the Force to better align its resources to priorities and become more efficient and results-driven. Under this new model, the RCMP Federal

[49] Canada explains that the conclusion that the TSCP sector is low risk is made on the basis that the ML/TF risk is offset by tax laws that require all businesses to register and file company information to the CRA.

[50] Which include Quebec notaries.

[51] See table 1 and paragraphs 103 and 158.

Policing maintain specialized members to investigate money laundering and terrorist activity financing on operations undertaken in line with their National strategic priorities of Serious and Organized Crime, Financial Integrity and National Security;

- the Department of Justice's International Assistance Group regularly provides training to Canadian police forces and prosecutors in the area of mutual legal assistance (MLA), including a section devoted to MLA requests related to restraint and forfeiture of assets, either on behalf of foreign country regarding assets located in Canada, or on behalf of Canada regarding assets sought to be restrained/forfeited by a foreign state on Canada's behalf;
- since 2008, the Public Prosecution Service of Canada (PPSC) has undertaken training on ML and TF, including at the School for prosecutors where for one week in 2008, 2009, 2010, and 2011, lectures on different issues, including proceeds of crime and money laundering, were given to approximately 50 to 75 prosecutors. In September 2013, the PPSC's national and regional terrorism prosecutions co-ordinators (approximately 30) met for an intensive three day workshop to discuss legal and operational issues relating to the investigation and prosecution of terrorism offences in Canada. Finally, PPSC has an Integrated Proceeds of Crime e-mail network which allows for timely exchange of best practices and consideration of novel circumstances and recent jurisprudence on money laundering and terrorist financing.

G8 Action Plan on Transparency of Corporations and Trusts

202. In June 2013, the Government of Canada committed to a G-8 Action Plan on Transparency of Corporations and Trusts. Part of the Action Plan includes a commitment to consult publicly on the issue of corporate transparency, including with respect to bearer shares, nominee shareholders, the ability of competent authorities to access information on beneficial ownership, as well as the possibility of establishing a central registry for entities incorporated under the Canada Business Corporations Act (CBCA).[52]

[52] The action plan can be viewed here http://pm.gc.ca/eng/media.asp?id=5547.

Anti-money laundering and counter-terrorist financing measures

Canada

Mutual Evaluation Report

September 2016

The Financial Action Task Force (FATF) is an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction. The FATF Recommendations are recognised as the global anti-money laundering (AML) and counter-terrorist financing (CTF) standard.

For more information about the FATF, please visit the website: **www.fatf-gafi.org**

The Asia/Pacific Group on Money Laundering (APG) is an autonomous and collaborative international organisation, whose members and observers are committed to the effective implementation and enforcement of internationally accepted standards against money laundering and the financing of terrorism, in particular the FATF Recommendations.

For more information about the APG, please visit the website: **www.apgml.org**

This document and/or any map included herein are without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and boundaries and to the name of any territory, city or area.

This assessment was conducted under the responsibility of the International Monetary Fund, adopted by the FATF at its June 2016 Plenary meeting.

CONTENTS

Executive Summary

This report provides a summary of the anti-money laundering and combating the financing of terrorism (AML/CFT) measures in place in Canada as at the date of the on-site visit (3-20 November 2015). It analyses the level of compliance with the FATF 40 Recommendations and the level of effectiveness of Canada's AML/CFT system, and provides recommendations on how the system could be strengthened.

Key Findings

1. The Canadian authorities have a good understanding of most of Canada's money laundering and terrorist financing (ML/TF) risks. The 2015 Assessment of Inherent Risks of Money Laundering and Terrorist Financing in Canada (the NRA) is of good quality. AML/CFT cooperation and coordination are generally good at the policy and operational levels.

2. All high-risk areas are covered by AML/CFT measures, except legal counsels, legal firms and Quebec notaries. This constitutes a significant loophole in Canada's AML/CFT framework.

3. Financial intelligence and other relevant information are accessed by Canada's financial intelligence unit, FINTRAC, to some extent and by law enforcement agencies (LEAs) to a greater extent but through a much lengthier process. They are used to some extent to investigate predicate crimes and TF activities, and, to a much more limited extent, to pursue ML.

4. FINTRAC receives a wide range of information, which it uses adequately, but some factors, in particular the fact that it is not authorized to request additional information from any reporting entity (RE), limit the scope and depth of the analysis that it is authorized to conduct.

5. Law enforcement results are not commensurate with the ML risk and asset recovery is low.

6. Canada accords priority to pursing TF activities. TF-related targeted financial sanctions (TFS) are adequately implemented by financial institutions (FIs) but not by designated non-financial business and professions (DNFBPs). Charities (i.e. registered NPOs) are monitored on a risk basis.

7. Canada's Iran and Democratic People's Republic of Korea (DPRK) sanction regime is comprehensive, and some success has been achieved in freezing funds of designated individuals, there is no mechanism to monitor compliance with proliferation financing (PF)- related TFS.

8. FIs, including the six domestic systemically important banks, have a good understanding of their risks and obligations, and generally apply adequate mitigating measures. The same is not true for DNFBPs. REs have gradually increased their reporting of suspicious transactions, but reporting by DNFBPs other than casinos is very low.

9. FIs and DNFBPs are generally subject to appropriate risk-sensitive AML/CFT supervision, but supervision of the real estate and dealers in precious metals and stones (DPMS) sectors is not entirely commensurate to the risks in those sectors. A range of supervisory tools are used effectively especially in the financial sector. There is some duplication of effort between FINTRAC and the Office of the Superintendent of Financial Institutions (OSFI) in the supervisory coverage of federally regulated financial institutions (FRFIs) and a need to coordinate resources and expertise more effectively.

10. Legal persons and arrangements are at a high risk of misuse, and that risk is not mitigated.

11. Canada generally provides useful mutual legal assistance and extradition. The authorities solicit other countries' assistance to fight TF and, to a somewhat lesser extent, ML. Informal cooperation is generally effective and frequently used.

Risks and General Situation

12. Canada has a strong framework to fight ML and TF, which relies on a comprehensive set of laws and regulations, as well as a range of competent authorities.

13. It faces an important domestic and foreign ML threat, and lower TF threat. As acknowledged in the public version of the authorities' 2015 assessment of Canada's inherent ML and TF risks (the NRA), the main domestic sources of proceeds of crime (POC) are fraud, corruption and bribery, counterfeiting and piracy, illicit drug trafficking, tobacco smuggling and trafficking, as well as (to a slightly higher level than assess) tax evasion. Canada's open and stable economy and accessible financial system also make it vulnerable to significant foreign ML threats, especially originating from the neighbouring United States of America (US), but also from other jurisdictions. The main channels to launder the POC appear to be the financial institutions (FIs), in particular the six domestic systemically important banks (D-SIBs) due to their size and exposure, as well as money service businesses (MSBs). While not insignificant, the TF threat to Canada appears lower than the ML threat. A number of TF methods have been used in Canada and have involved both financial and material support to terrorism, including the payment of travel expenses of individuals and the procurement of goods.

Overall Level of Effectiveness and Technical Compliance

14. Since its 2007 evaluation, Canada has made significant progress in bringing its AML/CFT legal and institutional framework in line with the standard, but the fact that AML/CFT obligations are inoperative for legal counsels, legal firms and Quebec notaries is a significant concern. In terms of effectiveness, Canada achieves substantial results with respect to five of the Immediate Outcomes (IO), moderate results with respect to five IOs, and low results with respect to one IO.

Assessment of Risks, coordination and policy setting (Chapter 2 - IO.1; R.1, R.2, R.33)

15. The authorities have a generally good level of understanding of Canada's main ML/TF risks. The public version of the 2015 NRA is of good quality. It is based on dependable evidence and sound judgment, and supported by a convincing rationale. In many respects, the NRA confirmed the authorities' overall understanding of the sectors, activities, services and products exposed to ML/TF risk. While the NRA's findings did not contain major unexpected revelations, the process was useful in clarifying the magnitude of the threat, in particular the threat affecting the real estate sector and emanating from third-party money launderers. The authorities nevertheless may be underestimating the magnitude of some key risks, such as the risk emanating from tax crimes and foreign corruption.

16. All high-risk areas are covered by the AML/CFT regime, with the notable exception of the legal professions other than British Columbia (BC) notaries, which is a significant loophole in Canada's AML/CFT framework, and online casinos, open loop prepaid cards, and white label ATMs.

17. While supervisory measures are generally in line with the main ML/TF risks, more intensive supervisory measures should be applied in some higher risk areas such as the real estate and DPMS.

18. AML/CFT cooperation and coordination appear effective at the policy level, but in some provinces, greater dialogue between LEAs and the Public Prosecution Service of Canada (PPSC) would prove useful.

19. While FIs generally appear adequately aware of their ML/TF risks, the same does not apply in some DNFBP sectors, in particular the real estate sector.

Financial Intelligence, Money Laundering and Confiscation (Chapter 3 - IOs 6-8; R.3, R.4, R.29-32)

20. Financial intelligence and other relevant information is collected and used to some extent only by competent authorities to carry out investigations into the predicate crimes and TF activities, and, to a more limited extent, to pursue ML. FINTRAC receives a range of information from REs and LEAs, which it adequately analyses. Some factors nevertheless hamper its ability to produce more comprehensive intelligence products, in particular, the fact that FINTRAC is not authorized to obtain from any RE additional information related to suspicions of ML/TF. FINTRAC's analysis and disclosures are mainly prepared in response to the requests made by LEAs in Voluntary Information Records (VIRs). LEAs use these disclosures mainly to investigate the predicate offense, rather than to carry out ML investigations. FINTRAC also produces strategic reports that address the LEAs' operational priorities and advise them on new ML/TF trends and typologies. Information resulting from cross-border transportation of cash and other bearer negotiable instruments is not exploited to its full extent. The FIU and the LEAs cooperate effectively and exchange information and financial intelligence on a regular basis and in a secure way.

21. LEAs have adequate powers and cooperation mechanisms to undertake large and complex financial investigations. This has notably resulted in some high-profile successes in neutralizing ML

networks and syndicates. However, current efforts are mainly aimed at the predicate offenses, with inadequate focus on the main ML risks other than those emanating from drug offenses, i.e. standalone ML, third-party ML and laundering of proceeds generated abroad. Some provinces, such as Quebec, appear more effective in this respect. LEAs' prioritization processes are not fully in line with the findings of the NRA, and LEAs generally suffer from insufficient resources and expertise to pursue complex ML cases. In addition, legal persons are not effectively pursued and sanctioned for ML, despite their misuse having been identified in the NRA as a common ML typology. Criminal sanctions applied are not sufficiently dissuasive. The majority of natural persons convicted for ML are sentenced in the lower range of one month to two years of imprisonment, even in cases involving professional money launderers.

22. Overall, asset recovery appears low. Some provinces, such as Quebec, appear more effective in recovering assets linked to crime. Falsely and undeclared cross-border movements of currency and other bearer negotiable instruments are rarely analysed by the FIU or investigated by the RCMP. As a result, the majority of the cash seized by the Canada Border Services Agency (CBSA) is returned to the traveller at the border.

Terrorist Financing and Financing Proliferation (Chapter 4 - IOs 9- 11; R.5-8)

23. The authorities display a good understanding of Canada's TF risk and cooperate effectively in CFT efforts. The intelligence services, LEAs and FINTRAC regularly exchange information, which notably contributes to support prioritization of TF investigations. Canada accords priority to investigations and prosecutions of terrorism and TF. There are a number of TF investigations, which resulted in two TF convictions. Canada also makes regular use of other disruption measures.

24. Implementation of TF-related targeted financial sanctions (TFS) is generally good but uneven. Large FIs implement sanctions without delay, but DNFBPs do not seem to have a good understanding of their obligations and are not required to conduct a full search of their customer databases on a regular basis. In practice, few assets have been frozen in connection with TF-related TFS, which does not seem unreasonable in the Canadian context.

25. Charities (i.e. registered NPOs) are monitored by the Canada Revenue Agency (CRA) on a risk basis, but the number of inspections conducted over the last few years does not reflect those TF risks. The NRA found the risk of misuse of charities as high, but only a small percentage of charities have been inspected. Nevertheless, to limit this risk, the CRA's charities division has developed an enhanced outreach plan which reflects the best practices put forward by the FATF.

26. Canada's framework to implement the relevant UN counter-proliferation financing sanctions is strong and, in some respect, goes beyond the standard, but does not apply to all types of assets listed in the standard. The current lists of designated persons are available on the OSFI websites, and changes to those lists are promptly brought to the attention of the FRFIs (i.e. banks, insurance companies, trust and loan companies, private pension plans, cooperative credit associations, and fraternal benefit societies). There is a good level of policy and operational cooperation between the relevant authorities including those involved in export control, border control, law enforcement and AML/CFT supervision. Some success has been achieved in freezing

funds of designated persons. None of the Canadian authorities has an explicit mandate to monitor FIs' and DNFBPs' implementation of their counter-PF obligations but, in practice, OSFI has examined implementation by FRFIs of TFS for both TF and PF, and has also identified shortcomings and requested improvements.

Preventive Measures (Chapter 5 - IO4; R.9-23)

27. AML/CFT requirements are inoperative towards legal counsels, legal firms and Quebec notaries. These requirements were found to breach the constitutional right to attorney-client privilege by the Supreme Court of Canada on 13 February 2015. In light of these professionals' key gatekeeper role, in particular in high-risk sectors and activities such as real-estate transactions and the formation of corporations and trusts, this constitutes a serious impediment to Canada's efforts to fight ML.

28. FRFIs, including the six domestic banks that dominate the financial sector, have a good understanding of their risks and AML/CFT obligations. Supervisory findings on the implementation of the risk-based approach (RBA) are also generally positive. The large FRFIs conducted comprehensive group-wide risk assessments and took corresponding mitigating measures. In an effort to mitigate some of the higher risks, a number of FRFIs have gone beyond the Canadian requirements (e.g. by collecting information on the quality of AML/CFT supervision in the respondent bank's country).

29. Nevertheless, some deficiencies in the AML/CFT obligations undermine the effective detection of very high-risk threats identified in the NRA, such as corruption. This is notably the case of the current requirements related to politically exposed persons (PEPs). The identification of beneficial ownership also raises important concerns. Although the legal requirements have recently been strengthened, little is done by FIs to verify the accuracy of beneficial ownership information. DNFBPs are not required to identify the beneficial ownership nor to take specific measures with respect to foreign PEPs.

30. Most DNFBPs are not sufficiently aware of their AML/CFT obligations. This is in particular the case of real estate agents. Extensive work has been conducted by FINTRAC with relevant DPMS trade associations, to increase the DNFBPs' awareness, which is leading to some improvement in compliance. REs have gradually increased the number of STRs and other threshold-based reports filed with FINTRAC but reporting remains very low. The fact that no STRs have been filed by accountants and BC notaries, and the low number of STRs received from the real estate sector raise concern.

Supervision (Chapter 6 - IO3; R.26-28, R. 34-.35)

31. FINTRAC and OSFI supervise FIs and DNFBPs on a risk-sensitive basis. FINTRAC should, however, apply more intensive supervisory measures to DNFBPs. There is good supervisory coverage of FRFIs, but FINTRAC and OSFI need to improve their coordination to share expertise, maximize the use of the supervisory resources available and avoid duplication of efforts. FINTRAC has increased its supervisory capacity in recent years. It adopted an effective RBA in its compliance

and enforcement program, but needs to further develop its sector-specific expertise and increase the intensity of supervision of DNFBPs, particularly in the real estate sector and with respect to DPMS, commensurate with the risks identified in the NRA.

32. There are good market entry controls in place to prevent criminals and their associates from owning or controlling FIs and most DNFBPs. There are, however, no controls for DPMS, and fitness and probity controls at the provincial level are not conducted on an ongoing basis (i.e. including after-market entry).

33. Supervisors appear generally effective. Remedial actions are effectively used and have been extensively applied by supervisors but the sanctioning regime for breaches of the Proceeds of Crime (Money Laundering) and Terrorist Financing Act (the PCMLTFA) has not been applied in a proportionate and/or sufficiently dissuasive manner. Supervisors have demonstrated that their actions have largely had a positive effect on compliance by FIs and some categories of DNFBPs. They have increased guidance and feedback to REs in recent years but further efforts are necessary, particularly with regard to the DNFBP sector. The exclusion of most of the legal professions (legal counsels, legal firms and Quebec notaries) from AML/CFT supervision has a negative impact on the effectiveness of the supervisory regime as a whole.

Transparency of Legal Persons and Arrangements (Chapter 7 - IO5; R. 24-25)

34. Canadian legal entities and legal arrangements are at a high risk of misuse for ML/TF purposes and that risk is not mitigated. This is notably the case with respect to nominee shareholding arrangements, which are commonly used across Canada and pose real obstacles for LEAs.

35. Basic information on legal persons is publicly available, but beneficial ownership information is more difficult to obtain. Some information is collected by FIs and to a limited extent DNFBPs, the tax authorities and legal entities themselves, but is neither verified nor comprehensive in all cases. LEAs have the necessary powers to obtain that information, but the process is lengthy. Information exchange between LEAs and the CRA is also limited by stringent legal requirements.

36. The authorities have insufficient access to information related to trusts. Some information is collected by the CRA as well as by FIs providing financial services, but that information is not verified, does not always pertain to the beneficial owner, and is even more difficult to obtain than in the case of legal entities.

37. LEAs have successfully identified the beneficial owners in limited instances only. Despite corporate vehicles and trusts posing a major ML and TF risk in Canada, LEAs do not investigate many cases in which legal entities or trusts played a prominent role or that involved complex corporate elements or foreign ownership or control aspects.

International Cooperation (Chapter 8 - IO2; R. 36-40)

38. range of mutual legal assistance (MLA) provided by Canada is generally broad, and countries provided—through the FATF—largely positive feedback regarding the responsiveness and

quality of the assistance provided. Canada solicits other countries' assistance in relatively few instances in pursuit of domestic ML, associated predicate offenses and TF cases with transnational elements. Some concerns were nevertheless raised by some Canadian LEAs about delays in the processing of incoming and outgoing requests. The extradition framework is adequately implemented. Informal cooperation is effective. Cooperation between LEAs, FINTRAC, the CBSA and OSFI and their respective foreign counterparts is more fluid, and more frequently used than MLA. Nevertheless, some weaknesses in Canada's framework (e.g. the impossibility for FINTRAC to obtain additional information from REs, and the low quantity of STRs from DNFBPs) negatively affects the authorities' ability to assist their foreign counterparts.

Priority Actions

- Ensure that legal counsels, legal firms, and Quebec notaries engaged in the activities listed in the standard are subject to AML/CFT obligations and supervision. Bring all remaining FIs and DNFBPs in the AML/CFT regime.
- Increase timeliness of access by competent authorities to accurate and up-to-date beneficial ownership information - Consider additional measures to supplement the current framework.
- Increase timely access to financial intelligence – authorize FINTRAC to request and obtain from any RE further information related to suspicions of ML, predicate offenses and TF.
- Use financial intelligence to a greater extent to investigate ML and traces assets.
- Increase efforts to detect, pursue and bring before the courts cases of ML related to all high-risk predicate offenses, third party ML, self-laundering, laundering of POC of foreign predicate and the misuse of legal persons and trusts in ML activities.
- Ensure that asset recovery is pursued as a policy objective throughout the territory.
- Ensure compliance by all FIs with the requirement to confirm the accuracy of beneficial ownership in relation to all customers.
- Require DNFBPs to identify and verify the identity of beneficial owners and PEPs.
- Coordinate more effectively supervision of FRFIs by OSFI and FINTRAC to maximize the use of resource and expertise, and review implementation of the current approach.
- Ensure that FINTRAC develops sector-specific expertise, and applies more intensive supervisory measures to the real estate and the DPMS sectors.

MUTUAL EVALUATION REPORT

Preface

This report provides a summary of the anti-money laundering and combating the financing of terrorism (AML/CFT) measures in Canada as at the date of the on-site visit. It analyses the level of compliance with the FATF 40 Recommendations and the level of effectiveness of Canada's AML/CFT system, and provides recommendations on how the system could be strengthened.

This evaluation was based on the 2012 FATF Recommendations, and was prepared using the 2013 Methodology as updated at the time of the on-site. The evaluation was based on information provided by Canada, and information obtained by the evaluation team during its on-site visit to Canada from 3-20 November 2015.

The evaluation was conducted by an assessment team consisting of:

- Nadim Kyriakos-Saad (team leader),
- Nadine Schwarz (deputy team leader),
- Antonio Hyman-Bouchereau (legal expert, IMF),
- Katia Bucaioni (financial sector expert, *Unità di Informazione Finanziaria*, Italy),
- Anthony Cahalan (financial sector expert, Central Bank of Ireland),
- Carla De Carli (legal expert, Regional Circuit Prosecution, Brazil),
- Gabriele Dunker (IMF consultant),
- John Ellis (IMF consultant),
- Sylvie Jaubert (law enforcement expert, Directorate of Intelligence and Customs Investigations, France),
- Amy Lam (law enforcement expert, Hong Kong Police).
- The report was reviewed by Emery Kobor (US), Erin Lubowicz (New Zealand), Peter Smit (South Africa), Richard Berkhout (FATF Secretariat) and Lindsay Chan (Asia Pacific Group on Money Laundering—APG secretariat).

Canada previously underwent a FATF mutual evaluation in 2007, conducted according to the 2004 FATF Methodology. That evaluation concluded that Canada was compliant with 7 Recommendations; largely compliant with 23; partially compliant with 8; and non-compliant with 11. Canada was rated compliant or largely compliant with 13 of the 16 Core and Key Recommendations. Canada was placed in the regular follow-up process, and reported back to the FATF in February 2009, February 2011, October 2011, October 2012, and February 2013. The FATF February 2014 follow-up report found that overall, while some minor deficiencies remained, Canada had made sufficient progress with respect to the Core and Key Recommendations. Canada was therefore removed from the follow-up process in February 2014.

The 2008 mutual evaluation report (MER) and February 2014 follow-up report have been published and are available at www.fatf-gafi.org/countries/#Canada.

CHAPTER 1. ML/TF RISKS AND CONTEXT

39. Canada extends from the Atlantic to the Pacific and northward into the Arctic Ocean, covering 9.98 million square kilometres (3.85 million square miles) in total, making it the world's second-largest country by total area (i.e. the sum of land and water areas) and the fourth-largest country by land area. Canada is a developed country and the world's eleventh-largest economy as of 2015 (approximately USD1.573 trillion). As of 2015, the population of Canada is estimated to be 35 851 774. The foreign-born population of Canada represented 20.6% of the total population in 2011, the highest proportion among the G7 countries.[1]

40. Canada is a federation of ten provinces and three territories[2] in the northern part of North America. Ottawa, in the province of Ontario, is the national capital. Canada is a federal parliamentary democracy and a constitutional monarchy, with her Majesty Queen Elizabeth II being the Head of State. The Governor General of Canada carries out most of the federal royal duties in Canada as representative of the Canadian crown.

41. Canada's Constitution consists of unwritten and written acts, customs, judicial decisions, and traditions dating from 1763. The composition of the Constitution of Canada is defined in subsection 52(2) of the Constitution Act, 1982 as consisting of the Canada Act 1982 (including the Constitution Act, 1982), all acts and orders referred to in the schedule (including the Constitution Act, 1867 and the Charter of Rights and Freedoms), and any amendments to these documents.

42. All provinces and territories within Canada follow the common law legal tradition, except Quebec, which follows the civil law tradition. In addition, all federal laws also follow the common law legal tradition and are applicable in every province and territory (Quebec's civil tradition only applies to provincial laws).

ML/TF Risks and Scoping of Higher-Risk Issues

Overview of ML/TF Risks

43. Canada faces important ML risks generated both domestically and abroad. Estimates of the total amount of POC generated and/or laundered in Canada vary: the Criminal Intelligence Service Canada (CISC) estimated in 2007 that POC generated annually by predicate crimes committed in Canada represent approximately 3-5% of Canada's nominal gross domestic product (GDP), or approximately USD47 billion. The RCMP estimated in 2011 that the amount of money laundered annually in Canada to be somewhere between USD 5 billion and USD 15 billion. The NRA indicates that profit-generating criminal activity generates billions of dollars in POC that might be laundered.

[1] Statistics Canada (2011), Immigration and Ethnocultural Diversity in Canada – National Household Survey, 2011, www12.statcan.gc.ca/nhs-enm/2011/as-sa/99-010-x/99-010-x2011001-eng.cfm.

[2] The 10 provinces are Alberta, British Columbia, Manitoba, New Brunswick, Newfoundland and Labrador, Nova Scotia, Ontario, Prince Edward Island, Quebec, and Saskatchewan. The three territories are Northwest Territories, Nunavut, and Yukon.

1

44. Organized Criminal Groups (OCGs) pose the greatest domestic ML risk, as they are involved in multiple criminal activities generating large amounts of POC. There are over 650 OCGs operating in Canada. The public version of the NRA does not include a detailed analysis of the risks associated with the methods and financial channels used to raise, collect or transfer funds for TF, due to reasons of national security. The classified version of the NRA includes specific ratings for the TF risks represented by each of the terrorist groups. However, this could not be shared and therefore not assessed by the assessors due to national security concerns.

45. Canada appears to be moderately exposed to PF risks, due primarily to the size of the Canadian financial sector. Canada produces a range of controlled military and dual-use goods, and while no estimates were provided regarding the value and volume of goods exported, they are understood to be relatively large. In addition, Canada appears vulnerable to being used as a transshipment or transit point for military controlled and dual-use goods produced in the US. There are no estimates of the financial flows between Canada and either Iran or the DPRK, but, due to the number of restrictions in place (see R.7 and IO.11), are understood to be low.

ML/TF Threats

46. POCs in Canada are mainly generated from: human smuggling, payment card fraud, tobacco smuggling and trafficking, mass marketing fraud, mortgage fraud, capital markets fraud, illicit drug trafficking, counterfeiting and piracy, corruption and bribery, and commercial trade fraud. Canada is exposed to very high ML threats of both local and foreign origin: (i) Fraud, including capital markets fraud, trade fraud, mass marketing fraud, and mortgage fraud, is a major source of POC in Canada.(ii) The proceeds of drug trafficking laundered in Canada are also significant, and derive predominantly from domestic activity controlled by OCGs. (iii) Third-party ML has started to pose a significant threat in recent years. The NRA found, and discussions on-site confirmed that large-scale and sophisticated ML operations in Canada, notably those connected to transnational OCGs, frequently involve professional money launderers[3] (i.e. individuals specialized in the ML of POC who offer their services for a fee), nominees or money mules. It also found that, of the three, professional money launderers pose the greatest threat both in terms of laundering domestically generated POC as well as laundering, through Canada, of POC generated abroad.[4]

47. The threat emanating from other countries is significant but less easily definable. While some countries have been identified as being the main source of POC laundered in Canada, the authorities' assessment of the foreign ML threat is less detailed and comprehensive than their analysis of the domestic threat.

48. The TF threat was assessed in relation to the terrorist organizations and associated individuals that have financing or support networks in Canada. In particular, the TF threat posed by the actors associated with the following ten terrorist groups and foreign fighters was

[3] It is suspected that criminally-inclined real estate professionals, notably real estate lawyers, are used to facilitate ML. OCGs involved in mortgage fraud appear to launder funds through banks, MSBs, legitimate businesses and trust accounts.
[4] Public version of the NRA, Department of Finance Canada (2015), Assessment of Inherent Risks of Money Laundering and Terrorist Financing in Canada, p.22, www.fin.gc.ca/pub/mltf-rpcfat/index-eng.asp

assessed: Al Qaeda in the Arabian Peninsula; Al Qaeda Core; Al Qaeda in the Islamic Maghreb; Al Shabaab; Hamas; Foreign Fighters/Extremist Travellers; Hizballah; Islamic State of Iraq and Syria; Jabhat Al-Nusra; Khalistani Extremist Groups; and Remnants of the Liberation Tigers of Tamil Eelam. Using rating criteria and currently available intelligence, the terrorist groups were assessed as posing a low, medium or high TF threat in Canada. The sectors and products exposed to very high TF risks are corporations, domestic banks, national full-service MSBs, small family-owned MSBs and express trusts. The NRA indicates the possible existence of TF networks in Canada suspected of raising, collecting and transmitting funds abroad to various terrorist groups.[5] The only domestically listed terrorist organizations that pose a TF threat to Canada are those that have financing or support networks in Canada.[6] Terrorism and TF have been increasing in the last two years and more resources were therefore shifted by the authorities to address these threats. As resources remain limited, these issues are putting additional pressures on the AML/CFT regime, and in particular LEAs. Additional funding for AML/CFT activities was authorized in Budget 2015, but these new resources have yet to be fully deployed.

Vulnerabilities

49. Canadian banks offer a number of inherently vulnerable products and services to a very large client base, which includes a significant amount of high-risk clients and businesses. In addition, banks are exposed to high-risk jurisdictions that have weak AML/CFT regimes and significant ML/TF threats. The main channels to launder the POC appear to be the FIs, in particular the D-SIBs due to their size and exposure, as well as MSBs. Terrorist financiers mostly use international and domestic wire transfers to move funds within Canada and/or abroad.

50. The legal profession in Canada is especially vulnerable to misuse for ML/TF risks, notably due to its involvement in activities exposed to a high ML/TF risk (e.g. real estate transactions, creating legal persons and arrangements, or operation of trust accounts on behalf of clients).[7] Following a 13 February 2015 Supreme Court of Canada ruling legal counsels, legal firms and Quebec notaries are not required to implement AML/CFT measures,[8] which, in light of the risks, raises serious concerns.

51. Businesses that handle high volumes of cash are highly vulnerable to ML/TF as they are attractive to launderers of drug proceeds. These include brick and mortar casinos, convenience

[5] The TF methods that have been used in Canada include both financial and material support for terrorism, such as the payment of travel expenses and the procurement of goods. The transfer of suspected terrorist funds to foreign locations has been conducted through a number of methods including the use of MSBs, banks and NPOs as well as smuggling bulk cash across borders.

[6] Organizations posing a terrorist threat to Canada do not necessarily pose a TF threat to Canada. In such cases, the level of threat may not be the same.

[7] The use of trust accounts by lawyers has been recognized by the Department of Finance as a high vulnerability. See: Standing Senate Committee on Banking, Trade and Commerce (2013), Follow the Money: Is Canada Making Progress in Combatting Money Laundering and Terrorist Financing? Not really, p. A-26- Lawyers and legal firms, www.parl.gc.ca/Content/SEN/Committee/411/BANC/rep/rep10mar13-e.pdf.

[8] See Judgements of the Supreme Court of Canada (2015), Canada (Attorney General) v. Federation of law societies of Canada, 2015 SCC 7, https://scc-csc.lexum.com/scc-csc/scc-csc/en/item/14639/index.do.

1

stores, gas stations, bars, restaurants, food-related wholesalers and retailers, and DPMS (notably in the diamonds sector).[9]

52. The real estate sector is highly vulnerable to ML, including international ML activities, and the risk is not fully mitigated, notably because legal counsels, legal firms and Quebec notaries (who provide services in related financial transactions) are not required to implement AML. The sector provides products and services that are vulnerable to ML and TF, including the development of land, the construction of new buildings and their subsequent sale. Also, the real estate business is exposed to high risk clients, including PEPs, notably from Asia[10] and foreign investors (including from locations of concern).

53. Other activities, such as the mining of diamonds, dealing in high value goods, virtual currencies and open loop prepaid cards, are subject to higher ML/TF vulnerability.[11][12] The NRA classifies the virtual currency sector as having high vulnerability, in particular convertible virtual currencies due to the increased anonymity that they can provide as well as their ease of access and high degree of transferability. White-label automated teller machine (ATM) operators are vulnerable to ML/TF. According to the RCMP, OCGs use white-label ATMs to launder POC in Canada. The money withdrawn has previously been deposed into a bank accounts controlled by OCGs through third parties.

54. Legal persons and legal arrangements are inherently vulnerable to misuse for ML/TF purposes to a high degree. There is no legal requirement for legal persons and entities to record and maintain beneficial ownership information. Accordingly, companies and trusts can be structured to conceal the beneficial owner and can be used to disguise and convert illicit proceeds. Privately-held corporate entities can also be established relatively anonymously in Canada. Express trusts have global reach; Canadians and non-residents can establish Canadian trusts in Canada or abroad.

55. Full-service MSBs are vulnerable to ML/TF as they are widely accessible and exposed to clients in vulnerable businesses or occupations, and clients conducting activities in locations of concern. Drug traffickers are particularly frequent users of MSBs.[13]

[9] Ibid. p. 63.
[10] For example, there are cases of Chinese officials laundering the PoC through the real estate sector, particularly in Vancouver, and the Chinese government has listed Canada as a country that it wishes to target for recovering the proceeds of Chinese corruption. Canada may be particularly vulnerable to such laundering, as there is no extradition treaty with China.
[11] See FATF (2013), ML and TF through Trade in Diamonds, pp. 30 and 41, www.fatf-gafi.org/media/fatf/documents/reports/ML-TF-through-trade-in-diamonds.pdf.
[12] See "Developing a ML/TF Risk Assessment Framework for Canada," updated by the Public-Private Sector Advisory Committee (PPSAC) in May 2014. In this regard, AML/CFT requirements have not been extended to the other sectors (i.e. luxury goods, automobile, antiquities) when they engage in any cash transaction with a customer equal to or above a designated threshold.
[13] APG (2013), Yearly Typologies Report, www.apgml.org/includes/handlers/get-document.ashx?d=e92a27b8-42d8-4f8e-bea0-6289dcb30b9b .

International Dimension of ML/TF Vulnerabilities

56. Some of Canada's key attributes (e.g. political and economic stability, well-developed international trade networks, cultural environment, and highly developed financial system and regulatory environment)[14] also make it attractive to those seeking to launder money or finance terrorism. Canada's appeal as an investment setting also makes it an attractive destination for foreign POC.

57. Canada and the US share the longest international border in the world, at over 8 800 kilometers. Some passages are unguarded and provide opportunity for criminals to move easily between both countries. OCGs in Canada and the US actively exploit the border for criminal gain. Both countries endeavour to tackle this vulnerability through close cooperation and careful monitoring of threats.

58. Outflows of POC generated within Canada appear to be moderate in comparison with the inflows of POC. Illicit proceeds from cocaine sales in Canada are often smuggled into the US. Canadian individuals and corporations use tax havens and offshore financial centres to evade taxes, in particular those located in the Caribbean, Europe and Asia.

59. Canada's multiethnic and multicultural character also leaves the country vulnerable to exploitation by OCGs seeking to launder POC or terrorist organizations looking to conceal themselves within law-abiding diaspora communities to finance and promote terrorist activities. Some terrorist groups have also been known to use extortion to gain power over individuals to further their objectives, including by extorting funds from diaspora communities in Canada.[15] Moreover, informal diaspora remittances are open to criminal interference because they circumvent exchange controls and can therefore facilitate ML.

Country's risk assessment & Scoping of Higher Risk Issues

60. The Canadian authorities recently undertook a comprehensive ML/TF NRA. They prepared a classified, restricted NRA report that was shared within the government, as well as a shorter, public version that was published in July 2015.

61. The NRA weighs ML/TF threats against the inherent vulnerabilities of sectors (i.e. to assess the likelihood of ML/TF) and then maps those inherent potential risk scenarios using ratings (i.e. very high, high, medium, low) of individual threat and vulnerability profiles. The threats analysed included some related to sectors that are not currently subject to the PCMLTFA (e.g. check cashing businesses, closed-loop pre-paid access, financing and leasing companies). Ratings serve to illustrate the relative importance of various factors/elements/components relevant to ML/TF.

[14] In response to such threats, Canada created the Illicit Financing Advisory Committee (IFAC) in September 2010. IFAC is responsible for advising the Department of Finance and its Minister about high-risk jurisdictions, and provides a formal mechanism to share information among Canadian government departments and AML/CFT agencies in order to identify and assess the ML/TF threats posed by foreign jurisdictions and entities to Canada.

[15] Department of Finance Canada (2015), Assessment of Inherent Risks of Money Laundering and Terrorist Financing in Canada (NRA), p. 26, www.fin.gc.ca/pub/mltf-rpcfat/index-eng.asp.

1

Metrics were based on judgments and were heavily reliant on subject-matter experts' input and readily available information. Based on this approach, all assessed sectors and products were found to be potentially exposed to inherent ML risks while a more limited number of them were found to be exposed to inherent TF risks.

62. While the NRA findings did not contain major unexpected revelations regarding inherent ML or TF threats, the authorities reported that the exercise revealed the magnitude of the threat affecting the real estate sectors and arising from third-party money launderers.

a) Scoping of Higher Risk Issues

63. The assessment team gave increased attention to the following issues which it considered posed the highest ML/TF risk in Canada or warranted more thorough discussions:

- Third-party money launderers (e.g. professional money launderers): The NRA found that large-scale and sophisticated ML operations in Canada, notably those connected to transnational OCGs, frequently involve professional money launderers;
- Exposure of the Canadian economy to international ML/TF activities (i.e. deposit taking sector, real estate sector, and illicit outflows from Canada to so-called tax haven jurisdictions): A number of sectors are highly vulnerable to ML/TF linked to foreign countries, notably due to the openness of the Canadian economy, the volume of international migrants and visitors, a large and accessible financial system, and a well-developed international trading system;
- Inflows and outflows of POC (including with respect to fraud, corruption, OCG and tax evasion): A better understanding of the nature and magnitude of the inflows and outflows of POC was sought to analyse how Canadian regulators and banks are mitigating the risks of the banking system and to evaluate the effectiveness of international cooperation efforts;
- Sanctioning of ML activities (i.e. all ML offenses) and confiscation of POC: The team gathered information on the number and nature of investigations, prosecutions, sanctions imposed and confiscations related to ML and the main predicate offenses in order to analyse trends since the 2008 mutual evaluation report (MER).; and
- Transparency of legal persons and trusts: The high level of vulnerability of Canadian legal persons and arrangements is reflected by the high level of threat of third-party ML, the inoperativeness of AML/CFT requirements to legal counsels, legal firms and Quebec notaries, and the frequent use of front companies by OCGs.

Materiality

64. Canada has a large and diversified economy, with assets totalling about 500% of GDP.[16] In 2014, 70% of the economy was devoted to services, while manufacturing and primary sectors accounted for the remaining 30%.[17] International trade represents more than 60% of Canada's GDP. Most of Canada's trade is with the US (74% of export and 64% of import) followed by China and Mexico.[18]

65. Canada's financial system plays a key role in the Canadian economy and the global financial system. Canadian FIs provide substantial services to non-residents. The financial system is dominated by banks that total 42% of the financial sector assets, and by a handful of players in most sectors. The D-SIBs hold 93% of bank assets. The IMF's 2014 Financial Sector Assessment Program (FSAP) found that Canada's regulatory and supervisory framework demonstrates strong compliance with prudential international standards. Responsibility for supervision of FIs and markets is divided among federal and provincial authorities. The majority of the prudential supervision of the financial sector is regulated at the federal level by OSFI, though a significant segment is subject to provincial regulation.[19] In regard to prudential and business conduct, financial supervision is generally well coordinated across the federal oversight bodies.

Financial Sector and DNFBPs

66. There are approximately 30 000 REs subject to the PCMLTFA.

Table 1. **Entities by Sector (as of November 2015)**

Sector	Number of Entities	Subject to PCMLTFA (Y/N)
Domestic Systemically Important Banks (D-SIBs)	6	Y
Domestic Banks (other than D-SIBs)	22	Y
Foreign Bank Subsidiaries	24	Y
Foreign Bank Branches	29	Y
White-Label ATM Operators (Non-bank or financial institution)	43 100 (est.)	N
Mortgage Lenders	Not available	N
Leasing Companies	Over 200 (est.)	N
Life Insurance Companies	73 federal and 18 provincially-regulated	Y
Independent Life Insurance Agents And Brokers[1]	154 000 agents and 45 000 brokers (est.)	N

[16] Canada is one of the 29 jurisdictions whose financial sectors are considered by the IMF to be systematically important: *Press Release NO 14/08* of 13 January 2014.

[17] See Canada's National Risk Assessment, p.27.

[18] CIA World Factbook, 2015.

[19] For more information on the financial sector, see IMF 2014 Financial Sector Stability Assessment of Canada (www.imf.org/external/pubs/ft/scr/2014/cr1429.pdf). Canada's NRA states that the banking sector is highly concentrated and holds over 60% of the financial system's assets.

Sector	Number of Entities	Subject to PCMLTFA (Y/N)
Trust and Loan Companies	63 federally-regulated trust companies and loan companies and 14 provincially-regulated	Y
Securities Dealers	3 487 (The D-SIBs own six of the securities dealers, accounting for 75% of the sector's transaction volume)	Y
Credit Unions and *Caisses Populaires* (CU/CPs)	696 CU/CPs9 that are provincially-regulated; 6 Cooperative Credit Associations and 1 Cooperative Retail Association that are federally-regulated	Y
Money Services Businesses (MSBs)	850 registered MSBs	Y
Check cashing businesses	Not available	N
Provincially-Regulated Casinos	39	Y
Ship-based casinos	0	N
Real Estate Agents & Developers	20 784	Y
Dealers in Precious Metals and Stones	642	Y
British Columbia Notaries	336	Y
Accountants	3 829	Y
Legal Professionals	104 938 lawyers, 36 685 paralegals and 3 576 civil law notaries	N (to legal counsels, legal firms and Quebec notaries)
Trust & Company Services Providers	8	N
Registered Charities	86 000 federally registered charities	N

1. While independent insurance agents and brokers are not directly covered under the PCMLTFA, life insurance companies may use agents or brokers to ascertain the identity of clients on the basis of a written agreement or arrangement, which must conform to the requirements of PCMLTFR, s.64.1.

67. The broader deposit taking sector includes trust and loan companies. Canada's largest trust and loan companies are subsidiaries of major banks. Some trusts have provincial charters and are regulated at that level of government. Credit unions and *caisses populaires* are provincially incorporated and may not operate outside provincial borders. Relative to banks, these entities are minor participants in the deposit-taking sector. However, *caisses populaires* represent a large portion of the deposit-taking sector in the province of Quebec.

68. The insurance industry is an important player in the financial services sector, providing almost one-fifth of all financing to Canadian companies. Canadian-owned insurers take in more than 70% of total Canadian premium income. Canadian companies are also active abroad, especially in south-east Asia, generating more than half of their premium income from foreign operations.

Structural Elements

69. The key structural elements for effective AML/CFT controls are present in Canada. Canada is generally considered to be a very stable democracy. Political and institutional stability,

accountability, the rule of law and an independent judiciary are all well established. There also appears to be a high-level political commitment to improve the effectiveness of Canada's AML/CFT regime, as evidenced by the Economic Action Plans 2014 and 2015.[20-21] However, LEAs' resources are generally insufficient to pursue complex ML cases.

70. Canada has an independent, efficient, and transparent Justice System. The judicial process is widely trusted and effective, as well as relatively quick.

71. Canada has a comprehensive legal framework that governs the protection of personal information of individuals in both the public and private sectors. The primary source of constitutionally enforced privacy rights is Section 8 of the Canadian Charter of Rights and Freedoms. The Office of the Privacy Commissioner (OPC) oversees compliance with both federal privacy laws (see Box 1 below). Every province has its own privacy law and the relevant provincial act applies to provincial government agencies instead of the federal legislation. The Canadian regime is implemented while seeking an appropriate balanced between privacy and security considerations. In that regard, in 2012 the OPC issued guidance for REs regarding reporting suspicions to FINTRAC, in light of their customers' privacy rights.[22]

[20] Budget 2014 announced the Government's intention to take action to address the need to enhance the AML/CFT framework. As a result, the Government introduced in 2015 legislative amendments and regulations aiming to strengthen Canada's AML/CFT regime and improve Canada's compliance with international standards. This reform was based on the five-year review of the PCMLTFA undertaken by the Standing Senate Committee on Banking, Trade and Commerce in 2013. Economic Action Plan 2015 (Budget 2015) provides updates on these measures. The Government proposed to provide FINTRAC up to CAD 10.5 million over five years and up to CAD 2.2 million per year subsequently. The Government also proposed to provide up to CAD 12 million on a cash basis over five years to improve FINTRAC's analytics system. This allocation intends to better meet the needs of Canadian law enforcement and other regime partners. See Budget 2014, www.budget.gc.ca/2014/docs/plan/pdf/budget2014-eng.pdf

[21] Includes additional allocation of CAD 292.6 million over five years in intelligence and law enforcement agencies for additional investigative resources to counter terrorism. See www.budget.gc.ca/2015/docs/plan/budget2015-eng.pdf.

[22] Office of the Privacy Commissioner of Canada (2012), Privacy and PCMLTFA: How to balance your customers' privacy rights and your organization's anti-money laundering and anti-terrorist financing reporting requirements, www.priv.gc.ca/information/pub/faqs_pcmltfa_02_e.asp.

1

Box 1. **Legal Framework for Information and Data Protection in Canada**

The primary source of privacy rights is Section 8 of the Canadian Charter of Rights and Freedoms, which provides protection against unreasonable search and seizure by authorities. This means, generally, that in situations where the person concerned has a reasonable expectation of privacy in relation to an object or document, in order for the state (i.e. government authorities such as LEAs) to have access to these items, prior judicial authorization will need to be obtained. Where such access is sought for the purposes of a criminal investigation, LEAs will generally seek to obtain a search warrant or a production order from a Canadian court. The latter is typically used for access to financial information held by a third party, such as a FI. "Reasonable grounds to believe" that an offense has been committed is the legal standard of proof in Canadian Law for the court to issue the appropriate order. In addition, it is necessary to demonstrate that evidence of the offense is to be found in the place to be searched. In certain cases, such as in relation to certain types of financial information, a lower legal standard of "reasonable grounds to suspect" applies.

At the federal level, Canada has two different privacy acts which are enforced by the Office of the Privacy Commissioner of Canada. The Privacy Act regulates the handling of personal information by federal government departments and agencies. The Personal Information Protection and Electronic Documents Act (PIPEDA) applies to the commercial transactions of organizations that operate in Canada's private sector. PIPEDA applies to all private sector entities in Canada, except in provinces that have enacted substantially similar legislation. Every Canadian province and territory has its own privacy law and the relevant provincial act applies to provincial government agencies instead of the federal legislation.

The Privacy Act lists13 uses and disclosures that might be permissible without the consent of the individual (e.g. national security, law enforcement, public interest). Canadian law provides for lawful access to law enforcement and national security agencies to legally intercept private communications and the lawful search and seizure of information, including computer data, without the consent of either the sender or receiver to investigate serious crimes, including ML and threats to national security, such as terrorism. Lawful access is provided for in the CC, the CSIS Act, the Competition Act and other acts.

The Anti-Terrorism Act (ATA) provides law enforcement and national security agencies powers to obtain electronic search warrants. The ATA also allows Canadian intelligence agencies to intercept communications of Canadians in Canada, and allows the Attorney General to prevent the disclosure of information on the grounds of national security.

Under the PCMLTFA, FINTRAC receives detailed personal information through reports from REs, which can then be provided to the CRA (in cases which include tax matters), CSIS, CBSA, Citizenship and Immigration Canada (in cases which include immigration matters) or to LEAs (e.g. when the information is relevant to the investigation and prosecution of ML or TF offenses).

Background and other Contextual Factors

72. Canada ranks among the highest in international measurements of government transparency, civil liberties, quality of life, economic freedom, and education. It enjoys a high rate of financial inclusion, with 96% of the population having an account with a formal FI. Canadian banks and other FIs operate an extensive network of more than 6 000 branches, and around 60 000 ATMs of which about 16 900 are bank-owned (the rest are white-label ATMs).[23]

73. The authorities have identified corruption as a high-risk issue for ML. Recent assessments of Canada's implementation of international anti-corruption conventions indicate a rather moderate range of positive outcomes in identifying and sanctioning cases of corruption and implementing structures and systems to prevent corruption.[24] Nevertheless, corruption does not appear to hinder the implementation of the AML/CFT regime. Canada is ranked as 9 out of 168 countries in Transparency International's 2015 Corruption Perception Index (with a score of 83/100).[25]

Overview of AML/CFT strategy

74. As formulated in Budget 2014, the Government's priority in regards to AML/CFT is to improve the ability to trace and detect criminal funds in Canada. Besides law enforcement goals, this priority also aims to protect the tax base by supporting the Government's efforts to ensure tax compliance. Addressing this priority requires improving corporate transparency.

75. Canada does not have formal 'stand-alone' AML, CFT or PF strategies. There is, however, a set of relevant policies and strategies: the National Identity Crime Strategy (RCMP 2011); National Border Risk Assessment 2013–2015 (CBSA); 2014–16 Border Risk Management Plan (CBSA); Enhanced Risk Assessment Model and Sector profiles (FINTRAC); AMLC Division AML and CFT Methodology and Assessment Processes (OSFI); Risk Ranking Criteria (OSFI); RBA to identify registered charities and organizations seeking registration that are at risk of potential abuse by terrorist entities and/or associated individuals (CRA) and CRA- RAD Audit Selection process. The RCMP recently developed its National Strategy to Combat ML.[26] These AML strategies and policies are linked to the *Canadian Law Enforcement Strategy on Organized Crime* adopted by senior police officials across Canada in 2011.

---

[23] In Canada, "white label" or "no name" ATMs are those run by independent operators and not by major financial institutions. They are usually located in local small establishment retailers such as gas stations, bars/pubs, and restaurants and do not display labels from financial institutions on the machine.
[24] See 2014 review of the implementation by Canada of the Inter-American Convention against Corruption; 2013 Phase 3 report on implementation of the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transaction and the 2009 Recommendation of the Council for Further Combating Bribery of Foreign Public Officials in International Business Transactions.
[25]Transparency International (2015), 2015 Corruption Perception Index, www.transparency.org/cpi2015.
[26] Royal Canadian Mounted Police (nd), Royal Canadian Mounted Police 2015–16 Report on Plans and Priorities, www.rcmp-grc.gc.ca/en/royal-canadian-mounted-police-2015-16-report-plans-and-priorities, this strategy was finalized in 2016.

1

76. The Government's other main AML/CFT concerns are reflected in Finance Canada's Annual Report on Plans and Priorities,[27] which describes the AML/CFT regime's spending plans, priorities and expected results. Canada's CFT strategy policy guidance is derived from its 2012 Counter-terrorism Strategy.[28] This comprehensive Strategy guides more than 20 federal departments and agencies to better align them to address terrorist threats, including in regard to CFT activity and initiatives. The Minister of Public Safety and Emergency Preparedness, in consultation with the Minister of Foreign Affairs, is responsible for the Strategy's implementation. Similarly, the country's PF strategy forms part of the broader strategy to counter the proliferation of chemical, biological, radiological and nuclear weapons.

Overview of the legal & institutional framework

77. Canada's AML/CFT regime is organized as a horizontal federal program comprised of a large number of federal departments and agencies. Finance Canada is the domestic and international policy lead for the regime, and is responsible for its overall coordination, including guiding and informing strategic implementation of the RBA. It chairs the four main governing bodies of Canada's AML/CFT regime, namely:

- The interdepartmental Assistant Deputy Minister (ADM) Level Steering Committee, which was established to direct and coordinate the government's efforts to combat ML and TF activities. The ADM Committee and its working group consists of representatives of all partners;[29]
- The Interdepartmental Coordinating Committee (ICC), which provides a forum for government working-level stakeholders[30] to assess the operational efficiency and effectiveness of the regime;
- The National ML/TF Risk Assessment Committee (NRAC) provides a forum for regime and *ad hoc* partners to exchange information on risks and discuss about ML/TF risks in Canada and their mitigation; and
- The Public Private Sector Advisory Committee (PPSAC) which is a discussion and advisory committee, with membership from (federal public sector) regime partners and private sector REs, as well as provincial law enforcement.[31]

[27] Department of Finance Canada (2014), Report on Plans and Priorities 2014–15, www.fin.gc.ca/pub/rpp/2014-2015/index-eng.asp.
[28] Public Safety (2012), Building Resilience Against Terrorism – Canada's Counter-Terrorism Strategy, www.publicsafety.gc.ca/cnt/rsrcs/pblctns/rslnc-gnst-trrrsm/index-eng.aspx.
[29] The ADM Committee is composed of the following agencies: Finance Canada; Justice Canada; PPSC; Public Safety Canada; CRA; FINTRAC; RCMP; CBSA; OSFI; and CSIS.
[30] The ICC is composed of the following agencies: Finance Canada; PPSC; Public Safety Canada; CRA; FINTRAC; RCMP; CBSA; CSIS; OSFI; Privy Council Office (PCO); and Global Affairs Canada.
[31] This Committee consist of approximately 30 members, with more than half of the members coming from the private sector. The public sector participants generally consist of members who already participate in the Interdepartmental Steering Committee on this topic. The private sector participants will consist of participants from sectors covered by the PCMLTFA. This includes financial entities, life insurance companies, securities

78. The AML/CFT regime operates on the basis of three interdependent pillars: (i) policy and coordination; (ii) prevention and detection; and (iii) investigation and disruption. On this basis, the following are the primary ministries, agencies, and authorities responsible for formulating and implementing Canada's AML/CFT policies (i.e. the regime partners):

Policy and Coordination:

- **Finance Canada** is the lead agency of the regime, responsible for developing AML/CFT policy related to domestic and international commitments.
- **Department of Justice Canada (DOJ)** is responsible for the drafting and amending of statutory provisions dealing with criminal law and procedure, and to negotiate and administer mutual legal assistance (MLA) and extradition treaties.
- **Global Affairs Canada (GAC)**[32] is responsible for the designation of entities and individuals in Canada associated with terrorist activities listed by the United Nations 1267 Sanctions Committee or under Resolution 1373 of the United Nations Security Council. GAC also chairs the Counter-Proliferation Operations Committee, coordinating responses to threats within Canada.
- **Public Safety Canada (PSC, previously known as Public Safety and Emergency Preparedness)** chairs the Threat Resourcing Working Group and ensures coordination across all federal departments and agencies responsible for national security and the safety of Canadians, including on terrorist financing matters. It is responsible for the listing of terrorist entities under the Criminal Code and co-chairs the Interdepartmental Coordinating Committee on Terrorist Listings.

Prevention and Detection:

- **Financial Transactions and Reports Analysis Centre of Canada (FINTRAC)** is Canada's financial intelligence unit. It is also responsible for supervising and monitoring all REs' compliance with the PCMLTFA.
- **Office of the Superintendent of Financial Institutions Canada (OSFI)** prudentially supervises FRFIs.
- **Innovation, Science and Economic Development Canada (ISED, former Industry Canada)** collects information about business corporations, including the business name and address, and information about the directors.

---

dealers, money service businesses, accountants, the notarial profession, the real estate sector, casinos, dealers in precious metals and stones, and home builders.

[32] Global Affairs Canada's Anti-Crime and Counter-Terrorism Capacity Building programs (ACCBP and CTCBP) funding has been used to support the Regime's AML and CFT projects in a number of regions.

1

- **Office of the Privacy Commissioner of Canada (OPC)** ensures that the necessary safeguards protecting privacy are upheld. The Privacy Commissioner has the ability to audit the public (e.g. FINTRAC) and private sector to ensure privacy laws are respected. The OPC is required to conduct a privacy audit of FINTRAC every two years.

Investigation and Disruption:

- **Royal Canadian Mounted Police (RCMP)** is Canada's main law enforcement agency (LEA) responsible for investigating predicate offenses, ML and TF.
- **Public Prosecution Service of Canada (PPSC)** is responsible for prosecuting criminal offenses under federal jurisdiction. It also provides legal advice to the RCMP and other LEAs over the course of their investigations, and for undertaking any subsequent prosecutions.
- **Canada Revenue Agency (CRA)**—the CRA's Criminal Investigations Directorate (CID) investigates cases of suspected tax evasion/tax fraud and seeks prosecution through the PPSC where warranted. The CRA also has responsibility for administering the registration system for charities under the Income Tax Act through its Charities Directorate.
- **Canada Border Services Agency (CBSA**) enforces the physical cross-border reporting obligation.
- **Canadian Security Intelligence Service (CSIS)** collects, analyses and reports to the Government of Canada information and intelligence concerning threats to Canada's national security.
- **Public Services and Procurement Canada (PSPC, previously Public Works and Government Services Canada)**, under the Seized Property Management Directorate (SPMD), is responsible for managing assets seized or restrained by law enforcement in connection with criminal offenses and for disposing and sharing the proceeds upon court declared forfeitures.

79. The AML/CFT regime is also supported by a number of other partners including: provincial, territorial and municipal LEAs, provincial and territorial financial sector regulators, and self-regulatory organizations.

80. Canada's AML/CFT framework is established in the PCMLTFA, supported by other key statutes, including the Criminal Code (CC). The Parliament of Canada undertakes a comprehensive review of the PCMLTFA every five years. The Government announced a series of measures to enhance the AML/CFT regime in Budget 2014, which received Royal Assent in June 2014. Accordingly, amended Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations (PCMLTFR) were released in draft form for consultation by the Government on 4 July 2015.

Proliferation Financing

81. The principal legislation governing Canada's export control system is the Export and Import Control Permits Act (EIPA), which provides for the requirements for exporters to report goods to the Government of Canada and for the enforcement of national control lists. The Customs Act and Canada Border Services Agency Act provide the CBSA with the authority to enforce Canada's export legislation. The country's efforts to combat the proliferation of weapons of mass destruction and, to some extent, its financing, are carried out by the following agencies: PSC (coordination of counter-proliferation policy and main operational partner); Global Affairs Canada (lead on international engagement on non-proliferation and disarmament and chairs the Counter-Proliferation Operations Committee); CBSA (law enforcement regarding the illicit export and proliferation of strategic goods and technology); Canadian Nuclear Safety Commission (licensing of nuclear-related activities); PWGSC (administers the Controlled Goods Program); FINTRAC (discloses financial intelligence that can assist in investigations and prosecutions); RCMP (enforces the counter-proliferation regime, investigates related criminal offenses, collects and analyses evidence to support prosecutions in court); the Public Health Agency of Canada (national authority on biosafety and biosecurity for human pathogens and toxins); and Finance (responsible for safeguarding Canada's financial system from illegitimate use, through the PCMLTFA and associated regulations, and the overall coordination of Canada's AML/CFT regime domestically and internationally).

Overview of preventive measures

82. The legal framework relevant to the preventive measures includes the PCMLTFA, the OSFI Act and the FRFIs' governing legislation (i.e. the Bank Act, Trust and Loan Companies Act, the Cooperative Credit Associations Act and the Insurance Companies Act). The PCMLTFA is applicable to most of the financial activities and DNFBPs.

Overview of legal persons and arrangements

83. Canada's company law consists of federal, provincial and territorial frameworks. Legal entities may be established at the federal level under the Canada Business Corporation Act (CBCA); the Canada Not-for-Profit Corporations Act (NFP Act), or the Canada Cooperatives Act (CCA). A federally incorporated entity is entitled to operate throughout Canada. However, provincial and territorial law requires federal entities to register with the province or territory in which the entity is carrying out business. Incorporation on the federal level is carried out by Innovation, Science and Economic Development Canada (ISED, formerly Industry Canada) is responsible for the incorporation of federal corporate entities, while each province has its own system for incorporating and administering legal entities.

84. There are over 2.6 million corporations incorporated in Canada, including almost 4 000 publicly-traded companies. About 91% of corporations are incorporated at the provincial or territorial levels and the remaining 9% at the federal level. Bearer shares are permitted in most provinces and at the federal level, but seem to be rarely used. There is also a relatively small market for stock warrants. All companies are obliged to file tax returns with the CRA on an annual basis.

1

Provincial legal entities incorporated in Alberta and Quebec must also file tax returns with the provincial tax authorities.

85. Partnerships are created under provincial law only and, other than limited partnerships, are created under the rules of the common law although subject to laws that codify and regulate certain aspects of the partnership. In contrast, limited partnerships are created under statute and subject to ongoing registration requirements.

86. The only form of legal arrangement that exists in Canada is the trust in form of testamentary or *inter vivos* trust. There is no general requirement for trusts to be registered, but Canadian resident trusts and certain foreign-resident trusts are subject to obligations to file information under the income tax laws. Specific-purpose trusts such as unit or mutual fund trusts are also subject to the securities laws of the relevant province. Trusts created under the laws of Quebec are required to register in some instances. According to the NRA, the total number of Canadian trusts is estimated in the millions. As of 2007, only 210 000 trusts filed tax returns with the CRA.

International Context for Legal Persons and Arrangements

87. According to the UNCTAD 2014 World Investment Report, Canada ranks amongst the top ten countries both with respect to inflowing and outflowing foreign direct investment, with much of the activity taking place in the manufacturing and oil and gas sectors. Canada received over USD 53 billion of foreign direct investment in 2014 coming mostly from the EU, the US, and China. On the outflow, Canada invested approximately USD 52 billion abroad in 2014, mostly in the EU and the US. While detailed figures are not available with respect to foreign ownership of Canadian companies, the statistics provided by the UNCTAD leads to the conclusion that foreign ownership of Canadian legal entities is significant. Canada is not perceived as an international centre for the creation or administration of legal persons or arrangements.

Overview of supervisory arrangements

88. Financial regulation is shared by a number of government bodies in Canada. The Bank of Canada has overall responsibility for financial stability, as well as for the conduct of monetary policy and the issuance of currency. As mentioned above, OSFI supervises and regulates FRFIs (banks and insurance companies, trust and loan companies, cooperative credit associations, fraternal benefit societies, and private pension plans). All banks, including branch operations of foreign banks, are regulated solely at the federal level. The securities sector including in respect of mutual funds, is currently regulated on a province by province basis with connections between the provinces through the Canadian Securities Administrators Association. Markets for securities and collective investments are overseen by provincial securities commissions, which co-ordinate their activities through the Canadian Securities Administrators.[33]

[33] Canada is currently developing a Cooperative Capital Markets Regulatory System (CCMRS), a new joint federal and provincial initiative. Under this system, the provinces and the federal government would delegate

89. In March 2013, FINTRAC and OSFI entered into an agreement to conduct concurrent examinations to improve the effectiveness and cohesion of supervision and allocation of resources, and to reduce the regulatory burden on FRFIs. FINTRAC and OSFI thus concurrently assess FRFIs' AML/CFT compliance and risk management regimes using a RBA. FINTRAC and OSFI mutually share information under a Memorandum of Understanding (MOU) was signed in 2004 with respect to FRFIs. At the provincial level, FINTRAC conducts AML/CFT supervision on non-FRFIs with the cooperation of other national and provincial supervisors under various MOUs.

their regulatory functions to the CCMR, which may be useful in regard to the identification of systemic risk and criminal enforcement.

1

CHAPTER 2. NATIONAL AML/CFT POLICIES AND COORDINATION

Key Findings and Recommended Actions

Key Findings

The Canadian authorities have a good understanding of the country's main ML/TF risks and have an array of mitigating measures at their disposal. Canada's NRA is comprehensive, and also takes into account some activities not currently subject to the AML/CFT measures.

All high-risk areas are covered by AML/CFT measures, except activities listed in the standard performed by legal counsels, legal firms and Quebec notaries, which is a significant loophole in Canada's AML/CFT framework, and online casinos, open loop prepaid cards, and white label ATMs.

FIs and casinos have a good understanding of the risks. Other DNFBPs, and in particular those active in the real estate sector, do not have a similarly good understanding.

Law enforcement action focus is not entirely commensurate with the ML risk emanating from high-risk offenses identified in the NRA.

Cooperation and coordination are good at both the policy and operational levels, except, in some provinces, in the context of the dialogue between LEAs and the PPSC.

Communication of the NRA findings to the private sector was delayed, but is in progress.

Recommended Actions

Canada should:

- Mitigate the risk emanating from legal counsels, legal firms, and Quebec notaries in their performance of the activities listed in the standard.
- Strengthen policies and strategies to address emerging ML risks (in particular white label ATMs and online casinos).
- Review LEAs' priorities in light of the findings of the NRA.
- In the context of the update of the NRA, examine more closely ML linked to tax evasion, corruption, legal persons and arrangements, third-party ML and foreign sources of POC and use results to implement mitigating actions.

The relevant Immediate Outcome considered and assessed in this chapter is IO1. The recommendations relevant for the assessment of effectiveness under this section are R1-2.

Immediate Outcome 1 (Risk, Policy and Coordination)

90. As indicated in Chapter 1 above, Canada completed in 2015 a national assessment of the inherent ML/TF risks that it faces. The process and main findings of the NRA are described above.

Country's understanding of its ML/TF risks

91. The authorities' understanding of ML/TF risks has been forged through the development of several national threat and risks assessments undertaken by different governmental agencies over the past decade on related matters (see Criterion 2.1). The Parliament's Standing Senate Committee on Banking, Trade and Commerce undertakes a comprehensive review of the PCMLTFA every five years. As a result of the most recent review (completed in 2013),[34] the Government introduced legislative amendments in 2014 to address the Committee's recommendations (e.g. including measures to strengthen customer due diligence (CDD) requirements, improve compliance, monitoring and enforcement and enhance information sharing). The authorities demonstrated a sound understanding of the issues highlighted in Chapter 1, including a good understanding of the linkages between the threats and inherent vulnerabilities of the different sectors and the domestic and foreign offenses that are a source of most of the ML/TF[35] in the country. The NRA process has also contributed to a deeper understanding of the powers, resources and operational needs of all regime partners. NRAC ensures that all regime partners generally have a similar level of understanding of the ML/TF risks.

92. Following the publication of the NRA in July 2015, the NRAC concluded a gap analysis in September 2015 to categorize the residual risks (i.e. the risk remaining after the mitigation of the identified threats and inherent vulnerabilities) and identify and prioritize the actions required to mitigate the risk. The review and updating of the NRA is expected to be finalized by the fall of 2016. The authorities indicated that as new, improved controls are put in place, the residual risk will be an indicator of the areas that remain pending to be addressed. As of the date of the on-site visit, it was not possible to establish if the publication of the NRA has led to improvements of the RE's level of compliance with AML/CFT requirements.

National policies to address identified ML/TF risks

93. The adjustment of the national policies and strategies related to the identified ML/TF risks is in its early stages and no updates have been completed. The authorities have been addressing the inherent risks identified in different ways including through ongoing policy coordination through NRAC, the discussion of draft amendments to the PCMLTF Regulations, adjusted supervisory priorities, more focused police investigations, and amendments to the law regarding the seizure of illicit assets, among others.

---

[34] Standing Senate Committee on Banking Trade and Commerce (2013), Follow The Money: Is Canada Making Progress In Combatting Money Laundering And Terrorist Financing? Not Really, www.parl.gc.ca/Content/SEN/Committee/411/banc/rep/rep10mar13-e.pdf.

[35] As elaborated in Chapter 1, the classified version of the NRA, which was not shared with the assessment team, ranks in greater detail the TF risks associated with terrorist groups.

94. On the basis of the NRA, a package of regulatory amendments was issued in July 2015 for public comment. The government is now moving forward with final publication and the Regulations will come into force one year after registration of the regulations. Canada is preparing a second package of regulatory amendments based on the NRA, including measures to cover pre-paid payment products (e.g. prepaid cards), virtual currency as well as money service businesses without a physical presence in Canada in the AML/CFT Regime. The authorities are also revisiting the PCMLTFA provisions relating to legal counsels, legal firms and Quebec notaries, in order to bring forward new provisions for the legal professional that would be constitutionally compliant. Furthermore, also informed by the NRA results, FINTRAC and OSFI are reviewing their RBA to supervision, the RCMP developed its Money Laundering Strategy, and the CBSA is reviewing its Cross-Border Currency Reporting program.

95. As discussed in Chapter 1, Canada's CFT strategy policy guidance is derived from its 2012 Counter-Terrorism Strategy. The PS coordinates Canada's counter-proliferation policy approach across the government, which includes PF.

Exemptions, enhanced and simplified measures

96. Canada's AML/CFT framework does not provide for simplified CDD measures, but the PCMLTFR provide a small number of exceptions to REs based on the risk circumstances and products (see Criterion 10.18). These exemptions correspond to lower-risk scenarios that are consistent with the NRA findings in regard to FIs (i.e. in regard to life insurance companies, brokers, or agents).

Objectives and activities of competent authorities

97. FINTRAC and OSFI objectives and activities are largely consistent with the ML and TF risks in Canada, as detailed in the NRA. With the exception of the legal professions (other than BC notaries), the supervisory coverage is adequate.

98. Law enforcement action is focused on LEAs current priorities, which include drug-related offenses and OCGs, but is not commensurate with the ML risk emanating from these and other types of offenses.

99. In terms of the resources required, the Government's Economic Action Plans for 2014 and 2015 included a commitment to ensuring that law enforcement and security agencies have the investigative resources and tools to address the threats presented by OGCs, ML and terrorism and to further their understanding of Canada's ML/TF risks. Nevertheless, the authorities advised the assessors that all regime partners are under significant pressures at the working level given the increased terrorist threats and combined with the increased threat of professional ML with transnational organized crimes and the number competing priorities.

National coordination and cooperation

100. AML/CFT policy cooperation and coordination to address Canada's ML/TF risks is adequate—with the exception of the dialogue between LEAs and the PPS in some provinces, which is currently insufficient- and constitutes an essential strength of the Canadian AML/CFT framework, as evidenced by the organization and process of the NRA. Canada has wide-ranging arrangements in place for AML/CFT coordination and cooperation at both the policy and operational levels, including with respect to strategic and tactical information sharing (See R.2). Coordination and cooperation at the policy design platform is exceptional.

101. The NRA has allowed the identification and inclusion of new partners for AML/CFT (e.g. Defence Research and Development Canada and Environment Canada), and to reconsider the roles and responsibilities of traditional partners that gained a more prominent role in the fight of ML/TF over the years given enhanced understanding of ML/TF risks (e.g. Industry Canada). Overall, the public version of the NRA is of good quality and is drafted in an accessible language. Moreover, the assessment process has yielded reasonable findings that broadly reflect the country's ML/TF context and risk environment.

Private sector's awareness of risks

102. The public version of the NRA had not been circulated widely at the time of the on-site visit, due to a broader prohibition on the federal public service undertaking consultations with private sector stakeholders during the August to October 2015 federal election campaign. However, the public NRA has been made available on Finance Canada's, OSFI's and FINTRAC's website since July 2015.[36] The report was also shared with the PPSAC. As of the dates of the on-site visit, the authorities had not formally presented the results of the communication strategy for the broader private sector, but were in the process of reaching out to selected FIs. FINTRAC also provides access to guidelines, Interpretation Notices reports on current and emerging trends and typologies in ML and TF on its website to assist FIs and DNFBPs.

Overall Conclusions on Immediate Outcome 1

103. **Canada has achieved a substantial level of effectiveness for IO.1.**

[36] The NRA has since been made available on several websites (e.g. OSFI, Investment Industry Organization of Canada, among others).

CHAPTER 3. LEGAL SYSTEM AND OPERATIONAL ISSUES

Key Findings and Recommended Actions

Key Findings

IO.6

Financial intelligence and other relevant information are accessed by FINTRAC to some extent, and by LEAs to a greater extent but through a much lengthier process.

They are then used by LEAs to some extent to investigate predicate crimes and TF, and, to a more limited extent, to investigate ML and trace assets.

FINTRAC receives a wide range of information, which it uses adequately to produce intelligence. This intelligence is mainly prepared in response to Voluntary Information Records (VIRs; i.e. LEAs' requests) and used to enrich ongoing investigations into the predicate offenses. FINTRAC also makes proactive disclosures to LEAs, some of which have prompted new investigations.

Several factors significantly curtail the scope of the FIU's analysis—and consequently the intelligence disclosed to LEAs—in particular: the impossibility for FINTRAC to request from any RE additional information related to suspicions of ML/TF or predicate offense, the absence of reports from some key gatekeepers (i.e. legal counsels, legal firms, and Quebec notaries), and the inability for FINTRAC to access to information detained by the tax administration. This is compensated by LEAs in their investigations to some extent only due to challenges in the identification of the person or entity who may hold relevant information.

FINTRAC also produces a significant quantity of strategic reports that usefully advise LEAs, intelligence agencies, policy makers, REs, international partners, and the public, on new ML/TF trends and typologies.

FINTRAC and the LEAs cooperate effectively and exchange information and financial intelligence in a secure way.

IO.7

Canada identifies and investigates ML to some extent only. While a number of PPOC cases are pursued, overall, the results obtained so far are not commensurate with Canada's ML risks.

LEAs have the necessary tools to obtain information, including beneficial ownership information, but the process is lengthy.

In some provinces, such as Quebec, federal, provincial, and municipal authorities are relatively more effective in pursuing ML.

Nevertheless, overall, as a result of inadequate alignment of current law enforcement priorities with the findings of the NRA and of resource constraints, LEAs' efforts are aimed mainly at drug offenses and fraud, with insufficient focus on the other main ML risks (corruption, tobacco smuggling, standalone ML, third-party ML, ML of foreign predicate offenses). In addition, investigations generally do not focus on legal entities and trusts (despite the high risk of misuse), especially when

more complex corporate structures are involved.

There is a high percentage of withdrawals and stays of proceedings in prosecution.

Sanctions imposed in ML cases are not sufficiently dissuasive.

3

IO.8

Canada has made some progress since its last evaluation in terms of asset recovery, but the fact that assets of equivalent value cannot be recovered hampers Canada's recovery of POC.

Confiscation results do not adequately reflect Canada's main ML risks, neither by nature nor by scale.

Results are unequal, with some provinces, such as Quebec, being significantly more effective, and achieving good results with adequately coordinated action (both at the provincial level and with the RCMP) and units specialized in asset recovery.

Administrative efforts to recover evaded taxes appear more effective.

Sanctions are not dissuasive in instances of failure to properly declare cross-border movements of currency and bearer negotiable instruments.

Recommended Actions

Canada should:

IO.6

- Increase timely access to financial intelligence. Authorize FINTRAC to request and obtain from any RE further information related to suspicions of ML, predicate offenses and TF in order to enhance its analysis capacity.
- Use financial intelligence to a greater extent to investigate ML and trace assets.
- Analyse and, where necessary, investigate further information resulting from undeclared or falsely declared cross-border transportation of cash and bearer negotiable instruments.
- Ensure that LEAs and FINTRAC can identify accounts and access records held by FIs/DNFBPs in a timely fashion.
- Consider granting FINTRAC access to information collected by the CRA for the purposes of its analysis of STRs.

IO.7

- Increase efforts to detect, pursue, and bring before the courts cases of ML related to high-risk predicate offenses other than drugs and fraud (i.e. corruption and tobacco smuggling), as well as third-party ML, self-laundering, laundering of POC of foreign predicate offenses, and the misuse of legal persons and trusts in ML activities.
- Ensure that LEAs have adequate resources (in terms of number and expertise) for ML

investigations.

- Engage prosecutors at an earlier stage for securing relevant evidence for ML/PPOC prosecutions in order to limit instances where charges are dropped at the judicial process and minimize waste of resources in ML investigations.
- Ensure that effective, proportionate, and dissuasive sanctions for ML are applied.

IO.8

- Ensure that asset recovery is pursued as a policy objective throughout the territory.
- Make a greater use of the available tools to seize and restraint POC other than drug-related instrumentalities and cash (i.e. including other assets, e.g. accounts, businesses, and companies, property or money located abroad), especially proceeds of corruption, including foreign corruption, and other major asset generating crimes.
- Amend the legal framework to allow for the confiscation of property of equivalent value.
- Consider increasing the sanctions and seizures related to falsely declared or undeclared cross-border movements of currency and bearer negotiable instruments.

The relevant Immediate Outcomes considered and assessed in this chapter are IO6-8. The recommendations relevant for the assessment of effectiveness under this section are R.3, R4 & R29-32.

Immediate Outcome 6 (Financial intelligence ML/TF)

Use of financial intelligence and other information

104. Financial intelligence derives from a wide range of information collected by LEAs and received by FINTRAC. Both processes are closely linked. FINTRAC's main financial intelligence product takes the form of disclosures made in response to LEAs' requests (i.e. voluntary information records, VIRs). FINTRAC also disseminates information to LEAs spontaneously (i.e. through "proactive disclosures").

105. LEAs request and obtain financial information held by the private sector either through a court warrant or a production order, when they can establish (as per the CC) that assets are POC. To obtain this judicial authorization, LEAs must identify the FI/DNFBP or entity that holds the information (i.e. account or assets owned or controlled, financial transactions or operation). Various methods are available (see TCA criterion 24.10) and used in practice, such as "grid searches," VIRs to FINTRAC, and consultation of other sources of information as well as use of a range of investigative activities. In Ontario (where the major D-SIBs have their headquarters), "grid searches" are frequently conducted: LEAs send a request to the six D-SIBs (as they dominate about 80% of the deposit-taking market) inquiring whether a particular person is amongst their customers. If there is indication that this person is in business relationships with another FI or with a DNFBP, a request will be sent to that RE as well. Once a D-SIB (or other RE) confirms that a specific person is its

customer, the LEAs apply for a court order requiring the D-SIB to produce the relevant account and beneficial ownership information, as well as transaction records. If necessary, the production is staged to expedite the procedure (i.e. the specific information stated in the order is produced first, and the remainder of the information is provided at a later stage). Nevertheless, the D-SIBs typically take up to several weeks to provide basic and beneficial ownership information to the LEA. As result of the time required at the initial stage (i.e. identification of the relevant RE that may hold the information), as well as the time imparted to implement the production order, it frequently takes 45-90 days before LEAs can obtain the initial transaction records of potential POCs. If the culprit uses numerous layering techniques before integration, it takes LEAs several months or even years to trace POCs. The outlined process is useful only if the persons under investigation bank with the D-SIBs or one of the other large FIs. In cases where a targeted person or entity is in a business relationship with a smaller FI or a DNFBP, the tracing of assets is far more burdensome; given the size of Canada and its financial and non-financial sectors, it is not possible for LEAs to check with each FI and DNFBP individually whether it holds relevant information. In these instances, the identification of the relevant FI or DNFBPs relies on other potentially lengthier methods (e.g. surveillance).

106. LEAs frequently obtain financial information and intelligence from FINTRAC, with or without prior judicial authorization. Most often, they request the information by sending VIRs (which do not require prior judicial authorization). This provides LEAs with a quicker access to the information they need to obtain the judicial authorization (but timeliness of production of requested information remains a challenge). The number of VIRs has increased steadily over the years.[37] This indicates a greater appetite for and appreciation of FINTRAC's reports.[38] Most LEAs expressed their satisfaction with the richness of FINTRAC's responses to VIRs and mentioned that these responses adequately supplement their ongoing investigations.[39] In 2011, the Canadian Association of Chiefs of Police also recognized the contribution of financial intelligence, and called on all Canadian LEAs to include financial intelligence in their investigations and share their targets with FINTRAC.[40]

107. FINTRAC also provides information to LEAs on a spontaneous basis, through proactive disclosures, both in instances linked to ongoing investigation and in cases that identify new potential targets. Between 1 January 2010 and 31 November 2015, the RCMP received 2 497 FINTRAC

[37] Number of VIRs received: 2010–2011: 1 186; 2011–2012: 1 034; 2012–2013: 1 082; 2013–2014: 1 320; 2014–2015: 1 380.
[38] The Canadian authorities were not able to provide additional information regarding the proportion of predicate offense investigations that lead to a VIR.
[39] The Canadian authorities provided examples of written testimonies of some agencies' satisfaction with FINTRAC's response to their VIRs. E.g. "*The disclosure was very impressive in its detail and scope. Shortly after receiving it, our General Investigation Service Unit generated a file resulting in a large seizure of drugs. The individuals mentioned in the disclosure were identified as involved*" (RCMP 'G' Division Federal Investigations Unit); "*The information obtained led us to start a new investigation focused on the money trail—namely the illegal means used by the accused to launder the money they obtained in this case*"(*Sûreté du Québec*); "*Quick turnaround time was appreciated. The disclosures provided new information of potential interest along with account numbers not previously known. The Service was further able to identify additional relationships, which assisted our national security investigation. The information in the electronic funds transfers was found to provide valuable intelligence*" (Canadian Security Intelligence Service).
[40] Canadian Association of Chiefs Police (Resolution #06-2011).

disclosures, 867 of which were proactive.[41] Of these proactive disclosures, the authorities indicated that 599 generated a new investigation.[42] Very few resulted in ML charges (see IO.6.3 and IO.7). The cases communicated to and discussed with the assessors highlighted that FINTRAC information (in response to VIRs and/or shared proactively) is used by LEAs mainly as a basis for securing search warrants, aiding in the selection of investigational avenues (including the identification of targets, associates, and victims) and providing clarification of relevant domestic and international bank accounts and cash flows.

108. Additional relevant information is used to varying degrees: (i) The RCMP and other LEAs receive relevant information from provincial Securities Commissions and recognize the value of such information in combating ML/TF in the context where corporations are identified as very highly vulnerable to be abused for ML/TF. In Toronto and Montreal, the RCMP now includes personnel from the Securities Commission (Joint Securities Intelligence Unit—SIU) to facilitate intelligence gathering, analysis, and dissemination functions. The Canadian authorities provided examples of the use of information communicated to LEAs by the "*Autorité des marches financiers*" (AMF) (including Project Carrefour detailed below, as well as projects Convexe, Jongleur, Incitateur, and Ilot). In these cases, the financial intelligence was used to develop the financial part of the investigation into the predicate offense, not to investigate potential ML activities. (ii) The CRA-CID also uses financial intelligence to identify potential tax evasion. (iii) The CBSA forwards to FINTRAC and to the RCMP all Cross-Border Currency reports (CBCRs) submitted by importers or exporters. It also forwards seizure reports to FINTRAC. It seems that both FINTRAC and the RCMP use the CBSA information to supplement ongoing analysis and investigations[43] and that they analyse or, in the case of LEAs, investigate the CBSA information to a very limited extent, namely only when it has no link to existing cases (see IO.7). Two cases originating from this intelligence have been communicated to the assessors, including project Chun (see Box 4 in IO.7).

[41] FINTRAC also makes disclosures to other LEAs.
[42] According to the authorities, 297 completed feedback forms indicated that FINTRAC proactive disclosures prompted a new investigation in 53 cases between 1 January 2008 and 31 November 2015. In 92 cases a proactive disclosure provided the names of, or leads on, previously unknown persons or businesses/entities, 90 provided new information regarding persons or businesses of interest, 53 triggered a new investigation and 17 provided intelligence that may generate a future investigation. Only one of the 53 new investigations prompted following a proactive disclosure was shared with the assessors.
[43] RCMP indicated that of all ML, PPOC and TF investigations, cross-border currency reporting have been used in 331 cases.

3

Box 2. **Project Carrefour**

In December 2008, the Montreal Integrated Market Teams (IMET) Program[44] initiated an investigation based on an AMF referral. The AMF is mandated by the government of Quebec to regulate the province's financial markets and provide assistance to consumers of financial products and services. The referral indicated that individuals' Registered Retirement Savings Plans (RRSPs) and other types of retirement savings accounts were being emptied using methods that avoided attention from regulatory and fiscal authorities. The scheme consisted of attracting the attention of investors, through classified ads, with RRSPs and/or other types of retirement savings accounts looking for financial aid. In order for the investors to receive that aid, they had to give up full control of their accounts. The operators of the schemes would then empty those accounts to use the funds to transact on a variety of publicly traded companies under their control, hence engaging in market manipulation. On 15 February 2011, eleven Montréal and Toronto residents were charged with various fraud related offenses committed against 120 investors. They were also charged with fraudulent manipulation of stock exchange transactions estimated at USD 3 million.

109. In sum, financial intelligence is used to some extent to develop evidence and trace criminal proceeds. While a great deal of information provided by REs and others (i.e. in STRs and CBCRs) is used by FINTRAC for tactical analysis, strategic analysis, and to take supervisory action, a large part of this information is not further used by its partners for tactical cases, until it appears relevant for an ongoing investigation. Moreover, a relatively small portion of the intelligence is used for the specific purpose of pursuing ML activities.

110. Financial intelligence and other relevant information are, however, more frequently used to pursue TF. FINTRAC, in consultation with some of the other competent authorities, published advisories that assisted the FIs in their efforts to identify potential ISIL and TF-related activities and funding. Financial intelligence is accessed and used in TF investigation (see below and IO.9), and the on-site discussions as well as the authorities' submissions indicate that FINTRAC's proactive disclosures and responses to VIRs are appreciated by LEAs in their TF efforts.[45]

STRs received and requested by competent authorities

111. FINTRAC receives a significant quantity of information in various reports (see table below), which it uses to develop its financial intelligence.

[44] The objective of the IMET program is to effectively enforce the law against serious criminal capital market fraud offenses in Canada. The authorities involved in the program are the RCMP, ODPP, DOJ, and Finance Canada.

[45] "*FINTRAC is considered a key partner and has provided valuable financial intelligence on an ongoing basis that contributed to "terrorist financing investigations." FINTRAC through their disclosures identified new linkages/nexus between entities and/or individuals through financial transactions which surfaced new avenues of investigation. FINTRAC has always responded in a timely fashion to our priority VIRs*" (RCMP Anti-Terrorist Financing Team, National Security Criminal Operations, Headquarters, Ottawa. FINTRAC 2012 Annual Report, pg. 11, Document 102).

Table 2. **Types of Reports Received by FINTRAC (excluding terrorist property reports)**

	2010–2011	2011–2012	2012–2013	2013–2014	2014–2015
Large Cash Transaction Reports	7 184 831	8 062 689	8 523 416	8 313 098	8 445 431
Electronic Funds Transfer Reports	11 878 508	10 251 643	10 993 457	11 182 829	12 348 360
STRs	58 722	70 392	79 294	81 735	92 531
Cross-Border Currency Reports / Cross-Border Seizure Reports	40 856	35 026	31 826	42 650	47 228
Casino Disbursement Reports	102 438	109 172	116 930	130 141	155 185
Total	**19 265 355**	**18 528 922**	**19 744 923**	**19 750 453**	**21 088 735**

112. With respect to STRs, the authorities indicated that the quality of reporting has improved over the years—notably as a result of FINTRAC's efforts to reach out to REs—and that the information filed is particularly useful for the analysis of individual behaviours and transactional activity. Half of the STRs are sent by MSBs. Banks and credit unions and *caisses populaires* have submitted more STRs to the FIU in the last two years, but the number of STRs filed by DNFBPs other than casinos, while it has increased as a result of FINTRAC's outreach efforts, remains very low (278 in 2014–2015), including those filed by the real estate sector despite the very high ML risk that it faces.[46]

113. The wide range of systematic reports of transactions above CAD 10 000 that FINTRAC receives constitutes an important source of information which has allowed FINTRAC to detect unusual transactions, make links between suspected persons and/or detect bank accounts and other assets held by these persons.

114. Despite the important amount of information received, several factors limit the scope and depth of the analysis that the FIU can do, namely: (i) the fact that some REs listed in the standard are not required to file STRs (in particular legal counsels, legal firms and Quebec notaries) – as a result, FINTRAC does not receive information from key gatekeepers which would otherwise prove useful to its analysis and/or highlight additional cases of potential ML; (ii) the fact that some REs, such as those active in the real estate sector, file few STRs – as a result, information on some areas of high risks is limited; (iii) delays in reporting (FINTRAC supervisory findings seem to confirm that STRs are not filed promptly but within 30 days); and (iv) the fact that FINTRAC is not authorized to

[46] Regarding the real estate sector, the authorities indicated that an important part of STRs received from banks and credit unions and *caisses populaires* over the last three years related to suspicions of ML activities in real estate transactions. This compensates partially but not fully the lack of reporting from legal professionals—other than BC notaries (who, although subject to AML/CFT reporting requirements had not filed STRs at the time of the assessment)- who are directly involved in these transactions. Real estate brokers, sales representatives, and developers (when carrying out certain activities) have filed STRs but in very small numbers.

request additional information related to suspicions of ML, predicate offenses or TF from any REs – as a result, FINTRAC is largely dependent on what is reported. These factors entail that it is challenging for FINTRAC to follow the flows of potential POC in certain cases. For example, when an STR indicates that suspicious funds have been transferred to another FI, FINTRAC can only follow the trail of particular activities or transactions if other intermediaries and/or the final FI have also filed an STR or another report above the required threshold. This is particularly acute when the funds transferred are divided into multiple transfers below CAD 10 000. Enabling FINTRAC to request additional information from REs would considerably facilitate and strengthen the analysis and development of financial intelligence.

Operational needs supported by FIU analysis and dissemination

115. FINTRAC nevertheless provides a significant amount of financial intelligence to LEAs. Over the years, it has increased the number of disclosures sent to regime partners, both in response to VIRs and proactively. In 2014–15, the FIU sent 2 001 disclosures to partners including the RCMP, CBSA, CRA, CSIS, municipal and provincial police, as well as foreign FIUs. Of these, 923 were associated to ML, while 228 dealt with cases of TF and other threats to the security of Canada. 109 disclosures had associations with all three. Additional statistics provided showed that FINTRAC's disseminations of financial information are appropriately spread between the different provinces.

Table 3. **FINTRAC Disclosures to Regime Partners** [1]

Year	Municipal Police	Provincial Police	CRA	CSIS	CBSA	CSEC	RCMP	Total
2012–13	182	144	149	164	96	32	580	**1 347**
2013–14	207	135	153	243	139	33	703	**1 613**
2014–15	331	214	173	312	169	23	779	**2 001**

1. A number of disclosures may have been sent to more than one regime partner.

116. The main predicate offenses highlighted in the disclosures are drugs-related offenses (27% of the cases disseminated), frauds (30%), and tax evasion (11%). Between FY 2010–2011 and 2013–2014, the type of predicates was stable.[47] In FY 2014–2015, FINTRAC also provided information pertaining to potential other predicate offenses to ML (namely crimes against persons, child exploitation, prostitution, weapons and arms trafficking, cybercrimes, and illegal gambling).[48] These predicate offenses are in line with the main domestic sources of POC identified in the NRA, except corruption and bribery, counterfeiting and piracy and tobacco smuggling and trafficking. FINTRAC's disclosures have assisted LEAs in their ongoing investigations in a number of instances, such as in the case of project Kromite described below.

[47] The range of predicate offenses related to the cases disclosed were: drugs, fraud, "unknown," i.e. unspecified, tax evasion, corruption, customs/excise violations, theft, human smuggling/trafficking.
[48] The percentages were the following: crimes against persons, 4%; child exploitation, 1%; prostitution/bawdy houses, 1%; weapons/arms trafficking, 1%; cybercrimes, 0.3%; illegal gambling, 0.3%.

Box 3. **Project Kromite**

In May 2013, the RCMP participated in an international investigation which focused on significant amounts of heroin being imported from source countries (Afghanistan, Pakistan and Iran) to Tanzania and South Africa. The investigation determined that the heroin was transported through various methods to destinations in Europe, South America, the Far East, Australia, the United States, and Canada. Profits from the distribution and sale of illicit drugs were being collected in Canada and disbursed back to the criminal organization in South Africa and Tanzania.

The RCMP sent VIRs to, and received financial disclosures from FINTRAC. The disclosures were able to identify accounts, businesses owned by the subjects and transactions which led to the identification of relevant banking information and, ultimately, to the identification of targets. The financial intelligence was used by the RCMP to collaborate with the DOJ and the PPSC to draft and issue judicial authorizations. Authorizations took various forms including four MLATs, which were issued to three foreign jurisdictions to provide a formal release of information, and Production Orders and Search Warrants that were used to trace and seize POC, both assets and funds. Formal drug-related charges under the Canada's Controlled Drugs Substances Act were laid. The ML-related component of the investigation has been concluded and potential ML/PPOC-related charges were being prepared at the time of the assessment, but no charges had been laid.

117. FINTRAC tailors its analysis to the LEAs' operational priorities. It focuses mainly on answering the VIRs and also discloses intelligence related to LEAs' priorities. Regular operational meetings[49] and discussions are conducted with disclosure recipients to discuss investigative priorities, analytical processes, the development of indicators, and to provide assistance regarding the use of FINTRAC intelligence. The CSIS Financial Intelligence Center (FIC), which is in charge of all financial Intelligence related to national security investigations and linked notably to terrorism and proliferation, also interacts with FINTRAC on a regular basis.

118. FINTRAC's financial intelligence products include its analysis of all relevant information collected: the information contained in STRs, EFTRs, LCTRs, other reports and other information received or accessed by the FIU are all an integral part for developing case disseminations. As mentioned above, LEAs generally consider that FINTRAC's disclosures provide useful supplements to their investigations and generally meet their operational needs. FINTRAC also uses the information gathered in the exercise of its AML/CFT supervisory function, as well as information from a fair range of law enforcement and administrative databases maintained by—or on behalf of—other authorities, and information from open and public sources. While this broad range of information is undeniably useful, it does not necessarily provide FINTRAC with sufficient information about the suspected person's financial environment. In this context, it would prove particularly useful to ensure that FINTRAC has adequate access, for the purposes of the analysis of STRs, to information collected by the CRA, as this would assist FINTRAC with information that could

[49] Seventy-six meetings have been laid in 2014–2015 between FINTRAC and different LEAs agencies, including municipal, provincial and federal agencies, as intelligence services.

strengthen its analysis further, such as information about a person's or entity's income and assets, as well as information on trust assets and trustees (see IO.5).

119. In addition to disclosures in response to VIRs and proactive disclosures, FINTRAC produced from FY 2010/11 to 2014/15, 62 strategic intelligence and research products, which identify ML/TF methods and techniques used by listed terrorist groups and criminal networks, emerging technologies, as well as vulnerabilities in different sectors. These reports support the operational needs of competent authorities and many of them are developed in collaboration with the Canadian and international security, intelligence and law enforcement communities. FINTRAC's classified strategic financial intelligence assessments address the nature and extent of ML/TF activities inside and outside of Canada. Canadian authorities provided testimonies of some partners' satisfaction with FINTRAC's strategic intelligence reports.[50]

120. FINTRAC provides a significant amount of disclosures on TF to a variety of LEAs. FINTRAC sent 234 disclosures related to TF and other threats to the security of Canada in 2013-14, and 228 disclosures in 2014-15. These disclosures were communicated to a variety of partner agencies, including CBSA, CRA, CSIS, CSE and RCMP, as well as to municipal and provincial police, and other FIUs, and generated 40 new RCMP TF investigations in 2014 and 126 in 2015.. FINTRAC has increased its disclosures regarding TF to 161 for the first six months of FY 2015-2016, of which 82 were proactive disclosures. This increase in the number of disclosure shows the involvement of the FIU in analysing and disseminating information regarding TF.

Cooperation and exchange of information/financial intelligence

121. Most agencies adequately cooperate and exchange information including financial intelligence. FINTRAC meets with partners on a regular basis, as seen above, and the FIU focuses on priority investigations to support the LEAs' operational needs. In particular, VIRs constitute an important channel for cooperation and information sharing between FINTRAC and LEAs, as well as between LEAs. FINTRAC may send a single disclosure to multiples agencies simultaneously, which informs LEAs that another agency is working on a case. A LEA can further disseminate a disclosure that was based on another agency's VIR, provided that it obtains the permission from the source agency to further disseminate to the requester. In 2014-2015, FINTRAC was authorized by the source agency to disseminate further its disclosures to another LEA in some 41% of cases.

[50] FINTRAC's report, Mass Marketing Fraud: "*Money Laundering Methods and Techniques, is helpful to Canadian law enforcement and government agencies in understanding the complexity and international scope of mass marketing fraud impacting Canada. The CAFC has been able to leverage this report to provide insight into the prominent money laundering techniques used by criminal organizations engaged in mass marketing fraud*" (Canadian Anti-Fraud Centre); "*FINTRAC's report (on terrorism financing risks related to a particular group) … have contributed to AUSTRAC's understanding of the topic … FINTRAC and AUSTRAC have been able to collaborate on analytical products, supporting a multilateral approach to information sharing*" (Australian Transaction Reports and Analysis Centre) ; "*Public Safety Canada benefits from strategic financial intelligence reports on ML and TF provided by FINTRAC to inform the overall analysis of national security and organized crime issues. Strategic financial intelligence helps Public Safety to identify the nature and extent of money laundering and terrorism* financing and its potential links to *Canada, international conflicts, crimes, sectors and/or organizations, and the growing links between transnational organized crime and terrorism*" (Public Safety Canada).

122. In addition, FINTRAC has direct and indirect access to LEAs and Security (i.e. intelligence services) databases. The authorities indicated that FINTRAC regularly queries LEA databases in the course of its normal work. FINTRAC and LEAs have established privacy and security frameworks to protect and ensure the confidentiality of all information under FINTRAC's control (including information collected, used, stored and disseminated). In October 2013, FINTRAC strengthened its compliance policies and procedures to increase further the protection of the confidentiality of the information it maintains.

123. Where necessary, LEAs also share information indirectly via FINTRAC by highlighting the disclosures that should be disclosed to other agencies: In this respect, the RCMP has, in specific cases, flagged some files with cross border features to the FINTRAC for disclosure to the CBSA where cross border elements. Similarly, the CBSA has advised FINTRAC to disclose the results of certain VIRs to another regime partner where it determined that further investigations should be carried out.

124. Additionally, the CRA—Charities shares information with other government departments, including RCMP, CSIS and FINTRAC, when there are reasonable grounds to suspect the information would be relevant to an investigation of a terrorism offense or a threat to the security of Canada. Similarly, CSIS shares information on security issues with a range of domestic partners, including FINTRAC, on a regular basis. The sharing of intelligence includes financial intelligence.

Overall Conclusions on Immediate Outcome 6

125. **Canada has achieved a moderate level of effectiveness for IO.6.**

Immediate Outcome 7 (ML investigation and prosecution)

ML identification and investigation

126. ML cases are primarily identified from investigations of predicate offenses, human sources (e.g. informants, victims, suspects, informers, etc.), intelligence (including FINTRAC responses to VIRs), coercive powers, and, in fewer instances, FINTRAC's proactive disclosures, as well as referrals from other government departments without ML investigative powers. LEAs mentioned that they examine all cases with a financial component and assess whether a concurrent financial investigation is warranted. The decisions on whether to investigate a case and how much resources should be devoted to a specific investigation are guided by the LEAs' prioritization processes.[51] As a result, LEAs principally investigate the financial aspects of ML[52] or PPOC[53] occurrences in serious

[51] In the case of the RCMP: The Prioritization Process is designed to aid the judgment of RCMP management in the application of its investigative resources against the most important (priority) criminal threats and activities facing the country. It takes into consideration a series of variables designed to gauge the overall profile of the investigation (or project), its targets, the expected impact against those targets, as well as the expected cost in terms of investigative resources and the length of time they will be dedicated to the project. Prioritization criteria include: economic, political and social integrity of Canada, strategic relevance to RCMP, links to other GoC and partner priorities, etc. Investigations are scored in three tiers (Tier 1 being the highest priority). Highest priority files afforded resources as required to successfully conduct the investigations.
[52] ML encompasses the CC: ss. 462.31(1) and (2) for laundering property and proceeds of property.

and organized crime cases, and in less serious investigations pursue PPOC charges if proceeds are seized through the predicate investigation.

Table 4. **ML and PPOC-Related "Occurrences**[1]
(numbers extracted from all police services' records management systems across Canada)

	2010	2011	2012	2013	2014	Total
ML-Related Occurrences	684	716	596	593	608	3 197
PPOC-related Occurrences	42 261	38 796	38 638	37 521	36 012	193 228
Total	**42 945**	**39 512**	**39 234**	**38 114**	**36 620**	**196 425**

1. The basic unit of this data capture system is an "incident", which is defined as the suspected occurrence of one or more criminal offense(s) during one single, distinct event. During the on-site visit, authorities explained that the ML/PPOC related occurrences are classified when the offenses or incidents fall into the definitions of PPOC/ML under the CC. E.g. a simple theft case can be regarded as a PPOC incident; and if the thief further transfers the stolen good, it will be a ML occurrence.

Source: Statistics Canada's Uniform Crime Reporting Survey (2015)

Table 5. **ML/PPOC Occurrences Handled by the RCMP**

	2010	2011	2012	2013	2014	Total
ML-Related Occurrences	945	844	692	619	664	3 764
PPOC-Related Occurrences	12 753	11 408	11 573	12 299	14 177	62 210
Total	**13 698**	**12 252**	**12 265**	**12 918**	**14 841**	**65 974**

Source: RCMP

127. The ML/PPOC occurrences handled by RCMP (unlike the numbers provided in the table for all police forces) include 1 599 ML- and 13 179 PPOC-related "assistance files," i.e. cases where the RCMP rendered assistance to foreign agencies. In practice, requests from foreign counterparts are used to a limited extent to identify potential ML cases in Canada. In particular, requests from foreign countries seeking information regarding Canadian bank accounts suspected of receiving or transferring POC are generally only acceded to and a ML investigation initiated when the account holder(s) is/are subject to ongoing investigation(s) in Canada, or there is clear indication of a predicate offense having been committed in Canada. Although Canada has identified third-party ML as one of the very high ML threat, it does not focus sufficiently on foreign requests that may reveal the presence, in Canada, of third-party launderers.

128. As mentioned in IO.6, FINTRAC provides a significant amount of information to LEAs. FINTRAC responses to VIRs (which constitute the majority of FINTRAC's disclosures) and proactive disclosures that have a link with an existing file and/or target are adequately used by LEAs. LEAs mentioned that due to time and resources considerations, in line with their prioritization process, fewer investigations are initiated on the basis of a proactive disclosure which has no link to an ongoing investigation. Between 2010 and 2014, FINTRAC made 867 proactive disclosures to the RCMP, of which 599 led to new ML/PPOC related occurrences for further investigations.

[53] PPOC includes CC s. 354 possession of property of proceeds obtained by crime.

129. While the CBSA may investigate fiscal crimes, it does not have the powers to investigate related ML/PPOC cases, and in instances where it considers that there are reasonable grounds to suspect that a person is or has been engaging in ML activities, it reports the case to the RCMP. The latter recorded that between 2010 and 2014 there were 444 ML/PPOC occurrences related to cross border currency reporting. The authorities provided one case ("Project Chun," described in the Box below) of a successful ML investigation started in 2002 on the basis of a CBSA referral. Whilst the assessment team was also shown several ML cases involving parallel investigations arising from CBSA's enquiries into smuggling or customs related offenses, no other cases arising from CBSA's cross-border declaration/seizure reports were provided. It therefore appears that, in practice, information collected at the border is analysed or investigated with a view to pursuing ML activities to a very limited extent only. The cross-border declaration system is not adequately used to identify potential ML activities.

Box 4. **Case study: Project Chun**

In October 2002, a male was intercepted at the Montreal International Airport with USD 600,000 cash in his hand luggage. In the absence of a valid explanation, the money was seized and the case was referred to RCMP which initiated an investigation to determine the source and destination of the money. Extensive enquiries unveiled that the male and his wife owned two currency exchange companies in Canada and in 2000 they made an agreement with a drug trafficker to assist the latter in laundering proceeds deriving from drug trafficking activities. The laundering included use of various financial services and an elaborate scheme for the transfer of money to a bank in Cambodia that was owned and controlled by the couple. The precise amounts involved in these activities are estimated at more than CAD 100 million. Information received from FINTRAC indicated that the couple dealt in large sums of cash and that their bank account activities did not fit their economic profiles. Travel records of one of the accomplice money launderers were received from Cuba through MLAT requests. The accomplice, who was detained in custody in the US, was later transferred from the US to Canada to provide testimony for the prosecution. Canadian investigators had travelled to Israel and Cambodia for tracing after and restraining the crime proceeds. The couple applied delaying tactics during the prosecution and the Canadian authorities eventually convicted the couple with six counts of Money Laundering and seven counts of tax offenses. In March 2015, the couple was each sentenced to eight years of imprisonment and ordered to pay fines of CAD 9 million. Two real properties, USD 600 000 and the shares of a bank in Cambodia were forfeited.

130. Canada's main law enforcement policy objective is to prevent, detect and disrupt crimes, including ML, but in practice, most of the attention is focused on securing evidence in relation to the predicate offense and little attention is given to ML, as evidenced by the discussions held as well as by the case studies provided. LEAs focus on criminal actions undertaken by OCGs (i.e. mainly drug-related offenses and fraud). Cases studies and figures provided by LEAs demonstrated that they also investigate other high-risk offenses (e.g. corruption and tobacco smuggling), but to a limited extent only. Insufficient efforts are deployed in pursuing the ML element of predicate offenses and pursuing

ML without a direct link to the predicate offense (e.g. third-party/professional money launderers). Since 2010, when tax evasion became a predicate offense to ML, none of the tax evasion cases finalized by the CRA have included sanctions for ML. There are, however, ongoing investigations that contemplate the ML activities.

131. The various LEAs adequately coordinate their efforts, both at the strategic level and at the operational and intelligence levels, through working groups and meetings. Within the RCMP, a centralized database is used to minimize the risk of duplicative investigative efforts against the same groups or persons. Direct exchanges regularly occur during relevant LEAs meetings, as well as through specific joint projects: in particular, the CRA-CID and the RCMP have entered into special projects (i.e. Joint Forces Operations, JFOs) for a specific duration, to identify targets of potential criminal charges including ITA/ETA offenses. Between 2010 and 2015, 10 JFOs were conducted. In these cases, the JFO agreements do not supersede or override the confidentiality provisions of the ITA/ETA, but they, nevertheless, enable the CRA to provide tax information to the RCMP if this is reasonably regarded as necessary for the purposes of the administration and enforcement of the Acts.

132. LEAs regularly seek the production of a court order to obtain banking (or other relevant) information for the purposes of their investigations. However, as detailed in R 31.3 and IO6, the length of the process leading to the identification of relevant accounts considerably delays the tracing of POC in ML/PPOC investigations.

133. The LEAs also access tax information (outside JFOs) with prior judicial authorization. During the period 1 April 2013 to 31 December 2015, the CRA CID received in excess of 2 500 LEA requests for taxpayer information. One RCMP unit indicated that this information is obtained in all significant cases by way of letter under S241 of ITA when charges are laid or by CC authorization of Tax order. The RCMP sent 91 tax letters from 2010 to 2016.

134. LEAs also regularly consult public registries of land and companies, but the paucity of accurate basic and beneficial ownership information in these registries limit the usefulness of the information obtained. Investigations in Canada typically do not focus on complex ML cases involving corporate structures (and/or involving transnational activities). LEAs stated that, in the few cases where legal entities were under investigation, the beneficial ownership information was typically obtained from FIs, in particularly the D-SIBs. Investigators are aware of the risk of misuse of corporate entities in ML schemes, but, in some provinces, do not investigate such cases to the extent that they should mainly because of a shortage of adequate resources and expertise. As a result, some targets are not pursued or bank accounts investigated (e.g. in instances where multiple targets and accounts are involved), and LEA efforts are focused on easier targets where the chances of the investigations being cost effective are greater.

Consistency of ML investigations and prosecutions with threats and risk profile, and national AML policies

135. According to the NRA, fraud, corruption, counterfeiting, drug trafficking, tobacco smuggling, and (although a recent phenomenon) third-party ML pose very high ML threats in Canada. The LEAs generally agreed with the NRA findings and have prioritized their resources on OCGs, which are

mostly involved in drug and fraud related offenses (see table below). As described above, LEAs, in particular the RCMP, have a prioritization process, which is continually evolving to address the current threats, taking into account a number of factors. At the time of the assessment, that process did not take the NRA's findings sufficiently into account.

Prosecuted ML-Related Cases	2010	2011	2012	2013	2014	Total	%
Money Laundering (CC s462.31)	88	86	130	108	114	526	51.2%
Fraud	12	27	57	61	53	210	20.4%

136. The authorities provided in the above tables the number of prosecution cases, broken down by the most serious offense (MSO) of the case, in which at least one ML or PPOC charge was laid in 2010 to 2014. [54] This information does not distinguish third-party ML from self-laundering. These statistics show that high-threat predicate offenses, i.e. drug trafficking and fraud, account for 27.1% of ML or 22.6% of PPOC prosecutions only, which does not match the ML threats and risks identified in the NRA (which suggest that a higher percentage would be necessary to mitigate the risks). The figures provided do not show related prosecutions in the context of corruption, counterfeiting, and tobacco smuggling cases, but these cases could be embedded in the "others", "ML" or "PPOC" categories, when they were not the MSO. Canada provided further information to show that there were 68 counterfeiting related ML/PPOC cases, examples of tobacco smuggling related ML cases and one case (Project LAUREAT highlighted below) of a successful prosecution of corruption-related ML cases[55].

[54] RCMP also provided that between 2010 and 2014, it laid 130 630 PPOC charges against 35 600 persons and 1 904 ML charges against 503 persons.
[55] Two other corruption related ML cases, Project Ascendant and Project Assistance, were provided but both cases were under court proceedings.

Box 5. **Case study: Project LAUREAT**

In 2010, in order to obtain the CAD 1.3 billion contract of modernization of a Health Centre ("HC"), the president ("P") and vice-president ("VP") of an engineer company ("EC") had bribed the top officials, "Y" and "Z," of the HC to get the award. Upon the announcement of the award to EC, the VP transferred a total of CAD 22.5 million to the shell companies in foreign countries owned by Y and Z. Y further transferred the crime proceeds to the accounts of his wife's (Y's wife) shell companies. Numerous MLAT requests were executed and bank accounts in nine other countries, worth more than CAD 8.5 million, were blocked. Y, Z, P, VP were also extradited from other countries. The syndicate was charged with corruption, fraud, ML along with other offenses. For Y's wife, who has only been involved in laundering the CAD 22.5 million, was sentenced to 33 months of imprisonment.[1] Upon her conviction, seven buildings (value at CAD 5.5 million) were confiscated.

1. The sentence of Y's wife expires in December 2016, but she was granted full parole in September 2015.

137. While Project LAUREAT was relatively successful, overall, on the face of the statistics and cases provided as well as of the discussions held on-site, it was not established that Canada adequately pursues ML related to all very high-risk predicate offenses identified in the NRA.

138. As indicated in the statistics on standalone ML / PPOC prosecutions below, there were 35 (3.4%) and 14 271 (9.6%) standalone ML and PPOC concluded respectively in the last five years. As professional money launderers are mostly involved in ML (rather than PPOC) cases, the fact that Canada only led 35 prosecutions and obtained 12 convictions of single-charge ML cases in the last five years is a concern. It is possible and, according to the authorities, very likely that a professional money launderer would also be charged with another charge such as conspiracy, fraud, or organized crime in addition to ML, but the numbers nevertheless appear too low in light of the risk.

Table 6. **Results of Single Charge ML Cases**

	2010	2011	2012	2013	2014	Total	%

139. Canada's NRA also identified very high ML vulnerabilities in the use of trusts and corporations. LEAs confirmed that corporate vehicles and trusts are misused to a relatively large extent for ML purposes. As the case study Dorade (below) indicates, the authorities have been successful in identifying the legal persons and arrangements involved in the ML schemes and in confiscating their assets in some instances. However, overall, it was clear from the discussions held with police forces and prosecutors that legal persons are hardly ever prosecuted for ML offenses, mainly because of a shortage of adequate resources and expertise. Investigators are nevertheless aware of the risk of misuse of corporate entities in ML schemes and that more focus should be placed on this risk.

Box 6. **Case study: DORADE**

During the investigation of a fraud syndicate, it was revealed that the director of a loan company had set up, with the assistance of various professional accomplices, foreign shell companies located in tax havens for receiving the crime proceeds and lending the sum back to loan company for its legitimate loan business, thereby facilitating the director to evade tax payment and recycle crime proceeds. It was estimated, between 1997 and 2010, a total of CAD 13 million of tax was evaded. With the assistance of MLAT requests, the syndicate members were identified and the proceeds, whether domestic or abroad, were restrained and eventually confiscated. The director and the professionals were convicted of fraud and ML and sentenced to 36–84 months of imprisonment. However, all the ML charges attracted an imprisonment term of less than 18 months and to be served concurrently with the Fraud sentence.

140. Overall, while there are exceptions, law enforcement efforts are not entirely in line with Canada's NRA risk profiles. As previously noted, LEAs' prioritization processes place strong attention to National Security investigations, OCGs, and, to a lesser extent, more recently third-party ML in an international context. Other instances of high threat predicate offenses, especially fraud, corruption, counterfeiting, tobacco smuggling, and related ML, as well as laundering activities in Canada of the proceeds of foreign predicate offenses, third-party ML and ML schemes involving corporate structures are not adequately ranked in the prioritization process and, consequently, are not pursued to the extent that they should.

3

Types of ML cases pursued

141. Different types of ML and PPOC cases are prosecuted, but there is insufficient focus on the types of ML that are more significant in Canada's context, i.e. ML related to high-risk predicate offenses. In addition, prosecutions of ML-related cases focus on the predicate offenses, with the ML charge(s) often withdrawn or stayed after plea bargaining and re-packaging of charges. The number of standalone ML cases is comparatively low, indicating few investigations and hence prosecutions of third-party ML and foreign predicate offenses despite their high ranking in the NRA. According to the authorities, as far as third-party ML is concerned, the low number of investigations and prosecutions is that the magnitude of the threat has only recently reached a high level. Finally, legal persons are frequently misused for ML purposes, but not often pursued for ML offenses. The tables below show the results of ML cases brought before the courts and the charges laid in these cases.

Table 8. **Results of ML-Related Cases**

142. Between 2010 and 2014, a total of 1,800 ML charges were concluded in 1,027 cases. Although about 60% of these cases were led to convictions, only 169 ML charges (i.e. some 9%) resulted in a conviction. Some 87% of the ML charges were either withdrawn or stayed. The reasons provided for the withdrawal of the ML charges included insufficient evidence, the lack of public interest in the pursuit of the charges, the avoidance of overcharging, as well as repackaging of charges and plea bargaining (as the ML/PPOC charge will not normally add any additional sentence to the defendant and it is easier for the defendant to accept the guilty plea of the predicate offenses in order to contribute to a fair and efficient criminal justice system). The consultation with prosecutors at an earlier stage of the ML cases is clearly useful in securing the necessary evidence

and avoiding a waste of investigative efforts. The length of criminal proceedings in ML cases is also a concern. Proceedings may take a number of years during which the subjects of the investigation and prosecution may continue their unlawful businesses and dispose of the POCs (as was the case in Project Chun for example).

143. Over the last years, although 68.4% of PPOC cases resulted in convictions, 74.6% of the PPOC charges were withdrawn / stayed or dealt with by other means, and the defendants were only charged with and convicted of the predicate offenses.

144. Overall, of the 1 027 ML-related cases and 102 029 PPOC-related cases that entered the court system, over 60% resulted in convictions, though most of the defendants were convicted of the predicate offenses rather than the ML or PPOC charges. This indicates that Canada is able to investigate and prosecute predicate offenses in ML/PPOC-related cases and disrupt some of the ML/PPOC activities. One hundred sixty-nine ML charges were led to a conviction in the past five years (i.e. 33.8 charges on average annually), which appears very low in light of the magnitude of the ML risks identified. Canada does not pursue the ML charges sufficiently.

Effectiveness, proportionality and dissuasiveness of sanctions

145. The totality principle[56] always applies in the sentencing, and a ML/PPOC sentence is usually ordered to be run concurrently with the predicate offenses. The statistics below indicate the sanctions imposed for ML in instances where the ML charges were the most serious offenses (MSO). The vast majority of natural persons (i.e. 89%) convicted for ML have been sentenced in the lower range of one month to two years of imprisonment or awarded non-custodial sentences.[57] This is proportionate with the type of ML activities most frequently pursued in Canada. However, although this is not made evident in the statistics provided, it is apparent from the case examples provided, and in Projects Dorade and Laurent mentioned above, that many sanctions imposed on money launderers are low even in the (relatively few) cases of complex ML schemes and/or of professional launderers brought before the courts. None of the PPOC convictions attracted a sentence of more than two years. In these circumstances, the sanctions applied do not appear to be of a level dissuasive enough to deter criminals from ML activities.

Table 12. **Sanctions in ML Cases Where ML was the Most Serious Offense, from 2010 to 2014**[1]

	Number	Percentage
Custodial Sentence	**80**	**55.2%**
• Less than 12 months	47	32.4%
• 12 to 24 months	17	11.7%
• More than 24 months	16	11.0%
Conditional sentence, probation, fine, restitution	**65**	**44.8%**
Total	**145**	**100.0%**

1. There are other undisclosed cases where the ML offense runs concurrently with another MSO.

Extent to Which Criminal Justice Measures are Applied Where Conviction is Not Applicable

146. Information provided under IO.8 reveals that non-conviction based forfeiture amounted to 17% of the total forfeiture. Whilst it is not encouraged to drop the criminal charges during the judicial process, Canada's use of civil confiscation is not to be discounted. Plea bargaining and repackaging of charges have also been used in the prosecution stage for shortening the length of court proceedings.

Overall Conclusions of Immediate Outcome 7

147. **Canada has achieved a moderate level of effectiveness for IO.7**.

[56] Totality principle is a common law principle, which applies when a court imposes multiple sentences of imprisonment. Section 718.2(c) of the CC stipulates that when a court that imposes a sentence shall take into consideration of, amongst others, where consecutive sentences are imposed, the combined sentence should not be unduly long or harsh.
[57] A breakdown of sanctions for third-party ML cases and against legal persons is not available.

Immediate Outcome 8 (Confiscation)

148. Since its last assessment, Canada improved its ability to collect information on seizures and confiscations and produce related statistics. It uses both criminal and civil (non-criminal based) proceedings to confiscate proceeds and property related to an unlawful activity. At the Federal level, there is an agency to manage seized and confiscated assets (SPMD). At the provincial level, the management of these assets rests with the prosecution services. Canada also confiscates with no terms of release any undeclared currency and monetary instruments from travellers entering and exiting the country when there is reasonable grounds to suspect they are from illicit origin or that the funds are intended for use in the financing of terrorist activities. It shares confiscated assets with countries with which it has a sharing agreement.

Confiscation of proceeds, instrumentalities and property of equivalent value as a policy objective

149. While confiscation of criminal proceeds and instrumentalities is a policy objective, that objective is pursued to some extent only. Canada is not able to confiscate property of equivalent value; instead, it imposes fines in lieu. As a result of the deficiencies described in IO.7 confiscation relate mainly to proceeds of criminal activities and offence related property conducted by OCGs, in particular drug offenses, fraud, theft, and to the proceeds of tax evasion.

150. Canada's Integrated Proceeds of Crime (IPOC) Initiative aims at the disruption, dismantling, and incapacitation of OCGs by targeting their illicit proceeds and assets. It brings together the CBSA, CRA, PPSC, Public Safety Canada, PSPC (more specifically, its Forensic Accounting Management Group, and the Seized Property Management Directorate), and the RCMP, which cooperate and share information to facilitate investigations. According to the authorities, the IPOC is a distinct program and a corner stone of the AML/CFT regime as a whole as modified in 2000. However, it is not identified as one of the key goals of the latest articulation of the AML/CFT program.

151. The RCMP's Federal Policing Serious and Organized Crime/Financial Crime Teams (which investigate ML cases) target the proceeds of organized crime for seizure. The return of frozen or seized POC and instrumentalities to the defendant is avoided in the context of a plea bargain; in line with the PPSC policy, both POC and instrumentalities must be sought.[58] According to the authorities, the accused normally agree with the confiscation request when they plead guilty. At the provincial level, measures aimed at tracing and seizing assets in view of confiscation are in some cases conducted jointly by the RCMP and the provincial LEA. In the province of Quebec, for instance, the cooperation between the RCMP and the relevant provincial police, i.e. the *Sûreté du Québec*, has shown a number of cases of successful recovery of assets. At the municipal level, the Service de Police of the City of Montreal has a unit specialized in the recovery of POC and in the investigation of ML (*Unité des produits de la criminalité*—Programme UPC-ACCEF). The priority of the investigations in Quebec and in Montreal in particular is clearly to identify assets for confiscation, especially in

[58] According to the PPSC Deskbook, Guideline issued by the Director under Section 3(3)(c) of the Director of Public Prosecutions Act, Chapter 5.3 Proceeds of Crime, in the context of ORP, "partial forfeiture is not a negotiation tool. If the facts justify and application for total forfeiture, Crown counsel may not, as part of negotiations, suggest partial forfeiture."

cases involving OCGs. These clear priorities and effective specialized units have resulted in greater recovery of POC and instrumentalities by criminal law means both in scope and in type of assets, including in more complex ML cases. Other provinces rely more on non-conviction based forfeiture, where roughly CAD 100 million have been confiscated, nationally, during the relevant period.

152. As a general rule, however, LEAs in other provinces and at the federal level do not seem to adopt a "follow the money" approach in practice, nor to initiate a parallel financial investigation, notably because of resource constraints. Overall, as a result of the shortcomings explained under IO.6 and IO.7, asset recovery is pursued to a limited extent only.

Confiscations of proceeds from foreign and domestic predicates, and proceeds located abroad

153. The total amounts recovered yearly have increased significantly since the previous assessment,[59] but, nevertheless, appear to be low in the Canadian context (see table below). This is likely to be due to the lack of focus on asset recovery mentioned above and the shortcomings mentioned in IO.6 and IO.7, as well as the length of time needed to bring cases to closure: The delays encountered (especially at the tracing stage) are likely to encourage and facilitate the flight of assets.

Table 13. **Amounts Forfeited in Canada**[1]
(in Canadian Dollars)

	Criminal Federal Forfeiture	Federal Fines in Lieu	CBSA Cash Forfeitures	Civil Forfeiture Results (Nationally)	Québec Criminal Provincial Forfeiture	Total

2014/15	72 869 240	314 217	4 076 586	---	---	77 260 044
Total In CAD	415 741 848	937 285	23 535 683	99 500 000	43 928 471	583 643 289

The table is a consolidation of statistics maintained by different authorities, using different criteria and does not include forfeitures undertaken by federal departments that do not involve or are not reported to the SPMD. At the provincial level, figures were provided for Quebec only (federal criminal results for Quebec appear in the first column). They do not differentiate domestic from foreign predicate offenses (though IO.2 shows that there have been forfeitures based on the direct enforcement of foreign orders) and proceeds which have moved to other countries. According to the authorities, the link between seized and forfeited assets cannot easily be made, as these actions occur over multiple years.

154. Different types of assets are seized or restrained in federal criminal proceedings (see table below) but, overall, Canada does not restrain businesses, company shares—despite the high risk of misuse of legal entities—or property rights. [60] In general, Canadian authorities seem to be managing

[59] An average of Can$ 27 million a year were forfeited from 2000 to 2007 (2008 MER, page 62).
[60] The only exception appears to be a golf course seized on behalf of another country.

effectively the seized and confiscated assets on both federal and provincial levels. Assets are generally not sold before the conclusion of the criminal proceeding to maintain their value or reduce the costs of management of the property, unless they are rapidly depreciating or perishable, or the accused authorizes their disposal.

Table 14. **Federally Seized/Restrained Assets by Appraisal Value**
(in Canadian Dollars)

Asset Type	2009/2010	2010/2011	2011/2012	2012/2013	2013/2014	2014/2015
Aircraft	108 000	-	15 000	-	250 000	0
Cash	20 878 443	21 456 803	22 665 264	28 833 075	18 036 703	21 680 932
Financial Instruments	365 247	961 557	5 938 052	732 443	26 924 056	723 834
Hydroponics	6 291	2 748	808	1 240	259	12
Other Property (incl. jewellery)	138 410	684 780	605 054	274 601	203 956	269 866
Real Estate	52 785 401	54 220 901	37 336 935	25 445 169	26 532 406	16 758 250
Vehicle	5 940 355	5 947 937	6 256 389	4 839 410	4 479 067	4 433 720
Vessel	311 200	156 101	79 296	121 661	39 700	518 000
Grand Total	**80 533 349**	**83 430 829**	**72 896 801**	**60 247 601**	**76 466 149**	**44 384 616**

155. Revenue agencies, both at the federal and provincial level, have been successful in recovering evaded taxes, including in instances where the monies were held offshore. In FY 2013/2014, Revenue Quebec alone recuperated over CAD 3.5 billion of evaded taxes, both by criminal sanctions and civil compliance actions. During the same period, FY 2013/2014 the CRA recuperated CAD 10.6 billion in its criminal and civil actions. As a result of the CRA's investigations into suspected cases of tax evasion, fraud and other serious violations of tax laws, and recommendations to the PPSC, Canada secured convictions for tax crimes for CAD 162.3 million and levied a total of CAD 70.7 million in criminal fines. However, it should be noted that these figures do not solely represent confiscations related to the proceeds of crime, and that the Canadian authorities were unable to provide such separate figures.

156. Between 2008 and 2015, in an effort to recover proceeds that have been moved to other countries, Canada sent 135 requests for tracing assets (bank or real estate records) to other countries 43 requests for restraint of funds or assets and 4 requests for forfeiture. Discussions with the authorities and the cases provided nevertheless established that the authorities pursue assets abroad to some extent only, notably because such actions require resources that are currently dedicated to other priorities. The fact that LEAs seem to have little expertise in pursuing complex international ML schemes or in the investigation of professional money launderers also explain the relatively low level of effort in seeking the recovery of assets abroad. Considering that there is no possibility for the authorities to seize property of equivalent value, when POC cannot be forfeited, fines in lieu are ordered, in addition to the custodial sentence. The total fines collected by the federal Crown are CAD 937 285.95 for 2009-2015. The authorities share parts of the confiscated assets with

their foreign counterparts, both in criminal and civil actions, when the property is in Canada, the foreign country assisted Canada in the case and there is a signed sharing agreement. This would be the case when the offense was committed partly or entirely abroad and laundered in Canada.[61] The major part of the sharing occurred with the US, which appears justified in the Canadian context, and property was also shared with Cuba and the UK.

Confiscation of falsely or undeclared cross-border transaction of currency/BNI

157. CBSA agents seize monies when there is a suspicion that the latter are POC or funds intended to be used to fund terrorism. As indicated in the table below, between 2009 and 2015, Canada seized about CAD 263 million at the border, of which less than 9% were confiscated and more than 91% were returned to the travellers. In the latter cases, according to the authorities, there was no suspicion of ML, TF, or other illicit activities; therefore, the monies were returned to the traveller and an administrative fixed fine (of CAD 250, CAD 2 500, or CAD 5 000) levied. In practice, however, falsely or undeclared cross-border movements of currency and other bearer negotiable instruments are analysed by the FIU, or investigated by the RCMP to a very limited extent, namely only when they pertain to an ongoing analysis or investigation (See IO.6). Moreover, the level of the sanctions for noncompliance with the obligation of disclosure of cross-border movements and the frequency which it is applied does not seem effective, proportionate nor dissuasive.

(in Canadian Dollars)

FY	Seized Amount	Returned at Seizure by CBSA	Final Penalty Amount Forfeited	Cash Seizures Forfeited	Amount Returned by SPMD[1]
2009/2010	99 430 742	94 448 985	2 150 500	5 277 676	731 782

2013/2014	52 508 920	47 564 857	1 340 000	4 054 089	873 782
2014/2015	65 989 388	61 808 579	1 732 000	4 076 586	1 328 046
Total	263 011 436	235 920 435	6 041 750	23 535 681	5 767 054

1. This column contains only the amounts for closed cases where an appeal or other legal means of challenging are no longer available to the travellers.

[61] Canada shared the following amounts: 2007/2008: CAD 199 390; 2008/2009: CAD 75 620; 2009/2010: CAD 357 844; 2010/2011: CAD 0; 2011/2012: CAD 93 013; 2012/2013: CAD 237 577; 2013/2014: CAD 244 846.

Consistency of confiscation results with ML/TF risks and national AML/CTF policies and priorities.

158. Law enforcement actions, including asset recovery efforts focus mostly on illicit drug trafficking, fraud, and theft.[62] While drug-related offense and fraud are identified as very high ML threats in Canada's NRA, theft is not. In addition, the recovery of proceeds of other very high threats identified in the NRA is pursued, but not to the same extent (this is notably the case for proceeds of corruption and bribery, third-party ML, and tobacco smuggling, although some success was achieved in a case of tax evasion perpetrated from 1991 to 1996 in relation to a large scale tobacco smuggling operation[63]).[64] As a result, Canada's confiscation results are not entirely consistent with ML/TF risks or national AML/CFT policy.

Overall Conclusions on Immediate Outcome 8

159. **Canada has achieved a moderate level of effectiveness in Immediate Outcome 8.**

[62] As stated in the Research Brief-Review of Money Laundering Court Cases provided by FINTRAC, p. 1 and the Authorities Submissions to IO.7, p. 12 and 13. This is consistent with the assessor's findings after the interviews with Canadian authorities during the on-site.
[63] Project Oiler, where charges of tax fraud (through smuggling) and the possession of proceeds of crime were laid in 2003 and ultimately a plea of guilty accepted for violations of the Excise Tax Act in 2008 and 2010. This case resulted in the imposition of criminal fines and penalties totalling CAD 1.7 billion.
[64] The authorities provided the assessment team with a table showing the seizures in relation to the offenses (Seizures by Act), from 2009 until 2015. The higher values are related to the Controlled Drug and Substance Act, followed by the offense of Possession of property obtained by crime, laundering of proceeds, PCMLTFA, tax offenses and conspiracy. The values seized in relation to bribery of officers are insignificant (except in one case where some CAD 4 million were confiscated). It is not possible to identify third-party ML in the statistics provided. Seizures for possession of tobacco appear only in fiscal years 2012/2013 and 2013/2014, and seizure for bribery of officers appear only in FY 2010/2011, 2011/2012 and 2013/2014. In FY 2009/2010, 2012/2013 and 2014/2015 the value of seizures in relation to bribery is zero.

3

CHAPTER 4. TERRORIST FINANCING AND FINANCING OF PROLIFERATION

Key Findings and Recommended Actions

Key Findings

IO.9

The authorities display a good understanding of TF risks and close cooperation in CFT efforts. The intelligence services, LEAs and FINTRAC regularly exchange information, which notably contributes to support prioritization of TF investigations.

Canada accords priority to pursuing terrorism and TF, with TF investigation being one of the key components of its counter-terrorism strategy.

The RCMP duly investigates the financial components of all terrorism-related incidents, considers prosecution in all cases and the prosecution services proceed with charges when there is sufficient evidence and it serves the public interest. Two TF convictions were secured since 2009. Sanctions imposed were proportionate and dissuasive.

Canada also makes frequent use of other measures to disrupt TF.

IO.10

Implementation of TF-related targeted financial sanctions (TFS) is quite effective for FIs but not for DNFBPs.

Canada takes a RBA to mitigate the misuse of NPOs (i.e. charities). A specialized division within CRA-Charities focuses specifically on concerns of misuse of organizations identified as being at greatest risk. In addition, CRA-Charities has developed an enhanced outreach plan, which reflects the best practices put forward by the FATF.

In practice, few assets have been frozen in connection with TF-related TFS.

IO.11

Canada's Iran and DPRK sanction regimes are very comprehensive and in some respects go beyond the UN designations.

Cooperation between relevant agencies is effective and some success has been achieved in identifying and freezing the funds and other assets belonging to designated individuals.

Large FIs have a good understanding of their TFS obligations and implement adequate screening measures but some limit their screening to customers only. DNFBPs, however, are not sufficiently aware of their obligations and have not implemented TFS.

There is no formal monitoring mechanism in place; while some monitoring does occur in practice, it is limited to FRFIs and is not accompanied by sanctioning powers in cases of non-compliance.

4

Recommended Actions

Canada should:

IO.9

- Pursue more and different types of TF prosecutions.

IO.10

- Require DNFBPs to conduct a full search of their customer databases on a regular basis.
- Consider increasing the instances of proactive notification of changes to the lists to REs other than FRFIs.
- Consider enhancing the number of seizures and confiscations related to TF offenses.

IO.11

- Monitor and ensure FIs' and DNFBPs' compliance with PF-related obligations.
- Conduct greater outreach. This should include information on the PF-risk that can be published without compromising Canada's security, as well as more detailed guidance on the implementation of TFS and indicators of potential PF activity.

The relevant Immediate Outcomes considered and assessed in this chapter are IO9-11. The recommendations relevant for the assessment of effectiveness under this section are R.5-8.

Immediate Outcome 9 (TF investigation and prosecution)

Prosecution/conviction of types of TF activity consistent with the country's risk-profile

160. The RCMP investigates all occurrences of TF. This includes investigations into a wide range of TF activities, such as the collection of funds and their movement and use by individual, entities or wider organizations. The RCMP lays TF charges when approved by PPSC based on sufficient evidence and when the prosecution would best serve the public interest. Between 2010 and 2015, charges were laid against one individual, resulting in a conviction for TF in 2010 (see Box 7 below). Charges were also laid in another case, but subsequently withdrawn for tactical and operational enforcement reasons.

Box 7. **R v. THAMBITHURAI 2008**

It came to the knowledge of the RCMP's Integrated Security Enforcement Team (INSET) that a man was in the process of collecting funds from his place of residence and businesses for the Liberation Tigers of Tamil Eelam (LTTE), a listed terrorist entity in Canada. The person was arrested in Vancouver. INSET found various materials in his possession, including donation forms for the LTTE which were used for a CAD 600 donation and a CAD 300 pledge. The accused was charged with four counts of "Providing or making available property for a terrorist organization" under CC 83.03, three of which were later withdrawn. He pled guilty in 2010 and was sentenced to six months of imprisonment.

161. LEAs actively pursue the threat of individuals radicalized to violence, and in particular, those seeking to travel abroad for terrorist purposes. The RCMP's priority is to pursue charges that are in the best interest of public safety, and to mitigate the possible threat of terrorist activity as efficiently as possible. TF charges are not always determined to be the most appropriate means to mitigate threat. In these instances, alternative measures are used. The below case showed that while a boy obtained funds by robbery for travel abroad to join a terrorist organization, RCMP had pursued terrorism and criminal charges instead of TF charges.

Box 8. **Young Foreign Terrorist Fighter**

In 2014, a 15-year-old boy who had become radicalized to violence became determined to travel abroad to join a terrorist organization. He had previously tried unsuccessfully to purchase an airline ticket for Syria with his father's credit card. In October 2014, the father discovered CAD 870, a knife, and a balaclava in the boy's backpack. Feeling suspicious of money might have been stolen, the father made a report to police. Investigation revealed that the boy had committed an armed robbery in order to purchase ticket for Syria. The boy was charged and convicted of armed robbery. Additional national security investigation by C-INSET resulted in the youth being convicted of attempting to leave Canada to participate in the activity of a terrorist group (CC 83.131) and commission of an offense for a terrorist group (83.2). He was sentenced to 24 months in youth custody plus one-year probation, consecutive to the sentence of armed robbery.

162. This and other cases discussed establish the authorities' ability to pursue TF activities. However the results obtained so far are not entirely commensurate with Canada's risk profile, which, as assessed in the NRA, points to more frequent and diverse TF occurrences. As a result, Canada has demonstrated to some extent that it pursues the different types of TF activities that it faces.

TF identification and investigation

163. The RCMP investigates the financial component of all terrorism-related incidents. It employs various avenues to identify and investigate potential TF activities including human source

or intelligence, referrals from international or domestic partners (e.g. the US Federal Bureau of Investigations (FBI), FINTRAC, CRA, and CSIS, direct reporting from Canadian FIs), and national security investigations.

164. FINTRAC regularly provides proactive disclosures and responses to VIRs on TF cases, which supports the prioritization of TF investigations. It mostly disseminates disclosures related to TF to CSIS, but also to the RCMP, CBSA, CRA, municipal and provincial police, and foreign FIUs. According to FINTRAC, roughly half of TF disclosures were proactive, and half in response to VIRs. The authorities do not keep figures on the results of TF investigations arising from proactive disclosures.

Table 15. **TF-Related VIRs and FINTRAC Disclosures (from and to RCMP only)**

	2010-11	2011-12	2012-13	2013-14	2014-15	Total
Number of TF Disclosures	100	110	125	188	206	729
Number of TF-Related VIRs	26	65	78	84	61	314

165. LEAs and FINTRAC accord priority to TF investigations, although there are exceptions where priority would be accorded to other terrorism files, as highlighted in the Project Investigation below. In urgent cases, FINTRAC provides TF-related financial intelligence to the RCMP within hours. In normal circumstances, it may take days or weeks to respond to the VIRs. In one of the cases provided, which dated back more than 10 years, timely intelligence from FINTRAC was instrumental in identifying domestic and foreign accounts, as well as in establishing the foundations for the necessary judicial authorization applications.[65] The CBSA also assists in the identification of an investigation into TF activities.

166. For example in the case of Project Investigation, a person was intercepted by the CBSA at a Canadian airport for carrying undeclared currency in excess of CAD 10 000. CBSA notified the RCMP, which assumed control of the investigation because of the nexus to TF. The investigation revealed that funds destined to a foreign country to support an organization listed by Canada as a terrorist entity had been collected across Canada by multiple individuals. Information received from FINTRAC resulted in the identification of the funding networks of the entity and of its key members. Due to operational and resource constraints imposed by higher priority national security investigations, the RCMP was unable to proceed further with the file. A different approach was therefore adopted: the suspect was charged under PCMLTFA for not reporting the importation or exportation of currency

[65] The case in question was the Project Saluki: In 2002, the RCMP conducted a TF investigation to determine whether monies were being raised in Canada by a front organization, the World Tamil Movement (WTM), for the LTTE in Sri Lanka. Financial Intelligence provided by FINTRAC and banking records from FIs obtained by a court order indicated that funds were being sent from a bank account in Canada to a bank account in a foreign country registered to a legal entity. With the assistance of the foreign country, the RCMP gathered the bank documents of the foreign account and identified the holders and the persons associated with or who maintained control over the account, which involved a private deed of trust as well as a list of the appointed trustees. RCMP officers went to the foreign country, interviewed the trustees and signatories of the foreign bank account and determined details of their involvement and position with the legal entity. No person was charged upon the conclusion of the investigation. The PPSC applied for civil forfeiture and in 2010 the Court ordered forfeiture of the WTM building in Montreal and other property under terrorism legislation.

or monetary instruments. He pleaded guilty and was fined CAD 5 000, and the funds previously seized were forfeited to the Crown.

167. All TF investigations are conducted by the RCMP's INSET field units. These units are located in Vancouver, Edmonton, Calgary, Toronto, Ottawa, and Montreal, and are comprised of officers deployed from other partners (including municipal and provincial LEAs and the CSIS) in numbers that fluctuate depending on operational needs. They are tasked by FPCO, which it is responsible for the prioritization of investigations. TF activities are investigated in proportion with their scope and complexity. As investigations become more complex and require more resources, the RCMP uses a management tool to ensure that investigations align with national security priorities. Between 2009 and 2013, it identified five investigations as major TF cases, which led to two charges being laid (see previous core issue).

Table 16. **TF Investigations**

1. An Assistance file is created when assisting domestic or foreign non-PROS/SPROS units or agencies.
2. Information File is information received, it is not a call for service, or the person or agency supplying the information does not expect police action.
3. Crime Prevention are activities directed toward the tangible objective of preventing a specific type of crime, e.g. breaking and entry, approved or accepted community-based policing program such as Drug Abuse Resistance Education (DARE).
4. National Security Survey Codes are the combined collection of two different survey types: Threat Assessments and VIP/Major Events.

TF investigation integrated with -and supportive of- national strategies

168. CFT is an integral part of Canada's strategy to combat terrorism. The RCMP confirms that it assesses the existence of a TF component in every national security investigation. Cases provided (including IRFAN-CANADA described in IO.10) showed that the authorities use TF investigations to identify the structures, key persons, and activities of terrorist organizations. TF investigations are integrated with, and used to support, national counter-terrorism strategies and investigations.

Effectiveness, proportionality and dissuasiveness of sanctions

169. Canada successfully pursued and convicted two individuals on TF charges. The first case (*R v. THAMBITHURAI* described above) only attracted a six-month imprisonment despite PPSC appealing against the sentence. In the second case (*R v. KHAWAJA*, see Box 9 below), the Court sentenced the defendant to two years imprisonment for TF and to life imprisonment for "developing a device to activate a detonator."

Box 9. **R v. KHAWAJA**

In 2004, Canada initiated an investigation into a Canadian citizen linked to a terrorist group under investigation in the United Kingdom (UK) for planning a fertilizer bomb attack targeting pubs, nightclubs, trains and utility (gas, water and electric) supply stations in the UK. The evidence collected indicated that the Canadian subject attended a training camp in Pakistan in July 2003 and transferred on three occasions a total of about CAD 6 800 to his associates in the UK with the help of a young woman to avoid suspicion of link. His parents were persuaded to evict tenants from their residence in Pakistan so that the subject may make the facility available for use by the group's members. He also planned 30 devices to strap explosives onto model airplanes with remote triggers. He was arrested by the RCMP in 2004, detained, and charged in 2008 with seven counts of offenses under the CC, including one count of TF under 83.03(a). MLA requests were sent to the US authorities for the subject's Internet Service Provider and payment records as well as the testimony of a US witness. In December 2010, upon the appeal by the PPSC, the subject was sentenced to life imprisonment for "developing a device to activate a detonator" and 24 years of imprisonment for the other offenses, including two years' imprisonment for TF.

170. While low, the number of instances prosecuted appears in line with Canada's threat profile and considering the alternative mitigating measures taken (see below). Sanctions applied appear to be proportionate with the amounts involved and dissuasive. No legal person has been convicted of TF offenses. No designations were made to the relevant UN bodies but Canada has been co-sponsor to a number of designations.

Alternative measures used where TF conviction is not possible (e.g. disruption)

171. Canada's primary goal in counter terrorism efforts is to maintain public safety, and Canada places a strong focus on disrupting terrorist organizations and terrorist acts before they occur. The RCMP defines disruption in national security matters as the interruption, suspension or elimination, through law enforcement actions of the ability of a group(s) and/or individual(s) to carry out terrorist or other criminal activity that may pose a threat to national security, in Canada or abroad. It includes disruption of TF activities

172. During national security investigations, activities of participants and peripheral participants may be tactically disrupted for a variety of reasons, including triggering reactions or behavioural changes of the main targets. TF investigations therefore do not always result in TF

charges, if other charges for terrorism or other offenses are being laid and the evidence is most cogent and appropriate or would best serve the public interest. The authorities shared several cases (including Project Smooth below) where despite clear evidence to substantiate a TF charge, other means were preferable to ensure the public interest.

Box 10. **Project SMOOTH**

In August 2012, CSIS reported to RCMP that a male ("CE") residing in Montreal had met another male ("RJ") in Toronto. RJ was known to the RCMP for recently distributing pro Al-Qaeda propaganda. Investigation, including the use of an undercover US FBI agent who had gained the trust of CE and RJ, revealed that the two men had plotted to cut a hole in a railway bridge to derail the Canadian Via Rail passenger train between Toronto and New York. The FBI agent had surreptitiously recorded their conversations, which made up the bulk of the case's evidence, including CE's description on the hierarchical structure and mode of communication of a terrorist group and that CE was receiving orders from Al Qaeda through a middleman. It was also unveiled during the investigation that CE had or intended to finance a total of CAD 4 200 to the terrorist group. In 2013, CE and RJ were arrested. CE and RJ were both charged with four offenses: conspiring to damage transportation property with intent to endanger safety for a terrorist organization, conspiring to commit murder for a terrorist group, plus two counts of participating or contributing to a terrorist. CE was found guilty of all four charges plus another he faced alone for participating in a terrorist group. RJ was convicted of all charges except that of "conspiring to damage transportation property with intent to endanger safety for a terrorist organization." In March 2015, both men were sentenced to life imprisonment.

173. In other cases, TF prosecutions were not possible, especially in cases based largely on intelligence that may fall short of the evidentiary threshold required by criminal courts. In instances where prosecution is not deemed to be the best avenue to protect the public or human sources, or is not possible, a wide-range of disruption techniques is employed. Such techniques typically include: arrests; search-and-seizure raids; "intrusive surveillance" (in which police make it obvious to the suspects that they are being watched); civil forfeiture; inclusion of specific persons in Canada's no fly list (which is particularly relevant considering the growing threat of foreign fighters); revocation of the charitable status of NPOs identified as having been used for TF purposes; listing of terrorist entity under the CC, barring of individuals who pose a threat to the security of Canada and prohibition from entering or obtaining status in Canada or from obtaining access to sensitive sites, government assets or information; and extradition. Canada frequently uses other criminal justice and administrative measures to disrupt TF activities when a prosecution for TF is not practicable.

Overall Conclusions on Immediate Outcome 9

174. **Canada has achieved a substantial level of effectiveness for IO.9**.

Immediate Outcome 10 (TF preventive measures and financial sanctions)

Implementation of targeted financial sanctions for TF without delay

175. Canada implements UNSCR 1267 and UNSCR 1373 (and their successor resolutions) through three separate domestic listing mechanisms: the United Nations Al-Qaeda and Taliban Regulations (UNAQTR); the Regulations Implementing the United Nations Resolutions on the Suppression of Terrorism (RIUNRST); and the CC. Canada plays an active role in co-sponsoring the listing of new terrorist entities, as appropriate, and delisting defunct entities. The lists of entities whose assets are to be frozen under UNSCR 1267 and its successor resolutions are automatically incorporated into Canadian law by reference through UNAQTR. Accordingly, UNSC decisions to list or delist an individual are given immediate effect in Canada; no additional action by Canadian authorities is needed to give legal effect to a designation. These decisions are rapidly brought to the attention of FRFIs, but not of other REs.

176. The CC is Canada's primary listing mechanism, and allows it to satisfy the obligations under UNSCR 1373. While the RIUNRST also satisfies UNSCR 1373, no listings have been added to the RIUNRST since 2006. In practice, this CC process entails a criminal intelligence report prepared by the RCMP or a security intelligence report prepared by the CSIS, which is subjected to a legal review by independent counsel to ensure that it meets the CC listing threshold (i.e. reasonable grounds to believe), as well as interdepartmental consultations. The authorities can list an entity to Canada's domestic list (under the CC) in an expedited manner if necessary.[66] The Canadian authorities provided a concrete example (IRFAN Canada, below) of the domestic listing of a NPO.

Box 11. **IRFAN-Canada**

In 2010, CRA-Charities suspended the receipting privileges of IRFAN-Canada. The suspension was based on the organization's failure to provide and maintain records, which interfered with CRA-Charities' ability to carry out the audit that began in 2009. CRA-Charities continued with the audit during the period of suspension and ultimately revoked IRFAN-Canada's charitable registration in 2011. It shared information regarding IRFAN-Canada's possible association with the listed organization, Hamas, with partner organizations, including the RCMP. A CRA-Charities analyst seconded to the RCMP was able to provide expertise to facilitate the sharing of information, as authorized by legislation. The RCMP collaborated with and received financial intelligence from FINTRAC.

In 2014, the RCMP officially opened the investigation, which resulted in an RCMP recommendation to PS Canada to have IRFAN-Canada listed as a terrorist organization. The financial intelligence provided by FINTRAC also served to inform deliberations on the listing of IRFAN. The RCMP, PS Canada, and the DOJ worked together to prepare the documentation required for the Government to make a decision as to the listing. In April 2014, IRFAN-Canada was listed as a terrorist entity by the Government of Canada. Following the listing, criminal investigations were initiated by the RCMP's INSETs in Ontario and Quebec, and were still ongoing at the time the assessment.

[66] Several factors may be considered, as for example: operational imperative to list more quickly to freeze known assets; nexus to Canada; national security concerns; allied concerns, etc.

177. Third-party requests from foreign jurisdictions are considered under the CC framework. Canada has received numerous requests from foreign jurisdictions since the establishment of the regime and has given effect to both formal and informal requests, though it does not keep records on the number of third-party requests for listing under the CC. The authorities also indicated that they were able to list an entity on an expedited manner when necessary, following third-party requests.

178. As of 7 April 2015, 54 entities were listed pursuant to the CC and 36 terrorist entities under the RIUNRST. Once an entity has been listed, PS issues a news release advising of the new listing and provides a notification on its sanctions website, and the listings are published in the Canada Gazette, approximately two weeks after listing. To assist FIs search their list of customers against these listed terrorist names, OSFI maintains on its website a database of all terrorist names (and known identifiers) subject to Canadian laws, and notifies FIs without delay by posting instantly a notification to its website and by notifying all its e-mail subscribers each time a new terrorist name is listed under Canadian law, or there are changes to existing information. FRFIs are also required to report to OSFI monthly that they have conducted the name screening and report any terrorist property that they have identified and frozen. FINTRAC also provides a link to OSFI's website on its own website, as well as guidance to REs on the reporting requirements related to terrorist property. Other than in the case of OSFI, the mechanism for informing the private sector about listed entities appears to be rather passive, as it relies on REs consulting the Official Gazette and the websites of the competent authorities and/or, when they are aware of this possibility, subscribing to RSS feeds (or the UN notification system).

179. The FRFIs met during the on-site had a good understanding of their screening obligation regarding targeted financial sanctions (TFS) and implemented sanctions without delay. DNFBPs, however, do not have a good understanding of their obligations (see IO.4). Furthermore, while they are required to check the listings at the beginning of a business relationship, they are not required to conduct a full search of their customer databases on a regular basis, which is a major limitation to an effective implementation of TFS.

180. Persons listed in Canada may apply for revocation of the designation under the framework detailed in R.6.[67] Examples of delisting were shared with the assessors. One entity was delisted in December 2012.

181. Canada has not proposed a designation to the UN Sanctions Committees, but acted as co-sponsor on several occasions.

Targeted approach, outreach and oversight of at-risk non-profit organisations

182. The Canadian NRA concluded that registered charities present a high risk of TF, due to the fact that a large number of the financial transactions that charities conduct may be performed via delivery channels with a high degree of anonymity and some level of complexity (i.e. multiple

[67] Under the Criminal Code regime, there are several ways an entity could be delisted. The Minister of Public Safety and Emergency Preparedness can recommend to the Governor in Council that an entity be delisted at any time, the entity could be recommended for delisting as part of the two-year review, or an entity can apply for delisting as per the process outlined under section 83.05(2).

intermediaries are involved). The NRA also highlights that the significant use of cash may make it difficult for the authorities to establish the original source of funds, and that it may be difficult to know how the funds or resources will be used once transferred to partner organizations or third parties.

183. Canada has implemented a targeted approach regarding the NPO sector vulnerability to TF. In 2015, the CRA, which regulates charities under the Income Tax Act, conducted a review in addition to the NRA, to examine the size, scope and composition of the NPO sector in Canada and to determine which organizations, by virtue of their activities and characteristics, were at greater risk of being abused for terrorist support purposes. The CRA found that, in Canada, the organizations at greatest risk of terrorist abuse because of the nature of their activities and characteristics are charities. As a result, the authorities concluded that, in the Canadian context, NPOs that fall within the FATF definition are charities. Four reports had previously been published regarding the sector, notably a "Non-profit Organisation Risk identification project" in 2009. Canada has a large NPO sector, comprising of approximately 180 000 organizations. The sector can be divided into two groups: charities and NPOs, depending on their legal structures. While both are exempt from paying taxes, federally registered charities (of which there are approximately 86 000) receive additional fiscal privileges and submit annual information returns, which include notably the names of the directors or trustee, a description of its activity and financial information, including sources of funding. Non-charity NPOs (of which there are approximately 94 000) having assets in excess of CAD 200 000 or annual investment income exceeding CAD 10 000 are not required to register, but must file an annual NPO Information Return with the CRA.[68] In addition, non-charity NPOs incorporated provincially or federally would be required to file certain information with the provincial or federal governments on an annual basis depending on the statute under which the organization is formed. This typically includes information related to address, directors, and the date of the last general meeting. In certain cases, organizations may have to provide detailed financial information depending on value of assets or fund received.

184. CRA-Charities reviews all applications for charitable registration and conducts audits of registered charities. From 2008–2014, CRA-Charities completed approximately 5 000 audits in total; 16 these audits comprised a national security concern, eight of which resulted in revocation of registration.[69] If an applicant charity does not meet the requirements of registration, e.g. due to terrorism concerns, the CRA denies its application.[70] Through its work, CRA-Charities may take administrative action to disrupt an organization's activities where it has identified a risk of terrorist abuse, and/or relay the information to LEAs. If a registered charity no longer complies with the requirements of registration, for any reason including connections to terrorism, the division can

[68] The annual NPO Information Return includes information about their activities, assets and liabilities.
[69] Two led to penalties totalling CAD 440 000; four led to compliance agreements with the charity involved and two resulted in education letters.
[70] The Income Tax Act requires that charities devote their resources to charitable purposes and activities. An organization that supports terrorism would be denied registration for carrying on activities contrary to public policy, which would not qualify as charitable. Additionally, the Charities Registration (Security Information) Act provides a prudent reserve power to deny or revoke registration when terrorist connections are suspected.

apply a range of regulatory interventions and, in the most the serious cases, may revoke the registration.

185. CRA-Charities conducts outreach to advise charities of their legislative requirements and how to protect themselves from terrorist abuse. This includes general guidance on topics related to sound internal governance, accountability procedures, and transparent reporting, as well as specific tools such as a checklist on avoiding terrorism abuse and a web page on operating in the international context. CRA-Charities will build on this existing outreach through its enhanced outreach plan. CRA-Charities has begun consultations with the sector to educate them on the risk of terrorist abuse and to gain a better understanding of their needs in terms of outreach and guidance.

186. National coordination has been enhanced. The CRA shares information with relevant partners where there are concerns that a charity is engaged in providing support to terrorism. If the division encounters information that is relevant to a terrorism investigation when carrying out its regulatory duties, it shares that information with national security partners and LEAs. The division shared information with domestic national security partners in support of their mandate in 47 cases. Similarly, the division received information from partners in 51 cases to assist with its analysis, in 2014/2015. In addition, to facilitate the sharing of information, a secondment program between the CRA and its partners has been instituted: CRA employees are seconded to the partner agencies and employees from the partner agencies are seconded to the CRA.

187. According to the CRA's NPO Sector Review of 2015 the 86 000 registered charities represent 68% of all revenues of the NPO sector and nearly 96% of all donations (see R.8). CRA registered charities also account for a substantial share of the sector's foreign activities as about 75% of internationally operating NPOs are registered as charities. In addition, as detailed above, all registered charities, regardless of the value of their assets, and all NPOs with assets in excess of CAD 200 000 or annual investment income exceeding CAD 10 000 must file an annual information return with the CRA, which includes the provision of financial information. In addition, registered charities with revenue in excess of CAD 100 000, and/or property used for charitable activities over CAD 25 000, and/or that have sought permission to accumulate funds, must provide more detailed financial information. The authorities identify charities as being the organizations falling under the FATF definition of NPOs and reviewed the NPO's sector (see Box 12).

Box 12. **Canadian NPO's Sector Review**

The national regulator of registered charities, i.e. the CRA, conducted a domestic review of the entire NPO sector in Canada in order to identify which organizations, by virtue of their activities and characteristics, were at greater risk of being abused for terrorist support purposes. The review aimed to ensure that Canada (i) is not taking an overly broad interpretation of the FATF definition of NPO, (ii) focuses on those organizations that are at greatest risk, and (iii) does not burden organizations that not at risk with onerous reporting requirements for TF purposes.

The CRA reviewed existing publications and research by governmental, academic, and non-profit organizations related to the non-profit sector, including reports by Statistics Canada on non-profit institutes, consultations on regulations affecting the sector, and studies on trends in charitable

giving and volunteering. In addition, it looked at existing laws and reporting requirements affecting NPOs. To determine where there is risk, NPOs were categorized based on shared characteristics such as purpose, activities, size and location of operation. The CRA compared those characteristics with the elements of the FATF definition of NPO. It also took into consideration the findings of the FATF typologies report Risk of Terrorist Abuse in NPOs to identify features that put organizations a greater risk.

The CRA found that, in Canada, the organizations at greatest risk of terrorist abuse are charities. As a result, the authorities concluded that, in the Canadian context, only charities fall within the FATF definition of NPO. While organizations at greatest risk are charities, not all charities are at risk. The insight obtained from the sector review allowed Canada to focus on charities as the starting point for its NRA.

Source: FATF (2015), Best practices paper on combating the abuse of NPOs—October 2015.

188. The registered charity met during the assessment is large and has a number of international connections. It has a good understanding of its vulnerability to TF and has implemented adequate measures to mitigate that risk, without disrupting legitimate NPO activities.

Deprivation of TF assets and instrumentalities

189. As of February 2015, the total amount of frozen assets belonging to designated entities is CAD 131 235 in 12 bank accounts, CAD 29 200 in six life insurance policies, nine house insurance policies, and one automobile insurance policy, totalling CAD 3 248 612 frozen. The number of entities that had their assets frozen was not provided.

190. Despite the high number of TF occurrences (see IO.9), no assets and instrumentalities related to TF were seized or confiscated in circumstances other than designations. There are several reasonable explanations for this. LEAs indicated that, in several cases, no assets or instrumentalities were found. In others cases, the lack of confiscation can be due to the fact that TF investigations do not always result in TF charges and other means of disruption (see IO 9). The authorities also provided cases of TF investigations unrelated to the UN designations where the RCMP seized some assets and instrumentalities,[71] but did not proceed to seek their confiscation.

Consistency of measures with overall TF risk profile

191. While the terrorist threat has grown in the recent years, in particular in light of an increased number of Canadian nationals who have joined terrorist groups abroad,[72] not all terrorist entities identified have financing or support in Canada. In October 2014, Canada was victim of two

[71] The assets seized included over CAD 10 000 in cash, in one case, and tractor trailers in another.
[72] As stated by the Director of CSIS following his appearance at the Senate Committee on National Security and Defence, as of the end of 2015, the Government was aware of approximately 180 individuals with Canadian a nexus who were abroad and suspected of engaging in terrorism related activities. The Government was also aware of a further 60 extremist travellers who had returned to Canada.

terrorist attacks in Saint-Jean-sur-Richelieu and Ottawa, perpetrated by two Canadian citizens who intended to travel abroad for extremist purposes, but had been prevented from doing so. The TF investigation related to these events was still ongoing at the time of the assessment. In other instances, the authorities detected the transfer of suspected terrorist funds to international locations. These transfers had been conducted through a number of methods, including the use of MSBs, banks, and NPOs, as well as smuggling bulk cash across borders.

192. Canada has demonstrated to some extent only that it pursues the TF threat that it faces (see IO.9). The system suffers from inadequate implementation of UNSCRs by DNFBPs. Nevertheless, it must also be noted that, in some respect, Canada goes beyond the standard—this in particular the case with respect to the CC terrorist list, which Canada reviews every two years to ensure that the legal threshold for listing continues to be met for each entity listed.

Overall Conclusions on Immediate Outcome 10

193. **Canada has achieved a substantial level of effectiveness for IO.10.**

Immediate Outcome 11 (PF financial sanctions)

Implementation of targeted financial sanctions related to proliferation financing without delay

194. Canada's framework to implement the relevant UN CFP sanctions relies on three main components: (i) a prohibition to conduct financial transactions to Iran and the DPRK, with a few regulated exceptions, (ii) an obligation to freeze assets of designated persons; and (iii) an obligation to notify the competent authorities of any frozen assets.

195. Canada implemented the UNSCR 1737 and 1718 obligations, including part of the freezing obligations, by issuing within the UN-requested timeline two regulations dealing with Iran and the DPRK respectively. Both regulations impose freezing obligations that are generally comprehensive (see R.7). The lead agency for their implementation is GAC. Canada also went beyond the standard by imposing additional unilateral sanctions under the Special Economic Measures Act (SEMA). As a result of its Controlled Engagement Policy towards both countries, the Canadian Government does not engage in active trade promotion with Iran and the DPRK, and, with almost all commercial financial transactions between Canada and Iran prohibited, the volume of existing bilateral trade with both countries has dropped considerably. Canada also ensured that the exceptions to the general prohibition of conducting financial transactions[73] do not apply with respect to designated persons and entities.

196. Decisions taken by the UNSC under 1737 and 1718 take immediate effect in Canada. The current lists of designated persons and entities are published on the OSFI website. To facilitate the

[73] Examples of these exceptions include: non-commercial remittances to the DPRK; financial banking transactions of CAD 40 000 and under between family members in Canada and family members in Iran; and other transactions permitted on a case-by-case basis, at the discretion of the Minister of Global Affairs. In practice, exceptions have been granted mainly in the case of prospective Iranian immigrants for the purposes of immigration fees and related transactions.

implementation of the TFS, guidance is provided on the GAC and OSFI website.[74] In addition, OSFI notifies the FRFIs of any changes to the lists on the same day as the changes occur, or on the day that follows the receipt of the note verbale. It also reminds FRFIs on a monthly basis of their screening and freezing obligations, either per web post or per email. Its guidance requires FRFIs to search their records for designated names in two ways: (i) by screening new customers' names against the official lists at the time such customers are accepted; and (ii) by conducting a full search of all customers' databases "continuously," which the guidance defines as "weekly at a minimum." No other authorities provide notifications to other REs of changes made to the lists. As a result, while the legal obligations to implement PF-related TFS are the same across the range of REs, swift action is actively facilitated in the case of FRFIs only. REs may nevertheless subscribe to the RSS feeds on the GAC website, or to the UN notification system, in order to be notified of changes to the Iran and DPRK regulations.

Identification of assets and funds held by designated persons/entities and prohibitions

197. Canada has had some success in identifying funds and other assets of designated persons, and preventing these funds from being used, as indicated in the table below. Two of the larger banks, as well as one provincial FI and two life insurers have identified assets of designated persons, frozen those assets (where available), and reported the case to the RCMP, OSFI, and FINTRAC. The assets were detected through timely screening of the FIs' customers' (but not other parties such as the beneficial owner, despite OSFI's guidance in this respect) against the UN lists. While the freezing are occurrences are low, they nevertheless indicate that FIs and in particular D-SIBs are taking measures to prevent their potential misuse for PF activities. No information was provided on the timing of the freezing measures.

Table 17. **Assets Reported Under the Regulations Implementing the United Nations Resolutions on both Iran and the DPRK, as of September 2015**

Reporting Entity	Number of Accounts/Contracts	Assets Frozen		Assets Reported but Not Frozen (no cash surrender value) in CAD
		CAD equivalent of amounts in foreign currencies	Amounts in CAD	
Bank X (DTI)	1		78 838	
Bank Y (DTI)	2	591.2	845	
Provincial FI	4		30 647	
Total re. Accounts	**7**	**591.2**	**110 330**	
Federal Life Insurer X	6			29 200
Life Insurer Y	10			3 248 612
Total re. Insurance Contracts	**16**			**3 277 812**

[74] See Global Affairs Canada (nd), Canadian Sanctions Related to Iran, www.international.gc.ca/sanctions/countries-pays/iran.aspx?lang=eng; Canadian Sanctions Related to North Korea, www.international.gc.ca/sanctions/countries-pays/korea-coree.aspx?lang=eng.

198. Canada went beyond the UN listings by investigating the financial components of proliferation activities detected on their territory. The authorities successfully prosecuted one individual for the export of prohibited dual-use goods. The enforcement function is shared between the RCMP and the CBSA, with the former taking the lead in instances that include a potential nexus with national security or OCGs, and the CBSA taking the lead in other instances. So far, the investigations revealed no need for freezing measures: the individuals had little assets, most of which had been used to purchase unauthorized dual use goods.

199. Through the analysis of STRs and other information, FINTRAC has detected potential violations of the SEMA and import-export legislation which it disclosed to the CBSA and CSIS.[75] The analysis of STRs notably pointed to some instances of potential wire stripping and sanctions evasion. No figures were provided as the system does not keep track of STRs that also mention suspicion of PF. According to the authorities, in most instances, the REs may not specifically refer to suspicions of PF, but simply highlight that the transactions does not make economic sense. FINTRAC has discussed some of these cases with its partner agencies in the operation meetings of the Counter-Proliferation Operations Committee.

FIs and DNFPBs' understanding of and compliance with obligations

200. Large FIs, and in particular the D-SIBs, have a good understanding of their freezing obligations, including with respect to PF. They generally have staff dedicated to the implementation of TFS that regularly check the UN lists. They are also aware of the risk of wire stripping and have reported instances of potential wire stripping to FINTRAC. Smaller FRFIs have a relatively good understanding of their obligations, although several do not distinguish the PF-related from the TF-related sanctions. DNFBPs, however, are far less aware of their PF-related obligations, so far, none of them have frozen assets belonging to designated persons.

201. Some outreach has been conducted, notably by the RCMP, with a view to increase the general public's awareness of the proliferation risk. Although some of the outreach activities include information on red flags for potentially suspicious PF activities, these efforts have, so far, mainly focused on proliferation activities rather than the implementation of related TFS.

Competent authorities ensuring and monitoring compliance

202. There is no formal mechanism for monitoring and ensuring compliance by FIs and DNFBPs with PF-related obligations. Nevertheless, some monitoring does take place in practice with respect to FRFIs: OSFI, in the exercise of its general functions, has examined the systems put in place by FRFIs to implement the sanctions regimes for both TF and PF. It has also identified shortcomings (in particular the lack of screening of persons other than the customer) and requested improvements in the screening processes. As a result of a sanction recently imposed by the US regulator on a foreign bank with subsidiary operations in Canada and the US for violations of the PF-related sanctions, OSFI

[75] While FINTRAC does not have an explicit mandate to receive reports of suspicions of PF, it is required by law to disclose financial intelligence to assist in investigations and prosecutions for ML, TF and other threats to the security of Canada, which could include PF.

increased its dialogue with and monitoring of that specific bank. Ultimately, it was satisfied that the activities conducted in Canada were different than those conducted in the US and that the risk was limited in Canada. OSFI is not, however, habilitated to sanction any potential breach of PF-related obligations.

203. While this ad hoc monitoring by the OSFI is proving helpful with respect to FRFIs and useful in identifying shortcoming in their implementation of TFS, it does not entirely compensate the lack of a more comprehensive monitoring system.

Overall Conclusions on Immediate Outcome 11

204. **Canada has achieved a moderate level of effectiveness with IO.11.**

CHAPTER 5. PREVENTIVE MEASURES

Key Findings and Recommended Actions

Key Findings

Several, but not all REs listed in the standard are subject to Canada's AML/CFT framework:

- AML/CFT requirements were found to breach the constitutional right to attorney-client privilege by the Supreme Court of Canada, and, as a result, are inoperative with respect to legal counsels, legal firms, and Quebec notaries. The exclusion of these professions is not line with the standard and raises serious concerns (e.g. in light of these professionals' key gatekeeper role in high-risk activities such as real-estate transactions and formation of corporations and trusts).
- TCSPs (other than trust companies), non FI providers of open loop pre-paid card, factoring companies, leasing and financing companies, check cashing business and unregulated mortgage lenders, online gambling, and virtual currencies do not fall under the AML/CFT regime, but legislative steps have been taken with respect to online gambling, open-loop pre-paid cards and virtual currencies.

FIs including the D-SIBs have a good understanding of the ML/TF risks and of their AML/CFT obligations. While a number of FIs have gone beyond existing requirements (e.g. in correspondent banking), technical deficiencies in some of the CDD requirements (e.g. related to PEPs) undermine the effective detection of some very high-risk threats, such as corruption.

Requirements—on FIs only—pertaining to beneficial ownership were strengthened in 2014 but there is an undue reliance on customers' self-declaration for the purpose of confirming beneficial ownership.

Although REs have gradually increased the number of STRs and threshold-based reports filed, the number of STRs filed by DNFBPs other than casinos remains very low.

With the exception of casinos and BC notaries, DNFBPs—and real estate agents in particular—are not adequately aware of their AML/CFT obligations.

Recommended Actions

Canada should:

- Ensure that legal counsels, legal firms, and Quebec notaries are subject to AML/CFT obligations when engaged in the financial transactions listed in the standard.
- Ensure that TCSPs (other than trust companies) open loop pre-paid cards, including non FI providers, virtual currency and on line gambling to AML/CFT requirements.
- Require DNFBPs to identify and verify the identity of beneficial owners and PEP in line with the standard.

- Require FIs to implement preventive measures with respect to PEPs, and wire transfers in line with the FATF standards, and monitor (e.g. through targeted inspections) and ensure compliance by all FIs of their obligation to confirm the accuracy of beneficial ownership in relation to all customers.
- Enhance the dialogue with DNFBPs other than casinos to increase their understanding of their respective ML/TF vulnerabilities and AML/CFT obligations, in particular with real estate agents, dealers in precious metals and stones (DPMS) (with greater involvement of the provincial regulators and the relevant trade and professional associations). Update ML/TF typologies and specific red flags addressed to the different categories of DNFBPs to assist in the detection of suspicious transactions.
- Consider introducing a licensing or registration regime, or other controls for DPMS.
- Monitor and ensure DNFBPs' and small retail MSBs' compliance with TFS obligations.
- Issue further guidance, especially to non-FRFIs, on the new requirements related to domestic PEPs.
- Strengthen feedback to small banks and the insurance sector on the use of STRs.
- Issue guidance for all REs to facilitate the detection of the possible misuse of open loop prepaid cards in ML and TF schemes.

The relevant Immediate Outcome considered and assessed in this chapter is I04. The recommendations relevant for the assessment of effectiveness under this section are R9-23.

Immediate Outcome 4 (Preventive Measures)

Understanding of ML/TF Risks and the Application of Mitigating Measures

205. The level of understanding of ML/TF risks and AML/CFT obligations, as well as the application of mitigating measures vary greatly amongst the various REs.

206. FIs are aware of the main threats and high-risk sectors identified in the NRA, as well as of the level of ML/TF vulnerabilities associated to their activities. Recent trends in the FIs' understanding of risks and AML/CFT obligations is not immediately apparent in the supervisory data (because the latter aggregates as "partial deficiencies" both minor and more severe failures), but, according to the authorities, have been positive. The major banks have developed comprehensive group-wide risk assessments and implement mitigating measures derived from detailed consideration of all relevant risk factors (including lines of business, products, services, delivery channels, customer profiles). Several other FIs stated that their risk assessment and mitigating measures are already in line with the findings of the NRA. Specific attention is paid to cash (including potentially associated to tax evasion) and to the geographic risk (which, especially in the case of large banks, takes into account the index of corruption developed by relevant international organization and includes offshore financial centres). Some FIs also consider trust accounts held by lawyers and other legal professions as presenting a higher risk and, as a result, conduct enhanced

monitoring of these accounts. Specific products associated to real estate transactions, such as mortgage loans, are also considered as high-risk products. Over the last three fiscal years, a total of 9 556 STRs were filed with FINTRAC regarding suspected ML/TF activities in relation to real estate, which represents 3,8% of the overall amount of STRs received, with most STRs coming from banks, credit unions, *caisses populaires*, and trust and loan companies. The main typologies identified in this respect range from the use of nominees by criminals to purchase real estate or structuring of cash deposits to more sophisticated schemes where, for example, loan and mortgage schemes are used in conjunction with the use of lawyer's trust account.

207. In some instances, however, the regulator's on-site inspections revealed issues with the quality and scope of the risk assessments, especially in relation to the elements taken into account as inherent risk of individuals, and to the consistency among business-lines. Smaller FRFIs display a weaker understanding of ML/TF risks, and tend to regard AML/CFT obligations as a burden.

208. The life insurance sector appears to underestimate the level of risk that it faces. According to FINTRAC supervisory findings, life insurance companies and trust and loan companies that are non-FRFIs show the highest level of deficiency in their risk assessment, as well as the weakest understanding of their AML/CFT obligations. Non-federally regulated life insurance companies have a weak understanding of their ML/TF risks than federally regulated companies, and appear particularly refractory to improving AML/CFT compliance.

209. The representatives of the securities sector recognized the high risk rating of their activities, but also noted that the higher level of risk lie mainly in smaller security firms and individuals. Firms not involved in cross-border activities seem to underestimate their vulnerability to ML risk, having a limited notion of geographic risk, as mainly referred to offshore countries. Overall, securities dealers have a good understanding of their AML/CFT obligations, although supervisory findings highlight that the level of understanding is weaker in more simplified structures and that internal controls are a recurring area of weakness.

210. MSBs' level of awareness of AML/CFT obligations is consistent with their size and level of sophistication of their business model. MSBs that operate globally as part of larger networks are aware of the specific ML/TF risks that they face (i.e. risks emanating mainly from the fact their activity is essentially cash-based). They have developed specific criteria to evaluate certain risk (e.g. the risks posed by their agents) to enable them to determine the appropriate level of controls. While the assessment team did not have an opportunity to meet with representative from the smaller independent MSBs,[76] representatives from other private sector entities as well as FINTRAC confirm that smaller MSBs are far less aware of their AML/CFT obligations and their vulnerabilities to ML/TF. According to FINTRAC, community-specific MSBs are reluctant to apply enhanced due diligence to higher risk customers. To assist mainly small MSBs in the development of a RBA, on 1 September 2015 FINTRAC developed an RBA workbook for MSBs.

[76] Under the glossary of the NRA the said category has been defined as these MSBs are focused on retail transactions, and have stand-alone computer systems and street-level retail outlets across Canada. Of these, one sub-group offers currency exchanges only, typically in small values, and is often found in border towns (e.g. duty-free shops), while the other sub-group offers currency exchanges, but may also offer money orders and EFTs, typically as an agent of a national full-service MSB.

211. Casinos vary greatly in size, complexity, and business models. All the relevant gaming activities are subject to AML/CFT requirements where (on the basis of the model in place) the province or the Crown corporation is responsible for their compliance. Representatives from casinos demonstrated a good understanding of their AML/CFT obligations and of the most frequent ML typologies in their sector. Nevertheless, their implementation of CDD measures seems to follow a tick-box approach rather than be based on an articulated risk-assessment. Moreover, casinos seem to be essentially focused on cash, and appear to underestimate to some extent the risk posed by funds received from accounts with FIs.

212. DPMS are highlighted as a high-risk in the NRA. Compliance examinations conducted between 2012 and 2014 revealed industry-wide non-compliance. FINTRAC has worked with two DPMS associations (namely the Canadian Jewelers Association, CJA, and the Jewelers Vigilance Canada, JVC, which, together, represent about one quarter of the Canadian DPMS) to strengthen compliance of this sector. This has led to an increase in these DPMS' understanding of their AML/CFT obligations, as shown in subsequent examinations. Nevertheless, the absence of licensing or registration system or other forms of controls applicable to the sector in its entirety creates major practical obstacles for FINTRAC to properly establish the precise range of subjects that it should reach out to.

213. The real estate agents met, despite being aware of the results of NRA, consider that they face a low risk because physical cash is not generally used in real estate transactions. As the normal practice is to accept bank drafts—agents consider banks have mitigated the ML/TF risk. In the province of Quebec, notaries trust accounts are used to deposit the funds involved in real estate transactions—real estate agents therefore consider that notaries are in a better position to detect possible ML activities, but Quebec notaries are not currently covered by the AML/CFT regime. Real estate agents are overly confident on the low risk posed by "local customer," as well as non-resident customer originating from countries with high levels of corruption.

214. The accountants' level of awareness of AML/CFT obligations is quite low. The competent professional association underlined that, in the absence of guidance and outreach efforts, accountants are often unclear as to when they are subject to the AML/CFT regime.

215. BC notaries provide a wide range of services related to residential and commercial real estate transfers. They are, however, not fully aware of the risk and their gatekeeper role in relation to real estate transactions. Like real estate agents, they consider that all risks have been mitigated by the bank whose account the funds originated from.

216. In May 2015, FINTRAC issued guidance to assist REs in the implementation of their RBA. Most representatives of DNFBPs considered this helpful, but also expressed the need for further initiatives focused on their respective activities.

217. AML/CFT obligations are inoperative towards legal counsels, legal firms and Quebec notaries involved in the activities listed in the standard. In February 2015, the Supreme Court of Canada declared that a portion of Canada's AML/CFT legislation is unconstitutional as to attorneys, because it violates the solicitor-client privilege. Representatives from the private sector and the Canadian authorities confirmed that lawyers in Canada are frequently involved in financial transactions, often related to high-risk sectors, such as real estate, as well as in the formation of trust

and companies. In the context of real estate transactions, in particular, lawyers and Quebec notaries provide not only legal advice, but also trading services,[77] and receive sums from clients for the purchase of a property or a business, deposited and held temporarily in their trust accounts. Representatives of the Federation of Law Societies, although aware of the findings of the NRA, did not demonstrate a proper understanding of ML/TF risks of the legal profession. In particular, they appeared overly confident that the mitigation measures adopted by provincial and territorial law societies (i.e. the prohibition of conducting large cash transactions[78] and the identification and record-keeping requirements for certain financial transactions performed on behalf of the clients)[79] mitigate the risks. While monitoring measures are applied by the provincial and territorial law societies, they are limited in scope and vary from one province to the other. The on-site visit interviews suggested that the fact that AML/CFT requirements do not extend to legal counsels, legal firms and Quebec notaries also undermines, to some extent, the commitment of REs performing related functions (i.e. real estate agents and accountants).

CDD and Record-Keeping

218. CDD obligations, and especially those dealing with beneficial ownership, politically exposed foreign persons (PEFPs) and, for FIs, wire transfers, are not fully in line with FATF standards. In addition, some DNFBPs are not subject to AML/CFT requirements and monitoring (see TCA for more details).

219. Since February 2014, FIs are required to obtain, take reasonable measures to confirm, and keep records of the information about an entity's beneficial ownership. In practice, FIs seem to interpret this new provision as requiring mostly a declaration of confirmation by the customer that the information provided is accurate, to be followed, in some cases, by an open source search. Only a few of the FIs interviewed stated that they would spend time to check the information received and verify the information through further documents and information, which raises concerns. The undue reliance on a customer's self-declaration (as a way to replace the duty to confirm the accuracy of the information provided) appears to be a significant deficiency in the implementation of preventive measures and OSFI has issued findings to FRFIs requiring that more robust beneficial ownerships confirmation measures be undertaken. Moreover, REs have limited methods to confirm the accuracy of beneficial ownership information (see IO.5). Several FIs are in the process of implementing the new requirement by reviewing the information gathered for their existing customers, but most of the FIs interviewed were unable to establish the current stage of this review.

220. Due to the recent entry in force of the new beneficial ownership requirements, there is limited information on how well FRFIs are complying with the new obligations. Recent supervisory findings—albeit limited in numbers- suggest that serious deficiencies remain.

---

[77] This is notably confirmed by the exemption from the requirement to be licensed as real estate agent granted under the relevant provincial legislation (for example in British Columbia, Real Estate Service Act, Section 3, (3) lett. f, and, for Quebec Notaries, Quebec Notary Act, Art.18).
[78] Model Rule on Cash Transactions adopted by the Council of the Federation of Law Societies of Canada on July 2004.
[79] Model Rule on Client Identification and Verification Requirements, adopted by the Council of the Federation of Law Societies of Canada on 20 March 2008 and modified on 12 December 2008.

221. Discussions with DNFBPs, in particular those with real estate representatives, highlighted that even basic CDD requirements are not properly understood and that the implementation of the "third-party determination rule" seems to be mainly limited to asking the customer whether he/she is acting under the instructions of other subjects, without further enquiry.

222. Measures to prevent and mitigate the risks emanating from corruption and bribery (classified as very high threats in the NRA) are insufficient, because of shortcomings in the legal framework (see TCA) and weak implementation of existing requirements. REs' capacity to properly detect these criminal activities is significantly undermined. This is in particular the case with DNFBPs considering that they are not required to take specific measures when dealing with PEPs. In order to determine whether they are in a business relationship with foreign PEPs (i.e. PEFPs) or their family members, FIs combine the information gathered through the client identification forms and the screening process (realized mainly through commercial databases). Most FIs interviewed limited their search to the customer and did not seem to establish whether they were dealing with "close associates" of PEFPs. Furthermore, the range of information required by FIs is limited to the source of funds, and does not always include the source of wealth. Most FIs appear to be over-reliant on the self-declaration of the customer to determine the source of funds, and do not perform further verification of the accuracy of the information provided. The approval of senior management can be obtained "within 14 days" from the day on which the account is activated, which will be extended to 30 days when the new provisions on domestic PEPs enter into force. Some FIs confirmed that, during that timeframe, the PEPs can operate the account—the business relationship can therefore be conducted without adequate controls having taken place. According to OSFI's supervisory findings, in some cases, the involvement of senior management occurs even beyond the prescribed timeframe.

223. There are nevertheless some encouraging signs: over the last four fiscal years, FINTRAC assessed non-FRFIs' determination of PEFPs[80] in the context of 2 508 examinations in four different sectors (credit unions and *caisses populaires*, trust and loan companies, MSB and securities dealers), and identified shortcomings were identified in only 4% of the cases.

224. Several FRFIs, including the D-SIBs,[81] interviewed, apply an onboarding procedure for all customers who include the same determination in relation to "domestic PEPs" and the same enhanced due diligence measures; in order to determine whether a customer is a "domestic PEP," the large banks rely mainly on the information contained in commercial databases. The notion of "domestic PEP" that they apply varies greatly from one institution to the other, and focuses on customers only, i.e. without taking the beneficial owners into account. Some non-FRFIs expressed the need for timely guidance to clarify and facilitate the implementation of the new requirement regarding domestic PEPs and their close associates.

[80] The said determination is considered in relation to the following cases: the opening of new accounts (financial entities and securities), when an EFT over CAD 10 000 is sent or received (financial entities and MSBs) or a lump sum payment of CAD 100 000 or more in respect to an annuity or life insurance policy.

[81] In this respect, OSFI Guidelines B-8, Deterring and detecting ML/TF, explain that FRFIs are not (currently) under any legal obligation to identify domestic PEPs *per se*, nevertheless, where a FRFI is aware that a client is a domestic PEP, the FRFI should assess what effect this may have on the overall assessed risk of the client. If the assessed risk is elevated, the FRFI should apply such enhanced due diligence measures as it considers appropriate.

225. DNFBPs, however, are not required to determine whether they are dealing with foreign PEPs. The interviews conducted confirmed that the political role of customers is not an element that DNFBPs take into account in practice to determine whether further mitigation measures are necessary.

226. While FRFIs have adequate record-keeping measures in place, the smaller credit unions, retail money services business and DNFBPs active mainly in the real estate sector implement weaker measures, which are mainly paper based or based on a combination of paper and manual procedures. FINTRAC identified several deficiencies in record-keeping procedures of BC notaries as well, especially with respect to the conveyancing of real estate.

227. Correspondent banking services are mostly offered by D-SIBs. The D-SIBs have a centralized global management and monitoring of correspondent banking relationships. In some cases, they go above and beyond the current requirements: for example, when reviewing correspondent bank relationships, they also take the quality of AML/CFT supervision into account. Controls on correspondent banking seem to be also reviewed through visits on site and testing procedures by the internal audit. According to OSFI supervisory findings, FRFIs properly assess these services as a higher risk activity, taking necessary mitigation measures.

228. Before introducing new technologies and products, banks typically conduct an assessment of the potential ML/TF risks (and, in doing so, go beyond the requirements of Canadian law). Some banks indicated the lack of information from the authorities regarding typologies on possible exploitation of emerging products that would be helpful in their risk assessment. Among the new products it is worth noting that pre-paid cards are used in Canada but are not currently subject to AML/CFT requirements.[82] Nevertheless, OSFI has alerted FRFIs in the context of its inspections to the need to consider that reloadable prepaid cards operate similarly to deposit accounts, and therefore require equivalent mitigation measures. OSFI supervisory findings reveals that in two cases, FIs had failed to integrate their risk assessment regarding prepaid cards into their overall risk assessment methodology as well as to establish effective controls over their agents. Following OSFI's supervisory interventions, the two institutions are now implementing prepaid access controls in reloadable card programs similar to controls over deposit accounts. Regulatory amendments to include prepaid cards in the regulations are being developed. Other new products currently used—albeit to a very limited extent—include virtual currencies,[83] which fall outside the current framework but which the government has proposed to regulate for AML/CFT purposes.[84]

[82] Global open loop prepaid card transaction volumes have grown by more than 20% over the past four years and were expected to reach 16.9 billion annually in 2014. Despite pre-paid open loop access (thus meaning any financial product that allows customers to load funds to a product that can then be used for purchases and, in some cases, access to cash or person-to-person transfers) has been considered under the NRA of high vulnerability rating, pre-paid cards are not currently subject to AML/CFT requirements.

[83] According to the Canadian Payments Association, as of 10 April 2014, there were between 1 000 and 2 000 daily transactions in Canada involving bitcoin, which represent 1/100 of 1% of the total volume of Canada's daily payments transactions. See Senate Canada, Digital Currency: you can't flip this coin!, June 2015, p. 23.

[84] The legislation to include dealing in virtual currencies among MSBs has been passed, and the associated enabling regulations are being developed.

229. Some of the larger FIs and money transfer companies go beyond current requirements for wire transfers and the filing of EFTRs by applying stricter measures: they notably monitor such transfers on a continuous basis through sample checks of wires received on behalf of customers in order to verify whether they contain adequate originator information, and, if not, take up the matter with the originating banks.

230. FIs have a good understanding of their obligations with respect to TFS (see IO.10). MSBs belonging to large networks, although they are not required to screen on a continuous basis their customer base against the sanctions lists, in practice do so. On-site supervisory inspections revealed, however, deficiencies in the timeliness of the name-screening processes, as well as in their scope (because they do not always extend the screening to the beneficial owners and authorized signers of corporate entities). According to industry representatives and FINTRAC, this is not the case in smaller independent MSBs, where less sophisticated procedures of record-keeping and monitoring are in place.

231. DNFBPs, in particular in the real estate sector, acknowledged that they do not fully understand the requirements related to TFS. They also recognized that their implementation of these requirements is weak, largely because their procedures are mainly paper-based.

Reporting Obligations and Tipping Off

232. With the exception of casinos, reporting by the DNFBPs sectors is very low, including in high-risk sectors identified in the NRA.

Table 18. **Number of STRs Filed by FIs and DNFBPs**

	2011–2012	2012–2013	2013–2014	2014–2015

DNFBPs				
Accountants	-	1	-	-
BC Notaries	1	-	-	1
Casinos	4 506	4 810	3 472	3 994
DPMS	66	129	235	243
Real Estate	15	22	22	34
Total	**70 392**	**79 294**	**81 735**	**92 531**

233. Nevertheless, FINTRAC is of the view that the quality of STRs is generally good and improving. The 1 256 examinations conducted in this respect from 2011/12 to 2014/15, revealed

that 82% of REs examined complied with their obligation. In particular, the REs' write-up for Part G of the reporting form (which relates to the reason for the suspicions) has evolved over the years from a basic summary to a very thorough and complex analysis of the facts. FINTRAC also noted that the percentage of STRs submitted with errors has significantly decreased, namely from 84% (in July 2011) to 17% (in July 2015). Most FIs interviewed rely on both front line staff and automated monitoring systems to detect suspicions. At the end of their internal evaluation process, if the STR is not filed, a record is kept with the rationale for the lack of reporting. STRs are generally filed within 30 days.

234. Awareness and implementation of reporting obligations vary greatly amongst the various sections. In particular: casinos are adequately aware of their reporting obligations. The larger casinos detect suspicious transactions not only through front-line staff, but also through analytical monitoring tools developed at the corporate level on the transaction performed and on the basis of video-investigation in order to identify possible unusual behaviours (such as passing chips). They also report to FINTRAC suspicious transactions that were merely attempted. The real estate sector, however, appears generally unaware of the need to report suspicious transactions that have not been executed. In brokerage firms, the detection of suspicious transactions is mainly left to the "feeling" of the individual agents, rather than the result of a structured process assisted by specific red flags. MSBs, securities dealers and DPMS have significantly increased the number of STRs filed, mainly in response to the outreach, awareness raising and monitoring activities performed by FINTRAC. The *caisses populaires* have also increased their reporting as a result of the centralized system of detection of suspicious transactions developed by the *Fédération des Caisses Desjardins du Quebec*.

235. The larger REs interviewed had good communication channels with FINTRAC and receive adequate feedback on an annual basis on the quality of their STRs and on the number of convictions related to FINTRAC's disclosure. In particular, a Major Reporter Group was established in FINTRAC to foster dialogue. In this context, FINTRAC hosted, in May 2014, a first forum for D-SIBs to enhance compliance with STRs obligations and targeted feedback sessions, and another, in 2015, for casinos. D-SIBs and casinos met considered these forums particularly helpful. Small banks and most categories of DNFBPs do not to receive the same kind of feedback.

236. Tipping off does not appear to be a significant problem in Canada. REs have included in their internal policies, controls and training initiatives some provisions that address the prohibition of tipping off. The measures are considered effective by FINTRAC. So far, no charges have been laid as regards tipping off.

Internal Controls and Legal/Regulatory Requirements Impending Implementation

237. OSFI supervisory findings conducted in the last three years confirm that FRFIs apply sufficient internal controls to ensure compliance with AML/CFT requirements with the five core

elements of the compliance regime.[85] A key OSFI finding is the scope of the two-year review, which is frequently more limited to the existence of controls rather than to their effectiveness.

238. REs with cross-border operations include their overseas branches in their AML/CFT program and extend their internal controls to their foreign subsidiaries. They also adopt the more stringent of Canadian or host jurisdiction rules in their group-wide AML/CFT framework on areas where host country requirements are stricter or more in line with FATF standards. The larger banks reported that they had sharing information mechanisms at group level and, in cases where the local jurisdiction had created obstacles to the information sharing, the local branches were closed.

239. Three of the D-SIBs have branches in Caribbean countries: the two REs interviewed took specific risk mitigating measures by adopting an enterprise-wide management to the highest level. As a result, every high-risk client in the Caribbean must be pre-approved both by senior management in the business and the compliance officer.

240. The data provided by FINTRAC indicates an uneven level of compliance among non-FRFIs. Credit unions and *caisses populaires* have good internal controls in place, which is not the case for trust and loan companies, securities dealers, insurance sector and MSBs: several deficiencies have been identified, including incomplete or not updated policies and procedures, the limited scope of controls, a lack of comprehensive assessment of effectiveness, and no communication to senior management.

241. DNFBPs other than casino and BC notaries have either no or weak internal controls. The discussions with real estate sector representatives also revealed some concerns about the effective control of the proper implementation of AML/CFT requirements by their agents. Some DNFBPs professional associations are working with their members to assist them in increasing their level of compliance and in increasing their awareness with their obligations. In this context, the associations felt that further engagement with FINTRAC would be useful.

Overall Conclusions on Immediate Outcome 4

242. **Canada has achieved a moderate level of effectiveness for IO.4**.

[85] Under PCMLTFR s. 71 (1), the five elements of the compliance regime are the following: appointment of a compliance officer, development and application of written compliance policies and procedures, assessment and documentation of ML/TF risks and of mitigating measures, written ongoing training program, a review of the compliance policies and procedures to test their effectiveness. The review has to be done every two years. Failure to implement any of these five elements is considered serious violation under AMPR and shall lead to an administrative monetary penalty of up to CAD 100 000 for each one (ss 4 and 5).

CHAPTER 6. SUPERVISION

Key Findings and Recommended Actions

Key Findings

FINTRAC and OSFI have a good understanding of ML and TF risks; and FIs and DNFBPs are generally subject to appropriate risk-sensitive AML/CFT supervision, but supervision of the real estate and DPMS sectors is not entirely commensurate to the risks in those sectors.

The PCMLTFA is not operative in respect of legal counsels, legal firms, and Quebec notaries—as a result, these professions are not supervised for AML/CFT purposes which represents a major loophole in Canada's regime.

A few providers of financial activities and other services fall outside the scope of Canada's supervisory framework (namely TCSPs other than trust companies, and those dealing with open loop pre-paid card, including non FI providers on line gambling and virtual currency, factoring companies, leasing and financing companies, check cashing business, and unregulated mortgage lenders), but legislative steps have been taken with respect to online gambling, open-loop pre-paid cards and virtual currencies.

Supervisory coverage of FRFIs is good, but the current supervisory model generates some unnecessary duplication of effort between OSFI and FINTRAC.

FINTRAC has increased its supervisory capacity to an adequate level but its sector-specific expertise is still somewhat limited. OSFI conducts effective AML/CFT supervision with limited resources.

Market entry controls are good and fitness and probity checks on directors and senior managers of FRFIs robust. There are, however, no controls for DPMS, and insufficient fit-and-proper monitoring of some REs at the provincial level.

Remedial actions are effectively used but administrative sanctions for breaches of the PCMLTFA are not applied in a proportionate and/or sufficiently dissuasive manner.

Supervisory actions have had a largely positive effect on compliance by REs. Increased guidance and feedback has enhanced awareness and understanding of risks and compliance obligations in the financial sector and to a lesser extent in the DNFBP sector.

Recommended Actions

Canada should:

- Ensure that all legal professions active in the areas listed in the standard are subject to AML/CFT supervision.
- Coordinate more effectively supervision of FRFIs by OSFI and FINTRAC to maximize the use of resources and expertise and review implementation of Canada's supervisory approach to FRFIs.
- Ensure that FINTRAC develops sector-specific expertise, continues to have a RBA in its

examinations, and applies more intensive supervisory measures to the real estate and DPMS sectors.

- Ensure that there is a shared understanding between FINTRAC and provincial supervisors of ML/TF risks faced by individual REs and ensure adequate controls are in place after market entry at the provincial level to prevent criminals or their associates from owning or controlling FIs and DNFBPs.
- Ensure that the administrative sanctions regime is applied to FRFIs and that AMPs are applied in a proportionate and dissuasive manner including to single or small numbers of serious violations and repeat offenders. Ensure that OSFI's guidelines relating to AML/CFT compliance and fitness and probity measures are subject to the administrative sanctions regime for non-compliance.
- Provide more focused and sector-specific guidance and typologies for the financial sector and further tailored guidance for DNFBPs, particularly with respect to the reporting of suspicious transactions.

The relevant Immediate Outcome considered and assessed in this chapter is IO3. The recommendations relevant for the assessment of effectiveness under this section are R26-28 & R.34 & 35.

Immediate Outcome 3 (Supervision)

Licensing, registration and controls preventing criminals and associates from entering the market

243. Market entry controls are applied at federal and provincial level. After market entry, there are effective measures in place at the federal level to ensure that when changes in ownership and senior management occur, FRFIs conduct appropriate fitness and probity (F&P) checks. The federal prudential regulator, OSFI, applies robust controls when licensing a federally regulated financial institution (FRFI). Due diligence measures, including criminal background checks on individuals, are carried out at the market entry stage and OSFI has refused or delayed applications when issues arise. OSFI provided an example where it became aware of misconduct by a small domestic bank's former CEO and ultimately undertook a suitability review of the person. OSFI concluded that he was not suitable to be an officer of the bank and recommended that he not be a member of the board. The bank removed the officer and as a result, OSFI's supervisory oversight strategy of the bank was downgraded. After market entry, FRFIs are responsible for implementing controls around the appointment of senior managers and directors of FRFIs under OSFI Guidelines. OSFI supervises FRFIs for compliance around conducting background checks but this control is not as robust as it is the responsibility of FRFIs to apply fit and proper controls after market entry stage rather than OSFI's in the approval of the appointment of senior managers in FRFIs. Provincial regulators apply market entry controls for non-FRFIs (e.g. securities dealers, credit unions, and *caisses populaires*). These controls include criminal checks to verify the integrity of applicants and to ensure that RE's

implement fit and proper controls. The controls are usually conducted by the RE but are subject to oversight by the provincial regulators. These market entry controls differ between provinces and sectors but, overall, the market entry controls being applied by provincial regulators are robust.

244. Since its last MER, Canada has implemented a money service business (MSB) registration system under the supervision of FINTRAC. One exception to the federal system of registration is in Quebec, where MSBs register with the *Autorité des marchés financiers* (AMF) and FINTRAC. Applicants for registration undergo criminal record checks and fitness and probity checks by FINTRAC and AMF. Individuals convicted of certain criminal offenses are ineligible to own or control an MSB. FINTRAC monitors the control of MSBs as they are required to submit updated information on owning or controlling individuals or entities when changes occur and again when the MSB applies for renewal of its registration every two years. FINTRAC has refused to register applicants and has revoked registration when the applicant was convicted for a criminal offense. An example was given where FINTRAC revoked the registration of two MSBs after the conviction of two individuals that owned both MSBs. Another example was provided where an MSB terminated its relationship with an agent due to fitness and probity concerns about the agent as part of follow-up activity conducted after an examination by FINTRAC. When an MSB registration is denied, revoked, expired, or pending, FINTRAC follows-up appropriately, for example by conducting an offsite review or on-site visit to the MSBs' last known address to ensure that the entity is not operating illegally.

245. There are market entry controls for most DNFBPs in Canada that require them to be licensed or registered by provincial regulators or by self-regulatory bodies (SRBs). Criminal checks are applied by supervisors and SRBs to casinos, BC notaries, accountants, and real estate brokers and agents during the licensing or registration process. The only exception to this is in the DPMS sector where there is no requirement to be registered or licensed or to be subjected to other forms of controls to operate in Canada. All casinos are provincially owned and apply thorough fit and proper procedures for employees.

246. After market entry, provincial regulators conduct some ongoing monitoring of non-FRFIs and DNFBPs and withdraw licenses or registration for criminal violations. The assessment team was provided with examples of restrictions or cancellations of investment dealers' registration by the Investment industry Regulatory Organization of Canada (IIROC) due to misconduct or a violation of the law. However, FINTRAC does not have responsibility for the licensing or registration of FIs or DNFBPs (apart from MSBs) and non-federal supervisors do not appear to implement the same level of controls to monitor of non-FRFIs and DNFBPs to ensure that they are not controlled or owned by criminals or their associates after the licensing or registration stage.

Supervisors' understanding and identification of ML/TF risks

247. Supervisors in Canada participated in the NRA process and understand the inherent ML/TF risks in the country. FINTRAC and OSFI have a good understanding of ML/TF risks in the financial and DNFBP sectors.

248. FINTRAC is the primary AML/CFT supervisor for all REs in Canada and is relied upon by provincial regulators to understand ML/TF risks within their population and to carry out AML/CFT

specific supervision. Provincial supervisors integrate ML/TF risk into their wider risk assessment models and leverage off FINTRAC for their assessment of ML/TF risks as FINTRAC has responsibility for AML/CFT compliance supervision in Canada.

249. OSFI is the prudential regulator for FRFIs and conducts an ML/TF specific risk assessment that applies an inherent risk rating to entities on a group-wide basis rather than an individual basis. It is also able to leverage off its prudential supervisors to better understand the vulnerabilities of individual FRFIs complementing the results of the NRA. OSFI demonstrated that it understands the FRFIs' ML/TF risks through its risk assessment model that appropriately identifies the vulnerabilities in the different sectors and REs under its supervision. It also collaborates well with FINTRAC and other supervisors on their understanding of ML/TF risk. This is very important strength of Canada's system because FRFIs account for over 80% of the financial sector's assets in the country. The sector is dominated by a relatively small number of FRFIs: the six D-SIBs control the banking market and hold a significant portion of the trust and loan company and securities markets in Canada. The largest life insurance companies in Canada are also federally regulated. OSFI has identified 34 FRFIs as high-risk, 32 as medium-risk, and 66 as low-risk. The D-SIBS are all rated as high-risk, given their size, transaction volumes and presence in a range of markets. OSFI updates its risk category for an FRFI or FRFI group on an ongoing basis following on-site assessments, ongoing monitoring and follow-up work. The outcomes from OSFI's risk assessment are effective.

250. FINTRAC has recently developed a sophisticated risk assessment model that assigns risk ratings to sectors and individual REs: the model was reviewed in detail by the assessment team and was compared against the data being collected and analysed in FINTRAC's case management tool. The model is a comprehensive ML/TF analytical tool that considers various factors to predict the likelihood and consequence of non-compliance by a RE. On the basis of its analysis, it rates reporting sectors and entities and the rating is then used to inform its supervisory strategy. FINTRAC's risk assessment has rated all 31 000 REs under the PCMLTFA and identified banks, credit unions, *caisses populaires*, securities dealers, MSBs and casinos as high-risk. FINTRAC has incorporated the findings of the NRA into the model to take account of the inherent risk ratings identified in the real estate and DPMS sectors.

251. Other supervisors, notably AMF and IIROC, integrate ML/TF risk into wider operational risk assessment models of entities that they supervise. They rely on FINTRAC to understand the ML/TF risks among all REs and to disseminate this information to prudential or conduct supervisors, given FINTRAC's role as primary supervisor for AML/CFT compliance in Canada. This appears to be happening in cases where AML/CFT issues arise in the course of prudential or conduct supervision. However, FINTRAC does not share with other supervisors its understanding of ML/TF risks in particular sectors on a regular basis. Provincial supervisors are therefore not aware of the ML/TF risks faced in their respective sectors, particularly around vulnerabilities relevant to ownership and management controls in the non-FRFI and DNFBP sectors. Similarly, FINTRAC and OSFI do not sufficiently share their understanding of detailed risks in FRFIs, e.g. through sharing of existing tools to carry out an integrated risk assessment of all FRFIs. As a result, they do not adequately leverage off their respective knowledge of the different business models and compliance measures in place.

Risk-based supervision of compliance with AML/CTF requirements

252. The regulatory regime involves both federal and provincial supervisors. FINTRAC is responsible for supervising all FIs and DNFBPs for compliance with their AML/CFT obligations under the PCMLTFA. Other supervisors may incorporate AML/CFT aspects within their wider supervisory responsibilities although the assessment team found that in instances where an AML/CFT issue arose, the primary regulator would refer the issue to FINTRAC. Given the primary responsibility held by FINTRAC for all REs and the federal and provincial division of powers for financial supervision other than in the areas of AML/CFT, combined with the geographical spread of the Canadian regulatory regime, the assessment team focused primarily on FINTRAC and OSFI's supervisory regime, but also met with provincial supervisors (e.g. AMF in Quebec) and other supervisors (e.g. IIROC for investment dealers).

253. FINTRAC has increased its resources and the level of sophistication of its compliance and enforcement program ("supervisory program") in recent years. In 2014/2015, there was 79 full-time staff employed in FINTRAC's supervisory program. Of this, 57 staff members were involved in direct enforcement activities including outreach and engagement (10), reports monitoring (5), examinations (37), and AMPs/NCDs (5). It has also developed, and continues to develop, its supervisory capabilities on a RBA. Its understanding of the different sectors and business models and of how AML/CFT obligations apply taking into account materiality and context is somewhat limited. This was communicated to the assessors by REs in the banking and real estate sectors during the on-site visit. FINTRAC has nevertheless increased its understanding of its different reporting sectors which is a challenge given the large number and diverse range of entities it supervises.

254. A range of supervisory tools is used by FINTRAC to discharge its supervisory responsibilities and, for the most part, those tools are applied consistently with the risks identified. A case management tool determines the level and extent of supervision to be applied to sectors and individual REs scoping specific areas for examinations, recording supervisory findings and managing follow-up activities. High-risk sectors are subject to on-site and desk examinations (details of which are contained in this report). Less intensive supervisory tools are used for lower-risk sectors. These tools include self-assessment questionnaires (Compliance Assessment Reports or CARs); observation letters (setting out deficiencies that require action); Voluntary Self Declarations of Non-Compliance (VSDONC); and policy interpretations on specific issues that require clarification. The use of observation letters was piloted with the *caisses populaires* sector in 2013/2014. FINTRAC had identified that *caisses populaires* were reporting large cash transactions of more than CAD 10 000 through automated teller machines which was not possible given the low limit on transactions through such machines. Observation letters were used to correct a misinterpretation of reporting obligations and clarify the correct way to report these types of transactions. FINTRAC also uses outreach tools for lower-risk sectors assistance and awareness building tools among smaller REs with limited resources, compliance experience and works with industry representatives. While supervisory measures are generally in line with the main ML/TF risks, more intensive supervisory measures should be applied in higher risk areas such as the real estate and DPMS sectors. FINTRAC

has updated its risk assessment to identify those sectors as high-risk, in line with the findings of the NRA.

255. OSFI applies a close touch approach to AML/CFT supervision of FRFIs. It engages with FRFIs through its prudential supervisors on an ongoing basis and is well placed to supervise higher-risk entities from an AML/CFT perspective given its knowledge of RE's business models OSFI has a particular focus on the large banking groups (D-SIBs) and insurance companies that dominate the financial market in Canada. These are identified as not only high-risk for prudential purposes but also for ML/TF as identified by OSFI and in the NRA. There is a specialist AML compliance (AMLC) division solely responsible for AML/CFT and sanctions supervision in OSFI and allocates its resources on a risk sensitive basis to supervise FRFIs. OSFI's "AML and ATF (i.e. CFT) Methodology and Assessment Processes" assesses the adequacy of FRFIs' risk management measures through its program of controls and assesses FRFIs' compliance with legislative requirements and OSFI guidelines. The AMLC division has expertise in the sectors it supervises and is covering the principal FRFIs leveraging off prudential supervision. OSFI has a good understanding of its sector, its staff has a high degree of expertise and it is adequately supervising FRFIs for AML/CFT compliance (in conjunction with FINTRAC). The number of OSFI AML/CFT supervisors (i.e. currently 10 supervisors including senior management) is, however, too low given the size of supervisory population and the market share and importance of FRFIs in the Canadian context.

256. FINTRAC and OSFI provided comprehensive statistics, case studies, and sample files relating to examinations of FIs and DNFBPs. There were a greater number of examinations of FIs than DNFBPs; in line with Canada's understanding of ML/TF risk and there were more desk-based than on-site examinations. Between April 2010 and March 2015, 3 431 examinations (1 949 desk-based and 1 482 on-site) of FIs were conducted. During the same period, there were 1 300 examinations (895 desk-based and 405 on-site) of DNFBPs.

Table 19. **AML/CFT Examinations Conducted by FINTRAC/OSFI in Canada 2009–2015**

257. Both FINTRAC and OSFI demonstrated that they apply scoping mechanisms within their examination strategies. Factors used by FINTRAC to prioritize examinations include: its follow-up strategy; concurrent assessments (with OSFI); market share; cycles; risk score; theme-based; regional selections and compliance coverage (used for lower risk where the preceding factors may not apply). OSFI primarily relies on its risk rating of FRFIs to inform its examination strategy and supervises on a cyclical basis with high-risk entities supervised on a three-year cycle, medium risk on a four-year cycle and low risk on a five-year cycle. It does, however, also supervise on a reactive basis arising out of information received from FRFIs, prudential supervisors or FINTRAC. An average on-site examination conducted by FINTRAC lasts between 2-3 days typically involving 2-3 supervisors, whereas on-site examinations of FRFIs typically last between 1 and 3 weeks and involves 10 or more supervisors from both OSFI and FINTRAC.

Supervision of FRFIs

258. Since 2013, FRFIs have been supervised by OSFI and FINTRAC concurrently. This involved examinations of high and medium risk FRFIs by each agency concurrently but with OSFI taking a top down (i.e. group wide) approach and FINTRAC taking a bottom up (i.e. individual entities/sector) approach with the two agencies coordinating their approaches during examinations but issuing separate supervisory letters setting out their respective findings. At the time of the on-site, it was planned to move to a more coordinated approach through joint examinations. Between 2009 and 2015, OSFI and FINTRAC conducted 126 assessments of FRFIs (OSFI carried out 78, FINTRAC carried out 48, and 22 were concurrent). During that period, OSFI and FINTRAC assessed all 6 D-SIBs (18 assessments in total) that hold a significant share of the Canadian financial market. OSFI issued 373 findings, including 97 requirements relating to lack of processes to comply with AML/CFT obligations and 276 recommendations relating to broader prudential AML/CFT risk management findings. The largest number of findings reflected changes that were required to correct or enhance

policies or procedures and the failure to ensure that risk assessment processed included prescribed criteria, and weaknesses in applying these criteria.

259. There is good supervisory coverage of FRFIs in Canada, which is being applied on a risk-sensitive basis. The level and intensity of the supervision of FRFIs was detailed to the assessment team by FINTRAC and OSFI, sample files were reviewed and feedback was also received from individual FRFIs during the on-site. OSFI provided examples of examinations and its follow-up activity including an AML/CFT examination of a major bank (D-SIB). A 2010 assessment of the bank found its AML/CFT program to be basic or rudimentary and there were 27 major findings ranging from instances of non-compliance with the PCMLTFA and weak risk management processes and policies. OSFI conducted an extensive follow-up program in tandem with the host regulators. When OSFI determined that the action plan to remedy deficiencies was not progressing satisfactorily it met with senior management in the bank. Enhanced monitoring by OSFI was implemented up until 2013 when the bank had adequately addressed the deficiencies to OSFI's satisfaction. Another example was provided involving a bank, which was a small subsidiary of a foreign bank and identified significant issues in its AML/CFT program, OSFI conducted quarterly monitoring of the bank which resulted in all recommendations being addressed by the bank. OSFI and FINTRAC provided examples where they have leveraged off each-others' supervisory findings including where a conglomerate life insurance company had issues with the process for submitting electronic fund transfer reports to FINTRAC that was subsequently reported to OSFI by FINTRAC that led to a prudential finding by OSFI. FINTRAC has also used OSFI's observations of compliance regime gaps to expand its standard scope of that RE to include a review of the compliance regime.

260. OSFI is taking measures to ensure that FRFIs heighten monitoring around overseas investment in Canada to mitigate any risk of illicit flows of funds entering the financial system. OSFI is also monitoring overseas branches of FRFIs as part of its group wide supervisory approach. There are three D-SIBs with branches in the Caribbean and South America. OSFI supervises FRFI on a group wide basis and FRFIs apply group wide policies and procedures and oversee controls (including ongoing monitoring of transactions) applied in overseas branches in Canada. From the discussions held and the material submitted it was found that OSFI exercises rigorous oversight of parent banks' group-wide controls in this key area.

261. Despite there being good supervisory coverage of FRFIs, the split of AML/CFT supervision generates some duplicative efforts. There are currently two agencies supervising FRFIs for AML/CFT compliance, which may be desirable given the size and importance of FRFIs, but suffers to some extent from insufficient coordination between the two agencies and duplication of supervisory resources. OSFI has a good understanding of its sectors and is implementing an effective supervisory regime with limited resources. FINTRAC has more resources but has a very wide population to supervise for AML/CFT compliance that may hinder a full appreciation of FRFIs' business models.

Supervision of non-FRFIs and DNFBPs

262. FINTRAC is applying its supervisory program to non-FRFIs and DNFBPs on an RBA. It is conducting more examinations in higher-risk sectors and using assistance, outreach, and compliance questionnaires to a large extent in sectors that it sees as lower-risk.

263. FINTRAC has shown that it is focusing mostly on high-risk non-FRFIs, securities, MSBs, and credit unions/*caisses populaires* for on-site examinations. It is, however, also conducting on-site examinations in lower-risk sectors, although it is conducting more desk exams in those sectors. FINTRAC also uses other supervisory tools for lower risk REs in the financial sector. On-site examinations have been undertaken by FINTRAC of non-FRFIs including securities dealers, credit unions and *caisses populaires*. The market share of credit unions is concentrated in a relatively small number of credit unions that are being supervised by FINTRAC and credit unions in Canada do not have cross-border operations. Another priority area for FINTRAC is the supervision of MSBs given the high-risk assigned to the sector. It has conducted a high number of examinations of MSBs relative to the size of the primary population figures provided to the assessment team. There appears to be ongoing cooperation between primary regulators and FINTRAC concerning the supervision of non-FRFIs based on details of referrals from other supervisors under MOU arrangements that were provided to the team. FINTRAC is adopting an adequate RBA to supervision of the non-FRFI sector.

264. FINTRAC applies intensive supervisory measures to casinos in line with the risks identified in the sector. This involves in-depth on-site examinations that are conducted on a cyclical basis that ranges from a two to five year cycle based on key factors such as size, risk level and market share. The three largest casinos (that represent 80% of the sector's market share) are examined on a two-year cycle. For other sectors, it has been relying on less intensive activities such as assistance and outreach to DNFBPs to build awareness of compliance obligations. FINTRAC identified the real estate sector and DPMS as medium-risk and accordingly is applying less intensive supervisory tools to those sectors. In the NRA, however, both sectors have been identified as high-risk. FINTRAC is therefore updating its risk assessment of these two sectors in line with the findings of the NRA with a view to applying more intensive measures in the future (including on-site examinations). FINTRAC is relying on the risk model (amongst other factors) of real estate agents to decide on examination selections to cover the sector. It also does not appear to identify adequately DPMS businesses in Canada that fall within the definition of the PCMLTFA.

265. FINTRAC utilizes lower intensity activities to good effect for lower-risk REs. Between 2011 and 2013, close to 10 000 compliance questionnaires (CARs) were issued to mainly sectors identified as lower or medium ML/TF risk. The questionnaire results were used to initiate close to 250 "themed-CAR" risk-informed examinations based principally on the significant non-compliance identified in the CAR. Observation letters are also used to highlight repeated non-compliance or reporting anomalies and remedial action is taken if the entity fails to respond or does not resolve the issues.

266. The legal profession is not currently subject to AML/CFT supervision due to a successful constitutional challenge that makes the PCMLTFA inoperative in respect of legal counsels, legal firms, and Quebec notaries. There is therefore no incentive for the profession to apply AML/CFT measures and participate in the detection of potential ML/TF activities. The exclusion of the legal profession from AML/CFT supervision is a significant concern considering the high-risk rating of the sector and its involvement in other high-risk areas such as the real estate transactions as well as company and trust formation. This exclusion also has a negative impact on the effectiveness of the supervisory regime as a whole because it creates an imbalance amongst the various sectors, especially for REs that perform similar functions to lawyers.

Remedial actions and effective, proportionate, and dissuasive sanctions

267. Supervisors in Canada take a range of remedial actions. There is also an administrative monetary penalties (AMPs) regime in place that is the responsibility of FINTRAC to apply under the PCMLTFA. OSFI and FINTRAC require REs to remediate any deficiencies identified during the assessment process. OSFI has implemented a graduated approach to applying corrective measures or sanctions for FRFIs. Both OSFI and FINTRAC issue supervisory letters to entities subject to AML/CFT assessment that contain supervisory findings and REs are required to take appropriate remedial action. OSFI has provided examples of follow-up action it has taken when FRFI fails to take remedial action.

268. OSFI and FINTRAC have thorough ongoing monitoring and follow-up processes to ensure remediation and have provided examples of steps taken to ensure that deficiencies have been addressed in the FRFI sector, MSBs and a large FI. Measures taken by supervisors include follow-up meetings, further examinations, action plans, and sanctions. OSFI may "stage" FRFIs, which is an enhanced monitoring tool involving four stages where severe AML/CFT deficiencies remain unaddressed. Staging is an effective tool to improve compliance as demonstrated by the Canadian authorities in case studies. There were examples provided where a small bank had not applied AML/CFT obligations correctly and where a staged RE underwent follow-up examinations demonstrated the process increased compliance. FINTRAC also provided examples of monitoring activities of non-FRFIs and DNFBPs where follow-up meetings and re-examinations of MSBs and large FIs resulted in significant improvements in compliance. Remedial actions have also been applied when REs failed to respond to mandatory CARs in the real estate sector. Follow-up activities on all non-responders found that of 55 non-responders, 37 were inactive REs, 1 was a late responder, 10 had inaccurate addresses, and 7 were true non-responders (i.e. increasing RE's risk profile). Where low levels of reporting have been identified, FINTRAC has conducted examinations and put in place remedial actions to increase reporting. This appears to have had an effect on reporting in the institutions concerned, but does not address the wider issue of general low levels of reporting. Supervisors have demonstrated that effective steps have been taken to a large extent to ensure that remediation measures are in place to address AML/CFT deficiencies.

269. FINTRAC can apply sanctions on all REs (including FRFIs) under the AMP regime. AMPs have been imposed and non-compliance disclosures (NCD) have been made to LEAs by supervisors for serious AML/CFT breaches and failure to address significant deficiencies. A notice of violation (NOV) is issued to the RE outlining the violation and penalty prior to an AMP being imposed. The most common violations cited in a NOV were for compliance regime deficiencies and reporting violations. AMPs are not always made public but can be published in egregious cases. AMPs have been imposed in the credit unions and *caisses populaires*, securities, MSBs, casinos, and real estate sectors but at the time of the on-site an AMP had not been applied to a FRFI. The imposition of AMPs in the MSB and casino sector was reported to have had a significant dissuasive effect in those sectors and FINTRAC confirmed that compliance had improved in those sectors as a result. However, the level of AMPs being applied is low relative to the reporting population and the size of the Canadian market. AMPs had not been applied to FRFIs at the time of the on-site is an issue that needs to be addressed. The non-sanctioning of FRFIs, the low number of AMPs applied to other FIs and the low

level of fines imposed to date is unlikely to have a dissuasive effect on FRFIs/larger FIs given their market share and the resources available to them. FINTRAC provided the assessors with current statistics at the time of the on-site (see table below) and with figures for NOVs, which included, among others, the FRFI sector, but for which proceedings were not concluded. OSFI has published guidelines for FRFIs on AML/CFT compliance, and while these guidelines cannot result in a financial penalty under OSFI's regulatory enforcement regime they are subject to measures such as staging.

Table 20. **Administrative Monetary Penalties for AML/CFT Breaches Between 1 April 2010 and 31 March 2015**

Sector	NOV Issued	Reporting Entity Size				Total Value of NOVs Issued (in CAD)	Publicly Named
		Micro	Small	Medium	Larger		
Casino	4	0	0	0	4	2 435 500	0
Financial Entities	15	0	6	9	0	897 705	3
MSB	28	22	5	1	0	768 375	16
Real Estate	7	6	1	0	0	197 310	2
Securities	5	0	3	2	0	587 510	4
Total	**59**	**28**	**15**	**12**	**4**	**4 886 400**	**25**

270. FINTRAC can submit an NCD to LEAs for failure to comply with the PCMLTFA, but this is only done in the most serious cases. Between 2010/2011 and 2014/2015, FINTRAC submitted seven NCDs (all from the MSB sector). These resulted in five investigations being commenced with two cases leading to criminal charges and one conviction (two individuals and one RE).

271. There are proportionate remedial actions being taken by supervisors, in particular extensive follow-up activities by supervisors (e.g. staging by OSFI) that demonstrated their dissuasive effect on the RE involved in the process as it exposes the RE being "staged" to costly remedial activities over a long period of time and ancillary costs such as higher deposit insurance premiums. While remedial actions, as opposed to AMPs, appear effective with respect to the individual RE they apply to, their wider dissuasive impact on other entities is limited, notably because they are not made public. More importantly, the lack of AMPs being applied to FRFIs and the relatively low level of fines imposed negatively impact the effectiveness of the enforcement regime as it affects its dissuasiveness. The non-application of the AMP regime to OSFI guidelines also affects the effectiveness of the Canadian supervisory regime.

Impact of supervisory actions on compliance

272. FINTRAC and OSFI provided examples where their actions have had an effect on compliance through the use of action plans, follow-up activities and findings from subsequent examinations. Feedback from the private sector indicates that supervisors' actions have led to increased compliance in the financial sector. There were examples given of increased compliance in

the FRFI, MSB and insurance sectors arising out of examinations and follow-up activities conducted by supervisors. It was reported by the private sector that the "close touch" nature of OSFI's supervision has enhanced compliance by FRFIs with their AML/CFT obligations. There has been an increase in compliance by REs as FINTRAC's compliance activities increased in recent years, e.g. MSB and casinos, and with the publication of additional information about PCMLTFA obligations.

273. FINTRAC and OSFI have provided written examples of examination findings and follow-up outcomes that demonstrate their effect on compliance by specific FIs and DNFBPs. There has been an increase in compliance among FRFIs and non-FRFIs (casinos) that are subject to cyclical examinations. The more intensive focus on higher risk areas in examination selection strategies has increased compliance in sectors such as FRFIs, MSBs, securities dealers and credit unions.

274. OSFI and FINTRAC supervisory measures to ensure compliance and their remedial actions are having a clear effect on the level of compliance of the individual RE that they apply to. OSFI has a robust follow-up system to monitor the remediation of deficiencies identified. OSFI requires FRFIs provide documentary evidence supporting progress on a continuous basis and requires validation prior to closure of every finding. Quarterly monitoring meetings are conducted with every D-SIB, and meetings with other FRFIs are frequently conducted at the request of OSFI or the FI when there are significant concerns or outstanding issues. Significant remedial steps have been taken by FRFIs based on findings by supervisors and OSFI has demonstrated that it has comprehensive supervisory measures to ensure compliance including the use of more intensive supervision (staging). FINTRAC's follow-up activities have been shown to have a positive effect on compliance by non-FRFIs and DNFBPs. It conducted 515 subsequent examinations across non-FRFIs and DNFBPs over a three-year period and by comparing previous performance indicators with the follow-up indicators revealed that the average deficiency rate had reduced by 13% due to increased compliance. AMPs, when applied, have also had a positive effect on the compliance of REs as demonstrated in follow-up examinations.

275. FINTRAC uses a supervisory tool that assigns "deficiency rates" to REs that are examined. It rates the levels of non-compliance on each specific area of the examination that leads to an overall deficiency rating being assigned to the RE. The overall rating is high, medium, or low and the RE's rating is used to tailor appropriate remedial measures to be put in place. Once remediation has occurred, a follow-up rating is applied and this is compared with the previous rating to identify whether compliance improvements have been made by the RE. The use of deficiency rates at RE and sector level is a useful tool to measure the effect the examination and follow-up process has on compliance by REs. Overall, supervisory measures taken in Canada are having an effect on compliance with improvements demonstrated –albeit to varying degrees- both in the financial and DNFBP sectors. Information provided indicates that compliance has improved in the financial sector, but less so in DNFBPs particularly in the real estate and DPMS sectors.

Promoting a clear understanding of AML/CTF obligations and ML/TF risks

276. There is a good relationship and open dialogue between OSFI and FRFIs. The private sector reports that OSFI has a good understanding of the compliance challenges faced by FRFIs and provides constructive feedback. OSFI has published compliance guidelines and raises awareness

through participation in outreach activities. FINTRAC has published a substantial amount of guidance on its website and increased its level of feedback and guidance to both the financial and, albeit to a lesser extent, the DNFBP sectors. FINTRAC deals with general enquiries through a dedicated call line and has published query specific policy interpretations, both of which are reported by the private sector to be good guidance tools. FINTRAC has dealt with a substantial amount of queries and it has a "Major Reporters" team that provides guidance directly to the largest reporters (mostly financial sector and casinos). It has also taken good steps to raise awareness amongst the MSB sector around the requirement to register and to explain AML/CFT obligations. However, more focused and sector-specific guidance and typologies is required for the financial sector as well as further tailored guidance for DNFBPs to enhance their understanding of the ML/TF risks that they face and of their AML/CFT obligations, particularly with respect to the reporting of suspicious transactions.

277. Supervisors have increased AML/CFT awareness through the use of presentations, seminars, public-private sector forums, establishment of OSFI supervisory colleges, and meetings with the industry. FINTRAC has engaged with non-FRFIs and DNFBPs conducting 300 presentations between 2009 and 2015. It has also hosted events to raise awareness on compliance obligations including a Major Reporters Forum in the financial sector in 2014 and a Casino Forum in 2015.

278. Overall, in light of supervisors' efforts and ML/TF risks in Canada, FINTRAC provides good quality general guidance to REs, but not enough sector-specific compliance guidance and typologies especially in the real estate and DPMS sectors.

Overall Conclusions on Immediate Outcome 3

279. **Canada has achieved a substantial level of effectiveness with IO.3.**

6

CHAPTER 7. LEGAL PERSONS AND ARRANGEMENTS

Key Findings and Recommended Actions

Key Findings

Canadian legal entities and arrangements are at a high risk of misuse for ML/TF and mitigating measures are insufficient both in terms of scope and effectiveness.

Some basic information on legal persons is publicly available. However, nominee shareholder arrangements and, in limited circumstances bearer shares, pose challenges in ensuring accurate, basic shareholder information.

Most TCSPs, including those operated by lawyers, are outside the scope of the AML/CFT obligations and DNFBPs are not required to collect beneficial ownership information. These pose significant loopholes in the regime (both in terms of prevention and access by the authorities to information).

FIs do not verify beneficial ownership information in a consistent manner.

The authorities rely mostly on LEAs' extensive powers to access information collected by REs. However, there are still many legal entities in Canada for which beneficial ownership information is not collected and is therefore not accessible to the authorities.

Access to beneficial ownership is not timely in all cases and beneficial ownership information is not sufficiently used.

For the majority of trusts in Canada, beneficial ownership information is not collected.

LEAs do not pay adequate attention to the potential misuse of legal entities or trusts, in particular in cases of complex structures.

Recommended Actions

Canada should:

- As a matter of priority, increase timeliness of access by for competent authorities to accurate and up-to-date beneficial ownership information - consider additional measures to supplement the current framework.
- Take the necessary steps to make the AML/CFT requirements operative with regards to all legal professions providing company or trust-related services.
- Ensure that FIs and DNFBPs identify and take reasonable measures to verify the identity of beneficial owners based on official and reliable documents.
- Take appropriate measures to prevent the misuse of nominee shareholding and director arrangements and bearer shares.
- Ensure that basic information indicated in provincial and federal company registers is accurate and up-to-date.
- Apply proportionate and dissuasive sanctions for failure by companies to keep records; to file

information with the relevant registry; or to update registered information within the required 15-day period.

- Determine and enhance the awareness of the ML and TF risks from an operational perspective and the means through which legal persons and trusts are abused in Canada, taking into account ML schemes investigated in Canada as well as international typologies involving legal entities and legal arrangements.

The relevant Immediate Outcome considered and assessed in this chapter is IO5. The recommendations relevant for the assessment of effectiveness under this section are R24 & 25.

7

Immediate Outcome 5 (Legal Persons and Arrangements)

Public availability of information on the creation and types of legal persons and arrangements

280. Innovation, Science and Economic Development Canada (ISED, formerly Industry Canada) provides a comprehensive overview and comparison on its internet homepage of the various types, forms, and basic features of federal corporations under CBCA, and gives detailed guidance on the incorporation process.[86] Similar information and services are provided through the homepages of all provincial governments except that of New Brunswick. The relevant web links are easy to find through ISEDC's homepage and provide public access to the relevant provincial laws that describe the various legal entities available; the name and contact information for the relevant authority competent for registration; and the procedures to be followed to establish a legal entity. In addition, the Canada Business Network, a collaborative arrangement among federal departments and agencies, provincial and territorial governments, and not-for-profit entities aimed at encouraging entrepreneurship and innovation also provides comprehensive information on the various types of legal entities as well as various forms of partnerships available at the federal and provincial/territorial levels.[87] For legal arrangements, the CRA provides on its homepage comprehensive information on the various trusts structures available under Canadian law.[88]

Identification, assessment and understanding of ML/TF risks and vulnerabilities of legal entities

281. Both legal entities and legal arrangements in Canada are at a high risk of being abused for ML/TF purposes. The NRA indicates that organized crime and third-party ML schemes pose a very high ML threat in Canada. Some of FINTRAC's statistics reflected in the NRA suggest that well over 70% of all ML cases and slightly more than 50% of TF cases involved legal entities. Canadian legal entities play a role in the context of channelling foreign POC into or through Canada, as well as in the

[86] See www.ic.gc.ca/eic/site/cd-dgc.nsf/eng/cs04843.html#articles.
[87] See Canada Business Network (nd), Sole proprietorship, partnership, corporation or co-operative?, www.canadabusiness.ca/eng/page/2853/#toc- corporations.
[88] See Canada Revenue Agency (nd), Types of trusts, www.cra-arc.gc.ca/tx/trsts/typs-eng.html.

laundering of domestically generated proceeds.[89] Typologies identified include: foreign PEPs creating legal entities in Canada to facilitate the purchase, of real estate and other assets with the proceeds of corruption; laundering criminal proceeds through shell companies in Canada and wiring the funds to offshore jurisdictions; and utilization of Canadian front companies to layer and legitimize unexplained sources of income and to commingle them with or mask them as profits from legitimate businesses.[90]

282. LEAs generally concurred with the NRA's findings, and have observed a high number of companies being established without carrying out any business activities, and the use of corporate entities and trusts in Canada to facilitate foreign investment. LEAs also stated that they encounter difficulties in identifying beneficial owners of Canadian companies owned by entities established abroad, particularly in the Caribbean, Middle East, and Asia. While the legal powers available to LEAs are comprehensive and sufficient, the instances in which LEAs were able to identify the beneficial owners of Canadian legal entities and legal arrangements appear to have been very limited and investigations do not sufficiently focus on international and complex ML cases involving corporate elements. Some LEAs are therefore less familiar with ML typologies involving corporate structures. Also, in a number of cases that have been investigated and where Canadian companies were owned by foreign entities or foreign trusts, it was not possible for LEAs to identify the beneficial owners.

Mitigating measures to prevent the misuse of legal persons and arrangements

283. Canada has a range of measures available to collect information on the control and ownership structures of legal entities as outlined below, and comprehensive investigation powers to locate and obtain such information if and as needed (see also R. 24). (i) In cases where a legal entity enters into a business relationship with a Canada FI, that FI must collect and keep beneficial ownership information. (ii) The federal register or the provincial register where the legal entity is incorporated must collect information; and the CRA collects information on legal entities as part of the tax return. (iii) The legal entities themselves are required to keep records of their activities, shareholders and directors. For public companies listed on the stock exchange disclosure requirements exist for shareholders with direct or indirect control over more than 10% of the company's voting rights. Only measure (iii) —maintenance of records by the companies— apply to all legal entities created in Canada.

284. Legal entities in a business relationship with a Canadian FI must provide basic and beneficial ownership information to the FI which has an obligation under the PCMLTFA to maintain this information and confirm its accuracy as needed (see R.10). Many of the FIs that the assessors met confirmed that beneficial ownership would generally be obtained through self-disclosure by the customer, and, in some instances, be followed by an open data search to confirm the accuracy of the information provided. Most FIs stated that they would not require the customer to provide official

[89] FINTRAC Research Brief: Review of Money Laundering Court Case between 2000 and 2014 determines that one of the most frequently used vehicles for ML (in a sample of 40 Canadian Court Cases reviewed) were companies acting as shells for or allowing for a commingling of illicit proceeds with regular business transactions.
[90] Ibid. as well as Project Loupe and Project Chun.

documents to establish the identity of the beneficial owners, nor carry out any independent verification measures other than the open data search. Of the 2.5 million registered legal entities in Canada and customers of a Canada FI, only a fraction had accuracy checks performed with respect to beneficial ownership. In addition, the mitigation of risks is limited by the fact that TCSPs, including those operated by lawyers, are outside the scope of the AML/CFT obligations and DNFBPs are not required to collect beneficial ownership information.

285. Federal and provincial registers record basic information on Canada companies and their directors, as well as on partnerships with businesses in Canada, but do not require the collection of beneficial ownership information. Alberta and Quebec have slightly more comprehensive registration mechanisms, which also cover shareholder information. All information maintained in the federal and provincial registers is publicly available. Updating requirements exist and violations thereof can be sanctioned criminally, but no sanction has been imposed in practice. The reliability of the information recorded raises concerns because there is no obligation on registrars to confirm the accuracy of the basic company information provided at the time of incorporation. Once the incorporation has been completed, companies are obliged to update their records held by the government registrar when there is a material change (e.g. a change in directors) and on an annual basis, and may do so electronically. The same situation applies to partnerships that register for a business permit. The updating process of registered information involves the company reviewing the information indicated in the register and confirming that the information is still correct. There is no need to submit any supporting documents. Despite the absence of verification process at the company registration stage, LEAs stated that basic company information would generally be reliable and comprehensive both on the provincial and federal levels, but they also raised concerns with respect to the accuracy and completeness of shareholder information in the registers of Quebec and Alberta. The CRA, as part of its tax revenue collection obligation, also obtains information on legal entities. However, such information does not include beneficial ownership information.

286. All legal entities, whether incorporated or registered at the federal or provincial level, are subject to record-keeping obligations. All statutes require the keeping of share registers, basic company information, accounting records, director meeting minutes, shareholder meeting minutes and the company bylaws and related amendments. While the relevant obligations are relatively comprehensive, their implementation raises serious concerns. ISEDC and provincial company registries indicated that they would consider company laws to be "self-enforcing" by shareholders, interested parties and the courts, and that they would have no mandate to enforce the implementation of the relevant provisions. While the Director of Corporations Canada has statutory powers to inspect company records, this power has been used only in the context of a shareholder's complaint and not to verify whether a company complies with its record-keeping obligations or to assist the RCMP in obtaining relevant information. So far, no company has been sanctioned criminally for failure to keep accurate and comprehensive company records. The LEAs expressed concern over the accuracy and completeness of companies' records, and stated that it would often be difficult to establish the true shareholder of a company as shareholder registers would often be either outdated or imprecise as they would not indicate whether the registered shareholder is the actual beneficial owner of the share or a proxy for another person.

287. Disclosure obligations for publicly listed companies are comprehensive and include beneficial ownership information.

288. Both bearer shares and nominee shareholders and directors are permitted in Canada. According to the authorities, bearer shares are rarely issued, but nominee shareholder arrangements are a frequent occurrence, and typically involve the issuance of shares in the name of a lawyer, who holds the shares on behalf of the beneficial owner. While companies are generally obliged to keep share registers, there is no obligation on nominees to disclose their status and information on the identity of their nominator, nor to indicate when changes occur in the beneficial ownership of the share.

Timely access to adequate, accurate and current basic and beneficial ownership information on legal persons

289. For information that is not publicly available, Canada has a wide range of law enforcement powers available to obtain beneficial ownership information as discussed in R.24. While the legal powers available to LEAs are comprehensive and sufficient, the instances in which LEAs were able to identify the beneficial owners of Canadian legal entities or legal arrangements appear to have been very limited and investigations do not sufficiently focus on international and complex ML cases involving corporate elements. In a number of cases that have been investigated and where Canadian companies were owned by foreign entities or foreign trusts, it was not possible for LEAs to identify the beneficial owners. This was due mainly to foreign jurisdictions not responding to requests by the Canadian authorities for beneficial ownership information.

290. As indicated in IO 6, other important practical limitations hamper the effectiveness of investigations relating to legal entities and legal arrangements. Despite the adequacy of their powers, it is often difficult for LEAs to obtain beneficial ownership information. As a result, their access to that information is not timely. The relevant Director under each corporate statute has the power to request company records but in practice this power has never been used to assist the RCMP in obtaining beneficial ownership information on a specific legal entity. Equally, at the time of the on-site visit the CRA had not made use of its newly acquired power to refer information to the RCMP in case of a suspicion of a listed serious offense.

Timely access to adequate, accurate and current basic and beneficial ownership information on legal arrangements

291. The level of transparency of legal arrangements is even lower than in the case of legal entities. There are two mechanisms in place to collect information on trusts: (i) the CRA, as part of the tax collection process, requires the provision of information on the trust assets and the trustee; and (ii) FIs are required to obtain information in relation to customers that are or represent a trust. These two measures suffer from significant shortcomings, both in terms of their scope and effective implementation, for the same reasons as in the context of legal persons, and only a small fraction of Canadian trusts file annual tax returns. There is also a fiduciary duty under common law principles of trustees vis-a-vis those who have an interest in the trust. While this makes it necessary for the

trustee to know who the beneficiaries are, it does not necessarily mean that trustees keep records or obtain information on the beneficial ownership of the trust in practice.

292. The information collected by FIs about legal arrangements raise the same concerns of reliability as outlined for legal entities because FIs rely mostly on the customer to declare the relevant information, they do not require official documentation to establish the identity of the beneficial owners, and do not conduct an independent verification of the information provided. Furthermore, there is no obligation on trustees to declare their status to the FI. As a result, in many cases, the FI may not know that the customer is acting as a trustee. It is unclear how many of the millions of trusts estimated to exist under Canadian law are linked with a Canadian FI.

Effectiveness, proportionality and dissuasiveness of sanctions

293. Proportionate and dissuasive criminal sanctions are available under the PCMLTFA, the CBCA and provincial laws for failure by any person to comply with the record-keeping obligations or registration or updating requirements under the law (see write up for R.24 for more details), but none have been imposed between 2009 and 2014.

294. So far, there seems to have been few instances in which administrative measures were applied for a failure by FIs to identify the beneficial owner or confirm the accuracy of the information received. Similarly, no legal entity in Canada has been struck off the company registry based on in its involvement in illicit conduct. In sum, sanctions have not been applied in an effective and proportionate manner.

Overall Conclusions on Immediate Outcome 5

295. **Canada has achieved a low level of effectiveness for IO.5.**

CHAPTER 8. INTERNATIONAL COOPERATION

Key Findings and Recommended Actions

Key Findings

International cooperation is important given Canada's context, and Canada has the main tools necessary to cooperate effectively, including a central authority supported by provincial prosecution services and federal counsel in regional offices.

The authorities undertake a range of activities on behalf of other countries and feedback from delegations on the timeliness and quality of the assistance provided is largely positive. Assistance with timely access to accurate beneficial ownership information is, however, challenging, and some concerns were raised by some Canadian LEAs about delays in the processing of some requests.

The extradition framework is adequately implemented.

Canada also solicits other countries' assistance to fight TF and, to a somewhat lesser extent, ML.

Informal cooperation appears effective amongst all relevant authorities, more fluid and more frequently used than formal cooperation, but the impossibility for FINTRAC to obtain additional information from REs, and the low quantity of STRs filed by DNFBPs limit the range of assistance it can provide.

Recommended Actions

Canada should:

- Ensure that, where informal cooperation is not sufficient, LEAs make greater use of MLA to trace and seize/restraint POC and other assets laundered abroad.
- Ensure that good practices, such as consultation with prosecution services are applied across police services with a view to improve the use of MLA to identify and pursue ML, associated predicate offenses and TF cases with transnational elements.
- Assess and mitigate the causes for the delays in the processing of incoming and outgoing MLA requests.
- Consider amending the MLACMA to include the interception of private communications (either by telephone, email, messaging, or other new technologies) as a measure that can be taken by the authorities in response of a foreign country's MLA request without the need to open a Canadian investigation.

The relevant Immediate Outcome considered and assessed in this chapter is IO2. The recommendations relevant for the assessment of effectiveness under this section are R.36-40.

Immediate Outcome 2 (International Cooperation)

Providing constructive and timely MLA and extradition

296. Since its previous assessment, Canada has greatly improved its statistics on MLA, and is now able to show several different aspects of MLA related to ML and TF. Canada receives a large number of MLA requests each year. From 2008 to 2015, it received a total of 4,087 MLA requests across all offenses, including 383 for ML investigations and 34 related to TF investigations.

297. The IAG[91] prioritizes the requests (in terms of urgency, court date or other deadline, seriousness of the offense, whether the offense is ongoing, danger of loss of evidence, etc.); it contacts the foreign authorities to obtain further information if the request is incomplete or unclear; and forwards it to the Canadian police for execution (if no court order is needed), or to the IAG's provincial counterparts, or to a counsel within federal DOJ Litigation Branch, if a court order is required.

298. Canada generally provides the requested assistance, both in the context of ML and TF cases:

Table 21. **Outcome of Incoming MLA Requests for ML**

FISCAL YEAR	EXECUTED	WITHDRAWN	ABANDONED	REFUSED
2008–2009	24	0	4	2
2009–2010	23	1	1	0
2010–2011	21	1	5	1
2011–2012	42	5	4	0
2012–2013	39	1	8	3
2013–2014	56	5	8	0
2014–2015	48	4	6	1

TOTAL	34	3	3	0

[91] The IAG is part of the Litigation Branch of the federal DOJ, and which assists the Minister of Justice as central authority for Canada.

299. The assistance provided is of good quality, as was confirmed by the feedback received from 46 countries. There have been numerous good cases of assistance, especially with the US, including covert operations, joint investigations and extraditions. This is an important positive output of the Canadian framework in light of the risk context (e.g. the extensive border with the US, the size of the US economy, and the opportunities it offers to criminal activity).

300. Canada undertakes a range of activities on behalf of other countries. It is, however, limited in its ability to provide in a timely manner accurate beneficial ownership information of legal persons and arrangements established in Canada, for the reasons detailed in IO.5 and IO.7. The fact that Canada cannot intercept, upon request, private communications (either telephone or messaging) in the absence of a Canadian investigation can also hamper foreign investigations, especially those pertaining to OCGs from or with links to Canada or international ML. While this measure is not specifically required by the standard, it is particularly relevant in the Canadian context given the high risk emanating from OCGs, including those with ties to other countries. The scope of this practical shortcoming is, however, limited by the fact that, in most instances, a domestic investigation is likely to be initiated, thus enabling the Canadian authorities to share evidence collected from wiretaps.

301. To facilitate MLA, Canada entered into 17 administrative arrangements with non-treaty partners over the past two years. It also executed over 300 non-treaty requests, mostly to interview witnesses and to provide publicly available documents.

302. Measures were also taken to expedite MLA. The IAG may now send the information requested by a foreign country directly, without the need for a second judicial order. The evidence shared includes, for example, transmission data for an electronic or telephonic message, which help identify the party communicating, tracking data that identify the location of a person or an object, information about a bank account and the account holder. In addition, LEAs that have obtained evidence lawfully for the purposes of their own investigation, may share this information with foreign counterparts without the need for a judicial order authorizing this sharing. For example, evidence obtained through wiretapping by Canadian police may be shared with foreign counterparts in this manner, as confirmed by case law.[92]

303. According to the feedback from delegations, the average time for Canada to respond to their requests varies between 4 and 10 months. The majority of delegations stated that assistance was timely, or did not comment on timeliness, with only one country commenting that the process was slow. Some Canadian LEAs also expressed concerns with the length of time taken to process some of the incoming and outgoing requests. The IAG explains that some of the factors that contribute to lengthening the process include: (i) missing information in the request and the requesting state's slow response to requests for clarification or additional information; (ii) litigation (i.e. when a party affected by the request contests the validity of the court order required, particularly in instances the litigation continues into appellate courts; (iii) because the fact that Canada is awaiting the fulfilment of a condition by the foreign authorities (e.g. in cases where Canada has restrained assets, a final judgment of forfeiture issued by the relevant foreign court may be pending); and (iv) the complexity of the file (e.g. cases involving multiple bank accounts, many witnesses, several Canadian provinces and successive supplemental requests). According to the Auditor General Report 2014, the DOJ processes formal requests for extradition and obtains evidence from abroad appropriately, but does not monitor the reasons

[92] See Supreme Court's decision in *Wakeling v. United States of America* 2014 SCC 72.

for delays in the process.[93] The report found that only 15% of the overall time needed to process MLA requests are within Justice Canada's control, and 30% of the overall time to process extradition requests are within its control. Justice Canada can only take actions to mitigate the delays when it develops insight about the reasons for the delays. In response to the comments by the Auditor General of Canada and after consultations with its international partners and closer research of its files in more recent years, there has been a significant reduction in the delays associated with executing MLA requests made to Canada.

304. Canada extradites its nationals. Pursuant to the Supreme Court of Canada's decision in *U.S. v. Cotroni*, where the extradition of a Canadian citizen is sought based on facts that might form the basis for a prosecution in Canada, certain consultations and an assessment of evidence and circumstances must take place before a decision can be made as to whether to prosecute or extradite. In 99% of such cases, the circumstances favour extradition. Between 2008 and 2015, Canada received 92 extradition requests based on a charge for ML. From the 92 requests, 77 came from the US. As a result of these requests, a total of 48 persons were extradited, while 13 were subject to other measures such as deportation, discharge, voluntary return, or were not located or the means of the return not listed. In the seven cases where the request was refused, the grounds were related either to insufficient evidence to show knowledge of ML, concerns with human rights record or prison conditions in the requesting state, or the defendant was not located. Between 2008 and 2015, five persons were extradited for TF.

305. More than half (52%) of the extradition requests take from 18 months to five years to be completed; from which 28% take from three to five years to be completed. An approximate of 4% take more than five years to be completed. Most of the delegations mentioned having successful extradition requests with Canada, although some mentioned having experienced delayed responses from the Canadian authorities regarding those requests.

Seeking timely legal assistance to pursue domestic ML, associated predicate and TF cases with transnational elements

306. From 2008 to 2015, Canada sent more than 700 MLA requests, including 124 (i.e. around 17%) on the grounds of ML charges. Some requests were made, e.g. in the context of real estate or to obtain bank records, as well as to freeze and confiscate funds or assets abroad.[94] Most of these requests were made on the basis of investigations conducted in the province of Quebec (which is in line with the findings in IO.7 and IO.8). Between 2008 and 2015, Canada also made 24 requests in the context of TF investigations, 11 of which during fiscal year 2014/2015 in light of increased concern about "foreign fighters."

307. The number of request for assistance on ML cases has increased over the years, but still appears relatively low in light of Canada's risk profile. The authorities explained that they frequently have recourse to informal means of cooperation (see core issue 2.3 below) in lieu of MLA because it is quicker. However, while informal means do simplify and expedite the process

[93] Office of the Auditor General of Canada (2014), Report of the Auditor General of Canada—Fall 2014, p. 11, www.oag-bvg.gc.ca/internet/docs/parl_oag_201411_02_e.pdf. The assessors reviewed 50 extradition and MLA files from between 2011 and 2013, which included incoming and outgoing requests, and both ongoing and closed files.

[94] From 2008 to 2005, Canada sent 113 requests with respect to tracing (bank or real estate records) and 33 requests with respect to freezing/restraint (funds or assets).

of assistance, they cannot substitute formal MLA in all cases (e.g. when there is a need for the tracing or the freezing of assets abroad). The relatively small number of outgoing requests may also be explained by the fact that Canada is not pursuing complex and transnational ML schemes to the extent that it should (see IO.7). Although the outflows of POC generated in Canada appear to be moderate in comparison to the inflows of POC generated abroad, data suggests that Canadian citizens and corporations use tax havens and offshore financial centres to evade taxes, in particular those located in the Caribbean, Europe and Asia- cooperation with the relevant countries in these regions would therefore prove helpful to Canada. Some domestic provincial LEAs mentioned concerns about the delay in the sending of requests to foreign countries. In response to that point, the IAG assures that the same case management prioritization measures are in place for outgoing requests as for incoming requests.

Seeking other forms of international cooperation for AML/CTF purposes

308. Canadian agencies regularly seek and provide other forms of international cooperation to exchange financial intelligence and other information with foreign counterparts for AML/CFT purposes. In particular, the cases studies provided as well as the discussions held on-site indicate a regular use by LEAs of foreign experts, missions abroad to secure evidence and assets, and joint investigations. Canada does not separate the information according to the function (i.e. seeker or provider of assistance), and the information provided therefore combines the objects of core issues 2.3 and 2.4.

309. FINTRAC is both a FIU and a regulator/supervisor:

- As Canada's FIU: FINTRAC is a member of the Egmont Group and shares information only on the basis of MOUs with counterparts. FINTRAC is open to sign a MOU with any FIU, and the process can be concluded very quickly, but sometimes this does not happen due to the absence of interest of the foreign FIU. At the time of the on-site there were 92 MOUs with foreign FIUs. In the absence of an MOU, they cannot share information. According to the feedback provided by other delegations, the information provided by FINTRAC is of good quality. Nevertheless, some limitations have a negative impact on the type of information that FINTRAC can share: more specifically, the fact that (i) FINTRAC is not habilitated to request and obtain further information from any REs; (ii) there are no STRs from lawyers. Canada receives far more requests for assistance than it sends to support Canadian investigations and prosecutions. Although there were fewer queries sent to its foreign counterparts a few years ago, FINTRAC has recently increased the number of requests sent. The queries received and sent to the US (which, as mentioned above, is a major Canadian partner in international cooperation) are generally comparable. In addition to requests sent, the significant increase of FINTRAC's numbers of proactive disclosures sent to its counterparts (2012-2013:52; 2013-2014:93; 2014-2015:190) highlights the Canadian FIU's willingness to share the relevant information it holds with its foreign partners.

- As a supervisor, FINTRAC regularly shares information with foreign supervisors and consults with international partners. In addition to general information, it also exchanges, on an on-going basis, since 2009, compliance information on operational processes with AUSTRAC. After several bilateral meetings, FINTRAC and AUSTRAC are working together in compliance actions on an MSB that operates both in Canada and in Australia. FINTRAC's public MSB registry was also provided to Australia and other jurisdictions, because the comparison of MSB lists is useful during the criminal record check of MSBs, who may operate in more than one country. FINTRAC has also an MOU with FINCEN.

310. The RCMP regularly exchanges information with its foreign counterparts. Cooperation is developed through police channels (Interpol, Europol, Five Eyes Law Enforcement Group), through the Camden Asset Recovery Informal Network (CARIN) and through several MOUs, including one with The People's Republic of China. The existence of this MOU with China is important in light of the risks of inward flow of illicit money generated in China; however, no assistance with this country was reported in the province of British Columbia, despite the fact that it appears to be at greater risk of seeing its real estate sector misused to launder POC generated in China. The RCMP uses a well-established and effective network of liaisons officers (42 officers and 10 intelligence analysts in 26 countries) to seek and provide assistance and other types of information, in ML and TF investigations. It shares intelligence information, carries out investigations on behalf of foreign counterparts, and participates in joint investigations, as demonstrated in several cases studies provided by the authorities. From 2008 to 2013, it sent 98 requests for assistance on PPOC and ML/TF-related occurrences to the US, 94 to Europe and 60 to Asia. The RCMP and other police forces are also the ones who execute incoming requests of assistance, when there is no need for a judicial order, and the information or documentation is publicly available or can be obtained on a voluntary basis.

311. OSFI concluded 30 MOUs with various international prudential supervisors. No statistical information was provided in this respect but the authorities mentioned that OSFI regularly exchanges information regarding FRFIs with its foreign counterparts. In 2012, OSFI hosted an AML/CFT Supervisory College on five conglomerate banks with 19 foreign regulators in attendance. The College provided an opportunity for the foreign regulators to provide information on AML/CFT supervision in the host jurisdictions, and also for the banks themselves to provide an overview of their AML/CFT programs. The OSFI Relationship Management Team also hosts Supervisory Colleges of a general prudential nature, where foreign regulators attend. When OSFI conducts assessments at foreign operations of FRFIs, it seeks cooperation of the host regulator, who usually participates on the on-site with OSFI. The Colleges are an important and effective way for the sharing of information with OSFI's foreign counterparts.

312. The CBSA cooperates on a regular basis with US Immigration and Custom Enforcement (ICE) and US Custom Border Protection for the Sharing of Currency Seizure Information, including in AML/CFT matters. This cooperation is very important due to the extensive border shared by Canada and the US Cases provided by the authorities demonstrated the CBSA's participation in joint operations. CBSA also receives information from the US Department of Homeland Security, which helps the detection of suspected POC and leads to the seizure of the currency. Its participation in the Homeland's Security BEST Program resulted in the CBSA

initiating 103 criminal investigations related to the smuggling of narcotics, smuggling of currency and firearms and illegal immigration. The CBSA also receives international cooperation from foreign governments or law enforcement and maintains strong collaboration with the 5-Eyes Community. It shares FINTRAC results with partner agencies in the US on files that indicate ML activities that cross the Canada/US border (Mexican Mennonites, outlaw motorcycle gangs, Persian organized crime). Nevertheless, the authorities also mentioned that financial information and information on import and export files declared in Canada are difficult to obtain by their counterparts, due to Canada's strong privacy framework.

313. The CRA has 92 Tax treaties and 22 Tax Information Exchange Agreements (TIEA) with international partners. However, CRA and CBSA do not cooperate under the Customs Mutual Assistance Agreement with the US. As is common for Canadian authorities, they would always require and MLAT to share the information regarding trading operations (where there is an important risk of trade-based ML, especially considering that more than 60% of Canada's GDP consists of international trade). Between 2009 and 2015, the CRA sent 72 requests and received 11 requests for exchange of information to foreign counterparts, in the context of criminal investigations.

314. The CSIS regularly receives from and shares financial information with FINTRAC in support of both organizations' mandates. In relation to high-risk travellers, it uses financial intelligence to determine how ready an individual may be to travel by determining whether they have purchased equipment, or if they have saved up money that could be used to support themselves while they are abroad. Due to confidentiality issues and matters of national security, CSIS did not provide the assessors any statistical data.

315. Feedback from the countries on Canada's assistance through other forms of cooperation is generally good. Most of the delegations indicated that the information received from FINTRAC in response to their requests was useful, of good content and of high quality. The limitation to request further information from any REs and bank information was, however, also reported. FINTRAC's average time to respond to request from its counterparts is 35 days (which is in line with the Egmont Group standards).The feedback from the US FIU is very positive. FINTRAC and FINCEN have had a strong working relationship for years, both as FIUs and as AML/CFT supervisory/regulatory agencies, which is very important in light notably of the extensive border between the two countries, the illicit flows of criminal money, as well as the linkages between OCGs active in both countries. The US, which is Canada's main partner in cooperation, also reported and outstanding cooperation exchange with CRA. They indicated that the CRA responds to American requests for records in a very timely manner and has provided assistance in the location and coordination of witness interviews.

International exchange of basic and beneficial ownership information of legal persons and arrangements

316. While the authorities recognize the risk of misuse of Canadian legal persons and arrangements, they do not appear to have identified, assessed and understood with sufficient granularity the extent to which Canadian legal persons and legal arrangements are misused for ML or TF in the international context. In addition, there are serious concerns about the timeliness access to relevant information by competent authorities as well as with respect to the

quality of the information collected by REs. As a result, cooperation in relation to foreign requests regarding BO of legal persons and arrangements cannot be fully effective.

317. Canada, and FINTRAC in particular, regularly receives requests for corporate records and information on beneficial ownership of both corporations and trusts (which points to the relevance of Canadian legal entities and trusts in international ML operations). FINTRAC provides the requested information as long as it already has it (i.e. it has received a STR or other report including VIRs regarding the relevant corporation or trust), it can access it (e.g. information from the corporate registries of Alberta and Quebec, or from the MSB registry, when the ownership is 25% or more, or from any other public source). The IAG also receives requests for basic and beneficial ownership information which it forwards to LEAs for execution. Between 2008 and 2015, it received 222 for corporate or business records, including 78 related to ML and 1 to TF investigations. Most of these requests have been executed.

Overall Conclusions on Immediate Outcome 2

318. **Canada has achieved a substantial level of effectiveness for IO.2**.

TECHNICAL COMPLIANCE ANNEX

This annex provides detailed analysis of the level of compliance with the Financial Action Task Force (FATF) 40 Recommendations of Canada in their numerical order. It does not include descriptive text on the country situation or risks, and is limited to the analysis of technical criteria for each Recommendation (R.). It should be read in conjunction with the Detailed Assessment Report (DAR).

Where both the FATF requirements and national laws or regulations remain the same, this report refers to analysis conducted as part of the previous Mutual Evaluation in 2008. The report for that assessment or evaluation is available from the FATF website.[95]

Recommendation 1 - Assessing Risks and applying a Risk-Based Approach

The requirements of R.1 were added to the FATF standard in 2012 and were, therefore, not assessed during the previous mutual evaluation of Canada.

Obligations and Decisions for Countries

Risk Assessment

Criterion 1.1— The Government of Canada has developed a risk assessment framework to support the identification, assessment and mitigation of ML/TF risks and includes a process to update and enhance this assessment over time. ML and TF threats were documented separately. Canada completed its first National Risk Assessment (NRA), the "Assessment of Inherent Money Laundering and Terrorist Financing Risks in Canada," in December 2014. In April 2015, the senior officials of participating federal departments and agencies endorsed the internal and draft public versions of the report. In July 2015, the Minister of Finance, on behalf of the government, released the public version of the NRA.[96] Canada's ML/TF Inherent RA is supported by a documented NRA Methodology with defined concepts on ML/TF risks and rating criteria. The report, which reflects the situation in Canada up to 31 December 2014, provides an overview of the ML/TF threats, vulnerabilities and risks in Canada before the application of mitigation measures.

The NRA consists of an assessment of the inherent (i.e. before the application of any mitigation measures) ML/TF threats and inherent ML/TF vulnerabilities of key economic sectors and financial products, while considering the contextual vulnerabilities of Canada, such as geography, economy, financial system and demographics.

Pursuant to the Interpretative Note to R.1, if countries determine through their risk assessments that there are types of institutions, activities, businesses or professions that are at risk of abuse from ML and TF, and which do not fall under the definition of financial institution or DNFBP, they should

[95] See FATF (2008), Third Mutual Evaluation on Anti-Money Laundering and Combating the Financing of Terrorism, www.fatf-gafi.org/countries/a-c/canada/documents/mutualevaluationofcanada.html
[96] See Department of Finance Canada (2015), Assessment of Inherent Risks of Money Laundering and Terrorist Financing in Canada, www.fin.gc.ca/pub/mltf-rpcfat/index-eng.asp

consider applying AML/CFT requirements to such sectors. In that regard, the 2008 MER discussed whether Canada had considered extending AML requirements to white-label ATMs (see paragraphs 1357 to 1364). In a 2007 FINTRAC report highlighted the vulnerability of white-label ATMs to ML, and various press articles highlight the risk of misuse of white-label ATMs. The authorities are considering mechanisms to address this risk.

Criterion 1.2— The Department of Finance Canada (Finance Canada) is the designated authority for coordinating the work associated with the ongoing assessment of ML/TF risks. In Canada government responsibilities in regard to AML/CFT are divided between the federal government and the ten provinces (the three territorial governments exercise powers delegated by the federal parliament). In that regard, the execution of AML/CFT actions involves collaboration and coordination across all levels of government.

The terms of reference for (i) the Interdepartmental Working Group on Assessing ML and TF Risks in Canada and (ii) the permanent National Risk Assessment Committee (NRAC; the senior-level AML/CFT Committee) establish Finance Canada as the designated authority for the initiative. The Minister of Finance is the Minister responsible for the PCMLTFA. Therefore, as decided by the Cabinet, the responsibility for coordinating the AML/CFT regime and the NRA falls also to Finance Canada.

Criterion 1.3— Canada's risk assessment framework contemplates a process to update and enhance this assessment over time. In accordance with the document "Proposed Governance Framework for Canada's ML/TF Risk Assessment Framework" (endorsed on 13 November 2014), the NRA update is now coordinated through the NRAC, the successor body to the Working Group that developed the NRA. The Terms of Reference of NRAC were approved at the senior-level AML/CFT Committee in April 2015. NRAC is composed of representatives of the federal departments and agencies that comprise Canada's AML/CFT (and may invite other public and private sector partners to participate), which facilitates sharing findings across the organizations represented to help them understand the evolving risks and ML/TF environment, as well as discuss and propose mitigations. Finance Canada is the permanent co-chair of the NRAC; the other co-chair position rotates every two years among other federal departments or agencies. NRAC is required to prepare a formal update every two years on the results of the risk assessment and an informal update on an annual basis. The reports are addressed to the senior level AML/CFT Committee. As Canada completed its NRA in December 2014, it is relatively up to date. Furthermore, the Committee will meet every six months or more frequently if needed, to review emerging threats and new developments and will report to the senior-level Committee on an annual basis with updates.

Criterion 1.4—Information on the results of the NRA is provided to competent authorities, self-regulatory bodies, FIs and DNFBPs through different working groups, committees and outreach activities. The NRA was released publicly on 31 July 2015 (and is available on the websites of Finance, FINTRAC, and OSFI). The NRA methodology and results were also shared and discussed beforehand by Finance

Risk Mitigation

Criterion 1.5— The risk mitigation is implemented through various thematic national strategies, to wit: National Identity Crime Strategy (2011), Canada's Counter-terrorism Strategy (2013); National Border Risk Assessment 2013–2015; 2014–2016 Border Risk Management Plan; Enhanced Risk Assessment Model and Sector profiles; OSFI's AMLC Division AML and CFT Methodologies and Assessment Processes; OSFI-Risk Ranking Criteria; and the CRA's techniques to identify registered charities and organizations seeking registration that are at risk of potential abuse by terrorist entities and/or associated individuals.

Criterion 1.6— Financial activities are subject to AML/CFT preventive measures as required in the FATF Recommendations, except when these activities are conducted by the sectors that are not subject to AML/CFT obligations under the PCMLTFA. These sectors include check-cashing businesses, factoring companies, and leasing companies, finance companies, and unregulated mortgage lenders, among others. The NRA assessed the ML/TF vulnerabilities of factoring, finance and financial leasing companies as medium risk, while pointing out that these entities were very small players as a proportion of Canada's financial sector. However, the ML/TF risks for these sectors has not been proven to be low and the non-application of AML/CFT measures is not based on a risk assessment. .

Except for the legal profession, all DNFBP sectors are required to apply AML/CFT preventive measures. Lawyers are covered as obliged AML/CFT entities, pursuant to PCMLTR, Section (s.) 33.3; however, the AML/CFT provisions are inoperative in relation to lawyers and Quebec notaries (who provide legal advice and are, therefore, considered legal counsel, PCMLTFA s. 2) as a result of a 2015 Supreme Court of Canada ruling.

Supervision and Monitoring of Risk

Criterion 1.7— REs are required to implement enhanced or additional measures in high-risk situations pursuant to PCMLTFA, ss.9.6(2) and 9.6(3) and PCMLTFR, §71(c) and 71.1(a) and (b) (see discussion on R.10 for additional information on enhanced CDD measures). The REs are expected to integrate the NRA results in their own risks assessments.

PCMLTFA, s.9.6(2) provides that REs develop and apply policies and procedures to address ML and TF risks. PCMLTFA, s.9.6(3) and PCMLTFR, s.71.1(a) and (b) require REs to apply "prescribed special measures" to update client identification and beneficial ownership information, and to monitor business relationships when higher risks are identified through the entity's risk assessment.

Nevertheless, the provisions discussed in the paragraphs above do not apply to the sectors that are not subject to reporting obligations under the PCMLTFA. These include sectors such as the legal counsels, legal firms and Quebec notaries, factoring companies, financing and leasing companies, among others. Of these sectors, the legal counsels, legal firms and Quebec notaries are exposed to ample ML opportunities and are exposed to higher risks. Therefore, as the legal profession is not required to take enhanced measures regarding higher ML risks (or any ML risks, for that matter) the risks associated with this sector are not being effectively mitigated.

Exemptions

Criterion 1.8— PCMLTFR ss.9, 62 and 63 provide for exemptions from the customer identification and record-keeping requirements in certain specific circumstances assessed as low risk by the authorities (for details about the exemption regime, see discussion on R.10 below). OSFI and FINTRAC continuously assess the risks associated with their supervised sectors and the current assessment of low risks appear to be consistent with the findings of the NRA.

Criterion 1.9— PCMLTFA, s.40(e) requires FINTRAC to ensure compliance with PCMLTFA provisions. PCMLTFA, s.9.6(1)-(3) requires REs Act to implement measures to assess ML and TF risks, and monitor transactions in respect of the activities that pose high ML/TF risks. OSFI and FINTRAC apply a risk-based approach to the supervision of their supervised sectors. As discussed previously, the legal profession is not subject to AML/CFT obligations and is, therefore, not monitored by FINTRAC. However, some high-risk DNFBPs are not subject to AML/CFT obligations and are thus not supervised in relation to their obligations under R.1.

Obligations and Decisions for Financial Institutions and DNFBPs

Risk Assessment

Criterion 1.10— PCMLTFA, s.9.6(2) and PCMLTFR, §71(c) requires REs to conduct risk assessments and consider all the relevant risk factors before determining what is the level of overall risk and the appropriate level and type of mitigation to be applied. PCMLTFR, s.71(e) provides that the REs shall keep their risk assessments up to date. All supervised entities and those subject to examination by FINTRAC are obligated under their sector legislation or PCMLTFA, s.62 to provide any material that FINTRAC or sector regulators may require. FINTRAC Guideline 4 (Implementation of a Compliance Regime, February 2014) provides a checklist of products or services that should be considered high-risk. OSFI Guideline B-8 (Deterring and Detecting Money Laundering and Terrorist Financing) provides instruction on the FRFIs risk assessment policies and procedures. As mentioned above, none of the AML/CFT requirements are applicable to lawyers, legal firms, and Quebec notaries.

Risk Mitigation

Criterion 1.11— *a)* Under PCMLTFA s 9.6(1) and PCMLTFR, s.71, REs are required to develop written AML/CFT compliance policies and procedures, which are approved by a senior officer of the RE in accordance with PCMLFTR s.71(1)(b).

b) These policies and procedures, the risk assessment and training program are required to be reviewed at least every two years (PCMLFTR, ss.71(1)(e) and 71(2)). The REs must also assess and document ML and TF risks (PCMLTFA, s.9.6(2) and PCMLFTR, s.71(1)(c)).

c) There are several different provisions that require REs to implement enhanced or additional measures in high-risk situations: Under PCMLTFA, ss.9.6(2) and 9.6(3), REs are required to assess ML and TF risks and enhanced due diligence, record keeping and monitoring of financial transactions that pose a high risk of ML or TF. The PCMLTFR requires REs to apply enhanced measures when high risks are identified in their activities as a result of ongoing monitoring. The

sectors covered by the PCMLTFR are banks and other deposit-taking institutions (s.54.4); life insurance (s.56.4); securities (s.57.3); MSBs (s.59.02); accountants (s.59.12); real estate (s.59.22); British Columbia Notaries (s.59.32); real estate developers (s.59.52), casinos (s.60.2); and Departments and agents of the Queen in rights of Canada or a Province for the sale or redemption of money orders for the general public (s.61.2). The provisions addressing the legal profession are not applicable to legal counsels, legal firms and Quebec notaries for the reasons stated earlier. FINTRAC, Guideline 4 and OSFI Guideline B-8 provide additional guidance.

Criterion 1.12— The Canadian AML/CFT legislation does not provide for simplified measures.

Weighting and Conclusion:

The main inherent ML and TF risks were identified and assessed for the implementation of appropriate mitigation.

Canada is largely compliant with R.1.

Recommendation 2 - National Cooperation and Coordination

Canada was rated LC in the 2008 MER with former FATF R.31; the cooperation between the FIU and LEAs was not considered to be fully effective.

Criterion 2.1— Several national strategies and policies are in place to inform AML/CFT policies and operations. The main AML policies and strategies are the *National Identity Crime Strategy* (RCMP 2011); *National Border Risk Assessment 2013–2015* (CBSA); *2014–16 Border Risk Management Plan* (CBSA); *Enhanced Risk Assessment Model and Sector profiles* (FINTRAC); *AMLC Division AML and CFT Methodology and Assessment Processes* (OSFI); *Risk Ranking Criteria* (OSFI); *Risk-Based Approach to identify registered charities and organizations seeking registration that are at risk of potential abuse by terrorist entities and/or associated individuals* (CRA) and CRA-RAD Audit Selection process. The RCMP is currently developing their National Strategy to Combat Money Laundering. These AML strategies and policies are linked to the 2011 *Canadian Law Enforcement Strategy on Organized Crime*. In addition, the Government's other main AML/CFT concerns are reflected in Finance Canada's Report on Plans and Priorities,[97] which outlines the AML/CFT regime's spending plans, priorities and expected results. Canada's CFT strategy forms part of the broader Counter-terrorism Strategy.[98] Similarly, the country's PF strategy forms part of the broader strategy to counter the proliferation of chemical, biological, radiological and nuclear weapons.[99]

The TRWG is an interdepartmental body that serves as a forum to enhance dialogue, coordination, analysis and collaboration, among PS Portfolio members and government departments with an intelligence mandate, on issues related to threat resourcing, including ML, TF and proliferation

[97] Department of Finance Canada (2015), Report on Plans and Priorities 2015–16, p. 29, www.fin.gc.ca/pub/rpp/2015-2016/index-eng.asp
[98] Public Safety Canada (2013), Building Resilience Against Terrorism: Canada's Counter-terrorism Strategy, www.publicsafety.gc.ca/cnt/rsrcs/pblctns/rslnc-gnst-trrrsm/index-en.aspx
[99] Public Safety and Emergency Preparedness Canada (2005), The Chemical, Biological, Radiological and Nuclear Strategy of the Government of Canada, www.publicsafety.gc.ca/cnt/rsrcs/pblctns/rslnc-strtg-rchvd/index-en.aspx

activities, organized crime and other means through which threat actors resource their activities. It also highlights the security and intelligence components of files associated with Canada's AML/ATF Regime.

Criterion 2.2— Finance Canada is the domestic and International policy lead for the whole AML/CFT regime, and is responsible for its overall coordination, including AML/CFT policy development and guiding and informing strategic operationalization of the NRA framework.

Criterion 2.3— The Canadian regime is also supported by various interdepartmental formal and informal working-level bilateral and multilateral working groups and committees, depending on the nature of the issues to be addressed including: NRAC; NCC; IPOC ; IFAC; TRWG, and the ICC.

To combat ML, Canada also coordinates domestic policy on the federal criminal forfeiture regime under the IPOC. IPOC's interdepartmental Director General-level Senior Governance Committee led by Public Safety Canada includes: CBSA, CRA, PPSC, PS, PWGSC and the RCMP. The Committee is mandated to provide policy direction, promote interdepartmental policy coordination, promote accountability, and to support the Initiative.

The NCC is the primary forum that reviews progress of the National Agenda to Combat Organized Crime. NCC's 5 Regional Coordinating Committees communicate operational and enforcement needs and concerns to the NCC, acting as a bridge between enforcement agencies and officials and public policy makers. Canada coordinates domestic AML policy on the federal criminal forfeiture regime under the IPOC Advisory Committee and the IPOC Senior Governance Committee.

The IFAC is an interdepartmental consultative body that has the responsibility for the sharing, analysis and monitoring of information related to ML/TF threats posed to Canada by foreign jurisdictions or entities. The ICC assists the Minister of Public Safety and Emergency Preparedness by providing the requisite analysis and considerations to inform the recommendations to the Governor in Council regarding listing of entities.

OSFI and FINTRAC coordinate their activities through a common approach for supervision of FRFIs, starting in 2013, by conducting simultaneous AML/CFT examinations. FINTRAC informs its compliance enforcement strategies with findings provided by other federal and provincial regulators in order to monitor and enforce AML/CFT compliance by REs. FINTRAC has established 17 Memoranda of Understanding (MOU) with federal and provincial regulators for the purpose of sharing information related to compliance with Part 1 of the PCMLTFA. The RCMP leads the Integrated National Security Enforcement Teams (INSETs) in major centers throughout the country). INSETs are made up of representatives of the RCMP, federal partners and agencies such as CBSA, CSIS, and provincial and municipal police services.

Criterion 2.4— Counter-proliferation (CP) efforts, including proliferation financing, are coordinated via a formalized CP Framework created in 2013. PS chairs the Counter-Proliferation Policy Committee, at which CP partners identify, assess and address policy and programming gaps that may undermine Canada's CP capacity. Global Affairs Canada chairs the Counter-Proliferation Operations Committee, through which CP partners work together to address specific proliferation threats with a

Canadian nexus. FINTRAC is a member of the Operations Committee, and as per PCMLTFA s.55.1(1)(a), is able to disclose designated financial information to the Canadian Security Intelligence Service (CSIS) when it has reasons to suspect that it would be relevant to investigations of threats to the security of Canada, which includes proliferation activities. FINTRAC can also disclose information on threats related to proliferation to the appropriate police force and the CBSA if separate statutory thresholds are met.

Weighting and Conclusion:

Canada has a number of standing committees, task forces and other mechanisms in place to coordinate domestically on AML/CTF policies and operational activities.

Canada is compliant with R.2.

Recommendation 3 - Money laundering offense

Canada was rated LC with former R.1 and 2 based on a number of shortcomings. The range of predicate offenses was slightly too narrow and for one part of the ML offense the *mens rea* requirement was not in line with the FATF standard. Since 2008, the range of predicate offenses for ML was expanded to include tax evasion, tax fraud, and copyright offenses.

***Criterion* 3.1**— ML activities are criminalized through Criminal Code (CC), ss.354 (possession of proceeds), 355.2 (trafficking in proceeds), and 462.31 (laundering proceeds). *Conversion or Transfer:* CC, s.462.31 criminalizes the use, transfer, sending or delivery, transportation, transmission, altering, disposal of or otherwise dealing with property with the intent to conceal or convert the proceeds and knowing or believing that all or part of that property or proceeds was obtained or derived directly or indirectly as a result of a predicate offense. S.462.31 falls somewhat short of the FATF standard due mainly because the perpetrator must intend to conceal or convert the property itself rather than the illicit origin thereof. Additionally, no alternative purpose element of "helping any person who is involved in the commission of a predicate offense to evade the legal consequences of his or her action" is provided for. S.355.2 criminalizes many of the same acts as s.462.31 but without setting out any specific intent requirement. However, the Supreme Court in *Canada in R. v. Daoust, 2004, 1 SCR 217, 2004 SCC 6 (CanLII)* held that "the intention of parliament was to forbid the conversion pure and simple, of property the perpetrator knows or believes is proceeds of crime, whether or not he tries to conceal it or profit from it." *Acquisition, possession or use:* Ss.354 and 355.2. criminalize the sole or joint possession of or control over (s.354) and the selling, giving, transferring, transporting, exporting or importing, sending, delivering or dealing with in any way (s.355.2) of property or things that the person knows were obtained or derived directly or indirectly from an indictable offense. Neither provision explicitly refers to the "acquisition or use," but such acts would be covered by "control over proceeds" in s.354 and the various material elements under s.355.2. *Concealment or disguise:* Under CC, s.354 it is an offense to conceal or disguise property that the perpetrator has possession of or control over, in which case liability is invoked for "possession and trafficking of proceeds." Additionally, the concealment or disguise is covered under s.355.2 and liability is for "trafficking in proceeds."

Criterion 3.2— Ss.354 and 355.2 cover acts relating to proceeds of an "indictable offense;" and s 462.31 to proceeds of a "designated offense." "Designated offense" is defined as "any offense that may be prosecuted as an indictable offense other than those prescribed by regulation". Canada's ML provisions apply to all serious offenses under Canadian law and cover a range of offenses in each FATF designated categories of predicate offenses, including tax evasion.

Criterion 3.3— All serious offenses under Canadian law, defined as offenses with a statutory sanction of imprisonment for more than six months, constitute a predicate offense for ML. As indicated in the 2008 MER, federal laws criminalize a range of serious offenses under each FATF designated categories of predicate offenses.

Criterion 3.4— Ss.354, 355.2, and 462.31 apply to any property or proceeds of property obtained or derived, directly or indirectly, from the commission of an indictable offense. No value threshold applies. "Property" is defined under s.2 of the CC to include real and personal property of every kind and deeds and instruments relating to or evidencing the title or right to property, or giving a right to recover or receive money or goods, including converted or exchanged property. The definition covers material and immaterial, tangible and intangible, and corporeal and incorporeal property as well as interest in such property.

Criterion 3.5— The legal provisions do not require a conviction for a predicate offense to establish the illicit source of property. Case law further confirmed this principle. [100]

Criterion 3.6— The text of ss.354, 355.2 and 462.31 apply the relevant offenses to indictable offenses committed in Canada and to any act or omission committed abroad that would have constituted an indictable offense had it occurred in Canada.

Criterion 3.7— Nothing in the relevant provisions prevent their application to the person who committed the predicate offense. Canadian case law supports the notion that the ML provisions can also be applied to the person who committed the predicate offense.[101]

Criterion 3.8— As a general rule, Canada allows for the intentional element of criminal offenses to be inferred from objective factual circumstances and based on credible, admissible and relevant circumstantial evidence. This principle has been confirmed through case law in multiple instances, as indicated in the 2008 MER.[102]

Criterion 3.9— Offenses pursuant to s.354 are punishable with imprisonment for up to ten years (if the value of the property exceeds CAD 5 000) or for up to two years (if the value of the property is less than CAD 5 000). S.355.5 applies the same value thresholds but set out slightly stricter sanctions of imprisonment for up to 14 years or up to five years, respectively. S.462.31 provides for a statutory

[100] United States of America and the honorable Allan Honourable Allan Rock, Minister of Justice for Canada v. Dynar, 1997, 2 SCR 462, 1997, CanLII 359 (SCC); R.c.Chun, 2015 QCCQ 2029 (CanLII); and R.c. Lavoie, 1999 CanLII 6126 (QCCQ).
[101] R. v. Tortine, 1998, 2 SCR 972, 1993 CanLII 57 (SCC); and R. v. Trac at R. v. Trac, 2013 ONCA 246 (CanLII).
[102] Manitoba Court of Appeal in R. v. Jenner (2005), 195 CCC (3d) 364 at para 20; and Ontario Court of Appeal in R. v. Aiello (1978), 38 CCC (2d) 485 affirmed 46 CCC (2d) 128n SCC at page 488.

sanction of imprisonment for up to ten years, regardless of the amounts involved. The statutory sanctions may be increased or reduced pursuant to CC, s.718.2 based on aggravating or mitigating circumstances. CC, s.718.1 requires that the sanction in all cases be proportionate to the gravity of the offense and the degree of responsibility of the offender. The statutory sanctions are considered to be both dissuasive and proportionate.

Criterion 3.10— Legal entities may be subject to criminal liability and be held criminally responsible for ML. Pursuant to CC, s.735 (1) a legal entity, partnership, trade union, municipality or association convicted of an indictable offense is liable to a fine with the relevant amount being determined by the court. In determining the relevant sanction, s.718.21 stipulates that factors such as the advantage realized, the degree of planning involved in carrying out the offense, whether the organization has attempted to conceal its assets or convert them to avoid restitution; and any regulatory penalty imposed shall be taken into account. CC, s.718.1 requires that a sentence must in all cases be proportionate to the gravity of the offense and the degree of responsibility of the offender. Given the wide discretion the court has in determining the sanction, the statutory sanctions are considered to be dissuasive and proportionate. Parallel civil or administrative sanctions may be applied in addition to the criminal process.

Criterion 3.11— Ancillary offenses are criminalized in the general provisions of the CC (s.24— Attempt; s.21 (1)—aiding and abetting; s.21 (2)—conspiracy to commit; s.22— counselling, procuring, soliciting or inciting to commit; s.23—accessory after the fact).

Weighting and Conclusion:

Canada is compliant with R.3.

Recommendation 4 - Confiscation and provisional measures

Canada was rated LC with former R.3.

Criterion 4.1— CC, s.462.37 (1) provides for the permanent forfeiture of proceeds of crime based on a conviction for a designated offense. CC, s.490.1 (for all crimes) and Controlled Drugs and Substances Act (CDSA), ss.16 and 17 set out similar forfeiture provisions in relation to property used or intended to be used for the commission of an indictable offense. In all cases, the court will consider forfeiture based on the application by the Attorney General. In the context of convictions for participation in a criminal organization or offenses under the CDSA, extended forfeiture orders may be granted for material benefits received within 10 years before commencement of the proceedings and income from sources that cannot be reasonably accounted for. In a standalone ML case, CC, s.462.37(1) allows for the confiscation of the proceeds of the laundering activity as well as the property laundered, although for the latter a stricter standard of proof would apply. CC, ss.462.37 (1) and 490.1 allow for forfeiture of property from a third party. In cases where the accused has died or absconded, forfeiture *in rem* is available under ss.462.38 and 490.2.

Equivalent value confiscation is not permitted. CC, s.462.37(3) provides for the issuance of a fine in lieu of forfeiture in cases where the court determined that a forfeiture order under CC, s.462.37 cannot be made in respect of any property. While the issuance of a fine may result in the same outcome as an equivalent value confiscation, from a legal point of view the concept of a fine cannot substitute equivalent value confiscation.

Criterion 4.2— The CC and CDSA set out a wide range of measures including search and seize warrants pursuant to CC, ss.487, 462.32 and 462.35 and CDSA, s.11; production orders pursuant to CC, s.487.018 regarding the existence of bank accounts; production orders pursuant to CC, ss.487.014 and 487.015; warrants for transmission of data including computer and telecommunication program recordings under CC, s.492.2; general information warrants under CC, s.487.01 and tax information orders under CC, s.462.48. The power under CC, s.487.01 to "use any device, investigation technique or procedure or do anything described in the warrant" is sufficiently broad to also cover account monitoring, In addition, PCMLTFA, s.23 allows for the seizure and forfeiture of cash or bearer-negotiable instruments for violations of the cross border declaration obligation. Seizing and restraint warrants to secure property or instrumentalities for forfeiture are available under CC, ss.462.33 and 490.8 and CDSA, s.14. Seizing and restraint orders may be issued based on reasonable grounds to believe that a forfeiture order will be made in regards to the relevant property. In both cases, the judge may opt to apply provisional measures ex parte and without prior notice. CC, ss.490.3 and 462.4 permit the judge to void any conveyances of transfers unless the transfer was for valuable consideration to a bona fide third party. Prior to the issuance of a seizing or restraint order, the holder of such property may become subject to criminal liability under CC, s.354(1) provided he acted knowingly. A specific forfeiture provision for property owned or controlled by a terrorist group or property that has been or will be used to carry out a terrorist activity is set out in CC, s.83.14.

Criterion 4.3— Rights of bona fide third parties are protected through CC, ss.462.42, 462.34 (b), 490.4 (3) and 490.5 (4), which allow for exclusion of certain property from a restraining, seizing, or forfeiture order.

Criterion 4.4— The Seized Property Management Act regulates the management of seized or restrained property and the disposal and sharing of forfeited property. Under the Act, the Minister of Public Works and Government Service is competent to take into custody all such property and may take any measures he deems appropriate for the effective management thereof. Forfeited property is to be disposed of and the proceeds to be paid into the Seized Property Proceeds Account. Fines paid in lieu of forfeited property and amounts received from foreign governments under asset-sharing agreements are to be credited to the Proceeds Account as well. Excessive amounts in the Account are to be credited to accounts of Canada as prescribed by the Governor in Council.

Weighting and Conclusion:

The confiscation framework has some shortcomings.

Canada is largely compliant with R.4.

Recommendation 5 - Terrorist financing offence

Canada was rated LC with former SR. II.

Criterion 5.1— TF is criminalized through CC, ss.83.02 to 83.04: S. 83.02 criminalizes the direct or indirect, wilful and unlawful collection or provision of property with the intent that the property is to be used or knowing that the property will be used to carry out a terrorist activity. CC, s.83.04 criminalizes the use of property for the purpose of facilitating or carrying out a terrorist activity, and the possession of property intending that it be used or knowing that it will be used to facilitate or carry out a terrorist activity. CC, s.83.01 defines "terrorist activity" to cover all acts which (1) constitute an offense as defined in one of the conventions and protocols listed in the Annex to the TF Convention, all of which are criminalized in Canada; and (2) any other act or omission carried out with terrorist intent.

Criterion 5.2— CC, s.83.03(a) criminalizes the direct or indirect collection or provision of property with the intent that such property is to be used or knowing that such property will be used to benefit any person who is facilitating or carrying out a terrorist activity. The offense applies also where the property is used by the financed person for a legitimate purpose. CC s.83.03(b) covers the direct or indirect collection or provision of property, knowing that such property, in whole or in part, will benefit a terrorist group. "Terrorist group" includes a person, group, trust, partnership, or fund or unincorporated associations or organizations that has as one of its purposes or activities the facilitating or carrying out of any terrorist activity. The mental element required under subsection (b) is slightly stricter than under subsection (a) as the offense only applies where the perpetrator knows that property will be used for the benefit of a terrorist group, but not where he merely intends for this to be the case. For both CC, ss. 83.03 (a) and (b) the courts have interpreted the term "facilitates" broadly to cover "any behaviour/activity taken to make it easier for another to commit a crime."[103] The term thus includes the "organizing or directing of others" to commit a terrorist activity, or the "contributing to the commission of a terrorist activity by a group of persons acting with a common purpose."

Criterion 5.3— "Property" is defined under CC, s.2 to include real and personal property of every kind and deeds and instruments relating to or evidencing the title or right to property or giving a right to recover or receive money or goods, including converted or exchanged property. CC, ss.83.01 to 83.03 are not limited in scope to financing activities involving illicit property. The source of the property used for the financing activity is irrelevant.

Criterion 5.4— CC, s.83.02 implies that the financing offense can also be applied in cases where a person collects or provides property merely with the intention to finance a specific terrorist activity. Thus, it is neither required that the financed activity has been attempted or committed, nor that the money collected or provided is linked to a specific terrorist activity. CC, s.83.03(b) extends to the collection or provision of funds for the benefit of a terrorist group, regardless of the purpose for which the funds are eventually used, but does not cover financing merely with the intent to benefit

[103] R. v. Nuttall, 2015 BCSC 943 CanLII.

an individual terrorist or terrorist organization. For financing of individual terrorists, CC, s.83.03(a) applies where the financed person is facilitating or carrying out a terrorist activity at the time the financing activity takes place and CC, s.83.03(b) covers situations where the property collected or provided is known to be used by or benefit a terrorist.

Criterion 5.5— Canada allows for the intentional element of criminal offenses to be inferred from objective factual circumstances and based on credible, admissible and relevant circumstantial evidence. This principle has been confirmed through case law in multiple instances, as indicated in the 2008 MER.[104]

Criterion 5.6— The statutory sanctions for a natural person is imprisonment for up to ten years with the possibility of an increased or reduced sentence pursuant to CC, ss.718.2 and 718.21 based on aggravating or mitigating circumstances. The statutory sanctions are considered to be both dissuasive and proportionate.

Criterion 5.7— Legal entities may be held criminally responsible for terrorism financing. Pursuant to CC, s.735 (1) of the CC, a legal entity, partnership, trade union, municipality, or association may fine in an amount that is in the direction of the court. CC, s.718.21 stipulates that factors such as the advantage realized, the degree of planning involved in carrying out the offense, whether the organization has attempted to conceal its assets or convert them to avoid restitution; and any regulatory penalty imposed shall be taken into account by the court. CC, s.718.1. CC further requires that the sentence be proportionate to the gravity of the offense and the degree of responsibility of the offender. Given the wide discretion by court in determining the sanction, the statutory sanctions are dissuasive and proportionate. Parallel civil or administrative sanctions may be applied.

Criterion 5.8— Ancillary offenses are criminalized in the general provisions of the CC (s.24—Attempt; s.21 (1)—aiding and abetting; s.21 (2)—conspiracy to commit; s.22—counselling, procuring, soliciting or inciting to commit; s.23—accessory after the fact). s.83.03 criminalizes inviting another person to provide or make available property for TF and ss.83.21 and 83.22 to knowingly instruct, directly or indirectly, any person to carry out an activity for the benefit of, at the direction of or in association with a terrorist group for the purpose of enhancing the ability of that group to facilitate or carry out a terrorist activity.

Criterion 5.9— Canada takes an all crimes approach to defining predicate offenses for ML. TF is, thus, a predicate offense for ML.

[104] Manitoba Court of Appeal in R. v. Jenner (2005), 195 CCC (3d) 364 at para. 20; and Ontario Court of Appeal in R. v. Aiello (1978), 38 CCC (2d) 485 affirmed 46 CCC (2d) 128n SCC at page 488.

Criterion 5.10— CC, ss.83.02 and 83.03 apply regardless of whether the underlying terrorist activity is committed inside or outside Canada, or whether the terrorist group or financed person is located inside or outside Canada.

Weighting and Conclusion

TF is set out as a separate criminal offense that covers all aspects of the offense set out in the Terrorism Financing Convention, with minor shortcomings.

Canada is largely compliant with R.5.

Recommendation 6 - Targeted financial sanctions related to terrorism and terrorist financing

Canada was rated LC with former SR. III. For certain FIs and other persons or entities that may hold targeted funds the assessors found that the names of designated persons and entities were not effectively communicated, the guidance issued was not sufficient and the implementation of the relevant legal provisions was not effectively monitored. The framework for the implementation of the TF-related targeted financial sanctions remains substantially unchanged. A new Security of Canada Information Sharing Act was adopted in 2015 to facilitate the sharing of information between Canadian government agencies with regards to any activity that undermines the security of Canada, including terrorism.

Identifying and Designating

Under United Nations Act, s.2, the Governor in Council may issue regulations to give effect to decisions and implement measures decided by the UNSC pursuant to Article 41, Chapter VII of the UN Charter. Two Regulations were issued on this basis—the *United Nations Al-Qaida and Taliban Regulations* (UNAQTR) and the *Regulations Implementing the United Nations Resolutions on the Suppression of Terrorism* (RIUNRST). In 2001, Canada enacted an additional domestic terrorist listing procedure under CC, ss.83.05 to 83.12 in addition to the RIUNRST. Over time, the listing mechanism under the CC has become the primary domestic listing regime and consequently no listings have been added to the RIUNRST since 2006. The Security of Canada Information Sharing Act facilitates implementation of the mechanisms by allowing for the exchange of information between government agencies with regards to terrorism, either spontaneously or upon request.

Criterion 6.1— *Sub-criterion 6.1a*—Department of Foreign Affairs, Trade and Development Act, s.10(2)(b) assigns responsibility to the Minister of Foreign Affairs for all communications between Canada and international organizations, including for proposing designations under UNSCR 1267/1989 or 1988 to the relevant UN Sanctions Committees.

Sub-criterion 6.1b—Based on the above mentioned s.10(2)(b), the Minister of Foreign Affairs identifies, reviews and proposes individuals or entities for designation, in consultation with an interdepartmental committee of security and intelligence officials. The interdepartmental committee on average meets once a month to discuss all listing regimes.

Sub-criterion 6.1c—The authorities stated that the identification process outlined above is based on a standard of "reasonable grounds to believe" and that a criminal conviction was not necessary for proposing the designation of an entity or individual to the UN. In the absence of any written procedures on this point, the assessors were not in a position to verify the authorities' view.

Sub-criterion 6.1d—Canada supports co-designation and co-sponsorship and its experience in proposing designations was so far limited to cosponsoring proposals for designations. To propose designations, Canada would use the UN standard forms and follow the procedures outlined under UNSCR's 2160 and 2161 (2014) and the relevant Sanctions Committee Guidelines.

Sub-criterion 6.1e—The authorities stated that Canada would provide as much relevant information to support a proposal for designation as possible, including identifying information and a statement of case.

Criterion 6.2— *Sub-criterion 6.2a*—Canada implements UNSCR 1373 through two distinct mechanisms: (i) for terrorist groups, CC, s.83.05 grants the Governor in Council the authority to list, on the basis of a recommendation by the Ministry of Public Safety Canada, a person, group, trust, partnership or fund or unincorporated association or organization. Requests for designation from another country can also be considered under the CC process; (ii) the RIUNRST designates the Governor in Council as responsible for making designations on the basis of a recommendation by the Minister of Foreign Affairs (Article 2 RIUNRST). The Minister may recommend a designation under the RIUNRST also based on a request from another country. In practice the mechanisms under the CC is the main one and no listings have been added to the RIUNRST since 2006.

Sub-criterion 6.2b—The CC and RIUNRST include mechanisms for identifying targets for designation and to decide upon designations based on clearly stipulated criteria in line with the designation criteria under UNSCR 1373.

Sub-criterion 6.2c—Foreign requests for designations are processed the same way as domestic designations. As a first step, authorities ensure that a request for listing is supported by verified facts that meet the legal threshold. Verification includes both factual and legal scrutiny. After verification is completed, the proposed listing is presented to the Cabinet and the relevant Minister recommends to the Governor in Council that the foreign request be granted. Authorities stated that the process takes on average six months but can be expedited, if necessary.

Sub-criterion 6.2d—The Governor in Council takes the decision to designate based on "reasonable grounds to believe" that a person meets the designation criteria in CC or the RIUNRST, independently from any criminal proceedings.

Sub-criterion 6.2e—The authorities stated that when making 1373 request to other countries, as much identifying information as possible would be provided to the requesting country to allow for a determination that the reasonable basis test is met Canada stated that it is in regular contact with its allies to discuss potential listings and notifies G7 partners prior to any domestic listing.

Criterion 6.3— The Canadian Security Intelligence Service Act s. 12 grants the CSIS the power to collect and analyse information on activities that may threaten Canada's security and to report and advise the government of any such activities. The Security of Canada Information Sharing Act, s.5 further allows government agencies to share such information. In the context of a criminal suspicion or the designation procedure under CC, s.83.05 the authorities may also collect information under criminal procedures. The outlined measures may in all cases be applied *ex parte* to avoid tipping off.

Freezing

Criterion 6.4— The UNAQTR, CC and RIUNRST set out a wide range of prohibitions to deal with property of or provide financial services to designated persons. The prohibitions apply as soon as any person is designated by the competent UN Sanctions Committee (for UNSCR 1267/1989 or 1988) or is added to the Regulations Establishing a List of Entities pursuant to the CC or is included in Schedule 2 to the RIUNRST (for UNSCR 1373). The prohibitions apply without delays, as soon as a person has been designated by the UN (for UNSCR 1267 and 1988) or was added to the domestic list. The term "person" covers both natural and legal persons.

Criterion 6.5— No authority has been designated for monitoring compliance by FIs and DNFBPs with the provisions of the UNAQTR, CC, and RIUNRST. Sanctions for violations of the Regulations are available but have never been applied in practice.

Sub-criterion 6.5a—The UNAQTR, CC and RIUNRST prohibit that any person or entity in Canada or any Canadian outside Canada knowingly deals with; provides financial or other services to; or enters into or facilitates any financial transaction involving funds or property of a designated person. The prohibition applies as soon as a person is listed and covers all aspects of the freezing obligation, thus also without prior notice.

Sub-criterion 6.5b—The UNAQTR, RIUNRST, and CC target funds or property owned or controlled, directly or indirectly, by any designated person or by any person acting on behalf or at the direction of a designated person. In the case of the UNAQTR but not the CC, does the prohibition extend also to funds derived or generated from such property. The concepts of "ownership and control" also cover property owned and controlled jointly. The obligations under all three procedures apply to property of every kind, including any funds, financial assets or economic resources.

Sub-criterion 6.5c—The UNAQTR, the CC, and RIUNRST prohibit Canadians and any persons in Canada from making property or financial or other services available, directly or indirectly, for the benefit of a designated person (Articles 4 RIUNRST; CC, ss.83.08 and UNAQTR s.4 and 4.1. CC, s.83.03 further criminalizes the provision of property or services to a listed entity, but the prohibition does not extend the provision of services to entities owned or controlled by a designated person or persons acting on behalf or at the discretion of a designated person.

Sub-criterion 6.5.d—Canada makes public all designations under all three listing regimes on government websites and through notification services. FRFIs have the option of signing up to receive information notices regarding list changes from OSFI and/or directly from the 1267 Al-Qaida

Sanctions Committee and the 1988 Taliban Sanctions Committee. OSFI receives a note verbale from the 1267 Al-Qaida Sanctions Committee and the 1988 Taliban Sanctions Committee in advance of a formal press release (i.e. before the Committees lists the entities publically). OSFI sends out email alerts to those entities that subscribe to its email notifications of any changes to the lists the same day or subsequent day from receiving the note verbale. However, if there are extensive changes to the lists, this process can be delayed by two weeks. The UN 1267 Al-Qaida Committee and 1988 Taliban Sanctions Committee also notify all email subscribers, which can include FIs or any persons, of new listings and de-listings the same day or the next UN business day. REs are informed without delay of any entities listed under the CC and RIUNRST. When an entity becomes listed pursuant to the CC, a notice is published in the *Canada Gazette*, which constitutes official public notice of the listing. These changes are also included in OSFI's email notifications. Public Safety also issues a news release for all new listings and de-listings, and both Public Safety and OSFI include information on its websites.

Sub-criterion 6.5.e—Banks, cooperative credit societies, savings and credit unions, and insurance companies are required to determine, on a continuous basis, whether they are in possession of targeted funds or property and must regularly report this and any associated information to the competent supervisory authority (OSFI or FINTRAC depending on whether it is a FRFI or not). A more general obligation applies to any person in Canada and any Canadian outside Canada to report to the RCMP or the CSIS transactions or property believed to involve targeted funds.

Sub-criterion 6.5.f—The CC and the RIUNRST both prohibit persons from "knowingly" dealing with listed entities. Third parties acting in good faith are thus protected in that they would not be covered under these obligations. The CC further clarifies that any person who "acts reasonably in taking, or omitting to take, measures to comply" with the relevant obligations shall not be liable in any civil action if they took all reasonable steps to satisfy themselves that the relevant property was owned or controlled by or on behalf of a terrorist group. The procedures under the UNAQTR, the RIUNRST and the CC for delisting and access to frozen funds also apply to protect bona fide third parties.

De-Listing, Unfreezing and Providing Access to Frozen Funds or other Assets

Criterion 6.6— The UNAQTR, CC and RIUNRST set out mechanisms for the delisting of persons or entities that do not meet the designation criteria (respectively in UNAQTR, ss.5.3. and 5.4.; CC, ss.83.05(5) and 2.1., and RIUNRST, s.2.2). Both Regulations and the CC are published in the official Gazette and the relevant procedures are thus "publicly known." CC, s.85.05(9) requires the Minister of Public Safety and Emergency Preparedness to review the list of entities every two years to determine whether there are still reasonable grounds for the entities to remain listed. The Minister can recommend to the Governor in Council at any time that an entity be delisted, either as part of the review process or upon application by the listed entity. Information on delisting processes is also set out at www.international.gc.ca/sanctions/countries-pays/terrorists-terroristes.aspx?lang=eng.

Sub-criterion 6.6.a—Under the UNAQTR, the Minister based on written receipt of a motion to delist under s 5.3 decides whether to forward a petition for delisting to the UN. The Minister's submission must be in accordance with guidance issued by the relevant UN Sanctions Committee. The possibility

of a judicial review of the Minister's decision is provided for under s.5.4. Procedures to unfreeze funds of de-listed entities are not available but the obligations under the UNAQTR automatically cease to apply once a person is removed from the UN's list.

Sub-criterion 6.6.b—The delisting procedures under the CC and RIUNRST are similar to those under the UNAQTR insofar as a listed entity may apply in writing to the relevant Minister to request to be removed from the list. Upon receipt of a written application for delisting from the relevant Minister, it has 60 days to determine whether there are reasonable grounds to recommend a delisting to the Governor in Council. The applicant can seek a judicial review of this decision.

Sub-criterion 6.6.c—Judicial review of the listing decision is available upon receipt of a motion to delist.

Sub-criterion 6.6d and 6.6e—UNAQTR, s.5.3 provides Canadians and any residents of Canada the option to apply to the Minister to be delisted from the 1988 or 1267 sanctions lists in accordance with the Guidelines of the 1988 and 1267 Sanctions Committees.

Sub-criterion *6.6f*—Pursuant to UNAQTR, s.10 and RIUNRST, s.10 a person claiming not to be a listed entity may apply to the Minister of Foreign Affairs for a certificate stating that the person is not a listed entity. The Minister then has a specific period of time to issue the certificate if it is established that the individual is not a listed entity. CC, s.83.07 allows an entity claiming not to be a listed entity to apply to the Minister of Public Safety and Emergency Preparedness for a certificate stating that it is not a listed entity.

Sub-criterion 6.6.g—Any changes to designations under the UNAQTR, CC or RIUNRST result in the publication of an updated Schedule to the relevant Regulation. For changes to the 1267/1988 lists, FIs and DNFBPs can subscribe to an automatic notification system. OSFI also notifies those entities that have subscribed to its email list of any changes to any of the three listing regimes.

Criterion 6.7— The Minister of Foreign Affairs or the Minister of Public Safety and Emergency Preparedness (for the CC) may grant a person access to frozen funds to cover basic or extraordinary expenses pursuant to UNAQTR, s.10.1, CC, s.83.09 or RIUNRST, s.5.7. Under the UNAQTR, the Minister must notify (for basic expenses) or obtain authorization from (for extraordinary expenses) the relevant UN Sanctions Committee before he/she may grant a motion for access to frozen funds. Once granted, the Minister issues a certification exempting the relevant property or funds from the scope of the Regulations. Under UNAQTR the procedures applied by the Minister have to be in line with the requirements under UNSCR 1452 (2002).

Weighting and Conclusion

There are some shortcomings in regard to the requirements of UN Resolutions 1267, 1988, and 1373.

Canada is largely compliant with R.6.

Recommendation 7 – Targeted financial sanctions related to proliferation

R.7 includes new requirements that were not part of the previous assessment.

Criterion 7.1— Two regulations implementing targeted financial sanctions (TFS) relating to Iran and North Korea were issued under Canada's *United Nations Act*—the *Regulations Implementing the United Nations Resolutions on Iran (RIUNRI)* and the *Regulations Implementing United Nations Resolutions on the Democratic People's Republic of Korea (RIUNRDPRK)*. Both require any person in Canada and any Canadian outside Canada to implement TFS in relation to individuals or companies that have been designated by the UN under paragraph 8(d) of UNSCR 1718 (ss.7, 8, and 9 RIUNRDPRK for North Korea) or paragraphs 10 or 12 of UNSCR 1737 (ss.5, 6, 9 and 9.1 RIUNRI for Iran). Under both regulations, it is clear that the relevant prohibition applies only from the date the relevant UNSCR came into force and not retroactively. Neither regulation specifies that sanctions must be applied "without delay" but the relevant obligations and prohibitions apply as soon as a person or entity is included in the UN's list of designated persons, and the communication procedures described under criterion 7.2(d) are sufficient that new listings are brought to the attention of the public. The Security of Canada Information Sharing Act facilitates the implementation of the two regulations by allowing for the exchange of information between government agencies with regards to proliferation of nuclear, chemical, radiological, or biological weapons, either spontaneously or upon request.

Criterion 7.2— Under UN Act, s.2 the Governor in Council issues regulations to give effect to decisions and implement measures decided by the UN Security Council (UNSC) pursuant to Article 41, Chapter VII of the UN Charter. Section 9 of the RIUNRDPRK and RIUNRI impose freezing obligations by prohibiting any person in Canada and any Canadian outside Canada from dealing with; or entering into or facilitating any financial transaction relating to; or providing financial or other related services in relation to property owned or controlled directly or indirectly by a designated person or by a person acting on behalf or at the direction of a designated person.

Sub-criterion 7.2.a—The legal prohibitions are triggered without delay as soon as a person is designated by the UN.

Sub-criterion 7.2b—The above-mentioned prohibitions apply to property owned or controlled by a designated person, including those owned or controlled jointly, or by a person acting on behalf or at the direction of a designated person.

Sub-criterion 7.2c—Under both regulations it is an offense to make property or any financial or other related services available, directly or indirectly, for the benefit of a designated person. Article 3 of the UN Act prescribes sanctions of a fine of up to CAD 100 000 or imprisonment for not more than two years or both (upon summary conviction); or to imprisonment for a term of not more than 10 years (upon conviction on indictment).

Sub-criterion 7.2d—The communication procedures described in criterion 6.5d are also applicable in the context of the RIUNRI and RIUNRDPRK. Canada publishes new designations in the public Canada

Gazette as well as on government websites and through notification services. The Ministry of Foreign Affairs has issued guidance for both sanction regimes.[105]

Sub-criterion 7.2e—All FRFIs and casualty insurance companies, savings and credit unions, and other provincially regulated FIs are required to determine, on a continuous basis, whether they are in possession of targeted funds or property and must freeze such property and regularly report this and any associated information to the competent supervisory authority (ss.11 RIUNRI and RIUNRDPRK). More general obligations apply to any person in Canada and any Canadian outside Canada to report to the RCMP or the CSIS transactions or property believed to involve targeted funds.

Sub-criterion 7.2f—The RIUNRI and RIUNRDPRK prohibitions apply only in cases where a person acts "knowingly." Bona fide third parties acting in good faith are, therefore, protected.

Criterion 7.3— Apart from the notification system outlined, under criterion 7.2.e, Canada does not have a mechanism in place for monitoring compliance by FIs and DNFBPs with the provisions of the RIUNRI and RIUNRDPRK. Sanctions for violations of the Regulations are available, but have never been applied in practice.

Criterion 7.4— Global Affairs Canada provides guidance on its homepage on the procedures and content of the RIUNRI and RIUNRDPRK.[106] While the homepage provides information that needs to be submitted as part of an application to the Minister for delisting, it does not give information on the procedures applied by the Minister to submit delisting requests to the UN on behalf of a designated person or entity.

Sub-criterion 7.4.a—Neither the Regulations nor the Global Affairs' homepage provide information on the availability of the UN Focal Point as a direct or indirect way to effect a delisting.

Sub-criterion 7.4.b—Claims of false positives can be filed with and granted by the Minister under RIUNRDPRK, s.14 and RIUNRI, s.16. *Sub-criterion 7.4.c*—RIUNRDPRK, s.15 and RIUNRI, s.17 further provide for the possibility for the Minister to grant access to frozen funds subject to the conditions and procedures set out in UNSCR 1718 and 1737.

Sub-criterion 7.4.d—FIs and DNFBPs can subscribe to the UNs automatic notification system found on its website. OSFI also notifies those entities that have subscribed to its email list of any changes to any of the three listing regimes. Detailed guidance on the provisions of the RIUNRI and RIUNRDPRK is provided on the Global Affairs' homepage.

Criterion 7.5— Neither Regulation allows for additions to frozen accounts but the Minister may permit such additions on the basis of a one-off exemption. Payments from frozen accounts are

[105] Global Affairs Canada (nd), Canadian Sanctions Related to Iran, www.international.gc.ca/sanctions/countries-pays/iran.aspx?lang=eng; Canadian Sanctions Related to North Korea, www.international.gc.ca/sanctions/countries-pays/korea-coree.aspx?lang=eng.
[106] See footnote 16.

permitted under the circumstances set out in relevant UNSCRs based on RIUNRI, s.19 and RIUNDPRK, s.15.

Weighting and Conclusion

There are minor shortcomings in regard to the implementation of the RIUNRI and RIUNRDPRK.

Canada is largely compliant with R.7.

Recommendation 8 – Non-profit organisations

Canada was rated LC with former SR. VIII, with only one deficiency having been identified regarding coordination amongst competent domestic authorities.

Criterion 8.1— *Sub-criterion 8.1.a*—The adequacy of laws and regulations relating to NPOs is reviewed on an ongoing basis and has recently resulted in amendments of various laws and regulations.

Sub-criterion 8.1.b—Canada has carried out a risk assessment of its NPO sector and determined that registered charities pose the greatest risk of TF in Canada and, thus, shall fall within the functional definition of "non-profit organization" as defined under the FATF standard. Canada's risk mitigation efforts are primarily focused on registered charities.

The NRA, which focuses on inherent risk, indicates that both for domestically and internationally operating charities, it may be difficult in practice to determine the origin or ultimate use of funds. In addition to the NRA, the CRA in 2015 conducted a comprehensive review of the entire NPO sector. Other relevant studies and reviews include the Canadian Non-Profit and Voluntary Sector in Comparative Perspective in March 2005; the Canada Survey on Giving, Volunteering and Participating in 2010; and the CRA's Non-Profit Organization Risk Identification Project, all of which provide insight into the way NPOs are organized and operate in Canada. All registered charities, regardless of the value of their assets, as well as non-charitable NPOs with assets in excess of CAD 200 000 or annual investment income exceeding CAD 10 000, must file an annual Information Return with the CRA, which includes information about their activities, assets and liabilities, and the amount of money received during the fiscal period in question. Incorporated NPOs are subject to additional filing obligations pursuant to the relevant statutes. NPOs must indicate whether they carry out activities outside of Canada (and specify where) and disclose the physical location of their books and records. Through information provided in these returns, the CRA has the capacity to obtain timely information on the activities, size and relevant features of the NPO sector and to identify those NPOs that are particularly at risk of abuse by virtue of their activities or characteristics.

Sub-criterion 8.1.c—The efforts described under the previous sub-criteria are ongoing and continuously integrate new information on the sector's potential vulnerabilities.

Criterion 8.2— Awareness raising events are focused on registered charities as those are the organizations that fall within the FATF definition of NPOs. The CRA is undertaking efforts to increase awareness amongst registered charities of terrorism financing risks and vulnerabilities, including on international best practices for mitigating terrorism financing risks in the charities sector, sound governance, accountability procedures, transparency reporting, as well as consultative processes and presentations by senior management. The CRA also maintains a grants program to motivate and reward the development and application of innovative compliance programs amongst charities. Many of these activities include a TF component.

Criterion 8.3— Canada imposes comprehensive registration and regulatory requirements on charities under the Income Tax Act (ITA). Other NPOs may operate without being subject to any registration requirements, but are subject to record-keeping obligations on their stated purpose, administration, and management pursuant to the federal or provincial legislation under which they were established. In addition, all registered charities, regardless of the value of their assets, and all NPOs with assets in excess of CAD 200 000 or annual investment income exceeding CAD 10 000 must file an annual information return with the CRA. Based on the information provided by the authorities, it is estimated that as of December 2014, a total of 180 000 NPOs existed in Canada of which 86 000 or about 50%, were registered under the ITA. Under the ITA, a failure by a registered charity to comply with the registration requirements, including links to terrorism, may result in denial or revocation of registration. Under the Charities Registration (Security Information) Act the CRA may utilize all information available to determine the existence of terrorism links for new applications or existing registrations, including security or criminal intelligence and otherwise confidential information. Once registered, charities are required to file annual information returns and financial statements, including information on the directors and trustees, the location of activities, the charity's affiliation and the organization's name. Much of the information is made publicly accessible on the CRA's homepage. Donations, spending and record keeping are regulated under the ITA. The CRA is granted wide powers under Part XV of the ITA to administer and enforce the provisions of the law. The CRA is responsible for ensuring compliance by registered charities with the requirements under the ITA and to sanction non-compliance. In addition, law enforcement and intelligence authorities monitor NPOs and investigate those suspected of having links to terrorism.

Criterion 8.4— Based on the information provided by the authorities, it is estimated that as of December 2014 a total of 180 000 NPOs existed in Canada of which 86 000 or about 50%, were registered under the ITA. According to the CRA's NPO Sector Review of 2015, the 86 000 registered charities represent 68% of all revenues of the NPO sector and nearly 96% of all donations. CRA registered charities also account for a substantial share of the sector's foreign activities as about 75% of internationally operating NPOs are registered as charities.

Sub-criteria 8.4.a and b—Charities registered under the ITA have comprehensive annual filing obligations, including on their directors and trustees, and financial statements including balance sheets and income statements. All this information is publicly available at the CRA's webpage.

Sub-criterion 8.4.c—All registered charities, regardless of their assets, and all other types of NPOs with revenue in excess of CAD 200 000, and/or annual investment income exceeding CAD 10 000, must file an annual information return with the CRA, including financial information. In addition, registered charities with revenue in excess of CAD 100 000 and/or property used for charitable activities over CAD 25 000 and/or that have sought permission to accumulate funds, must provide financial information. CRA-Charities must ensure that charities' funds are fully accounted for by reviewing and conducting analysis of information submitted in the annual information return. Where there are irregularities or concerns CRA-Charities may conduct an audit to review charity's finances and activities in detail.

Sub-criterion 8.4.d—Registration with the CRA is optional, not mandatory.

Sub-criterion 8.4.e—ITA registered charities are required to know intermediaries that provide services on its behalf, and to ensure that charity funds are used only for charitable activities. As such, there is an obligation to know enough about beneficiaries to meet this obligation. NPOs can be held liable for acts by associated NPOs if the court finds that there is an agency relationship between the two, which provides an additional incentive for NPOs to know associate NPOs. Records of registered charities must be sufficient for the CRA to verify that the charity's resources have been used in accordance with its activities.

Sub-criterion 8.4.f—Comprehensive record-keeping obligations apply both for ITA registered charities and other types of NPOs based on the provisions of provincial or federal legislation.

Criterion 8.5— As part of their annual information return charities must provide a breakdown of financial information related to revenue and expenditures. This includes information on the total expenditures for charitable activities, management and administration, and gift to qualified donees. Charities must also report ongoing and new charitable programs. Where audits reveal financial irregularities, the CRA may apply a range of sanctions set out in the ITA. The CRA is granted a wide range of powers to monitor registered charities for compliance with the filing obligations under the ITA and to apply sanctions, including financial penalties and suspensions, or revocation of registration.

Criterion 8.6— *Sub-criterion 8.6.a*—For registered charities, the registration system under the ITA is supported by the Charities Registration (Security Information) Act which allows the Minister of Public Safety and Emergency Preparedness to take into account criminal and security intelligence reports on registered charities or those applying for registration. The CSIS and also the RCMP and CBSA contribute information to these criminal and security intelligence report. The CRA has entered into MOUs with the CSIS and RCMP to facilitate the process. Any suspicion that a specific charity is linked to terrorism may result in registration being denied or revoked.

Sub-criterion 8.6.b—For ITA registered charities, the CRA may share certain information about registered charities with the public, including foreign counterparts, online through the CRA's website, or upon request. Information that is publicly accessible, includes governing documents, the name of directors or trustees, annual information returns and financial statements.

Sub-criterion 8.6.c—For non-publicly available information, the ITA allows but does not oblige the CRA to disclose to FINTRAC as well as the RCMP and CSIS information about charities suspected of being involved in FT. Equally, the Security of Canada Information Sharing Act (SCISA) permits the CRA to share any taxpayer information relevant to a terrorism offense (under part II of the CC) or threats to the security of Canada (under the CSIS Act) with competent authorities, including any information that the CRA may have on the broader sector of NPOs. FINTRAC is required under the PCMLTFA to disclose information to the CRA with regards to registered charities. Additional information sharing powers are available under the Security of Canada Information Sharing Act whenever there is a threat to Canada's national security. For NPOs other than registered charities regular investigative and information-gathering powers under the criminal procedure code are available to obtain records and information, they are required to maintain under provincial or federal NPO legislation.

Criterion 8.7— The CRA may share certain information about registered charities with foreign counterparts, including governing documents, the names of directors or trustees, annual information returns, and financial statements. Additional information may be shared by the CRA with foreign tax authorities. If required, information on registered charities or NPOs may also be shared by FINTRAC and the RCMP as described under R.40 or based on formal MLA. In sum, Canada is found to have appropriate points of contact and procedures in place to respond to international request for information sharing regarding particular NPOs.

Weighting and Conclusion:

Canada is compliant with R.8.

Recommendation 9 – Financial institution secrecy laws

In its 2008 MER, Canada was rated C with R.4, and neither the relevant laws nor the applicable FATF R. have subsequently changed. The MER assessors' only concern was that data protection law implementation was subject to excessively strict interpretations that might prevent LEAs accessing information in the course of investigations.

Criterion 9.1— Various constitutional and legal provisions impose confidentiality obligations over personal information and individuals' privacy. In particular, s.8 of the Canadian Charter of Rights and Freedoms (which forms part of Canada's Constitution) provides that everyone has the right to be secure against unreasonable search and seizure. According to the Supreme Court of Canada, the purpose of s.8 is to protect a reasonable expectation of privacy. Accordingly, those who act on behalf of a government, including LEAs and supervisors, must carry out their duties in a fair and reasonable way. Canada also has two privacy laws: the Privacy Act covers the personal information-handling practices of federal government departments and agencies; and the PIPEDA is the main federal private-sector privacy law.

PIPEDA, s.5 notably contains specific obligations concerning organizations' collection, dissemination and use of customers' personal information. Every province and territory has its own public-sector

legislation and the relevant provincial act applies to provincial government agencies (in lieu of the Privacy Act). Some provinces also have private-sector privacy legislation. Alberta, British Columbia and Québec notably have legislation that have been declared "substantially similar" to the PIPEDA and apply to private-sector businesses that collect, use and disclose personal information while carrying out business within these provinces. Finally, several federal and provincial sector-specific laws also include provisions dealing with the protection of personal information: The federal Bank Act, in particular, contains provisions regulating the use and disclosure of personal financial information by FRFIs (ss.606 and 636 (1)); and most provinces also have laws governing credit unions that require the confidentiality of information related to members' transactions.

Various provisions also govern the authorities' access to information: of the PIPEDA, s.7(3)(d), in particular, provides that an organization may, without the individual's knowledge or consent or judicial authorization, disclose personal information that it has reasonable grounds to believe could be useful in the investigation of a contravention of the laws of Canada, a province or a foreign jurisdiction that has been, is being or is about to be committed and the information is used for the purpose of investigating that contravention. The "substantially similar" laws in Alberta, British Columbia and Quebec contain broadly equivalent provisions. The PCMLTFA also contains a number of provisions that enable FINTRAC to access information (ss.62-63) and the Bank Act (ss.643-644) and equivalent provisions governing other FRFIs gives OSFI powers to access all records of FRFIs.

As regards sharing of information between competent authorities, implementation of the Privacy Act, which obliges federal government departments and agencies to respect privacy rights, does not seem to have caused AML/CFT problems. The PCMLTFA (ss.55, 55.1, 56 and 65(1) and (2)) empowers FINTRAC to disclose information to a range of law enforcement and other competent authorities within Canada in specified circumstances. Similarly, the PCMLTFA, s.65.1(1)(a) allows FINTRAC to make agreements with foreign counterparts to exchange compliance information. The Bank Act, s 636(2) also enables OSFI to disclose information to other governmental agencies.

Weighting and Conclusion:

Canada is compliant with R.9.

Recommendation 10 – Customer due diligence

In the 2008 MER, Canada was rated NC with R.5. There were numerous deficiencies, and also the CDD requirement did not cover all FIs as defined by the FATF. Subsequently, both the PCMLTFA and PCMLTFR were amended to include measures covering the circumstances in which CDD must take place. Further PCMLTFR amendments, effective from February 2014, addressed most of the remaining deficiencies.

The 2008 MER noted that the requirement to conduct CDD excluded financial leasing, factoring and finance companies. The Sixth FUR (2014) concluded that the set of sectors not covered by the AML/CFT regime and not yet properly risk assessed was not a major deficiency. Since then, Canada's NIRA assessed the ML/TF vulnerabilities of factoring, finance and financial leasing companies as medium risk, while pointing out that these entities were very small players. Sectors not covered by

the AML/CFT regime are continually evaluated to identify trends indicating a higher ML/TF risk rating. Their current exclusion from the scope of the AML/CTF regime is an ongoing minor deficiency.

Criterion 10.1— In its 2008 MER, Canada explained that, while there was no explicit prohibition on opening anonymous accounts, the basic CDD requirements on all new account holders effectively prohibited anonymous accounts. This also applied to accounts in obviously fictitious names. The legal position remains unchanged: The PCMLTFA, s.6.1, requires REs to verify identity in prescribed circumstances and s.64 of the PCMLTFR sets out the measures to be taken for ascertaining identity. However, the 2008 assessors were concerned about the absence of detailed rules or guidance for FIs' use of numbered accounts, including compliance officers having access to related CDD information. Subsequently, OSFI Guideline B-8 addressed this latter point, covering the provision of account numbering or coding services that effectively shield the identity of the client for legitimate business reasons. Thus, FRFIs should ensure that they had appropriately ascertained the identity of the client and that the firm's Chief AML Officer could access this information. Consequently, this deficiency has been partially addressed through an adequate control mechanism, for FRFIs only, albeit not by enforceable means. This is a relatively minor matter.

When CDD is Required

Criterion 10.2— PCMLTFR ss.54, 54.1, 55, 56, 57, 59(1), 59(2) and 59(3) of the require FIs to ascertain the identity of their clients when establishing business relations. Similarly, all REs must ascertain the identity of every client with whom they conduct an occasional large cash transaction of CAD 10 000 or more. Two or more such transactions that total over CAD 10 000, conducted within a period of 24 hours, are deemed a single transaction. CDD is required for both cross-border and domestic wire transfers exceeding CAD 1 000.

Pursuant to PCMLTFR s.53.1(1) FIs must) take reasonable measures to verify the identity of every natural person or entity who conducts, or attempts to conduct, a transaction that should be reported to FINTRAC (i.e. where there is suspicion of ML or TF). This obligation applies (s.62(5)) even when it would not otherwise have been necessary to verify identity. Also, FIs must reconfirm (s.63 (1.1) of the PCMLTFR) the client's identity where doubts have arisen about the information collected. However, this measure applies only to natural persons, not to legal persons or arrangements.

The limited application of this last measure remains a deficiency under 10.2(e).

Required CDD Measures for all Customers

Criterion 10.3— PCMLTFA, s.6.1 of the requires REs to verify the identity of a person or entity in prescribed circumstances and in accordance with the Regulations. PCMLTFR ss.64 to 66 detail the measures that REs must take to ascertain the identity of a prescribed individual, corporation and "entity other than a corporation.[107]" For individuals, acceptable identification documents include a

[107] This is not defined in the Regulations, but would include any kind of unincorporated business or legal arrangement.

birth certificate, driver's license, passport, or other similar document. For corporations, the corporation's existence is confirmed, and the names and addresses of its directors ascertained, by reference to its certificate of corporate status. However, other methods are acceptable, e.g. a record that it is required to file annually under applicable provincial securities legislation, or any other record that validates its existence as a corporation. The existence of an entity other than a corporation must be confirmed by reference to a partnership agreement, articles of association, or other similar record that ascertains its existence. These legal provisions meet the FATF standard.

Criterion 10.4— The "Third Party Determination" provisions of the PCMLTFR require FIs to determine whether their customers are acting on behalf of another person or entity. Where an account is to be used by or on behalf of a third party, the FI must collect CDD information on that third party and establish the nature of the relationship between third party and account holder.

Criterion 10.5— PCMLTFR s.11.1(1) requires FIs, at the time the entity's existence is confirmed, to obtain the following information:

For corporations, the name of all directors of the corporation and the name and address of all persons who own or control, directly or indirectly, 25% or more of the shares of the corporation;

For trusts, the names and addresses of all trustees and all known beneficiaries and settlors of the trust;

For entities other than corporations or trusts (typically, a partnership fund or unincorporated association or organization), the name and address of all persons who own, directly or indirectly, 25% or more of the shares of the entity; and

In all cases, information establishing the ownership, control, and structure of the entity.

Under the PCMLTFR, s.11.1(2), REs further need to "take reasonable measures to confirm the accuracy of the information obtained" on beneficial ownership. This requirement implies the need to use reliable sources to obtain the requisite information and the FATF standard[108] allows identification data to be obtained "from a public register, from the customer, or from other reliable sources." Also, OSFI Guideline B-8 usefully indicates that "reasonable measures" to identify ultimate beneficial owners could include not only requesting relevant information from the entity concerned, but also consulting a credible public or other database or a combination of both. This Guideline also makes clear that the measures applied should be "commensurate with the level of assessed risk."

No specific legal provisions cover beneficial ownership of personal accounts. However, the PCMLTFR, in effect, establish beneficial ownership of personal accounts: in particular, s.9 requires REs to determine whether personal accounts are being used on behalf of a third party and, for personal accounts in joint names, all authorized signatories are subject to CDD measures.

[108] FATF (2013), Methodology for assessing technical compliance with the FATF Recommendations and the effectiveness of AML/CFT systems, p. 147, www.fatf-gafi.org/media/fatf/documents/methodology/FATF%20Methodology%2022%20Feb%202013.pdf

Criterion 10.6— PCMLTFR, s.52.1, requires every person or entity that forms a business relationship under the Regulations to keep a record of the purpose and intended nature of that business relationship. OSFI Guideline B-8 amplifies this requirement, requiring a FRFI to be satisfied that the information collected demonstrates that it knows the client.

Criterion 10.7— PCMLTFR ss.54.3 (financial entities), 56.3 (life insurance sector), 57.2 (securities dealers), 59.01 (MSBs), and 61.1 (departments or agencies of the government or provinces that sell or redeem money orders) require all covered REs to conduct ongoing monitoring of their business relationships. Section 1(2) defines this to mean monitoring on a periodic basis, according to assessed risk, by a person or entity of their business relationships with clients for the purpose of (i) detecting transactions that must be reported to FINTRAC; (ii) keeping client identification information up to date; (iii) reassessing levels of risk associated with clients' transactions and activities; and (iv) determining whether transactions or activities are consistent with the information.

Where higher risks are identified, PCMLTFR, ss.71.1(a)-(c)) require "prescribed special measures" to be taken, which include enhanced measures to keep client identification and beneficial ownership information up to date and also to monitor business relationships in order to detect suspicious transactions. The Regulations do not explicitly cover scrutiny of the source of funds.

Specific CDD Measures Required for Legal Persons and Legal Arrangements

Criterion 10.8— The PCMLTFR requirements for FIs to understand the nature of the customer's business and its ownership and control structure cover legal persons or legal arrangements.

Criterion 10.9— See c.10.3 above, which covers identification and verification of legal persons and arrangements. The PCMLTFR (ss.14(b), 14.1(b), 15(1)(c), 20, 23(1)(b), 30(b) and 49(b)) require the collection of information on power to bind the legal person or arrangement in relation to an account or transaction. However, the Regulations do not cover gathering the names of relevant persons having a senior management position in the legal person or arrangement. Where an RE is unable to obtain information about the ownership, control and structure of a trust or other legal arrangement, the PCMLTFR (s.11.1(4)(a)) require reasonable measures to be taken to ascertain the identity of the most senior managing officer of the entity concerned.

The Regulations (s.65(1)) require confirmation of a corporation's existence, and its name and address, by reference to its certificate of corporate status or other acceptable official record. The existence of an entity other than a corporation must be confirmed by referring to a partnership agreement, articles of association or other similar record. There is no specific requirement, in this case, to obtain the address of the registered office or principal place of business, if different. Consequently, for non-corporate legal persons and for legal arrangements such as trusts, the standard is only partially met. Partnership agreements, etc., are unlikely to confirm details of address and principal place of business. Similarly, while trust documents usually contain sufficient information to satisfy the account-holding FI as to name, legal form, and proof of existence; such documents usually do not provide additional information about the registered address or principal business of the trust.

In addition, trust companies are required when acting as trustee of a trust (ss.55 (a)-(c)) to (i) of the PCMLTFR) to ascertain the identity of every person who is the settlor of an inter vivos trust: (ii) confirm the existence of, and ascertain the name and address of, every corporation that is the settlor of an institutional trust; and (iii) confirm the existence of every entity, other than a corporation, that is the settlor of an institutional trust. Under the Regulations (s.55 (d)), where an entity is authorized to act as a co-trustee of any trust, the trust company must (i) confirm the existence of the entity and ascertain its name and address; and (ii) ascertain the identity of all persons—up to three—who are authorized to give instructions with respect to the entity's activities as co-trustee. Finally, under the Regulations (s.55 (e)), trust companies must ascertain the identity of each person who is authorized to act as co-trustee of any trust. However, as natural persons who are trustees are not REs under the PCMLTFA, they are not subject to CDD obligations.

PCMLTFR ss 11 (a)-(b) require trust companies, for inter vivos trusts, to (i) keep a record that sets out the name and address of each of the beneficiaries that are known at the time that the trust company becomes a trustee for the trust; (ii) if the beneficiary is a natural person, record their date of birth and the nature of their principal business or their occupation; and (iii) if the beneficiary is an entity, the nature of their principal business.

Criterion 10.10— The legal requirements for obtaining information on beneficial owners of customers that are legal persons are set out under c.10.5 above.

REs must confirm the existence of a corporation or non-corporate legal entity at the opening of an account or when conducting certain transactions. At the same time, they must obtain information about the entity's beneficial ownership and confirm its accuracy. Beneficial ownership refers to the identity of the individuals who ultimately control the corporation or entity, which extends beyond another corporation or another entity. The PCMLTFR requirements for corporations and other entities refer to "persons." PCMLTFA, s.2 defines "person" to mean an individual, which therefore requires the natural person to be identified. If the RE has doubts about whether the person with the controlling ownership interest is the beneficial owner, then it is deemed to have been unable to obtain the information referred to under PCMLTFR, s.11.1(1) or to have been unable to confirm that information in accordance with PCMLTFR, s.11.1(2). In this case, the RE is required, under PCMLTFR s.11.1(4), to: take reasonable measures to ascertain the identity of the most senior managing officer of the entity; treat that entity as high risk for the purpose of PCMLTFA, s.9.6(3) and apply the prescribed special measures set out in PMCLTFR, s.71.1. Where no individual ultimately owns or controls 25% or more of an entity, directly or indirectly, REs must nevertheless record the measures they took, and the information they obtained, in order to reach that conclusion. Also, REs must comply with PCMLTFR, s.11.1(1)(d), which requires that information "establishing the ownership, control and structure of the entity" be obtained.

Criterion 10.11— The legal requirements for collecting information on the identity of beneficial owners of customers that are legal arrangements are set out under c.10.5 and 10.9 above. It is unclear, in the case of trusts, what identification requirements apply to protectors. Beneficiaries of trusts are covered by the ongoing monitoring provisions of s. 1(2) of the Regulations, which require that client identification information and information be kept up to date.

CDD for Beneficiaries of Life Insurance Policies

Criterion 10.12— All provincial *Insurance Acts* require life insurance companies to conduct CDD on (and keep a record of) the beneficiaries of life insurance policies, so this requirement applies to insurance companies nationally. There is no specific requirement to verify the identity of the beneficiary at the time of pay-out.

Criterion 10.13— As life insurance companies are covered under the PCMLTFA, they must risk assess all their clients and business relationships, products and services, and any other relevant risk factors (which include the beneficiary of a life insurance policy). In cases of high risk, life insurance companies must apply enhanced measures (prescribed special measures—s.71.1 of the *Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations*).

Timing of Verification

Criterion 10.14— PCMLTFR, ss.64(2), 65(2) and 66(2)) specify the timeframe for verifying the identity of individuals, corporate and non-corporate entities. With certain exceptions, the legal obligation is to verify identity either at the time of the transaction or before any transaction other than an initial deposit is carried out. There are two main exceptions: (i) in relation to trust company activities, identity may be verified within 15 days of the trust company becoming the trustee; (ii) in relation to life insurance transactions and government or provincial departments or agencies handling money orders, identity may be verified within 30 days of the client information record being created. These exceptions are not justified according to what is reasonably practicable or necessary to facilitate the normal conduct of business, nor is there any condition about managing the ML/TF risks of delaying identity verification.

Criterion 10.15— PCMLTFR, s.1(2) defines "business relationship" to commence on account opening or when a client conducts specified transactions that would require their identity to be ascertained. Consequently, it is not possible for a customer to utilize a business relationship prior to verification.

Existing Customers

Criterion 10.16— see c.10.7. These ongoing monitoring obligations apply to all clients, whether or not they were clients at the date of new CDD obligations coming into force. Consequently, the ongoing monitoring process covers clients whose identity had not previously been ascertained. REs are required to take a risk-based approach to keeping information on client identification, beneficial ownership and purpose and nature of intended business relationship up to date.

Risk-Based Approach

Criterion 10.17— PCMLTFR, s.71.1 details the "prescribed special measures" to be taken in cases of high risk. This includes, for example, cases where beneficial ownership information cannot be obtained or confirmed. These special measures comprise taking enhanced measures to (i) ascertain the identity of a person or confirm the existence of an entity; (ii) keep client identification

information up to date (including beneficial ownership information); (iii) monitor business relationships for the purpose of detecting suspicious transactions; and (iv) determining whether transactions or activities are consistent with the information. In addition, Appendix 1 to FINTRAC Guideline 4 provides a checklist of products or services that should be considered high-risk.

Criterion 10.18— No reduced or simplified CDD measures are in place. Instead, the PCMLTFR gives exemptions from the client identification and record-keeping requirements in specific circumstances assessed as low risk by the authorities. These exemptions are mainly contained in s. 9 (accounts used by, or on behalf of, a third party) and s.62 (mainly concerning life insurance business). Furthermore, PCMLTFR, ss.19 and 56 create a form of exemption by requiring that life insurers only conduct CDD in relation to the purchase of an immediate or deferred annuity or a life insurance policy for which the client may pay CAD 10 000 or more over the duration of the annuity or policy. However, these exemptions do not apply where there is a suspicion of ML or TF.

Failure to Satisfactorily Complete CDD

Criterion 10.19— The PCMLTFA, s.9.2, provides that no RE shall open an account for a client if it cannot establish the identity of the client in accordance with the prescribed measures. Consequently, an FI that failed to conduct CDD, when obliged to do so, would be in breach of the Act and could be fined. There is no explicit prohibition on REs commencing a business relationship or performing a transaction when they are unable to comply with CDD measures if the identity of an individual cannot be ascertained or the existence of an entity confirmed when they open an account, the FI cannot open the account. This also means that no transaction, other than an initial deposit, can be carried out. Also, if the RE suspects that the transaction is related to a ML or TF offense, it must file an STR with FINTRAC. Under PCMLTFA, s.7, if the RE has reasonable grounds to suspect that the client conducts or attempts to conduct a transaction that is related to the commission or the attempted commission of an ML or TF offense, even if the client cannot be identified or his/her identity cannot be properly verified, the RE must file a STR. This requirement is amplified in FINTRAC guidance.

CDD and Tipping Off

Criterion 10.20— PCMLTFR, s.53.1 (2) specifies that the identity verification obligation does not apply where the RE believes that complying with that obligation would inform the customer that the transaction is being reported as suspicious. PCMLTFA s. 7 requires an STR to be filed in these circumstances.

Weighting and Conclusion

A number of relatively minor deficiencies have been identified.

Canada is largely compliant with R.10.

Recommendation 11 – Record-keeping

In the 2008 MER, Canada was rated LC with R.10. Two deficiencies were noted. First, the record-keeping requirement did not cover all FIs as defined by the FATF (notably financial leasing, factoring and finance companies). Second, FIs must ensure that all records required to be kept under the PCMLTFA could be provided within 30 days, which did not meet the requirement to make CDD records available on a timely basis. The FATF standard has not since changed, the requirement being to make records available "swiftly".

Criteria 11.1 and 11.2— The PCMLTFRs.69 detail the obligation to keep records for a period of at least five years following completion of the transaction or termination of the business relationship.

The PCMLTFR outlines, for each type of covered entity, detailed record-keeping rules for CDD, account files and business correspondence. The Regulations do not specifically require retention of any internal analysis of client business that might lead to an STR. However, covered entities would need to keep this information to substantiate that they were not in contravention of PIPEDA and that the disclosure without consent would have been warranted. The Privacy Commissioner could request this type of information under PIPEDA, s.18 as part of a compliance audit. In addition, OSFI requires FRFIs to keep such information.

Criterion 11.3— There is no clear legal obligation that transaction records be sufficient to permit reconstruction of individual transactions. However, the Regulations do specify in detail the contents of each piece of information that must be held in various records.

Criterion 11.4— The PCMLTFR s.70 requires REs to provide records upon request of FINTRAC within 30 days. This does not meet the "swiftly" standard.

Weighting and Conclusion

The deficiencies noted in the 2008 MER remain.

Canada is largely compliant with R.11.

Recommendation 12 – Politically exposed persons

In the 2008 MER, Canada was rated NC with R.6. There were no relevant legislative or other enforceable requirements in place.

Significant changes have been introduced since then. Requirements for FIs in relation to Politically Exposed Foreign Persons (PEFPs) were introduced in June 2008 through amendments to the PCMLTFA and PCMLTFR, specifying the enhanced customer identification and due-diligence requirements for such clients.

Subsequently, as part of a package of amendments to the PCMLTFA introduced in 2014, the coverage of the Act was extended to include Politically Exposed Domestic Persons (PEDP) and heads of international organizations. The bill was enacted on 19 June 2014; however, implementing

regulations are required before the PEP provisions will come into force. These regulations, announced on 4 July 2015, will come into force one year after registration of the regulations. They will require REs to determine, under prescribed circumstances, whether a client is a PEFP, a PEDP, a head of an international organization, or a close associate or prescribed family member of any such person.

Criterion 12.1— The PCMLTFR ss.54.2, 56.1, 57.1, 59(5) require REs to take reasonable measures to determine a person's status as a PEFP. FINTRAC Guidance 6G explains the PEP determination and OSFI Guideline B-8 is also relevant.

FINTRAC Guidance (s.8.1) makes clear that reasonable measures must be taken in relation to both new and existing accounts, as well as certain electronic funds transfers (EFT). Also, those measures include asking the client or consulting a credible commercially and/or publicly available database. OSFI Guideline B-8 also details what would constitute reasonable measures to make a PEFP determination.

PCMLTFA s. 9.3.2 requires REs, when dealing with a PEFP, to obtain the approval of senior management in the prescribed circumstances and take prescribed measures. For existing accounts, PCMLTFR, s. 67.1 (b) requires FIs and securities dealers to obtain the approval of senior management to keep a PEFP account open. FINTRAC Guidance 6G explains when to obtain the approval of senior management.

The Regulations (s. 67.2) also require REs to take reasonable measures to establish the PEFP's source of funds. FINTRAC Guidance 6G explains that reasonable measures include asking the client and OSFI Guideline B-8 gives a number of examples of acceptable sources of funds. Source of wealth is not mentioned in the Regulations; however, Guideline B-8 states that FRFIs should satisfy themselves that the amount of clients' accumulated funds or wealth appears consistent with the information provided.

The Regulations (s. 67.1 (1)(c)) require FIs and securities dealers to conduct enhanced ongoing transaction monitoring of PEFP and their family members' accounts. However, no similar legal requirement applies to other REs in relation to PEFPs, although FINTRAC Guidance 6G does specify enhanced ongoing monitoring of PEFP account activities. OSFI Guideline B-8 states that enhanced ongoing transaction monitoring may involve manual or automated processes, or a combination, depending on resources and needs and gives some examples of what this could comprise.

Criterion 12.2— OSFI Guideline B-8 explains that FRFIs are not (currently) under any legal obligation to identify domestic PEPs *per se*, whether by screening or flagging large transactions or in any other way. Further, even if FRFIs know they are dealing with a domestic PEP, until new regulations come into effect, they have no legal obligation to apply enhanced measures to PEDPs as they do to PEFP accounts.

Nevertheless, this OSFI guidance states that, where a FRFI is aware that a client is a domestic PEP, it should assess any effect on the overall assessed risk of the client. If that risk is elevated, the FRFI should apply appropriate enhanced due-diligence measures.

Criterion 12.3— Currently, PCMLTFA, s.9.3 includes family members of PEFPs and PCMLTFR, (s.1.1) states that the prescribed family members of a PEFP are included in the definition of a PEFP. Until the necessary implementing regulations take effect, close associates of any kind of PEP are not covered in law or regulations.

Criterion 12.4— No provisions in law or regulations relate to beneficiaries of life insurance policies who may be PEPs.

Weighting and Conclusion

Canada is non-compliant with R.12.

Recommendation 13 – Correspondent banking

In the 2008 MER, Canada was rated PC with R.7. Deficiencies were noted in relation to: assessment of a respondent institution's AML/CFT controls; assessment of the quality of supervision of respondent institutions; and inadequate CDD for payable-through accounts.

Criterion 13.1— The PCMLTFR (s.15.1 (2)) cover correspondent banking relationships, requiring FIs to collect a variety of information and documents on the respondent institution. That information includes: the primary business line of the respondent institution; the anticipated correspondent banking account activity of the foreign FI, including the products or services to be used; and the measures taken to ascertain whether there are any civil or criminal penalties that have been imposed on the respondent institution in respect of AML/CFT requirements and the results of those measures. The Regulations contain no specific requirements about determining either the reputation of the respondent institution or the quality of supervision to which it is subject. The PCMLTFR (s.15.1(3)) require the taking of reasonable measures to ascertain whether the respondent institution has in place AML/CFT policies and procedures, including procedures for approval for the opening of new accounts. There is, however, no requirement to assess the quality of a respondent institution's AML/CFT controls. PCMLTFA s. 9.4 (1) requires senior management approval to be obtained for establishing new correspondent relationships. The Regulations (s.15.1(2)(f)) specify the collection of a copy of the correspondent banking agreement or arrangement, or product agreements, defining the respective responsibilities of each entity.

Criterion 13.2— The PCMLTFR (s. 55.2) stipulate that where the customer of the respondent institution has direct access to the services provided under the correspondent banking relationship (the 'payable-through account' scenario), the FI shall take reasonable measures to ascertain whether (i) the respondent institution has met the customer identification requirements of the Regulations; and (ii) the respondent institution has agreed to provide relevant customer identification data upon request.

Criterion 13.3— PCMLTFA, s.9.4 (2) prohibits correspondent banking relationships with a shell bank. In addition, the PCMLTFR (s. 15.1 (2) (h) require FIs to obtain a statement from the

respondent institution that it does not have, directly or indirectly, correspondent banking relationships with shell banks.

Weighting and Conclusion

Deficiencies remain under c. 13.1.

Canada is largely compliant with R.13.

Recommendation 14 – Money or value transfer services

In its 2008 MER, Canada was rated NC with SR VI. The main deficiencies were: lack of a registration regime for money services businesses (MSBs); no requirement for MSBs to maintain a list of their agents; and the sanction regime available to FINTRAC and applicable to MSBs was deemed not effective, proportionate and dissuasive. Subsequently, Canada has made significant progress, and the FATF standard has been strengthened to require countries to take action to identify unlicensed or unregistered MSBs and apply proportionate and dissuasive sanctions to them.

Criterion 14.1— PCMLTFA, s.11.1 stipulates that any entity or person covered by s.5(h) of the Act, (persons and entities engaged in the business of foreign exchange dealing, of remitting funds or transmitting funds by any means or through any person, entity or electronic funds transfer network, or of issuing or redeeming money orders, traveller's checks or other similar negotiable instruments) and those referred to in s.5(l) of the Act (those that sell money orders to the public), must be registered with FINTRAC.

Criterion 14.2— Under its mandate (PCMLTFA, s. 40(e)) to ensure compliance with part 1 of the Act, FINTRAC has a process for identifying MSBs that carry out activities without registration. This includes searching advertisements and other open sources as well as through on-site visits. Additionally, MVTS whose registration status is revoked are still tracked to ensure that they are not conducting business illegally.

The PCMLTF Administrative Monetary Penalties (AMP) Regulations describe the classification of different offenses under the PCMLTFA and the Regulations. Failure to register is classified as a serious violation. These Regulations classify violations as minor, serious, and very serious, each with a varying range of monetary penalties, up to CAD 500 000. In addition to criminal sanctions and monetary penalties for non-compliance, FINTRAC uses other means to encourage compliance. Monetary penalties are only considered after giving an entity or person a chance to correct deficiencies. If a very serious violation has been committed, a fine is greater than CAD 250 000, or if there is repeat significant non-compliance, FINTRAC considers publicly naming that entity or person, using its powers under s.73.22 of the PCMLTFA.

Criterion 14.3— PCMLTFA s. 40 (e) gives FINTRAC the mandate to ensure compliance with the Act. FINTRAC uses its powers under the PCMLTFA (ss. 62, 63 and 63.1) to examine records and inquire into the business and affairs of REs to monitor MVTS providers for AML/CFT compliance.

Criterion 14.4— PCMLTFA, ss.11.12(1) and (2) require that a list of agents, mandataries or branches engaged in MSB services on behalf of the applicant be submitted upon registration of the MSB with FINTRAC. S. 11.13 of the Act stipulates that a registered MVTS must notify FINTRAC of any change to the information provided in the application or of any newly obtained information within 30 days of the MVTS becoming aware of the change or obtaining the new information. This includes information about the MVTS's agents.

This criterion is also met through the legal obligation described under c. 14.1 above.

Criterion 14.5— The PCMLTFR (s.71(1)(d)) require MVTS, who have agents or other persons authorized to act on their behalf, to develop and maintain a written ongoing compliance training program for those agents or persons. S. 71(1)(e) also requires MVTS to institute and document a review of their agents' policies and procedures, risk assessment and the training program for the purpose of testing effectiveness. Such reviews must be carried out every two years.

Weighting and Conclusion

Canada is compliant with R.14.

Recommendation 15 – New technologies

In the 2008 MER, Canada was rated NC with former R.8 due to the lack of legislative or other enforceable obligations addressing the risks of new technological developments. Since then, some 40 legislative amendments to the PCMLTFA were tabled in Parliament (e.g. measures to subject new types of entities to the PCMLTFA, including online casinos, foreign MSBs and businesses that deal in virtual currencies such as Bitcoin). Canada is currently developing regulatory amendments to cover pre-paid payment products (e.g. prepaid cards) in the AML/CTF regime. The NRA examined the ML/TF vulnerabilities of 27 economic sectors and financial products, including new and emerging technologies, both in terms of products (e.g. virtual currency and pre-paid access), and sectors (e.g. telephone and online services in the banking and securities sectors).

Criterion 15.1— REs must conduct a risk assessment that includes client and business relationships, products and delivery channels, and geographic location of activities of the RE and the client(s), and any other relevant factors (PCMLTFR. s.71(1)(c)). While the requirements capture the need to assess ML/TF risks related to products and delivery mechanisms, there is no explicit legal or regulatory obligation to similarly risk assess the development of new products and business practices, nor is there any such obligation relating to the use of new or developing technologies for new and pre-existing products. However, Canada issued regulatory amendments for public comment in July 2015 clarifying that REs must consider, in their risk assessment, any new developments in, or the impact of new technologies on, the RE's clients, business relationships, products or delivery channels or the geographic location of their activities. A risk assessment review must be conducted every two years by an internal or external auditor, or by the entity (s.71(1)(e) of the Regulations). This ensures that risk assessments are regularly evaluated to capture risks, which may include new technologies. FINTRAC Guideline 4 specifies that new technology developments (e.g. electronic cash,

stored value, payroll cards, electronic banking, etc.) must be included in a company's risk assessment.

Criterion 15.2— While there is a regulatory expectation in FINTRAC's risk-based approach guidance[109] which states that REs should reassess their risk if there are changes due to new technologies or other developments, there are no explicit requirements in law or regulation that FIs undertake risk assessments prior to the launch or use of such products, practices and technologies.

Weighting and Conclusion:

Canada is non-compliant with R.15.

Recommendation 16 – Wire transfers

In the 2008 MER, Canada was rated NC with SR VII, which had simply not been implemented. Canada made some progress since then. The requirements have also been very substantially expanded in R.16 (i.e. inclusion of beneficiary information in wire transfers and additional obligations on intermediary and beneficiary FIs and MSBs).

Ordering Financial Institutions

Criterion 16.1— PCMLTFA, s.9.5 requires FIs to include with the transfer, when sending an international EFT, the name, address, and account number or other reference number, if any, of the client who requested it. The Act has no equivalent provision about including beneficiary name, account number or unique transaction reference number in this 'ordering FI' scenario. However, Schedule 2, Part K, of the PCMLTFR, which covers outgoing SWIFT payment instructions report information, does stipulate that, for single transactions of CAD 10 000 or more, the beneficiary client's name, address and account number (if applicable) should be included. There are no enforceable provisions requiring FIs to include beneficiary information in EFTs below CAD 10 000 (either as a single transaction, or multiple transactions within a 24-hour period).

Criterion 16.2— PCMLTFA, s.9.5 is not limited to single transfers—it, therefore, also applies in cases where numerous individual cross-border wire transfers from a single originator are bundled in a batch file for transmission to beneficiaries.

Criterion 16.3— There is no 'de minimis' threshold for the requirements of c.16.1.

Criterion 16.4— Originator information would be verified through CDD obligations (see R.10). In addition, s. 53.1 of the Regulations states that the identity of every person that conducts a suspicious transaction must be ascertained, unless it was previously ascertained, or unless the FI believes that doing so would inform the individual an STR was being submitted.

Criterion 16.5— The Act's s.9.5 requirements cover both domestic and international EFTs.

[109] FINTRAC (2015), Guidance on the Risk-Based Approach to Combatting Money Laundering and Terrorist Financing, www.fintrac-canafe.gc.ca/publications/rba/rba-eng.pdf.

Criterion 16.6— Canada does not permit simplified originator information to be provided.

Criterion 16.7— The PCMLTFR (ss. 14 (m) and 30 (e)) require FIs and MSBs to keep a record of the name, address and account number, or transaction reference of the ordering client for all EFTs of CAD 1 000 or more. In addition, a record must be kept of the name and account number of the recipient of the EFT, as well as the amount and currency of the transaction.

Criterion 16.8— There is no explicit prohibition on executing wire transfers where CC, ss.16.1 to 16.7 above cannot be met. However, if an RE is unable to comply with the relevant legal requirements, it cannot proceed with a wire transfer without breaking the law and being subject to AMPs.

Intermediary Financial Institutions

Criteria 16.9 to 16.12— The PCMLTFA and regulations use the terms "send/transfer" and "receive" to apply obligations to intermediaries, which are, therefore, subject to the same requirements that apply to ordering and beneficiary institutions. Thus, the implications of possible data loss and of straight-through processing are not captured, as they should be to meet the standard.

Beneficiary Financial Institutions

Criterion 16.13— PCMLTFA, s.9.5(b) requires FIs to take reasonable measures to ensure that any transfer received by a client includes information on the name, address, and account number or other reference number, if any, of the client who requested the transfer. These requirements apply equally to all EFTs, regardless of where they are situated in the payment chain. Where an FI is transmitting a transfer received from another FI, it is, therefore, required to ensure that complete originator information is included. There are no legal requirements relating to beneficiary information.

OSFI Guideline B-8 states that FRFIs that act as intermediary banks should develop and implement reasonable policies and procedures for monitoring payment message data subsequent to processing. Such measures should facilitate the detection of instances where required message fields are completed but the information is unclear, or where there is meaningless data in message fields. The Guideline cites a few examples of reasonable measures that could be taken.

Criteria 16.14 and 16.15— There are no specific obligations on beneficiary FIs involved in cross-border EFTs.

Money or Value Transfer Service Operators

Criterion 16.16— All obligations identified in CC, ss.16.1–16.9 above apply to MSBs and their agents.

Criterion 16.17— There are no specific legal requirements for MTVS providers either to review ordering and beneficiary information to decide whether to file an STR or to ensure that an STR is filed in any country affected and transaction information made available to the FIU.

Implementation of Targeted Financial Sanctions

Criterion 16.18— See the assessment of R.6 and R.7. The processing of EFTs, in terms of FIs taking freezing action and complying with prohibitions from conducting transactions with designated persons and entities, is adequately covered in law.

Weighting and Conclusion

The legal obligations applicable to ordering FIs and MSBs are broadly satisfactory, but there remain some weaknesses.

Canada is partially compliant with R.16.

Recommendation 17 – Reliance on third parties

In the 2008 MER, Canada was rated NC with R.9. In the only two scenarios where reliance on a third party or introduced business was legally allowed without an agreement or arrangement, the measures in place were insufficient to meet the FATF standard. In addition to the two reliance on third parties/introduced business scenarios contemplated by the Regulations, the financial sector used introduced business mechanisms as a business practice. However, no specific requirements, as set out in R.9, applied to these scenarios. Only minor changes have subsequently been introduced.

Criterion 17.1— The PCMLTFR (ss. 64(1)(b)(A)(I) and (II)) allow FIs, other than MSBs, and also foreign entities that conduct similar activities, to rely on affiliated third parties, or those in the same association, for the purpose of ascertaining the identity of a person.

More specific legal provisions apply to both the life insurance industry and securities dealers. A life insurance company, broker, or agent is not required to ascertain the identity of a person where that person's identity has previously been ascertained by another life insurance company, broker, or agent in connection with the same transaction or series of transactions that includes the original transaction. Similarly, a securities dealer, when opening an account for the sale of mutual funds, is not required to ascertain identity where another securities dealer has already done so in respect of the sale of mutual funds for which the account has been opened. The PCMLTFR (s.56(2) and s.62(1)(b)) refer.

Apart from the specific situations set out above, all requirements under the PCMLTFR continue to apply to the FI that has the relationship with the customer.

The PCMLTFR (s.64.1) state that, when REs use an agent or a mandatary to meet their client identification obligations, they must enter into a written agreement or arrangement with the agent or mandatary. In addition, the RE must obtain from the agent or mandatary the customer information that was obtained under the agreement or arrangement. The agent or mandatary can be any individual or entity, provided these two conditions regarding written agreement and obtaining customer information are met. Where the client is not physically present at the opening of an account, establishment of a trust or conducting of a transaction, the agent or mandatary has the same

two options, outlined in ss.64(1) and 64(1.1), that an RE does when dealing with a client who is not physically present.

In the first option, the agent or mandatary must obtain the individual's name, address, and date of birth. Then, they must confirm that one of the following has ascertained the identity of the individual by referring to an original identification document:

- a financial entity, life insurance company, or securities dealer affiliated with them;
- an entity affiliated with them and whose activities outside Canada are similar to those of a financial entity, life insurance company, or securities dealer; or
- another financial entity that is a member of their financial services cooperative association or credit union central association of which they also are a member.

To use this option, the agent or mandatary must verify that the individual's name, address and date of birth correspond with the information kept in the records of that other entity. The second option requires the use of a combination of two of the identification methods set out in Part A of Schedule 7 of the PCMLTFR.

Where agents or mandataries with written agreements are concerned, the relying entity must obtain customer information supplied under the agreement. However, life insurance companies/brokers/agents or securities dealers are not required to obtain from the relied-upon institution the necessary CDD information.

Similarly, life insurance companies/brokers/agents or securities dealers are not required to satisfy themselves that copies of CDD information will be made available to them by the third party on request without delay.

There is no explicit obligation, either for relying entities with agents and mandataries or for life insurance companies/brokers/agents or securities dealers, to satisfy themselves that the FI relied on is regulated and supervised or monitored for compliance with CDD and record-keeping obligations in line with R.10 and R.11.

Criterion 17.2— The PCMLTFA and PCMLTFR do not require life insurance companies/brokers/agents or securities dealers to assess which countries are high risk for third party reliance. The authorities state that reliance may only be placed on life insurance companies/brokers/agents or on securities dealers that are subject to the PCLMTFA, and FINTRAC's oversight. If so, the scenario outlined in Criterion 17.2 would not arise.

While ss.56(2) and 62(1) (b) of the PCMLTFR do not actually preclude the possibility of reliance being placed on third parties outside Canada, with no account taken of the level of country risk, an RE can only rely on third parties outside Canada if they are affiliated with them. Canada issued

regulatory amendments for public comment in July 2015 that included an amendment with respect to Group-Wide Compliance Programs that would require REs to take into consideration as part of their compliance programs the risks resulting from the activities of their affiliates.

Criterion 17.3— The PCMLTFR (ss.64(1)(b)(A)(I) and (II)) allow FIs, other than MSBs, and also foreign entities that conduct similar activities to rely on affiliated third parties, or those in the same association, for the purpose of ascertaining the identity of a person. PCMLTFA, ss9.7 and 9.8 require foreign branches and subsidiaries, subject to there being no conflict with local laws, to develop and apply policies to keep records, verify identity, have a compliance program, and exchange information for the purpose of detecting or deterring an ML or TF offense or of assessing the risk of such an offense. Thus, group-wide ML/TF standards should apply, providing appropriate safeguards.

Where there is a conflict with, or prohibition by, local laws, the RE must keep a record of that fact, with reasons, and notify both FINTRAC and its principal federal or provincial regulator within a reasonable time (PCMLTFA, s.9.7(4)).

Weighting and Conclusion

A number of deficiencies remain, even though that reliance on third parties appears to be of limited practical application.

Canada is partially compliant with R.17.

Recommendation 18 – Internal controls and foreign branches and subsidiaries

In the 2008 MER, Canada was rated LC with R.15 due to minor deficiencies and NC with R.22 due to the lack of legal obligation to ensure that foreign branches and subsidiaries applied AML/CFT measures consistent with home country standards, and obligation to pay particular attention to branches and subsidiaries in countries, which did not, or insufficiently, applied the FATF Recommendations. The current FATF standards are broadly unchanged, although R.18 specifies in more detail what should be done to manage ML/TF risk where host country requirements are less strict than those of the home country. Significant changes came into force in Canada in June 2015.

Criterion 18.1— PCMLTFA s. 9.6 requires FIs to establish and implement a compliance program to ensure compliance with the Act. The program must include the development and application of policies and procedures for the FI to assess, in the course of their activities, the risk of an ML or TF offense. The PCMLTFR (ss. 71 (1)(a) and (b)) specify that: a person must be appointed to be responsible for implementation of the program; and the program must include developing and applying written compliance policies and procedures that are kept up-to-date and approved by a senior officer.

OSFI Guideline B-8 stipulates that FRFIs must have a Chief Anti-Money Laundering officer (CAMLO) responsible for implementation of the enterprise AML/ATF program, who should be one person positioned centrally at an appropriate senior corporate level of the FRFI. Separately, OSFI Guideline E-13 requires that FRFIs must have a Chief Compliance officer with a clearly defined and

documented mandate, unfettered access and, for functional purposes, a direct reporting line to the Board.

Neither the PCMLTFA nor PCMLTFR contain any specific obligations regarding FIs' screening procedures when hiring employees. Similarly, there are no measures in place in sector legislation at the federal or provincial level. OSFI Guideline E-17 details OSFI's expectations in respect of screening new directors and senior officers of FRFIs at the time of hiring. However, this applies only to a defined set of "Responsible Persons," not to all employees.

The PCMLTFR (s. 71(1)(d)) require REs that have employees, agents or other persons authorized to act on their behalf to develop and maintain a written ongoing training program for those individuals. In addition, OSFI Guideline B-8 advises FRFIs to ensure that written AML/ATF training programs are developed and maintained. Appropriate training should be considered for the Board, Senior Management, employees, agents and any other persons who may be responsible for control activity, outcomes or oversight, or who are authorized to act on the Company's behalf, pursuant to the PCMLTFR.

The PCMLTFR (s.71 (1) (e)) oblige all REs to institute and document a review of their policies and procedures, the risk assessment and the training program for the purpose of testing effectiveness. That review must be carried out every two years by an internal or external auditor of the RE, or by the RE itself, if it has no auditor. OSFI Guideline B-8 amplifies the requirement in a number of ways and also sets out an expected standard of self-assessment of controls applicable to FRFIs.

Criterion 18.2— Measures which came into effect in June 2015 expanded section 9.7 of the PCMLTFA to cover foreign branches as well as subsidiaries. The effect was to require FIs, securities dealers and life insurance companies to implement policies and procedures for CDD, record-keeping and compliance programs that are consistent with Canadian requirements and apply across a financial group.

A new s.9.8(1) of the Act introduced requirements for REs to have policies and procedures in place for how they will share information with affiliates for the purpose of detecting or deterring an ML or TF offense or of assessing the risk of such an offense. This provision is sufficiently widely drawn to cover the kind of customer, account and transaction information stipulated in the FATF standard. There are no prohibitions in either the PCMLTFA or PIPEDA on sharing of information, including STRs, within financial groups, domestically or cross-border.

The new law did not cover safeguards on the confidentiality and use of information exchanged. However, the necessary safeguards already exist under PIPEDA (s.5 and Schedule 1), which apply equally to client information received from a branch or subsidiary under the PCMLTFA.

Criterion 18.3— Under newly amended s.9.7(4) of the PCMLTFA, when local laws would prohibit a foreign branch or foreign subsidiary from implementing policies that are consistent with Canadian AML/ATF requirements, the RE must advise FINTRAC and their principal regulator. (In the case of FRFIs, this is OSFI; for provincially regulated FIs, the relevant provincial supervisor).

Weighting and Conclusion

There is a remaining deficiency regarding the internal controls aspect of R.18.

Canada is largely compliant with R.18.

Recommendation 19 – Higher-risk countries

In the 2008 MER, Canada was rated PC with R.21, because there were no general enforceable requirement for FIs to give special attention to transactions or business relationships connected with persons from higher-risk countries, no measures advising of other countries with AML/CFT weaknesses, and no requirement to examine the background and purpose of transactions and to document findings. The FATF standard remains broadly the same, but there have been major changes in Canada since 2008.

Criterion 19.1 and 19.2— Part 1.1 of the PCMLTFA, which entered into force in June 2014, introduced two new authorities for the Minister of Finance: (i) the authority to issue directives requiring REs to apply necessary measures to safeguard the integrity of Canada's financial system in respect of transactions with designated foreign jurisdictions and entities. The measures contemplated included CDD, monitoring and reporting of any financial transaction to FINTRAC; (ii) the authority to recommend that the Governor-in-Council issue regulations limiting or prohibiting REs from entering into financial transactions with designated foreign jurisdictions and entities. These authorities enable Canada to take targeted, legally enforceable, graduated and proportionate financial countermeasures against jurisdictions or foreign entities with insufficient or ineffective AML/ATF controls. These measures can be taken in response to a call by an international organization, such as the FATF, or unilaterally. The Minister has not issued any countermeasures under Part 1.1; however, OSFI and FINTRAC have regularly drawn the attention of FRFIs and REs to the FATF calls on members, and have issued regular guidance in Notices and Advisories following each FATF meeting. OSFI has issued prudential supervisory measures against FRFIs it believes have not implemented FATF expectations (PCMLTA (s.11.42) and PCMLTFR (s.71.1)).

Criterion 19.3— Risk assessments on jurisdictions with AML/ATF weaknesses are conducted through the IFAC Under s.11.42(3) of the Act, the Minister's decision to issue a Directive may require the Director of FINTRAC to inform all REs. Additional guidance is provided through FINTRAC advisories and OSFI notices, available online, encouraging enhanced CDD with respect to clients and beneficiaries involved in transactions with high-risk jurisdictions.

Weighting and Conclusion:

Canada is compliant with R.19.

Recommendation 20 – Reporting of suspicious transaction

In the 2008 MER, Canada was rated LC with R.13 and SR. IV because some FIs (e.g. financial leasing, factoring and finance companies) were not covered by the obligation to report and there was no requirement to report attempted transactions. Some improvements have been made since then.

Criterion 20.1— PCMLTFA, s.7 requires REs to report to FINTRAC every financial transaction that occurs, or that is attempted, in the course of their activities and in respect of which there are reasonable grounds to suspect that the transaction is related to the commission or attempted commission of an ML or TF offense. The scope of the PCMLTFA still excludes certain sectors (financial leasing, finance and factoring companies), but this represents an ongoing minor deficiency. ML is defined by reference to CC, s.462.31(1), which, in turn, is defined in CC, s.462.31(1) to mean any offense that may be prosecuted as an indictable offense under this or any other Act of Parliament, other than an indictable offense prescribed by regulation. As described under c.3.2, ML now applies to a range of offenses in each FATF designated category of predicate offenses, including tax evasion.

Suspicious transactions must be reported "within 30 days" of detection of a fact that constitutes reasonable grounds to suspect that the transaction or attempted transaction is related to the commission of an ML offense or a TF offense. (PCMLTF Suspicious Transaction Reporting Regulations, s.9(2)).This does not meet the standard of reporting "promptly."

Criterion 20.2— Attempted transactions are now covered by the reporting requirement.

Weighting and Conclusion

The reporting requirement covers several, but not all elements, of the standard.

Canada is partially compliant with R.20.

Recommendation 21 – Tipping-off and confidentiality

In the 2008 MER, Canada was rated C with R.14.

Criterion 21.1— The PCMLTFA (s.10) states that no criminal or civil proceedings lie against a person or an entity for making an STR in good faith or for providing FINTRAC with information about suspicions of ML or TF activities. However, the requirement does not explicitly extend to reporting related to ML predicate offenses.

Criterion 21.2— PCMLTFA s.8 specifies that no person or entity can disclose that they have made an STR, or disclose the contents of a report, with the intent to prejudice a criminal investigation, whether or not a criminal investigation has begun. The law does not, however, cover a situation where a person or entity is in the process of filing a STR but has not yet done so. Neither does the legal obligation explicitly extend to reporting related to ML predicate offenses.

Weighting and Conclusion

The tipping off and confidentiality requirements do not explicitly extend to the reporting of suspicions related to ML predicate offenses.

Canada is largely compliant with R.21.

Designated Non-Financial Businesses and Professions (DNFBPs)

Since the 2008 MER, Canada has extended the AML/CFT requirements to BC Notaries and DPMS. The following DNFBPs are now subject to AML/CFT obligations: land-based casinos, accountants (defined as chartered accountant, certified general accountant, certified management accountant)[110] and accounting firms, British Columbia Notaries Public and Notary Corporations (hereinafter referred to as BC Notaries), real estate brokers or sales representatives, dealers in precious metals and stones (hereinafter DPMS) and certain trust companies, which fall under PCMLTFA, s.5 (e). Legal counsel and legal firms are covered as obliged AML/CFT entities, pursuant to PCMLTR, s.33.3, but, on 13 February 2015,[111] the Supreme Court of Canada concluded that the AML/CFT provisions are inoperative, as they are unconstitutional, for lawyers and law firms in Canada. Canada extended the AML/CFT regime to real estate developers when, under certain conditions, they sell to the public real estate (PCMLTFR, s.39.5). Notaries in provinces other than Québec and British Columbia are restricted to certifying affidavits under oath, and document certification. These notaries do not conduct any financial transactions and the transfer of property is done exclusively through lawyers in these provinces (see 2008 MER, para. 150). TCSPs are not a distinct category under the PCMLTFA and PCMLTFR. The definition of casino (PCMLTFR, s.1(1)), which excludes registered charities authorized to perform business temporarily, provides an unclear exemption.[112]

All gambling is illegal,[113] unless specifically exempted under CC, s.207. Several provinces (British Columbia, Quebec, Manitoba Nova Scotia, Prince Edward Island, New Brunswick and Newfoundland) have introduced online gambling through an extensive interpretation of the notion of "lottery scheme" allowed to them under CC, s.207(4)(c), which includes games operated through a computer. When these provinces introduced internet gambling, FINTRAC sent them a letter to inform them that

[110] PCMLTFR, Section 1. (2).

[111] The Supreme Court of Canada on 13 February 2015 has concluded that the search provisions of the Act infringe Section 8 of the Canadian Charter of Rights and Freedoms, while the information gathering and retention provisions, in combination with the search provisions, infringe Section 7 of the Charter Canada (Attorney General) v. Federation of Law Societies of Canada, 2015 SCC 7.

[112] There is no definition of "charitable purposes" and the notion of "temporary" business, does not give an exact timeframe, making unclear the reference to "not more than two consecutive days at a time," without fixing any further limit per week or per year. The exemption involving registered charities is to avoid duplication in the AML/CFT regime, as the Provincial Authority or its designate are RE of FINTRAC. Nevertheless, taking into account the possible operational models of casinos operating in Canada, the current definition of casino and the resulting AML/CFT requirements lack clarity in addressing the respective AML/CFT responsibilities of the different persons or entities that could be simultaneously involved in the business of the same casino (Crown corporations or regulators branches involved in the conduct and management of lotteries schemes, charitable organizations, First Nation organizations, casino's service providers).

[113] CC, Section 206 (1).

they were considered subject to AML/CFT obligations. Subsequently, these casinos started sending to FINTRAC Casino Disbursement Reports (for example, FINTRAC has received 988 such reports in the last 24 months). Nevertheless, the amendment to the definition of casinos that makes reference to online gambling operators is not yet entered into force.[114]

There are also land-based gaming and on line gambling[115] sites actually operating within Quebec, whose legal status is unclear which are not supervised by the province and which are not subject to AML/CFT obligations. These activities are authorized by the Kahnawake Gaming Commission operating on the basis of an asserted jurisdiction by the Mohawks over their territory. They are considered illegal by the authorities. Offshore gambling sites are deemed to be illegal as each casino must be licensed by a Canadian province. The authorities clarified that these activities are a matter for law enforcement to oversee.

Cruise ships that offer gambling facilities in Canadian waters are not obliged entities for AML/CFT purposes. (See 2008 MER, para. 1186-1187). Lottery schemes cannot be operated within five nautical miles of a Canadian port at which the ship calls (s.207.1 of the CC). Of note, there are no Canadian cruise ships. The exemption of cruise ship casinos is based on a proven low risk.

Trust and company services are provided by trust companies, legal counsels, legal firms and accountants—the PCMLTFA therefore does not identify TCSPs separately. Twenty-two trust companies (covered by a provincial Act, falling under of PCMLTFA, s.5(e)) are subject to AML/CFT obligations, but lawyers and accountants are not, despite the high vulnerability rating highlighted in the NRA.[116]

Recommendation 22 – DNFBPs: Customer due diligence

In the 2008 MER, Canada was rated NC with these requirements due to deficiencies in the scope of DNFBPs covered and in CDD and record-keeping requirements. Since then, Canada has extended the scope of the AML/CFT requirements to BC Notaries and DPMS and addressed some deficiencies in CDD requirements applicable to DNFBPs.[117]

Criterion 22.1— Scope issue: Internet casinos, TCSPs are not covered and the relevant provisions are inoperative with respect to legal counsels, legal firms and Quebec notaries (PCMLTFR, ss.33.3,

[114] Steps are being taken in this respect. Bill C-31 introduced legislative amendments to PCMLTFA s.5 k 1, which will come into force once the regulations are finalized, aimed at establishing AML/CFT obligations for online gambling conducted and managed by the provinces and covering those lottery schemes other than bingo and the sale of lottery tickets that are conducted and managed by provinces in accordance with CC, s.207(1)(a). These amendments will also extend the notion of relevant business to include other electronic devices similar to slot machines (such as video lottery terminals, currently excluded from the AML/CFT regime) but establishing a relevant threshold of "more than 50 machines per establishment" (PCMLTFA, s.5(k)(ii)).

[115] Online gaming operators that are licensed by the Commission must be hosted at Mohawk Internet Technologies, a data centre, located within the Mohawk Territory of Kahnawake.

[116] NRA, p.32.

[117] In particular, introducing the obligation to collect information on the purpose and intended nature of the business relationship and ongoing due diligence, extending the circumstances in which CDD is required, providing for enhanced measures in higher risk scenarios, excluding the exemption regime in case of suspicion.

33.4, 33.5, 59.4, 59.41, 59.4). As regards accountants and BC notaries, not all the relevant activities under the criterion are taken into account.

DNFBPs[118] are not required to obtain, take reasonable measures to confirm, and keep records of the information about the beneficial ownership of legal persons and legal arrangements, nor as to understand the ownership and control structure of the latter. DNFBPs are only required to confirm the existence of and ascertain the name and address of every corporation or other entity on whose behalf a transaction is being undertaken, and in the case of a corporation the names of its directors.[119] The rule of "third party determination" (PCMLTFR, s.8) is limited to individuals and is not applied to all relevant circumstances when CDD is required under the criterion. DNFBPs are not explicitly required to establish that the person purporting to act on behalf of the customer is so authorized. There are additional deficiencies for each relevant category. Casinos can perform a large variety of financial services, including wire transfers (see 2008 MER, para. 138). The following measures for ascertaining identity are carried out in line with the following threshold: on account opening (no threshold), when dealing with EFTs (CAD 1 000) and, dealing with foreign exchange or extension of credit (CAD 3 000).[120] The CAD 10 000 thresholds for ascertaining identity for cash financial transactions and casinos disbursement[121] are higher than the FATF standard. Not all the range of non-cash occasional transactions are covered: in particular, the purchase of chips through checks, credit, and debit cards, as well as prepaid cards are not captured. The redemption of "tickets" under PCMLTFR, s.42(1)(a) is not included, even if some kind of tickets (TITO tickets)[122] have been detected by FINTRAC in typologies of ML. There are no enforceable provisions requiring casinos to include beneficiary information in wire transfers, and no obligation for all REs to ascertain the identity of authorized signers (PCMLTFR, ss.54(1)(a) and 62(1)(a)). As regards, accountants and BC Notaries, not all the relevant activities under the criterion are included. In particular, no requirement is provided in relation to activities related to organization of contributions for the creation, operation and management of companies, legal persons and arrangements, and the scope of "purchasing or selling" securities, properties and assets is more limited than the notion of "management" included under the criterion. The definition of accountant (PCMLTFR, s.1(1) does not include "Chartered Professional Accountant."[123] In a real estate transaction, when the purchaser and the vendor are represented by a different real estate broker, each party to the transaction is identified by their own real estate broker. Real estate agents, in case of unrepresented party are required to take reasonable measures only to ascertain the identity of the party (PCMLTFR, s.59.2 (2, 3, and 4)), rather than applying reasonable risk-based CDD measures to the party that is not their client. DPMS are covered as required by the standards when they engage in the purchase or sale of

[118] With the exception of legal counsel and legal firms for which however the provisions are inoperative (Section 11.1 (1) of the PCMLTFR.
[119] PMCLTFR 59.1(b) & (c), 59.2(1)(b) &(c), 59.3 (b) & (c), 59.5 (b) & (c), 60 (e) &(f)
[120] PCMLTFR, Sections 60(a), 60(b)(iv), 60(b)(iii), 60(b)(ii)
[121] PCMLTFR, Sections 53 and 60(b)(i).
[122] Ticket In Ticket Out (TITO) "tickets" are also an increasingly popular casino value instrument used in many Canadian casinos (FINTRAC, ML Typologies and Trends in Canadian Casino, Nov. 2009, p.8).
[123] The unified new professional designation replaces the former three (Chartered Accountants, Certified General Accountants and Certified Management Accountants), and it is currently completed in several provinces (Quebec, New Brunswick, Saskatchewan, Newfoundland and Labrador). Further work is underway and expected to be included in forthcoming regulatory amendments.

precious metals, precious stones or jewellery in an amount of CAD 10 000 or more in a single transaction, other than those pertaining to manufacturing jewellery, extracting precious metals or precious stones from a mine, or cutting, or polishing precious stones..

Criterion 22.2— Scope issue: see 22.1. The circumstances under which relevant DNFBPs have to keep records do not fully match the list of activities required under R.10 (see 22.1). Furthermore, a non-account business relationship is established when transactions are performed in respect of which obliged entities are required to ascertain the identity of the person, rather than being based on a mere element of duration. The said definition entails that, apart from the case of suspicion, the record keeping requirements on a business relationship arise only when the prescribed thresholds for the transactions are reached. The deficiencies identified in R.11 apply also to DNFBPs.

Criteria 22.3, 22.4 and 22.5— There are no requirements for DNFBPs to comply with specific provisions covering PEPs, new technologies and reliance on third parties.

Weighting and Conclusion:

Canada is non-compliant with R.22.

Recommendation 23 – DNFBPs: Other measures

In its 2008 MER, Canada was rated NC with these requirements, due to the limited scope of DNFBPs included as well as to deficiencies with the underlying recommendations and to concern about the effectiveness of the STR regime in these sectors. Canada has since extended the scope of DNFBPs to some extent (See R.22), included attempted transactions in the STR regime and empowered the Department of Finance to take financial countermeasures with respect to higher-risk countries.

Criterion 23.1— PCMLTFA, s.7 (transaction where reasonable grounds to suspect) does not apply to all relevant categories of DNFBPs, nor to all relevant activities of accountants and BC Notaries as described under R.22.[124] The analysis in relation to R.20 above equally applies to reporting DNFPBs. There are no key substantive differences between the reporting regime for FIs and DNFBPs. FINTRAC Guidelines no. 2 (Suspicious Transactions) includes industry-specific indicators.

Criterion 23.2— Scope issue: see 23.1. Accountants, accounting firms, legal counsels and legal firms, BC Notaries, real estate agents and developers, land-based casinos, DPMS are all required to establish and implement a compliance program (PCMLTFA, s.9.6 (1); PCMLTFR, s.71(1)). While compliance procedures must be approved by a senior officer, PCMLTFA, ss.9.6 and PCMLTFR, s.71(1)(a) do not stipulate that the designation of the compliance officer shall be at the management level. DNFBPs, other than land-based casinos, are not required to have adequate screening procedures to ensure high standards when hiring employees. Also, there is no specific requirement that review of the compliance regime be performed by an independent audit function, as it can also be carried out through a procedure of self-assessment (PCMLTFR, s.71(1)(e)).

[124] Under PCMLTA, Section 5, Part 1 of the Act (including the STRs obligations) applies while carrying out the activities described under the regulations.

Criterion 23.3— Scope issue: see 23.1. See R.19 for a description of this requirement.

Criterion 23.4— Scope issue: see 23.1. The requirements for DNFBPs are the same as those applied to FIs under R.21.

Weighting and Conclusion:

Canada is non-compliant with R.23.

Recommendation 24 – Transparency and beneficial ownership of legal persons

Canada was rated NC with former R.33 based on concerns over a lack of transparency for legal entities, the availability of bearer shares without adequate safeguards against misuse, and a lack of powers by the authorities to ensure the existence of adequate, accurate and timely beneficial ownership information for legal entities. Since 2008, the obligations for FIs to obtain information on the identity of beneficial owners and the CRA's ability to disseminate information on legal entities to the RCMP have been strengthened.

Canada's corporate legal framework consists of federal, provincial and territorial laws: (i) Legal entities may be established at the federal level under the Canada Business Corporation Act (CBCA); the Canada Not-for-Profit Corporations Act (NFP Act), or the Canada Cooperatives Act (CCA). Federally incorporated entities are entitled to operate throughout Canada but in addition to registration at the federal level, are also subject to registration with the province or territory in which they carry out business. (ii) Each of the thirteen territories and provinces regulates the types of legal entities that can be established at the local level. Eight provinces and territories have enacted specific laws that provide for the establishment of corporations and NPOs. Prince Edward Island, Newfoundland and Labrador, Alberta, Manitoba, Quebec, and New Brunswick do not have specific NPO legislation in place but regulate NPOs through the relevant provincial company law.

Legal entities incorporated at the provincial or territorial level enjoy business name protection only in the province or territory where they are incorporated. To operate in another province in Canada, they have to register with that province but there is no guarantee that they will be able to use their corporate name (e.g. a business entity with the same name may already be operating in that province). Federal, provincial and territorial corporate entities may carry out business internationally if the foreign country recognizes the type of corporate entity.

In addition to legal entities, all provinces provide for the establishment of general and limited partnerships pursuant to common law rules; and all provinces, but Yukon, Prince Edward Island and Nunavut have passed statutes to provide for the establishment of limited liability partnerships. Partnerships are not subject to registration as part of the establishment process, but most provinces and territories require registration of businesses before a partnership may operate there. Business registration obligations under provincial and territorial laws also apply to foreign entities wishing to carry out business in Canada.

Criterion 24.1— *Federal legal persons:* Innovation, Science and Economic Development Canada (ISED), formerly Industry Canada, provides a comprehensive overview and comparison on its internet homepage of the various legal entities available and their forms and basic features. All legal entities established at the federal level are subject to registration. Given that corporations are by far the most utilized type of legal entity in Canada, particular emphasis is put on information pertaining to federal corporations under CBCA and their incorporation and registration process, which can be initiated online or by sending all required documents to the competent registrar via email, fax, or mail. [125] ISED also offers a search tool, which makes some basic information of federal companies publicly available. The search function also indicates the legislation the corporation is incorporated under, which in turn clarifies basic regulating powers. *Provincial legal persons:* Similar information and services are provided through the homepages of all provincial governments except that of New Brunswick. The relevant web links are easy to find through ISED's homepage and provide public access to the relevant provincial laws that describe the various legal entities available; the name and contact information for the relevant authority competent for registration; and the procedures to be followed to establish a legal entity or to register a corporation. *Partnerships and foreign entities:* Partnerships and foreign entities operating in any of Canada's provinces or territories are subject to registration at the provincial level. The Canada Business Network maintains a homepage that provides links to the various provincial and territorial business registries.

Criterion 24.2— The NRA identified privately held corporations as being highly vulnerable to misuse for ML/TF purposes. The conclusion was reached based on the understanding that such corporations can easily be established and be used to conceal beneficial ownership. The risk assessment determines the inherent risks involved with legal persons based on factors such as the products and services offered by legal entities, the types of persons that may establish or control a legal person, the possible geographic reach of a Canadian legal entity, and taking into account FINTRAC statistics on typologies involving legal entities in Canada.

Basic Information

Criterion 24.3— Both federal and provincial corporations, NPOs with legal personality and cooperatives are established through incorporation by the relevant incorporating department or agency. *Federal legal persons:* On the federal level, ISED, as part of the incorporation and annual filing process, collects and publishes information comprising the corporation's name, type, status, corporation number, registered office address in Canada, name and address of all directors, and governing legislation. The regulating powers for federal corporations are set out in the legislation or in the corporation's articles, which are approved by the Director appointed under the relevant Act. *Provincial legal persons:* Company information including the corporate name, type, status, registered office in Canada, and name and address of directors is collected through the same process as on the federal level, which is through annual filing procedures. *Partnerships and foreign entities:* Business registration requirements vary between the different provinces and territories, but usually require the provision of the name, registered office, mailing address, place of business in the province/territory, the date and jurisdiction of incorporation (for extraterritorial companies) or type

[125] www.ic.gc.ca/eic/site/cd-dgc.nsf/eng/cs04843.html#articles.

of partnership, the name and address of directors or partners and a copy of the partnership contract or the incorporation certificate or other proof of existence. Partnerships not carrying out any business in Canada are not required to register as part of the establishment process.

Criterion 24.4— Record-keeping obligations extend to the corporation's articles and by-laws and any amendments thereof, of minutes of shareholder meetings and resolutions, share registers, accounting records, and minutes of director meetings and resolutions. Pursuant to CBCA, s.50, companies must also keep a share register that indicates the names and address of each shareholder, the number and class of shares held, as well as the date and particulars of issuance and transfer for each share. Similar provisions are set out in provincial legislation. Federal as well as provincial companies are required to keep records of basic information either in a location in Canada or at a place outside Canada, provided the records are available for inspection by means of computer technology at the registered office or another place in Canada and the corporation provides the technical assistance needed to inspect such records (CBCA, s.20). There is no legal requirement to inform the incorporating department or agency, or where applicable, the company register of the location at which such records are being kept.

Criterion 24.5— Under CBCA, s.19 (4) federal corporations are required to inform the Director appointed under the CBCA within 15 days of any change of address of the registered office. Changes in legal form, name or status as well as amendments to the articles of incorporation take effect only after they have been filed with the Director. More or less the same updating requirements are especially provided for under provincial legislation, except in Quebec and Nova Scotia.[126] In Nova Scotia, the updating requirement applies but changes to the registered office have to be filed within 28 days and there is only a general obligation to notify the Registrar "from time to time" of any changes among its directors, officers, or managers. Directors, shareholders and creditors have access to these documents and are permitted at all times to check their accuracy. However, no formal mechanism is in place to ensure that shareholder registers are accurate. For partnerships and extraterritorial corporations, some provinces and territories impose an annual filing obligation, others require renewal of the license and updating of relevant information on a multi-year basis.

Beneficial Ownership Information

Criterion 24.6— Canada uses existing information to determine a legal entity's beneficial ownership, if and as needed, including as follows:

(i) FIs providing financial services to legal entities, partnerships or foreign companies. Since 2014, obligations under the PCMLTFA for FIs to obtain ownership information of customers or beneficiaries that are legal entities have been strengthened. Prior to 2014 FIs identified beneficial owners of legal entities mostly based on a declaration of the customer. For those companies established prior to 2014, it is, thus, questionable whether this measure did indeed result in the availability of accurate and updated beneficial ownership information. Ongoing CDD obligation under the PCMLTFA have resulted in BO information becoming available for a number of companies that opened bank accounts in Canada prior to 2014, but most FIs interviewed by the assessors

[126] For example Section 2 Ontario Corporations Information Act; Article 20 Alberta Business Corporation Act; Article 19 Nova Scotia Companies Act.

indicated that the ongoing CDD process has not yet been completed for all legal entities. For some DNFBPs as outlined in R.22, certain limited CDD obligations apply as discussed under R.22 but those do not amount to a comprehensive requirement to identify and take reasonable measures to verify beneficial ownership information and the obligations also are inoperative with regards to lawyers.

(ii) The federal and provincial company registries record some basic information as discussed above, but do not generally collect information on beneficial owners. Verification mechanisms for registered information are not in place. The CRA as part of its general obligations, collects information on legal entities that file tax returns. As indicated in the 2008 MER, however, this information generally does not comprise beneficial ownership information. Furthermore, not all legal entities in Canada file tax returns with the CRA; and

(iii) Legal entities themselves are required to collect certain information on holders of shares but no mechanisms are in place to ensure that the registered information is accurate.

(iv) For public companies listed on the stock exchange, disclosure requirements exist for shareholders with direct or indirect control over more than 10% of the company's voting rights.

As outlined under R.9 and 31, LEAs have adequate powers to obtain information from FIs, DNFBPs and any other types of companies and the CRA. However, the process of linking a specific FI with a legal entity or partnership subject to the investigation and accessing beneficial ownership information may not be timely in all cases. In sum, while some of the information collection mechanisms have been strengthened since 2008, deficiencies with regards to the collection and availability of full and updated beneficial ownership information remain and timely access by law enforcement authorities to such information is not guaranteed in all cases.

Criterion 24.7— As indicated under criterion 24.6, FIs are required to collect and update beneficial ownership information. The registries, the CRA and legal entities themselves are not required to ensure that accurate and updated beneficial ownership information is collected.

Criterion 24.8— Companies on both federal and provincial levels are obliged to grant the Director under the relevant Act access to certain information, including in relation to company share registers (Article 21 CBCA). There is no legal obligation on corporations or partnerships to authorize one or more natural person resident in Canada to provide to competent authorities all basic information and available beneficial ownership information; or for authorizing a DNFBP in Canada to provide such information to the authorities.

Criterion 24.9— Legal entities are required to maintain accounting records for six years, but not from the date of dissolution, but of the financial year to which they relate. In addition, pursuant to s.69 of the PCMLFTR FIs/some DNFBPs holding information on legal entities must keep that information for five years from termination of the business relationship or completion of the transaction. The Director retains corporate records submitted under the CBCA for a period of six years, except for articles and certificates which are kept indefinitely. In addition, s.225 of the CBCA requires a person who has been granted custody of the documents or records of a dissolved corporation to produce those records for six years following the date of its dissolution or such

shorter period as ordered by a court. Non-financial documents or records must be kept by the corporation until the corporation is dissolved; and then for another six years or less period as ordered by a court. The CRA, in partnership with the National Archivist of Canada, retains documents obtained or created by the CRA for various periods of time depending on the nature of the information. In relation to questions of beneficial ownership, the relevant retention periods are five to ten years, in some instances indefinitely.

Other Requirements

Criterion 24.10— Some basic company information is publicly available on various federal and provincial government websites and is therefore available to the authorities in a timely fashion. For information that is not publicly available, a wide range of law enforcement powers are available to obtain beneficial ownership information, including search warrants, using informants, surveillance techniques, wiretaps and production orders, and public sources (e.g.: law enforcement databases, city databases, corporate companies, civil proceedings, bankruptcy records, divorce records, civil judgments, land titles and purchase, building permits, credit bureau, insurance companies, liquor and gambling licenses, death records, inheritance, shipping registers, federal aviation, trash searches, automobile dealerships) and private source information searches. To be able to compel an FI to produce records pertaining to the control or ownership structure of a legal entity or legal arrangement, LEAs must first establish the link between a legal entity and a specific FI. Several tools are available to this effect (e.g.: grid search request to all D-SIBs to establish if they count the target person amongst their customers, VIRs to FINTRAC, requests to Equifax, mortgage and loan checks , consultations of NEPS to obtain an economic profile of an individual or private or public company). Investigative techniques may also be used (e.g. informants, witnesses, wiretaps). The RCMP may also request information from the CRA once charges have been laid in a criminal case, and on the basis of a judicial authorization. Prior to the prosecution stage, a tax order under the CC can be obtained for the RCMP to receive tax information from the CRA on a specific entity. Since 2014, the CRA may also share information with the RCMP on its own motion in cases where the CRA considers that there are reasonable grounds to believe that the information in its possession would provide evidence of listed serious offenses, including ML, bribery, drug trafficking and TF. In relation to tax crimes, the CRA CID may also obtain information. The relevant Director under each corporate statute—in the case of the CBCA the Director of Corporations Canada— also has the authority to inspect a corporation's records. Once it is established that a specific RE maintains a business relationship with a legal entity, LEAs may obtain a court order and deploy the measures available under criminal procedures to obtain, compel the production of, or seize relevant information—including beneficial ownership information—from any person, as discussed under R.31.

Criterion 24.11— Bearer shares are permitted both under the CBCA and several provincial company laws (for companies limited by shares).[127] While the CBCA generally requires the issuance of shares to be in registered form, the CBCA also makes provision for the issuance of certain types of shares in bearer form. In the absence of an express prohibition, the CBCA, therefore, still leaves some

[127] Quebec, Prince Edward Island, North-Western Territories and Nunavut allow for the issuance of registered shares only.

room for the issuance of bearer shares and no safeguards are in place to ensure that such shares are not being misused for ML or TF purposes.

Criterion 24.12— The CBCA requires corporations to keep shareholder registers in relation to registered shares, whereby the term "holder" of a security is defined as "a person in possession of a security issued or endorsed to that person." Under Part XIII of the CBCA, the holder of a share is permitted to vote at a meeting using someone else to represent them. The CBCA permits a registered shareholder to authorize another person to vote on their behalf. The proxy form itself lists the registered shareholder and the name of the "proxyholder" or person acting on their behalf. The proxy is recorded at the shareholder meeting, which provides transparency in respect of the identity of these individuals. However, the outlined arrangement still allows for nominee shareholding arrangements if the relevant shares are not voted. CBCA, s.147 permits, for example, securities brokers, FIs, trustees, or any nominees of such persons or entities to hold securities on behalf of another person who is not the registered holder but beneficial owner of that security. Similar provisions are found in provincial legislation such as, for example, Alberta Business Corporations Act, s.153 and Quebec's Business Corporations Act, s.2. Corporate directors are not permitted under the CBCA and provincial statutes. Nominee director arrangements in form of one natural person formally acting as director on behalf of another person may, however, still exist. Nominees (whether shareholders or directors) are not required to be licensed, or disclose their status, or to maintain information on or disclose the identity of their nominator. However, under the PCMLFTR, legal entities when opening a bank account, are required to provide details on the natural person that owns or controls a legal entity, which would include the nominating shareholder or director. For publicly listed companies, the risk of abuse of nominee shares is properly mitigated based on rigid reporting obligations for change of shares in excess of 10%. In sum, for companies other than those listed on the stock exchange, there are insufficient mechanisms in place to ensure that nominee shareholders are not misused for ML or TF purposes.

Criterion 24.13— Under the CBCA and provincial company laws violation of a company's disclosure, filing or record-keeping obligations may be fined with up to CAD 5 000 and/or imprisonment for up to six months in case of a violation by a natural person acting on behalf of the company. FIs and those DNFBPs covered under the law are subject to criminal (imprisonment for up to six months and/or a fine of up to CAD 50 000) as well as administrative sanctions if they fail to comply with their identification obligations with regards to legal entities (PCMLTFA, ss.73.1 and 74). In addition, officers, directors and employees of FIs and DNFBPs may be subject to sanctions regardless of whether the FI or DNFBP itself was prosecuted or convicted, as discussed under R.35. In summary, the statutory sanctions available are proportionate and dissuasive.

Criterion 24.14— Some basic information in the federal and provincial company registers is publicly available and can be directly accessed by foreign authorities. For other information, the powers and mechanisms described under criteria 37.1 and 40.9, 40.11, and 40.17 to 40.19 apply.

Criterion 24.15— Information on the quality of assistance received from other countries in the context of MLA and in response to ownership information requests is kept by the International Assistance Group (IAG) at the Department of Justice. The IAG maintains a copy of the requests made,

the follow-up that takes place with regards to each request, and keeps copies of all documents and information provided in response to the request. When forwarding the relevant information to the requesting agency, the IAG inquires with that agency, whether the request should be considered fulfilled. The authorities stated that the information collected by IAG suggests that the assistance received is generally adequate, although the result vary according to the particular component of basic/beneficial ownership sought.

Weighting and Conclusion

Serious gaps remain under criterion 6 with respect to the availability of beneficial ownership information for legal entities and partnerships.

Canada is partially compliant with R.24.

Recommendation 25 – Transparency and beneficial ownership of legal arrangements

Canada was rated PC with former R.34 as the obligations to obtain, verify, and retain beneficial ownership information was considered to be inadequate. Since then, changes have been introduced to the PCMLTFR to strengthen FI obligations with regards to the identification and verification of beneficial ownership information for legal arrangements (whether created in Canada or elsewhere). In addition, the CRA's power to disseminate tax information to LEAs have been enhanced, taxpayer information can be shared at the discretion of the CRA if the CRA has reasonable grounds to believe that the information will afford evidence of certain designated offenses, including ML under CC s. 462.31. However, it is not clear for how many of the millions of trusts estimated to exist under Canadian law beneficial ownership information is available and access to such information is in any case difficult to obtain as there is no requirement for trustees to be licensed or registered.

Canada allows for the establishment of common law trusts as well as civil law fiducie (in Quebec). There is no general registration requirement for trusts, and trustees may but do not have to be licensed individuals or entities under the PCMLTFA. No specific statutes regulate the operation of foreign trusts in Canada, or require the registration of such foreign trusts.

Criterion 25.1— In the case of professional trustees, the customer due-diligence obligations vary depending on the trustee's profession: TCSPs are not subject to the general identification and verification obligations under the PCMLTFA as outlined under R.22. The CDD obligations applied to accountants have limitations as discussed in R.22. The requirements for lawyers are inoperative as a result of a Supreme Court decision. Trustees other than professional trustees are not subject to any statutory customer due diligence or record-keeping obligations.

Criterion 25.2— TCSPs are not covered under the scope of the PCMLFTR. Accountants are subject to basic ongoing CDD measures that do not amount to a comprehensive obligation to obtain and take reasonable measure to verify the identity of beneficial owners. Other trustees are not subject to comprehensive CDD or record-keeping requirements, as indicated under criterion 1.

Criterion 25.3— There is no obligation on trustees to disclose their status without being prompted, but under the PCMLFTR, FIs are required to determine whether a customer is acting on behalf of someone else, to establish the control and ownership structure of legal entities they are providing services to, and to obtain the names and addresses of all trustees, known beneficiaries and settlors.

Criterion 25.4— There is no prohibition under Canadian law for trustees to provide trust-related information to competent authorities, except in the case of lawyers where legal privilege may prevent authorities from accessing such information.

Criterion 25.5— Where there are suspicions of a crime, LEAs may deploy a wide range of investigative measures to obtain, compel the production of, or seize relevant information from any trustee, whether subject to the PCMLFTR or not. The extent to which the information available would include beneficial ownership information and information on the trust assets is unclear, as apart from the PCMLFTR, no legal requirements to maintain such information exist. Furthermore, linking a specific FI or DNFBP with a legal entity or partnership subject to the investigation and accessing beneficial ownership information may not be timely in all cases. With regards to FIs and accountants and trust companies acting as trustees, LEAs may also obtain information available to FINTRAC in its capacity as FIU through a request for voluntary information records. FINTRACs powers to access such information are, however, limited as outlined under criterion 29.2. In situations where a trust owes taxes and is required to file income tax returns, the CRA also has access to certain trust information, including the name and type of the trust and certain financial information on the trust. Information available to the CRA typically includes beneficiary, but not beneficial ownership information. The CRA may share taxpayer information upon request by LEAs either based on a court order or after criminal charges have been laid; or upon its own initiative if the CRA has reasonable grounds to believe that the information will afford evidence of certain designated offenses, including ML under CC, s462.31.

Criterion 25.6— The authorities may exchange information on trusts with foreign counterparts based on the procedures outlined under criteria 37.1 and 40.9, 40.11, and 40.17 to 40.19 and 11. LEAs have wide powers to exchange information with foreign counterpart. FINTRAC as well as the CRA may also share information with foreign counterparts as part of their respective functions. Investigative measures to obtain beneficial ownership can be taken upon foreign request.

Criterion 25.7— Under the PCMLFTR, failure to comply with the identification, verification or record-keeping requirements is subject to a range of criminal and administrative sanctions (see write-up under R.35 for more details). Trustees other than accountants are not subject to the AML/CFT framework. Violations of the principles of a trustees' breach of fiduciary duties may give rise to claims by the beneficiary and legal liability of the trustee based on these claims. However, in the absence of a specific obligation to collect and maintain beneficial ownership or general trust information there are also no sanctions available to authorities for a failure of the trustee to do so.

Criterion 25.8— For accountants, a the PCMLFTR sanctions may be applied by supervisory authorities as discussed under criterion 27.4. For other trustees, however, no sanctions are in place in the case of a failure to grant competent authorities timely access to trust related information.

Weighting and Conclusion:

Canada is non-compliant with R.25.

Recommendation 26 – Regulation and supervision of financial institutions

In the 2008 MER, Canada was rated PC with former R.23 due to the exclusion from the AML/CFT regime of certain sectors without proper risk assessments, an unequal level of supervision of AML/CFT compliance, lack of a registration regime for MSBs and concerns around fit and proper screening requirements. Canada made significant progress since then.

Criterion 26.1— FINTRAC is the AML/CFT supervisor for all REs subject to the PCMLTFA. It is assisted in the regulation and supervision of FIs by other federal and provincial regulators that are responsible for prudential and conduct supervision. However, ultimate responsibility for supervision and sanctioning under the PCMLTFA remains with FINTRAC. It is estimated that 80% of Canada's financial sector market is controlled by FRFIs. FRFIs are under the supervision of OSFI and include six large conglomerates (DSIBs) that hold a substantial share of the financial sector and other financial entities such as banks, insurance companies, cooperative credit and retail associations, trust companies and loan companies. OSFI's powers are mandated under the OSFI Act and governing legislation for the various financial sectors such as the *Bank Act*, *Trust and Loan Companies Act, Insurance Companies Act* and *Cooperative Credit Associations Act*. Non-FRFIs (e.g. credit unions) are regulated and supervised by provincial regulators under provincial statute.

AML/CFT supervisory functions are concentrated in FINTRAC and have not been delegated to primary regulators in Canada. At the federal level, OSFI and FINTRAC concurrently assess FRFI's for compliance with AML/CFT compliance obligations and are moving to a joint examination process (see further details below). At the provincial level, FINTRAC conducts AML/CFT supervision on non-FRFIs with the cooperation of other supervisors and has signed 17 MOUs with supervisors in relation to non-FRFIs. FINTRAC is authorized to share information with primary regulators at national and provincial levels relating to AML/CFT to monitor compliance with the PCMLTFA, and such regulators are also authorized to share information with FINTRAC.

Market Entry

Criterion 26.2— Federal and provincial authorities are the primary regulators of FIs with responsibility for prudential and conduct supervision including the licensing and registration of market entrants. FINTRAC is responsible for the registration and supervision of MSBs (along with AMF for MSBs operating in Quebec).

Market entry rules for FRFIs are set out in the relevant federal governing legislation and the process is entirely under the control and direction of OSFI. The Minister of Finance is responsible for approving Letters Patent creating domestic FRFIs, and for authorizing foreign banks and life insurance companies to operate branches in Canada by means of Ministerial Orders. OSFI is responsible for managing the process leading up to Ministerial actions. Authorized banking is

regulated both at the federal and provincial levels and it is not possible for the process to permit the creation or authorization of shell banks.

The following table sets out the licensing or registration requirements in Canada.

Reporting Entities	Primary Regulator	Licensed/Registered	Legislation
Banks	Federal-OSFI	Licensed. Domestic banks are created by the Minister pursuant to an incorporation process discussed below. Authorized foreign banks receive certificates to operate by one or more branches in Canada.	Bank Act
Cooperative Credit and Retail Associations [128]	Federal-OSFI for Cooperative Retail Associations; Provincial-Cooperative Credit Associations	Same as domestic banks	Cooperative Credit Associations Act
Credit Unions and *caisses populaires*	Provincial authorities	Registration	Legislation includes Credit Unions Act; Financial Institutions Act; Credit Union Incorporation Act; Credit Unions and *Caisses Populaires* Act; Deposit Insurance Act; An act respecting financial services cooperatives; An Act respecting the Mouvement Desjardins
Life Insurance Companies	Federal-OSFI Provincial authorities	Licensed [129] Either licensed or registered	Insurance Companies Act Legislation includes Insurance Act; Financial Institutions Act; Insurance Companies Act; Life Insurance Act; Registered Insurance Brokers Act; An Act respecting insurance (Quebec); An Act respecting the distribution of financial products and services(Quebec); Saskatchewan Insurance Act

[128] OSFI's oversight of Cooperative Credit Associations, commonly referred to as credit union centrals, is limited and quite different from its oversight of banks and other FRFIs. Cooperative Credit Associations are organized and operated based on cooperative principles. With the exception of the Credit Union Central of Canada ('CUCC'), the Cooperative Credit Associations are provincially incorporated, and regulated and supervised at the provincial level. The CUCC, which is federally incorporated, functions as the national trade association for the Canadian credit union system and does not provide any financial services. Cooperative Retail Associations are federally incorporated and supervised by OSFI in the same way as for banks and other FRFIs.

[129] Domestic life insurance companies under OSFI's jurisdiction are created by the Minister pursuant to an incorporation process discussed below. Authorized foreign life insurance companies only operation under the federal legislation and receive Ministerial Orders permitting one or more branches in Canada.

Reporting Entities	Primary Regulator	Licensed/Registered	Legislation
Life Insurance Brokers and Agents	Provincial authorities	Licensed or registered	Legislation includes Insurance Act; Financial Institutions Act; Insurance Companies Act; Life Insurance Act; Registered Insurance Brokers Act; Saskatchewan Insurance Act; An Act respecting insurance (Quebec); An Act respecting the distribution of financial products and services (Quebec)
Trust and Loan Companies	Federal-OSFI Provincial authorities	Licensed Licensed or registered	Trust and Loan Companies Act Legislation includes Loan and Trust Corporations Act; Financial Institutions Act; Corporations Act; Trust and Loan Companies Act; Trust and Loan Companies Act; Deposit Insurance Act; An act respecting trust companies and savings companies (Quebec)
Investment Dealers	IIROC Provincial authorities	Registration Licensed (Northwest Territories) or registered	IIROC Dealer Member Rules Legislation includes Securities Act; Commodity Futures Act; An Act pertaining to financial products and services (Quebec); Derivatives Act;
Mutual Fund Dealers	Mutual Funds Dealers Association Provincial authorities	Registered Licensed (Northwest Territories) or registered	MFDA Rules Legislation includes Securities Act; Commodity Futures Act; An Act pertaining to financial products and services (Quebec); Derivatives Act;
Investment Counsel and Portfolio Management Firms	Provincial authorities	Licensed (Northwest Territories) or registered	Legislation includes Securities Act; Commodity Futures Act; An Act pertaining to financial products and services (Quebec); Derivatives Act;
Other securities firms	Provincial authorities	Licensed (Northwest Territories) or registered	Legislation includes Securities Act; Commodity Futures Act; An Act pertaining to financial products and services (Quebec); Derivatives Act;
Money Service Businesses	FINTRAC *Autorité des marchés financiers* (Québec)	Registration Licensed	PCMLTFA and PCMLTF Registration Regulations Money-Services Business Act

Criterion 26.3— Federal and provincial regulators are responsible for carrying out fit-and-proper tests on persons concerned in the management or ownership of FIs in Canada. The measures are used to prevent criminals or their associates from holding a significant or controlling interest in an FI in Canada.

OSFI conducts fit-and-proper tests on FRFIs at the application stage to assess the fit-and-proper status of applicants, their principals (beneficial owners), senior management and Boards of Directors. Fit-and-proper tests are conducted under the Bank Act (ss.27, 526 and 675), Trust and Loan Companies Act (s.26), Cooperative Credit Associations Act (s.27) and Insurance Companies Act (ss.27 and 712). OSFI requires that applicants provide details of whether applicants have been the subject of any criminal proceedings or administrative sanction and it conducts security screening.

OSFI has the authority to apply fit-and-proper tests during the lifetime of a FRFI but only applies this authority directly to changes of ownership and/or shareholding. To address changes in directors or senior managers, OSFI has issued Guideline E-17 "Background Checks on Directors and Senior Managers of Federally Regulated Entities" in that regard. These requirements are applied throughout the life of FRFIs. After an FRFI is licensed, fit-and-proper testing on new senior officers and Directors is conducted by the FRFI rather than by the regulator. However, OSFI continues to apply fit-and-proper checks on new shareholders. OSFI assesses FRFIs' compliance with the Guideline and has issued prudential findings on background checks conducted by FRFIs on responsible persons. Since 2014, FRFIs are required to notify OSFI of plans to appoint or replace senior managers or directors.[130]

Persons and entities operating and controlling MSBs are required to register with FINTRAC under the PCMLTF Registration Regulations. FINTRAC conducts criminal record checks when assessing applications for registration as MSBs and it can refuse or revoke registrations where a person has been convicted of certain criminal offenses.

Provincial regulators apply fit-and-proper controls to assess the suitability of persons who control, own or are beneficial owners of provincially regulated FIs. General fit-and-proper requirements apply in the securities and insurance sectors. For example, the Investment Industry Regulatory Organization of Canada (IIROC) evaluates whether an individual appears to be "fit and proper" for approval/registration and /or whether the individual's approval is otherwise not in the public interest. Included in the criteria are the evaluation of an individual's integrity and criminal record. Provincial securities regulators apply similar criteria. In addition, MSBs located in Quebec are subjected to a "fit-and-proper" test by the *Autorité des marches financiers* (AMF) under the *Money Services Business Act* (Quebec).

Provincial regulators have not adopted fitness and probity requirements for persons owning or controlling financial entities after market entry to the same extent as what is achieved at federal level.

Risk-Based Approach to Supervision and Monitoring

Criterion 26.4— OSFI and provincial regulators are responsible for prudential and conduct supervision of Core Principle institutions in Canada under the OSFI Act, provincial legislation and other governing legislation. OSFI applies an AML/CFT assessment program as part of the Core Principles-based prudential supervision of FRFIs. All FRFIs are supervised by OSFI on a consolidated

[130] OSFI issued an Advisory on Changes to the Membership of the Board or Senior Management.

or group basis, as required by the Core Principles. Canada underwent an IMF FSAP in 2013 and OSFI was found to comply with the implementation of the Core Principles in the banking and insurance sectors and was rated LC.

FINTRAC is responsible for the supervision of all REs for AML/CFT compliance under the PCMLTFA, including Core Principles institutions supervised by OSFI and provincial prudential regulators. OSFI and FINTRAC have a coordinated approach to supervision of Core Principles institutions that are FRFIs. FINTRAC consults and coordinates with other federal and provincial prudential supervisors and has signed 17 MOUs with regulators to exchange compliance related information.

Both OSFI and provincial regulators adopt a risk-based approach to identify firms that have a higher risk of AML/CFT activities. In 2013, OSFI and FINTRAC adopted a concurrent approach to conduct AML/CFT examinations in the FRFI sector. Non-Core Principles institutions are supervised by FINTRAC for compliance with the PCMLTFA. FINTRAC also receives information from provincial regulators arising from their prudential/conduct supervisory activities that may be relevant to AML/CFT compliance. MSBs are registered and supervised by FINTRAC (and AMF in Quebec) for compliance with the PCMLTFA.

Criterion 26.5— AML/CFT supervision is conducted in Canada on a risk-sensitive basis. A shorter version of the NRA identifying the inherent ML/TF risks in Canada has recently been published and the findings are being incorporated into supervisors' compliance activities. Supervisors have their own operational risk assessment models and they use a range of programs, activities and tools to supervise and monitor compliance with AML/CFT requirements. There has been an increase in the frequency and intensity of on-site and offsite supervision of FIs in recent years. There has also been an increase in resources at FINTRAC to carry out compliance activities since the last MER.

FINTRAC has developed an AML/CFT Supervisory Program that is risk-based to ensure that REs are complying with their obligations under the PCMLTFA. It uses an enhanced risk-assessment model to assign risk ratings to REs that allows the allocation of resources according to higher-risk areas. Its risk model relies on information such as media information, ML/TF intelligence, financial transaction reporting behaviour, information received from law enforcement and regulatory partners that have MOUs with FINTRAC. It is updated regularly using information it collects through intelligence and examinations and is adjusted following on-site and off-site examinations. The risk assessment carried out on FRFIs is done in collaboration with OSFI.

FINTRAC's Supervisory Program is influenced and guided by a number of factors including the risk rating of the RE using the enhanced risk-assessment model and using other tools such as the examination selection strategy. FINTRAC focuses its supervisory activities on a risk-based approach using higher-intensity activities for higher-risk REs and using other lower-intensity activities for medium- and lower-risk entities. FINTRAC's primary tool to supervise for AML/CFT compliance is its examinations strategy that is well developed. The examination strategy developed by FINTRAC prioritized activities aimed at REs that have been found to be non-compliant previously and those with high-risk ratings. It also focuses on key industry players with large market shares, which are examined regularly, given the inherent risks that are associated with their size and respective

business models and the consequences of non-compliance. FINTRAC also has a range of offsite mechanisms to conduct supervision of FIs including compliance assessment reports (CAR), desk-based reviews, monitoring of financial transactions, observation letters, compliance enforcement meetings, IT tools, voluntary self-disclosures of non-compliance and other awareness/assistance tools. CARs are used to segment REs within a sector, with results being used to initiate desk and on-site exams.

OSFI applies a risk-based approach to AML/CFT supervision. It has an AML/CFT risk assessment separate from its prudential risk assessment model for FRFIs and directs its assessment program at Canada's largest banks and insurance companies and other FRFIs considered at highest risk of ML and TF. OSFI's risk assessment methodology focuses on the vulnerabilities of FRFIs to ML and TF, looking at factors such as size, geographical spread, products, services and distribution channels and quality of risk management generally. It assigns a risk profile on each institution considering the risk factors and the quality of its risk management. OSFI's risk assessment results in a classification of FRFIs into categories of high, medium and low risk based on a combination of inherent risk, coupled with broader prudential views on the quality of risk management. OSFI supervises FRFIs on a group-wide basis and it conducts examinations of FRFI's on a cyclical basis depending on an FRFI's risk ratings and when information is received from prudential supervisors and other regulators including FINTRAC. OSFI also monitors major events or developments impacting the management or operations of FRFIs that informs both the content of AML/CFT assessments and also the assessment planning cycle.

FINTRAC and OSFI have agreed a concurrent approach to AML/CFT supervision of FRFIs allowing for concurrent examinations in addition to individual examinations that both supervisors can conduct of FRFIs. Both OSFI and FINTRAC exchange information that is relevant to FRFI's compliance with AML/CFT obligations. FINTRAC and provincial regulators also exchange information and FINTRAC can conduct AML/CFT follow-up activities with provincially regulated REs when AML/CFT issues are reported to it. Other supervisors also adopt risk assessments and supervision that are related to AML/CFT. For example, IIROC uses a risk assessment model for IIROC-regulated firms to determine priority focus and can apply an AML examination module by IIROC that is judged to present an AML/CFT risk. The primary responsibility for AML/CFT supervision remains with FINTRAC and any supervisory activity conducted by other supervisors' supplements, but does not replace, FINTRAC's responsibility to ensure compliance with the PCMLTFA and Regulations made thereunder.

Criterion 26.6— FINTRAC reviews its risk model on an ongoing basis and recently reviewed its sectoral analysis. FINTRAC also reviews its understanding of ML/TF risks for individual REs through reviewing the institution's compliance history, reporting behaviour and risk factors. In its ongoing review of the risk assessment, FINTRAC regularly monitors and assesses actionable intelligence, ML/TF risks and trigger events. OSFI reviews its AML/CFT risk profiles of FRFIs periodically. Risk assessments are applied to DSIBs on a continuous basis, reflecting their dominance of the FRFI sector and their very high-risk level. On-site assessments of DSIBs are conducted on a regular basis and DSIBs may be subject to more intensive supervision (staging) where deficiencies have been identified. The review of the risk profiling of other high-risk FRFIs is updated at less frequent

intervals, due to their less complex risk profiles. Provincial regulators are also kept apprised of ML/TF risks by FINTRAC and through the recently published NRA.

Weighting and Conclusion

Further fitness and probity controls are required.

Canada is largely compliant with R.26.

Recommendation 27 – Powers of supervisors

In the 2008 MER, Canada was rated LC with these requirements, notably because FINTRAC had no power to impose AMPs on REs. This has been remedied in December 2008.

Criterion 27.1— FINTRAC has authority to ensure compliance by all REs with parts 1 and 1.1 of the PCMLTFA (s.40). OSFI and provincial supervisors also have supervisory powers over REs under their own supervisory remit under federal and provincial legislation: e.g. the OSFI Act indicates the Superintendent's powers and duties in relation to the Bank Act, Trust and Loan Companies Act, the Cooperative Credit Associations Act and the Insurance Companies Act and the supervisory powers of the Superintendent are uniform under these Acts.

Criterion 27.2— FINTRAC has the authority to conduct inspections of FIs under the PCMLTFA. It can carry out on-site examinations of REs under PCMLTFA, s.62(1). Such examinations can be routine (with notice) but FINTRAC also has the authority to conduct unannounced examinations of REs under the PCMLTFA. OSFI has no mandate under PCMLTFA, but it supervises FRFIs under the OSFI Act and FRFIs' governing legislation (e.g. Bank Act) to determine whether they are in sound financial condition, are managed safely and are complying with their governing statute law. IIROC and provincial regulators conduct audits of registered firms to ensure compliance with Canadian securities laws.

Criterion 27.3— FINTRAC is authorized under the PCMLTFA to compel production of any information relevant to monitoring compliance with AML/ATF requirements. It can enter any premises (except a dwelling house) to access any document, computer system and to reproduce any document "at any reasonable time" (PCMLTFA, ss.62(1) and (2)). FINTRAC also has the authority to require REs to provide any information that FINTRAC needs for compliance purposes (s.62). There is a 30-day period given to deliver the information (PCMLTFR, s.70). OSFI has general powers to compel information from REs under OSFI Act, s.6 and federal governing legislation. While not mandated under the PCMLTFA, other regulators have the power to compel information under provincial or governing legislation to protect the public and market integrity. FINTRAC can exchange information on compliance with Parts 1 and 1.1 of the PCMLTFA with federal and provincial agencies that regulate entities.

Criterion 27.4— FINTRAC and OSFI have a range of supervisory tools to sanction REs for non-compliance. These tools include supervisory letters, action plans for FRFIs, staging by OSFI, compliance agreements, revocation of registration of MSBs by FINTRAC, revocation of FRFIs'

licenses by the AG of Canada[131] and criminal penalties. The PCMLTFA AMP Regulations provide FINTRAC with the power to apply AMPs to any FI and DNFBPs subject to the AML/CTF regime for non-compliance with the PCMLTFA. Provincial regulators, IIROC and MFDA have the power under their own governing legislation to conduct investigations and undertake enforcement action where necessary to protect the public and market integrity. They have the power to restrict, suspend and cancel registration. Further information is provided under the analysis of R.35.

Weighting and Conclusion:

Canada is compliant with R.27.

Recommendation 28 – Regulation and supervision of DNFBPs

In the 2008 MER, Canada was rated NC with these requirements (pages 229–243) notably because of deficiencies in the scope of the DNFBPs covered and not subject to FINTRAC supervision, and the sanction regime and resources available to FINTRAC were considered inadequate. Since then, the scope of DNFBPs under the supervision of FINTRAC has been extended to BC Notaries and DPMS, and FINTRAC was granted the power to impose sanctions under the PCMLTF AMP Regulations.

Casinos

Criterion 28.1— *a)* Gambling activities are illegal in Canada, except if conducted and managed by the province or pursuant to a license issued by the province on the basis of CC, ss.207(1)(a) to (g), and three different models are in place (charity, commercial casinos, First Nation casinos, as described in the 2008 MER pages 214–215). Internet gambling are not subject to AML/CFT obligations, as the amendment to the definition of casino under PCMLTFA[132] is not yet into force, as well as ship-based casinos (the latter is a very minor issue, considering that, according to the authorities, no Canadian cruise ship are currently being operated, and lottery schemes cannot be operated within 5 nautical miles of the Canadian shore). Several provinces have introduced internet gambling (British Columbia, Quebec, Manitoba, Nova Scotia, Prince Edward Island, New Brunswick, and Newfoundland). Under the provincial legislation, also lottery schemes performed through Internet are required to be licensed.

b) All provinces and territories have regulation on terms and conditions for obtaining the license and a regulatory authority empowered to administer the relevant provincial legislation. Due-diligence requirements of the applicants (casino operator, key persons associated with the applicants and executive members) are part of the licensing process, where financial, business information, information referring to criminal proceedings, and reputational elements are required and subject to a review conducted by the competent provincial regulatory authorities. The licensing provisions make reference to due-diligence procedure related to an extensive notion of "associates" of the applicant, and when the applicant is a company or a partnership controls are extended to partners, directors, as well as to any subject who directly or indirectly control the applicant or has a beneficial

[131] This authority is subject to a number of conditions as set out in federal governing legislation.
[132] In particular, PCMLTFA, Section 5, k, (i).

interest in the applicant. Notice of changes in directors, officers, associated of the registrants are submitted to the approval of the competent regulatory authority. Notification of charges and convictions of the licensee, as well as of its officers, shareholders, owners are required. In respect of charities that require a license to conduct casino events eligibility requirements must be met both where a charitable model has been adopted[133] and where a corporation model is in place.[134] Charitable events may be licensed also by First Nations Authority under the agreement with the relevant provincial legislator (Manitoba, Saskatchewan),[135] where the authority to issue license to charitable gaming has been delegated by the competent provincial authorities in favour of First Nations commissions. Under the Agreements (Part 10.1) the parties agree that the terms and conditions that apply to licenses off and on reserve are essentially the same. Audits are performed in order to ensure that the operators comply with the terms and conditions of the license.

Under the relevant provincial legislation, the same provisions apply also to lottery schemes performed through Internet.

The table below summarizes the list of casino's regulators identified under the provincial gaming legislation and the relevant legislation. Licensing authorities do not have express AML/CFT responsibility to qualify as competent authorities.

Province	Regulator	Provincial Legislation
Alberta	Alberta Gaming &Liquor Commission	Gaming and Liquor Act
British Columbia	Gaming Policy and Enforcement Branch	Gaming Control Act
Manitoba	Liquor and Gaming Authority of Manitoba First Nations Gaming Commissions at reserve charitable gaming within the municipality or on reserve	Liquor and Gaming Control Act
New Brunswick	Gaming Control Branch-Department of Public Safety	Gaming Control Act
Nova Scotia	Nova Scotia Alcohol and Gaming Division	Gaming Control Act

[133] Pursuant to Section 20.(1) of the Gaming and Liquor Regulation in Alberta charitable or religious organisation in order to qualify for the license must satisfy the board that the proceeds generated from the gaming activities must be used for charitable and religious activities. In this context, the volunteers of charities are allowed to work in key positions at the casino events only if licensed, thus being subject to criminal record checks. The Commission must ensure that the licensed organisation comply with the relevant legislation.
[134] Where Lottery Corporations are empowered to conduct and manage gaming on behalf of the provincial government, group or organization can be licensed to hold a gaming event by the competent regulator. In British Columbia background investigations may be conducted also in respect of the eligible organisation, its directors, officers employees or associated (Section 80 (1) (g) (vi) of the Gaming Control Act. Audit of the licensee are performed conducted by the Charitable Gaming Audit Team of the Gaming Policy and Enforcement Branch.
[135] In Saskatchewan the Provincial regulatory authority, SLGA, owns and manage the slot machines at six casinos operated by the Saskatchewan Indian Gaming Authority, a non-profit corporation licensed by SLGA, while the Indigenous Gaming Regulator has a delegated authority under 207 (1) (b) of the CC to issue charitable gaming licenses on designated reserves.

Province	Regulator	Provincial Legislation
Ontario	Alcohol and Gaming Commission of Ontario	Gaming Control Act Alcohol and Gaming Regulation and Public Protection Act
Quebec	*Régie des alcools des courses et des jeux*	Act Respecting Lotteries, Publicity Contest and Amusement Machines An Act respecting the *Société des lotteries du Québec.*
Saskatchewan	Saskatchewan Liquor and Gaming Authority IGR responsible for licensing and regulating charitable gaming on First Nations, operating through a Licensing Agreement with SLGA (2007).	The Alcohol and Gaming Regulation Act
Yukon	Professional Licensing & Regulatory Affairs Branch	Lottery Licensing Act Sec 2 (Eligibility) and Sec 10 (Regulations) of the Lottery Licensing Act
Newfoundland and Labrador	Department of Government Services and Lands, Trades Practices and Licensing Division (no specific provisions)	Lottery schemes-General rules
Prince Edward Island	PEI Lotteries Commission /Department of Community and Cultural Affairs for casinos charities	Lotteries Commission Act
Northwest territories	Consumer Affairs, Department of Municipal and Community Affairs	Lotteries Act Lottery Regulations
Nunavut	Department of Community and Government Services	The Lotteries Act and Regulations

c) FINTRAC is the only competent supervisory authority for compliance of casinos with AML/CFT requirements. It has signed the MOUs with the following regulators: Alcohol and Gaming Commission of Ontario (AGCO); British Columbia Gaming Policy Enforcement Branch (GPEB); Alcohol and Gaming Division of Service Nova Scotia; Saskatchewan Liquor and Gaming Authority (SLGA). Online gambling is not covered by the definition of casino currently into force under PCMLTFA.

DNFBPs Other than Casinos

Criterion 28.2— FINTRAC is the designated competent authority under PCMLTFA and PCMLTFR for the AML/CFT supervision of all DNFBPs. FINTRAC supervises 26,000 DNFBPs in total, including casinos (discussed under 28.1), trust and loan companies, accountants, dealers in precious metals and stones, BC Notaries, and real estate agents and developers. As described under R.22 lawyers and Quebec notaries, trust and company service providers that are not included among the trust and loan companies are not monitored for AML/CFT purposes.

Criterion 28.3— All the categories of DNFBPs that fall into the scope of AML/CFT regime are monitored by FINTRAC for compliance with AML/CFT requirements. Apart from real estate dealers under certain condition, the AML requirements have not been extended to other categories in addition to those provided for in the FATF standards.

Criterion 28.4— *a)* FINTRAC powers to monitor and ensure compliance are the same for FIs and DNFBPs (PCMLTFA s. 62). For details, see R.27.

b) The powers to prevent criminals or their associates from being accredited, or from owning, controlling or managing a DNFBPs other than casinos are more limited. No specific measure is in place for DPMS. Referring to accountants the current process of creating a unified new professional designation, the Chartered Professional Accountant, replacing the former three (Chartered Accountants, Certified General Accountants and Certified Management Accountants), is at different stages in the various provinces. The provincial associations are in charge of ensuring high professional standards also through investigation of complaints and enforcement actions. In the admission to membership disclosure of investigations and disciplinary proceedings is required and consent must be provided permitting the Registrar to access the relevant information.[136] Members are also required to promptly inform CPA after having being convicted of criminal offenses.[137] Allegations for a wide set of crimes, included ML, financial frauds, TF, entail a rebuttable presumption of failing to maintain good reputation of the profession.[138] Accounting firms (partnerships, limited liability partnerships and professional corporations) are required to disclose investigations involving any partners[139] or shareholders and consent shall be provided permitting the Registrar to access information regarding such investigation. Any change in partners, shareholder must be notified and failure to provide such disclosure are considered breach of memberships obligations. Regarding BC Notaries, under the Notaries Act of BC, the Society of Notaries Public of BC is empowered to maintain standards of professional conduct. The procedure for the enrolment include screening procedure conducted by the Credentials Committee of the Society, where consent for disclosure of criminal records information in favour of the RCMP must be provided. Under the Notary Act also Notary Corporation (Notary Act, ss.57 and 58(f) of) are subject to a permit and the procedure imply controls on the voting shares members (that must be members of the Society in good standing, thus having passed the screening procedures described above related to disclosure of criminal records) as well as the non-voting members (who can be only members of the Society or relatives). The Society is empowered to impose fines, as well as take disciplinary action and revoke the permits (Notary Act, s.35). In respect of real estate agents, as shown in the attached each province has suitability requirements for licensee that apply as individual,[140] which in most cases entail the provision of Certified Criminal Records Checks. Nevertheless, in some cases the relevant provisions make reference both as a condition of refusal to issuing and to suspending or cancelling a license to the notion of "public interest,"[141] which, despite the authorities, consider broad to include a large number of factors, seems to be too vague and left to the discretion of the competent regulatory authorities. The integrity requirements in respect of

[136] Section 2 of Reg. 4-1 of CPA Ontario.
[137] Rule 102. 1 of the Rules of professional conduct CPA Ontario.
[138] Rule 201.2 of 1 of the Rules of professional conduct CPA Ontario.
[139] Regulations 4-6, Section 11, CPA Ontario.
[140] No specific integrity requirement under the Real Estate Agents Licensing Act. The convictions of offenses against the CC shall be related to qualifications, functions or duties of the agent/sales persons (Section 18, (k) and are cause for suspension or cancellation of license.
[141] Manitoba, Section 11(1) of the Real Estate Brokers Act, New Brunswick, Section 10 (2) of the Real Estate Act; Prince Edward Islands, Section 4 (3) of the Real Estate Trading Act.

corporations and partnerships are not always expressly extended to partners, directors, officers.[142] Not always changes in the directors, officers, shareholders, partners must be notified to the competent provincial Authority.[143] Furthermore, the relevant legislation is essentially orientated in a perspective of consumer's protection so that in some cases the condition for refusal of the license are previous convictions of indictable offense "broker-related,"[144] as well as the notification of licensee makes reference to convictions involving a limited set of offenses.[145] Moreover, as the presence of criminal records is not necessarily a bar to registration, a case-by-case approach is taken by the regulatory authority. Provincial legislation establishes an express exemption regime in favour of lawyers, trust companies[146] and in some cases accountants from the requirement for license in respect of real estate services provided in the course of their practice.

DNFBPS Category	Designated Competent Authority	Relevant Legislation	Market Entry Safeguards

DPMS	**No designated competent authority**	-	**No measure in place**
BC Notaries	The Society of Notaries Public	the Notary Act	The procedure for the enrolment include screening procedure conducted by the Credentials Committee of the Society, where consent for disclosure of criminal records information in favour of the RCMP. Notary Corporation (ss 57 and 58 f the Notary Act) are subject to a permit and the procedure imply controls on the voting shares members (that must be in good standing) as well as the non-voting members (who can be only members of the Society or relatives)

c) There are civil and criminal sanctions[147] available for failure to comply with AML/CFT obligations for DNFBPs as described under R.35, as well as the public notice of AMPs imposed. The AMP regime allows administrative sanctions to be applied to REs although the maximum threshold raises doubts about the dissuasiveness and/or proportionality of sanctions for serious violations or repeat offenders. However, there is a range of measures available to supervisors to ensure compliance that are both proportionate and dissuasive.

All DNFBPs

Criterion 28.5— FINTRAC has further developed its risk model that lead to a risk classification (low, medium, high) of activity sectors and entities and the frequency and intensity of supervision is a function of FINTRAC's risk assessment. FINTRAC has started to integrate the results of inherent NRA for 2015/2016. The risk model takes into account numerous sources of information in order to assess the risk factor of specific REs. Further details on how the risk profile affects the scope and frequency of controls are provided under IO.3.

Weighting and Conclusion

AML/CFT obligations are inoperative for legal counsels, legal firms and Quebec notaries. Online gambling, ship-based casinos, trust and company service providers that are not included among the trust and loan companies are not subject to AML/CFT obligations and not monitored for AML/CFT purposes. The entry standards and fit-and-proper requirements are absent in DPMS and TCSPs, while for the real estate brokerage they are not in line with the standards. Taking into account the deficiencies identified in the scope of DNFBPs and subsequent coverage of AML/CFT supervision and in the fit-and-proper requirements for DPMS, TCSPs and for the real estate brokerage

Canada is partially compliant with R.28.

Recommendation 29 - Financial intelligence units

In its third MER, Canada was rated PC with former R.26 (see paragraphs 364–418) notably due to the fact that the FIU (i) had insufficient access to intelligence information from administrative and other authorities, and (ii) was not allowed to gather additional information from REs. The first deficiency has since been addressed. The FATF standard was strengthened by new requirements which focus on the FIU's strategic and operational analysis functions, and the FIU's powers to disseminate information upon request and request additional information from REs.

Criterion 29.1— In 2000, Canada established an administrative FIU—Financial Transactions and Reports Analysis Centre of Canada (FINTRAC), which is a national centre for receiving, analysing and disseminating information in order to assist in the detection, prevention, and deterrence of ML, associated predicate offenses and TF activities: PCMLTFA, s.40. The definition of an ML offense

[147] Sections 73.1 to 73.24 of PCMLTFA.

under the PCMLTFA is based on the definition of the offenses established in the CC, which includes information related to associated predicate offense.[148]

Criterion 29.2— FINTRAC serves as a national agency authorized to receive STRs and other systematic reporting required by the PCMLTFA or the PCMLTF regulations, including Terrorist Property Reports, Large Cash Transaction Reports (of CAD 10 000 or more), SWIFT and Non-SWIFT Electronic Funds Transfer Reports (of CAD 10 000 or more), Casino Disbursement Reports (of CAD 10 000 or more), physical cross-border currency or monetary instruments reports and seizures reports and any financial transaction, or any financial transaction specified in PCMLTFA. In addition, FINTRAC is authorized to receive voluntary information records (VIRs), i.e. information provided voluntarily by LEAs[149] or government institutions or agencies, any foreign agency that has powers and duties similar to those of the Centre (i.e. FINTRAC), or by the public about suspicions of ML or TF activities.[150]

Criterion 29.3— *a)* FINTRAC may request the person or entity that filed a STR to correct or complete its report when there are quality issues such as errors or missing information, but not in other instances where this would be needed to perform its functions properly. According to the authorities, Canada's constitutional framework prohibits FINTRAC from requesting additional information from REs. This deficiency was highlighted in Canada's Third MER, and Canada's Sixth Follow-up Report concluded that, despite the information-sharing mechanism put in place by FINTRAC since its last evaluation, the deficiency has not been adequately addressed.

b) PCMLTFA, ss.54 (1) (a) to (c), states that FINTRAC may collect information stored in a database maintained, for purposes related to law enforcement or national security, by the federal government, a provincial government, the government of a foreign state or an international organization, if an agreement to collect such information has been concluded. FINTRAC has direct or indirect access to a wide range of law enforcement information, as the Canadian Police Information Centre (CPIC), the Public Safety Portal (PSP), CBSA's cross-border currency reports and seizure reports databases, RCMP's National Security systems and *Sûreté du Québec*'s criminal information and the Canada Anti-fraud Centre of the RCMP databases, as well as to the CSIS database. However, FINTRAC still has insufficient access to the information collected and/or maintained by–or on behalf of–administrative and other authorities, such as CRA databases.

Criterion 29.4— *a)* FINTRAC must analyse and assess the reports and information received and/or collected under PCMLTFA, ss.54(1)(a) and (b), namely, STRs, Large Cash Transaction Reports, Electronic Funds Transfer Reports, Casino Disbursement Reports, physical cross-border currency or monetary instruments reports and seizures reports, information provided voluntarily by LEAs and

[148] See subsection 462.31(1) of the criminal code where "designated offence" means "a primary designated offence or a secondary designated offence" under section 487.04 of the CC.
[149] FINTRAC receives information provided voluntarily by CSIS, CBSA, CRA–Criminal Investigation Directorate–and the RCMP, as well as provincial and municipal police.
[150] VIRs are the mechanism used by LEAs and other partners of FINTRAC to send information to and advise FINTRAC of investigative priorities without creating an obligation on FINTRAC to respond so as to respect the principle of independence of the FIU. The majority of VIRs that FINTRAC receives focus on priority investigations. VIRs are often the starting point of FINTRAC's analysis (however, FINTRAC always maintains its ability to proactively develop cases).

other regime partners (i.e. the VIRs), queries from, foreign FIUs, as well as information collected from several databases or open source information (s. 54(1) (c) PCMLTFA).

b) FINTRAC is also required to conduct research into trends and developments in the area of ML and TF activities and to undertake strategic analysis (s. 58(1)(b) PCMLTFA). It does so by leveraging a range of open and classified sources of information. It publishes Typologies and Trends Reports[151] on a broad array of issues. From 2010 to 2015, it produced 62 strategic intelligence and research products, which identify ML/TF methods and techniques used by listed terrorist groups and criminal networks, emerging technologies, as well as vulnerabilities in different sectors (both covered and non-covered by the PCMLTFA). These reports provide feedback to REs, respond to Canada's intelligence priorities and build the evidence base for new policy development. FINTRAC has also participated to the working out of Canada's first formal NRA.

Criterion 29.5— FINTRAC is able to disseminate "designated information,"[152] either spontaneously or in response to a VIR, to the appropriate police force,[153] the CRA, CBSA, Communications Security Establishment, Provincial Securities Regulators (as of 23 June 2015) and CSIS, through secure and protected channels (ss.55(3)(a) to (g) and 55.1(1)(a) to (d) PCMLTA). It is also able to disseminate information upon request to LEAs with a court order issued in the course of court proceedings in respect of an ML, TF, or another offense (PCMLTFA, s.59(1). This process has not been used in recent years, as LEAs obtain sufficient information from FINTRAC in response to their VIRs. FINTRAC's AML/CFT supervisory unit and FIU unit are able to exchange information in the exercise of their respective functions. As indicated under R.30, some competent authorities, such as Environment Canada or Competition Bureau, cannot request information from the FIU.

Criterion 29.6— Information held by FINTRAC is securely protected and is disseminated in accordance with the PCMLTFA (s.40(c)). FINTRAC has internal procedures (FINTRAC's Privacy framework) governing the security and confidentiality of information, the respect of the confidentiality and security rules by its staff members and limiting access to information, including access to the IT system, to those who have a need to know in order to effectively perform their duties.

Criterion 29.7— FINTRAC was established as an independent agency that acts at arm's length and is independent from LEAs and other entities to which it is authorized to disclose information under ss.55(3), 55.1(1) or 56.1(1) or (2) (PCMLTFA, s.40(a)).

[151] Mass Marketing Fraud: Money Laundering Methods and Techniques (January 2015), Money laundering trends and typologies in the Canadian securities sector (April 2013), Money Laundering and Terrorist Financing Trends in FINTRAC Cases Disclosed Between 2007 and 2011 (April 2012), Trends in Canadian Suspicious Transaction Reporting (STR) (April and October 2011), Money Laundering and Terrorist Financing (ML/TF) Typologies and Trends for Canadian Money Services Businesses (July 2010), Money Laundering Typologies and Trends in Canadian Casinos (November 2009), Money Laundering and Terrorist Financing Typologies and Trends in Canadian Banking (May 2009).
[152] The terms "designated information" cover a range of information, including the name and criminal records of a person or entity involved in the reported transaction, the amounts involved, etc.
[153] The appropriate police force means the police force that has jurisdiction in relation to the ML offense. This includes federal, provincial and municipal police forces, as they receive their power from the province.

a) The Director of FINTRAC is appointed by the Governor in Council for a reappointed term of no more than five year with a maximum term of ten years, and has supervision over and direction of the Centre regarding the fulfilment of its mission (internal organization, decisions taken, etc.) and in administrative matters (staff and budget).

b) FINTRAC is able to make arrangements or engage independently with other domestic competent authorities. Agreements or arrangements with foreign counterparts on the exchange of information are entered either into by the Minister or by the Centre with the approval of the Minister (PCMLTFA, s.56 (2)).

c) FINTRAC is not located within an existing structure of another authority: the FIU is an independent agency under the responsibility of the Minister with legally established and distinct core functions (PCMLTFA, ss.42 and 54).

d) The Minister is responsible for FINTRAC (PCMLTFA, s.42(1)) and the director of FINTRAC is the chief executive officer of the Centre, has supervision over and direction of its work and employees and may exercise any power and perform any duty or function of the Centre (PCMLTFA, s.45(1)).

Criterion 29.8— FINTRAC has been a member of the Egmont Group since 2002.

Weighting and Conclusion

FINTRAC has limited access to some information.

Canada is partially compliant with R.29.

Recommendation 30 – Responsibilities of law enforcement and investigative authorities

In its 2008 MER, Canada was rated LC with former R.27 due to an effectiveness issue. Minor changes have since been made. There are also significant changes in the standard.

Criterion 30.1— LEAs are designated with the responsibility for investigating ML, predicate offenses and TF. There is one national police force (the RCMP) and two provincial LEAs (respectively, in Ontario and Quebec). The RCMP is a federal, provincial, and municipal policing body. All Canadian police forces are potential recipients of FINTRAC disclosures under the PCMLTFA and can investigate ML/TF offenses.

Most predicate offenses are investigated by provincial and municipal police forces, including the RCMP when they are acting as provincial police (except Ontario and Quebec). Serious or proceeds-generating crime investigations can be done by the RCMP either exclusively or in parallel with provincial or municipal forces.

The RCMP has the primary law enforcement responsibility to investigate both terrorism and TF. The Terrorist Financing Team of the RCMP's Federal Policing Criminal Operations (FPCO) is responsible for, inter alia, monitoring and coordinating major ongoing investigational projects related to

terrorist organizations on financial and procurement infrastructures.

Criterion 30.2— All national, provincial and municipal police forces are authorized, under the CC, as "peace officers" to conduct parallel financial investigations related to their criminal investigations. They may refer the ML/TF case to other police units for investigation, regardless of where the predicate offense occurred.

Criterion 30.3— All police forces are empowered to identify, trace, seize, and restrain property that is, or may subject to forfeiture, or is suspected of being proceeds of crime. They are empowered with a wide range of measures under the CC (see Criterion 4.2).

Criterion 30.4— Other agencies, including the CRA (Income Tax Act), Competition Bureau (Competition Act, ss.11-21) and Environment Canada (Environmental Protection Act 1999), have the authority to conduct financial investigations related to the predicate offenses that they respectively specialize in. In addition, law enforcement agencies in Canada have the authority under Common Law to investigate crime and criminal offenses such as ML. They may seek judicial authority to seize and freeze assets. For the CBSA, although it does not have the responsibility for pursuing financial investigations of predicate offenses included in the Immigration Refugee Protection Act (IRPA), the Customs Act and border related legislations, a referral mechanism is in place for RCMP to follow up on the financial investigations. PCMLTFA, s.18 authorizes the seizure and forfeiture of cash by CBSA. Section 36 of the same Act also authorizes the disclosure of the information to the RCMP for criminal investigations into ML or TF.

Criterion 30.5— All police forces are responsible for investigating corruption offenses (CC, ss.119-121 and Corruption of Foreign Public Officials Act, s.3). As mentioned in R.4 and above, they have the powers to identify, trace, and initiate the freezing and seizing of assets.

Weighting and Conclusion:

Canada is compliant with the R.30.

Recommendation 31 - Powers of law enforcement and investigative authorities

In its 2008 MER, Canada was rated C with former R.28. Minor changes have since been implemented in the Canadian legal framework as well as in the standard.

Criterion 31.1— *a)* CC, ss.487.014 (production order) and 487.018 (production order for financial and commercial information) empower a justice or judge to order a person other than a person under investigation to produce specified documents or data within the time to any peace or public officer. S.487.018 production order for financial data is also available to compel a particular person or entity to disclose the identity of the account holder of a given account number.

b) Search warrant under CC, s.487 is available for peace and public officers to search any prescribed places for available information.

c) Law enforcement officers are authorized to take statements from voluntary witnesses under the powers conferred by the Common Law and in accordance with the Charter of Rights and Freedoms and the Canada Evidence Act. However, a witness cannot be compelled to provide a statement to police in an investigation of ML or its associated predicate offenses. For TF investigations, witnesses are bound to provide a statement in an investigative hearing under Part II.1 of the CC (Terrorism).

d) Search warrants under CC, s.487 (search and seizure of evidence) and 462.32 (search and seizure of proceeds of crime) empower investigators to search and seize evidence. The General Warrant under CC, s.487.01 further authorizes the use of any device or means to collect evidence.

Criterion 31.2— *a)* RCMP can mount undercover operations to infiltrate crime syndicates and collect evidence for prosecution. Based on the principles in common law, the police are deemed to have common law powers where such powers are reasonably necessary in order for them to execute the mandate of investigating the commission of serious offenses, and undercover operations fall into this category.

b) Law enforcement can intercept communications pursuant to an Order made under CC, s.186 without the consent of the targeted person. It applies to organized crime offenses or an offense committed for the benefit of, at the direction of, or in association with a criminal organization; or a terrorism offense. It applies to both ML and TF offenses.

c) Computer systems can only be accessed with the consent of the owner or by a search warrant / General Warrant under the CC, but the courts[154] have found that particular considerations apply to computers and the stored content therein, which may require authorities to obtain specific prior judicial authorization to search computers found within a place for which a search warrant has been issued.

d) Similar to (a) above, Canadian Police are conferred with the power to conduct controlled delivery and is subject to stringent RCMP's internal policy.

Criterion 31.3— *a)* CC, s.487.018 (production order for financial and commercial information) empower a justice or judge to order a FI or DNFBP other than a lawyer to produce specified data within the time to any peace or public officer. The s. 487.018 production order for financial data is also available to compel a particular person or entity to disclose the identity of the account holder of a given account number. Search warrant under the provision of CC, s.487 is also available for peace and public officers to search any prescribed places for available information. However, the mechanism used to identify whether legal or natural persons hold or control accounts is not timely and deficient. In identifying whether a subject holds or controls accounts, law enforcement agencies will apply for a court order and serve it to the FI/DNFBP they reasonably suspect of holding such information and wait for the FI/DNFBP to respond. Each order can only be served to one specified FI/DNFBP. In urgent cases, the order can be drafted to obtain an initial response within days or otherwise it will take a longer time. The time required for such identification is considered not timely enough and the mechanism is not exhaustive to identify all accounts held with FIs/DNFBPs.

[154] (R. v. Vu, 2013 SCC 60 (CanLII))— www.canlii.org/en/ca/scc/doc/2013/2013scc60/2013scc60.html. .

LEAs may also use other informal processes, such as surveillance or FINTRAC disclosures, to identify the FIs/DNFBPs. These informal processes are sometimes lengthier and again not exhaustive to identify accounts held by the subject.

b) Warrants and production orders are normally obtained on an ex-parte basis. If the order is directed to a third party, a condition may be added specifically to prohibit the third party from revealing the fact of the warrant to the account holders. Assistance Order, under CC, s.487.02, can also be applied by the law enforcement agencies to seek assistance from a person and request that he/she refrain from disclosing the information to the suspect.

Criterion 31.4— Most law enforcement agencies can ask for information from FINTRAC by submitting VIRs. FINTRAC is able, under PCMLTA, ss.55(3)(a) to (q) and 55.1(1)(a), to disseminate "designated information" by responding to these VIRs. However, these provisions do not allow other competent authorities such as Environment Canada or Competition Bureau conducting investigations of ML and associated predicate offenses to ask for information held by the FINTRAC.

Weighting and Conclusion

LEAs generally have the powers that they need to investigate ML/TF but there are some shortcomings.

Canada is largely compliant with R.31

Recommendation 32 – Cash Couriers

In its 2008 MER, Canada was rated C for former SR IX (para 559–607).

Criterion 32.1— Canada has implemented a declaration system[155] for both incoming and outgoing physical cross-border transportation of currency and bearer negotiable instrument. A declaration is required for all physical cross-border transportation, whether by travellers or through mail, courier and rail or by any other means of transportation. The declaration obligation applies to both natural and legal persons acting on their own and behalf of a third party, and applies to the full range of currency and BNI, as defined in the Glossary to the FATF Recommendations.

Criterion 32.2— The reporting of currency and bearer-negotiable instrument of an amount of CAD 10 000 or more must be made in writing on the appropriate form and must be signed and submitted to a CBSA officer.[156] The reporting requirements of the PCMLTFA are met once the completed report is reviewed and accepted.

Criterion 32.3— This criterion is not applicable in the context of Canada, as it only applies to disclosure systems.

[155] Part 2 of the *PCMLTFA.*

[156] The PCMLTFA Sec. 12(3) outlines who must report; this applies to conveyances regardless of mode (air; marine; rail; land or postal).

Criterion 32.4— Upon discovery of a false declaration of currency or BNIs, or a failure to declare, CBSA officers have the authority to request and obtain further information from the carrier with regard to the origin of the money and its intended use, as to ask for the documents supporting the legitimacy of the source of funds (Customs Act s. 11).

Criterion 32.5— Under PCMLTFA, s.18, when persons make a false declaration or fail to make a declaration, CBSA officers have the power to seize as forfeit the currency or monetary instruments and to impose an administrative fine. The officer shall, on payment of a penalty in the prescribed amount (CAD 250, CAD 2 500, or CAD 5 000, depending of the circumstances, including the particular facts and circumstances of any previous seizure(s) the individual has had under the PCMLTFA), return the seized currency or monetary instruments to the individual from whom they were seized or to the lawful owner. If the officer has reasonable grounds to suspect that the currency or monetary instruments are proceeds of crime within the meaning of CC, s.462.3(1) or funds for use in TF activities, there are no terms of release and the funds are forfeited. Overall, the administrative sanctions could appear to be nor proportionate and nor dissuasive for undeclared or falsely declared cross-border transportation of cash over the threshold.

Criterion 32.6— CBSA forwards all Cross-border Reports submitted by importers or exporters as well as seizure reports to FINTRAC electronically. If the currency or monetary instruments have been seized under PCMLTFA, s.18, the report is sent without delay to FINTRAC, in order to undertake an analysis on seizure information.

Criterion 32.7— CBSA officers undertake customs as well as immigration matters. Under PCMLTFA s. 36, CBSA is allowed to communicate information to FINTRAC, to the appropriate police force and to the CRA. Reports and seizure reports are systematically sent to the FIU and reports are communicated to the RCMP. The RCMP has a formal MOU with CBSA and a Joint Border Strategy which stipulates the roles and responsibilities of each partner and how they will cooperate.

Criterion 32.8— When persons make a false declaration or fail to make a declaration, CBSA officers have the power to seize as forfeit the currency or bearer negotiable instrument. No terms of release are offered on funds that are suspected to be proceeds of crime within the meaning of CC, s.462.3(1) or TF (PCMLTFA, s.18(2)). When an individual fully complies with the requirement to report on currency above the threshold, but there are reasonable grounds to believe the funds are related to ML/TF or predicate offenses, the CBSA contacts the RCMP who may carry out a seizure under the CC. The CBSA is empowered to restrain currency or BNIs for a reasonable time in order to allow the RCMP to ascertain whether evidence of ML/TF may be found, but there is no clear process is in place to engage any authority in ascertaining these evidences following false declaration or undeclared cross-border transportation of cash, nor where there is a suspicion of ML/TF or predicate offenses.

Criterion 32.9— False declaration leading to seizures of currency and bearer negotiable instruments are entered and maintained into the Integrated Customs Enforcement System. These information are also sent by CBSA to FINTRAC, which incorporates them into its database. These

reports include information that must be provided in the mandatory reports.[157] Under PCMLTFA, ss.38 and 38.1, within an agreement or arrangement signed by the Minister, cross-border seizure reports where ML/TF is suspected are provided to foreign counterparts if the CBSA has reasonable grounds to suspect that the information would be relevant to investigating or prosecuting a ML or a TF offense, or within Custom Act s. 107 in accordance with an agreement. Declaration which exceeds the prescribed threshold are not retained by CBSA, but are forwarded to FINTRAC that should be in position to disclose CBCRs to its foreign counterparts, what may complicate international cooperation between customs regarding cash couriers.

Criterion 32.10— The information collected pursuant to the declaration obligation is subject to confidentiality.[158] There are no restrictions on the amount of money that can be imported into or exported from Canada; however, once the amount has reached or exceeded the threshold it must be reported.

Criterion 32.11— When there is reasonable grounds to believe the funds are related to ML/TF or predicate offenses, the CBSA contacts the RCMP who may carry out subsequent criminal investigation and laying of charges under the CC. If the suspicion is confirmed, seizure and confiscation measures may be decided by the judicial authority under the conditions described in R.4.

Weighting and Conclusion

There are some minor deficiencies.

Canada is largely compliant with R.32.

Recommendation 33 – Statistics

In its 2008 MER, Canada was assessed as LC with former R.32 because the absence of statistical information on ML investigations and sentencing, confiscation, response times for extradition and mutual legal assistance (MLA) requests, response times for requests to OSFI by its counterparts. Some changes were introduced in the standard as well as in Canada.

Criterion 33.1— The compilation of AML/CFT related statistics are coordinated by Finance Canada and provided by all regime partners including FINTRAC, the RCMP, the PPSC and Statistics Canada at the federal and provincial level. The authorities maintain a comprehensive set of statistics that appears suitable to assist in the evaluation of the effectiveness of its AML/CTF framework. As a consequence of the NRA process, the authorities have improved the usefulness of existing data sets and developed new ones. The authorities intend to maintain the AML/CFT related statistics with a focus on periodically measuring the effectiveness of the AML/CFT regime.

[157] Including amount and type of currency or BNI, identifying information on the person transporting, mailing or shipping the currency or monetary instruments, as well as information on the person or entity on behalf of which the importation or exportation is made.
[158] PCMLTFA, article 36 and followings.

Sub-criterion 33.1 a: FINTRAC keeps statistics of STRs received and disseminated. Statistics on STRs received by regions is also available. Regarding the statistics provided on the dissemination of information by FINTRAC, it is unclear whether these disclosures derive from STRs, as required by the FCFT standard statistics related to the FIU.

Sub-criterion 33.1 b: Canada maintains acceptable statistics regarding ML/TF investigations, prosecutions and convictions. Statistical data on ML, proceeds of crime and TF investigations and prosecutions is generated at the national, federal and provincial levels. It is generated from various sources, such as Statistics Canada's Uniform Crime Reporting Survey (UCR), the RCMP Occurrence Data (a records management system), the Public Prosecution Service's iCase, its case management and timekeeping system. The RCMP has employed its Business Intelligence program to provide statistical information on ML/TF investigations that is more detailed than UCR. This information is derived from the RCMP's various Operational Record Management Systems.

Sub-criterion 33.1 c: Canada maintains statistics on assets seized, forfeited and confiscated as proceeds of crime and offense-related property (the equivalent of "instruments" or "instrumentalities" in other countries). However, there is no legal requirement for the AG to keep statistics on seizures.

Sub-criterion 33.1 d: Statistics on made and received mutual legal assistance or other international requests for cooperation are maintained by the Department of Justice Canada. These statistics are used by Justice Canada to track the timeliness of response and the nature of underlying predicate crime.

Weighting and Conclusion

Canada is compliant with R.33.

Recommendation 34 – Guidance and feedback

In its 2008 MER, Canada was rated LC with these requirements due to the lack of specific guidelines intended for sectors such as life insurance companies and intermediaries, and insufficient general feedback given outside the large FIs sector. There has been a substantial increase in guidance and feedback by Canadian authorities since the last MER.

Criterion 34.1— Canada provides guidance to industry on AML/CFT principally through regulators. FINTRAC provides guidance to both FIs and DNFBPs that is accessible on its website. A range of guidance has been published in the form of guidelines, trends and typologies reports, frequently asked questions, interpretation notices, sector specific pamphlets, brochures and information sheets on general topics such as the examination process. Guidance information is tailored to the different reporting sectors and deals with reporting, record-keeping, customer due diligence, general compliance information and questionnaires. Issues such as suspicious transaction reporting, terrorist property reporting, record-keeping, client identification, and implementing compliance

regime to comply with AML/CFT obligations. Global Affairs Canada has issued guidance for countering proliferation (CP) sanctions regimes.

OSFI has a dedicated section of its website for AML/CFT and sanctions issues and it has issued prudential guidance that includes guidance on AML/CFT. A number of other guidelines issued by OSFI are either directly or indirectly applicable to AML/CFT requirements of the FRFI sector. In addition, OSFI's Instruction Guide Designated Persons Listings and Sanction Laws sets out OSFI's expectations for FRFIs when implementing searching and freezing CP and sanctions reporting obligations under the Criminal Code, UN Regulations and other sanctions laws. Other regulators such as IIROC have issued AML guidance to IIROC Dealer members in 2010. OSFI's guidance for FRFIs focuses on prudent risk management and internal controls to address the risk of ML and TF. It includes guidance on deterring and detecting ML and TF, background checks on directors and senior management, oversight of outsourced AML/CFT functions, corporate governance and screening of designated persons under the CC and UN Regulations. While FINTRAC is the main authority responsible for issuing AML/CFT guidance, other regulators also provide guidance on AML issues[159] and consult FINTRAC for policy interpretations.

Feedback is given by FINTRAC to industry through an outreach and assistance program for REs. This includes participating in conferences, seminars, presentations and other events providing feedback on compliance with AML/CFT legislation. REs can liaise with FINTRAC and OSFI by email or an enquiries telephone line. Each RE has a designated FINTRAC Compliance Officer to contact with any queries. FINTRAC's guidance and feedback to REs, in particular MSBs, is also reported as having increased significantly. The RCMP provides guidance through lectures to various businesses throughout Canada on recognizing and reporting suspicious transactions and has given conferences and seminars on identifying, reporting, and investigating ML and materials produced by it on AML related issues.

Since 2008, Canada has provided guidance to the life insurance sector that is very similar to what is provided to other sectors. The guidance on AML/CFT provided by OSFI is applicable to all FRFIs subject to the PCMLTFA including life insurance companies. The guidance provided by FINTRAC is relevant to FIs and DNFBPs and there is sector specific guidance for the financial sector including life insurance companies and brokers and MSBs.

Weighting and Conclusion

There is more specific guidance needed in certain sectors.

Canada is largely compliant with R.34.

[159] Quebec: AMF published a notice on AML/CFT requirements of their regulated entities; Nova Scotia Credit Union Deposit Insurance Corporation, Financial Institutions Commission of British Columbia, British Columbia Gaming Policy Enforcement Branch, Deposit Insurance Corporation Ontario, Prince Edward Island Credit Union Deposit Insurance Corporation have all published guidance on their websites.

Recommendation 35 – Sanctions

In its 2008 MER, Canada was rated PC because: administrative sanctions were not available to FINTRAC; OFI used a limited range of sanctions; and effective sanctions had not been used in cases of major deficiencies. Several changes occurred since then, e.g. FINTRAC was granted the power to apply AMPs for non-compliance with the PCMLTFA.

Criterion 35.1— Civil and criminal sanctions are available in addition to remedial actions. FINTRAC is responsible for imposing AMPs for non-compliance with the PCMLTFA and its regulations.

The PCMLTFA and related legislation provide for penalties for non-compliance with AML/CFT measures. Part V of the PCMLTFA sets out penalties for non-compliance with the Act. The United Nations Act provides that, when the United Nations Security Council passes a resolution imposing sanctions, such measures automatically become part of domestic law, and sets out penalties for non-compliance with its provisions.

The PCMLTFA covers a range of criminal offenses and a series of sanctions for contraventions of the provisions of the Act. Criminal penalties for non-compliance can lead up to CAD 2 million in fines and up to five years in prison. The criminal sanctions regime applies to most of the law and regulations provisions in the PCMLTFA. LEAs can conduct investigations and lay criminal charges in cases of non-compliance with the PCMLTFA.

The PCMLTF AMP Regulations govern the imposition of administrative sanctions for non-compliance with the PCMLTFA and related regulations. They provide for penalties, classifying violations as minor, serious or very serious. The maximum penalty for a violation by a person is set at CAD 100 000 and for a RE it is CAD 500 000. The imposition of a penalty is on a per violation basis: therefore, where there are multiple violations, an entity is potentially exposed to the maximum penalty for each individual violation. The maximum AMP thresholds for serious violations raises doubts whether it is proportionate or dissuasive (notwithstanding it relates to each instance of violation), given that there may be circumstances where a single egregious breach (or a few) may occur and the cumulative threshold might not be either a proportionate or dissuasive sanction. The threshold may also not be dissuasive in circumstances of repeat offending.

There are also other non-monetary methods used by FINTRAC, in addition to the AMP procedure, to apply corrective measures or sanction REs, including issuing deficiency letters, action plans for FRFIs, compliance meetings and enquiries, public naming, revocation of registration of MSBs and non-compliance case disclosures to LEAs.

OSFI has a range of powers as set out in OSFI Act, s.6. OSFI can apply written interventions, staging (more intense/frequent supervision), put in place compliance agreements and directions of compliance, place terms and conditions on a FRFI's business operations and direct independent auditors to extend the scope of their audit and guidance, which are enforceable. The staging process, involving more intensive supervision of an FRFI, does have a dissuasive affect, as it attracts an increase in the deposit insurance premiums paid by the FRFI concerned. OSFI can also remove

directors and/or officers from office, and/or take control of an FRFI in extreme cases of non-compliance with federal legislation, including the PCMLTFA. While OSFI does have the power to impose monetary penalties for non-compliance with general prudential provisions under an FRFI's governing legislation, violations of the PCMLTFA are dealt with by FINTRAC through the AMP procedure. OSFI has regulatory guidelines for AML compliance and background checks of directors and senior managers. OSFI cannot apply AMPs for non-compliance with the PCMLTFA.

Other regulators, such as securities regulators, can impose sanctions under securities legislation in circumstances where a market intermediary fails to meet legal requirements. The measures that can be taken include terminating the intermediary's license and imposing terms and conditions that restrict the intermediary's business. Sanctions can also be imposed on members for contraventions of self-regulatory organizations' requirements, including AML and supervision requirements.

Criterion 35.2— PCMLTFA, s.78 provides that sanctions are applicable to any officer, director, or agent of the person or entity that directed, assented to, acquiesced in, or participated in its commission.

Weighting and Conclusion

The dissuasiveness and/or proportionality of some of the sanctions is unclear.

Canada is largely compliant with R.35.

Recommendation 36 – International instruments

Canada was rated LC with former R.35 and SR I in the 2008 MER, because the ML offense did not cover all designated categories of predicate offenses and contained a purposive element that was not broad enough to meet the requirements of the Conventions, and because of inadequate measures to ascertain the identity of beneficial owners.

Criterion 36.1— Canada is party to the conventions listed in the standard.[160]

Criterion 36.2— Bill C-48 amended to the CC to meet the requirements of the Merida Convention, especially by providing for the forfeiture of property used in the commission of an act of corruption and to clarify that it may be direct or indirect, and that it is not necessary that the person who commits the corrupt act receive the benefit derived from the act. Canada also addressed the deficiencies identified in 2008 (see R. 3 and 10).

Weighting and Conclusion:

Canada is compliant with R.36.

[160] Canada ratified the Vienna Convention on 5 July 1990, the Palermo Convention on 13 May 2002, and the Merida Convention on 2 October 2007, the Convention on the Suppression of Terrorist Financing Convention on 19 February 2002, and the Inter-American Convention against Terrorism. It has also signed the Council of Europe Convention on Cybercrime (2001), on 23 November 2001.

Recommendation 37 - Mutual legal assistance

In its third MER, Canada was rated LC with former R.36 and SR. V due to concerns about Canada's ability to handle MLA requests in a timely and effective manner and about the lack of adequate data that would establish effective implementation. Canada's legal framework for MLA was supplemented by Canada's new Protecting Canadians from Online Crime Act (PCOCA, in force 9 March 2015). The requirements of the (new) R.37 are more detailed.

Criterion 37.1— Canada has a sound legal framework for international cooperation. The main instruments used are the Mutual Legal Assistance in Criminal Matters Act (MLACMA); the relevant international conventions, the Extradition Act; 57 bilateral treaties on MLA in criminal matters, extradition and asset sharing; and MOUs for the other forms of assistance to exchange financial intelligence, supervisory, law enforcement or other information with counterparts. These instruments allow the country to provide rapid and wide MLA. In the absence of a treaty, Canada is able to assist in simpler measures (interviewing witnesses or providing publicly available documents), or, based in the MLACMA, to enter in specific administrative arrangements, that would provide the framework for the assistance.

Criterion 37.2— Canada uses a central authority (the Minister of Justice, assisted by the International Assistance Group—IAG) for the transmission and execution of requests. There are clear processes for the prioritization and execution of mutual legal assistance requests, and a system called "iCase" is used to manage the cases and monitor progress on requests.

Criterion 37.3— MLA is not prohibited or made subject to unduly restrictive conditions. Canada provides MLA with or without a treaty, although MLA without a treaty is less comprehensive. Requests must meet generally the "reasonable grounds to believe standard, in relation for example to MLACMA ss 12 (search warrant) and 18 (production orders). However, certain warrants (financial information, CC, s.487.018, tracing communications, and new s.487.015) may be obtained on the lower standard of "reasonable ground to suspect."

Criterion 37.4— Canada does not impose a restriction on MLA on the grounds that the offense is also considered to involve fiscal matters, nor on the grounds of secrecy or confidentiality requirements on FIs or DNFBPs.

Criterion 37.5— MLACMA, s.22.02 (2) states that the competent authority must apply *ex parte* for a production order that was requested in behalf of a state of entity. In addition to that, the international Conventions signed, ratified and implemented by Canada include specific clauses requiring the confidentiality of MLA requests be maintained.

Criterion 37.6— Canada does not require dual criminality to execute MLA requests for non-coercive actions.

Criterion 37.7— Dual criminality is required for the enforcement of foreign orders for restraint, seizure and forfeiture or property situated in Canada. MLACMA, ss.9.3 (3) (a) and (b) and 9.4 (1) (3) (5) (a) (b) and (c) allow the Attorney General of Canada to file the order so that it can be entered as a

judgment that can be executed anywhere in Canada if the person has been charged with an offense within the jurisdiction of the requesting state, and the offense would be an indictable offense if it were committed in Canada. This applies regardless of the denomination and the category of offenses used.

Criterion 37.8— Most, but not all of the powers and investigative techniques that are at the Canadian LEAs' disposal are made available for use in response to requests for MLA. The relevant powers listed in core issue 37.1 are available to foreign authorities via an MLA request, including the compulsory taking of a witness statement (according to MLACMA, s.18). Search warrants are not possible to obtain via letters rogatory. However, the Minister may approve a request of a state or entity to have a search or a seizure, or to use any device of investigative technique (MLACMA, s.11). The competent authority who is provided with the documents of information shall apply *ex parte* for the warrant to a judge of the province in which the competent authority believes evidence may be found. Regarding the investigative techniques under core issue 37.2, undercover operations and controlled delivery are possible through direct assistance between LEAs from the foreign country and Canada. Production orders to trace specified communication, transmission data, tracking data and financial data are possible by approval of the Minister in response to a foreign request. The authorities will not grant interception of communications (either telephone, emails or messaging) solely on the basis of a foreign request (this special investigative technique is not provided for in the MLACMA and will not be provided for in bilateral agreements. According to MLACMA, s.8.1, requests made under an agreement may only relate to the measures provided for in the bilateral agreement). The only possibility to intercept communications is within a Canadian investigation in the case of organized crime, or a terrorism offense, which would require that the criminal conduct occurred, at least in part, in Canadian territory (including a conspiracy to commit an offense abroad). Foreign orders for restraint, seizure and confiscation can be directly enforced by the Attorney General before a superior court, as if it were a Canadian judicial order.

Weighting and Conclusion

The range of investigative measures available is insufficient.

Canada is largely compliant with R.37.

Recommendation 38 – Mutual legal assistance: freezing and confiscation

Canada was rated LC with R.38 in the 2008 MER due to the limited evidence of effective confiscation assistance, the rare occurrence of sharing of assets and the fact that Canada executed requests to enforce corresponding value judgments as fines. The framework remains the same.

Criterion 38.1— Canada has the authority to take expeditious action in response to requests by foreign countries to identify, freeze, seize or confiscate laundered property and proceeds from crime (MLACMA, ss.9.3, 9.4 and CC, ss.462.32, 462.33), and instrumentalities used in or intended for use in ML, predicate offenses or TF. There is, however, no legal basis for the confiscation of property of corresponding value. As was the case during its previous assessment, Canada still treats value-based

forfeiture judgement as fines, which has limitations and cannot be executed against the property. If the fine is not paid, it can be converted into a prison sentence. Regarding the identification of financial assets new CC, s.487.018 allows the production of financial registration data in response to requests from foreign states.

Criterion 38.2— In Canada, MLA is based on the federal power in relation to criminal law. Therefore, the enforcement of some foreign non-conviction based confiscation orders is not possible under the MLACMA because they were not issued by a "court of criminal jurisdiction." However, in cases where the accused has died or absconded before the end of the foreign criminal proceedings, the MLACMA applies because the matter would still be criminal in nature. Due to Canada's constitutional division of powers, the Government of Canada cannot respond to a request for civil forfeiture as such requests fall within the jurisdiction of Canada's provinces. However, most of the Canadian provinces have already adopted legislation on a civil confiscation regime. Even if Canada is not able to provide assistance to requests for cooperation based on NCB proceedings, non-conviction based confiscation is possible under Canadian law. Should a foreign state seek to recover assets from Canada though NCB asset forfeiture, it must hire private counsel to act on its behalf in the province where the property or asset is located.

Criterion 38.3— *a)* No particular legal basis is required in Canada for the coordination of seizure and confiscation actions. It is a matter primarily for national and foreign police authorities at the stage of seizure. Thus, via direct police-to-police contact, arrangements are made in relation to any relevant case.

b) The Seized Property Management Act sets out the mechanisms for the management and, when necessary, the disposition of property restrained, seized and forfeited. The Minister of Public Works and Government Services is responsible for the custody and management of all property seized at the federal level. The Minister may make an interlocutory sale of the property that is perishable or rapidly depreciating, or destroy property that has little or no value. Property seized in the provincial level is managed by the provincial prosecution services.

Criterion 38.4— Canada shares confiscated property on a mutual agreement basis, under the Seized Property Management Act, s.11. Canada has 19 bilateral treaties regarding the sharing and transfer of forfeited or confiscated assets and equivalent funds.

Weighting and Conclusion

The seizure and confiscation regime has a deficiency, which is the impossibility of confiscation of equivalent value.

Canada is largely compliant with R.38.

Recommendation 39 – Extradition

Canada was rated LC with R.39 in the 2008 MER, mostly because of the difficulties in establishing the delay element, due to insufficient statistical data. The legal framework remains unchanged.

Criterion 39.1— Canada is able to execute extradition requests in relation to ML/TF without undue delay. Statistics provided to this assessment have shown that at least 40% of the requests are executed on a timely basis, what shows that the existing legal framework allows for extraditions without delay.

a) Both ML and TF are extraditable offenses (Extradition Act, ss.3(1) (a) and (b) of the combined with CC, ss.83.02, 83.03, 83.04 and 462.31).

b) Canada has a case management system (iCase) and clear processes in place for timely execution of extradition including prioritization of urgent cases. The Extradition Act sets out timelines for specific steps to ensure minimal delays, and requires judges to set an early date for the extradition hearing when the person has been provisionally arrested (s.21(1)(b)(3).

c) Canada does not place unreasonable or unduly conditions on the execution of extradition requests.

Criterion 39.2— Nationality does not constitute grounds for refusal to extradite under the Extradition Act, ss.44, 46, and 47 of the, but the Charter of Fundamental Rights and Freedoms gives Canadian citizens the right to remain in Canada. The Supreme Court decided in *U.S. v. Cotroni* that extradition is a reasonable limitation of the right to remain in Canada, and the decision whether to prosecute or not in Canada and allow the authorities in another country to seek extradition is made following consultations between the appropriate authorities in the two countries when various factors, including nationality, are considered in weighing the interests of the two countries in the prosecution. Historically, the result of most of these assessments has been to favour extradition, but when it is not, the Canadian citizen can be prosecuted in Canada.

Criterion 39.3— Dual criminality is required for extradition. It is not relevant whether the extraditable conduct is named, defined or characterized by the extradition partner in the same way as it is in Canada (Extradition Act, s.3(2)).

Criterion 39.4— Direct transmission of an extradition request to Canada's IAG or via Interpol is possible unless a treaty provides otherwise. Requests for provisional arrest may be made via Interpol by virtually all of Canada's extradition partners. The extradition process is simplified when the person consents to commit and surrender. Canada does not grant extradition based solely on a foreign warrant for arrest, such as in an Interpol Red Notice, or a foreign judgment, or in the absence of a treaty, based on reciprocity. There must be an assessment of the evidence, which takes place in the course of the judicial phase, which is followed by the Ministerial phase of the extradition proceedings.

Weighting and Conclusion:

Canada is compliant with R.39.

Recommendation 40 – Other forms of international cooperation

In the 2008 MER, Canada was rated LC with these requirements (para. 1551–1612). The main deficiency raised was related to FINTRAC as a supervisory authority.[161]

General Principles

Criterion 40.1— Canada's competent authorities can broadly provide international cooperation spontaneously or upon request related to ML/TF[162]. Referring to FINTRAC as FIU, PCMLTFA allows the Centre to disclose information to a foreign FIU spontaneously and makes reference to a disclosure of designated information "*in response to a request*."

Criterion 40.2— *a)* Competent authorities have the legal basis to provide international cooperation (see criterion 40.1).

b) Nothing prevents competent authorities from using the most efficient means to cooperate.

c) FINTRAC as a FIU and as a supervisor, OSFI, CBSA, and RCMP use clear and secure gateways, mechanism or channels for the transmission and execution of requests.

d) FINTRAC as an FIU has put in place processes for prioritizing and executing requests and answers in five business days if the Centre has transaction information in its database and FINTRAC as a supervisory authority processes the request and provides a response in a matter of days. In regard to TF, RCMP prioritize, assign and respond to such requests in the most efficient and effective manner on a National Level. It has not been established that LEA and supervisor authorities have clear procedures for the prioritization and timely execution of bilateral requests.

e) Competent authorities have clear processes for safeguarding the information received. FINTRAC policies and procedures for the safeguard of information apply to both the FIU and the supervisory side of FINTRAC. All supervisory information received by OSFI is subject to the same standard of confidentiality as domestic information (OSFI Act, s.22). RCMP has policies for handling requests and sharing or exchanging criminal intelligence and information with foreign partners and agencies (RCMP Operational manual Chapter 44.1s).

Criterion 40.3— Under the Privacy Act, competent authorities need bilateral or multilateral arrangements to cooperate with foreign counterparts where a disclosure of personal information about an individual is involved. FINTRAC as a FIU, RCMP and CBSA have signed a comprehensive network of MOUs and letters of agreement with foreign counterparts, but FINTRAC as a supervisory authority has entered into two MOUs so far. The Canadian authorities indicated that these bilateral agreements were signed mostly in a timely way. Examples of MOUs signed promptly have been

[161] *FINTRAC* as a supervisory authority had the legal capacity to exchange information with foreign counterparts but had not put the arrangements and agreements in place.
[162] FINTRAC as a FIU: *PCMLTFA*, section56; FINTRAC as a supervisory authority: *PCMLTFA*, section.65.1; RCMP: *Privacy Act and Memoranda of understanding or Letters of agreements*; CBSA: *PCMLTFA*, art.38 and 38.1 and *Custom Act*; OSFI: OSFI Act, section 22.

provided to the assessors. The OSFI Act does not require that the Superintendent enter into a MOU with a foreign counterpart in order to be able to cooperate.

Criterion 40.4— FINTRAC provides feedback upon requests to its foreign counterparts on the use and usefulness of the information obtained (PCMLTFA, ss.56.2 and 65.1(3)). Canadian authorities indicated that FINTRAC generally provides feedback to its foreign counterparts on the usefulness of the information obtained within five to seven days. There is no restriction on OSFI's ability to provide feedback. There is no general impediments, which prevents Canada's LEAs from providing feedback regarding assistance received.

Criterion 40.5— Competent authorities do not prohibit or place unreasonable or unduly restrictive conditions on information exchange or assistance on any of the four grounds listed in this criterion.

Criterion 40.6— Competent authorities have controls and safeguards to ensure that information exchanged is used for the intended purpose for, and by the authorities, for whom the information was provided.[163]

Criterion 40.7— Competent authorities are required to maintain appropriate confidentiality for any request for cooperation and the information exchanged, consistent with data protection obligations

Criterion 40.8— FINTRAC as an FIU, may conduct inquiries on behalf of foreign counterparts, by accessing its databases (all report types, federal and provincial databases maintained for purposes related to law enforcement information or national security, and publicly available information), under PCMLTFA, s.56.1(2.1). FINTRAC as a supervisory authority can conduct inquiries on behalf of foreign counterparts with which it has an MOU under PCMLTFA, ss.65.1(1)(a) and 65.1(2), but only two MOUs have been signed so far. The RCMP can use a number of criminal intelligence and police databases to conduct inquiries on behalf of foreign counterparts, under sharing protocols that aim at protecting the right to privacy of the individuals mentioned in the databases.

Exchange of Information Between FIUs

Criterion 40.9— FINTRAC exchanges information with foreign FIUs in accordance with the Egmont Group principles or under the terms of the relevant MOU, regardless of the type of its counterpart FIU. The legal basis for providing cooperation is in PCMLTFA, s.56(1), which stipulates that the Centre exchanges information if it has reasonable grounds to suspect that the information would be relevant to investigating or prosecuting a ML or TF offense, or an offense that is "*substantially similar to either offense.*"

Criterion 40.10— FINTRAC provides feedback on the usefulness of information obtained, when feedback is specifically requested by foreign FIUs (PCMLTFA, s.56), and whenever possible as well as on the outcome of the analysis conducted, based on the information provided.

[163] *Privacy Act*—FINTRAC as a FIU: PCMLTFA, para 56 (3) and MOUs template; FINTRAC as a supervisory authority: PCMLTFA, s.65.1 (1) (b) and MOUs template; RCMP: Operational manual on information sharing; OSFI: OSFI Act, s.22.

Criterion 40.11— FINTRAC have the power to exchange:

a) The information held in its database (c. 40.8), which does not cover the scope of the information required to be accessible or obtainable directly or indirectly under R.29, as it does not include additional information from REs.

b) The information FINTRAC has the power to obtain or access directly or indirectly at the domestic level (c. 40.8), subject to the principle of reciprocity.

Exchange of Information Between Financial Supervisors

Criterion 40.12— PCMLTFA, allows FINTRAC to enter into information sharing arrangements or agreements under new s.65(2) with any agency in a foreign state that has responsibility for verifying AML/CFT. OSFI has broad authority to share supervisory information with domestic and foreign regulators or supervisors of FIs, including SROs.

Criterion 40.13— FINTRAC, as the AML/CTF supervisor for entities covered by the PCMLTFA, has the authority to share with foreign supervisors compliance-related information that FINTRAC has in its direct possession about the compliance of persons and entities. The information that FINTRAC may exchange with foreign supervisors is defined by "FINTRAC supervisory MOU Template." Canadian authorities indicated that FINTRAC can exchange information domestically available, including information held by FIs. As regards OSFI, under the OSFI Act a broad exemption is provided under s.22(2) in favour of the exchange of supervisory information with any government agency or body that regulates or supervises FIs.

Criterion 40.14— *a)* FINTRAC and OSFI do not require legislation to exchange regulatory information, and that they currently exchange such information. Examples were given by FINTRAC of cross-border cooperation with other regulators.

b) OSFI, under OSFI Act, s.22 can exchange supervisory information with foreign government agency or body that regulates or supervises FIs which meets this Criterion.

c) PCMLTFA, subsection 65.1 enables FINTRAC to exchange supervisory information with other supervisors about the compliance of persons and entities, record-keeping and reports. Through its supervisory examinations and compliance assessment reports, FINTRAC normally obtains information on REs' internal AML/CFT procedures and policies, CDD, customer files and sample accounts and transaction information. FINTRAC is able to exchange this information with other supervisors. However, this possibility is limited to exchanges with counterparts who are MOU partners.

Criterion 40.15— FINTRAC can conduct inquiries on behalf of foreign counterparts with which it has an MOU under PCMLTFA, ss.65.1(1)(a) and 65.1(2).

Criterion 40.16— FINTRAC can enter into agreements or arrangement with other supervisors to exchange information pursuant to the PCMLTF.[164] Under such agreements or arrangements, there is an obligation to keep such information confidential and not further disclose the information. FINTRAC's tactical MOU sets out the requirements for use and release and confidentiality of information exchanged between financial supervisors. It is provided in the tactical MOU that information that has been exchanged will not be disclosed without the express consent of the requested authority. It is also provided that if an authority has a legal obligation to disclose information, it will notify and seek the consent of the other authority. OSFI can exchange information with other supervisors on the basis that such information satisfies the requirements of the Act and will be kept confidential.

Exchange of Information Between Law Enforcement Authorities (LEAs)

Criterion 40.17— Under article 44.1 of the RCMP Operational Manual on "Sharing of information with Foreign Law Enforcement," RCMP and other Canadian LEAs are able to exchange domestically available information with foreign counterparts for intelligence or investigative purposes relating to ML, associated predicate offenses or TF, including the identification and the tracing of proceeds and instrumentalities of crime. Nevertheless, CBSA does not retain CBCRs, which have to be obtained through international cooperation between FIUs, what could complicate their access by CBSA's foreign counterparts. PS works with other countries on national security, border strategies and countering crime, including ML and TF. PS also participates in a number of fora and initiatives to foster its international cooperation, including violent extremism and foreign fighters.

Criterion 40.18— Canadian LEAs can use the legislative powers available under the CC[165] and other Acts[166] including investigative techniques available in accordance with domestic law, to conduct inquiries and obtain information on behalf of foreign counterparts. However, it appears than the range of powers and investigative techniques that can be used by LEA to conduct enquiries and obtain information on behalf of foreign counterparts are very limited.[167] Both the PPOC and ML offense definitions allow that the offense need not to have occurred in Canada "so long as the act or omission anywhere that, if it had occurred in Canada, would have constituted a designated offence." Canada extensively cooperates with foreign law enforcement counterparts based on multilateral agreements in the context of Interpol and on bilateral MOUs.

Criterion 40.19— Canadian LEAs are able to form joint investigative teams to conduct cooperative investigations, and, when necessary, establish bilateral or multilateral arrangement to enable such joint investigations on the basis of RCMP Act (and the RCMP Operational policy Chapter 15 provides guidance on joint forces operation). Joint Forces Operations (JFO) involve one or more

[164] PCMLTFA, s.40 (c). PCMLTFA, s.65.1 (1) (b) also provides a limit on how the information can be used by both parties to a supervisory MOU. MOU Supervisory Template, Section 6 on Permitted Uses and Release of Exchanged Information, and Section 7 on Confidentiality are also relevant.
[165] CC, s.462.31 allows police to perform reverse sting operations to obtain information on ML cases and CC, s.462.32 to seize POC.
[166] Mutual Legal Assistance in Criminal Matters Act, RCMP Act and Canada Evidence Act.
[167] The only provisions which can be used allows police to perform reverse sting operations to obtain information on ML cases and to seize POC (CC, ss.462.31 and 462.32).

police/enforcement agencies working with the RCMP on a continuing basis over a definite period. A JFO should be considered in major multi-jurisdictional cases that are in support of national priorities and must be consistent with the mandated responsibility of the particular resource.

Exchange of Information Between Non-Counterparts

Criterion 40.20— Under PCMLTFA, FINTRAC as a FIU and a supervisor may enter into an agreement or arrangement, in writing, with an institution or agency of a foreign state that "*has powers and duties, similar to those of the Centre,*" which seems to exclude diagonal cooperation. Nevertheless, Canadian authorities indicate than when FINTRAC receives a request from a non-counterpart, the Centre address it either through its domestic partners or through the foreign FIU or supervisor. RCMP operational manual 44.1 outlines that sharing information will be managed on a case-by-case basis and there is no element that prevents RCMP to exchange information indirectly. OSFI has a broad ability to share information diagonally based on the wording of the OSFI Act, s.22. The "any government agency that regulates or supervises FIs" wording does not seem to limit disclosure to prudential regulators. However, OSFI would have to determine on a case-by-case basis whether such agency "regulates or supervises FIs." OSFI has shared information with foreign FIUs where they are also AML/CFT supervisors.

Weighting and Conclusion

There is room for improvement in regard to non-MLA international cooperation.

Canada is largely compliant with R.40.

Summary of Technical Compliance – Key Deficiencies

Compliance with FATF Recommendations		
Recommendation	**Rating**	**Factor(s) underlying the rating**
1. Assessing risks & applying a risk-based approach	LC	• Lawyers, legal firms and Quebec notaries are not legally required to take enhanced measures to manage and mitigate risks identified in the NRA.
2. National cooperation and coordination	C	• The Recommendation is fully met.
3. Money laundering offence	C	• The Recommendation is fully met.
4. Confiscation and provisional measures	LC	• The legal provisions do not allow for the confiscation of property equivalent in value to POC.
5. Terrorist financing offence	LC	• CC, s. 83.03 does not criminalize the collection or provision of funds with the intention to finance an individual terrorist or terrorist organization.
6. Targeted financial sanctions related to terrorism & TF	LC	• Persons in Canada are not prohibited from providing financial services to entities owned or controlled by a designated person or persons acting on behalf or at the discretion of a designated person. • No authority has been designated for monitoring compliance by FIs and DNFBPs with the provisions of the UNAQTR, CC and RIUNRST.
7. Targeted financial sanctions related to proliferation	LC	• No mechanisms for monitoring and ensuring compliance by FIs and DNFBPs with the provisions of the RIUNRI and RIUNRDPRK. • Little information provided to the public on the procedures applied by the Minister to submit delisting requests to the UN on behalf of a designated person or entity.
8. Non-profit organisations	C	• The Recommendation is fully met .
9. Financial institution secrecy laws	C	• The Recommendation is fully met.
10. Customer due diligence	LC	• Exclusion of financial leasing, factoring and finance companies from scope of AML/CTF regime. • Minor deficiency of existence of numbered accounts whose use is governed only by regulatory guidance. • Minor deficiency of limited application, to natural persons only, of requirements to reconfirm identity where doubts arise about the information collected. • No explicit legal requirements to check source of funds. • No requirement to identify the beneficiary of a life insurance payout. • Minor deficiency of exceptions to the timing requirements for verifying identity are not clearly justified in terms of what is reasonably practicable or necessary to facilitate the normal

Compliance with FATF Recommendations		
Recommendation	**Rating**	**Factor(s) underlying the rating**
		conduct of business. • Minor deficiency of the lack of a requirement to obtain the address and principal place of business of non-corporate legal persons and legal arrangements such as trusts.
11. Record keeping	LC	• The legal obligation requiring REs to provide records to FINTRAC within 30 days does not constitute "swiftly", as the standard specifies.
12. Politically exposed persons	NC	• Only one element of the FATF standard is currently largely met, although new legislation covering domestic PEPs will come into force in July 2016.
13. Correspondent banking	LC	• No requirement for a FI to assess the quality of AML/CFT supervision to which its respondent institutions are subject.
14. Money or value transfer services	C	• The Recommendation is fully met.
15. New technologies	NC	• No explicit legal or regulatory obligation to risk assess new products, technologies and business practices, before or after their launch.
16. Wire transfers	PC	• No specific requirements for intermediary and beneficiary FIs to identify cross-border EFTs that contain inadequate originator information, and take appropriate follow-up action. These are significant deficiencies.
17. Reliance on third parties	PC	• No explicit requirements on life insurance entities and securities dealers in relation to either necessary CDD information to be provided by the relied-upon entity or supervision of that entity's compliance with CDD and record-keeping obligations. • No requirements on life insurance entities or securities dealers to assess which countries are high risk for third party reliance.
18. Internal controls and foreign branches and subsidiaries	LC	• No specific legal requirements in relation to screening procedures when hiring employees.
19. Higher-risk countries	C	• The Recommendation is fully met.
20. Reporting of suspicious transaction	PC	• Minor deficiency that financial leasing, finance and factoring companies are not required to report suspicious activity to FINTRAC. • Lack of a prompt timeframe for making reports.
21. Tipping off and confidentiality	LC	• The tipping off and confidentiality requirements do not explicitly extend to the reporting of suspicions related to ML predicate offenses.

Compliance with FATF Recommendations		
Recommendation	**Rating**	**Factor(s) underlying the rating**
22. DNFBPs: Customer due diligence	NC	• AML/CFT obligations are inoperative for legal counsels, legal firms and Quebec notaries. • On line gambling, TCSPs that are not trust companies are not obliged entities. • No requirement on beneficial owner, PEP, new technologies, reliance on third parties. With the exception of a limited set of transactions the fixed threshold (CAD 10,000) of cash financial transactions and casinos disbursement exceeds that provided in the Recommendation. • The circumstances in which accountants and BC notaries are required to perform CDD are not in line with the FATF requirement.
23. DNFBPs: Other measures	NC	• AML/CFT obligations are inoperative for legal counsels, legal firms and Quebec notaries. • TSCPs that are not trust and loan companies and on line gambling are not subject to the AML/CFT obligations; the circumstances under which accountants and BC notaries are required to comply with STRs are too limitative. • Further deficiencies identified under R.20 for DNFBPs that are subject to the requirements.
24. Transparency and beneficial ownership of legal persons	PC	• No appropriate mechanism to ensure that updated and accurate beneficial ownership information is collected for all legal entities in Canada, whether established under provincial or federal legislation. • Timely access by competent authorities to all beneficial ownership information is not warranted, in particular in cases where such information is held by a smaller or provincial FI, or a DNFBP. • Insufficient risk mitigating measures in place to address the ML/TF risk posed by bearer shares and nominee shareholder arrangements. • No obligation for legal entities to notify the registry of the location at which company records are held. • In some provinces, there is no legal obligation to update registered information within a designated timeframe. • No legal obligation on legal entities to authorize one or more natural person resident in Canada to provide to competent authorities all basic information and available beneficial ownership information; or to authorize a DNFBP in Canada to provide such information to the authorities.
25. Transparency and beneficial ownership of legal arrangements	NC	• No obligation for trustees to obtain and hold adequate, accurate and current beneficial ownership information for all legal arrangements in Canada, whether established under provincial or federal legislation, or basic information on other regulated agents or and service providers to the trust. • Professional trustees, including lawyers, are not required to maintain beneficial ownership information for at least five

Compliance with FATF Recommendations		
Recommendation	**Rating**	**Factor(s) underlying the rating**
		years. • Insufficient mechanism in place to facilitate timely access by competent authorities to all beneficial ownership information and any trust assets held or managed by the FI or DNFBP. • No requirement for trustees to proactively disclose their status to FIs and DNFBPs when forming a business relationship or carrying out a financial transaction for the trust. • Proportionate and dissuasive sanctions for a failure by the trustee to perform his duties are not available in most cases.
26. Regulation and supervision of financial institutions	LC	• There are further fitness and probity controls needed for persons owning or controlling financial entities after market entry at provincial level.
27. Powers of supervisors	C	• The Recommendation is fully met.
28. Regulation and supervision of DNFBPs	PC	• AML/CFT obligations are inoperative for legal counsels, legal firms and Quebec notaries. • Online gambling, cruise ship casinos, TSCPs not included among trust and loan companies are not subject to AML/CFT obligations and thus not monitored for AML/CFT purposes. • The entry standards and fit and proper requirements are absent in DPMS and TCSPs than trust companies, and they are not in line with the standards for real estate brokerage.
29. Financial intelligence units	PC	• FINTRAC is not empowered to request further information to REs. • FINTRAC has a limited or incomplete access to some administrative information (e.g. fiscal information), • FINTRAC is not able to disseminate upon request information to some authorities (e.g. Environment Canada, Competition Bureau)
30. Responsibilities of law enforcement and investigative authorities	C	• The Recommendation is fully met.
31. Powers of law enforcement and investigative authorities	LC	• No mechanism in place to timely identify whether a natural or legal person holds / controls accounts • No power to compel a witness to give statement in ML investigation • Only LEAs can ask for designated information from FINTRAC
32. Cash couriers	LC	• Administrative sanctions are not proportionate, nor dissuasive. • It has not been established that a clear process was in place to analyse or investigate cross-border seizures. • Cross-border currency reports are not retained by CBSA and can only be exchanged with foreign Customs authorities through FIUs' international cooperation.

Compliance with FATF Recommendations		
Recommendation	**Rating**	**Factor(s) underlying the rating**
33. Statistics	C	• The Recommendation is fully met.
34. Guidance and feedback	LC	• There is more specific guidance needed in certain sectors such as DNFBPs to ensure that they are aware of their AML/CFT obligations, the risks of ML/TF and ways to mitigate those risks. There is also further feedback required arising out of the submitting of STRs.
35. Sanctions	LC	• The maximum threshold of administrative sanctions raises doubts about the dissuasiveness of sanctions for serious violations or repeat offenders.
36. International instruments	C	• This Recommendation is fully met.
37. Mutual legal assistance	LC	• The MLACMA does not allow for the interception of communications (either telephone or messaging) based solely on a foreign request, what hampers foreign investigations.
38. Mutual legal assistance: freezing and confiscation	LC	• Canada cannot respond to requests for the seizure and confiscation of property of corresponding value.
39. Extradition	C	• The Recommendation is fully met.
40. Other forms of international cooperation	LC	• The impediments raised in R.29 for FINTRAC, notably the fact that the FIU is not empowered to request further information from REs and the fact that some RE are not requested to fulfil STRs, impacts negatively the international cooperation with its counterparts. • LEAs are not able to use a large range of powers and investigative techniques to conduct inquiries and obtain information on behalf of foreign counterparts.

TABLE OF ACRONYMS

Anti-money laundering and counter-terrorist financing measures - Canada
Fourth Round Mutual Evaluation Report

In this report: a summary of the anti-money laundering (AML) / counter-terrorist financing (CTF) measures in place in Canada as at the time of the on-site visit on 3-20 November 2015. The report analyses the level of effectiveness of Canada's AML/CTF system, the level of compliance with the FATF 40 Recommendations and provides recommendations on how their AML/CFT system could be strengthened.

APG & FATF, *FATF Report: Vulnerabilities of Casinos and Gaming Sector* (Paris: FATF, 2009)

The Asia/Pacific Group on Money Laundering

Financial Action Task Force Groupe d'action financière

FATF Report

Vulnerabilities of Casinos and Gaming Sector

March 2009

THE FINANCIAL ACTION TASK FORCE (FATF)

The Financial Action Task Force (FATF) is an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering and terrorist financing. Recommendations issued by the FATF define criminal justice and regulatory measures that should be implemented to counter this problem. These Recommendations also include international co-operation and preventive measures to be taken by financial institutions and others such as casinos, real estate dealers, lawyers and accountants. The FATF Recommendations are recognised as the global anti-money laundering (AML) and counter-terrorist financing (CFT) standard.

For more information about the FATF, please visit the website:

WWW.FATF-GAFI.ORG

ASIA PACIFIC GROUP ON MONEY LAUNDERING

The Asia/Pacific Group on Money Laundering (APG) is an autonomous and collaborative international organisation founded in 1997 in Bangkok, Thailand consisting of 39 member jurisdictions and a number of international and regional observers. The member jurisdictions and observers of the APG are committed to the effective implementation and enforcement of internationally accepted standards against money laundering and the financing of terrorism, in particular the Forty Recommendations and Nine Special Recommendations on Terrorist Financing of the Financial Action Task Force (FATF).

For more information about the APG, please visit the website:

WWW.APGML.ORG

TABLE OF CONTENTS

EXECUTIVE SUMMARY

The vulnerability of casinos was recognised in the revision of the FATF 40 Recommendations, with obligations on casinos being significantly enhanced. However, there remained a lack of recent regional or global typologies on casinos and gaming, which this report seeks to address.

This APG/FATF report considers casinos with a physical presence and discusses related money laundering (ML) and terrorist financing (TF) methods, vulnerabilities, indicators to aid detection and deterrence, international information exchange. The report considers vulnerabilities from gaps in domestic implementation of anti-money laundering / combating the financing of terrorism (AML/CFT) measures. Data in the report was derived from members of the FATF, APG, other FSRBs and open sources.

Online gaming and illegal gambling are beyond the scope of this study.

Overall, there is significant global casino activity that is cash intensive, competitive in its growth and vulnerable to criminal exploitation. This paper identifies significant gaps in awareness of ML typologies, gaps in regulatory and law enforcement responses, gaps in online gaming typologies, issues with controls over junkets / VIP programs, and significant issues with controls over 'high seas' gaming. The report identifies significant gaps in global coverage of AML/CFT controls over the sector, which represents a significant vulnerability. The report is a resource for policy formation.

The report identifies significant ML vulnerabilities and related case studies and typologies, but does not identify any instances of TF through the sector.

Chapter 1, *The Casino Sector*, presents a global overview of casinos organised by regions (some 100 countries). The overview sets out the numbers, locations and, in some cases, ownership of each sector and coverage of AML/CFT controls. The chapter discusses some statistics and estimates of revenues (over USD70 billion globally) and profits (where known). The chapter discusses emerging casino markets, including a number of developing countries with governance and capacity challenges.

Chapter 1 briefly discusses casino sector risk assessments as a basis for allocating regulatory and law enforcement resources. The report highlights the need to identify ML risks for both those jurisdictions with or without a casino sector.

Chapter 2, *Money laundering Methodologies and Indicators*, considers vulnerabilities such as casino chips, casino cheques, casino accounts and facilities, structuring through the casino, currency exchange, employee complicity, etc. The paper describes typologies, case studies, and includes a summary of practical indicators for the industry, regulators and law enforcement.

Casinos undertake high volume/speed financial activities that are similar to financial institutions, but in an entertainment context. Casinos are generally large cash-based businesses. Foreign exchange facilities and reduced transparency of 'high rollers' in VIP rooms present substantial challenges. The use of foreign holding accounts where funds in one jurisdiction are available for use in a casino in another jurisdiction without the need for a cross border remittance presents further issues.

Chapter 3, *Sector Vulnerabilities and emerging Issues*, explores a number of additional

vulnerabilities and emerging issues. Casino-based tourism or "junkets" are identified as a vulnerability as they involve the cross border movement of people and funds and often target high net-worth / VIP clients. Transparency of the movement of funds is an issue with junkets, due to gaps in controls, and weak implementation and supervision.

The emerging issue of high-seas cruise ship casinos and associated junkets is a challenge for regulators and law enforcement. The question of who has jurisdiction is prominent, including where the vessel is registered, where it operates from and where it visits. The paper notes that few jurisdictions regulate this sector.

With respect to VIP rooms and 'high roller' customers, vulnerabilities are noted with identifying source of funds and movement of funds. In many casino markets high-roller clients make up a large majority of casino turnover, yet only a very small percentage of casino patrons.

Other vulnerabilities discussed include corrupt or inadequately trained staff, new markets opening and terrorist financing.

Chapter 4, *Policy Implications*, reiterates various key findings of the report and discusses a number of policy implications, including:

- Online gaming requires further typologies study and sharing of cases and regulatory models is needed;
- A significant number of jurisdictions do not subject their casino sector to AML/CFT controls;
- When casinos are subject to AML/CFT controls, many jurisdictions lack effective implementation of preventative measures (CDD, STRs, internal controls);
- There is a lack of regulatory tools that carry effective, proportionate and dissuasive sanctions;
- AML/CFT controls over casino foreign branches, offices or subsidiaries are not well regulated and there is a need for international guidance and best practice;
- Casino foreign holding accounts are not clearly covered for AML/CFT, which allows movement of funds without sending a cross-border wire transfer;
- Controls over VIP rooms vary and some jurisdictions lack clear powers regarding collecting and sharing information of VIP program participants;
- High-seas gaming is a large market over which there is little regulatory control;
- Many jurisdictions' casino regulators lack AML/CFT capacity and experience;
- International cooperation between casino regulators on AML issues is lacking and it is not always clear who are the competent authorities for information sharing.

INTRODUCTION

1. The APG and FATF have undertaken a joint study of vulnerabilities in the gaming and casinos sector. The project is led by New Zealand, with Ms Rachael Horton of New Zealand Department of Internal Affairs leading the work, including the drafting of this report. The work arose due to FATF and APG mutual evaluations and earlier typologies work, which noted a range of ML/FT risk factors related to gaming and casinos.

2. The project has examined and illustrated areas of vulnerabilities in the gaming and casino sectors with an emphasis on legal sectors that have a physical presence. The project has sought to identify sector-specific money laundering or terrorist financing indicators; and to highlight possible policy implications for effective implementation of the FATF standards to cover casinos and gaming.

Scope of Research

3. Typologies produced by the FATF and APG over the last 10 years have consistently identified a money laundering risk from casinos and gaming. The casino and gaming sector is characterised by diverse types of gambling activity, size and rate of development, as well as public and private sector ownership models.

4. Within the sector, the FATF recognised that casinos represent the greatest risk for money laundering activities and this was reflected in the revision of the FATF 40 Recommendations 2003, with obligations on casinos being significantly enhanced in relation to Customer Due Diligence (CDD), record keeping, reporting of suspicion, and comprehensive regulation and supervision.

5. Casinos are the only form of gaming or gambling explicitly covered by the FATF standards, however the FATF standards do not define casinos or gaming, nor do they set out the activities undertaken by casinos. It is left to each jurisdiction to determine the forms of gaming included in its coverage of "casinos".

Magnitude of casino sector globally

6. Statistics from 2007 show that over 150 countries participate in some kind of legal gambling, 100 of those countries have legalised casino and card room gambling. Over 100 countries offer some kind of lottery product and over 60 countries participate in the race and sports betting industry.[1]

7. Casinos generate enormous revenue streams for providers and for government through taxation and licensing fees. The size of the global casino business was estimated at over USD 70 billion in revenue in 2006, although a figure for overall turnover of funds was not available. Casinos in North America (US and Canada) account for almost half of that figure. Macao China is the fastest growing casino jurisdiction, and recorded more than USD 10 billion in gaming revenue in 2007. In addition there is a proliferation of Internet gambling sites, with global revenues estimated

[1] "Overview of Gaming Worldwide", *Casino City, Global Gaming Almanac*, 2007, http://www.casinocitypress.com/GamingAlmanac/globalgamingalmanac.

around USD 15 billion,[2] plus a significant amount of illegal gambling occurring around the world, which is largely unmeasured.

8. The nature and expanding scope of the casino sector presents a number of challenges for AML/CFT implementation. In particular:

- Casinos are cash intensive businesses, often operating 24hrs per day, with high volumes of large cash transactions taking place very quickly.
- Casinos offer many financial services (accounts, remittance, foreign exchange, cash issuing etc), but in some jurisdictions may only be regulated as 'entertainment' venues, rather than financial institutions.
- In some jurisdictions casinos are poorly regulated or unregulated for AML/CFT.
- A number of jurisdictions with well regulated casino sectors continue to identify significant levels of money laundering.
- Many casinos are located in geographic areas characterised by poor governance, political instability or bordering regions with significant crime or terrorist problems.
- The movement of funds associated with gaming-related tourism is poorly understood and may pose particular money laundering risks, *e.g.* international movement of funds for casino 'junket' operations[3].
- In some jurisdictions casino staff turnover is high, sometimes due to seasonal factors, which can lead to weaknesses in staff training and AML/CFT competencies.

9. A significant number of countries have recently established, expanded, or are considering expanding their gaming and casino sectors.

10. In response to these issues the FATF and APG began a project to consider money laundering and terrorist financing vulnerabilities in the Casino and Gaming sector.

11. This paper examines ML and TF vulnerabilities with legally operating casinos. The paper does not consider issues related to online gaming, but rather is concerned with casinos that have a physical presence. The aim of the project is to share information on the casino sector for the following purposes:

- Assist jurisdictions to understand money laundering and terrorist financing methods.
- Increase understanding in the casino sector of money laundering and terrorist financing vulnerabilities.

---

2 "eGaming Data Report: Global Internet Gambling Revenue Estimates and Projections", *Christensen Capital Advisors 2005*, http://www.cca-i.com.

3 The term Junket has its origins in Chinese where Jin literally means introducing and Ke means customers. It is a method of casino marketing developed in the late 1930s for introducing customers to the expanding Macao, China gaming industry. Over time this method has been adopted elsewhere and the term has gradually evolved to be known as Junkets.

- Assist law enforcement and gatekeepers in the industry to detect and deter forms of money laundering.
- Strengthen capacity and international information exchange.
- Provide evidential basis to support domestic implementation of AML/CFT measures in the sector.

12. The following chapters will:

- Examine the scope and nature of regional casino sectors.
- Identify and examine money laundering methodologies from known cases.
- Identify related indicators to support operational and policy objectives.
- Examine sector vulnerabilities and emerging issues.
- Highlight possible policy implications for effective implementation of the revised FATF 40 + 9 recommendations to cover casino operations.

13. Unless otherwise referenced, all data contained in this report is sourced from jurisdictional reports and research questionnaires submitted to APG and FATF.

Project scope / methodology

14. The APG began initial work on money laundering typologies in the casino sector in November 2006 during the Annual Typologies Workshop in Jakarta. At that time the APG commenced some preliminary scoping work and a number of APG jurisdictions shared their experience of AML/CFT issues in casino and gaming sectors.

15. The 2007 FATF/APG Typologies Meeting included a workshop on casinos and gaming. The workshop was very well supported by members of the FATF, APG and other FSRBs. The following jurisdictions were involved in the 2 day breakout session which considered issues in depth: Australia; Austria; Belgium; Canada; Ireland; Japan; Netherlands; New Zealand; Spain; United States; China; Hong Kong, China; India; South Africa; OECD; Cambodia; Macao, China; Malaysia; Papua New Guinea; Philippines; Thailand; and Vietnam.

16. Following on from the workshop in Bangkok, the FATF and APG distributed a short survey to FATF and FSRB members. The survey results were in addition to materials provided by APG member jurisdictions. The following jurisdictions provided a response to the survey:

Austria	Latvia	Spain
Belgium	Malta	Sweden
Brazil	Mexico	Ukraine
Finland	Poland	United Kingdom
Germany	Romania	
Iceland	Slovenia	

17. This project would like to acknowledge the particular input of New Zealand (Department of Internal Affairs), Australia (NSW Casino Control Authority and AUSTRAC); Canada (RCMP); Macao, China (Gaming Inspection & Coordination Bureau and Financial Intelligence Office); Hong Kong, China; Belgium; Austria; Spain; Vietnam; US; and the OECD.

CHAPTER 1: THE CASINO SECTOR

Introduction

18. There is very wide range of legal gaming / gambling across the globe. This includes various games of chance and gambling forms ranging from casino and card room gaming, lotteries, online gaming, race and sports wagering and charitable gaming, such as raffles, bingo and other low technology games. Legalised gambling has become more prevalent over the last 25 years as more jurisdictions take advantage of the revenue sources from the taxation and regulated gambling industries. Over this time many governments have allowed for the expansion of legal gambling, including casinos, or introduced regulatory regimes over existing gambling.

19. Based on information generated by the gaming sector, it is estimated that over 150 countries participate in some form of legal gambling and 100 of those countries participate in legalised casino and card room gambling. The broad AML/CFT network of FATF and FATF-style regional bodies includes over 180 jurisdictions globally. At least 77 of these 180+ jurisdictions have been indentified from the responses to research questionnaires and other requests for information, as having legally operating casino sectors.

20. *Appendix 1* provides summary tables of each the casino sectors operating in each region.

21. The casino market is in a major growth phase in most regions. At least three jurisdictions (Albania, Singapore and Papua New Guinea) have newly passed legislation and a greater number have recently expanded their casino sectors (South Korea; Macao, China; and Chile are examples). At least five jurisdictions have been identified as taking active steps towards legalising or giving consideration to legalising casinos (see section Emerging Markets).

22. A number of jurisdictions report significant problems from illegal gaming. Illegal gaming is largely beyond the focus of this study. It is recognised that illegal gaming is a factor in governments considering regulated gambling. A number of jurisdictions have casinos operating outside of legal frameworks. These include Sri Lanka (not clearly legal) and Myanmar.

23. A number of countries, recognising the social harms associated with gambling, have recently moved to restrict gambling growth in an effort to curb rising social costs (UK in relation to its 'super' casino and Russia through its four designated gaming zones).

24. There are a significant number of jurisdictions where gambling is illegal for religious and other reasons. In a number of these jurisdictions proponents are making a case for legal and regulated gambling to be introduced.

Regional Overviews

Africa

25. Sector studies view Africa as a significant growth region for casinos. This is the case in both the major casino market in South Africa and in smaller developing markets in other African jurisdictions. A number of casino jurisdictions in Africa do not regulate the sector for AML/CFT and a greater number appear to be poorly regulated. A number of jurisdictions have sought to restrict casinos only to foreigners.

26. Based on information from FSRBs, commercial databases and commercial studies casinos are known to be legally operating in Egypt (25), Morocco (8+) and Tunisia (4) (MENAFATF members).

27. Casinos operate in Cameroon (3), Central African Republic (2), Gambia, Ghana (3), Liberia (1), Mali (1) and Senegal (4) (all GIABA countries). Casinos operate in Botswana (11), Comoros (3), Kenya (15+), Malawi (1+), Mauritius (7+), Mozambique (3), Namibia (3), Seychelles (3), Swaziland (5+), Tanzania (7+), Uganda (3), and Zimbabwe (6) (ESAAMLG region).

28. South Africa is the only FATF member of this region and has over 40 legal casinos operating, making it by far the biggest casino sector in Africa. Casinos in South Africa are covered by AML/CFT controls There are a number of cases reported in the press of criminals attempting to launder proceeds of crime through one or a number of South Africa's casinos.

Middle East

29. Online commercial directories[4] list casinos operating in Iraq and Lebanon (1), both jurisdictions members of MENAFATF, but the nature and extent of casino gambling in these countries is unknown. Israel operates licensed cruise-ship casinos as well as land-based casinos.

Asia/Pacific

30. The Asia/Pacific region has the world's fastest growing economies, the world's strongest growth in tourism, and a vast array of cultures, languages, religions, political structures and consumer preferences. The region is also characterised by significant differences in wealth distribution ranging from well developed economies with strong governance and AML/CFT controls to some geographic areas characterised by poor governance, political instability or bordering regions with significant crime or terrorist problems. Some legal casino sectors are located in jurisdictions that have predominant cash-based economies and weak regulatory controls and/or no controls for AML/CFT. These factors present a significant challenge for governments and regional bodies committed to ensuring effective AML/CFT controls.

31. Within Asia there are legal casino sectors in: Korea (17); Lao PDR; Macao, China, China (29); Malaysia (1); Nepal (6); Philippines (14); and Vietnam (2). Sri Lanka has nine large casinos which are not regulated and are not subject to AML/CFT controls, but pay a levy to the government to operate pursuant to the Betting and Gaming Levy Act. Casinos in India are only permitted in one state and are not yet subject to AML controls. Press reports from late 2005 noted a draft bill had been prepared to regulate casinos in Nepal but this has not been enacted. Casinos in the Philippines are

[4] Casino City.

regulated, but there is no competent authority for AML/CFT matters, although the Philippine Amusement and Gaming Corporation (PAGCOR) have voluntarily agreed to submit suspicious transaction reports (STRs) to the Anti Money Laundering Council.

32. There is a mix of state and private ownership of casinos across the region. For example, in the Philippines, all casinos are state owned.

33. Some jurisdictions, such as Cambodia (21), Korea, Nepal and Vietnam restrict citizen access to casinos, only permitting foreign tourists to enter the casinos and gamble.

34. Hong Kong, China does not have a legal casino sector; many residents favouring travel to Macao, China due to its proximity and ease of access. Although the operation of casinos is illegal within the jurisdiction, Hong Kong, China is the home port for several cruise ships offering cruises into international waters principally to provide casino operations (see Chapter 3 for more information on 'high seas gambling').

35. Singapore is due to open its first casinos in 2009. Jurisdictions considering legalising casino gambling include Indonesia, Japan, Palau, Chinese Taipei, Thailand and Timor Leste (see box 2 below).

36. Casinos are illegal in Bangladesh, Brunei Darussalam, China, Chinese Taipei, Indonesia, Mongolia, Myanmar, and Pakistan.

Box 1. A Closer Look at Macao, China

Macao, China is a Special Administrative Region of China. Macao, China's population is just 0.5 million. The majority of the economy is linked to the tourism and casino industries. The casino industry now outstrips Las Vegas with casino revenue. Tax collected in 2008 made up over 70% of government total revenue. Macao, China holds the monopoly over casino-style gaming in the region with 31 casinos in operation.[5] There are approximately 30 million total visitor arrivals in 2008. Over half are from mainland China, the remaining predominantly from Hong Kong, Chinese Taipei and South East Asia. In 2002 Macao, China ended the gaming monopoly which had been dominated by Mr Stanley Ho's *Sociedade de Turismo e Diversões de Macao, China* (STDM) for 40 years. It liberalised the gaming industry by granting three casino gaming concessionaires and 3 sub-concessionaires.

The competent authorities responsible for the regulation of the casino sector are the Gaming Inspection and Coordination Bureau (DICJ) and the Judiciary Police. Criminal investigation of money laundering activities is undertaken by the Judiciary Police, whilst the preventative measures against money laundering are the responsibility of the DICJ. For currency exchange activities inside the casinos, they are under the supervision of the Monetary Authority of Macao.

Macao, China has introduced a licensing system to regulate junket operators. All licensed junket operators are obliged to file their information with the government, with their names published in the Official Gazette. Their licence will be reviewed periodically to see whether they are properly complying with the legislation and see whether they still fit the requirements of a junket operator. All casinos, junket operators and currency exchange counters inside the casinos have the duty to report Suspicious Transaction Reports to the Financial Intelligence Office of Macao, China. At the same time, casinos and junket operators have to submit large transaction reports to the Gaming Inspection and Coordination Bureau.

37. There are seven jurisdictions with legal casino sectors in the Pacific. These include Australia (13), New Caledonia, New Zealand (6), Northern Mariana Islands, La Réunion (France), Solomon Islands, and Vanuatu (1). Papua New Guinea passed legislation in 2007 for 23 land-based and online

5 As at September 2008, reported by The Gaming Inspection and Coordination Bureau.

casinos and Palau and Timor Leste are considering legalising casinos. All of the jurisdictions with casino sectors or considering legalising casinos are APG members, except for New Caledonia, Northern Mariana Islands, and, La Réunion (France). Casinos are not operating in Niue, the Cook Islands, Fiji, Tonga or Samoa.

38. Cruise ships operating in the Pacific include offshore gaming, but do not operate while in harbour on pacific islands. Pacific jurisdictions indicate that they lack clear information on the operation and regulation of these gaming cruise ships.

39. Australia is the largest casino sector in this region with 13 legally operated casinos, the first opening in Tasmania in 1973, and each state and territory having a least one. The casinos vary in size from 18 tables and 250 gaming machines to 350 tables and 2 500 gaming machines. Total gaming revenues from Australian casinos was recorded as AUD 2.8 billion in 2005/06.[6] Gaming revenue, the largest component of casino revenue, has experienced a 4.1% cumulative annual growth and average annual growth rate since 2002/03. Each state and territory has its own regulatory and licensing control over casinos, which includes investigation and enforcement. In addition, all casinos are classified as "regulated entities" under law and supervised by the FIU (AUSTRAC) for compliance to AML/CFT laws. Casinos are commercially owned and operated in Australia and open to both citizens and tourists.

40. New Zealand has six legally operated casinos, the first opening in 1994. Gambling revenue in casinos was reported at NZ469 million in 2007.[7] They are all commercially owned and operated and open to both citizens and tourists. New Zealand, however, does not have AML/CFT supervision of casinos, but has draft legislation underway to rectify this. Current laws provide financial reporting responsibilities to the FIU. General casino supervision is the responsibility of the Department of Internal Affairs, but casino licensing is the responsibility of a separate Gambling Commission. In 1997 the New Zealand Government passed a moratorium on new casinos, capping the number of legal casinos allowed to operate at six.

Central Asia

41. The Eurasian Group (EAG) report casinos operating in Kazakhstan and Kyrgyzstan (18). In Kazakhstan laws passed in April 2007 limit casinos to two provincial cities – Kapchagai and Shchuchinsk, but it is unknown if any regulation of AML controls are in place. The 18 casinos reported in Kyrgyzstan are regulated, including for AML/CFT, however a recent ME noted the casinos are showing some resistance to these laws.

42. Tajikistan, Turkmenistan, and Uzbekistan report no casinos operating, although it is uncertain if this is because of legal restrictions or market limitations.

Europe

43. Europe has long-established casino and gaming sectors and has experienced large-scale growth in recent years. Within Europe European Union (EU) members have responsibility to implement AML/CFT measures on casinos following the relevant EU directives. There are

---

6 "Australian Casino Economic Report 2005/06", July 2007, *Australian Casino Association*, http://www.auscasinos.com/documents/publicationsSubmissions/ACAFinalReport200506v3.pdf

7 Department of Internal Affairs. *Gambling Expenditure Statistics 1983 – 2007*, http://www.dia.govt.nz/Pubforms.nsf/URL/Expendstats07.pdf/$file/Expendstats07.pdf

39 jurisdictions in the Europe with reported legal casino sectors in operation. These include: Austria (12), Belgium (9), Cyprus (20+), Czech Republic (158), Denmark (6), France (161), Finland (1+), Georgia (2), Germany (62), Greece (9), Hungary (6), Italy (4), Latvia (14), Luxembourg (1), Malta (4), Poland (27), Portugal, Romania, Russia (348), Slovakia (4), Slovenia (14), Spain (39), Sweden (4), Switzerland (19), and the United Kingdom (165 licensed 140 operating). See Annex A for full details.

44. Casino ownership across Europe varies between state and private ownership, but some jurisdictions, such as Germany, Slovenia and Sweden have a mix of both. There is no citizenship prohibition reported. Most casino sectors are regulated and all are subject to AML/CFT controls. Casino jurisdictions rely less on junket or casino tourism operations and few European jurisdictions report commercial arrangements between casinos and junket promoters to support casino tourism.

45. In most European countries there exists alongside traditional casinos a low stakes gaming machine market. These machines can be found in many places, including sports betting shops and poker clubs.[8] With regards to the size of each sector, Russia has the largest sector with 348 operating casinos. After 1 July 2009, all gaming in Russia will be prohibited except within four newly created special gaming zones in Kalingrad, Rostov-na-Donu, Altai and Primorie Krai (Vladivostok), France, the Czech Republic, and the United Kingdom follow closely with 160, 158 and 140 respectively.

46. Austria has 12 casinos which generated approximately Euro 190 million in revenue in 2007 from 2.44 million visitors. Finland has just one casino which recorded annual turnover of EUR 30.9 million in 2007. Germany has 62 casinos which generated 944 million revenue in 2005 from 7.7 million visitors. Germany's casino sector employees approximately 5 000 staff. Slot machines account for 75% of gross earnings in German casinos. Malta has three casinos which employ over 600 people. Spain has 39 casinos which attracted 3.3 million visitors in 2006.

47. Ireland has a number of private gaming clubs operating casino-like facilities that create an AML/CFT risk, but which fall outside the scope of their AML laws. Casinos are reported to be illegal in Iceland, Norway and Turkey.

South America

48. Many Central and South American jurisdictions have well established gaming sectors (lotteries, sports betting, etc) but fewer have well established casino sectors. GAFISUD and online directories report casino sectors operating in Argentina (70+), Chile (17+), Uruguay (18), Peru (7), and Venezuela (5), however it is unknown the extent of regulation and/or AML controls over these sectors. Uruguay and Venezuela also report casino sectors, but no further information is available. It is unclear the extent to which South American casinos rely on introduced junket operations.

49. Argentina has a well established gaming market with further expansion taking place in the casino sector. Casinos do not operate in Bolivia, and it is unknown if Colombia, Ecuador and Paraguay have casino sectors.

50. Bolivia and Brazil prohibit casinos.

---

8 Rich Geller. "Saturation or Malaise?" *Global Gaming Business*, June 2008, p. 40.

The Caribbean and Central America

51. The Caribbean has more than 120 casinos on 15 islands. The CFATF reports casinos operating in the Bahamas (4), Belize (2), Costa Rica (35), Dominican Republic (44), Jamaica (10), Panama (14), and Suriname (9), but the level of regulation and AML controls is not clear.

52. Trinidad and Tobago have no legal casinos but have 72 registered Private Members Clubs that operate like casinos, but are not supervised by the government.

53. Open source material reports that Panama has 14 full-scale casinos with three additional licences being recently granted, and 29 gaming machines halls. Combined with non-casino gaming revenues, Panama has the second-largest gaming market in Latin America behind Argentina. AML/CFT controls appear to be lacking in Costa Rica, El Salvador, and Nicaragua despite recent attempts by their respective governments to better control and regulate the industries. The Dominican Republic does not extend AML controls to the sector.

54. In Bermuda, the Cayman Islands, Guatemala and Guyana casinos are illegal.

North America

55. Canada and the United States account for almost 50% of the global casino market.

56. Casinos in Canada are relatively recent with most opening in the early 1990s (except for Yukon where a charity casino was legalised in 1973). Canada now has 63 casinos operating in seven provinces and one territory (Yukon). 29 of these are commercial casinos which are usually state-owned or operated through service contracts with private corporations. There are 24 charity casinos licensed in Alberta, and one in Yukon, which are all privately owned. In Alberta, only religious or charitable groups may hold a casino licence. Also in Canada there are nine First Nations[9] casinos operating in Ontario, Manitoba and Saskatchewan. The provincial and territorial authorities are responsible for regulating all casinos, as well as municipal, provincial and federal law enforcement agencies. The Canadian FIU (FINTRAC) is responsible for ensuring that casinos are compliant with their responsibilities under AML/CFT laws.

57. Cruise ships operate out of Canadian waters and do offer casino facilities (except within five nautical miles of a Canadian port). As with many FATF/APG jurisdictions AML/CFT measures do not apply to cruise ship gambling.

58. The 2005 revenues and profits for commercial and charity casinos in Canada are shown in Table 2 below:

Table 1

	Revenues 2005	Profits 2005
Commercial Casinos	CAD 3.7 billion	CAD 1 billion
Charity Casinos in Alberta	CAD 1.2 billion	CAD 147 million

9. TBD.

59. The United States has approximately 845 casinos and card clubs operating in at least 30 jurisdictions (including Puerto Rico, the U.S. Virgin Islands and Tinian). Casino ownership in the United States is a mix of commercial and tribal ownership. In 2003, more than USD 800 billion was wagered at casinos and card clubs in the United States. In particular, there has been a rapid growth in riverboat and tribal casino gaming as well as card room gaming over the last ten years (see Box 5 for more on Indian Gaming in the United States). Collectively, tribal casinos took in USD 25.7 billion in revenue in 2006, compared with Nevada's revenues of USD 12.06 billion for the same year.

60. Gambling is primarily a matter of state/territory law and responsibility for regulating casinos falls on state gaming commissions and the National Indian Gaming Commission. All legally licensed casino and card clubs with gross annual revenues greater than USD 1 million are subject to Federal AML requirements in the BSA. Covered gaming establishments (state licensed land based, riverboat, tribal casinos and card clubs) are subject to AML requirements. The US FIU (FINCEN) administers the BSA but does not directly examine casino for compliance with the law. That is delegated to the Internal Revenue Service (IRS). For floating casinos, i.e. gambling "cruises to nowhere" which operate out of certain states along the East Coast of the US to conduct gambling beyond the 3 nautical miles limit, customers are subject to reporting currency and monetary instruments of $10,000 or more when sailing both in and out of US territorial waters ships. Moreover, the operators of the "cruises to nowhere" are required to file tax notices for jackpot wins of USD 1200 or more.

Box 2. Indian Gaming in the United States

Tribal government-sponsored gaming is an evolution dating back to the late 1970's. After the Supreme Court confirmed (in 1987) the right of the tribal governments to establish gaming operations, Congress passed in 1988 the Indian Gaming Regulatory Act (IGRA) (25 USC 2701) which recognized, but limited, the right of tribes "to conduct gaming operations" and embodies a compromise between state and tribal interest. According to the IGRA, the states are given a voice in determining the scope and extent of tribal gaming by requiring tribal-state compacts for all forms of casinos style gambling and other gaming activities. Most recently tribal casinos have moved rapidly from relative obscurity within the casinos industry to prominent position with ample potential for money laundering and other types of financial crimes. There are 567 federally recognised Indian Tribes, half of which are in Alaska, and 225 of them operate 411 gaming facilities in 28 states.[10] Of these 307 are considered casino operations, while the remainder are basically bingo halls. Collectively, the tribal casinos took in USD 25.7 billion in revenue in 2006, more than twice the amount generated by Nevada casinos.[11] If the tribal gaming industry were a single company, rather than 307 casinos, it would rank near the top 100 corporations in America. Tribal gaming interests have what is currently the largest casino in the United States, Foxwoods Resort and Casino, located in Mashantucket, Connecticut and owned by the Mashantucket Pequot Tribe. The west coast, primarily California, represents the fastest growing region for the Indian gaming industry.

61. Mexico reports a growing gaming industry; however, the only casino-style of gambling authorised is in betting game halls exclusive to regional fairs with cards, dice and roulette. These are Temporary permits for large-scale "salones de Apuestas ", regulated by the Secretaría de Gobernación (Ministry of Interior), but not subject to AML controls. The Mexican government do not foresee any permanent casinos being located or permitted to operate within national territory.

10 "An Analysis of the Economic Impact of Indian Gaming in 2006", *National Indian Gaming Association,* http://www.indiangaming.org/info/pr/press-releases-2007/NIGA_econ_impact_2006.pdf

11 "Tribal casino revenue up 5 percent nationwide", *Associated Press*. June 19 2008, http://blog.mlive.com/kzgazette/2008/06/tribal_casino_revenue_up_5_per.html

Emerging Markets

62. Given the scope of potential revenue and the interest in foreign direct investment, a number of regions have significant emerging markets in the casino and gaming sectors. This is particularly the case in the Asia/Pacific region and in Africa.

63. A number of developing countries with predominantly cash-based economies and weak or limited AML/CFT capacity are giving active consideration to establishing casino sectors. Some of the smaller less developed countries considering legalising casinos include Palau and Timor Leste.

64. Singapore has passed legislation which provides for granting two licences for large-scale casinos. The licensing remains subject to confirmation of suitability of the two casino operators.

65. Papua New Guinea passed legislation in 2007 for approximately 20 land-based and online casinos.

66. Japan has indicated has organised crime groups running casino-like operations for online gaming, but is giving consideration to establishing luxury casino resorts by 2012 if liberalisation of the gaming market goes ahead.

67. Chinese Taipei is considering proposals to open up the island nation's gambling business by revising legislation that may allow casinos on the offshore islands of Chinese Taipei.[12]

68. Thailand is also considering legalising gambling after the findings of a detailed study on the prevalence of illegal casinos at the border between Thailand and Myanmar and related flows of funds to neighbouring casino jurisdictions. Thailand estimates USD 4-17 billion in illegal gambling turnover annually and 100 000 people arrested per annum for illegal gaming.

Box 3. Drivers for Change in Asia

Market analysts consider that the Asia region has an undersupply of quality legal casino venues. Such analysts view Asia as having the greatest potential for growth in casino revenue and venue development. The key drivers for regulatory change in the Asia region include:

1. Economic growth resulting in increased disposable income.
2. Changing social attitudes.
3. Increased media and government attention on existing illegal gambling industries.
4. Need for increased taxation revenues.
5. Need for tourism infrastructure development.
6. Availability of private sector capital for foreign direct investment.

However, issues that drive resistance to regulatory change include:

1. Social conservatism.
2. Religion.
3. Corruption in government.
4. Incumbent illegal and legal operators.
5. Government inefficiency or insufficient capability to affect change.
6. Voter/communities lack of faith in government to effectively regulate and control the industry.

12 Global Gaming Business, "Asia Update", June 2008, p. 30.

Conclusion

69. What is shown in this chapter and in detailed tables at Annex A is the extent of casino gambling around the world and the diversity of each region's sector. Demand for casino gambling services is high and increasing and is associated with high revenues for government. This is leading some jurisdictions to legalise gambling particularly in developing countries.

70. There are established casino sectors in jurisdictions with government oversight, but are unregulated for AML/CFT.

71. The next two chapters set out a number of vulnerabilities of casinos to money laundering by describing the methods and indicators of money laundering from past cases and the casino sector vulnerabilities and emerging AML-related issues.

CASINO SECTOR RISK ASSESSMENTS FOR MONEY LAUNDERING & TERRORIST FINANCING

The need for casino sector-specific risk assessments

72. The casinos project group considered the need to conduct periodic assessments of ML/TF risks in the casino and gaming sector. The project group discussed the benefits of understanding the nature of the ML/TF environment to allow regulatory and enforcement agencies to better allocate resources to address priority risks in the casino sector.

73. ML/TF is one aspect of criminal risk. Risk assessments of the casino sector may look at broader risks including organised crime, loan sharking, prostitution, drug dealing, human trafficking etc.

Guidance on Typologies Risk Assessments

74. The FATF WGTYP June 2008 paper on Risk Assessments identifies factors that may influence the ML/TF risk in a county and suggests information to access when conducting a risk assessment. The WGTYP paper highlights a wide range of factor to be covered in a risk assessment. For the casino and gaming sector, these may include:

- Legal and regulatory environment.
- Characteristics of the economy as well as the casino/gaming sector.
- Ownership structure, integrity, internal controls and corporate governance of casino/gaming institutions.
- Ownership structure, integrity internal controls and corporate governance of intermediaries and associated businesses (junket promoters, agents, gaming equipment, financial service providers).
- Types of products and services offered and clients served.
- Criminal activities and proceeds of crime generated domestically as well as generated abroad but laundered domestically.
- Financial services offered by casino/gaming institutions and by casino intermediaries (junket promoters, agents etc).

Sources of information

75. Responses received from FATF/APG questionnaires indicate that many jurisdictions are receiving suspicious activity reports from casinos or that relate to casino activity. Casino regulators, law enforcement, bank regulators and FIUs hold useful information to assess risk areas.

76. The project group noted that a number of commercial companies provide baseline information on national and regional casino and gaming trends, including size, scope and nature of markets; trends in investment and regulation and criminal exploitation, including money laundering. This information can assist competent authorities understand the nature of their sector as well as offshore sectors.

Risks for jurisdictions without a casino sector

77. The casinos project group discussed why and how a jurisdiction without a casino sector may undertake an ML/TF risk assessment. These may be undertaken in response to illegal gaming as well as the movement of persons and funds to another gaming jurisdiction to launder the proceeds of crime.

Models for casino sector risk assessments

78. A number of countries have recently undertaken casino sector risks assessments. The models of assessment have varied, depending on the agency undertaking the assessment and the purpose (*e.g.* policy settings, law enforcement responses, regulatory compliance).

Police-led assessment - e.g. Canada

79. Canada's RCMP has recently undertaken a police-led assessment of ML risks in the casino sector. This involved working with a very wide range of stakeholders to identify national sector-specific risks. As with other risk assessments, the RCMP drew on a wide range of information sources to understand risks in the sector. These included typologies trends derived from the FIU; interviews with operators in the sector, including staff of casinos (pit bosses, owners, security etc); and information collected from intelligence databases on related crime trends.

80. The assessment aimed to understand:

- The scope of the casino sector: number, type, location, ownership, risk profile etc of casinos.
- How Casinos are used as financial intermediaries.
- Law enforcement cases / intelligence of how casinos are used for ML or are associated with predicate offences (fraud, loan sharking etc).
- Criminal trends linked to casinos.

Academic Sectors – e.g. Thailand

81. Thailand is a jurisdiction where casinos and gaming are illegal. Thai authorities have long recognised a very significant illegal gaming problem and the large scale movement of Thai nationals to foreign casino jurisdictions.

82. In order to better understand background issues, Thailand sought the assistance of the academic sector to undertake a scoping study of the impact of illegal gaming on Thailand, including ML and TF risks to the country. Thai authorities have given some consideration to regulatory reform and the possible licensing of some forms of gaming, including casinos.

83. The scope of the Thai assessment included the value of gaming sector (illegal and offshore gaming); scope of illegal gaming; movement of Thai people to foreign jurisdictions for gaming; risks for ML/TF and other predicate offences (smuggling, drugs, human trafficking etc); and impact on the community from illegal gaming.

- Over 100 000 people are arrested each year for illegal gambling offences.
- It is estimated that there are 200 to 300 illegal gambling houses in Bangkok.
- Annual turnover for illegal gambling houses in Bangkok is estimated at between USD 4 to 17 billion and for those outside Bangkok is USD 2 to 4 billion.
- There are 27 legal or semi-legal casinos operating in neighbouring countries within very close proximity of the Thai border servicing Thai gamblers.
- Thai junket operators offer casino tourism services in major Thai cities to move people and funds to these 'offshore' casinos.
- Movement of Thai citizens to border casinos increases risks associated with currency smuggling and cross-border crime risks including smuggling, human trafficking and drug trafficking.

Regulator-led assessments – e.g. Australia

84. In Australia, AUSTRAC, as the AML/CFT regulator, and various state-based casino regulators have worked together to conduct a preliminary assessment of key typologies and regulatory risk related to money laundering and terrorist financing. This has involved considering a range of law enforcement information, regulatory information and sector information to identify areas of specific risk and to supporting preparation of AML guidelines and AML/CFT supervision and monitoring.

CHAPTER 2: MONEY LAUNDERING METHODOLOGIES AND INDICATORS

85. This chapter will identify and examine money laundering methods from known cases and draw out related indicators to support the detection of money laundering activity.

Broad risks in casinos

86. Casinos are by definition non-financial institutions. As part of their operation casinos offer gambling for entertainment, but also undertake various financial activities that are similar to financial institutions, which put them at risk of money laundering. Most, if not all, casinos conduct financial activities akin to financial institutions including: accepting funds on account; conducting money exchange; conducting money transfers; foreign currency exchange; stored value services; debit card cashing facilities, cheque cashing; safety deposit boxes; etc. In many cases these financial services are available 24 hours a day.

87. It is the variety, frequency and volume of transactions that makes the casino sector particularly vulnerable to money laundering. Casinos are by nature a cash intensive business and the majority of transactions are cash based. During a single visit to a casino a customer may undertake one or many cash or electronic transactions, at either the 'buy in' stage, during play, or at the 'cash out' stage.[13] It is this routine exchange of cash for casino chips or plaques[14], TITO tickets[15], and certified cheques, as well as the provision of electronic transactions to and from casino deposit accounts, casinos in other jurisdictions and the movement of funds in and out of the financial sector, which makes casinos an attractive target for those attempting to launder money.

88. As this research is solely focused on casinos, the data collected is not wide enough to carry out statistical trend analysis. Chapter 3, however, does provide specific sector vulnerabilities and emerging issues as a start to this broader study. It is also recognised that methods and indicators are immediately useful to private sector organisations seeking to develop effective AML/CFT processes.

---

13 The 'buy in' stage is when a customer enters a casino and purchases casino chips, tickets, or gaming machine credits in order to commence gambling. The 'cash out' stage is when a customer converts casino chips, tickets or gaming machine credits for cash, casino cheque, credits an account or transfers funds to another casino.

14 The term 'casino chip' also refers to plaques and other wagering instruments provided by the casino.

15 Ticket In/Ticket Out (TITO) is a gaming machine system that allows a gaming machine to accept either banknotes or tickets with a credit value printed on them (Ticket In) to commence play. TITO also prints tickets with a credit value when a player wishes to 'cash out' of the gaming machine (Ticket Out). The player can them redeem his/her ticket for cash at a cashier's desk, ticket redemption kiosk, or insert the ticket into another TITO machine and continue playing. A ticket redemption kiosk machine is a multifunctional device, connected to a gateway or kiosk server, that can perform a variety of financial transactions for customers, such as redeeming slot machine/video lottery tickets for currency, exchanging currency for currency (*i.e.*, breaking bills or paper money), redeeming player slot club points, purchasing slot machine vouchers (*i.e.*, tickets), and initiating electronic transfers of money to or from a wagering account including currency withdrawals from a casino ATM.

89. The importance of studying money laundering methods – the "how to" – cannot be overstated. Such studies provide government decision-makers and operational experts with the material to target policies and strategies for combating financial crime. The sharing of these methods, together with indicators to detect money laundering activity, with responsible financial and non-financial organisations is equally important. They are a necessary tool for financial institutions, other financial intermediaries and gatekeepers who are on the front line in confronting activities that may or may not be suspicious (and thus may or may not be related in some way to money laundering, terrorist financing or some other financial crime).

90. For the private sector, and in this case casino owners and operators, valid money laundering indicators are therefore essential in establishing and "calibrating" mechanisms that help to identify suspicious or unusual transactions which must then be reported to a financial intelligence unit.

91. For the purposes of this chapter the following definitions apply:[16]

- *Method:* a particular procedure for carrying out money laundering activity. There are further distinctions in the concept of a money laundering method:
    - *Technique:* a particular action or way that the activity is carried out, for example, purchasing a cashier's cheque.
    - *Mechanism:* a system or thing that carries out part of the process. An example of a money laundering mechanism is a casino.
    - *Instrument:* an object of value (or representing value) that is somehow used in the money laundering process, for example, a casino cheque or casino chips.

92. For example, the action of depositing funds into a casino account relates to all three concepts: *i)* depositing the funds is a *technique*, *ii)* the casino managing the account is a *mechanism* and *iii)* the funds deposited are an *instrument*. It should be noted as well that, for the most part, the examples provided for each of these concepts may not in and of themselves represent illegal activities. Indeed it is only when these *techniques*, *mechanisms* and *instruments* are put together to form a money laundering activity that they become illegal.

93. With regards to indicators, there is sometimes confusion between a money laundering indicator and a money laundering method. While it is sometimes true that the methods defined below could indicate money laundering activity, they are not synonymous. For example, exchanging chips for cash is not by itself an indicator of money laundering. By the same token, indicators are not all necessarily money laundering methods.

Criminal interest in casinos – players and infiltration of casinos

94. Casinos are attractive venues for criminals. Casinos are consistently targeted by criminals for criminal influence and criminal exploitation. Organised crime groups seek to control or own casinos or aspects of casino operations. Criminals attempt to infiltrate or influence casinos to facilitate theft, fraud, money laundering and other crimes.

95. A core function of all casino regulators is making certain that gaming is conducted honestly by approving the rules of the games and requiring the operator to provide a high standard of

16 Financial Action Task Force. *Money Laundering & Terrorist Financing Trends and Indicators Initial Perspectives.*

surveillance and security systems. This ensures public confidence in the gaming product, minimises opportunities for criminal activity and provides certainty of government revenue streams.

96. Criminal influence and exploitation of casinos appears to be both for possible money laundering, but also for recreation and in some cases enhancing their criminal endeavours outside the casino. Casinos have been noted as a place where criminals and organised crime figures like to socialise and particularly like to spend and launder their criminal proceeds.

97. Feedback from police also indicates that large casinos with sophisticated security and surveillance systems may be viewed by criminals as providing a safe haven to meet and associate in without fear for their personal safety.

98. Gaming venues attract ancillary criminal activities including loan sharking, vice and other crimes.

Box 4. Loan Sharking

Loan Sharking (also known as usury) is prevalent in casinos in a number of jurisdictions. Loan sharking is a crime that involves loaning money to individuals at an interest rate that is above a maximum legal rate, sometimes collected under blackmail or threats of violence. Loan sharks may be financed and supported by organised crime networks who are also involved in money laundering activities. A loan shark usually preys on individuals who are problem gamblers, struggling financially or, for some reason, are unwilling to seek credit from legal sources.

Persons in debt to loan sharks may be coerced into assisting with money laundering schemes in the casino.

Box 5. Credit card scam using the casino

A jurisdiction reported a credit card point scam where casino chips are purchased using credit cards. The chips are then cashed out and instead of crediting the credit card, casinos usually issue cash or a casino cheque. The balance on the credit card is eligible for consumer points. The balance on the credit card is paid back using the cash or cheque received from the casino. This method enabled large amounts of credit card points to be accumulated in a short period of time and can be used for merchandise purchases.

Money laundering methods and techniques in Casinos

99. The money laundering methods outlined in this chapter are:

- Use of Casino Value Instruments (cash / casino chips / TITO / gaming machine credits / cashier's orders / casino cheques / gift certificates / chip purchase vouchers / casino reward cards).
- Structuring / Refining.
- Use of Casino Accounts (credit accounts, markers[17], foreign holding accounts) / facilities.
- Intentional losses.
- Winnings / intentional losses.

17 Casino markers act as a credit line through a personal checking account, no transaction occurs, but are issued once a patron submits their checking account number and a cheque to the casino. The casino has the right to deposit the marker at any time but usually waits a few months to allow for customers to pay back the credit if the losses are high. Money launderers will pay back the debt with the proceeds of crime.

- Currency Exchange.
- Employee Complicity.
- Credit Cards / Debit Cards.
- False Documents.

100. Each method is illustrated by representative cases[18] and followed up with related indicators that can be used to detect suspicious or unusual transactions by casino owners and operators. The methods, cases and indicators have been generated from the following research material:[19]

- Sanitised case material from regulatory, law enforcement and security organisations.
- International case study and typology reports including FATF, APG and the Egmont Group.
- Open source research.

Casino value instruments

Cash / Casino Chips / TITO / Gaming Machine Credits / Cashier's Orders / Casino Cheques / Gift Certificates / Chip Purchase Vouchers / Casino Reward Cards

101. Casinos utilise various value instruments to facilitate gambling by their customers. The type and use of the value instruments listed above differs between casinos and is influenced by local regulation and casino operating structures. Casino value instruments are most often used for money laundering by converting illicit funds from one form to another.

102. Casino chips are the most common casino value instruments. Casino chips are issued by casinos and used in lieu of cash in gaming transactions between the house and players. Chips are round and marked with the denomination and name of the casino and are negotiable within the casino, or, in some cases, within casinos in the same group. Casinos may issue 'credit chips' which are different in colour and only used by patrons playing on credit. Casinos may issue 'dead chips' which are only used by *junket* patrons (*see section below on junkets*).

103. ***Buying chips for cash or on account, then redeeming value by way of a casino cheque, bank draft of money transfer.*** Launderers typically buy chips with cash or through their casino account. Chips bought on account may use a Chip Purchase Voucher (CPV) or similar value instrument. Repayment is then requested by a cheque, draft or transfer drawn on the casino's account. This method can be made more opaque by using a chain of casinos where the chips that were purchased with illicit cash are converted to credit, and transferred to another jurisdiction in which the casino chain has an establishment; the credit is then converted into in the form of a casino cheque at the second casino.

---

[18] The cases outlined are provided from jurisdictions contributing to the project research, and while some countries may appear to be over/under-represented in the cases, this is not an indicator of high or low levels of money laundering within that country, but merely a reflection of that government's willingness to share money laundering information to support global AML awareness.

[19] It is important to note that this chapter does not provide a description of all methods used to facilitate money laundering. It is limited to those methods that have been reported to FATF or APG and from cases that have been approved for use in the public forum.

104. Money launderers may hold the chips for a period of time, either using the chips to gamble in hopes of generating certifiable winnings or later redeeming the chips for cash/ cheque / transfer.

105. ***Purchase of chips from 'clean' players at a higher price*** – Money launderers may purchase chips from other money launderers or un-associated casino patrons with 'clean' backgrounds. This is done at a price greater than the chips' face value. This is referred to as *value tampering*.

106. ***Casino cheques payable to cash*** – in some jurisdictions, casinos allow winning cheques to be made payable to 'cash'. High-value casino cheques payable to cash have been observed in secondary circulation as bearer negotiable instruments and used as payment for goods or for reinvestment in criminal ventures, such as purchasing drugs. High-value casino cheques may originate from VIP rooms, which may provide alternative remittance services between player's home jurisdictions and the casino VIP room.

107. ***Combining winnings and cash into casino cheques*** – although few jurisdictions allow this, money launderers seek to add cash to casino winnings and then exchange the combined cash and winnings for a single cheque.

108. ***Use of chips as currency in illegal transactions –*** money launderers may retain casino chips to be used as currency to purchase drugs or other illegal goods. Carrying chips from a drug transaction may also contribute to an alibi for the predicate offence. The recipient of the chips will later cash them at the casino.

109. Casino chips to be used as currency may be taken across borders and exchanged for payment of an illegal enterprise then returned by the third parties and cashed at the issuing or honouring casino in amounts below a reporting threshold. Most jurisdictions do not list casino chips as money value instruments and therefore do not require Customs declaration.

110. In some jurisdictions, casino chips from one casino can be utilised in another associated casino. Cases showed that the money launderers will take advantage of this arrangement to avoid attracting attention to their activities at the one casino. This may take in another jurisdiction. To prevent this some jurisdictions require casinos to have casino-specific chips and do not allow inter-casino chip cashing.

111. ***Purchase of large numbers of 'casino gift certificates' –*** Cases have been detected of money launderers purchasing high value or numerous low value casino gift certificates which can be redeemed by 3rd parties. The certificates are then sold or given to other persons distancing the money launderer from the illicit funds.

112. ***Purchase of casino reward cards –*** Money launderers use illicit funds to purchase casino reward cards from legitimate customers paying them a premium above the value of the reward.

Case 1. Casino used as preferred method to launder millions

Offence:	Money Laundering
Jurisdiction:	Australia
Technique:	Chip purchase and cash out, claiming credits as jackpot wins, playing games with low return and high win.
Mechanism:	Casino
Instrument:	Casino chips, casino cheques

Information identified alleged money launderers using the casino as a preferred method of laundering millions of dollars accumulated from criminal activities. The methods used to launder the money included purchasing and cashing out chips without playing, putting funds through slot machines and claiming credits as a jackpot win and playing games with low returns but higher chances of winning. The same group were also utilising bank

accounts and businesses to launder funds.

Case 2. Purchase of chips and gambling without clear intention to win

Offence:	Money Laundering
Jurisdiction:	Belgium
Technique:	Chip purchase and cash out, claiming credits as jackpot wins, playing games with low return and high win.
Mechanism:	Casino
Instrument:	Casino chips, casino cheques

Two Asian males residing in Belgium went to a Belgian casino twice to purchase chips for a total amount of almost 25 000 EUR. When visiting they did not play at the tables and immediately collected funds through a third person, also an Asian national.

Investigations indicated that the three persons were students and lived at a common address with other Asian students. It appeared that the transactions were likely to be linked to human trafficking. By not playing at the casino and collecting the money through a third person they wanted to leave a paper trail in order to justify the origin of the funds.

Case 3. Proceeds of drugs used to purchase chips and claim funds as winnings

Offence:	Drug importation
Jurisdiction:	Australia
Technique:	Chip purchase and cash out
Mechanism:	Casino
Instrument:	Casino chips, chip to cash transfer, casino cheques

A cargo consignment addressed to a person contained approximately 3.4 kilograms of black opium resin, concealed within the contents. The person was arrested when attempting to collect the consignment. Further investigation revealed the person to be a regular customer of a casino, having conducted approximately 50 betting transactions, predominantly chip cash outs totalling AUD 890 000. Very little casino gaming play was recorded for the person and it was assumed that he used the proceeds from previous importations to purchase chips and claim the funds as winnings.

Case 4. Proceeds from stolen cheques used to purchase casino chips

Offence:	Money Laundering
Jurisdiction:	United Kingdom, India
Technique:	Purchase casino chips
Mechanism:	Casino
Instrument:	Casino chips

In November 2007 two men were convicted for their part in a GBP 25 000 cheque scam. The victim was robbed at New Delhi Railway Station in India in March 2006 and among the items stolen were two Barclays cheque books. The money laundering trail led authorities to a casino in London where cash withdrawn from the defendants account was used to purchase gambling chips. Both men claimed gambling addictions. STRs were not submitted by the casino in this case.

Case 5. Cash laundered through casino used to bribe officials

Offence:	Money Laundering
Jurisdiction:	Korea
Technique:	Cash to chip to cash/cheque transfers
Mechanism:	Casino
Instrument:	Casino chips, casino cheques

Early 2006 a bribery case involving money laundering at a casino was investigated by the Public Prosecutor's Office. A legal broker bought casino chips with cheques to a total of KRW 20 billion (approx USD 20 million) from 2003 to 2005 and then changed the chips with cash and cheques issued by the casino. He then used the money to bribe politicians and senior government officials.

Case 6. Casino reward cards traded for gold coins

Offence:	Money Laundering
Jurisdiction:	United States
Technique:	Purchase casino reward cards from legitimate customers
Mechanism:	Casino
Instrument:	Casino reward cards, gold coins

A suspect purchased casino reward cards from legitimate customers at a US casino. The cards increase in value with each casino visit and with each gambling session. The cards were purchased with illicit funds and were then traded for gold coins at the casino's store. An employee at the store was an accomplice in the laundering scheme.

Case 7. Embezzled money laundered through casino

Offence:	Money Laundering
Jurisdiction:	United States
Technique:	Purchase and cash out with little or no gaming activity
Mechanism:	Casino
Instrument:	Casino chips

A lawyer was sentenced in New Jersey for embezzling more than USD 500 000 and laundering USD 250 000 of it through an Atlantic City casino. The defendant wire transferred USD 250 000 to the casino and arrived at the casino later the same day to launder the funds. He purchased casino chips and gambled for an hour on a roulette table losing USD 10 000. He then cashed out the remaining USD 240 000 into currency and left the casino.

Case 8. Embezzled money laundered through casino

Offence:	Money Laundering
Jurisdiction:	Spain
Technique:	Purchase and cash out with little or no gaming activity, casino cheques in the name of 3rd parties
Mechanism:	Casino
Instrument:	Casino chips

Different people entered separately in a casino and bought chips. After playing minor amounts of chips they tried to change chips and requested a cheque paid to the name of a third person. They tried to do the same operation with different people and lower amounts one day later, which raised suspicion of casino operators.

Indicators of ML using casino value instruments

- Inserting funds into gaming machines and immediately claiming those funds as credits.
- Customers claiming gaming machine credits/payouts with no jackpot.
- Customers claiming a high level of gaming machine payouts.
- Noticeable spending/betting pattern changes.
- Customers frequently inserting substantial amounts of banknotes in gaming machines that have high payout percentages and do not play "max bet" to limit chances of significant losses or wins, thereby accumulating gaming credits with minimal play.
- Frequent even-money wagering when conducted by a pair of betters covering both sides of an even bet (e.g., in roulette, baccarat/mini-baccarat, or craps).
- Customer's intention to win is absent or secondary.

- Two or more customers frequently wagering against one another on even-money games.
- Customer in possession of large amounts of coinage or bills.
- Customer befriending/attempting to befriend casino employees.
- Purchasing and cashing out casino chips with little or no gaming activity.
- Customer requests to add cash to casino winnings and then exchanging the combined cash and winnings for a single cheque.
- Multiple cheques being requested or drawn on account.
- High volume of transactions within a short period.
- Multiple chip cash outs on the same day.
- Structuring of chip/cheque transactions.
- Chip cash out is same/similar to chip purchase.
- Requests for credit transfers to other casinos.
- Use of multiple names to conduct similar activity.
- Use of third parties to purchase casino chips.
- Use of credit cards to purchase casino chips.
- Use of personal cheques, bank cheques and traveller's cheques to purchase casino chips.
- Customer due diligence challenges, e.g. refusals, false documents, one-offs, tourists passing trade.
- Customer purchases chips and leaves casino shortly after.
- CPV, TITO, ticket or voucher dated prior to date of redemption.
- Large chip purchases.
- Frequent purchase of casino gift certificates.
- Unexplained income inconsistent with financial situation/customer profile.
- Supposed winnings do not correspond with recorded winnings.
- Dramatic or rapid increase in size and frequency of transactions for regular account holder.
- Detection of chips brought into the casino.

Structuring

113. Structuring or 'smurfing' involves the distribution of a large amount of cash into a number of smaller transactions in order to minimise suspicion and evade threshold reporting requirements. Common methods of structuring include:

- Regularly depositing or transacting similar amounts of cash, which are below a country's reporting disclosure limit.
- The use of third parties to undertake transactions using single or multiple accounts.
- Using cheques from multiple financial institutions or branches of a financial institution to 'buy in' while the amount of each cheque is below the reporting threshold.
- Utilising shift changes to systematically 'cash in' chips or other value instruments to avoid threshold reporting.
- Regularly switching gaming tables, gaming rooms, junkets or casinos within a chain when the wagering amounts are approaching the reporting threshold.
- Requesting the division of winnings or prize money, which exceeds the reporting threshold, to be broken down into cash and chips below the reporting threshold in order to exchange it at the cashier's desk.

114. While money launderers will often structure their transactions to avoid financial institutions filing reports to authorities, it has been found that some money launderers using casinos have the opposite strategy and seek to trigger a cash transaction report to further authenticate a transaction.

Case 9. Using reporting thresholds to legitimise suspicious transactions

Offence:	Money laundering
Jurisdiction:	United States
Technique:	Use of third parties, triggering transaction reports to legitimise suspicious transactions
Mechanism:	Casino
Instrument:	Casino chips, casino cheque

A number of persons purchased chips with illicit cash in amounts below the CTR threshold, but then passed the chips to one individual who cashed out, receiving a casino cheque and triggering the filing or a CTRC that gave the appearance of further authenticating the transaction. Over a twelve-month period, one individual was named in casino CTRCs reporting UDS1.1million paid out, but was not named in a single CTRC for cash taken in.

Refining

Exchanging low denomination for high denomination currency

115. Individual launderers or organised groups use casino services to refine large amounts of low denomination bank notes into more manageable high denomination notes. Some countries note this as being associated with drug dealers who accumulate large amounts of small denomination bills from drug sales. In cases of groups, they may seek to refine money by dividing it amongst the group before entering the casino. The group enter the casino, individually refine their portion of the money and meet again outside the casino to assemble the total amount. The refining techniques most commonly identified are listed below:

116. ***Refining using the cashier's desk*** – money launders exchange coins or small denomination bills for larger denomination bills at the cashier's desk.

117. ***Refining using 'note acceptors' or gaming machines that accept cash*** – Most casinos with gaming machines have 'note acceptors'. Money launderers will feed currency notes into the machine to accumulate credit with little or no play before redeeming the credits. As the amount can be quite large, it requires a 'ticket' or similar document provided by the slot attendant as proof to enable the exchange for cash or cheque at the casino cashier's desk. Gaming machines, Video Lottery Terminals (VLTs) and Ticket In/ Ticket Out (TITO) machines are used to refine currency. Gaming machines, TITO machines and VLTs are fed large sums of low denomination cash. Launderers redeem credits with minimal play. The ticket is then cashed at the cashier's desk, ticket redemption kiosk, for high denomination bills.

118. ***Use of casino account for refining*** – launderers pay low denomination cash into their casino accounts and withdrawn funds with cash of higher denominations.

Case 10. Refining low denomination notes

Jurisdiction:	Spain
Technique:	Refining, Use of third parties
Mechanism:	Casino
Instrument:	Cash, casino chips, remittance arrangement

A group of three foreign people entered separately in a casino and bought chips, paying with low denomination notes. They didn't play any game, and after they changed the chips that they had bought trying to obtain high denomination notes.

Case 11. Drug proceeds converted into casino chips by third parties

Offence:	Drug importation
Jurisdiction:	Australia, Vietnam
Technique:	Use of third parties
Mechanism:	Casino, remittance agent
Instrument:	Casino chips, remittance arrangement

A person was involved in the importation and distribution of heroin into Australia from Vietnam. The person gambled a large proportion of the proceeds at casinos and used third parties to purchase gaming chips on his behalf. Reports from the casino noted multiple chip cash outs on the same day, with some of these transactions being structured to avoid the AUD 10 000 reporting threshold.

Further investigations noted that he would send large cash payments to various entities in Vietnam through a remittance dealer. The remittance dealer was a trusted associate of the person and had been non-compliant with his reporting obligations.

Indicators of ML using structuring/refining methods

- Activity was inconsistent with the customer's profile.
- Associations with multiple accounts under multiple names.
- Use of multiple names to conduct similar activity.
- Depositing multiple amounts of cash and receiving multiple cheques drawn on that account.
- Multiple individuals sending funds to the one beneficiary.
- Cheque issued to a family member of the person.

- Third party presents for all transactions but does not participate in the actual transaction.
- Transferring funds into third party accounts.
- Transactions on casino accounts conducted by persons other than the account holder.
- Use of third parties to undertake structuring of deposits and wire transfers.
- Use of a remittance dealer / junket operators to deposit or withdraw cash.
- Use of third parties to purchase gaming chips.
- Use of third party to conduct wagering.
- Cash handed to third party after cash out.
- High volume of transactions within a short period.
- Purchasing and cashing out casino chips with no gaming activity.
- Exchanging large quantities of quarters from non-gaming proceeds for paper currency.
- Frequent betting transactions just under thresholds.
- Frequent 'buy in' and 'cash out' transactions just under thresholds.
- Cash deposits / withdrawals just under thresholds.
- Wire transfers / currency exchanges just under thresholds.
- Requests for winnings in separate cash or chip amounts under reporting threshold.
- Cashing in winnings in a multiple combination of chips, cheque and cash.
- Customer conducts several transactions under reporting thresholds over several shift changes.
- Customer moving from table to table or room to room before the wagering amounts reach the reporting threshold.
- Opening a casino account or purchasing casino chips with small denominations bills.
- Customer gambling with large amounts of small denomination bills.
- Currency exchange from small denomination bills to larger denomination bills.
- Frequent 'cash out' transactions without corresponding 'buy in' transactions or vice versa.
- Customer due diligence challenges, e.g. refusal, false documents, one-off/tourist or passing trade.
- Dramatic or rapid increase in frequency of currency transactions for regular account holders.
- Noticeable spending/betting pattern changes.

- Insert banknotes in electronic gaming devices with no gaming activity, press the "cash out" button which generates a TITO ticket, and redeem ticket at cashier's desk or ticket redemption kiosk machine.

Casino accounts & facilities

Credit accounts / Markers / Foreign holding accounts / safe deposit boxes

119. Casino accounts provide criminals further opportunities to attempt to laundering crime proceeds. Many casinos offer deposit accounts and lines of credit with less scrutiny and CDD requirements than financial institutions. The frequent movement of funds between financial institutions and casinos, or between casino accounts held in different casinos may be vulnerable for money laundering. Many casinos offer private safe deposit boxes, particularly to VIP/'high roller' customers.

120. ***Cashing cheques into casino accounts*** – Some casinos allow customers to cash various types of cheques and use the proceeds for gambling. Cheques could be signed over to the bearer by the cheque recipient. In the cases studied, proceeds from illegal activity were initially used to draw these cheques with the aim of avoiding the casino's suspicion.

121. ***Deposits into casino accounts by wire transfers or bank cashier's cheque*** – funds are deposited by wire transfer of bank cheque, then cashed out or moved to other accounts with minimal or no gambling activity.

122. Cashed out funds are stored in casino safety deposit boxes or held in the form of safekeeping markers and then cashed out.

123. ***Foreign Holding Accounts (FHAs)*** – Accounts that are held in one jurisdiction by the casino, but the funds can be used to gamble in another jurisdiction under the same casino group. For example, funds held in a FHA account in Macao, China can be used to gamble at a casino in Las Vegas. The money held in the account does not physically leave the country and is not subject to cash declarations. Large casinos may operate marketing offices in jurisdictions other than where the casino is located. Patrons are able to pay in funds to their casino account to be played when they travel to the casino without sending a cross-border wire transfer. *See the Junkets section for further details*.

124. ***Wire transfers from Casas de Cambio to casino accounts*** – Casas de Cambio in another jurisdiction may wire transfer funds to casinos. As an example, in the United States Casas de Cambio businesses are concentrated along the southwest border, with over 1 000 located along the border from California to Texas. These businesses are generally unregistered and do not comply with AML reporting requirements, and are suspected of being a significant money laundering risk. These *Casas de Cambio* have corresponding bank accounts which allow them wire transfer of large amounts of cash to casinos and other institutions throughout the world.

125. ***Safety deposit boxes*** – A number of casinos offer safety deposit boxes to patrons, in particular to 'high roller' patrons in VIP rooms. These present a risk due to the lack of transparency with the use of such boxes and the possibility for 3rd parties to be given access to safety deposit boxes via a password or key, to facilitate financial transactions. Very few jurisdictions regulate the safety deposit boxes in casinos.

Case 11. Large money laundering conspiracy

Offence:	Money laundering, VAT fraud, counterfeiting, credit card fraud, drug trafficking
Jurisdiction:	United Kingdom, Dubai
Technique:	Use of casino accounts, placement via gambling
Mechanism:	Bank, casino
Instrument:	Cash

The money laundering conspiracy involved millions of UK pounds from organised criminal gangs being laundered by a group of men from West Midlands. The money laundered included the profits from a number of activities including drug trafficking, multi-million pound VAT conspiracies in the mobile phone industry, counterfeiting and credit card fraud. The monies were a mixture of Scottish and English notes. The defendants would transfer large amounts of money to a back account in Dubai, which would then be accessed by their associates. The defendants received the proceeds of crime in the UK and made equivalent amounts of criminal monies available in Dubai. They then utilised the gambling industry to launder the money. Money was placed on a deposit at a casino and withdrawn a day or so later. Other sums would be gambled. Thousands of pounds would be passed over the tables in order to disguise the original source of the banknotes. Monies gambled or exchanged at the casino provided the defendants with an apparently legitimate explanation as to their source.

Case 12. Bank employee gambles millions from clients' accounts

Offence:	Fraud, money laundering
Jurisdiction:	Australia
Technique:	Use of casino accounts, structuring
Mechanism:	Bank, casino
Instrument:	Bank cheques

An investigation into a bank employee who gambled millions of dollars from clients' accounts was initiated as a direct result of information submitted by the casino. The suspect used his knowledge of the bank's internal procedures to discreetly transfer funds from customer accounts to his own personal account. Over a period of time, these funds were deposited into his casino account in the form of bank cheques made out in his name. The casino reported the regular deposit of bank cheques. The same casino had also previously reported bets placed by the suspect of AUD 9 000 to avoid the AUD 10 000 reporting threshold. As a result of the investigation the suspect was charged with three counts of money laundering and 37 counts of fraud.

Case 13. Avoiding liquidation action

Offence:	Money laundering
Jurisdiction:	Australia
Technique:	Placement via gambling
Mechanism:	Casino
Instrument:	Cash

A person was a director of a company that was subject to liquidation. Contrary to liquidator's instructions, the person began transferring large amounts of cash between company accounts and depositing the money into a casino account. The funds were used to gamble at the casino and subsequent "winnings" taken as cash.

Case 14. Cigarette Fraud

Offence:	Money laundering, bank fraud, wire fraud, conspiracy
Jurisdiction:	United States
Technique:	Use of third parties and casino accounts to facilitate fraud
Mechanism:	Casino
Instrument:	Cash, Casino Cheques

A suspect in New York lured foreign buyers into ordering large quantities of cigarettes. Suspect did not have cigarettes and had no intention of providing them to the buyers. The casino was used to launder the funds from the fraud as below:

- Buyer 1 paid USD 100 000 up front in a casino cashier's cheque. Suspect had accomplice deposit the cheque at the casino. Accomplice was permitted to gamble with USD 10 000 and cash out remainder and give to suspect.
- Buyer 2 provided a USD 60 000 certified cheque up front. Accomplice deposited the cheque at the same casino and was permitted to gamble, but lost USD 50 000 and gave remaining USD 10 000 in cash to

defendant. Buyer 2 sent another USD 100 000 certified cheque.

- Buyer 3 deposited USD 600 000 cheque into an account against which a cheque in the amount of USD 180 000 was made payable to the same casino. Accomplice then tried to withdraw all of the money, but the casino refused and permitted only a USD 50 000 withdraw. Accomplice then gambled with some funds and won USD 15 000. Casino then permitted withdrawal of funds and allowed accomplice to cash out.

Case 15. Loan-sharking profits laundered at casino

Offence:	Money laundering
Jurisdiction:	Japan, United States
Technique:	Purchase and cash out with little or no gaming activity
Mechanism:	Casino
Instrument:	Cash, casino chips, casino credit

A boss of a loan-shark business ordered his associates to convert the profits from Yen into US currency using false names. These funds were then distributed to numerous bank accounts around the world. Some of the money was also invested with a foreign agent of a Las Vegas casino, who kept the money in a safety deposit box in the head office of a major Tokyo bank. Against the security of this money, the boss played frequently at Las Vegas casinos as a VIP player. Although he gambled in the VIP room, he would never place big bets and, after minimal play, would frequently cash in his chips for US currency. His associated were also circulated through a number of Las Vegas casinos cashing in chips worth USD 2 000 or less.

Indicators of ML using casino accounts:

- Frequent deposits of cash, cheques, bank cheques, wire transfers into casino account.
- Funds withdrawn from account shortly after being deposited.
- Significant account activity within a short period of time.
- Account activity with little or no gambling activity.
- Casino account transactions conducted by persons other than the account holder.
- Funds credited into account from country of concern.
- Large amounts of cash deposited from unexplained sources.
- Associations with multiple accounts under multiple names.
- Transfer of funds from/to a foreign casino/bank account.
- Transfer of funds into third party accounts.
- Funds transferred from casino account to a charity fund.
- Multiple individuals transferring funds to a single beneficiary.
- Structuring of deposits / withdrawals or wire transfers.
- Using third parties to undertake wire transfers and structuring of deposits.
- Use of an intermediary to make large cash deposits.

- Use of gatekeepers, e.g. accountants and lawyers to undertake transactions.
- Use of multiple names to conduct similar activity.
- Use of casino account as a savings account.
- Activity is inconsistent with the customer's profile.
- Unexplained income inconsistent with financial situation.
- Transfers with no apparent business or lawful purpose.
- Transfer of company accounts to casino accounts.
- Use of false and stolen identities to open and operate casino accounts.
- Customer name and name of account do not match.
- U-turn transactions occurring with funds being transferred out of country and then portions of those funds being returned.
- Customer due diligence challenges, *e.g.* refusal, false documents, one-off/tourist or passing trade.
- Requests for casino accounts from Politically Exposed Persons (PEPs).

Winnings

126. ***Use of illicit funds to gamble*** – this is the simplest method of gambling illicit funds in the home hopes of generating certifiable winnings. One way to do this is to play gaming machines or other games with low payout higher win/loss ratios. The money launderer will then receive a casino cheque for the total amount of credits remaining on the machine plus the jackpot.

127. Some jurisdictions require casinos to endorse the casino cheques from jackpots as 'winnings' in order to differentiate it from a cheque generated as a result of cashing out large amounts of machine credits.

128. ***Buying winnings from legitimate customers*** - is another method used across the gaming sector. Money launderers will approach customers and offer them cash at a premium above their winnings. This was evident with customers who had won gaming machine jackpots, or accumulated a large amount in casino chips from winnings on table games, or customers that had won in other forms of betting offered by some casinos, such as electronic lotteries, horse racing and sports betting.

129. ***Parallel Even money betting*** – In cases where gambling is undertaken to launder funds, it is usually on low odds, low risk games such as the even money options on roulette. This would involve two or more persons placing opposite equivalent bets on even money wagers in the same game. As an example Person A places USD 1 400 on red, while Person B places USD 1 400 on black in a game of roulette. The bet is 'double or nothing'. In this case the winning party would win just under USD 3 000 which could be paid out with a 'winnings' cheque and the size of the win would not trigger CDD requirements at the roulette table.

130. ***Betting against associates / intentional losses*** – This is also the case in games where which provide money launderers the option to bet against an associate so that in most cases one party will win. These 'intentional losses' where money launderers are intentionally losing to one of the party, who is able to receive a casino issued cheque or wire transfer of 'legitimate' winnings.

Case 16. Overseas nationals purchase winning jackpots with illegal proceeds

Offence:	Drug trafficking & money laundering
Jurisdiction:	Spain
Technique:	Buying winning lottery tickets
Mechanism:	Lotteries
Instrument:	Winning jackpots, cash

Investigations in Spain related, mainly with drug trafficking, corruption and tax fraud identified the use of gaming to launder funds. The technique consisted of buying winning lottery tickets from legitimate gamblers.

Case 17. Overseas nationals purchase winning jackpots with illegal proceeds

Offence:	Money Laundering
Jurisdiction:	Australia
Technique:	Buying winning jackpots
Mechanism:	Gambling clubs
Instrument:	Winning jackpots, casino cheques

A group of overseas nationals were identified buying winning jackpots from other persons at various clubs in Sydney, Australia. The suspects deposited approximately AUD 1.7 million in winning cheques within a year, immediately withdrawing money in cash afterwards. The source of the funds used to buy winning jackpots was suspected to be from illegal means.

Indicators of ML using winnings:

- Frequent claims for winning jackpots.
- Frequent deposits of winning gambling cheques followed by immediate withdrawal of funds in cash.
- Customers watching/hanging around jackpots sites but not participating in gambling.
- Multiple chip cash outs on the same day.
- Customers claiming gaming machine credits/payouts with no jackpot.
- Customers claiming a high level of gaming machine payouts.
- Purchasing and cashing out casino chips with no gaming activity.
- Requests for winnings in separate cash or chip amounts under reporting threshold.
- Frequent 'cash out' transactions without corresponding 'buy in' transactions.
- Cashing in winnings in a multiple combination of chips, cheque and cash.

Currency exchange

131. Given the popularity of casino-based tourism and the willingness of customers to travel to legal casino sectors, most casinos offer currency exchange services.

132. ***Conversion of large sums of foreign currency*** – launderers may use large, one-off, or frequent foreign currency exchanges or deposits of a foreign currency. This may not appear suspicious in jurisdictions with high numbers of foreign players.

133. Reported cases indicate that criminals involved in the distribution and supply illegal drugs are using casino currency exchange services to convert their criminal proceeds from one currency to another, in order to alter its original form.

134. Individuals and groups will also employ structuring methods to undertake currency exchanges without triggering threshold reports. They will use multiple casino locations and once the currencies are exchanged, will meet again to assemble the total amount.

135. ***Casino play is undertaken in foreign currency*** – in some poorly regulated jurisdiction, customers are able to purchase chips directly in a foreign currency (for example in Nepal with USD and Indian Rupees).

Case 18. Overseas nationals purchase winning jackpots with illegal proceeds

Offence:	Money Laundering
Jurisdiction:	Spain
Technique:	Currency conversion
Mechanism:	Casino
Instrument:	Cash – various currencies

A group of foreign people entered separately in a casino to buy casino chips using Swiss Francs (CHF). The purpose of the syndicate was not to play in the casino, but to redeem the chips in Euros. The casino detected the operations, stopped the transactions and filed an STR.

Indicators of ML using currency exchange:

- Bank drafts/cheques cashed in for foreign currency, *e.g.* Euros, USD.
- Multiple currency exchanges.
- Dramatic or rapid increases in size and frequency of currency exchange transactions for regular account holders.
- Currency exchange for no reasonable purpose.
- Currency exchanges with low denomination bills for high denomination bills.
- Currency exchanges carried out by third parties.
- Large, one-off, or frequent currency exchanges for customers not known to the casino.
- Requests for casino cheques from foreign currency.
- Currency exchanges with little or no gambling activity.

- Structured currency exchanges.

Employee complicity

136. Employee complicity is another method in which third parties are used to facilitate money laundering. Individual employees or organised groups comprising of staff from different departments conspire with customers to enable money laundering transactions to go undetected. Methods include:

- Failing to file suspicious transaction reports or threshold transaction reports.
- Destroying documents/transactions reports related to due diligence or reporting processes.
- Falsifying player ratings and other gambling records to justify the accumulation of casino chips/gaming machine credits.

137. Some jurisdictions have raised vulnerabilities from providers of gaming equipment and machines as well as contractors that supply goods with a potential to impact on the integrity of the operation. Major contracts can be an avenue for criminal exploitation of the operation (*e.g.* through corrupt purchasing and under supply of contract goods). Criminals will try to exploit gaming equipment and associated computer systems to achieve theft and money laundering in the casino.

Case 19. Suspected falsified player ratings

Offence:	Money laundering
Jurisdiction:	Australia
Technique:	Falsifying player ratings to legitimise criminal proceeds
Mechanism:	Casino
Instrument:	Cash

An ex-employee of one casino was investigated by Australian authorities after he was able to purchase a house for cash. The family of this person is alleged to be involved in illegal drug activity and it was suspected that the funds used to purchase the house were provided by his family. The person, however, was able to show 'player ratings' from a second casino to show how he had turned NZD 20 000 into over NZD 400 000 in two weeks. It is suspected that an accomplice at the second casino falsified these 'player ratings', but this was not able to be proven.

Case 20. Back door corruption

Offence:	Money laundering
Jurisdiction:	United States (Indian casino)
Technique:	Casino staff bribed to facilitate money laundering
Mechanism:	Casino
Instrument:	Cash, jackpots

In Florida drug proceeds were laundered through gaming machines. Some gaming machines are controlled by software that have certain override features, or 'back doors' that give key casino staff the ability to force jackpot payouts. In Florida drug dealers bribed casino staff who accessed the override features and rigged a number of machines for the drug dealers to play and win jackpots from their drug proceeds.

Indicators of employee complicity:

- Contact between patrons and casino staff outside of the casino.
- Supposed winnings do not correspond with recorded winnings.

- Dramatic or rapid increases in size and frequency of currency transactions for regular account holders.
- Large sums of cash from unexplained sources.
- Large sums credited into accounts from other jurisdictions or countries of concern.[20]
- Associations with multiple accounts under multiple names.
- Transactions on casino accounts conducted by persons other than the account holder.
- Deposits into casino account using multiple methods.
- Cheques issued to a family member of the person.
- Multiple individuals sending funds to a single beneficiary.
- Third party presents for all transactions but does not participate in the actual transaction.
- Transferring funds into third party accounts.
- Use or third parties to undertake wire transfers.
- Use of an intermediary to make large cash deposits.
- Use of gatekeepers, *e.g.* accountants and lawyers to undertake transactions
- U-turn transactions occurring with funds being transferred out of a country and then portions of those funds being returned.
- Use of remittance agents to move funds across borders.
- Use of third parties to purchase gaming chips.
- Use of third party to conduct wagering.
- Wire transfers from third parties in tax haven countries.
- Junket tours where funds can be concealed amongst the pool for the group.
- Cash handed to third party after cash out.

Credit cards / debit cards

138. ***Laundering proceeds from stolen credit cards*** – Casinos in some jurisdictions allow customers to purchase casino chips using credit cards. In cases where the cards are not stolen or fraudulently obtained, the outstanding credit card balances are paid by the card holder at the bank using the illicit funds.

20. TBD.

139. ***Credit cards*** – criminals use of credit cards provides an opportunity for authorities to follow the money trail more readily.

Case 21. Debit card scheme

Offence:	Fraud, money laundering
Jurisdiction:	Belgium
Technique:	Use of credit cards to conduct money laundering transactions
Mechanism:	Casino
Instrument:	Credit cards, casino chips.

A person residing in Belgium, originally from Eastern Europe, visited a casino on the Belgian coast on two occasions and bought gaming chips for a total value of EUR 400 000 paid for in cash and with credit cards. The casino reported these transactions to the FIU.

Based on the history of gambler's purchases using credit cards it was determined that his account had been extremely active: it had been inundated with various transfers from companies and, in particular, with many cash deposits. The spouse of the party concerned ran a business in Belgium and maintained underworld links with organised crime from Central and Eastern Europe. The party concerned received citizens from those countries at his personal address and that financial transactions were carried out in cash. The gambler was in frequent contact with a person who was being investigated for the laundering of money deriving from organised crime.

140. ***Debit cards*** – are another value instrument used to conduct fraud and money laundering crimes. In the case below, criminals would join a casino and use their debit card to draw up to the casino's maximum standard daily limit and purchase casino chips. The subjects either do not put any funds at risk or there would be minimal play. The subjects would then typically cash out. In similar cases, plaques would be passed to an associate for play. Sometimes all the funds would be put at risk. The major operators quickly identified this trend and put risk control mechanisms in place to limit the initial debit card transaction to a much lower limit for first time transactions in high risk situations.

Case 22. Debit card scheme

Offence:	Fraud, money laundering
Jurisdiction:	United Kingdom
Technique:	Use of debit cards to conduct money laundering transactions
Mechanism:	Casino
Instrument:	Casino plaques

An existing member of a casino introduced a number of people over a period of time. Suspicious was raised as the new members were completing debit card transactions to the maximum limit and receiving gaming plaques in exchange, which in turn were passed to the existing member. Most of the new members never returned to the casino after the initial visit. The nationalities of the new members varied widely, but all are believed to have recently arrived from foreign jurisdictions. The transactions varied from GBP 1 000 to 7 000. Some money was put at risk and lost by the existing main member.

Indicators of ML using credit/debit cards:

- Purchasing casino chips using credit card.
- Purchasing casino chips using debit card.
- Purchasing and cashing out casino chips/plaques with no gaming activity.
- Customer purchases chips and leaves casino shortly after.
- Use of stolen or fraudulently obtained credit card.

- Use of multiple credit/debit cards to purchase casino chips.
- Use of third parties to purchase chips using credit/debit card.
- Structuring of credit card transactions.
- Conducting debit card transactions up to the maximum limit.
- Chip cash out is same/similar to chip purchase.
- Customer due diligence challenges, *e.g.* refusals, false documents, one-offs, tourists passing trade.

False documents

141. As with financial institutions, money launderers use false documentation to disguise the origin of criminal proceeds and to protect the identity of those laundering the proceeds.

142. ***False identification documents*** – often used to conduct financial transactions at the casino, open casino accounts, undertake gambling transactions and redeem winnings.

Case 23. Money launderer uses third parties and false identities to launder drug proceeds

Offence:	Money laundering, identity fraud
Jurisdiction:	United States
Technique:	Use of 3rd parties and false identities to structure gambling transactions
Mechanism:	Casino
Instrument:	Cash, casino chips

A Person of Interest (POI) of a drug trafficking organisation, utilising both the money he was paid for his services and the large sums of money put into his possession to be laundered, elevated his previously modest gambling practices to that of a high-roller. The person would recruit third parties at the casino to purchase, or cash in, chips for him, paying them a nominal fee to do so. After gambling, he would cash some of these third-party purchased chips back out again, claiming they were his gambling winnings. According to the CTRs a USD 313 000 discrepancy was found to exist between chip purchases and cash out. Twenty-four of the CTRCs recording his activities revealed the use of aliases and multiple social security numbers. On numerous other CTRCs he had refused to provide a social security number.

Indicators of ML using false documents and counterfeit currency:

- Associations with multiple accounts under multiple names.
- Purchasing chips or undertaking cash transaction and immediately leaves casino.
- Transferring funds into third party accounts.
- Use of multiple names to conduct similar activity.
- Use of altered/fraudulent or stolen identification to conceal identity.
- Customer due diligence challenges, *e.g.* refusal, false documents, one-off/tourist or passing trade.

- Inconsistent identity information presented.
- Refusal to provide identification / false identification or Social Security numbers.
- Using false or multiple Social Security numbers.
- Refusing to provide required identification.

CHAPTER 3 – SECTOR VULNERABILITIES AND EMERGING ISSUES

Introduction

143. This chapter identifies some of the sector vulnerabilities and emerging issues within the global casino sector, as reported by members of the FATF, APG and other FATF-style regional bodies (FSRBs).

Casino-based Tourism – "Junkets"

144. Casino junkets or casino-based gaming tours are derived from casino marketing programs. A junket is an organised gaming tour for people who travel to the casino primarily to gamble. The junket may include transport, accommodation, incentives to play at the casino and the movement of funds to and from the casino.

145. Casino junkets may be part of the casino's in-house marketing operation or may be run by independent operators who have a contract with the casino. In jurisdictions where the role of junkets is limited, they may still operate in travel agent roles with an added service of moving funds to the jurisdiction. In such cases, junkets may have no direct connection to the casino, but just bring the players and their funds to the front door of the casino. Junket agents are persons or companies who have a role to sign up casino patrons to take part in junkets. Junket representatives work to organise the junket.

146. In house marketing by casinos may include representative offices of the casino being located in foreign jurisdictions in order to organise junket gaming tours to the casino jurisdiction.

147. Junkets appear to be common in casino jurisdictions in the Americas, Caribbean and Asia, but are less common in European casinos. The extent of junket operations in casinos in Africa, the Middle East and Central Asia is unclear.

Regional junket patterns

148. A number of casino sectors in the Asia/Pacific region have a sizable junket industry to attract gambling tourists to their sector. As at 28 January 2009 Macao, China has 153 licensed junket operators, made up of 107 companies and 46 individuals. The patterns of casino-based tourism in the Asia Pacific region vary but source jurisdictions include China, India, Hong Kong, Japan, Chinese Taipei, Thailand, Australia, New Zealand and the United States.

149. Junkets do not operate in Canada and it is reported that junkets do not operate in much of Europe, although Malta reported EUR 28 million in revenues from junkets operations in 2006 and Austria reports that there is only small-scale activity in the sector, due to tight regulations applicable to casino customers. While casino-linked junkets are not a feature of some casino sectors in Europe, it is likely that junkets are a relatively recent development for this region and authorities may not yet recognise junket-type operations or the level of risk they present.

Features of Junkets

150. Junket operators provide incentives for patrons to play at a particular casino. As part of this, the junket provider may organise all aspects of a player's tour to the casino, including the movement of funds to be played in the casino. Junkets generally target the high net worth clients. In some jurisdictions, junket operators and their agents have a role in conducting CDD on junket patrons.

151. In house marketing by casinos may include representative offices of the casino being located in foreign jurisdictions in order to organise gaming tours to the casino jurisdiction. In such cases, players can organise all aspects of their visit to the casino, including depositing funds into their casino account. An example is Wynn Resorts, which has casinos in Las Vegas and Macau and has marketing executives located in local offices in, Tokyo, Hong Kong, Singapore, Taipei and Vancouver. Other large-scale casinos operate similar networks of offices.

152. Junket representatives / agents serve as an agent between casino marketing departments and proven premium players. VIP junkets do not tend to be advertised. Region specific junkets often do not deal with the general public, but rely on introductions from intermediaries. Junket representatives / agents rely on commissions or fees to support their business. These commissions vary, but may include:

- A percentage of front money.
- A commission on 'dead chips'.
- A commission on 'live chips'.
- A commission on players' losses.
- A percentage of the casino's theoretical win.

Vulnerabilities

Movement of people and money to casinos

153. A vulnerability of junket programmes is that they involve the movement of large amounts of money across borders and through multiple casinos by third parties. Junket participants generally rely on the junket operators to move their funds to and from the casino. This creates layers of obscurity around the source and ownership of the money and the identities of the players. This is made more difficult if the junket operator is complicit in any money laundering activity by the players, or is solicited by criminals to blend illicit funds with the pool of legitimate funds.

154. Foreign marketing offices/branches of casinos may accept deposits to a patron's casino account before they travel to the casino. The study of casino vulnerabilities could not identify cases where the foreign marketing offices of a casino were subject to local AML/CFT controls, despite their role in taking deposits to player accounts. In such cases there is, in effect, no cross border wire transfer to move the funds to the casino.

Case 24. Criminal control of junket operations

Offence:	money laundering
Jurisdiction:	Australia
Technique:	Use of a junket agent to move funds and purchase chips
Mechanism:	Casino agent

A gambler used gambling contacts and knowledge of high-stakes gambling to become a registered and successful junket operator, bringing millions of dollars of revenue to a casino. All of the money gambled by the junket went through the operator's accounts in order to calculate commission from the group's turnover. This way the casino bypassed the necessity for identifying the source and beneficial owner of the funds. It was not until the junket operator began stealing from her customer's winnings that this situation came to the attention of the authorities.

155. Junket operators may use wire transfers to move funds on behalf of clients. The identity of the junket patrons may be unknown to the sending and receiving financial institution or the receiving casino.

Regulation of Junkets

156. Relatively few casino jurisdictions regulate junkets. While the US has a long history of regulating junkets, as an example Macao, China has only recently taken steps towards clear regulation of junkets and their representatives.

157. In the US, a number of states require registration of junket representatives. As an example, the State Gaming Control Board of Nevada requires a fingerprint check and detailed information including military record and criminal arrests. Macao, China requires licensing and registration as well as fit and proper tests of junket operators, as does Australia. Very few gaming jurisdictions have controls on whether or not junket operators are permitted to extended credit to the players taking part in the junket.

158. In cases where junket operators are strongly regulated, jurisdictions require junket operators to be vetted, licensed and operate according to regulations; some with specific AML/CFT controls that compel junket operators to report suspicious transactions by its players. In addition some legal frameworks place the responsibility for junket activities on the casino operator, with their license at risk if players' funds are found to be unlawful. Strong regimes oblige the casino operators to report any suspicion that a junket promoter may be involved in illegal activity.

159. Some casinos and junket providers operate in a number of jurisdictions and offer services from the same casino group in a number of jurisdictions. It is not clear what obligations are placed on junket operators or casinos when they operate in a number of jurisdictions. In relation to junkets offered by independent operators and by casinos, there are a number of issues with foreign branches or subsidiaries of casinos operating in another jurisdiction to the one where the casino is located.

160. Such issues vary from jurisdiction to jurisdiction, but include the following:

- Over-reliance on junket operators, especially in markets with resident populations that are too small to normally support casinos can pose a heightened money laundering risk. In these instances, casinos can become overly dependent on junket operators for business, a potential misuse of these services.
- In some jurisdictions, a casino may enter into a contractual agreement with a junket operator to rent a private room within a casino and in some situations, it is the junket operator, not the casino, which monitors player activity and issues and collects credit.

- Junket operators that provide premium players may exert commercial pressures on casinos, which may result in reducing scrutiny of individual spending patterns, or unduly influence or exercise control over licensed casino operations.
- Junket operators may engage in lending or the facilitation of lending to players outside casinos' knowledge.
- In some jurisdictions, junket operators are allowed to 'pool' and therefore obscure the spending of individual customers, thus preventing casinos from making any assessment of customers' spending patterns.
- In certain jurisdictions, licensed junket operators act as fronts for junket operators in another country. The front operators supply players to a casino through a casino's licensed junket companies which may not qualify for licensure in the country where the players will be gambling. Such unlicensed sub-junket operators can act as unlicensed collectors of credit and may have ties to organized crime networks.

161. All the above issues pose serious risks, and can lead a casino to engage in informal arrangements with junket operators that are inconsistent with risk-based AML/CFT policies, procedures and internal controls as well as hinder authorities' ability to recognize the level of risk that certain operators pose.

Junkets use of alternative remittance

162. In some jurisdictions junket operators may use formal or informal systems to remit money. The nature of junket business assists them to facilitate informal alternative remittance. The Junket operators may have agents in a number of jurisdictions. Junkets / casino agents may utilise their branch offices in foreign jurisdictions to organise movement of funds to the casino jurisdiction. It is not clear if these agents are responsible to their home jurisdiction for reporting STRs on junket patrons.

Case 25. Cash smuggling and underground remittance

Offence:	Cash smuggling, money laundering
Jurisdiction:	Macao, China
Technique:	Use of an casino agent to move funds and purchase chips, structuring
Mechanism:	Casino, casino agent, remittance arrangements
Instrument:	Cash, cashier's order

A casino agent received large amounts of cash in PR China from a mainland customer who wanted to gamble at a Macao, China casino. The agent took the cash to a shop at Zhuhai, which is adjacent to Macao, China. The shop divided the sum into small lots, which would be carried to Macao, China by many 'professional commuters'. Another agent collected these lots and handed them to the casino agent by depositing the monies into his account in the form of cash, cheque, bank transfer and remittance. When the full sum was received, the casino agent converted it into a cashier's order for receipt by the VIP room of the casino. The VIP room then issued non-negotiable chips to the mainland customer who could start gambling. When the customer won from the table, the gain in cash is given to the casino agent who would remit the funds back to China via underground banks.

Case 26. Use of junket promoter and casino VIP room to move cash between countries

Offence:	Money laundering
Jurisdiction:	Macao, China
Technique:	Use of third parties to move illicit funds
Mechanism:	Casino, junket operators
Instrument:	Cash

A merchant in country A could not perform a large remittance to country B due to its foreign exchange control. With the help of a junket promoter, he transferred the monies to the VIP room of a local casino, which informed

an underground remitter in country B about the amount and beneficiary of the funds. The remitter would then arrange payment of the fund to the beneficiary. For country B citizens who wished to gamble in this casino of country A, but had difficulty in bringing in the cash, they would arrange alternative remittance through this remitter who would then inform details of these customers to the VIP room. When these citizens arrived at the VIP room they could immediately obtain the amount required for gambling. Both the VIP room and the remitter would perform reconciliation for net settlement, and basically no transfer of monies between two sides was required.

Case 27. Junket promoter use of underground banking

Jurisdiction:	South Korea
Technique:	Alternative remittance
Mechanism:	trade-based settlement mechanism

A casino in Las Vegas, 'A' operated a marketing team entirely responsible for Korean customers. This team lent gambling money to Koreans in form of card (coupon) not cash so that the loan would be spent only for the purpose of gambling at 'A'. The members of this team visited Korea to collect debts or made their relatives in Korea do so on behalf of them.

The collected money was paid to trading companies in Korea for the goods that these companies sold to importing companies in the United States. And the importing companies paid the amount to 'A'.

Junket incentives – 'Dead chips'

163. Casinos in some regions offer junket agents a commission on non-negotiable, or "dead", chips. The use of dead chips requires the junket operator to account for their use. These 'dead chips' cannot be redeemed for cash from the casino, but are only negotiable with the junket promoter. In general, dead chips can be wagered only in the game of baccarat.

164. Players purchase large amounts of these chips from the junket operator at a discounted price based on an operator's terms. They cannot redeem the chips for cash or for live chips but must play the chips until they lose them or win replacement live chips. The live chips can be redeemed for cash with the casino. At the conclusion of gambling, 'dead chips' can be redeemed with the junket operator. A junket operator requires players periodically to roll their "live chips" into "non-negotiable" dead chips so that an operator can receive a commission from a casino based on the total value of the dead chips. Because 'dead chips' are offered at a premium to junket patrons, there is an incentive for players to purchase additional 'dead' chips and players receive live chips in exchange as well rebates equal to the product of the agreed-upon rebate percentage and total dead chips purchased.

165. ***'Dead chips' being used by criminals as currency*** – jurisdictions report 'dead chips' being used in drug deals and to settle other criminal transactions.

166. ***'Dead chips' being smuggled out of a jurisdiction*** – such chips are a safe way for criminals to move value as they are difficult for customs agencies to detect in cross border movements.

Case 28. 'Dead chips' associated with loan sharks

Offence:	money laundering, criminal coercion
Jurisdiction:	Hong Kong; China; Macao, China
Technique:	Use of 'dead chips'
Mechanism:	Junket 'dead' chips

Dealing in junket chips (colloquially known as 'mud-chips') is closely connected to other forms of criminality, and it is particularly ripe for exploitation by loan sharks often with a triad element, who are attracted by lucrative profits and the ease of finding potential borrowers amongst gamblers, with loans being offered in the form of 'mud-chips'.

In Hong Kong, China for example, stooge or nominee corporate accounts are often used for settlement purposes

by loan shark syndicates operating offshore. A common scenario involves victims being induced to gamble more than they can afford in the VIP rooms at offshore casinos by mud-chip (*dead chip*) syndicates, which often work with loan sharks. The victims are then escorted back to Hong Kong, China and held pending settlement. Family members are induced to make settlement by bank transfers, which are structured through a series of stooge accounts.

Case 29. Diversion of illicit funds to casino agents and junket operators

Offence:	Fraud, money laundering
Jurisdiction:	Hong Kong, China, China, United States
Technique:	Use of third parties to move illicit funds
Mechanism:	Casino agents, junket operators
Instrument:	Cash

In 2006, three provincial managers of a bank in another jurisdiction were indicted for embezzling in excess of USD 3.5 billion that was subsequently channelled through shell companies and personal and investment accounts in Hong Kong, China with the help of associates and intermediaries. Approximately HKD500 million was deposited with the representative agents and junket promoters of various South East Asian and North American casinos for the groups' personal use.

167. Indicators of money laundering through junket operations include:

- Players refusing to provide identification.
- Use of representatives/third parties to conduct cash buy-in.
- Junket chips redeemed without any gambling activity.
- Source of funds for buy-in not disclosed.
- Source of funds for buy-in from companies.
- Buy-in of junket chips by a person whose occupation is not commensurate with the buy-in value.
- Junket issuing cheques to rival casinos.
- Junket transferring funds to players with no verifiable proof of winnings.
- Player frequently requesting cheques from junket operator below threshold amounts.

Emerging Issue – Cruise Ship junkets

168. A growing number of independent casino junket representatives now offer junkets to cruise ships. These escorted cruise casino junkets tend to be on ships of the same lines and the packages offered by independent operators range from cruises that are entirely complimentary (with the exception of port charges and taxes) to packages offering reduced player rates. In most cases, players deposit a significant amount of money up front with the independent junket operator. Once aboard, the player can then draw this money for gambling in the cruise ship casino. Very few jurisdictions regulate junket operations linked to cruise ship gaming.

VIP Rooms and 'High-Roller' Customers

169. VIP customers or 'high rollers' are highly valued casino customers who gamble in private and exclusive rooms within the casino complex and are afforded special treatment by the casino. VIP rooms are closely tied to the junket business, and, like junkets, the vulnerability is with identifying the high rollers, and being able to know where their money is coming from and going to. A concern shared by many jurisdictions is that casino staff view very high cash use or large deposits and withdrawals by VIPs, and especially within VIP rooms, as 'normal'. In addition casinos offer VIP customers financial facilities akin to any banking institution, yet many jurisdictions do not have the level of AML controls over casinos as they do their banking industry. If there are no requirements to conduct CDD on VIPs, particularly those associated to junkets, and/or regulators and law enforcement cannot access membership information on operations and if required the money trail associated with their gambling, it poses a serious risk.

170. VIP customers represent high revenue streams for most casinos. A Canadian study in 2007 showed VIP customers are responsible for 80% of casino turnover in Canada, but only represented 1% of casino patrons. Macao, China also reports 50-70% of all casino revenue comes from VIP rooms.

171. In the past, under Macao, China's old monopoly system the VIP rooms catered to clients seeking anonymity and were shielded from official scrutiny. With the changes to the gaming industry in 2002 and passing of new AML/CFT laws in 2006, the casino industry has been placed under the AML/CFT regime with casinos (including gaming intermediaries and junket operators) having obligations to report STRs to the FIU in the main areas and VIP rooms – and with respect to all customers. Macao, China reports that supervisors and casinos are aware of the risk that VIP rooms could be associated with crimes, and have been tightening the control of junket activities. At the same time, all casinos do not cede control of their VIP gaming facilities to outside organisations, which impedes organised crime's ability to operate in the casino sector.

172. The following two cases illustrate the risks presented by VIP players:

- In Australia a high profile Asian organised crime figure became a member of the high rollers club at an Australian casino. The person was running a heroin trafficking network from suites in the casino's hotel and using his gambling activities to mask the illicit profits. He was a VIP player with an extremely high turnover. Over a two-year period he was given gambling incentives by the casino of more than AUD 2.5 million dollars and spent two years as a non-paying guest of the casino's hotel. It was not until he was investigated by law enforcement agency that the casino looked more closely at his gambling transactions.

- In the United States a foreign national travelled frequently to Las Vegas to gamble. He was well-known to a Las Vegas casino and had a gambling loss of approximately USD 1 million over a four year period. Over a subsequent three year period his losses increased to more than USD 125 million. On his behalf the casino conducted wire transfers and direct bank to bank transfers from corporate accounts. The casino on occasion would extend him USD 10 million line of credit and frequently offered him extravagant perks including use of hotel suites, cars, and the casino jet. There were no SARs filed by the casino and no verification of his source of funds was undertaken. Yet open source documents show the company owned by the person could not have generated income sufficient to sustain his gambling losses.

Corrupt or Inadequately Trained Staff

173. Effective AML/CFT controls require casinos (and support industries) to be free from corruption and influence and casino employees to be adequately trained to prevent and detect money laundering activity. However, high staff turnover is characteristic of many casino sectors, particularly in the regions that are poorly regulated for AML/CFT, AML training and experience being lost from the sector as a result. And the potential for corruption in a cash intensive industry, characterised by high employee turnover, is ever-present. Reported cases demonstrate that casino employees, either individually or acting in concert with others, intentionally do not file suspicious/threshold reports, destroy records and falsify documents to disguise money laundering activities. However, inadequate systems and poor employee training also account for large-scale money laundering in the casino sectors.

- In 2007 a number of casino employees were charged for their role in running an illegal gambling ring out of a casino, taking in USD 22 million in sports betting. The casino employees included poker room supervisors, dealers, and a bartender and their roles mostly involved not filing suspicious reports on transactions.

- A Las Vegas compliance officer was charged with failure to file approximately 15 000 CTRCs between 2001 and 2003. He stated that he did not file the reports because he was having personal problems, was behind in his work, and the importance of filing CTRCs was never explained to him.

- In 2006 a drug dealer admitted to distributing approximately 100 pounds of crystal methamphetamine between Las Vegas and Hawaii. In court, he admitted to gambling millions of dollars in cash through Las Vegas Casinos, mostly carried in to the casino in duffle bags. Law enforcement authorities were never notified of this activity.

- USD 207 million in cash was found in a home in Mexico. It is believed to be the proceeds of a drug kingpin who reportedly lost between USD80 – 120 million at Las Vegas Casinos. However, law enforcement authorities were unaware of this person until the cash seizure.

174. Most well-regulated jurisdictions require casino operators to certify an employee's competence to perform the functions authorised by their employment license. This can include reporting of suspicious and significant transactions to the FIU and reporting of illegal and undesirable activity by patrons. Some jurisdictions require regulators to approve the content of training courses run by the casino operator. Yet inadequate employee training, as demonstrated by the cases above, is a significant vulnerability within the casino sector, regardless it seems of the level of regulation imposed.

New Casino Markets

175. As discussed in Chapter 1, new and emerging casino markets are vulnerable to money laundering activities, particularly in the Asia/Pacific and African regions where casino sectors are being rapidly established in developing countries. Many of these jurisdictions have predominantly cash-based economies, poor governance and weak or limited AML/CFT capability. Often the growth of the casino industry will outpace the country's ability to put in place sufficient AML controls, as well as regulatory and enforcement capacity, leaving the sector vulnerable to corruption and money laundering by organised crime groups.

176. Macao, China is another area of vulnerability due to rapid market growth. Revenues in Macao, China started to surge in 2004 when new casinos opened after the 2002 decision to end the 40 year monopoly by the STDM. Now the majority of Macao, China's economy is linked to the casino industry. In less than 6 years, Macao, China has become the biggest casino market in the world. Prior to regulatory reforms in 2002, Macao, China's casino industry was under-regulated, despite the presence of high cash transactions and lucrative junket and VIP room contracts. Since 2002, Macao, China has sought to reform its legal regulatory framework for AML/CFT in the casino sector, however, like many jurisdictions, effective implementation of FATF standards remains a challenge.

177. Like all jurisdictions, Macao, China continues to face threats from organised crime. Whilst AML/CFT implementation in the casino sector is occurring, the scale and speed of growth experienced in the market may result in even greater vulnerabilities for ML.

178. The United States has noted that the rapid growth of new casino markets can provide money laundering opportunities. A US threat assessment in 2005 considered the most notable development in this field is the striking growth of Native American casinos, which have enjoyed double-digit revenue growth for the last ten years, collectively taking in USD 25.7 billion in revenue in 2006, more than twice the amount generated by Nevada casinos.[21]

179. A challenge to establishing effective AML/CFT controls for tribal casinos is coordinating the various regulatory bodies. Tribal gaming is regulated on three levels:

a) Indian Nations (Tribal Government – Gaming Regulatory Commissions).

b) State Gaming Agencies.

c) The National Indian Gaming Commission and federal government agencies, including the U.S. Justice Department, the U.S. Treasury Department and the Department of the Interior.

180. The growth of the Indian gaming market, coupled with overlapping regulatory jurisdictions and limited enforcement resources, has generated concern over the potential for large-scale criminal activity in the Indian gaming industry.

High Seas Gambling

181. High seas gambling (also called boat gambling or floating casinos) involves gaming vessels that travel to international waters to conduct gaming/casino activities. These may be long-distance cruises that have gaming/casinos as side entertainment, or short distance trips that are directed solely at gaming.

182. The phenomenon of gambling in international waters is an issue for all countries with cruise ships registered or operating within their jurisdiction. While many countries prohibit casinos on ships from operating in territorial waters, cruise ship gambling in international waters is not well regulated.

183. Few jurisdictions have regulatory oversight over cruise ship casinos registered to their jurisdiction and fewer have AML/CFT controls over cruise ship casinos. Since cruise ship casinos, with only minor exceptions, are allowed to operate only when in international waters the casinos are largely unregulated. Some steps have been taken within the cruise line sector to self regulate (see

---

21 Associated Press., "Tribal casino revenue up 5 percent nationwide", June 19 2008, http://blog.mlive.com/kzgazette/2008/06/tribal_casino_revenue_up_5_per.html

guidelines published in 1999 by the International Council of Cruise Lines (ICCL).)[22] It is unknown what general record-keeping or due diligence processes, if any, are carried out by cruise lines or if they report suspicious activities to appropriate authorities.

184. Little is known about the level of risk presented by gambling that is undertaken in international waters. For example, it is unknown what methods are used to transfer funds to and from the cruise ship and any associated money laundering risks.

185. Regulatory control over 'High seas gambling' raises complex questions of international law. If AML/CFT laws were to apply, which jurisdictions would have oversight; the jurisdiction from which the ship is operating from, or the jurisdiction where the vessel is registered?

186. Some jurisdictions impose tax and AML regulations on cruise ship lines, such as the United States. Ships registered in the US are subject to income tax and money laundering legislations, meaning that US citizens and permanent residents must declare any income from cruise-ship gambling with Customs on returning to the US and through yearly tax returns. The cruise line is also required to file tax notices for jackpots of over USD 1200However, there is some question as to whether all US registered ships comply with these requirements, and it is unknown the nature or level of oversight by US authorities.

187. High seas gambling is an issue for many jurisdictions, for example Hong Kong, China, where a number of cruise ships or large luxury vessels, operate from their harbours, with the sole or primary purpose of providing casino gaming in international waters. These vessels sail under foreign flags, so port jurisdictions have difficulty in imposing AML/CFT controls on these "foreign" vessels due to the limitation of extra-territorial jurisdiction.

Case 30. High Seas casinos used to launder proceeds of fraud

Offence:	Money laundering
Jurisdiction:	Hong Kong, China; Australia
Mechanism:	High-seas casino; bank accounts,
Instrument:	Casino

In 2005 five Australian citizens defrauded a superannuation scheme of AUD 150 million. Two of the five men flew to Hong Kong, China and boarded a cruise ship, drawing on the illicit funds while gambling at the ship's casino. After losing approximately AUD 3 million, they cashed in their casino chips and had the remaining funds sent to their personal accounts in Hong Kong, China.

188. The case above highlights how 'high seas gambling' poses a money laundering risk to port jurisdictions. The lack of supervision of casinos operating in international waters leaves port jurisdictions exposed to casino-related money laundering risks.

189. It should be noted that the FATF and a number of FSRBs, including the APG, consider AML/CFT controls on cruise ship casinos in the context of a country's ME evaluation if this activity presents a risk of money laundering.

190. Jurisdictions have raised the challenges faced by the issue of extra-territorial jurisdiction over gambling activities beyond flag-flying vessels, as per the current status of international law. There appears to be a need for further consideration of the issue and possible multilateral solutions.

22 Further information can be found at http://www.cruising.org/industry/tech-intro.cfm

Terrorist Financing

191. Throughout this report, the term money laundering has also referred to terrorist financing. It should be pointed out that the research undertaken failed to find any reported cases of terrorist financing in the casino sector. This may be due to the characteristics of terrorist financing that make it difficult to detect, characteristics such as the relatively low value of transactions involved in terrorist financing, or the fact that funds can be derived from legitimate as well as illicit sources.

192. It would be a mistake, however, to assume that terrorist financing has not and could not occur in the casino sector. Where funds are derived from criminal activity, then traditional monitoring mechanisms that are used to identify money laundering may also be appropriate for terrorist financing and includes the methods and indicators described in Chapter 2, though these indicators would only support suspicious activity, and may not be identified as or connected to terrorist financing once further investigation is undertaken.

193. It should be noted that transactions associated with the financing of terrorism may be conducted in very small amounts, which may not be the type of transactions that are reflected in the indicators for money laundering. Where funds are from legal sources, it is even more difficult to determine if they could be used for terrorist purposes. Therefore, while terrorist funds may be derived from criminal activity as well as from legitimate sources, transactions related to terrorist financing may not exhibit the same traits as conventional money laundering.

194. The ability of casinos to detect and identify potential terrorist financing transactions without guidance on terrorist financing typologies or unless acting on specific intelligence provided by the authorities is significantly more challenging than is the case for potential money laundering and other suspicious activity.

195. Detection efforts, absent specific national guidance and typologies, are likely to be based on monitoring that focuses on transactions with countries or geographic areas where terrorists are known to operate or on the other limited typologies available (many of which are indicative of the same techniques as are used for money laundering). Particular individuals, organisations or countries may be the subject of terrorist financing sanctions, in a particular country. In such cases a listing of individuals, organisations or countries to which sanctions apply and the obligations on casinos to comply with those sanctions are decided by individual countries.

CHAPTER 4 - POLICY IMPLICATIONS

196. A number of issues and policy implications have been identified by the APG/FATF casinos project. Many of these relate to implementation issues with the current FATF standards.

Online gaming / online casinos

197. While this study has not included online gaming / online casinos in its scope of enquiry, it is clear that there are a number of related risks and vulnerabilities from online casinos. A number of jurisdictions license physical casinos and online casinos under a similar process. This report notes a significant gap with understanding regional money laundering risks and vulnerabilities from online casinos and online gaming. There is a need for further study in this area and for sharing case studies and regulatory models.

Lack of AML/CFT coverage for casino sectors

198. A number of jurisdictions clearly lack awareness of money laundering and terrorist financing risks in the casino and gaming sectors.

199. A significant number of jurisdictions have limited regulatory controls, including 'fit and proper' tests for casino owners, managers and staff, internal controls, etc. A greater number of casinos sectors are not yet subject to any AML/CFT controls, in particular in developing countries. Very few jurisdictions regulate junket operators.

200. ***Vetting, licensing and training relevant employees*** – jurisdictions raised the need to ensure that staff with a potential to impact on the integrity of the casino operation should be vetted and appropriately trained in AML/CFT. There are significant gaps in coverage of staff in some gaming jurisdictions.

201. ***Internal controls*** – Most jurisdictions require casinos to have a documented set of internal controls over almost all aspects of casino operations. Some require the regulator to approve these whilst others require the documented controls to meet a set of specified standards.

Lack of regulatory tools

202. Law enforcement agencies and regulators report the need for and implementation of suitable tools that carry effective, proportionate and dissuasive sanctions to use in the regulation of casinos, which are wilfully negligent in AML. Results of Mutual Evaluations indicate a lack of effective regulatory tools for casinos across members of the FATF and FSRBs.

203. There is a need for further guidance and sharing of best practice models for AML/CFT regulation, supervision and monitoring of the casino and gaming sectors.

Implementation of CDD measures

204. Many jurisdictions have struggled to implement CDD measures in casinos in keeping with the international standards. A number of jurisdictions have not followed the thresholds outlined in the FATF standards (for example opting for a USD 10 000 threshold for CDD).

205. A number of jurisdictions are relying on customers being issued with a casino membership cards for which CDD information is collected at the start of the relationship. Customers are then only required to present the card to identify themselves when transacting over the threshold of USD/EUR 3 000.

206. A number of jurisdictions have noted challenges with determining a suitable timeframe for determining whether transactions are linked for the purposes of determining whether the USD 3 000 is met. Cases have illustrated criminals' awareness of change of shifts with casino staff to seek to avoid reporting requirements.

207. A key issue is that in general casinos are not doing enough to establish source of funds and failing to recognise suspicious activity by their customers. Casino security and marketing systems tend to pay particular attention to customer's financial transactions and gambling behaviours, but mostly in terms of patterns of winning and opportunities to encourage greater participation. There is a need for greater vigilance of patterns of transactions and play, unusual transactions and possible indicators of suspicious transactions.

208. There is a need for jurisdictions to share more case examples of money laundering cases and experience of ways in which effective AML/CFT preventative measures have contributed to detecting and prosecuting cases of money laundering.

Application of AML/CFT controls to casino foreign branches, offices or subsidiaries

209. A number of casino operations are owned or controlled in a jurisdiction other than the one in which the casino is established. It is not clear what AML/CFT obligations are placed on junket when they operate in another jurisdiction. There is an issue in a number of jurisdictions of equivalent AML/CFT controls not being implemented by branch or subsidiary casinos. There is a need for further international guidance and best practice experience with regulating branches and subsidiaries.

Application of AML/CFT controls to casino foreign holding accounts

210. It is not clear what AML/CFT controls are in place over accounts operated in a jurisdiction foreign to the location of the casino. Large casinos may operate marketing offices in jurisdictions other than where the casino is located. Patrons are able to pay in funds to their casino account to be played when they travel to the casino without sending a cross-border wire transfer.

Control of junket operators and their agents

211. A number of jurisdictions that allow junket play do not require registration/licensing and regulation of junket organisers and their agents. The vulnerabilities identified in the previous section raises concerns about the need to ensure that junkets and their agents are not under criminal control/influence and to ensure that financial transactions are transparent and subject to relevant AML/CFT measures.

212. The international standards do not clearly address junket operations, but their role as intermediaries or third parties is a significant concern in many jurisdictions.

213. ***Issues with foreign branches or subsidiaries of junkets*** – as outlined above, a number of junket providers operating in a number of jurisdictions and offer services from the same casino group in a number of jurisdictions. It is not clear what obligations are placed on junket operators when they operate in another jurisdiction.

Regulatory controls over VIP rooms and related facilities

214. There are significant issues with implementation of CDD controls over VIP rooms. In some jurisdictions there are not clear powers for the regulator, FIU or law enforcement to have access and to share information regarding members of casino VIP programs.

215. In some cases VIP gaming rooms are leased to junket operators, who provide the gaming equipment, staff and funds to play in the room. This may be done outside of the CDD and other internal controls of the casino.

216. VIP rooms may offer safety deposit boxes and other facilities that are not subject to AML/CFT controls, but which might represent a vulnerability for AML/CFT.

Regulatory coverage of 'foreigners only' casino models

217. As indicated above, a number of jurisdictions have sought to establish casino sectors, but to ban nationals from entering or playing in the casino. This is viewed as a risk management and harm reduction strategy. In some cases this leads to weakened oversight by authorities as there is a perception that risks from money laundering are less under this model. In some cases of very weak supervision, only basic licensing criteria and foreign exchange obligations are enforced on such casinos.

Regulatory control over high-seas gaming

218. As outlined in the previous section, there is a large-scale high seas or cruise ship casino and gaming market, but few jurisdictions regulate or impose AML/CFT controls over the sector. There are significant issues of legal jurisdiction. In very few cases do the 'flag' jurisdictions of cruise ships offering gaming services extend their regulation to gaming conducted aboard the vessels in international waters.

Controls over significant contractors, systems and equipment

219. Jurisdictions raised concerns about contractors that supply goods with a potential to impact on the integrity of the casino operation (*e.g.* gaming equipment and computer systems) should be required to be subject to probity assessment.

Lack of AML/CFT capacity / experience by casino regulators

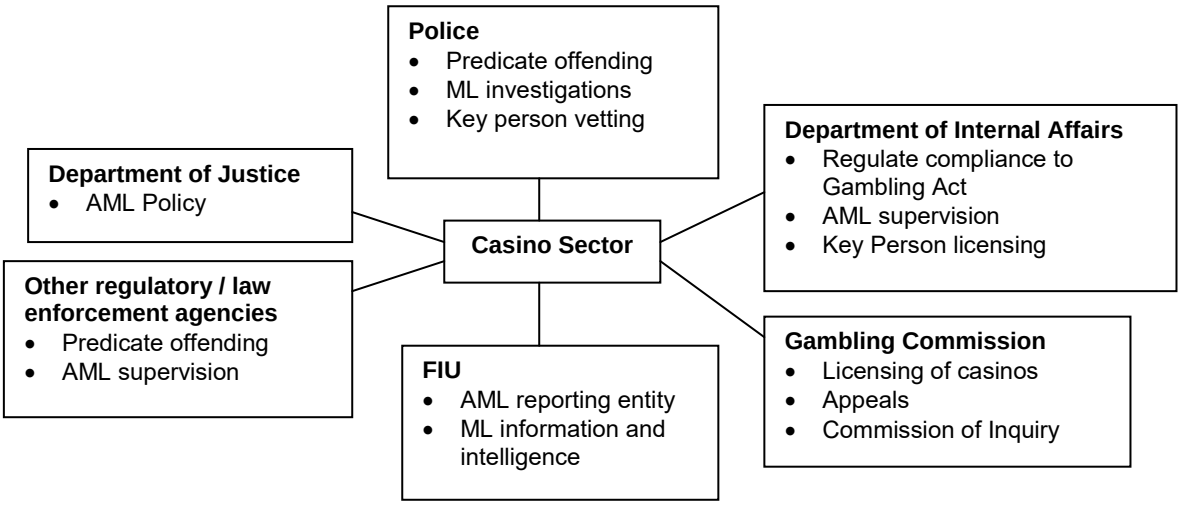
220. In some jurisdictions where casinos have recently been brought under AML/CFT controls, the AML supervisor lacks technical expertise of the casino sector to effectively supervise. There are a number of technical issues specific to casinos and gaming that require sector-specific technical knowledge and experience to support effective regulation and supervision.

Coordination between AML/CFT and casino-sector supervisors

221. Many jurisdictions lack effective coordination between AML/CFT authorities and casino regulatory authorities for setting policies, implementing preventative measures and investigating ML and TF in the sector.

222. In some jurisdictions, a gambling supervisor audits gambling operations in casinos for compliance to gambling laws, but may have a limited role in assessing the casino's level of AML compliance, despite their day to day role. Given the number of financial and non-financial sectors to be supervised, as well as other agencies involved, AML supervision of casinos without the direct involvement of casino regulators may present problems. Joint supervision depends on a high level of inter-agency collaboration to be effective.

223. As shown in the diagram below, New Zealand is an example of a jurisdiction in AML-related policy and operations are invested across a number of agencies.



224. A number of federal systems report state/provincial-level casino regulation, but national level AML/CFT regulation. Effective inter-agency coordination and cooperation is needed to achieve consistent national coverage of casino and gaming sectors for AML/CFT.

Building compliance culture in casino sectors

225. Precluding criminal involvement in casinos and gambling involves addressing both criminal influence and criminal exploitation. Successfully minimising criminal influence of casino operations is dependent upon a licensing and regulatory regime to preclude criminal involvement in the management and operation of casinos and effective preventative measures to detect ML and TF. A number of jurisdictions have struggled to establish an appropriate casino management compliance culture, including for AML/CFT.

226. Persons with large amounts of disposable cash are attractive customers casinos and this makes it imperative that the operator has not only integrity but a commitment to preserving a crime-free environment. Importantly commercial reward systems often provide bonuses or remuneration for "middle management" based on revenue-based performance criteria. These may not take into account the protection of the primary asset (the casino licence) and unless an appropriate management culture is in place within the operator these may work against maintaining a crime-free environment.

227. There is a need for greater cooperation between AML/CFT regulators and enforcement agencies and the front line compliance staff within casinos who are responsible for AML/CFT regulation within casinos.

Law enforcement / FIU / Regulator access to information and investigation of ML/TF

228. ***Legislative system for gathering information for law enforcement:*** Many jurisdictions provide a legislated system for the regulator to receive requests for casino information (such as patron records) and then direct the casino operator to supply that information to the regulator. The regulator then provides the information to the law enforcement agency without the casino being made aware of which law enforcement agency requested the information.

229. In some jurisdictions this provision is regularly used to obtain lists of the casinos' major players for a set time period.

230. There is a reported need for regulations to oblige casinos to adopt AML- systems, particularly when current arrangements hinder the detection and investigation of money laundering. As an example, most casinos operate player tracking systems (or player loyalty schemes) that record customer's levels of gambling, and can include data such as, capital introduced, wagering amounts, win and loss totals, and turnover. This type of information is critical to identifying and prosecuting money laundering; however, these systems are not calibrated to provide the calculations necessary for investigations or to the evidential standard required of prosecutions. Some jurisdictions report casinos showing very little interest in supporting AML efforts by addressing this issue.

231. ***Dedicated police squads or intelligence units:*** – In jurisdictions with large urban casinos it is common for there to be a dedicated police squad (sometimes located on site) or a specific police casino intelligence/investigation unit.

232. An important intelligence function for this type of body is being a gathering point of all available criminal intelligence related to casino operations (including from the casino operator and regulator). It is important that such specialist functions should work closely with AML investigations units.

233. ***Police barring of undesirable patrons***: – A number of jurisdictions have provided the head of the Police with the power to require casinos to bar specified patrons where there are grounds to believe the person might attempt to criminally exploit the casino if allowed to attend. This is generally on the basis of criminal history or in some cases intelligence information. In some jurisdictions this has been made non-appealable and non-reviewable.

234. ***Regulator barring of undesirable patrons***: – A number of jurisdictions have provided the casino regulator with the power to bar or require – casinos to bar specified patrons. This is generally a power reserved for patrons who have not given the casino or police adequate reason to bar the person but owing to information available to the regulator, the regulator is of the opinion that the person is an unacceptable risk to the integrity of the operation of the casino. In some jurisdictions this has been made non-appealable and non-reviewable.

235. ***Casino regulator assistance to FIU***: – In many jurisdictions the casino regulator proactively assists the flow of AML/CTF information to the FIU by conducting inspection programs or audits which seek to identify suspicious activity which the casino operator or regulator then reports to the FIU and/or law enforcement. There needs to be close cooperation between the FIU and gaming regulators.

International Cooperation

236. Effective international cooperation remains a challenge for AML and casino regulatory authorities on AML issues in many jurisdictions. Jurisdictions responses indicated relatively low levels of international cooperation between casino regulatory authorities on issues relevant to AML. In addition, several Asian jurisdictions report the difference in legal frameworks between jurisdictions as a factor, as well as their inexperience in AML/CTF supervision and international information exchange.

237. Effective mechanisms are not always in place, in particular to share information related to junket operators and patrons of junket businesses. There is a need for both casino jurisdictions and those jurisdictions whose citizens regularly travel to casino jurisdictions to ensure clear channels for information sharing and cooperation. This is a challenge when a number of the large casino sectors, such as that in the US, are characterised by a large number of state/provincial/city based regulators.

238. The issues described above in no way represent all of the problems encountered by jurisdictions.

Conclusion

239. While it is estimated that 100 countries participate in casino and card room gambling,[23] this research was able to confirm 77 jurisdictions with legalised casino sectors and 8 jurisdictions who have recently legalised or are giving consideration to legalising casinos. This represents a significant global activity that is cash intensive, competitive in its growth and vulnerable to criminal exploitation. What is encouraging is that all 77 jurisdictions are members of FATF or other related FSRBs, requiring those jurisdictions to meet an international standard in their AML programmes.

240. Mutual Evaluations have shown that globally, that while low, the casino sector has shown relatively higher levels of compliance with FATF standards than other DNFPBs. This is largely because of historical concerns many government have over the perceived levels of criminality and social consequence inherent in casino operations. Governments also tend to impose more stringent supervision and record keeping on casino operations in order to track and secure government revenues. For these reasons, it is often less politically difficult to apply AML/CFT measures to casino sectors, compared to other DNFPBs. Despite this there are many jurisdictions that are yet to fully extend AML controls to the casino sector, and as demonstrated by this research, not all jurisdictions have effective controls over the casino sectors even if they are included in AML frameworks.

241. There are significant regional and global sector vulnerabilities and emerging issues that have weakened AML controls and provide opportunity for money laundering and other financial crimes to flourish.

242. A key issue is casinos not doing enough to establish source of funds and failing to recognise suspicious activity by their customers. Casinos have to pay particular attention to customer's financial transactions and gambling behaviours, particularly if it does not correspond to that of a normal gambler or the intention to play to win is apparently absent or secondary. The methods and indicators in Chapter 2, the sector vulnerabilities and emerging issues in Chapter 3, and the policy implications in Chapter 4 are written to provide government decision-makers and supervisors with the base material from which they can properly target policies and interventions based on the pervasiveness of these methods and issues in their country. But more importantly the material in these chapters, specifically

[23] Casino City.

the methods, case studies and indicators, can and should be shared with casino operators and their staff who are on the front line in confronting these activities, so they may put effect to the AML controls imposed on their operation.

243. Indicators are not of themselves evidence of money laundering and it is not the casino's responsibility to determine that money laundering activity is taking place, rather it is the casino's role is to identify and report the suspicious activity. It is then up to the FIU and law enforcement authorities to examine the matter further and determine if there is a link to money laundering or terrorist financing.

BIBLIOGRAPHY

ACRONYMS AND ABBREVIATIONS & GLOSSARY

AML/CFT	Anti Money Laundering and Countering the Financing of Terrorism
APG	Asia Pacific Group on Money Laundering
AUSTRAC	Australian Transactions Reports and Analysis Centre
BSA	Bank Secrecy Act (United States)
CFTAF	Caribbean Financial Action Task Force
CDD	Customer Due Diligence
CPV	Chip Purchase Voucher
CTRC	Currency Transaction Report - Casino
DICJ	Gaming Inspection and Coordination Bureau (Macao, China)
DNFPB	Designated Non-Financial Businesses and Professions
ESAAMLG	The Eastern and South African Money Laundering Group
EAG	The Eurasian Group
EU	European Union
FATF	Financial Actions Task Force
FBI	Federal Bureau of Investigations (United States)
FINCEN	The Financial Crimes Enforcement Network (United States)
FHA	Foreign Holding Account
FINTRAC	The Financial Transactions Report Analysis Centre of Canada
FIU	Financial Intelligence Unit
FSRB	FATF-Style Regional Body
GIABA	Intergovernmental Anti Money Laundering Group in Africa
IGRA	Indian Gaming Regulation Act (United States)
IMF	International Monetary Fund
IRS	Internal Revenue Service (United States)
ME	Mutual Evaluation
MONEYVAL	The Committee of Experts on the Evaluation of Anti-Money Laundering Measures and the Financing of Terrorism (Europe)
MENAFATF	Middle East and North African Financial Action Task Force
PACGOR	Philippine Amusement and Gaming Corporation
PEP	Politically Exposed Person
POI	Person of Interest
RCMP	Royal Canadian Mounted Police
SAR	Suspicious Activity Report
STDM	Sociedade de Turismo e Diversões de Macao, China
TITO	Ticket In/Ticket Out
VLT	Video Lottery Terminal
VIP	Very Important Player

GLOSSARY OF COMMON CASINO TERMS

The bank	The casino
Barred / banned	A person who is not permitted to enter a casino (may be banned by the casino itself or the regulator)
Betting Limit	For table games, the minimum and maximum amount of money that a player is allowed to wager in a single bet
Bill changer	A machine which accepts coins or currency notes and exchanges them for currency notes or coins
Blackjack	A casino card game. Players bet against the dealer
The Cage (cashier's cage / casino cage)	A secure area within the casino which has custody of funds and provides banking services to casino patrons
Chips	Casino value instruments. Issued by casinos and used in lieu of cash in gaming transactions between the house and player. Chips are round and marked with the denomination and name of the casino and are negotiable within the casino
Dead chips	Promotional or junket associated casino chips that cannot be exchanged for cash. See *Mud Chips* and *non-negotiable chips*
Even money bet	A wager what pays back the same amount that was originally wagered, plus the original wager.
Even money exchange	Exchanging two items of equivalent value in the casino, such as purchasing USD 100 in chips for USD 100 cash
Float	The amount of value (chips + cash) on a table game
High rollers	Premium players who consistently gamble high stakes and large sums of money – see also *VIPs* and *whales*
House	The casino
Junket	A group of people who travel to the casino primarily to gamble. The junket may include transport, accommodation, incentives to play at the casino and the transportation of funds to and from the casino
Junket agent	A person or company who signs up casino patrons to take part in junkets
Junket representative	The person who organises the junket
Mud chips	Promotional or junket associated casino chips that cannot be exchanged for cash. See *Dead Chips* and *Non-negotiable chips*...
Non-negotiable chips	Promotional or junket associated casino chips that cannot be exchanged for cash. See *Dead Chips* and *Mud Chips*
Pit	An area in the casino where gaming tables operate
Pit boss	A casino supervisor responsible for gaming on the casino floor
Plaques	Casino value instruments. Issued by casinos and used in lieu of cash in gaming transactions between the house and player. Rectangular, square-shaped or oval cheque primarily used in European casinos
Slot machines	Gaming machines that accept coins or vouchers and pay out winnings either in coins or via cashier's cheque
Ticket-in-ticket-out	A cashless slot machine that uses vouchers instead of chips or coins
VIP	Premium players who consistently gamble high stakes and large sums of money – see also *Highrollers* and *whales*
Wager	A bet of value
Whale	A high-stakes player

APPENDIX 1. REGIONAL DATA ON CASINO SECTORS

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
Africa						
Benin	Yes	1		No		
Botswana	Yes	10			None	Only two casinos operate gaming tables with the reminder operating only slot machines. Both the casinos with gaming tables are subsidiaries of South African casinos. A bill to include casinos under AML/CFT regime is being drafted.
Cameroon	Yes	3				
Central African Republic	Yes	2				
Comoros	Yes	3		Unclear		
Cote d'Ivoire	Yes	1		Unknown		Abidjan Hotel Ivoire Inter-Continental & Casino
Democratic Republic of the Congo	Yes	1		No		

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
Djibouti	Yes	1		Unknown		
Egypt	Yes	25				
Gambia	Yes					Kololi Casino, African Gaming Co. Ltd. – Royal 7's
Ghana	Yes	3				Run by KaiRo International.
Kenya	Yes	15				Controlled by the Betting Control & Licensing Board, Mombasa
Liberia	Yes	1				
Madagascar	Yes	2		No		
Malawi	Yes	1+		No		
Mali	Yes	1		No		Run by KaiRo International.
Mauritius	Yes	7+		No		
Morocco	Yes	8?		Yes		
Mozambique	Yes	3		No		
Namibia	Yes			No		
Nigeria	Yes	2				
Reunion	Yes	4				
Senegal	Yes	4				

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
Seychelles	Yes	3				
Sierra Leone	Yes	1		No		Licensed, but no supervision by government.
South Africa	Yes	45		Yes		**More details**
Swaziland	Yes	3			Yes	licensed online operators
Tanzania	Yes	3				
Tunisia	Yes	3		No		Only open to foreigners.
Uganda	Yes	3				
Zambia	Yes	3				
Zimbabwe	Yes	6			Yes	Lotteries and Gaming Act, 2000 -Ministry of Home Affairs is the regulator. Limited CDD obligations
Middle East						
Israel	Yes	4				NB – two of these casinos are cruise-ship based casinos
Lebanon	Yes	1				
Central Asia						
Kazakhstan	Yes	28				Since April 2007 laws passed to limit casinos to two provincial cities — Kapchagai (near Almaty) and Shchuchinsk.
Kyrgyzstan	Yes	18		Yes	Yes	MER noted that casinos are showing some resistance to AML/CFT implementation.

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
Turkmenistan	Yes	2				
Asia/Pacific						
Cambodia	Yes	21		No	No	Cambodian nationals are prohibited from entering casinos
Chinese Taipei	No		Yes			Press reports indicate that in late 2007 the Chinese Taipei legislature was considering a draft gambling bill which, if passed, would legalise casinos and gaming in Chinese Taipei
Hong Kong, China	No				No	Foreign registered vessels operate casinos in international waters.
India	Yes	6		No		Offshore – limited to the state of Goa
Japan	No		Possibly		No	
Korea, South	Yes	17		Yes	No	
Korea, North	Yes	1		No		
Lao PDR						
Macao, China	Yes	31		Yes	No	3 concessionaires and 3 sub-concessionaries operate all the casinos in Macao, China. Annual revenue is over USD 13.8 billion per annum
Malaysia	Yes	1		Yes	No	
Myanmar	Yes	4		No		The established casinos are not clearly legal.
Nepal	Yes	6	No	No	Yes	Nepal nationals are prohibited from entering. No 'fit and proper' tests for licensees

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
Palau	No		Yes		No	Proposals for legalising casino sector have not been supported.
Philippines	Yes	14		No	Yes	All 14 casinos are government owned and operated by PAGCOR. PAGCOR operates an internet casino run in conjunction and cooperation with PhilWeb Corp Approximately 20% of patrons are foreign nationals - Chinese Taipei, Japan and Hong Kong, China.
Singapore	No		Yes	Yes	No	
Sri Lanka	Yes	9		No		Nationals are not allowed into Sri Lankan casinos. Casinos are not clearly regulated by the government, although tax is paid. There is no 'fit and proper' test for casino licensees.
Thailand	No		Possibly			Initial risk assessment from illegal gaming sector undertaken
Vietnam	Yes	2		Yes	No	
Australia	Yes	13	No	Yes	Yes	State-based casino regulation, with FIU national AML/CFT regulator.
New Caledonia	3					
New Zealand	Yes	6	No	Yes	No	Regulator is
Northern Mariana Islands	1					
Papua New Guinea			Yes	No	Yes	Newly passed legislation, May 2007
Solomon Islands	2					
Vanuatu	Yes	2	Yes	Yes	No	No 'fit and proper' tests for casino licensees. Vanuatu licensed an online casino, but it no longer in

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
						operation since 2002.
Europe						
Albania	Yes	1				
Austria	Yes	12		Yes		
Belarus	Yes	Approx 25		Yes		
Belgium	Yes	9		Yes		
Bosnia & Herzegovina	Yes	1				
Bulgaria	Yes	7				
Croatia	Yes	15				
Northern Cyprus (Area of)		Approx. 20				
Czech Republic	Yes	158		No		2004 -27 licenses for 158 casinos across the country. 15 licensed for foreign exchange
Denmark	Yes	6		Yes		
Estonia	Yes	75				
Finland	Yes	1 + some in Åland		Yes Unclear if Åland is covered.	Some in Åland.	Casinos also operating on ships.

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
France	Yes	161		Yes		Widespread casino and gaming industry
Georgia	Yes	10		Yes		
Germany	Yes	62				Widespread casino and gaming industry. Casino regulators at state level. AML/CFT is a federal role
Gibraltar	Yes	1			Yes	19 online casino licensees offering 166 sites.
Greece	Yes	9		No		
Hungary	Yes	6		Yes		
Ireland	No				No	A number of private gaming clubs operate casino-like facilities that create an AML/CFT risk, but which fall outside the scope of the CJA (1994).
Italy	Yes	5		Yes		Although legislation has been adopted bringing casinos within the scope of the AML Law, further regulations are required to implement it.
Latvia	Yes	14		Yes	Yes	
Lithuania	Yes	18		Yes		
Luxembourg	Yes	1				
Malta	Yes	3		Yes	Yes	Regulated by the Lotteries and Gaming Authority 266 online gaming sites are operating. Malta regulates junket providers
Moldova	Yes					

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
Monaco	Yes	4				
Netherlands	Yes	167		Yes		
Poland	Yes	27		Yes		FIU is the casino regulator for AML/CFT purposes ***The Ministry of Finance gives licenses, approves rules of the games in casinos, issues certificates of profession and registers gambling devices***.
Portugal	Yes			Yes	No	
Romania	Yes	20		Yes		The number of tourists who come especially to gamble in the Romanian casinos is very little, even insignificant (approximately 40-50 persons/month).
Russia	Yes	169		Yes – the FIU	Yes	After 1 July 2009, all gaming will be prohibited in Russia, except within 4 newly created special gaming zones in Kaliningrad, Rostov-na-Donu, Altai and Primorie Krai (Vladivostok).
Serbia & Montenegro	Yes	7				
Slovakia	Yes	4			1	
Slovenia	Yes	23 + 36 gaming saloons		Yes		Office for Gaming Supervision is the regulator. The 23 licenses for Casinos are mainly owned
Spain	Yes	39 + 2 branches		Yes	No	Approx 3.5 million visitors per annum to Spain's casinos. Regulator is the Ministry of Interior through the National Police.

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
Sweden	Yes	4	No. Casinos Act allows for a maximum of 6 casinos	AML only	No	Sweden does not permit internet casinos. MER noted Swedish businesses marketing Malta-based internet casinos in Sweden. Swedish National Gaming Board is the regulator - www.lotteriinspektionen.se
Switzerland	Yes	19	No	Yes	No	
Ukraine	Yes	45		Yes		Over 50 000 patrons visit Ukrainian casinos daily. Ministry of Finance is the licensing body.
United Kingdom	Yes	140 operating casinos		Yes	Yes	Regulations have permitted operators to apply for an online casinos license only since 2007. Regulator: The Gambling Commission - http://www.gamblingcommission.gov.uk
The Americas & Caribbean						
Antigua & Barbuda	Yes	6			yes	
Argentina	Yes	80				Regulated at the provincial level
Aruba	Yes	10				
Bahamas	Yes	4		Yes	No	Tourism Board is the general and AML regulator
Barbados	Yes	2				
Belize	Yes	2			Yes	
Canada	Yes	63		Yes	No	*Cruise ship casinos*. Cruise ships can offer casino facilities under strict conditions in Canadian waters, but are not covered by the AML/CFT legislation.

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
Chile	Yes	17				In 2005 a new Casino Law was passed for a maximum of 24 casinos
Colombia	Yes	20				ETESA regulates all gambling
Costa Rica	Yes	35		No	Yes	more than 250 sports betting companies operate as online casinos
Dominican Republic	Yes	32		No		There is no monitoring of the financial behaviour of casinos or supervision of their AML compliance.
Ecuador	Yes	13				
El Salvador	Yes	2				
Guyana	No					
Haiti	Yes	2				
Honduras	Yes	3				
Jamaica	Yes	10		No		
Martinique	Yes	2				
Mexico	Yes	Up to 5		No		Temporary permits for large-scale “salones de Apuestas“. Regulator is the Secretaría de Gobernación (Ministry of Interior)
Netherlands Antilles	Yes	26				
Nicaragua	Yes	10				
Panama	Yes	36		Yes	1 not yet functioning	

Jurisdiction	Casinos operating	Number of Casinos	Proposals for new Casinos	Regulated for AML/CFT	Online casinos	Miscellaneous
Paraguay	Yes	3				
Peru	Yes	7				
Puerto Rico	Yes	18				
Saint Vincent & the Grenadines	Yes	2				
St Kitts and Nevis	Yes	2				
Suriname	Yes	9		No		
Trinidad & Tobago	No			No		No legal casinos but the 72 Private Members Clubs (registered) seem to operate like Casinos, but are not supervised.
USA	Yes	845		Yes	No	Various US gaming jurisdictions regulate junket operators and their agents.
Uruguay	Yes	18				
Venezuela	Yes	5

Financial Action Task Force

Groupe d'action financière

MONEY LAUNDERING & TERRORIST FINANCING THROUGH THE REAL ESTATE SECTOR

29 June 2007

TABLE OF CONTENTS

EXECUTIVE SUMMARY

1. Various reports produced by the FATF over the last few years have made reference to the fact that the real-estate sector may be one of the many vehicles used by criminal organisations to launder their illicitly obtained money.[1] The general objective of this report is to develop more information on this issue and present a clearer picture of the way that real estate activity can be used for money laundering or terrorist financing.

2. The study aims to accomplish two primary goals: First, it explores the means by which illicit money is channelled through the real-estate sector to be integrated into the legal economy. Second, it identifies some of the control points that could assist in combating this phenomenon. One of the most effective ways to understand how the sector is abused is to examine concrete case studies; therefore, the report is based primarily on information provided by participating FATF and non-FATF members.

3. Several characteristics of the real estate sector make it attractive for potential misuse by money launderers or terrorist financiers. The report outlines the reasons for this. From the case examples provided during the research for this project, several basic techniques were identified, such as the use of complex loans or credit finance, the use of non-financial professionals, the use of corporate vehicles and so on. The report briefly describes these techniques, followed by one or more most striking case examples. To reach out to the private sector, part of the research has been to develop a basic list of risk indicators from the case examples. These indicators may assist financial institutions and others involved in certain types of real estate activities in customer due diligence and in performing a risk analyses on new and existing clients.

4. The project identified three areas that seem especially vulnerable for misuse in money laundering schemes involving real estate and thus suitable for further consideration. In almost all case examples provided, wire transfers to channel the money have been involved at some stage. Also emerging markets seem to be more vulnerable to misuse of the real estate sector. Due to the worldwide market growth of real estate-backed securities and the development of property investment funds, the range of options for real estate investments has also grown. This effect has not gone without notice in emerging markets. Money laundering transactions can be easily camouflaged in genuine commercial transactions among the huge number of real estate transactions taking place. Complicating matter is the fact that often these less developed economies do not have an average market price for real estate, but rather prices varying across sectors and districts. To complete real estate transactions in some stage of the process involvement of legal expert is inevitable. The case examples have shown this category, when not covered by AML/CFT obligations, often becomes the weakest link in the process.

[1] This report is the product of research carried out by a project team operating under the umbrella of the FATF typologies initiative. The FATF project team was led by Spain and the Netherlands with the participation of Australia, Belgium, Canada, Japan, Lebanon, Luxembourg, Mexico, Myanmar, Norway, Pakistan, Portugal, South Africa, South Korea, Sweden, Ukraine, the United Kingdom, the United States, Interpol, the European Central Bank, and the OECD.

INTRODUCTION: NATURE OF THE REAL-ESTATE SECTOR

5. The real estate sector merits closer consideration given the large scope of monetary transactions, its significant social impact, and because of the number of cases in which money laundering, and in limited circumstances terrorist financing and tax fraud schemes, have been detected.[2] Abuse in this sector also has the undesirable effect of political, institutional and economic destabilisation. Moreover, due to the international nature of the real-estate market, it is often extremely difficult to identify real estate transactions associated with money laundering or terrorist financing.

6. Given that the purchase or sale of a property is one of the largest financial transactions a family or individual may undertake, changes in property prices have a substantial impact on the considerations taken into account by potential buyers and sellers of properties. Fluctuations in property prices have an impact on decisions about where to live and work in addition to affecting an owner's net worth. Moreover, to the extent that property values influence rents, the effect is manifested in the distribution of wealth between landlords and tenants. Finally, property prices significantly influence the building industry. Taken together, these factors all suggest that fluctuations in property prices may influence economic activity and price stability by affecting aggregate supply and demand, the distribution of income, and the debt decisions undertaken by households.[3]

7. Nevertheless, it is difficult to monitor and explain variations in property prices due to a lack of reliable and uniform information. Property markets are geographically segmented and numerous factors shape the local price of real-estate. Understanding the factors that underlie pricing in the property market is therefore essential.

8. Historically there exists a commercial and residential real-estate market, and the property in both types of market may be bought and sold, managed and/or developed. More recently, new investment vehicles have emerged, including *property investment funds* (PIF) and *real estate investment trusts* (REIT). Such instruments allow average citizens to invest in markets – historically only available to the very wealthy – in order to create a diversified portfolio.

9. Investment in the real-estate sector offers advantages both for law-abiding citizens and for those who would misuse the sector for criminal purposes. Real property has historically appreciated in value, and many countries offer incentives to buyers, including government subsidies and tax reduction. Most importantly for misuse by criminals, however, is the facility the sector may provide for obscuring the true source of the funds and the identity of the (ultimate) beneficial owner of the real asset, which are two key elements of the money laundering process.

10. The real-estate sector is therefore of extraordinary importance to the economy in general and the financial system in particular. The widespread use of mechanisms allowing households to access the property market, the elimination of personal limitations on property ownership, the economic development and growth of tourism in many regions have all led to exponential growth in the number

---

[2] It is important to note as is mention by the OECD (Sub-group on Tax Crimes and Money Laundering) in its real estate report that in many countries, their tax authorities investigate these cases in partnership with other law enforcement agencies. In some instances, parallel investigations for tax fraud and money laundering may be pursued. The OECD examined tax fraud and money laundering involving the real estate sector, along with identity theft and identity fraud. It also developed a training manual to assist tax auditors in detecting and reporting cases of suspected money laundering and/or terrorist financing. The confidential report contains: the scope and nature of the issue, how cases are successfully detected and investigated, a list of red flag indicators (catalogue), the benefits of multi-agency co-operation (including effective exchange of information), compliance results and risk prevention strategies and an inventory of relevant case studies.

[3] European Central Bank (2006).

of financial transactions linked to real-estate. The extraordinary range of possibilities for misusing these processes also allows suspected criminals to integrate and enjoy illegally obtained funds.

11. Through the implementation of international standards in recent years, countries have put various measures into place within their formal financial sector – which includes, among others, banks and credit unions – in order to prevent money laundering and terrorist financing. Because of the tendency for illegal activity to move to other financial / economic areas that may have less formal oversight or where there is relatively less potential for detection, countries must consider extending AML/CFT measures to other parts of their economies, if they want to respond successfully to this threat. For the real-estate sector, this would necessarily include such key players as real-estate agents, legal advisors and notaries.

BASIC TECHNIQUES

12. In order to misuse the real-estate sector, a number of methods, techniques, mechanisms, and instruments[4] are available. Many of these methods are in and of themselves illegal acts; however, certain of them might be considered perfectly legal if they were not associated with a money laundering or terrorist financing scheme (or if this association could not be detected. Through examination of case examples from past money laundering and terrorist financing cases, this study has identified a series of the more common or basic methods and then grouped them according to type or "typology".

- Use of complex loans or credit finance.
- Use of non-financial professionals.
- Use of corporate vehicles.
- Manipulation of the appraisal or valuation of a property.
- Use of monetary instruments.
- Use of mortgage schemes.
- Use of investment schemes and financial institutions.
- Use of properties to conceal money generated by illegal activities.

Typology 1: Complex Loans and Credit Finance

13. Intercompany loans have become a frequent instrument used as a means for raising funds. The ease with which such loans can be arranged makes them popular with the general public. These loans are also used in the real estate sector. Where an instrument is frequently used, misuse of the instrument becomes a possibility as well. Depending on the way in which the loan is structured, two different schemes have been detected.

Loan-Back Schemes

14. Intelligence and law enforcement reports indicate "loan-back" transactions are used by suspected criminals to buy properties – either directly or indirectly – through the purchase of shares in property investment funds. Essentially, suspected criminals lend themselves money, creating the appearance that the funds are legitimate and thus are derived from a real business activity. The purpose of the loan is to give the source of the money an appearance of legitimacy and to hide the true identity of the parties in the transaction or the real nature of the financial transactions associated with it.[5]

---

[4] This report uses the terminology commonly used by the FATF in its various projects. See Annex A to this report and FATF (2005) for more on this terminology.

[5] The lack of information caused by the internationalisation of these structures and their specific morphology make it difficult to understand the true relationship between the various corporate vehicles involved in the loan structure and to be sure of the real origin of the funds, and thus determine whether they are linked to criminal activities or not. In several cases, offshore company loans were used. See FATF (2006) for more on the use of legal persons for money laundering.

Case study 1.1: Proceeds of drug trafficking laundered into real estate

(Predicate offence: money laundering forged loan agreement)

An individual set up three companies. For one of the companies he held bearer shares. To hide his involvement in the companies he used a front-man and a trust and company service provider[6] as legal representatives. For each of the companies, the legal representatives opened bank accounts with three different banks in different jurisdictions. The individual used the three companies to set up a loan-back scheme in order to transfer, layer and integrate his criminal money. He then co-mingled the criminal funds with the funds that originated from the legal activities of one of his companies.

Next the front man then bought real estate. To finance that transaction he arranged for a loan between the two companies.

A more detailed version of this scheme (describing all steps in the process) is included in Annex C.

Indicators and methods identified in the scheme:

- **The source of the funds used to finance the real estate transaction was from abroad, in particular from offshore jurisdictions and jurisdictions with strict bank secrecy.**
- **The lender of the money, an offshore company, had no direct relation with the borrower of the money**
- **A financial institution was not involved in the loan structure.**
- **There was no loan agreement between the lender and borrower.**
- **The loan agreement was legally invalid.**
- **The information in the loan agreement was inconsistent or incorrect.**
- **The conditions in the loan agreement were unusual (for example, no collateral was required).**
- **No payment of interest or repayment of the principal.**
- **Transaction monitoring by financial institutions showed payable-through accounts, by which incoming payments from abroad were immediately transferred abroad without a logical reason.**

Source: Netherlands.

Back-to-Back Loan Schemes

15. As with *loan-back* schemes, *back-to-back loans* are also known to be used in real-estate related money laundering schemes. In this case, a financial institution lends money based on the existence of collateral posted by the borrower in the usual way. However, the collateral presented to the financial institution originates from criminal or terrorist activities. Although financial institutions are obligated to disclose the existence of these funds on a risk dossier, there are occasions where this analysis may contain shortcomings. Instances where the collateral posted is not specified in the loan agreement or unreliable information as to the nature, location and value of the collateral make it very difficult to recognise a back-to-back loan.

Case study 1.2: Back-to-back loan used to launder funds

(Predicate offence: forged loan agreement, in particular the failure to mention the security underlying the loan and money laundering)

An individual set up two companies in different jurisdictions. He used a front man and a trust and company service provider as legal representatives to hide his involvement. One of the companies, led by the front-man, owned real estate and generated income through rental activity. He set up a back-to-back loan structure to use his criminal money for his real estate investments. He then arranged a bank guarantee between two banks in case of a default of the loan. The bank was willing to provide the bank guarantee with the pledged deposit of one of his companies as collateral. The money placed as a deposit was generated by the individual's criminal activity.

A more detailed version of this scheme (describing all steps in the process) is included in Annex C.

Indicators and methods identified in the scheme:

- **No reference in the loan agreement to the underlying collateral.**

[6] See Annex A for definitions of this term and others used in this report.

- **The collateral provided was not sufficient**
- **The collateral provider and other parties involved in the loan structure were not known.**
- **The borrower of the money was not willing to provide information on the identity and background of the collateral provider and/or the other parties involved in the loan structure.**
- **The complex nature of the loan scheme could not be justified**
- **There was an unexpected loan default.**

Source: Netherlands.

Typology 2: The Role of Non-Financial Professionals

16. Research has shown that when governments take action against certain methods of money laundering, criminal activities tend to migrate to other methods. In part, this reflects the fact that more aggressive policy actions and enforcement measures increase the risk of detection and therefore raise the economic cost of using these methods.

17. FATF experts have observed in recent years that money launderers are increasingly forced to develop elaborate schemes to work around AML/CFT controls. This has often meant seeking out the experience of professionals such as lawyers, tax advisors, accountants, financial advisors, notaries and registrars in order to create the structures needed to move illicit funds unnoticed. These professionals act as *gatekeepers* by providing access to the international financial system, and knowingly or not, can also facilitate concealment of the true origin of funds.[7]

Obtaining Access to Financial Institutions Through Gatekeepers

18. A number of cases reveal that criminals and terrorists have used non-financial professionals or gatekeepers to access financial institutions. This is especially important during the process of determining eligibility for a mortgage, opening bank accounts, and contracting other financial products, to give the deal greater credibility. It has also been documented that bank accounts are opened in the name of non-financial professionals in order to carry out various financial transactions on their behalf. Examples include depositing cash, issuing and cashing cheques, sending and receiving international fund transfers, etc., directly through traditional saving accounts or indirectly through correspondent accounts.[8]

Case study 2.1: Misuse of a real estate agent to gain introduction to a financial institution, possible link to terrorist financing

(Predicate offence: suspected terrorist financing)

A trustee for a trust established in an offshore centre approached a real estate agent to buy a property in Belgium.

The real-estate agent made inquiries with the bank to ask whether a loan could be granted. The bank refused the application, as the use of a trust and a non-financial professional appeared to be deliberately done to disguise the identity of the beneficial owner. The bank submitted a suspicious transaction report.

Following the analysis of the financial intelligence unit, one of the members of the board of the trust was found to be related to a bank with suspected links to a terrorist organisation.

Indicators and methods identified in the scheme:

- **Instrument: real estate, loan.**
- **Mechanisms: bank, trust, real-estate agent.**

[7] FATF (2001), p. 12.

[8] Although it is not the scope of the report, the FATF experts have observed the misuse of the correspondent accounts as a way to hide the origin or destination of money flows and the real participants in the transaction. On several occasions, the misuse of these accounts has been linked to the type of operations reflected in it, especially when cheques or cover payments were used.

- **Techniques: offshore customer, non-account holder customer, physical person intermediary, high risk jurisdiction, loan, purchase of real estate.**
- **Opportunity taken: using a trust and appealing to a non-financial profession was clearly done to disguise the identity of the beneficial owner.**

Source: Belgium, 2003.

Assistance in the Purchase or Sale of Property

19. Non-financial professionals such as notaries, registrars, real-estate agents, etc., are sometimes used by suspected criminals on account of their central role in carrying out real-estate transactions. Their professional roles often involve them in a range of tasks that place them in an ideal position to detect signs of money laundering or terrorist financing.

20. Until relatively recently, however, these professionals have not been obligated under international standards to report suspicious activity to their national financial intelligence units (FIUs). In some countries where non-designated financial professionals fall under the scope of anti-money laundering legislation, these systems are still in the initial stages of implementation[9], so that the level of co-operation and the effectiveness of their suspicious transaction reporting have not yet been extensively tested. Operational problems have also arisen. In some cases, these have resulted from difficulties in centralising information gathered from various domestic authorities, and in others it stems from differences in legal systems between jurisdictions (common law and civil law, for example).

21. Several cases have come to light revealing that the role of non-financial professionals in detecting illegal activity can also be significant in this area. There have been examples of notaries and registrars detecting irregularities in the signing of the property transfer documents (for example, using different names or insisting on paying a substantial part of the cost of the transaction in cash). Other examples include buying land designated as residential through a legal person and then reclassifying it a short time later for commercial development. Professionals working with the real-estate sector are therefore in a position to be key players in the detection of schemes that use the sector to conceal the true source, ownership, location or control of funds generated illegally, as well as the companies involved in such transactions.

Case study 2.2: Use of a notary when buying a real estate

(Predicate offence: suspected money laundering by organised crime)

An East European was acting under a cover name as the director of a company for which he opened an account with a Belgian bank. Transfers were made to this account from abroad, including some on the instructions of "one of our clients".

The funds were then used to issue a cheque to a notary for the purchase of a property. The attention of the notary was drawn to the fact that some time after the purchase, the company went into voluntary liquidation, and the person concerned bought the property back from his company for an amount considerably above the original price. In this way the individual was able to insert money into the financial system for an amount corresponding to the initial sale price plus the capital gain. He was thus able to use a business account, front company customer, purchase of real estate, cross border transaction and wire transfers to launder money that, according to police sources, came from activities related to organised crime.

It appeared that the company acted as a front set up merely for the purpose of carrying out the property transaction.

Indicators and methods identified in the scheme:

- **Instruments: check, wire transfers, real estate.**

[9] In some countries the sector contains a large group of supervised natural and legal persons. That may be the cause for concerns regarding the capacity to provide adequate supervision.

- **Mechanisms: notary, bank.**
- **Techniques: business account, front company customer, purchase of real estate, cross border transaction, incoming wire transfer, reverse/flip real estate, unknown source.**
- **Opportunity taken: use of a notary when buying a real estate. Since the company's bank account was not used for any other transaction, it can be deduced that this company was a front company set up for the mere purpose of carrying out the property transaction.**

Source: Belgium, 2003.

Trust Accounts

22. A *trust account*[10] is a separate bank account, which a third party holds on behalf of the two parties involved in a transaction. Funds are held by the trustee until appropriate instructions are received or until certain obligations have been fulfilled. A trust account can be used during the sale of a house, for example. If there are any conditions related to the sale, such as an inspection, the buyer and seller may agree to use a trust account. In this case, the buyer would deposit the amount due in a trust account managed by, or in the custody of, a third party. This guarantees the seller that the buyer is able to make the payment. Once all the conditions for the sale have been met, the trustee transfers the money to the seller and the title to the property is passed to the buyer.

Case study 2.3: Use of a solicitor to perform financial transactions

(Predicate offence: distribution of narcotics)

An investigation of an individual revealed that a solicitor acting on his behalf was heavily involved in money laundering through property and other transactions.

The solicitor organised conveyancing for the purchase of residential property and carried out structured transactions in an attempt to avoid detection. The solicitor established trust accounts for the individual under investigation and ensured that structured payments were used to purchase properties and pay off mortgages.

Some properties were ostensibly purchased for relatives of the individual even though the solicitor had no dealings with them. The solicitor also advised the individual on shares he should buy and received structured payments into his trust account for payment.

Indicators and methods identified in the scheme:

- **Instruments: cash deposits, real estate.**
- **Mechanisms: solicitor, trust accounts.**
- **Techniques: structured cash transactions, establishment of trust accounts to purchase properties and pay off mortgages, purchase of property in the names of the main target.**
- **Opportunity taken: the solicitor set up trust accounts on behalf of the target and organised for transactions to purchase the property, pay off mortgages, and shares were purchased to avoid detection. In some cases properties were purchased in the names of relatives of the target.**

Source: Australia.

Management or Administration of Companies

23. There have been documented cases of non-financial professionals approached by money launderers and terrorists not just to create legal structures, but also to manage or administer these companies. In this context, these professionals may have been generally aware that they are taking an active role in a money laundering operation. Their access to the companies' financial data and their direct role in performing financial transactions on behalf of their clients make it almost impossible to accept that they were not aware of their involvement.

[10] Also known as an *escrow* account.

Case study 2.4: Abuse of a notary's client account

(Predicate offence: suspected trafficking in narcotics)

A company purchased property by using a notary's client account. Apart from a considerable number of cheques that were regularly cashed or issued, which were at first sight linked to the notary's professional activities, there were also various transfers from the company to his account.

By using the company and the notary's client account, money was laundered by investing in real estate in Belgium, and the links between the individual and the company were concealed in order to avoid suspicions.

Police sources revealed that the sole shareholder of this company was a known drug trafficker.

Indicators and methods identified in the scheme:

- **Instruments: cheque, cash, wire transfers, real estate.**
- **Mechanisms: notary, bank.**
- **Techniques: intermediary account, purchase of real estate, incoming wire transfer.**
- **Opportunity taken: by using the company and the notary's client account money was laundered by investing in real estate in Belgium, and the links between the individual and the company were concealed in order to avoid suspicions**

Source: Belgium, 2002.

Typology 3: Corporate Vehicles

24. Corporate vehicles – that is, legal persons of all types and various legal arrangements (trusts, for example)[11] – have often been found to be misused in order to hide the ownership, purpose, activities and financing related to criminal activity. Indeed that practice is so common that it almost appears to be ubiquitous in money laundering cases. The misuse of these entities seem to be most acute in tax havens, free-trade areas and jurisdictions with a strong reputation for banking secrecy; however, it may occur wherever the opacity of corporate vehicles can be exploited.

25. Apart from obscuring the identities of the beneficial owners of an asset or the origin and destination of funds, these corporate vehicles are also sometimes used in criminal schemes as a source of legal income. In addition to shell companies, there are other specialised companies that carry out perfectly legitimate business relating to real estate, which have sometimes been misused for money laundering purposes. This aspect is illustrated by the use, for example, of property management or construction companies. The use of corporate vehicles is further facilitated if the company is entirely controlled or owned by criminals.

Offshore Companies[12]

26. Legal persons formed and incorporated in one jurisdictions, but actually used by persons in another jurisdiction without control or administration of a natural or legal resident person and not subject to supervision, can be easily misused in money laundering transactions. The possibilities for identifying the beneficial owner or the origin and destination of the money are at times limited. In these scenarios actors with wrongful intentions have the distinct advantage of extra protection in the form of bank secrecy.

[11] See Annex A for definitions of some of these terms.

[12] It applies to the situation where a company is incorporated in one jurisdiction for persons who are resident in another jurisdiction. See FATF (2006) for the terminology relating to offshore companies.

Case study 3.1: Use of an offshore company to buy real estate.

(Predicate offence: suspected violations related to the state of bankruptcy)

A bank reported a person whose account had remained inactive for a long period but which suddenly was inundated with various cash deposits and international transfers. These funds were then used to write a cheque to the order of a notary for the purchase of a real estate.

It appeared that the party involved had connections with a company in insolvency and acted in this way to be able to buy the property with a view to evading his creditors.

The final buyer of the real estate was not the natural person involved but an offshore company. The party involved had first bought the property in his own name and subsequently had passed it on to the aforementioned company.

Indicators and methods identified in the scheme:

- **Instrument: cash, wire transfers, real estate.**
- **Mechanisms: notary, bank.**
- **Techniques: personal account, purchase of real estate, incoming wire transfer, dormant account, offshore transactions.**
- **Opportunity taken: use of an offshore company to buy real estate. It appeared that the party involved had connections with a company in insolvency and acted in this way to be able to buy the property with a view to getting away from his creditors.**

Source: Belgium, 2002.

Legal Arrangements

27. The use of some legal arrangements such as trusts can play an important role in money laundering. Under certain conditions these legal arrangements can conceal the identity of the true beneficiary in addition to the source and/or destination of the money.

28. The nature and/or structure of certain trusts can result in a lack of transparency and so allow them to be misused:[13]

- Certain trusts may exist without the need for a written document constituting them.
- Although there may be a deed defining the trust, in some cases it does not need to identify the depositary and/or a specific beneficiary.
- There may be no obligation to register decisions regarding the management of a trust, and it may not be possible to disclose them in writing to anyone.
- In some types of trust, such as discretionary trusts, the beneficiary may be named or changed at any time, which makes it possible to safeguard the identity of the beneficiary at all times up until the moment the ownership of the assets is transferred.
- Trusts set up to protect assets may protect the depositary against decisions to freeze, seize or attach those assets.
- Trusts may be set up to manage a company's shares, and they may make it more difficult to determine the identities of the true beneficiaries of the assets managed by the trusts.
- Certain legislation may expressly prohibit the freezing, seizure or attachment of assets held in trust.
- Certain clauses commonly referred to as escape clauses, allow the law to which the trust is subject to be changed automatically if certain events arise. Such clauses make it possible to protect the assets deposited in the trust from legal action.

[13] See FATF (2006) for a short explanation of trusts.

29. These conditions may create a significant obstacle for the authorities charged with applying anti-money laundering and counter terrorist financing laws – especially in relation to international co-operation – thus significantly slowing the process of collecting information and evidence regarding the very existence of the trust and identifying its ultimate beneficiary. Under these circumstances it may be very difficult, if not impossible, for a bank or other financial institution to comply with the "know-your-customer" policies applicable in the country or territory in which it is located.[14]

Case study 3.2: Use of trusts to buy real estate

(Predicate offence: suspected serious tax fraud)

Two trusts were established in an offshore centre by a law firm. The trustee had been requested to accept two payment orders in favour of a bank in order to buy real estate. The communication between these trusts and their trustee always took place through the law firm. It appeared that the trust had been used to conceal the identity of the beneficial owners.

Information obtained by the FIU revealed that the beneficiaries of the trusts were individuals A and B, who were managers of two companies, established in Belgium that were the subject of a judicial investigation regarding serious tax fraud. Part of the funds in these trusts could have originated from criminal activity of the companies.

Indicators and methods identified in the scheme:

- **Instruments: wire transfers, real estate.**
- **Mechanisms: lawyer, trust, bank.**
- **Techniques: trust account, purchase of real estate, legal entity transactor, offshore, and incoming wire transfer.**
- **Opportunity taken: use of trusts to buy real estate. The trusts were used to conceal the identity of the true owners.**

Source: Belgium, 2005.

Shell Companies

30. A shell company is a company that is formed but which has no significant assets or operations, or it is a legal person that has no activity or operations in the jurisdiction where it is registered. Shell companies may be set up in many jurisdictions, including in certain offshore financial centres and tax havens. In addition, their ownership structures may occur in a variety of forms. Shares may be held by a natural person or legal entity, and they may be in nominative or bearer form. Some shell companies may be set up for a single purpose or hold just one asset. Others may be set up for a variety of purposes or manage multiple assets, which facilitates the co-mingling of legal and illicit assets.

31. The potential for anonymity is a critical factor in the use of shell companies. They may be used to hide the identity of the natural persons who are the true owners or who control the company.[15] In particular, permissive practices regarding the form of the shares, whether corporate, nominative or bearer, together with the lack of co-operation on the collection of information, represent a significant challenge when seeking to determine the ultimate beneficial owner.

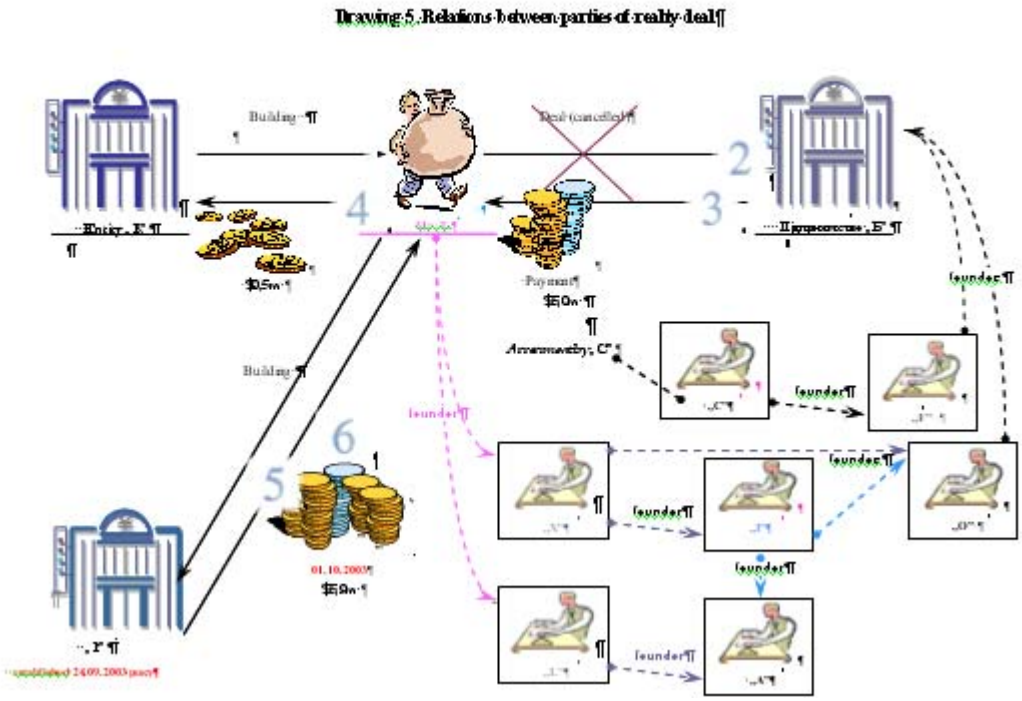
[14] However, it was pointed out in FATF (2006) that, in jurisdictions where trust administrators are licensed and regulated to ensure that they comply with FATF standards on knowing the beneficial owner, these difficulties might be able to be avoided.

[15] Commonly referred to as the *beneficial owner*.

Case study 3.3: Use of a shell company to buy real estate

This scheme involved the purchase of real estate, which was then sold for the higher price to the figureheads. In this case the financial intermediaries informed the financial intelligence unit (FIU) only about the transfer amount. To detect and investigate such cases it was therefore necessary to obtain information from relevant "gatekeepers", especially from registrars of real estate.

The case, investigated by Ukrainian FIU, started from the STR submitted by the auditor of the property buyer. Information was then received from the state registrar of real estate proprietors.



Entity P bought the building in the Ukrainian capital.
Entity K - first owner;
Mr. T - first buyer;
Entity B - next buyer. But the deal was cancelled in 3 months;
Entity P - new buyer.

Suspicion about the transaction was aroused because:

The selling price of building was 10 times higher then purchase price 3 days later.
The purchase price for Mr. T was determined based on the assessment of the state registrar of real estate.
The selling price was based on the assessment of private expert from entity C.
Mr. T did not have his own money. He would have had to work for 200 years to acquire this amount (USD 500 000) through his legal income. Nevertheless, on the day of payment, Mr. T received money from B as an advance for the same building.

In three months the deal with B was cancelled and the building was sold to P for USD 5.9 million. There are close relations between T, B and C, shown at the diagram. There was thus strong probability that the transfers of money to Mr. T were done for the purpose of laundering of USD 5.4 million.

Source: MONEYVAL (Ukraine).

Property Management Companies

32. When using the real-estate sector, the purchase or construction of properties is a commonly used means by which criminals carry out financial transactions. However, a property that is bought or constructed using illegally obtained funds may subsequently be rented out to provide an apparently

legal source of income in order to camouflage movements of funds between various jurisdictions (for example, the tenant and the landlord are located in different jurisdictions).

33. In cases where a company is owned or controlled by a criminal group, a possible way to use the property for money laundering is to mix cash of illegal origin with legitimate rental income. It then appears to be the result of the company's legitimate profits. In other cases, criminals seem to use the company's property management services to create a veil of legitimacy over other transactions they conduct. Those cases showed the active involvement of property management companies in criminal activity. The level of their participation can vary widely both in what kind of property is involved and how the property management company is being misused. The company may be an integral part of the organised criminal group or it may provide a part of the criminal business activity, fundamentally money laundering.[16]

Case study 3.4: Use of property management companies

(Predicate offence: suspected fraud)

The FIU received a suspicious transaction report from notary A on one of his clients, person B, a foreigner without an address in Belgium, who in his office had set up a company for letting real estate. The sole manager and shareholder of this company was a family member of B, who also resided abroad.

Shortly after its creation the company bought a property in Belgium. The formal property transfer was carried out at notary A's office. The property was paid for through the account of notary A by means of several transfers, not from company X, but from another foreign company about which individual B did not provide any details. The establishment of a company managed by a family member with the aim of offering real estate for let and paid by a foreign company disguised the link between the origin and the destination of the money.

Police intelligence revealed that the individual was known for financial fraud. The investment in the property was apparently financed by the proceeds of these funds.

Indicators and methods identified in the scheme:

- **Instruments: cash, wire transfers, real estate.**
- **Mechanisms: notary, bank.**
- **Techniques: business account, purchase of real estate, transactor inconsistencies, non-resident customer, unknown source.**
- **Opportunity taken: the establishment of a company managed by a family member with the aim of letting real estate paid by a foreign company disguised the link between the origin and the destination of the money**

Source: Belgium, 2005.

Non-trading real estate investment companies[17]

34. Several characteristics of these companies make them especially vulnerable to abuse by suspected criminals. First, it is often very difficult to identify the real owner or controller. Second, the company can be created very easily with no minimum initial capital and without an authentic deed. Additionally, these entities are only recorded at the trade register. Finally, the shares of such companies can be sold without certification so that the true owner is not easily identified.

16 See Serious Organised Crime Agency (2006).

17 Also known by its French acronym, *SCI* or *société civile immobilière*.

Case Study 3.5: Misuse of *non trading real estate investment companies*

(Predicate offence: suspected organised criminal activities)

Two French non-trading real estate investment companies managed by two residents of a western European country successively bought two high value properties for a significant amount (more than EUR 20 million) with a single payment (not a loan).

The analysis of the FIU revealed that beneficial owner of the two properties was a resident of an Eastern European country. Further analysis showed that offshore Company A had moved the funds used to purchase the properties through SWIFT wire transfers. This offshore company was well known for holding shares of Company B registered in the very same country as the beneficial owner of the properties. Company B itself was known for its links to organised crime. Analysis also showed that the two managers of the real estate investment companies were senior staff of Company B.

Indicators and methods identified in the scheme:

- **Instrument: real estate, single payment.**
- **Mechanisms: bank, *société civile immobilière* (SCI).**
- **Techniques: purchase of real estate, French SCI and foreign/offshore companies as intermediary, high value, physical intermediaries linked to the beneficial owner.**
- **Opportunity taken: the FIU analysis revealed that the 2 managers of the French SCI were linked to the beneficial owner through a company owned by him and in which the two managers had senior responsibilities**

Source: France, 2006.

Typology 4: Manipulation of the Appraisal or Valuation of a Property

35. Manipulation of the real value of properties in relation to real estate involves the overvaluing or undervaluing of a property followed by a succession of sales and purchases. A property's value may be difficult to estimate, especially in the case of properties that might be considered atypical, such as hotel complexes, golf courses, convention centres, shopping centres and holiday homes. This difficulty further facilitates the manipulation when such property is involved.

Over-valuation or Under-valuation

36. This technique consists of buying or selling a property at a price above or below its market value. This process should raise suspicions, as should the successive sale or purchase of properties with unusual profit margins and purchases by apparently related participants.

37. An often-used structure is, for example, the setting up of shell companies to buy real estate. Shortly after acquiring the properties, the companies are voluntarily wound up, and the criminals then repurchase the property at a price considerably above the original purchase price. This enables them to insert a sum of money into the financial system equal to the original purchase price plus the capital gain, thereby allowing them to conceal the origin of their funds.

Successive Sales and Purchases

38. In the case of successive sales and purchases, the property is sold in a series of subsequent transactions, each time at a higher price. Law enforcement cases have shown that these operations also often include, for example, the reclassification of agricultural land as building land. The sale is therefore fictitious, and the parties involved belong to the same criminal organisation or are non-financial professionals in the real-estate sector who implicitly know the true purpose of the transactions or unusual activity.

39. In addition to placing obstacles to discovering the true identity of the owners of the property and the real origin of the funds used in the transaction, these constructs usually also have a significant tax impact, as they generally avoid the liability for capital gains tax.

Case study 4.1: Use of a lawyer when buying a real estate.

(Predicate offence: suspected organised crime activity)

A lawyer created several companies the same day (with ownership through bearer shares, thus hiding the identity of the true owners). One of these companies acquired a property that was an area of undeveloped land. A few weeks later, the area was re-classified by the town hall where it is located so that it could be urbanised.

The lawyer came to the Property Registry and in successive operations, transferred the ownership of the property by means of the transfer of mortgage loans constituted in entities located in offshore jurisdictions.

With each succeeding transfer of the property, the price of the land was increased. The participants in the individual transfers were shell companies controlled by the lawyer. Finally the mortgage was cancelled with a cheque issued by a correspondent account. The cheque was received by a company different from the one that appeared as acquirer on the deed (cheque endorsement). Since the company used a correspondent account exclusively, it can be concluded that this company was a front company set up merely for the purpose of carrying out the property transactions.

After investigation it was learned that the purchaser and the seller were the same person: the leader of a criminal organisation. The money used in the transaction was of illegal origin (drug trafficking). Additionally, in the process of reclassification, administrative anomalies and bribes were detected.

Indicators and methods identified in the scheme:

- **Instruments: cheques and cover payments.**
- **Mechanisms: correspondent bank accounts.**
- **Techniques: business account, front company customer, purchase of real estate, cross border transaction, incoming wire transfer, reverse/flip real estate, unknown source.**
- **Opportunity taken: use of a lawyer when buying real property and performing bank transactions through correspondent bank accounts. Since the correspondent bank account was not used for any other transaction, it can be deduced that the lawyer set up the correspondent account for the purpose of carrying out the property transactions.**

Source: Spain, 2006.

Typology 5: Monetary Instruments

40. The use of monetary instruments in real estate transactions has traditionally dealt primarily with the use of cash. Although methods of payment continue to evolve, cash continues to be one of the main ways of obtaining and handling funds at the early stages of the process in many of the cases that ultimately involve funds of illegal origin.

41. Other monetary instruments used by criminals in their real-estate activities are cheques and wire transfers through conduit or correspondent bank accounts.

Cash

42. The purchase of high-value properties in cash is one way in which large sums of money can be integrated into the legal financial system. Some jurisdictions have observed that there has been a marked increase in demand for high denomination banknotes in their territory, which seems to be inconsistent with the progressive change in public preferences towards other means of payment. Specific geographic and financial concentrations of demand and cross-border movements have also been detected (specific locations, banks, ports, etc.). Although this demand also arises for reasons not strictly considered to be money laundering or terrorist financing activities, such as tax avoidance, evasion or fraud, it does seem to be clear that the real estate sector may be a key contributing factor in the increase in this demand for some jurisdictions, as the black economy tends to grow during a property boom.

43. As well as being used to buy real estate, cash is also used in currency exchange and to structure deposits. It is common to structure cash transactions involving funds from criminal or terrorist sources and then to use these funds to buy, build or renovate a property. When the improved property is finally

sold, the transaction has the advantage that it is difficult, or even impossible, to relate it to a specific individual or a criminal activity.

44. Cash is also used in rental or financial leasing transactions.[18] These processes may be used by money launderers or terrorists to obtain the use of a property without having to fear losing it through its being seized or frozen if their criminal activity is discovered by the authorities. Moreover, it can also be used directly by criminals to settle contracts close to the start of the operation, receiving a reimbursement from the leasing company in the form of a cheque, for example, thus giving the transaction an air of legitimacy. It should be noted that this analysis found that a large share of the market remains in the hands of legal entities which are independent from the banks and financial institutions, thus creating a different channel for funds and making investigation and analysis difficult given the fragmentation of the information.

Case study 5.1: Use of cash to buy real estate

(Predicate offence: drug trafficking)

A criminal organisation operating in the Americas and Europe, laundered resources generated from drug trafficking through the misuse of bureaux de change and exploitation of apparently legitimate real-estate businesses in different countries. The criminal organisation led by Mr. B, sent cocaine from South America to Europe, disguising it in rubber cylinders that were transported by air. The money generated from the trafficking was collected in Europe and forwarded in the same way back across the Atlantic.

In Latin-American Country 1, Mr B acquired an existing bureau de change; he changed its name and became its main shareholder and general director. With the purchase of an already constituted financial institution, the criminal organisation avoided the strict controls implemented by the regulatory authorities as regards to the constitution and operation of financial entities.

In European country 2, the criminal organisation acquired commercialisation companies, created real estate corporations managed by citizens of Latin-American Country 1 and opened bank accounts in various financial institutions, declaring as commercial activity trading in jewels, financial intermediation and real estate activities, among others.

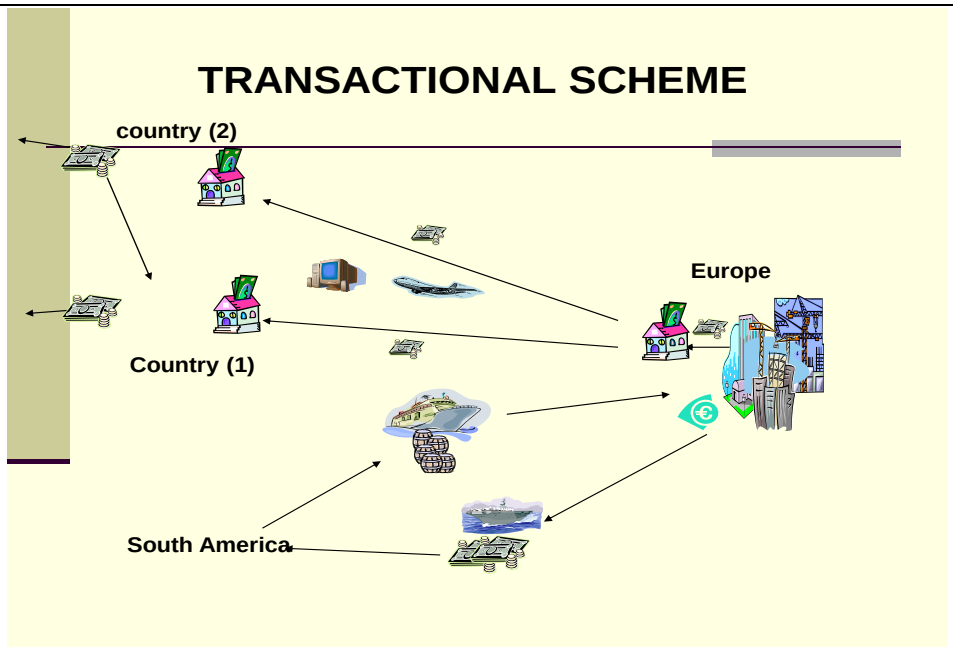
Those companies performed unusual transactions, such as cash deposits in amounts above EUR 500,000 and immediate transfer orders for the same amounts to foreign accounts belonging to Mr. B's bureau de change in Latin-American Country 1 and American Country 2; allegedly for investments in the real-estate sector; money was deposited in low denomination currency and some counterfeit notes were identified as well.

Intelligence information revealed that the account of the bureau de change located in American Country 2, received during a year and a half period, deposits for more than USD 160 million.

Indicators and methods identified in the scheme:

- **Maritime exportation of drugs from America to Europe and cash imports trough the same route.**
- **Incorporation of jewellery and real-estate companies in Europe, managed by citizens of Latin-American Country 1 to launder the money generated from drugs trafficking.**
- **Acquisition of an existing bureau de change in Latin-American Country 1, opening several bank accounts located in Latin-American Country 1, American Country 2 and Latin-American Country 3.**
- **Cash deposits in amounts above EUR 500 000 on behalf of the real state corporations located in Europe and immediate transfer orders for the same amounts to foreign accounts belonging to Mr. B's bureau de changeg in Latin-American Country 1 and American Country 2; allegedly for investments in real state sector.**
- **Intelligence information revealed that the account of the exchange house located in American Country 2, received during a year and a half period, more than USD 160 million.**
- **No continuity in the resources in the accounts.**

[18] Leasing is considered to mean contracts with the sole purpose of granting the use of real property purchased for this purpose in accordance with the specifications of the future user, in exchange for consideration in the form of the periodic payment of instalments to recoup the cost of the asset, excluding the value of the purchase option and financial charges. Leased goods must be used by the user solely for his business purposes. A financial leasing contract must include a purchase option in favour of the user at the end of the lease.



Source: Mexico.

Cheques and Wire Transfers

45. A number of cases revealed that criminals frequently use what might be termed *payable-through accounts* to channel large sums of money, generally through a series of transactions. In many cases sums are initially paid into these accounts in cash, cheques or via international wire transfers. The money never stays in the account for long, the rate of turnover of the funds is high, and the funds are then used to purchase real estate. There would appear to be no commercial or economic justification for using these accounts. The same could apply to correspondent accounts when used as transit account. Suspicion about a legitimate use can be appropriate, when the account has high turnover, it appears to deal exclusively with wire transfer payments (MT 103 plus MT 202 messages) or cheques and the account appears to have no commercial or economic justification for such use.

46. Analysis of the accounts in the cases studied often showed that they were opened for the sole purpose of conducting transactions and operations of this type. The basic purpose of the operation was, as always, to conceal the true origin of the funds and their ownership.

Case study 5.2: Use of a transit account to buy real estate and launder the funds from human being trafficking

(Predicate offence: suspected trafficking in human beings)

A bank's suspicions were raised after a bank cheque was issued to the order of a notary upon request of an Asian national for purchasing real estate. Analysis of the account transactions showed that the account received several transfers from Asians residing abroad and was known through an investigation regarding a network of Asian immigrants.

The analysis showed that the account had been used as a transit account by other Asian nationals for the purchase of real estate.

Indicators and methods identified in the scheme:

- **Instruments: wire transfers, cheques, real estate.**
- **Mechanisms: notary, bank.**
- **Techniques: personal account, purchase of real estate, transit account, incoming wire transfer.**
- **Opportunity taken: use of a transit account by non resident nationals for purchasing real estate.**

Source: Belgium, 2005

Typology 6: Mortgage Schemes

47. Mortgage loans comprise one of the main assets on the balance sheets of banks and other financial institutions. An inherent risk in this activity arises from the fraudulent or criminal use of these products. Through this misuse of the mortgage lending system, criminals or terrorists mislead the financial institution into granting them a new mortgage or increasing the amount already lent. This use constitutes, in the majority of the cases analysed, a part of the financial construction established to carry out criminal activities.

48. It was observed in many instances that financial institutions consider these mortgage products to be low risk. A risk-based approach to monitoring subjects related to money laundering and terrorist financing, similar to those based on customer due diligence or "know your customer" principles, could mitigate some of the risk of this activity.

Illegal Funds in Mortgage Loans and Interest Payments

49. Illicit actors obtain mortgage loans to buy properties. In many cases, illegal funds obtained subsequently are used to pay the interest or repay the principal on the loan, either as a lump sum or in instalments. The tax implications of using these products should also not be overlooked (for example, eligibility for tax rebates, etc.).

50. Front men are also sometimes used to buy properties or to apply for mortgages. The analysed cases seem to indicate that this misuse of mortgages goes hand in hand with a simulated business activity and the related income so as to deceive the bank or other financial institution when applying for the mortgage. On occasion the property is apparently purchased as a home, when in reality it is being used for criminal or terrorist activities (for example, selling or storing drugs, hiding illegal immigrants, people trafficking, providing a safe house for members of the organisation, etc.).

Case study 6.1: Use of illegal funds in mortgage loans and interest payments

(Predicate offence: forgery, deception, fraud, money laundering)

An individual used a front-man to purchase real estate. The value of the real estate was manipulated by using a licensed assessor (realestate agent) to set up a false higher but plausible assessment of the market value of the property after renovation. The bank was willing to grant a mortgage on the basis of this false assessment. After the disbursement of the loan the real estate was paid for. The remaining money was then transferred by the owner to bank accounts in foreign jurisdictions with strict bank secrecy. The renovation took never place. The company finally went into default and the loan could not be reimbursed.

A more detailed version of this scheme (describing all steps in the process) is included in Annex C.

Indicators and methods identified in the scheme:

- **Applying for a loan under false pretences.**
- **Using forged and falsified documents.**
- **The client persisted in representing his financial situation in a way that was unrealistic or that could not be supported by documents.**
- **The loan amount did not relate to the value of the real estate.**
- **Successive buying and selling transactions of the real estate were involved.**
- **The client had several mortgage loans concerning several residences**

Source: Netherlands.

Under-valuation of Real Estate

51. Illicit actors often omit a part of the price from the purchase contract. In other words, the amount listed on the contract of sale is less than the real purchase price paid. The price shown on the contract is paid for with a mortgage loan; whereas the part not appearing on the contract is paid in cash

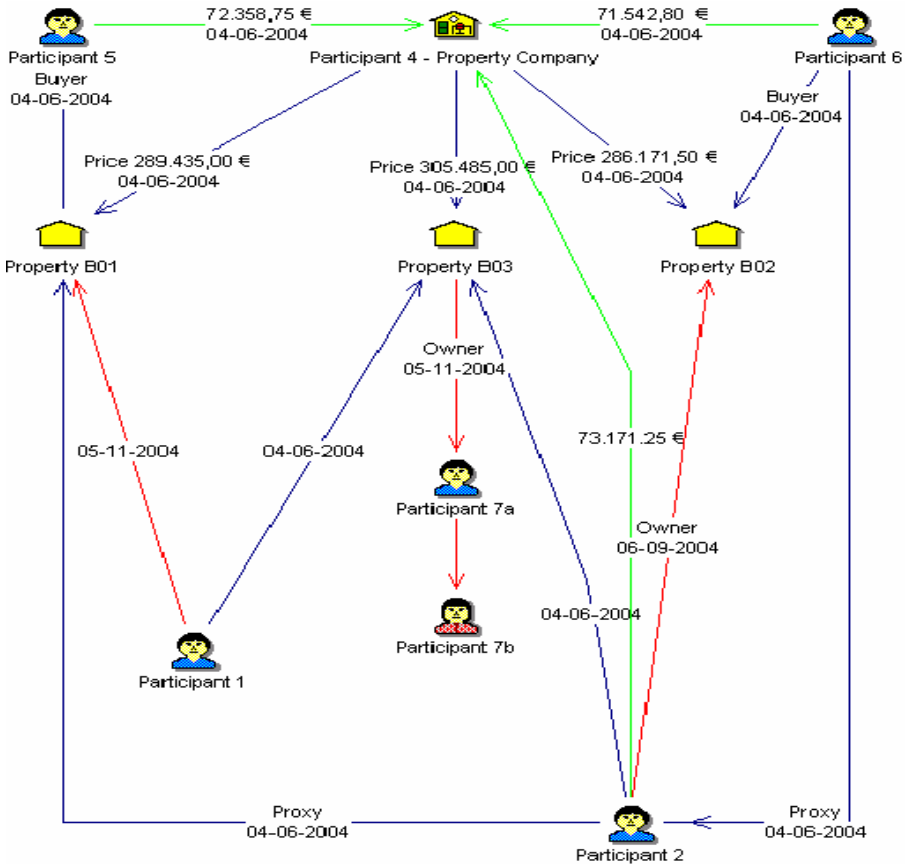
produced by the criminal organisation or terrorist group's criminal activities and is paid to the seller under the table.

52. When the property is sold at fair market price the illicit actor converts illegal income into seemingly legitimate profits. The proceeds might remain available in the bank account of the criminal organisation or terrorist group in the jurisdiction in which the property is located and thus constitute a critical starting point for an investigation.

53. If the criminal organisation or terrorist group is unable to find a seller willing to accept money under the table or is unable to influence the valuation of the property by the independent appraiser, it may still pay for part of the price set in the contract in cash from illegal activities, with a sum of money left over from not using the whole of the mortgage granted to it. In all these scenarios, it should be obvious to the bank or other financial institution that part of the purchase price is being paid via an alternative route, and it should verify whether this is consistent with the known profile of the customer in relation to the customer's pattern of income and expenses.

Case 6.2: Undervaluation of real estate in a terrorist financing scheme

(Predicate offence: money laundering, terrorist financing, manipulation of the appraisal of a property)



The authorities in Country A became aware, during the investigation of the finances of a terrorist organisation in Country B, that the police in Country B had searched the offices of real-estate agents allegedly used by the terrorist group to conceal funds by buying property.

It was found that the owners of the real-estate agents had conducted various real-estate transactions in Country A, either directly or as proxies, using the services of a law firm which had placed its own structure of bank accounts at the disposal of the parties under investigation. Both the law firm and the bank at which it held its accounts were located in Country A.

There was information in Country A regarding the involvement of participants 1 and 2 in the purchase of three properties. On a single day in 2005, Participants 1 and 2 made three deposits of EUR 3 210 each as down-payments to reserve properties in a residential complex in a coastal region of Country A for subsequent purchase. These properties were being built by the property company (Participant 4). Three un-notarised contracts of sale were signed by the property company and Participant 2, acting on his own behalf and as the verbal proxy of the purchasers (Participants 5, 6, 7). On the same day, Participant 1 transferred EUR 210 000 into the current account held by the law firm in Country A (Participant 3).

Three bank drafts were requested, for the sums of EUR 69 000, EUR 68 000, and EUR 73 000, with the funds being drawn from the law firm's current account. These were used to make the first payment against the contract of sale, which named the purchasers and set the final price.

Subsequently, after signing the property transfer documents before a notary in Country A, various assignments were made in the un-notarised contracts of sale that made changes to the final ownership of the properties:

○ Participant 1 ultimately bought property B01, and parking space 01.
○ Participant 2 ultimately bought property B02, and parking space 02.
○ Participants 6 and 7 ultimately bought property B03, and parking space 03.

The law firm (Participant 3) undertook all the legal formalities and attended the signing of the transfer documents and acted as a translator for the purchasers.

To reconstruct the route taken by the funds used to buy the properties and to be reasonably sure of the origin of this money a number of obstacles had to be overcome. The first obstacle was the use of the bank drafts received by the property company in Country A (Participant 4) in each case. Bank drafts were used for the initial payments against the un-notarised contracts and the final payments before signing the deeds[19].

These bank drafts were issued by the main office located near the properties and the relevant funds deducted from current account held by the law firm (Participant 3). Funds transfers were paid into this current account. On some occasions these referred to a person’s name and in others a generic sender.

In the case of the property eventually purchased by Participant 1, at the time of signing the property transfers two certificates issued by a financial institution were submitted, certifying that the funds with which the property was being bought belonged to a non-resident in Country A.

The law firm (Participant 3) stated that at the time of agreeing to act as an advisor to Participant 1 that it knew Participant 1 to be a real-estate agent in Country B and that it was working for third parties who were interested in making investments in Country A, and that for this reason it was unaware of the origin of the funds being paid into its account for the transactions in which it was acting as an intermediary on behalf of Participant 1.

Examining each of the legal and financial transactions described above on their own there does not appear, at first glance, to be any suspicious activity. However, a look at the overall operation provides an argument for the conclusion that the people investigated and the law firm (Participant 3) were facilitating real-estate investments in Country A while hiding the origin of the funds and their true owner.

The purchase of the three properties was designed as a single transaction from the outset:

○ The deposits were paid on the same date, as were the contracts of purchase with the property company (Participant 4) in Country A, and they were all signed by Participant 2.

○ The funds used to make the first payments arrived in a single transfer, against which three bank drafts were requested. These drafts had sequential serial numbers.

○ The three transactions have the same legal structure: payment of the deposit, un-notarised contract of sale, assignment of rights to a second purchaser by means of an un-notarised contract, and deed of sale in the name of a person other than the one who had initially signed the contract with the property company (Participant 4) in Country A.

○ Various legal entities and natural persons acting on behalf of third parties intervened between the property and the final purchaser:

○ The law firm (Participant 3), which had as its client a real estate agent in Country B, carried out legal transactions on behalf of third parties.

[19] In the case of the property bought by Participant 2, it was impossible to obtain evidence of the means of payment used to make the final payment before signing the property transfer documents.

○ From the point of view of the property company, a law firm (Participant 3) and a property company in Country B were buying property on behalf of individuals who paid with bank drafts.

Indicators and methods identified in the scheme:

- **The property which Participants 1 and 2 (who were the managers of the property companies in Country B) were going to buy for themselves was finally assigned to third parties.**
- **The properties that certain third parties were initially going to buy were finally bought by Participants 1 and 2 for themselves.**
- **One of the managers of the property company in Country B, Participant 1, bought an option to buy a property for four times its value even though the property was virtually identical to another which he already had the right to purchase and which he had transferred to a third party at cost. This would imply a profit of >250% if this price was actually paid, although in the contract there is no reference to the form or date of payment.**
- **Participant 1 first bought his property and then one month later applied for a mortgage on it. This may either be for tax reasons or a sign that the funds with which he acquired the property were not his.**
- **In addition to the parties investigated (Participants 1 and 2), there is a thread running throughout the operation as analysed, namely the law firm (Participant 3):**
- **The law firm (Participant 3) placed its current account with a bank in Country A at the disposal of Participants 1 and 2 so that they could send funds, while knowing that as professionals in the property business that they could open non-resident accounts in Country A either in the name of the company for which they worked or in their own names.**
- **The participants also obtained bank drafts for the various payments arising out of the contracts they signed. The combination of the use of bank drafts and the current account of a law firm considerably complicated the task of tracking the funds with which the property was bought, as, starting with the property transfer documentation it is necessary to contact the seller to obtain the bank draft number, and then obtain information about the origin of the funds used to purchase the draft from the bank, to finally arrive at the law firm.**
- **Given the active participation of the law firm in all the legal transactions relating to the properties (from the signing of the first, un-notarised contracts of sale, through to the signing of the property transfer documents, in which the law firm was present to act as a translator for the final buyers) the contract transferring the right of purchase that Participant 1 obtained from the purchaser (Participant 5) for four times its value can only be interpreted as a transaction intended to provide the buyer (Participant 5), or others, with an apparently legitimate origin for at least EUR 200 000.**

Over-valuation of Real Estate

54. Cases have also occurred in which illicit actors overvalued properties in order to obtain the largest possible mortgage. This over-valuation was achieved by manipulating the appraisal or by setting up a succession of purchases. Properties that have a more subjective valuation offer more scope for overvaluation, as is the case of hotel complexes, leisure centres, golf courses, restaurants, unique buildings, etc.

55. When applying for a mortgage, illicit actors often submit false documentation regarding the real value of the property underlying the operation. Additionally, they often use front men or corporate vehicles as a party to the mortgage agreement. The list of participants (for example directors, representatives, etc.) also changes frequently. On occasion, it has been noticed that some time after the mortgage was granted by the financial institution, the borrower defaulted on payment. When the bank tried to recover the debt from the front-man, it found that the latter did not know who was really behind the operation or where they might be located, leading to the debtor's being classified as insolvent. The same thing happens if the defaulter is a corporate vehicle.

Case 6.3: Overvaluation of real estate and used of third parties launder funds

(Predicate offence: money laundering, forged loan agreement)

The parents of Mr X (Mr and Mrs Y) purchased a residential property and secured a mortgage with a Canadian bank. In his mortgage application, Mr Y provided false information related to his annual income and his ownership of another property. The property he had listed as an asset belonged to another family member.

Mr and Mrs Y purchased a second residence and acquired another mortgage at the same Canadian bank. A large portion of the down payment came from an unknown source (believed to be Mr X). The monthly mortgage payments were made by Mr X through his father's bank account. This was the primary residence of Mr X. Investigative evidence shows that Mr X made all mortgage payments through a joint bank account held by Mr and Mrs Y and Mr X.

Mr X then purchased a residential property and acquired a mortgage from the same Canadian bank. Mr X listed his income (far higher than the amounts he had reported to Revenue Canada) from Company A and Company B. Mr X made the down payment and monthly payments. Over two years, Mr X paid approximately CAD 130 000 towards the mortgage. During this time his annual legitimate income was calculated to be less than CAD 20 000.

Mr X also used his brother Mr Z as a front man (nominee) on title to purchase an additional property. Investigators discovered that Mr Z had stated an annual income of CAD 72 000 on his mortgage application listing his employer as Mr X although Mr Z had never worked for his brother, and his total income for two years was less than CAD 13 000.

Mr X made the down payment on this property, and his tenants, who were members of Mr X's drug trafficking enterprise, paid all the monthly mortgage payments. A total of CAD 110 000 was paid towards this property until Mr X and his associates were arrested.

Mr X and his father purchased a fifth property. The origin of the down payment, made by Mr Y, was unknown but is believed to be the proceeds of Mr X's drug enterprise. Monthly payments were made by Mr X.

The use of real estate was one of many methods Mr X employed to launder the proceeds from his drug enterprise. Recorded conversations between Mr X and his associates revealed that he felt it was a fool-proof method to launder drug proceeds.

Mr X was convicted in 2006 of drug trafficking, possession of the proceeds of crime and laundering the proceeds of crime in relation to this case.

Indicators and methods identified in the scheme:

- **The use of real estate was one of many methods Mr X employed to launder the proceeds from his drug enterprise. Recorded conversations between Mr X and his associates revealed that he felt it was a fool-proof method to launder drug money.**
- **The only problem he faced was securing a mortgage alone, so he had to use a nominee to secure the mortgage or to co-sign on the mortgage. A problem surfaced in this investigation when various properties were sold prior to a restraint order being served. This resulted in a portion of the funds being secured in a lawyer's trust account, which could not be restrained. It was the investigator's belief that up to CAD 500,000 was being held in this trust account.**

Typology 7: Investment Schemes and Financial Institutions

56. Direct or indirect investment in the real estate sector by banks and other financial institutions is significant.[20] However, the volume of investment by insurance companies and pension fund managers is also significant, as these institutions place a large part of their long-term liabilities in the property sector at both national and international levels. Bank and other financial institution investment policies demonstrate that investment in property is gaining ground relative to other direct investments.

[20] In the majority of countries, On the balance sheets of banks and financial institutions in most countries, the asset item referred to as credit investments mainly consists of mortgage lending transactions. This means that at times the evolution of the financial system is highly correlated with that of the real-estate sector.

57. Indirect investments are those considered to be limited or in which there is no direct control over the assets of the fund or investment vehicle. Moreover, real estate investment funds may or may not be publicly listed. If funds are unlisted it means that some or the entire fund or investment vehicle is capitalised by the financial institution. The number of co-investors generally ranges from two to ten.

58. The legal structures used for real estate investment funds vary:

- Investment trusts in the real estate sector, either listed or unlisted.[21]
- Companies operating in the real estate sector, either listed or unlisted.[22]
- Associations and unlisted limited companies.

59. A number of cases have revealed that criminal organisations can influence property investment funds in various ways, depending on their degree of involvement:

- Partners in limited companies.
- Co-investors in property investment funds.
- Managers with direct or indirect control over the investment decisions made by property investment funds.

60. Institutions frequently outsource the management of their real estate assets to advisors or intermediaries, who, if they are managers of assets held in trust, may also outsource this task. Thus, several counterparties may be involved in the investment process, beginning with the investment policy set by the financial institution and ending with the investment ultimately made. The criminal organisation or terrorist group may operate or be situated at any point along this chain.

61. Through investment schemes in the real estate sector, the bank or other financial institution may, whether wittingly or not, facilitate or involve itself or become a vehicle for third parties to launder money.

Case study 7.1: Investments in hotel complexes through a front-man

(Predicate offence: organised criminal activities)

On the French west seacoast, an individual presented a project to a district planning authority which involved several real-estate project management companies to develop a golf course with a hundred villas and apartments on property owned by the authority.

The total cost of the operation was very high and was to be funded mostly with funds originating from abroad. The analysis of the FIU revealed that the individual as well as close members of his family had already been involved in previous cases transmitted to the judicial authorities, in which the family had been implicated in the laundering of funds originating from Eastern Europe.

Indicators and methods identified in the scheme:

- **Instrument: real estate.**
- **Mechanisms: bank, district-planning authority, real-estate project management companies.**
- **Techniques: purchase of real estate, involvement of a natural person as an intermediary, high value.**
- **Opportunity taken: the FIU investigations revealed that this individual and members of his family had acted as a front-man for persons from Eastern Europe suspected of being linked with organised crime.**

Source: France, 2006.

[21] Known as *real estate investment trusts* (REITs) in the US and *property investment funds* (PIFs) in the UK.

[22] Known as *real estate operating companies* (REOC) in the US.

Typology 8: Concealing Money Generated by Illegal Activities

62. The use of real estate to launder money seems to afford criminal organisations a triple advantage, as it allows them to introduce illegal funds into the system, while earning additional profits and even obtaining tax advantages (such as rebates, subsidies, etc.).

63. Some areas within the real-estate sector are more attractive than others for money laundering purposes, since the financial flows associated with them are considerable. This makes the task of hiding the funds of illegal origin in the total volume of transactions easier. The real estate sector offers numerous possibilities for money laundering: hotel businesses, construction firms, development of public or tourist infrastructure (especially luxury resorts), catering businesses. It is worth highlighting that over the course of the study, trends in these activities were noticed that depend on different regional characteristics: for example, more cases occur in coastal areas, in areas with a pleasant climate, and where non-resident foreign nationals are concentrated, etc. It is also worth noting that countries which have regions of this kind are more aware of the problem and have increasingly begun to establish appropriate measures and controls in the real-estate sector.

Investment in Hotel Complexes, Restaurants and Similar Developments

64. Real estate is commonly acquired in what is known as the integration or final phase of money laundering. Buying property offers criminals an opportunity to make an investment while giving it the appearance of financial stability. Buying a hotel, a restaurant or other similar investment offers further advantages, as it brings with it a business activity in which there is extensive use of cash.

Case study 8.1: Purchase of real-estate in order to establish a restaurant

(Predicate offence: trafficking in illegal labour force)

An Asian national had purchased real estate in order to start a restaurant that he had financed by a mortgage at Bank A. This mortgage was repaid by transfers from an account opened with Bank B in name of his spouse. Within one year his spouse's account was credited by cash deposits and debited by cash withdrawals, as well as transfers to Bank A.

On the debit side of the account there were also various transfers to China in favour of a natural person. The repayment of the mortgage by transfers from an account opened with another bank in name of his spouse.

The main individual involved was known to be part of network that illegally smuggled foreign workers to Belgium.

Indicators and methods identified in the scheme:

- **Instruments: loan, wire transfer, cash, real estate.**
- **Mechanisms: bank.**
- **Techniques: personal account, purchase of real estate, physical person intermediary, cash deposit, withdrawal, outgoing wire transfer.**
- **Opportunity taken: repayment of the mortgage by transfers from an account opened with another bank in name of his spouse.**

RED FLAG INDICATORS

65. Building on the cases and other information analysed, the participants in this study also identified a number of common characteristics that, when detected individually or in combination, might indicate potential misuse of the real estate sector for ML/TF purposes. These "red flag" indicators when available can assist financial institutions and others in the conduct of customer due diligence for new and existing clients. They also may help in performing necessary risk-analysis in the more general sense for the sector. Thus, valid indicators may help in identifying suspicious activity that should be reported to competent national authorities according to AML/CFT legislation.

66. The indicators developed by this study of the real estate sector are set out in Annex B. They are not intended to represent an exhaustive list of all the possible types of transactions that might be linked to money laundering or terrorist financing. Nor does it imply that the transactions listed are necessarily linked to such activities. It needs to be borne in mind that money laundering always aims to disguise itself as a "normal" transaction. The criminal nature of the activity derives from the origin of the funds and the aim of the participants.

67. Because the international standard in this field primarily focuses on prevention, it is essential to emphasise two types of measures: *i)* Detection of suspicious transactions before they are completed, so as to avoid the funds being fed into the system; and *ii)* analysis of these transactions in cases where it is impossible to detect suspicious activity in order to detect such activity in the future.

ISSUES FOR CONSIDERATION

68. Regarding the real estate sector, there are other issues for consideration apart from the ones previously mentioned that can play a key role in the process of detecting misuse within the sector as a way to channel illicit money. Additionally, all the concerns expressed in the report have policy implications which need to be considered by countries either at a national or international level.

69. This study of typologies should help to identify the weaknesses or loopholes in the prevention systems currently in place, and may lead to the setting up or development of measures to protect the sector from criminal activities linked to money laundering, and thus avoiding its becoming an attractive destination for money obtained from criminal sources.

70. It is therefore important to highlight that the preventive framework to which this report aims to contribute must be constructed in accordance with the preventive measures laid down in these practices or systems. In the same way, it must be pointed out that any relaxation of the controls on these practices or systems could represent an enormous boost to the success of investments in the real estate sector by criminals.

71. In this context, the FATF should play a central role – together with World Bank and International Monetary Fund – in helping develop appropriate measures in emerging markets, as a way to stop illegal money flows.

72. Finally, as the key parties to real estate transactions, DNFBPs need to be encouraged by organisations and legislators in the fight against ML/TF. Real estate agents in particular are involved in the vast majority of real estate transactions and therefore can play a key role in detecting money laundering and terrorist financing schemes. Although this research has demonstrated the growing use of emerging markets and new methods of payments to launder money or finance terrorism through the real estate sector, simpler schemes such as large cash transactions are still commonly used. Because they are in direct contact with buyers and sellers, real estate agents generally know their clients better than the other parties in the transactions. Therefore, they are well placed to detect suspicious activity or identify red flag indicators.

73. The FATF Recommendations recognise the importance of customer due diligence, record-keeping and reporting requirements for the real estate sector. To ensure effective compliance with these requirements, it is important that authorities inform the sector of its obligations and share sector-specific indicators with the industry.

74. Also, it was observed during the research for the project that wire transfers still constitute the best way to allocate money between countries. Although controls have been established within the financial sector and for certain actors within it, settlement systems are still not included in the ML/TF legislation in most countries.

75. Finally, as they are key figures within the real estate sector and its transactions, designated non-financial businesses and professions (DNFBPs) need to be encouraged by organisations and legislators to implement effective AML/CFT measures.

Emerging markets

76. The worldwide market growth of real estate-backed securities and the development of property investment funds has meant that the range of options for real estate investments has also grown. Emerging markets in particular can offer attractive returns at low prices with considerable room for growth. This has not gone unnoticed by many suspected criminals.

77. As a result of a the property boom in emerging markets, it has come to light that many money launderers believe that it is easier to camouflage genuine commercial transactions - funded by their illicitly obtained funds - among the huge number of transactions taking place. Complicating matters is the fact that often these less developed economies do not have an average market price for real estate but rather prices varying across sectors and districts. Examining each and every transaction is impossible, and obtain a clear valuation of its real price is therefore also impossible. At times this situation is made worse by the fact that the banking sector is insufficiently developed, in terms of its financial products and conditions, resulting in financial and company structures that make the tasks of supervision or investigation yet more difficult.

78. Emerging markets often contain several characteristics that are highly favourable for money laundering, including:

- A high level of state intervention as a result of private sector financial structures and banking systems still at the embryonic stage.
- Absence, or limited development, of AML/CFT legislation and absence of indicators of the seriousness and social impacts of these phenomena.
- Lack of foreign capital in sectors other than raw materials.
- Banking and competent authorities (*i.e.* police, tax authorities, courts, etc.) lack training and the means necessary to detect and combat money laundering and terrorist financing.

Wire transfers

79. This method is common to practically all the schemes analysed and is probably one of the most accessible and widely used methods by criminals. The growing introduction of new technologies in financial markets and their increasing globalisation have meant that borders are disappearing and there are fewer obstacles to both legal and illegal activities. It also needs to be borne in mind that as a result of their growing use, the regulatory standards applicable to the financial markets regarding these wire transfers are scant as regards preventing money laundering and terrorist financing, and focus almost exclusively on the standardisation of the data fields used in order to automate and speed up transactions.

80. It needs to be borne in mind that wire transfers can be performed by highly regulated financial institutions and also through by less regulated institutions, such as alternative remittance systems. We need to also include those institutions providing message services and settlement services (*e.g.* FEDWIRE, CHIPS, SWIFT, etc). Therefore differentiating between the providers of the activity on a risk based manner seems appropriate. Additionally, we need to take into consideration the system and instrument used in each institutions to perform their transactions in relation to the regulation level. It means that we need not only consider the institutional regulation, but also if the money flows go through saving accounts, correspondent accounts, cheques, etc that can be considered as wire transfers.

81. The minimal information customers are required to provide in some jurisdictions to prove their identity facilitates the abuse of the system by criminal organisations and terrorist groups by making it possible for them to be almost undetectable while moving large sums of money between countries in seconds. The speed of execution, whether in person or not, the minimal documentation required and the high level of anonymity mean that they are commonly used by money launders abusing these regulatory loopholes. The fact that in only a few countries wire transfer offices are being supervised and subject to anti money laundering and counter terrorist financing requirements, makes the offices even more vulnerable for misuse.

82. Wire transfer systems move billions every day in domestic and international transfers, and although some countries have introduced limited standards for their surveillance, they are extremely difficult to control. It may be concluded from the information compiled that there are no effective

international controls on wire transfers, particularly as regards international transfers. It would be worthwhile to look into the current standards for the category. It could be said that the reliable identification of the parties (payer, payee, etc.) in wire transfer is indispensable to any effective effort to combating money launderings.

Notaries, registrars and similar figures

83. As illustrated throughout this report, notaries and registrars seem to be the weakest link in the chain of real estate transactions, and they may be able to play a role in the detection of high risk transactions relating to the real estate sector. The importance of AML/CFT requirements for third parties has already been recognised by the FATF under Recommendation 9. Due to their central position in the legal system in relation to these real estate transactions, they could potentially also perform a role in centralising and filtering information. However according to the legal professions it is not clear what the boundaries are in complying with the requirements. The FATF is currently undertaking a dialogue with the legal professions and further work in guidance on the recommendation will be elaborated. Some FATF members have charged prevention bodies within the professional associations to which notaries and registrars belong with providing information to the authorities (both judicial and administrative) with powers in relation to money laundering and terrorist financing under the authority of national laws.

84. In countries where the legal professions are considered public servants, a possible solution would be that a system put in operation by notaries and registrars would encompass, in particular, the identification and analysis of patterns of transactions where there is a risk of their concealing money laundering or terrorist financing activities. These models should include mechanisms for notifying financial intelligence units, for example, of those cases in which the level of risk increases or does not decrease after analysis. On this basis, the co-operation of notaries and registrars in the fight against ML and TF would be more clearly supported. It should obviously be pointed out that only a small proportion of these transactions constitute or form part of real money laundering or terrorist financing activities, a conclusion which can only be reached by the competent authorities.

85. Some FATF members consider an overall database at the level of the professional association[23], which would include the majority of the details of all transactions authorised by a notary or registrar and thus serve as the central gathering point for information from these public servants. However, in establishing system like this, countries would also need to consider cost effectiveness and privacy protection issues. A series of risk templates could be applied to this database to extract the relevant information required automatically for subsequent analysis. Approaching openly these gatekeepers and raising awareness on their vulnerabilities and risks as regards to money laundering and or terrorism financing is crucial for the competent authorities in order to reinforce the preventive network against those offences.

[23] From the research, it was clear that, because of the complex nature of real estate transactions, authorities experience difficulties in getting a complete picture of the role played by a person in the financial system. The nationwide database of financial products through which the authorities would be able to locate accounts and other products and then approach the relevant financial institution or other actors in the sector to seek more information through appropriate investigative or judicial means could help in this regard to provide a more complete picture.

ANNEX A - TERMINOLOGY[24]

Beneficial owner: This term refers to the natural person(s) who ultimately owns or controls a customer and/or the person on whose behalf a transaction is being conducted. It also incorporates those persons who exercise ultimate effective control over a legal person or arrangement. As used in this study, the term *beneficial owner* applies as well to the true owner of real property.

Instrument – An ML/TF *instrument* is an object of value (or one which represents value) that in some way or other is used to carry out ML/TF activity. Examples of ML/TF *instruments* include cash funds, cheques, travellers' cheques, precious metals or stones, securities, real property, etc.

Legal arrangements – This term refers to express trusts or other similar structures, such as (for AML/CFT purposes) the *fiducie*, *Treuhand* and *fideicomiso*.

Legal persons – A legal person is a corporate body, foundation, Anstalt, partnership or association, or any similar entities that can establish a permanent customer relationship with a financial institution or otherwise own real property.

Mechanism – An ML/TF *mechanism* is a system or element that carries out part of the ML/TF process. Examples of ML/TF *mechanisms* include financial institutions, money remitters, legal entities and legal arrangements, etc.

Method – In the ML/TF context, a *method* is a discrete procedure or process used to carry out ML/TF activity. It may combine various techniques, mechanisms and instruments, and it may or may not represent a typology in and of itself.

Scheme – An ML/TF *scheme* is a specific operation or case of money laundering or terrorist financing that combines various methods (techniques, mechanisms and instruments) into a single structure.

Technique – An ML/TF *technique* is a particular action or practice for carrying out ML/TF activity. Examples of ML/TF *techniques* include structuring financial transactions, comingling of legal and illegal funds, over- and under- valuing merchandise, transmission of funds by wire transfer, etc.

Trust and Company Service Provider (TCSP): This term refers to all persons or businesses that specialise in acting as a formation agent of legal persons for third parties. For a fuller definition of this type of activity, see the "Glossary" to the *FATF 40 Recommendations*.

Typology – An ML/TF *typology* is a pattern or series of similar types of money laundering or terrorist financing schemes or methods.

This report uses the terminology commonly used by the FATF in its typologies analysis. The following figure illustrates the relationship between the various elements of typologies analysis.

[24] Sources used for these terms include FATF (2003), FATF (2004) and FATF (2005).

ANNEX B - RED FLAG INDICATORS

Building on the cases and other information analysed, the participants in this study also identified a number of common characteristics that, when detected individually or in combination, might indicate potential misuse of the real estate sector for ML/TF purposes. These "red flag" indicators when available can assist financial institutions and others in the conduct of customer due diligence for new and existing clients. They also may help in performing necessary risk-analysis in the more general sense for the sector. Thus, valid indicators may help in identifying suspicious activity that should be reported to competent national authorities according to AML/CFT legislation.

These indicators are not intended to represent an exhaustive list of all the possible types of transactions that might be linked to money laundering or terrorist financing. Nor should it in any way be implied that the transactions listed here are *necessarily* linked to such activities. It should be remembered that activities related to money laundering or terrorist financing are always carried out with the aim of appearing to be "normal". The criminal nature of the activity derives from the origin of the funds and the aim of the participants.

Natural persons

- Transactions involving persons residing in tax havens or risk territories[25], when the characteristics of the transactions match any of those included in the list of indicators.
- Transactions carried out on behalf of minors, incapacitated persons or other persons who, although not included in these categories, appear to lack the economic capacity to make such purchases.
- Transactions involving persons who are being tried or have been sentenced for crimes or who are publicly known to be linked to criminal activities involving illegal enrichment, or there are suspicions of involvement in such activities and that these activities may be considered to underlie money laundering
- Transactions involving persons who are in some way associated with the foregoing (for example, through family or business ties, common origins, where they share an address or have the same representatives or attorneys, etc.).
- Transactions involving an individual whose address is unknown or is merely a correspondence address (for example, a PO Box, shared office or shared business address, etc.), or where the details are believed or likely to be false.
- Several transactions involving the same party or those undertaken by groups of persons who may have links to one another (for example, family ties, business ties, persons of the same nationality, persons sharing an address or having the same representatives or attorneys, etc.).
- Individuals who unexpectedly repay problematic loans or mortgages or who repeatedly pay off large loans or mortgages early, particularly if they do so in cash.

[25] The definition of a risk territory could be either one that is determined by the financial institution or another entity applying the indicator directly or else one that has been defined by the national authorities of the country in which the institution or entity is located.

Legal persons

- Transactions involving legal persons or legal arrangements domiciled in tax havens or risk territories, when the characteristics of the transaction match any of those included in the list of indicators.
- Transactions involving recently created legal persons, when the amount is large compared to their assets.
- Transactions involving legal entities, when there does not seem to be any relationship between the transaction and the activity carried out by the buying company, or when the company has no business activity.
- Transactions involving foundations, cultural or leisure associations, or non-profit-making entities in general, when the characteristics of the transaction do not match the goals of the entity.
- Transactions involving legal persons which, although incorporated in the country, are mainly owned by foreign nationals, who may or may not be resident for tax purposes.
- Transactions involving legal persons whose addresses are unknown or are merely correspondence addresses (for example, a PO Box number, shared office or shared business address, etc.), or where the details are believed false or likely to be false.
- Various transactions involving the same party. Similarly, transactions carried out by groups of legal persons that may be related (for example, through family ties between owners or representatives, business links, sharing the same nationality as the legal person or its owners or representatives, sharing an address, in the case of legal persons or their owners or representatives, having a common owner, representative or attorney, entities with similar names, etc.).
- Formation of a legal person or increases to its capital in the form of non-monetary contributions of real estate, the value of which does not take into account the increase in market value of the properties used.
- Formation of legal persons to hold properties with the sole purpose of placing a front man or straw man between the property and the true owner.
- Contribution of real estate to the share capital of a company which has no registered address or permanent establishment which is open to the public in the country.
- Transactions in which unusual or unnecessarily complex legal structures are used without any economic logic.

Natural and legal persons

- Transactions in which there are signs, or it is certain, that the parties are not acting on their own behalf and are trying to hide the identity of the real customer.
- Transactions which are begun in one individual's name and finally completed in another's without a logical explanation for the name change. (For example, the sale or change of ownership of the purchase or option to purchase a property which has not yet been handed over to the owner, reservation of properties under construction with a subsequent transfer of the rights to a third party, etc.).
- Transactions in which the parties:
  - Do not show particular interest in the characteristics of the property (*e.g.* quality of construction, location, date on which it will be handed over, etc.) which is the object of the transaction.
  - Do not seem particularly interested in obtaining a better price for the transaction or in improving the payment terms.
  - Show a strong interest in completing the transaction quickly, without there being good cause.

  - Show considerable interest in transactions relating to buildings in particular areas, without caring about the price they have to pay.
- Transactions in which the parties are foreign or non-resident for tax purposes and:
  - Their only purpose is a capital investment (that is, they do not show any interest in living at the property they are buying, even temporarily, etc.).
  - They are interested in large-scale operations (for example, to buy large plots on which to build homes, buying complete buildings or setting up businesses relating to leisure activities, etc.).
- Transactions in which any of the payments are made by a third party, other than the parties involved. Cases where the payment is made by a credit institution registered in the country at the time of signing the property transfer, due to the granting of a mortgage loan, may be excluded.

Intermediaries

- Transactions performed through intermediaries, when they act on behalf of groups of potentially associated individuals (for example, through family or business ties, shared nationality, persons living at the same address, etc.).
- Transactions carried out through intermediaries acting on behalf of groups of potentially affiliated legal persons (for example, through family ties between their owners or representatives, business links, the fact that the legal entity or its owners or representatives are of the same nationality, that the legal entities or their owners or representatives use the same address, that the entities have a common owner, representative or attorney, or in the case of entities with similar names, etc.).
- Transactions taking place through intermediaries who are foreign nationals or individuals who are non-resident for tax purposes.

Means of payment

- Transactions involving payments in cash or in negotiable instruments which do not state the true payer (for example, bank drafts), where the accumulated amount is considered to be significant in relation to the total amount of the transaction.
- Transactions in which the party asks for the payment to be divided in to smaller parts with a short interval between them.
- Transactions where there are doubts as to the validity of the documents submitted with loan applications.
- Transactions in which a loan granted, or an attempt was made to obtain a loan, using cash collateral or where this collateral is deposited abroad.
- Transactions in which payment is made in cash, bank notes, bearer cheques or other anonymous instruments, or where payment is made by endorsing a third-party's cheque.
- Transactions with funds from countries considered to be tax havens or risk territories, according to anti-money laundering legislation, regardless of whether the customer is resident in the country or territory concerned or not.
- Transactions in which the buyer takes on debt which is considered significant in relation to the value of the property. Transactions involving the subrogation of mortgages granted through institutions registered in the country may be excluded.

Nature of the Transaction

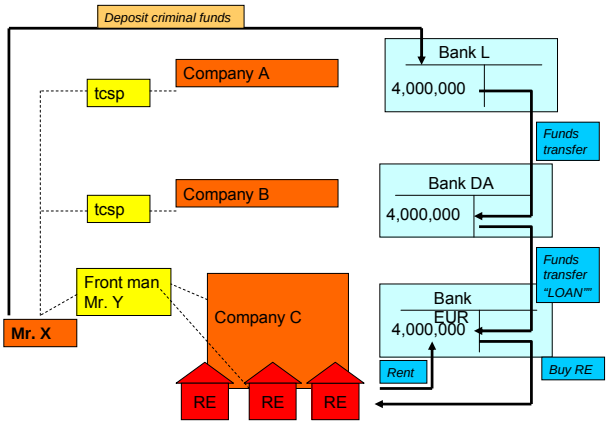
- Transactions in the form of a private contract, where there is no intention to notarise the contract, or where this intention is expressed, it does not finally take place.
- Transactions which are not completed in seeming disregard of a contract clause penalising the buyer with loss of the deposit if the sale does not go ahead.
- Transactions relating to the same property or rights that follow in rapid succession (for example, purchase and immediate sale of property) and which entail a significant increase or decrease in the price compared with the purchase price.

- Transactions entered into at a value significantly different (much higher or much lower) from the real value of the property or differing markedly from market values.
- Transactions relating to property development in high-risk urban areas, in the judgement of the company (for example, because there is a high percentage of residents of foreign origin, a new urban development plan has been approved, the number of buildings under construction is high relative to the number of inhabitants, etc.).
- Recording of the sale of a building plot followed by the recording of the declaration of a completely finished new building at the location at an interval less than the minimum time needed to complete the construction, bearing in mind its characteristics.
- Recording of the declaration of a completed new building by a non-resident legal person having no permanent domicile indicating that the construction work was completed at its own expense without any subcontracting or supply of materials.
- Transactions relating to property development in high-risk urban areas based on other variables determined by the institution (for example, because there is a high percentage of residents of foreign origin, a new urban development plan has been approved, the number of buildings under construction is high relative to the number of inhabitants, etc.).

ANNEX C – COMPLETE CASE STUDIES FOR TYPOLOGIES 1 AND 6

Case Study 1.1: Proceeds of drug trafficking laundered into real estate

Mr. X deposited money earned from drug activities into Company A's account at offshore Bank L. Mr. X set up Company A in order to disguise his identity and to place his criminal funds the bank under false pretences. Mr. X also held **bearer shares** issued by Company A., Mr X. established Company B in another offshore jurisdiction under the same circumstances.



Mr X was shareholder of Company A and B but was not registered as such in the public registers. Mr. X made use of a local trust in each location and gave them power-of-attorney to act as his legal representative (through a trust and company service provider: **TCSP**). The local trusts opened accounts at Bank L and at Bank DA on behalf of Company A and Company B respectively. The trusts explained to the banks that the companies that they represented were part of an international structure and that they wanted to benefit from favourable tax arrangements by means of **inter company loans**. This was the reason given for frequent debits and credits of the accounts for incoming and outgoing foreign funds transfers.

Mr X set up Company C in the European country where he is living. Mr. X is the owner of Company C; however, he uses a **front-man**, Mr Y, who is the owner and manager according to the public register at the Chamber of Commerce and the shareholder register. Company C conducted legal counselling activities. This way Mr. X was able to monitor and control the activities in Company C without becoming known to the authorities. Mr Y opened accounts on behalf of Company C with Bank EUR.

Mr X used Companies A, B and C to set up a **loan-back scheme** in order to transfer, layer and integrate his criminal money. The criminal funds, initially placed in the account of Company A in a bank in an offshore jurisdiction, were ultimately invested into real estate in Europe. The real estate was used to expand his legal counselling activities in Company C. The set up of the international loan-back structure, involving Company A, B and C, complicated the audit trail, legitimated the international funds transfers between the various bank accounts of the companies that Mr X controlled. Also Mr X **co-mingled** the criminal funds, disguised as a loan, with the funds originating from the legal activities of Company C, which made the criminal funds difficult to detect and to trace, thus involving a company with legitimate activities in the money laundering scheme, *i.e.* the integration phase (and avoiding attracting the attention of the authorities).

Mr. X arranged for Mr. Y to buy real estate. To finance the transaction, Mr. X arranged for a loan agreement to be drawn up between Companies B and C. The parties in the contract were the trust of Company B and Mr. Y of Company C. To execute the cash disbursement under the loan, Mr. X ordered the trust of Company A to transfer funds from the account in Bank L to the account of Company B in Bank DA. Next he ordered the trust of Company B to transfer funds from the account in Bank DA to the account of Company C in Bank EUR. The description given to Bank DA en Bank EUR referred to the loan agreement between Company B and C. Both banks did not know about the relationship between Companies B and C. The funds deposited in the account of Company C in Bank EUR were then transferred to the seller of the real estate. Periodically Company C made payments of the principal and interest to Company B from the earnings of the counselling activities. Company B transferred the money to Company A which was used by Mr. X to finance his criminal activities. The interest costs were deducted from the taxable result and declared in the tax return.

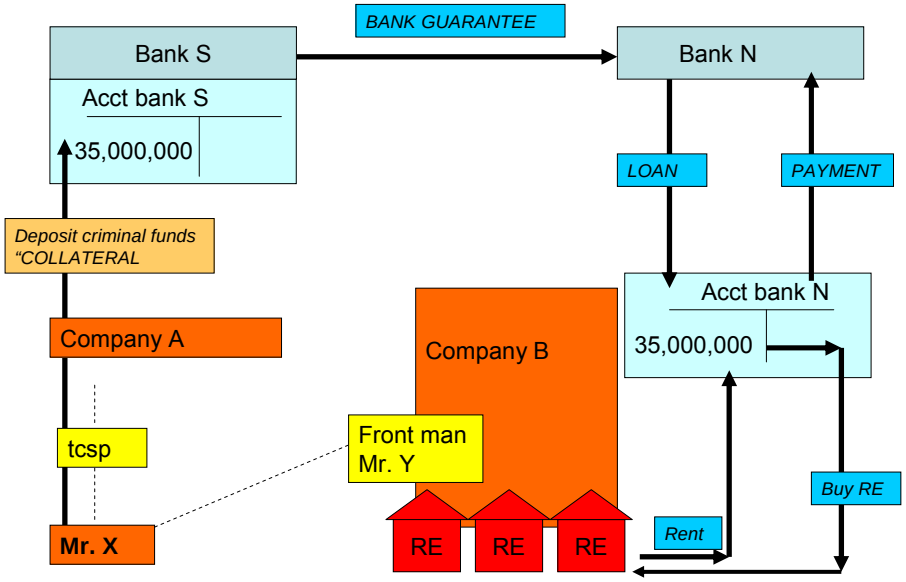
Indicators and methods identified in the scheme:

- **The source of the funds used to finance the real estate transaction was from abroad, in particular from off shore jurisdictions and jurisdictions that have strict bank secrecy.**
- **The lender of the money, an offshore company, had no direct relation with the borrower of the money**
- **A financial institution was not involved in the loan structure.**
- **There was no loan agreement between the lender and borrower.**
- **The loan agreement was legally invalid.**
- **The information in the loan agreement was inconsistent or incorrect.**
- **The conditions in the loan agreement were unusual, for example, there was no collateral required.**
- **No payment of interest or repayment of the principal.**
- **Transaction monitoring by the financial institutions showed payable-through accounts, by which incoming payments from abroad were transferred abroad immediately without a logical reason.**

Source: Netherlands.

Case Study 1.2: Back-to-back Loan Used to Launder Funds

(Predicate offence: forged loan agreement, in particular the failure to mention the security underlying the loan and money laundering)



Mr. X was a criminal who deposited funds via one of his corporate vehicles (Company A) into an account at Bank S. Company A was in an offshore jurisdiction that had strict bank secrecy. Mr X. was the owner of Company A, did not want to disclose his identity and thus used a **TCSP** to manage Company A. Mr. X used Company C to mask his real identity. Mr X also set up and controls Company B of which he is the owner. According to the public registers, the official owner and manager of Company B was Mr. Y who acts as a **front-man**. Company B owned several buildings that were rented out to natural persons and companies. This way Mr. X generated legal rental income via Company B.

Mr. X was short of money from legitimate sources to expand his legal activities. Based on the financial situation of Company B, Bank N was not willing to grant a loan without additional security. He set up a **back-to-back loan** structure to use his criminal money to invest in real estate.

Bank N was willing to lend money to Company B under the condition that Company B provided sufficient collateral and was willing to pay a high-risk premium on top of the market interest rate. Mr. X. arranged for Bank S to provide a **bank guarantee** to Bank N which could be drawn by Bank N on Bank S in case of a default on the loan. Bank N´s credit risk regarding Company B was then fully covered. The loan fit into the financial situation and activities of Company B.

Bank S was willing to provide the bank guarantee to Bank N in name of Company A, with the **pledged deposit** as collateral. The money deposited in Bank S originated from the criminal activities of Mr. X. If Bank N were to withdraw the guarantee on Bank S, Bank S would have used the deposit pledged by Company A to settle the payment with Bank N. For Bank N the original collateral provider Company A, *i.e.* Mr X, was not visible. Bank N only saw Bank S´s guarantee. Bank N lent the money to Company B. Through the payment by Bank N as part of the reimbursement of the back-to-back loan, Mr. X was able to provide a valid reason for the money used to finance the real estate. The collateral originated from criminal activities. The laundered money was invested in real estate that provided for legal rental income.

The earnings of Company B were continuously skimmed off by Mr. X to finance his illegal activities. Company B initially made loan and interest payments to Bank N. After a period of time, Company B stopped the payment of the principal and interest. Based on the loan agreement and the banking terms, Bank N withdrew the bank guarantee on Bank S. Bank S used the pledged deposit to settle the payment to Bank N.

Indicators and methods identified in the scheme:

- **No reference in the loan agreement to the underlying collateral.**
- **The collateral provided was not sufficient**
- **The collateral provider and other parties involved in the loan structure were not known.**
- **The borrower of the money was not willing to provide information on the identity and background of the collateral provider nor on the other parties involved in the loan structure.**
- **The complex nature of the loan scheme could not be justified**
- **There was an unexpected loan default.**

Source: Netherlands.

Case study 6.1: Use of Illegal Funds in Mortgage Loans and Interest Payments

(Predicate offence: forgery, deception, fraud, money laundering)

Mr. X was the owner of Company A and the individual controlling its activities. Mr. X hired Mr. Y as **front man** of Company A. Company A had some low-profile activities in managing and exploiting properties. During the life of Company A, Mr. Y set up a relationship with Bank EUR that provided for accounts and payment services. The property managed by Company A was used for activities by other companies owned by Mr. X (for storage, for example).

Mr. X. planned to buy office buildings for EUR 8 000 000 via Company A. The office buildings had to be renovated to be marketable. Mr. X. knew a licensed assessor (real estate agent), Mr. Z. Mr. X. and Mr. Z found a way to set up a **false but plausible assessments of the market value** of the office buildings after renovation (EUR 13 000 000). Mr. X ordered Mr. Y to negotiate a **mortgage** with Bank EUR to finance the purchase and renovation of the property. Based on the assessment, Bank EUR was willing to grant a mortgage of EUR 13 000 000. Mr. Y entered into the loan agreement on behalf of Company A as the buying party. After the disbursement of the loan, the real estate was paid for. Mr X. then paid Mr. Y EUR 500 000 and had the remaining EUR 4.5 million, together with the proceeds of other criminal activities, transferred into several bank accounts in countries with strict **bank secrecy**. The mortgage of Bank EUR was presented to the foreign banks as the legitimate source of the funds that were being transferred to the accounts. In this way, the money was layered and integrated. The renovation of the office buildings never took place. Meanwhile the activities of Company A rapidly decreased. Company A finally went into default. Bank EUR called the loan, but Mr. Y was not in a position to reimburse it along with the interest payment. Mr Y stated that he was not aware of the persons behind Company A, their whereabouts and the background of the accounts to which the money was transferred.

Indicators and methods identified in the scheme:

- **Applying for a loan under false pretences.**
- **Using forged and falsified documents.**
- **The client persisted in a picture of the financial situation that was unrealistic or that could not be supported by documents.**
- **The loan amount did not relate to the value of the real estate.**
- **Successive buying and selling of the real property involved.**
- **The client had several mortgage loans relating to several residences**

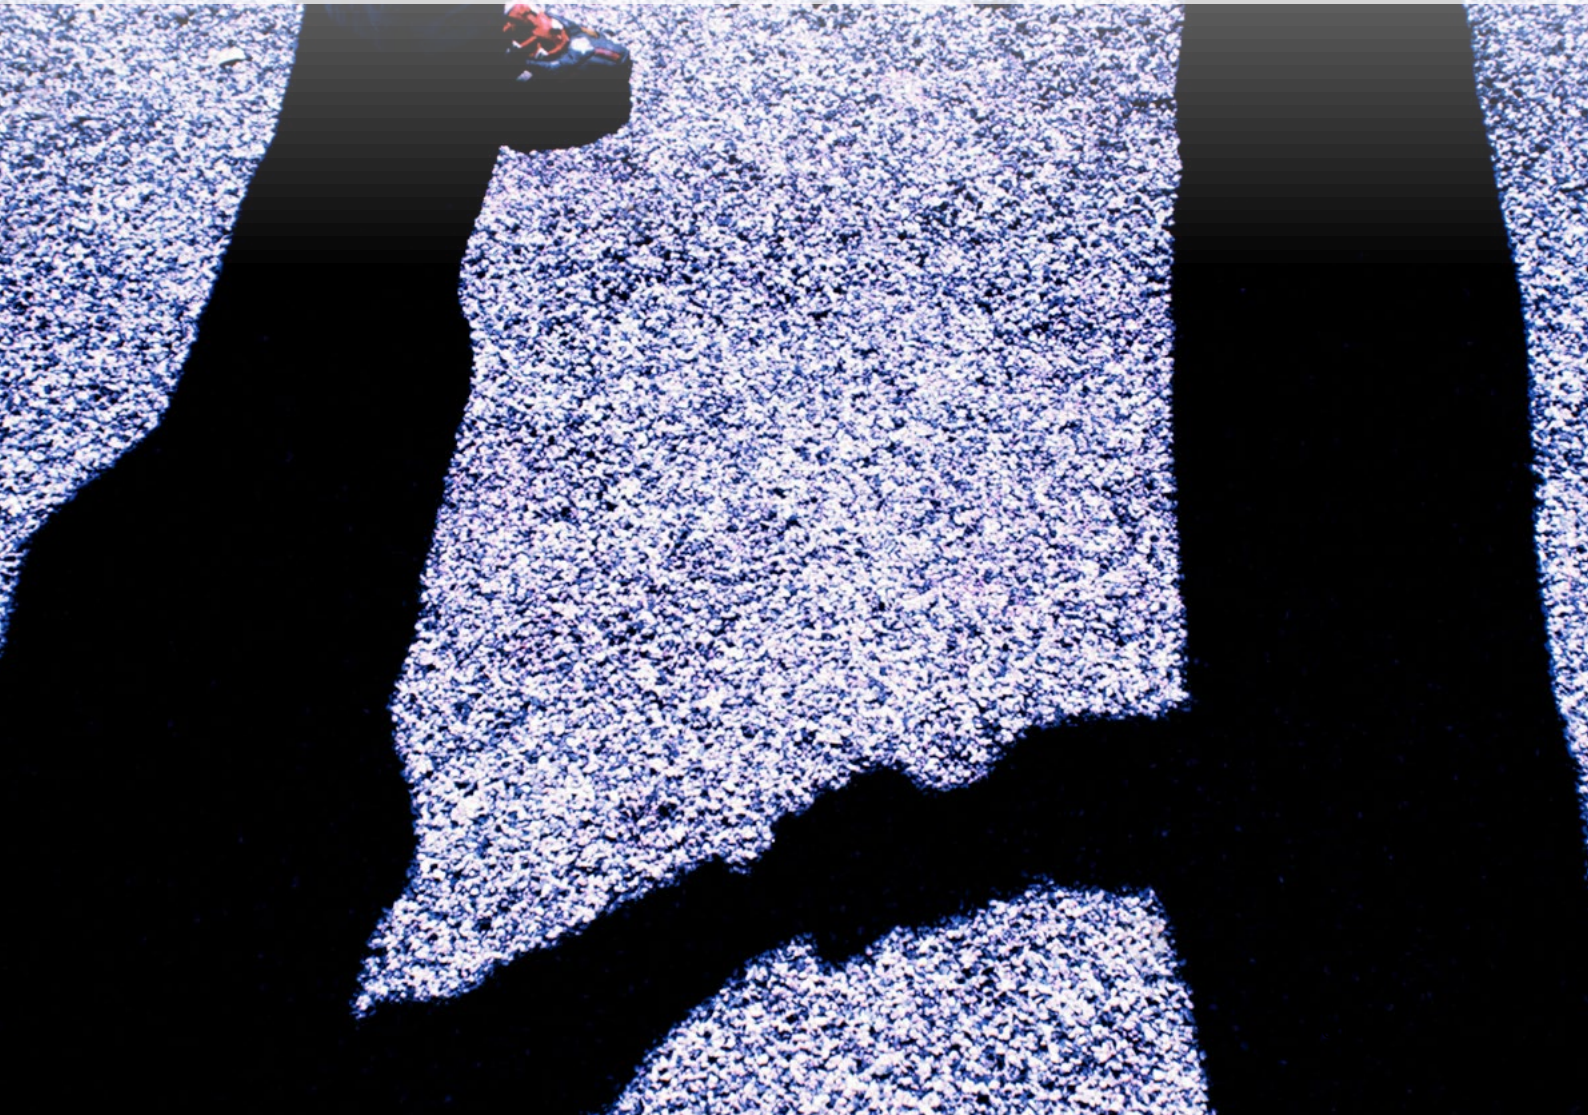
FATF REPORT

Professional Money Laundering

July 2018



The Financial Action Task Force (FATF) is an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction. The FATF Recommendations are recognised as the global anti-money laundering (AML) and counter-terrorist financing (CFT) standard.

For more information about the FATF, please visit **www.fatf-gafi.org**

EXECUTIVE SUMMARY

This is the first time the FATF is undertaking a project which concentrates on professional money launderers (PMLs) that specialise in enabling criminals to evade anti-money laundering and counter terrorist financing safeguards and sanctions in order to enjoy the profits from illegal activities. The report aims to describe the functions and characteristics that define a "professional" money launderer, namely those individuals, organisations and networks that are involved in third-party laundering for a fee or commission. This report is therefore focused on money laundering *threats* as opposed to *vulnerabilities*, and it addresses criminal actors, including organised crime groups that specialise in the provision of professional money laundering services and complicit actors who are knowingly involved, or are deliberately negligent, in the laundering process. While PMLs may act in a professional capacity (e.g. lawyer, accountant) and serve some legitimate clients, the report aims to identify those actors who serve criminal clients whether on a full-time or part-time basis.

PMLs provide services to criminals and organised crime groups by laundering the proceeds of their illegal activities. As the main purpose of PMLs is to facilitate money laundering, they are rarely involved in the proceeds-generating illegal activities. Instead, they provide expertise to disguise the nature, source, location, ownership, control, origin and/or destination of funds to avoid detection. PMLs generally do not differentiate between drug dealers, fraudsters, human traffickers or any other criminal with a need to move or conceal ill-gotten gains. These are all potential PML clients. PMLs operate under a number of business models and may be individuals; criminal organisations with a clear structure and hierarchy; or networks of loosely affiliated members. Providing services to criminals and organised crime groups, PMLs are criminal actors, profiting from these money laundering activities.

PMLs may provide the entire infrastructure for complex money laundering schemes (e.g. a 'full service') or construct a unique scheme tailored to the specific needs of a client that wishes to launder the proceeds of crime. These PMLs provide a menu of generally applicable services, with the result that the same laundering techniques (and potentially the same financial channels and routes) may be used for the benefit of multiple organised crime groups. As such, professional money laundering networks may act transnationally in order to exploit vulnerabilities in countries and particular businesses, financial institutions, or designated non-financial businesses or professions. PMLs, themselves, pose a threat to the financial system, as they facilitate money laundering and criminality more broadly, profiting from these illegal activities. The results of FATF's fourth round of mutual evaluations reveal that many countries are not sufficiently investigating and prosecuting a range of money laundering activity, including third-party or complex money laundering. Many countries continue to limit their investigations to *self-launderers*: criminals who

launder the proceeds of drug trafficking, fraud, tax evasion, human trafficking or other criminality. While this may address in-house or self-laundering, it does not impact on those specialised in providing criminals with money laundering services. PMLs, professional money laundering organisations and professional money laundering networks can survive law enforcement interdiction against any of its criminal or organised crime group clients, while still standing ready to support the next criminal clientele. Effective dismantling of PMLs requires focused intelligence collection and investigation of the laundering activities, rather than the associated predicate offences of the groups using the services of the PMLs. The dismantling of PMLs, can impact the operations of their criminal clients, and can be an effective intervention strategy against numerous criminal targets.

This report identifies the specialist skill sets that PMLs offer their clients in order to hide or move their proceeds, and provides a detailed explanation of the roles performed by PMLs to enable authorities to identify and understand how they operate. This can include locating investments or purchasing assets; establishing companies or legal arrangements; acting as nominees; recruiting and managing networks of cash couriers or money mules; providing account management services; and creating and registering financial accounts. This report also provides recent examples of financial enterprises that have been acquired by criminal enterprises or co-opted to facilitate ML. The analysis shows that PMLs use the whole spectrum of money laundering tools and techniques; however, the report specifically focuses on some of the common mechanisms used to launder funds, such as trade-based money laundering, account settlement mechanism and underground banking.

The project team also examined potential links between PMLs and terrorist financing, however, there was insufficient material provided to warrant a separate section on this topic. The *Khanani* provides the clearest example of a professional money laundering organisation, providing services to a UN designated terrorist organisation. One delegation also noted potential links between a loosely affiliated professional money laundering network and a domestically designated terrorist organisation. However, the vast majority of cases submitted relate to money laundering, rather than terrorist financing.

The non-public version report also explores unique investigative tools and techniques that have proved successful in detecting and disrupting PMLs to guide countries that are seeking to address this issue. The report includes a number of practical recommendations that are designed to enhance the identification and investigation of PML; identify strategies to disrupt and dismantle these entities; and identify steps to prevent PML. Combatting these adaptable PMLs requires concerted law enforcement and supervisory action at the national level, appropriate regulation and effective international co-operation and information exchange. This report emphasises the need for a more co-ordinated operational focus on this issue at a national level, and the importance of effective information sharing between authorities at an international level. The report also identifies the information and intelligence required to successfully identify, map, and investigate PMLs, with the objective of disrupting and dismantling those involved in PML and their criminal clientele.

This report intends to assist authorities at jurisdictional level target PMLs, as well as the structures that they utilise to launder funds, to disrupt and dismantle the groups that are involved in proceeds-generating illicit activity so that crime does not pay.

PROFESSIONAL MONEY LAUNDERING

SECTION I: INTRODUCTION

Purpose, Scope and Objectives

The FATF has conducted a number of studies on money laundering (ML) risks. The resulting reports have usually examined ML threats associated with particular proceeds generating offences or vulnerabilities associated with entities covered under the FATF Standards. This report assesses the threats associated with professional money launderers (PMLs), and does not assess ML vulnerabilities that are covered in other FATF reports. Specifically, the report aims to:

- raise awareness of the unique characteristics of professional money laundering (PML);
- understand the role and functions of those involved in PML;
- understand the business models and specific functions performed by PMLs;
- understand how organised crime groups (OCGs) and terrorists use the services of PMLs to move funds;
- identify relevant ML typologies and schemes;
- develop risk indicators for competent authorities and the private sector that are unique for PMLs; and
- develop practical recommendations for the detection, investigation, prosecution and prevention of PML.

Structure of the Report

Sections II and **III** provide the framework for the report, including key characteristics of PML; differences between individuals, organisations and networks involved in PML; and an explanation of the roles performed by those involved. The aim of these sections is to ensure a consistent dialogue on this topic as countries deepen their understanding of this issue.

Sections IV, **V** and **VI** highlight the main types of dedicated ML networks, including the types of complicit and criminal financial services providers and other professional intermediaries generally involved in PML, and common mechanisms used to launder funds. The types of information within these sections should not be considered finite, as PMLs utilise all ML tools and techniques available to them and continue to adapt their methods to take advantage of regulatory and enforcement gaps.

Methodology

This project was co-led by the Russian Federation and the United States and incorporates input from a variety of delegations across the FATF's Global Network. The project team received submissions from Argentina, Australia, Belgium, Canada, China, Germany, Israel, Italy, Malaysia, the Netherlands, the Russian Federation, Singapore, Spain, the United Kingdom, the United States, EAG Members (Belarus, Kazakhstan, Kyrgyzstan, Tajikistan, Uzbekistan), MONEYVAL (Ukraine), MENAFATF (Lebanon), CFATF (Belize) and EUROPOL.

Authorities provided detailed information, including from risk assessments and case examples of various schemes arranged by PMLs, strategic analysis outcomes, information on internal organisational and behavioural aspects of PMLNs and investigative techniques. The report includes select country examples to provide the necessary context.

Input was also gathered at the Middle East and Africa Joint Typologies and Capacity Building Workshop in Rabat, Morocco, from 22-25 January 2018, and input and feedback gathered at the FATF Joint Experts Meeting held in Busan, Republic of Korea, from 1-4 May 2018. The findings of this report also rely on feedback from financial intelligence units (FIUs) and law enforcement agencies (LEAs), based on their experiences in investigating PMLs.

There has been sparse research on this subject. However, the project team did take into consideration previous and ongoing work by the FATF on operational issues, including the 2012 *FATF Guidance on Financial Investigations*, 2013 *FATF Report on ML and TF Vulnerabilities of Legal Professionals* and the 2018 *Joint FATF/Egmont Report on the Vulnerabilities Linked to the Concealment of Beneficial Ownership*.

SECTION II: CHARACTERISTICS OF PROFESSIONAL MONEY LAUNDERING

This section of the report outlines the key characteristics, which make PML unique, and helps to frame the scope of this report. **Section III** then provides a list of specialised services, which include specific roles or functions performed by various individuals. The report has attempted to avoid the use of formal titles (e.g. controller, enabler and facilitator), as multiple and inconsistent terminology is used globally, which leads to confusion when describing these functions. **Section III** provides a business model demonstrating how PMLs generally conduct financial schemes.

Key Characteristics

PML is a subset of third-party ML. The FATF defines third-party ML as the laundering of proceeds by a person who was not involved in the commission of the predicate offence[1]. The main characteristic that makes PML unique is the provision of ML services in exchange for a commission, fee or other type of profit. While the specialisation in providing ML services is a key feature of PMLs, this does not mean that PMLs are not also involved in other activities (including legal businesses).

[1] FATF Methodology 2013, footnote to Immediate Outcome 7.

Similarly, this does not mean that they exclusively only launder illicit proceeds. PMLs also use specialised knowledge and expertise to exploit legal loopholes; find opportunities for criminals; and help criminals retain and legitimise the proceeds of crime.

Given that PMLs are third-party launderers, they are often not familiar with the predicate offence (e.g. narcotics or human trafficking) and are generally not concerned with the origins of the money that is moved. Nonetheless, PMLs are aware that the money that they move is not legitimate. The PML is concerned primarily with the destination of the money and the process by which it is moved. They are used by clients in order to create distance between those perpetrating the crimes and the illicit proceeds that they generate as profit, or because the criminal clients do not have the knowledge required to reliably launder the money without law enforcement detection.

Ultimately, PMLs are criminals, who often operate on a large scale and conduct schemes that are transnational in nature. The term "PMLs" is not intended to include unwitting or passive intermediaries who are exploited to facilitate an ML scheme. Other features of PMLs are that they sometimes operate on a large scale and often conduct schemes that are transnational in nature.

Commissions / Fees

A number of different and overlapping factors affect the fee paid to PMLs or the commission they receive for their services. The fee will often depend on the complexity of the scheme, methods used and knowledge of the predicate offence. The rate may change based on the level of risk that PMLs assume. For example, commission rates are often influenced by the countries or regions involved in the scheme, as well as other factors such as:

- the reputation of the individual PML;
- the total amount of funds laundered;
- the denomination (i.e. value) of the banknotes (in cases involving cash);
- the amount of time requested by a client to move or conceal funds (for example, if the laundering needs to be done in a shorter time period, the commission will be higher); and
- the imposition of new regulation(s) or law enforcement activities.

To obtain commission for their services, PMLs may (i) take commission in cash in advance, (ii) transfer a portion of money laundered to their own accounts or (iii) have the commission integrated into the business transaction.

Advertising / Marketing

Advertising and marketing of services can occur in numerous ways. Often, this involves the PMLs actively marketing their services by 'word-of-mouth' (through an informal criminal network). Criminal links and trust developed through previous criminal engagement also strengthens bonds and can encourage further co-operation. Authorities have also identified the use of posted advertisements for PML services on the Dark Web.

Record Keeping (Shadow Accountancy)

Law enforcement has reported that PMLs often keep a shadow accounting system that contains detailed records with code names. These unique accounting systems may use detailed spreadsheets that track clients (using code names); funds laundered; the origin and destination of funds moved; relevant dates; and commissions received. PMLs may either store their records electronically (e.g. a password-protected Excel spreadsheet) or use paper records. These records represent an invaluable resource for investigators.

Individuals, Organisations and Networks

PMLs can belong to one of three categories:

1. An **individual PML,** who possesses specialised skills or expertise in placing, moving and laundering funds. They specialise in the provision of ML services, which can also be performed while acting in a legitimate, professional occupation. These services can include, but are not limited to, the following: accounting services, financial or legal advice, and the formation of companies and legal arrangements (see *specialised services*, below). Individual PMLs often spread their risks across diverse products, and carry out business activities with several financial specialists and brokers (see examples below).

2. A **Professional money laundering organisation (PMLO)**, which consists of two or more individuals acting as an autonomous, structured group that specialises in providing services or advice to launder money for criminals or other OCGs. Laundering funds may be the core activity of the organisation, but not necessarily the only activity. Most PMLOs have a strict

hierarchical structure, with each member acting as a specialised professional that is responsible for particular elements of the ML cycle (see **Section III**).

3. A **Professional money laundering network (PMLN)**, which is a collection of associates or contacts working together to facilitate PML schemes and/or subcontract their services for specific tasks. These networks usually operate globally, and can include two or more PMLOs that work together. They may also operate as informal networks of individuals that provide the criminal client with a range of ML services. These interpersonal relationships are not always organised, and are often flexible in nature.

These extensive PML networks are able to satisfy the demands of the client by opening foreign bank accounts, establishing or buying foreign companies and using the existing infrastructure that is controlled by other PMLs. Collaboration between different PMLs also diversifies the channels through which illicit proceeds may pass, thereby reducing the risk of detection and seizure.

PMLOs work with OCGs of all nationalities, on a global basis or in a specific region, often acting as a global enterprise. The same PML can be used to facilitate ML operations on behalf of several OCGs or criminal affiliates. They are highly skilled and operate in diverse settings, adept at avoiding the attention of law enforcement. One relevant case has been identified demonstrating that the same money launderers provided services to both OCGs and terrorist organisations (see Box 1, below).

Box 1. Khanani Money Laundering Organisation

The Altaf Khanani Money Laundering Organisation (MLO) laundered illicit proceeds for other OCGs, drug trafficking organisations and designated terrorist groups throughout the world. The Khanani MLO was an OCG composed of individuals and entities operating under the supervision of Pakistani national, Altaf Khanani, whom the US Drug Enforcement Administration (DEA) arrested in 2015. The Khanani MLO facilitated illicit money movements between Pakistan, the United Arab Emirates (UAE), the United States, the United Kingdom, Canada, Australia and other countries. It was responsible for laundering billions of dollars in criminal proceeds annually.

The Khanani MLO offered ML services to a diverse clientele, including Chinese, Colombian and Mexican OCGs, as well as individuals associated with a US

domestically designated terrorist organisation. The Khanani MLO has also laundered funds for other designated terrorist organisations. Specifically, Altaf Khanani, the head of the Khanani MLO and Al Zarooni Exchange, has been involved in the movement of funds for the Taliban, and Altaf Khanani is known to have had relationships with Lashkar-e-Tayyiba, Dawood Ibrahim, al-Qa'ida and Jaish-e-Mohammed. Furthermore, Khanani was responsible for depositing drug proceeds via bank wires from a foreign business account in an effort to conceal and disguise the nature, source, ownership and control of the funds. Khanani conducted transactions, which involved multiple wire transfers from a number of general trading companies. Khanani's commission to launder funds was 3% of the total value of funds laundered.

The Khanani MLO itself was designated by OFAC in 2015 as a "transnational criminal organisation[1]," pursuant to Executive Order 13581. On the same day, OFAC designated the exchange house utilised by the Khanani MLO, Al Zarooni Exchange. In 2016, the US Treasury's Office of Foreign Assets Control (OFAC) designated four individuals and nine entities associated with the Khanani MLO. On October 26, 2016 Altaf Khanani pleaded guilty to federal ML charges. Approximately USD 46 000 in criminal proceeds was also confiscated from Khanani. In 2017, Altaf Khanani was sentenced to 68 months in prison for conspiracy to commit ML.

Extensive law enforcement co-ordination took place between multiple law enforcement agencies from Australia, Canada and the US who all held a different piece of the puzzle. The designation of Al Zarooni Exchange complements an action taken by the Central Bank of the UAE, with assistance from the AML Unit at Dubai Police General Headquarters, which closely coordinated with the DEA prior to the action taken.

Note: 1. Transnational Criminal Organisation (TCO) is a specific technical term used in the US designation process and is synonymous with organised crime group (OCG), the latter of which is used throughout this report.

Source: United States, Australia, Canada, UAE

OCGs use both outsiders and OCG members to perform ML services on behalf of the group. In cases where there is an in-house component of an OCG that is responsible for ML, these members may receive a portion of the proceeds of the group, rather than a fee or commission. The extent to which PMLs get involved in ML schemes depends on the needs of the criminal group, the complexity of the laundering operation that they wish to execute, as well as the risks and costs associated with such involvement.

When OCGs employ the services of PMLs, they often choose PMLs who are acquainted with persons close to, or within, the OCG network. They can be family members or close contacts. They may also be professionals that previously acted in a legitimate capacity, and who now act as:

- accountants, lawyers, notaries and/or other service providers;
- Trust and Company Service Providers (TCSPs);
- bankers;
- MVTS providers;

- brokers;
- fiscal specialists or tax advisors;
- dealers in precious metals or stones;
- bank owners or insiders;
- payment processor owners or insiders; and
- electronic and cryptocurrency exchanger owners or insiders.

OCGs also make use of external experts on a permanent or ad hoc basis. These experts knowingly operate as entrepreneurs and often have no criminal record, which can aid in avoiding detection. These complicit professionals are increasingly present on the criminal landscape, coming together as service providers to support specific criminal schemes or OCGs (see **Section VI**). PMLs can also provide services to several OCGs or criminal affiliates simultaneously, and are both highly skilled at operating in diverse settings and adept at avoiding the attention of law enforcement.

Compartmentalised relationships also exist, particularly within PMLNs, whereby there may be no direct contact between OCGs and the lead actors responsible for laundering the funds In these instances, transactions are facilitated via several layers of individuals who collect the money (see **Section III**) before funds are handed over to PMLs for laundering.

SECTION III: SPECIALISED SERVICES AND BUSINESS MODELS

PMLs can be involved in one, or all, stages of the ML cycle (i.e. placement, layering and integration), and can provide specialised services to either manage, collect or move funds. PMLOs act in a more sophisticated manner and may provide the entire infrastructure for complex ML schemes or construct a unique scheme, tailored to the specific needs of a client.

There are a number of specialised services that PMLs may provide. These include, but are not limited to:

- consulting and advising;
- registering and maintaining companies or other legal entities;
- serving as nominees for companies and accounts;
- providing false documentation;
- comingling legal and illegal proceeds;
- placing and moving illicit cash;
- purchasing assets;
- obtaining financing;
- identifying investment opportunities;
- indirectly purchasing and holding assets;
- orchestrating lawsuits; and
- recruiting and managing money mules.

Roles and Functions

This section identifies numerous roles and functions that are necessary to the operation of PMLs. These specific functions, outlined below, should not be considered an exhaustive list. Depending on the type of PML, an individual may perform a unique function or perform several roles simultaneously. Understanding these roles is important in order to identify all of the relevant players and ensure that all relevant aspects of PMLs are detected, disrupted and ultimately dismantled.

- ***Leading and controlling***: There may be individuals who provide the overall leadership and direction of the group, and who are in charge of strategic planning and decision making. Control over ML activities of the group is normally exercised by a leader, but may also be exercised by other individuals who are responsible for dealing with the funds from the time they are collected from clients until delivery (e.g. arranging the collection of cash and organising the delivery of cash at a chosen international destination). These individuals are also responsible for determining the commission charged and paying salaries to other members of the PMLO/PMLN for their services.
- ***Introducing and promoting***: There are often specific individuals who are responsible for bringing clients to the PMLs and managing communications with the criminal clients. This includes managers who are responsible for establishing and maintaining contact with other PMLOs or individual PMLs that operate locally or abroad. Through the use of these contacts, the PMLO gains access to infrastructure already established by other PMLs.
- ***Maintaining infrastructure***: These individuals are responsible for the establishment of a range of PML infrastructure or tools. This could include setting up companies, opening bank accounts and acquiring credit cards. These actors may also manage a network of registrars who find and recruit nominees (e.g. front men) to register shell companies on behalf of the client, receive online banking logins and passwords, and buy SIM-cards for mobile communication.

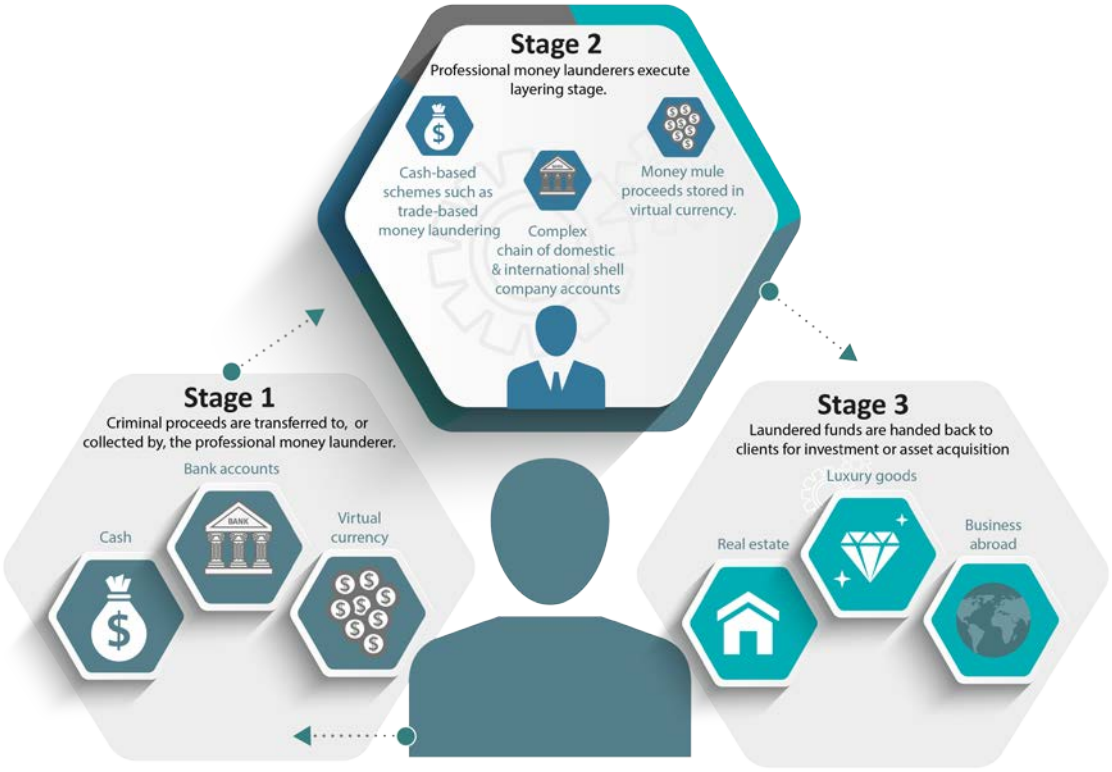
  One example of managing infrastructure is the role of a *money mule herder*, who is responsible for recruiting and managing money mules (e.g. via job ads and via a personal introduction), including the payment of salaries to mules. This salary can be paid either as a fee for their money transfer services or as a one-time payment for their services (see **Section IV** for a wider description of money mule networks and the roles within these specific networks).
- ***Managing documents***: These individuals are responsible for the creation of documentation needed to facilitate the laundering process. In some cases, these individuals are responsible for either producing or acquiring fraudulent documentation, including fake identification, bank statements and annual account statements, invoices for goods or services, consultancy arrangements, promissory notes and loans, false resumes and reference letters.
- ***Managing transportation***: These individuals are responsible for receiving and forwarding goods either internationally or domestically, providing

customs documentation and liaising with transport or customs agents. This role is particularly relevant to TBML schemes.

- ***Investing or purchasing assets***: Where needed, real estate or other assets, such as precious gems, art or luxury goods and vehicles, are used to store value for later sale. Criminals seek assistance in purchasing real estate overseas, and PMLs have been known to use elaborate schemes involving layers of shell companies to facilitate this.
- ***Collecting***: These individuals are responsible for collecting illicit funds, as well as the initial placement stage of the laundering process. Given that they are at the front end of the process, they are most likely to be identified by law enforcement. However, they often leave little paper trail and are able to successfully layer illicit proceeds by depositing co-mingling funds using cash-intensive businesses. These individuals are aware of their role in laundering criminal proceedings (compared to some money mules, who may be unwitting participants in a PML scheme).
- ***Transmitting***: These specific individuals are responsible for moving funds from one location to another in the PML scheme, irrespective of which mechanism is used to move funds. They receive and process money using either the traditional banking system or MVTS providers, and are also often responsible for performing cash withdrawals and subsequent currency exchange transactions.

General Business Model of Professional Money Laundering Networks

Figure 1. Three stages of professional money laundering



In general, financial schemes executed by PMLs consist of three stages:

Stage 1: Criminal proceeds are transferred to, or collected by, PMLs

In the first stage, funds are transferred, physically or electronically, to PMLs or to entities operating on their behalf. The precise manner of introduction of the funds into the ML scheme varies depending on the types of predicate offence(s) and the form in which criminal proceeds were generated (e.g. cash, bank funds, virtual currency, etc.):

Cash: When illicit proceeds are introduced as currency, they are usually passed over to a cash collector. This collector may ultimately deposit the cash into bank accounts. The collector introduces the cash into the financial system through cash-intensive businesses, MVTS providers or casinos, or physically transports the cash to another region or country.

Bank accounts: Some types of criminal activity generate illicit proceeds held in bank accounts, such as fraud, embezzlement and tax crimes. Unlike drug proceeds, proceeds of these crimes rarely start out as cash but may end up as cash after laundering. Clients usually establish legal entities under whose names bank accounts may be opened for the purposes of laundering funds. These accounts are used to transfer money to a first layer of companies that are controlled by the PMLs.

Virtual Currency: Criminals who obtain proceeds in a form of virtual currency (e.g. owners of online illicit stores, including Dark Web marketplaces) must have e-wallets or an address on a distributed ledger platform, which can be accessed by the PMLs.

Stage 2: Layering stage executed by individuals and/or networks

In the layering stage, the majority of PMLs use account settlement mechanisms to make it more difficult to trace the funds. A combination of different ML techniques may be used as part of one scheme. The layering stage is managed by individuals responsible for the co-ordination of financial transactions.

Cash: ML mechanisms for the layering of illicit proceeds earned in cash commonly include: TBML and fictitious trade, account settlements and underground banking.

Bank Accounts: Funds that were transferred to bank accounts managed by PMLs are, in most cases, moved through complex layering schemes or proxy structures. Proxy structures consist of a complex chain of shell company accounts, established both domestically and abroad. The funds from different clients are mixed within the same accounts, which makes the tracing of funds coming from a particular client more difficult.

Virtual Currency: Criminals engaged in cybercrime or computer-based fraud, as well as in the sale of illicit goods via online stores, often use the services of money mule networks (see Section IV). The illicit proceeds earned from these crimes are often held in the form of virtual currency, and are stored in e-wallets or virtual currency wallets that go through a complex chain of transfers.

Stage 3. Laundered funds are handed back over to clients for investment or asset acquisition

In the last stage, funds are transferred to accounts controlled by the clients of the PML, their close associates or third parties acting on their behalf or on behalf of affiliated legal entities. The PML may invest the illicit proceeds on behalf of these clients in real estate, luxury goods, and businesses abroad (or, in some cases, in countries where the funds originated from). The funds can also be spent on goods deliveries to a country where the funds originated or to a third country.

SECTION IV: TYPES OF DEDICATED ML ORGANISATIONS AND NETWORKS

As mentioned in the previous sections, PMLs may move funds through dedicated networks, utilising multiple mechanisms to move funds. These networks, often used during the placement and layering stages in the laundering cycle, are able to quickly adapt and adjust to shifting environmental factors (such as new regulation) and law enforcement activities. PMLs may also provide detailed guidance to assist with the entire ML scheme and often sell "packages" that contain the instruments and services required to facilitate an ML scheme. This section describes the key types of dedicated ML organisations and networks identified through an analysis of case studies: (i) money transport and cash controller networks; (ii) money mule networks; (iii) digital money and virtual currency networks; and (iv) proxy networks.

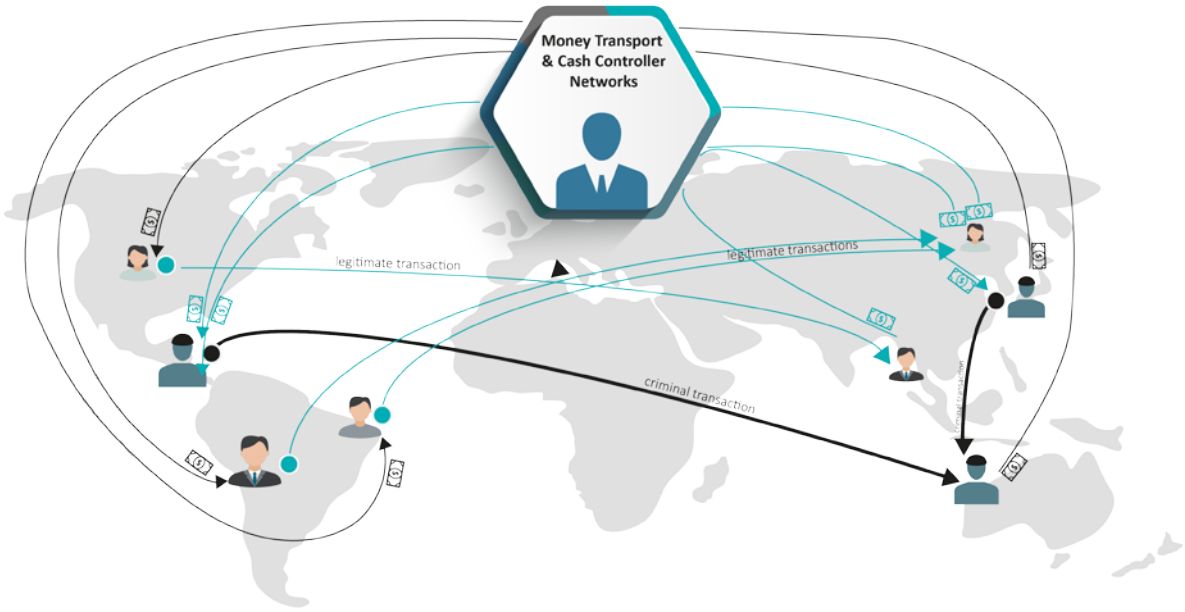
Money Transport and Cash Controller Networks

Criminals and OCGs that generate significant amounts of cash often use the services of cash controller networks that are capable of transferring vast sums of cash on their behalf. These international controller networks have the capacity to receive, hand over and transfer criminal proceeds, while charging a processing fee. Generally the structure of these networks consists of individuals who *control, co-ordinate, collect and transmit illicit funds,*[2] and who operate together to negotiate deals with the OCG.

Cash controller networks often orchestrate the laundering of the proceeds of crime for multiple OCGs located worldwide through an account settlement system, whereby illicit proceeds are substituted for legitimate funds. The ML technique employed sometimes involves the transfer of criminal funds through the accounts of unwitting customers who receive funds or payments from abroad. In this scheme, legal funds, which are to be transferred into the bank account of an unwitting third party, are substituted by the launderer with the illicit proceeds of the OCG. The launderer deposits the money in amounts under the reporting threshold to avoid detection.

[2] See roles and functions defined in Section III

Figure 2. Money Transport and Cash Controller Network



Amounts deposited do not immediately match the overall sums of illicit proceeds. However, in the long term, the value of illicit proceeds collected against the value of deposits tends to be equivalent. Where this is not the case, the PML may resort to other trade-based techniques, such as fake or over invoicing, in order to legitimise the movement of funds between two or more jurisdictions, to balance the system. This technique allows the PML to oversee payments made in another country, without the risk of being detected by holding bank accounts in their own name(s).

If an international cash controller network works with criminals and OCGs operating in different countries, it may easily avoid conducting cross-border transfers of funds, with the support of an account settlement mechanism (see Section V). The chart, below, illustrates the operations of an international cash controller network in four different situations.

Box 2. Cash Controller Network and Account Settlement Scheme

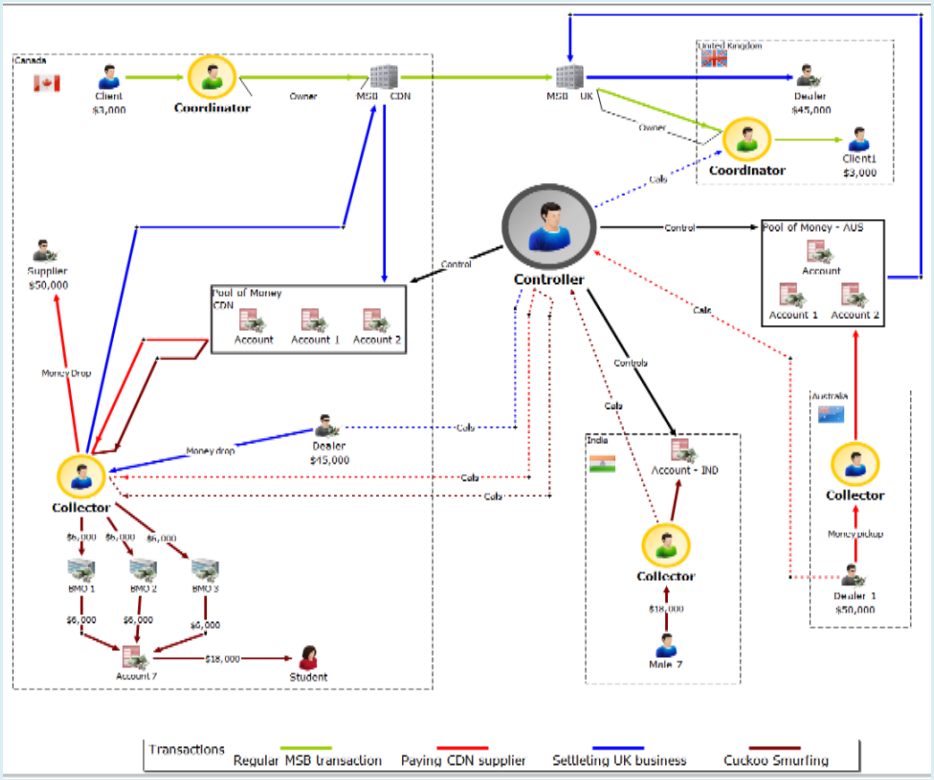
USD 3 000 GREEN: Basic transaction. The Canadian client wants to send money to another client in the UK. It is conducted through the MVTS provider's intermediary.

USD 50 000 RED: An Australian dealer wants to pay its Canadian supplier. The dealer contacts the controller to arrange the transfer. The controller instructs the collector to pick up money. The money is now part of a pool of money in that country under the control of the controller. The controller instructs his Canadian collector to take money from his Canadian pool of money to conduct a money-drop.

USD 45 000 BLUE: The Canadian dealer wants to settle an account in the UK.

The dealer contacts the controller and arranges a pick-up. The collector picks up the money and is instructed to deliver it to a complicit transmitter to place the money into bank accounts (structuring). This increases the Canadian pool of money. The controller then takes money from the UK pool and instructs the UK collector to deliver the money.

USD 18 000 MAROON: A father in India wants to send money to his daughter in Canada. The funds are sent through a hawala network[1]. The collector secures the contract for the controller. The controller then directs his Canadian collector to disperse deposits into the individual`s bank account. He visits three different branches to structure the deposits into the account.



Note: 1. For further information about hawala, see FATF, *Role of Hawala and Other Similar Service Providers in ML and TF*, October 2013

Source: Australia

The laundering of criminal proceeds generated in cash may include the physical transportation of bulk cash. Recent cases show that services to transport cash are also being outsourced to specialised cash transportation networks that are responsible for collecting cash, transporting it to pre-determined locations and facilitating its placement in the financial system. One of the recent examples of efforts taken to combat cash transportation networks that provide services to drug trafficking organisations operating in Europe is EUROPOL's Operation Kandil. The network was responsible for collecting the proceeds of heroin sales throughout Europe (Spain, the Netherlands, Italy and the UK) and transporting this cash to Germany, where it was placed into the financial system through the purchase of second-hand cars, spare parts and equipment.

Box 3. Operation Kandil – Use of Cash Courier Network

In 2016, authorities from Germany, supported by EUROPOL experts, took action against an Iraqi OCG (based in Germany) that was suspected of performing ML services for international heroin traffickers. The operation was preceded by extensive and complex criminal investigations, supported by EUROPOL, which coordinated the law enforcement authorities in France, Spain, Germany and the Netherlands, mirrored by EUROJUST's co-ordination of judicial authorities.

This criminal syndicate, composed mainly of Iraqi nationals, was responsible for collecting the proceeds of heroin sales throughout Europe (Spain, the Netherlands, Italy and the UK) and laundering these funds to the Middle East through Germany, with an estimated total amount of EUR 5 million already laundered.

The criminals' modus operandi involved the use of cash couriers traveling by car to pick up dirty cash all over Europe. This was followed by the use of TBML techniques to transmit the value to the Middle East, primarily through the shipment of second-hand cars; heavy machinery and construction equipment purchased in Germany and exported to Iraq, where the goods were ultimately resold in exchange for clean cash.

The OCG was then able to make use of MVTS services and unregulated financial channels (the hawala system) to integrate and further transfer funds into the regulated financial system. This left virtually no paper trail for law enforcement.

Professional service providers, such as solicitors, accountants and company formation agents, provided the skills and knowledge of financial procedures necessary to operate this scheme. Although, few groups are known to provide these services, they launder large amounts of money, and have a considerable impact on the ability of other OCGs to disguise and invest criminal proceeds. These syndicates are a significant obstacle to tracing criminal assets.

Source: EUROPOL (Germany)

Money Mule Networks

One of the significant elements of many PML schemes is the use of money mules. Money mules are people who are used to transfer value, either by laundering stolen money or physically transporting goods or other merchandise. Money mules may be willing participants and are often recruited by criminals via job advertisements for 'transaction managers' or through online social media interactions. Money mule recruiters are also known as mule 'herders.' Money mules may be knowingly complicit in the laundering of funds or work unwittingly, or negligently, on behalf of a PMLN or OCG. Cyber criminals tailor their recruitment techniques based on the prospective mule's motivations. For example, these criminals will also offer off-the-record cash payments and free travel to incentivise and recruit "witting" mules motivated by easy money and free travel.

Box 4. Use Of Money Mules to Launder Criminal Proceeds

Person A was recruited by a Nigerian syndicate to receive money in her bank accounts. She was promised commissions of up to SGD 5 000 (EUR 3 160) for each transaction. Person A received criminal proceeds from fraud committed in the US and the Bahamas into her bank accounts. Most of the funds were transferred out or withdrawn within a few days of receipt, upon instructions of the Nigerian-based OCG.

Not only did Person A serve as a receptacle for illicit proceeds, she also recruited two other money mules. The control of the mules' bank accounts allowed her to obscure the locations of the illicit proceeds through layering, and enabled her to evade detection as the funds were spread out over multiple accounts. Through this network, Person A and her money mule network received a total of 12 fraudulent wire transfers, amounting to SGD 5 million (EUR 3 16 million) from overseas victims into their bank accounts in Singapore, within a period of six weeks.

Person A was convicted and sentenced to 72 months' imprisonment for receiving stolen property and ML offences.

Source: Singapore

PMLs frequently recruit money mules from diaspora networks and ethnic communities. A sizeable amount of money mule transactions are linked to online illicit stores and cybercrime, such as phishing, malware attacks, credit card fraud, business e-mail compromise and various types of other scams (including romance, lottery and employment scams).

Some money mules are unaware that they are being used to facilitate criminal activity. Unwitting mules are used by OCGs to cash counterfeit checks and money orders or purchase merchandise using stolen credit card numbers or other personal identification information. In some cases, the mules may suspect that the source of the money that they are moving is not legitimate. Such wilfully blind money mules often use income earned to supplement their regular income because they are facing financial difficulties or are motivated by greed.

In the past, money mules have been viewed as low-level offenders, transferring small amounts of cash. However, organised, sophisticated money mule schemes have evolved as a PML mechanism. These money mule networks are controlled by a hierarchical structure, and are well-resourced and highly effective in laundering funds. Money mule networks are usually associated with OCGs that operate cross-border, particularly those involved in cybercrime and the sale of illicit goods through online stores. Typically, these schemes involve criminals that create apparently legitimate businesses, hiring unsuspecting individuals whose jobs involve setting up bank accounts to receive and pass along supposedly legitimate payments. In reality, these unsuspecting individuals act as money mules, processing the criminals' illicit proceeds and wiring them to other criminals.

Money mule networks have been used to open numerous individual bank accounts locally as well as in global financial centres to facilitate the movement of criminal

proceeds. Bank accounts, opened by the mules, serve as the initial layering stage in the laundering process. This indicates that criminals still find the combination of money mule accounts, cash withdrawals and wire transfers to be an effective way to layer proceeds.

Box 5. Avalanche Network

Avalanche is an example of a criminal infrastructure dedicated to facilitating privacy invasions and financial crimes on a global scale. Avalanche was a hosting platform composed of a worldwide network of servers that was controlled via a highly organised central system. This cyber network hosted more than two dozen of the world's most pernicious types of malware and several large scale ML campaigns.

The Avalanche network, in operation since at least 2010, was estimated to serve clients operating as many as 500 000 infected computers worldwide on a daily basis. The monetary losses associated with malware attacks conducted over the Avalanche network are estimated to be in the hundreds of millions of USD worldwide.

The Avalanche network offered cybercriminals a secure infrastructure, designed to thwart detection by law enforcement and cyber security experts. Online banking passwords and other sensitive information stolen from victims' malware-infected computers was redirected through the intricate network of Avalanche servers and ultimately to back-end servers controlled by the cybercriminals. Access to the Avalanche network was offered to the cybercriminals through postings on exclusive, dark web criminal forums.

The types of malware and money mule schemes operating over the Avalanche network varied. Ransomware such as Nymain, for example, encrypted victims' computer files until the victim paid a ransom (typically in a form of crypto-currency) to the cybercriminal. Other malware, such as GozNym, was designed to steal sensitive online banking credentials from victims in order to use those credentials to initiate fraudulent wire transfers from the victims' bank accounts.

The ML schemes operating over Avalanche involved highly organised individuals, who controlled server networks and money mules, which were a crucial part of the criminal network. In some cases, the leaders would use a network of individuals to open bank accounts in major global financial hubs to facilitate wire transfers. The mules were often sponsored by the leader of a particular, country-based network and brought to the US, or, they were unwitting individuals who were recruited. The mules purchased goods with stolen funds, enabling cybercriminals to launder the money they acquired through malware attacks or other illegal means.

Source: United States

Digital Money and Virtual Currency Networks

PMLs also arrange schemes that allow criminals to cash out proceeds generated in virtual currency via online illicit markets (e.g. Dark Web drug-trafficking marketplaces). In many cases, payments for illicit drugs purchased online are transferred to e-wallets held in fiat currency or in virtual currency (e.g. Bitcoin). Afterwards, virtual currency is transferred through a complex chain of e-wallets, which may include the use of mixers and tumblers to further enhance the anonymity of the virtual currency transactions. Funds are then sent back to the e-wallet of the OCG, and subsequently transferred to bank cards and withdrawn in cash.

Financial instruments are issued under the names of money mules (usually students who obtain a bank card and then sell the bank card to criminals for a fee, knowing nothing about its subsequent usage and associated criminal activities). Money mules employed by the PML conduct ATM withdrawals in a coordinated manner, and then give the money to members of the client OCGs.

There are cases when the same financial scheme and the network of individuals worked for the benefit of multiple OCGs operating on the Dark Web. These persons then re-distributed funds to the respective OCGs.

Box 6. Laundering Proceeds from Dark Web Drug Stores

The Russian Ministry of Internal Affairs and FIU conducted an investigation into OCGs that sold drugs via the Dark Web. Customers could choose two ways to pay and transfer funds for their order either by an indicated e-wallet, held in fiat currency, or to a Bitcoin address. The majority of clients preferred using e-wallets held in fiat currency, instead of Bitcoins.

The financial scheme for the drug stores was arranged and managed by a financier and his network. The ML network was responsible solely for moving funds and had no links to drug trafficking. Numerous e-wallets and debit cards were registered in the names of front men. This usually involved students who issued e-wallets and credit cards, and then sold them to members of the ML network, unaware of the criminal purpose of their further usage. Some e-wallets were used at the placement stage of the laundering process and had a limit of USD 300 000, while other e-wallets had a higher limit.

To simplify the ML process, the network's IT specialists developed a 'transit-panel' that had a user-friendly interface and was accessible via the TOR browser. The transit panel automatically switched between e-wallets that were used for drug payments. Digital money was automatically moved through a complex chain of different e-wallets.

Money from e-wallets was then transferred to debit cards and withdrawn in cash via ATMs. Withdrawals via ATMs were conducted by "cash co-ordinators" who had multiple debit cards at hand (all cards were issued on the names of straw men[1]). Afterwards, cash was handed over to interested parties. In order to increase the complexity, proceeds were re-deposited on a new set of debit cards and transferred to the OCGs (usually located abroad).

In similar schemes, funds from e-wallets were exchanged into Bitcoins via virtual currency exchangers. The Bitcoins were used to pay salaries to members of the drug trafficking organisation. This included low-level members, such as small dealers and runners who facilitated the sale of drugs. The same financier worked with multiple owners of the Dark Web stores, distributing the laundered funds to the respective OCGs.

Note: 1. The term "straw men" refers to informal nominee shareholders and directors who are being controlled by the actual owner or controller of the company.

Proxy Networks

Proxy networks are PMLs who supply a type of banking service to OCGs, generally through the use of multi-layered transfers via bank accounts. These specialised services offer all of the advantages that come with moving funds globally via the legitimate financial sector. The main task of these proxy networks is to move client funds to the final, pre-determined destination and to obfuscate the trail of the financial flows. In many cases, these schemes are supported by TBML mechanisms.

PML schemes that are arranged with the use of bank accounts consist of multiple layers of shell companies in different jurisdictions, which have been established purely to redistribute and mix funds from various sources. These shell companies could be located in the country where the predicate offence occurred, transit countries or countries where the final investment of funds is conducted. This scheme is designed to make the portion of funds that belong to a client untraceable. In most cases, laundered funds are transferred to a client's personal bank account(s), affiliated companies or foundations under their control, or handed over to them as physical cash.

In general, a cross-border ML scheme arranged by a proxy network has the following structure:

- **Step 1:** Clients' funds are transferred to accounts opened in the name of shell companies controlled by the PML, often through the use of legal entities controlled by them, or entities operating on their behalf. If the criminal proceeds were obtained in cash, controllers arrange to collect and deposit the cash into the accounts of PML-controlled shell companies.
- **Step 2:** Funds are moved through a complex chain of accounts established by domestic shell companies under fictitious contracts. The funds from different clients are mixed within the same accounts, which makes it difficult for investigators to trace the funds coming from a particular client.
- **Step 3:** Funds are transferred abroad under fictitious trade contracts, loan agreements, securities purchase agreements, etc. In most cases, accounts of the first-level layer of foreign companies are controlled by the same money launderers, who facilitated Step 1, or by foreign PMLs who act in collaboration with the domestic money launderers.
- **Step 4:** Funds are moved through a complex chain of international transfers. The ML infrastructure used (i.e. accounts set up by shell companies) is typically used to channel money that comes from all over the world. These

international money transfers often demonstrate similar geographical patterns.

- **Step 5:** Funds are returned to the accounts controlled by the initial clients, their close associates or affiliated legal entities and arrangements. Alternatively, the PML will purchase goods and services on behalf of the OCG. PMLs that arrange these schemes provide different reasons to justify or legitimise the wire transfers they conduct. These may include trade in various goods and services, import/export services, loans, consultancy services or investments. PMLs look for loopholes and other possible purposes for payments that give the veneer of legitimacy to these transactions. Bank accounts are chosen to make the activity appear legitimate, and to avoid suspicious transactions reporting and/or instances where the transaction are blocked by financial institutions. For example, PMLs use accounts of various characteristics (i.e. accounts where the activity volume was small, medium or large), in accordance with the sums laundered.

Box 7. Facilitating the Laundering of Proceeds from Bank Fraud

In 2015, Russian law enforcement authorities, in co-operation with the FIU and the Central Bank, disrupted a large-scale scheme to embezzle funds and subsequently conduct illicit cross-border transfers.

During the course of the investigation, it was established that OCG members assisted in stealing assets from a number of Russian banks. Typically, the bank management team knowingly granted non-refundable loans and conducted fictitious real estate deals, which led to the bank's premediated bankruptcy. Illicit proceeds were then moved abroad via accounts of shell companies.

Law enforcement authorities and the FIU, in co-operation with foreign counterparts, detected a wider scheme of illicit cross-border money transfers that was used to move proceeds from several predicate offences abroad. Funds were moved via accounts of domestic shell companies and offshore companies (registered in the UK, New Zealand, Belize and other jurisdictions), with their accounts held by banks in Moldova and Latvia, under the pretext of fictitious contracts and falsified court decisions.

One of the major launderers of this scheme received profits for his services in his own personal bank accounts from two offshore companies that were used in the scheme.

The OCG consisted of more than 500 members. Law enforcement authorities seized more than 200 electronic keys of online bank accounts; more than 500 stamps of legal entities; shadow accountancy documents, copies of fictitious contacts; and cash. Bank managers and other complicit individuals were arrested.

Source: The Russian Federation

Social engineering frauds and other types of Internet-based fraud are often a source of illicit proceeds that may be laundered through a proxy network:

Box 8. Creating Infrastructure to Launder Funds

This investigation was conducted by a specially designated Israeli Task Force for PML investigations, which includes members from the Israeli Police, Tax Authority, IMPA (FIU) and Prosecution. The investigation also involved the co-operation of LEAs in another country.

The suspects of the investigation were criminals conducting massive fraud and extortion, as well as PMLs, who assisted the predicate offenders in laundering the proceeds of crimes. Funds were laundered using shell companies established in Europe and the Far East. "Straw men," couriers and hawala-type services. The companies were established in advance in countries that were less susceptible for illegal activity in the eyes of the fraud victims.

The PML built the infrastructure that enabled the ML activity, which in turn was part of a global ML network. The PML, through the use of other individuals, opened foreign bank accounts, established foreign companies, and also used a repatriation network of foreign immigrants to move funds as part of the ML network.

The suspects transferred fraudulent proceeds to bank accounts opened in the name of the shell companies and straw men. The funds were then transferred to other bank accounts in the Far East and immediately the suspects withdrew money in cash by using couriers, hawala networks and MVTS providers in Israel to transfer the funds to their final destinations.

During the investigation, an Israeli suspect (one of the PMLs) was arrested by an LEA of a third country. This assisted the investigation in understanding the modus operandi of the PMLN. It was established that the PML of the network was also able to provide bank accounts of various characteristics (i.e. accounts where the activity volume was small, medium or large in accordance with the sums laundered). The bank accounts were thus chosen to make the activity look legitimate, avoiding unusual activity reports and/or instances where the transaction is blocked by the financial institution concerned.

Source: Israel

Proxy networks that facilitate cross-border movement of funds often tie into a wider network of other PMLs in several countries for the purpose of moving and laundering funds to and from the country where the predicate offence took place. PMLs who facilitate the outgoing flow of funds from the country where the predicate offence was conducted are typically part of a broader, global ML network that specialises in moving illicit proceeds around the globe. Some third-party money launderers, identified by responding countries, also acted through collaboration with other PMLs operating abroad which provided ML services at their request. The use of a global network of PMLs, located in different countries, as well as using different methods to transfer funds internationally, ensures the diversification of financial transactions and helps to limit the risk of detection. An analysis of proxy networks shows that PMLs may change their *modus operandi* and employ different contacts as needed.

Box 9. Large-Scale International Money Laundering Platform

A financial investigation was initiated into the embezzlement of public funds and suspected corruption, which led to the detection of a large-scale international ML platform that was used to move funds originating from different sources.

The proceeds of crime were moved to accounts of shell companies held with banks in Latvia, Cyprus and Estonia. The criminal proceeds were further transferred to accounts of companies controlled by the beneficiary's close associates and then moved back to Russia. Further investigation revealed that various companies used the same channel to move the funds.

A criminal proceeding on articles "Fraud", "Arrangement of organised criminal group" and "Money Laundering," according to the Criminal Code of the Russian Federation, was opened. The Central Bank of the Russian Federation withdrew the license of the Russian bank that facilitated frequent cross-border money transfers under fictitious contracts for violations of AML legislation. The European Central Bank also withdrew the license of a Latvian bank that facilitated the redistribution of criminal proceeds. A significant portion of funds was frozen on the accounts held by Latvian banks.

While the investigation of the case started with a particular predicate offence, it led to the identification of a wide international PML scheme that was used to move funds originating from various crimes. There are also indications that clients from other countries used this ML scheme. In a demonstration of the interconnectedness of PML, some companies involved in this scheme have financial links with a UAE company designated by the US in relation to the Altaf Khanani Money Laundering Organisation,[1] described in Box 1.

Note: 1. See Section III for the case study on this MLO.

Source: The Russian Federation

PML schemes and infrastructure can also be used to launder funds and to facilitate large-scale tax evasion schemes. In such schemes, multiple layers of shell companies may be used between the importer and producer of goods that are located abroad. Funds used for the purchase of foreign goods thus go through a complex chain of transactions, with only one portion of these funds used for the import deal. The rest is directed to accounts controlled by beneficiaries.

Proxy networks also use layering schemes to transform illicit proceeds generated within the financial system into cash. This is mostly arranged for those clients who need to move criminal proceeds from bank accounts to physical cash. The majority of such clients are involved in public funds embezzlement, tax fraud and cyber fraud schemes. At the final stage, funds are transferred to corporate bank cards, followed by subsequent cash withdrawals. The number of shell companies and personal bank accounts involved may exceed several thousands. This limits the risk of detection and diversifies possible losses.

In some cases, cash withdrawals may be conducted abroad. In one case, funds were channelled to accounts of companies registered in the Middle East, with subsequent

cash withdrawals via exchange houses. Cash was then transported back to the country of origin and declared on the border as profits from legitimate business activities in the Middle East, which were intended to be used for the purchase of real estate.

SECTION V: SUPPORTING MECHANISMS USED BY PROFESSIONAL MONEY LAUNDERERS

PMLNs use a wide variety of ML tools and techniques. Among the most significant mechanisms are TBML, account settlement mechanisms and underground banking.

Trade-Based Money Laundering (TBML)

TBML is defined as "the process of disguising the proceeds of crime and moving value through the use of trade transactions in an attempt to legitimise their illicit origin."[3] There are various TBML variations that can be employed by PMLs. These include:

- *The purchase of high-value goods using the proceeds of crime*, followed by the shipment and re-sale of goods overseas;
- *The transfer of funds which purport to be related to trade*, or to the purchase of goods that are ultimately never shipped or received (also known as "phantom shipments");
- *Falsifying the number and/or value of goods being shipped* to be higher or lower than the corresponding payment, allowing for the transfer or receipt of the value of proceeds of crime (also known as over or under-invoicing);
- *Using the proceeds of crime to purchase goods for legitimate re-sale*, with payment for goods made to drug traffickers/distributors by legitimate business owners (e.g. the Black Market Peso Exchange - BMPE); and
- *Using Money (Peso) Brokers*, who are third parties that seek to purchase drug proceeds in the location where illicit proceeds are earned by drug cartels (e.g. Colombia, Mexico) at a discounted rate. Money brokers often employ many individuals responsible for collecting narcotics proceeds and disposing of those proceeds, as directed by either the drug trafficking organisation or the money brokers who serve as PMLOs.

Box 10. ML Network, Operating as a Trade-Based ML Scheme1

Project OROAD was a joint task force financial investigation, launched from a drug investigation into ML activities of a suspicious group[2]. Information received from FINTRAC helped identify a complex TBML where two of the group's central figures hired 10 nominees to establish 25 shell companies. The shell companies were opened using names across a diverse number of

[3] FATF, 2006.

industries: landscaping, interior design, electronics, metal recycling, plastics recycling, construction supplies, beauty supplies, etc.

The laundering network included legitimate businesses, operating in the financial and real estate sectors, as well as a small financial company, which was complicit in laundering the funds. The money launderer provided his accomplice at the financial company with large bags of cash, which were then deposited into business accounts in the name of shell companies. This continued until the accounts were closed by the financial institution that held the shell company's accounts, due to a high volume of suspicious transactions.

Investigators believe the ML group used a TBML scheme. The ML operation and the network of shell companies were largely centred on a logistics company. One of the money launderers was seen leaving the logistics company location with large bags of bulk cash, which were believed to be the proceeds of drug sales. The money launderer used nominees to make multiple cash deposits into their personal and business accounts.

The money launderer instructed nominees to either i) transfer funds back to the logistics company; or ii) transfer funds to other business accounts, held by nominees located in Canada, China, Panama and the US. Funds were sent by wire transfer, bank draft or cheque, some of which were then returned to the logistics company. In each case, the money launderer used fraudulent invoices to account for the proceeds of drug sales so that they could be more easily integrated into the financial system.

Investigators believe that some of the funds were transferred back to the Mexican drug trafficking organisation and to other companies controlled by the drug trafficking organisation in China, Mexico and the US. In some cases, funds were used for to purchase goods located in Panama or Mexico. The ringleaders in Canada established companies in these countries in attempts to make the transfers seem legitimate. The purchased goods were then shipped to other foreign countries for sale. Once the purchased goods arrive at the destination country, they were sold, and the proceeds of the sale (in the destination country's currency) were then transferred to the drug trafficking or ML organisation to provide the criminals with "clean" funds, laundered through TBML.

Notes:

1 See case study "Operation Snake" in Section III, which involves another professional ML network using a TBML and MVTS scheme

2 The investigation also revealed a number of bulk cash transactions between the ring and illegal money brokers; however, the focus here is on the ML ring.

Source: Canada

PMLs may also create and use false documentation, layer related financial transactions and establish shell and/or shelf companies to facilitate purported trade transactions. By using TBML mechanisms, PMLs can break the link between the predicate crime and related ML, making it difficult to associate the criminals with the ML activity.

Box 11. Venezuelan Currency Smuggling Network

During 2015, 10 limited liability companies established by a single person in Spain processed more than 110 000 transactions, totalling EUR 22.4 million, through mobile payment "point of sale (POS)" terminals. Nine of these companies were purportedly active as travel agencies, eight shared the same registered offices and six had the same associate and director.

The POS terminals held by these companies exclusively accepted payment cards issued by the Venezuelan government (Comisión de Administración de Divisas - CADIVI). Given strict currency controls in Venezuela, residents can only obtain foreign currencies when traveling abroad. Therefore, a maximum of USD 3 000 at a rate of 6.3 bolivars per dollar can be exchanged. This led to a large currency exchange fraud called "el raspao," where Venezuelan residents accessed euros or dollars, under the false pretence of a journey abroad. The payment cards issued by the CADIVI, at the official exchange rate, were debited abroad while drug traffickers received the counter value in cash, in euro or dollar notes, which was then smuggled back into Venezuela and sold on the black market at a rate of about ten times the official exchange rate. Authorities in Luxembourg suspect that the payment cards issued by CADIVI were smuggled in bundles to Spain and swiped through the POS terminals of complicit traders who operated through Spanish front companies.

Drug traffickers and Colombian cartels are believed to have taken advantage of this currency smuggling network in order to repatriate the proceeds generated in cash through drug sales in Europe back to South America. These criminals washed their illicit cash by handing it out to Venezuelan currency traffickers. Once processed, the debited amounts were credited to linked bank accounts. These bank accounts had International Bank Account Numbers (IBANs), issued by a former Luxembourg-licensed electronic money remitter.

AML investigations by the regulator and the financial intelligence unit (FIU) revealed that the Luxembourg electronic money remitter did not manage these accounts itself, as stipulated in regulation, but handed them over to a Bulgarian-licensed electronic money remitter, which used the accounts for its own customers. The POSs were sold to the Spanish front companies by the Bulgarian electronic money remitter. Additionally, the Spanish front companies applied for hundreds of withdrawal cards (most front companies had more than 10 withdrawal cards each), issued by the Bulgarian electronic money remitter, in order to allow them to withdraw cash from their accounts. About 106 000 withdrawals, totalling more than EUR 20 million were made at ATMs situated in Colombia. These withdrawals did not comply with the daily, weekly and monthly limits as laid out in the general terms and conditions of the Bulgarian electronic remitter. Authorities in Luxembourg were not aware of any related suspicious transaction reports that were reported to the Bulgarian FIU. The Luxembourg and Bulgarian electronic remitters were held by the same beneficial owner. Commissions received by the Bulgarian electronic remitter on the operations totalled as much as EUR 1.9 million, or 9 % of the amounts processed through the POSs.

Source: Luxembourg

Account Settlement Mechanisms

PMLNs can facilitate the settlement of accounts between multiple OCGs. They may do this for OCGs operating in different countries that generate proceeds from cash and hold funds within bank accounts. A PML may, for example, simultaneously provide ML services to criminals who have cash and want to send funds to bank accounts in other countries, and to criminals who have money in their bank accounts but need cash (e.g. to pay their networks and workers). This *modus operandi* is called an *account settlement mechanism*.

The case, below, illustrates how a PMLO accepted and moved cash by car to Belgium, as part of an account settlement mechanism.

Box 12. Money Laundering as Part of an "Account Settlement Scheme" Between Various Criminal Organisations

Several Belgian corporate customers transferred funds to the accounts of Belgian construction or industrial cleaning companies and their managers. These companies had a similar profile: they operated in the same industry, the managers were often from the same country, the articles of association were copied with slight modifications, and the companies' financial health was poor. Some companies had already gone bankrupt or no longer complied with their legal requirements.

Funds were channelled through different accounts: Part of the funds credited to the accounts was withdrawn in cash, presumably to pay workers. Another part of the funds were transferred to companies located abroad, in Europe and in Asia.

The funds transferred to Europe were credited to the accounts of other companies in the same industry. Often no explanation was provided for these transfers, even though the scale was significant. The references accompanying these transfers, if any, were vague. The majority of the funds were subsequently withdrawn in cash.

The funds transferred to Asia, mainly China and Hong Kong, were credited to the accounts of limited liability companies, which were not linked to the construction or industrial cleaning industry in any way.

Information received from a counterpart FIU revealed links with a criminal organisation involved in drug trafficking. This organisation, which held large amounts of cash, used an organisation that laundered the funds and transported the cash to Belgium by car. In Belgium, intermediaries then handed over the cash to various companies in Belgium that required cash to carry out their activities.

Based on this information, authorities have concluded that the Belgian construction and industrial cleaning companies involved in this case were part of an account settlement scheme. The cash proceeds of drug trafficking were used to pay illegal workers of Belgian companies.

Underground Banking and Alternative Banking Platforms

Underground banking is one tool often used by PMLs. This mechanism is used, with the goal of bypassing the regulated financial sector and creating a parallel system of moving and keeping records of transactions and accountancy.

Box 13. Investigation of Massive Underground Banking System

Subject X and his network of associates in British Columbia, Canada, are believed to have operated a PMLO that offered a number of crucial services to Transnational Criminal Organisations including Mexican Cartels, Asian OCGs, and Middle Eastern OCGs. It is estimated that they laundered over CAD 1 billion per year through an underground banking network, involving legal and illegal casinos, MVTSs and asset procurement. One portion of the ML networks illegal activities was the use of drug money, illegal gambling money and money derived from extortion to supply cash to Chinese gamblers in Canada.

Subject X allegedly helped ultra-wealthy gamblers move their money to Canada from China, which has restrictions on the outflow of fiat currency. The Chinese gamblers would transfer funds to accounts controlled by Subject X and his network in exchange for cash in Canada. However, funds were never actually transferred outside of China to Canada; rather, the value of funds was transferred through an Informal Value Transfer System. Subject X received a 3-5% commission on each transaction. Chinese gamblers were provided with a contact, either locally or prior to arriving, in Vancouver. The Chinese gamblers would phone the contact to schedule cash delivery, usually in the casino parking lot, which was then used to buy casino chips. Some gamblers would cash in their chips for a "B.C. casino cheque", which they could then deposit into a Canadian bank account. Some of these funds were used for real estate purchases. The cash given to the high-roller gamblers came from Company X, an unlicensed MVTS provider owned by Subject X. Investigators believe that gangsters or their couriers were delivering suitcases of cash to Company X, allegedly at an average rate of CAD 1.5 million a day. Surveillance identified links to 40 different organisations, including organised groups in Asia that dealt with cocaine, heroin and methamphetamine.

After cash was dropped off at Company X, funds were released offshore by Subject X or his network. Most transactions were held in cash and avoided the tracking that is typical for conventional banking. Subject X charged a 5% fee for the laundering and transfer service. As the ML operation grew, the money transfer abilities of Company X became increasingly sophisticated to the point where it could wire funds to Mexico and Peru, allowing drug dealers to buy narcotics without carrying cash outside Canada in order to cover up the international money transfers with fake trade invoices from China. Investigators have found evidence of over 600 bank accounts in China that were controlled or used by Company X. Chinese police have conducted their own investigation, labelling this as a massive underground banking system.

Source: Canada

An *alternative banking platform (ABP)* is an alternative bank that operates outside the regulated financial system. However, an ABP may use the facilities of the formal banking system, while creating a parallel accountancy and settlement system. ABPs are a form of shadow banking that make use of bespoke online software to provide banking services, without the regulated and audited customer due diligence checks. They are an effective way to transfer the ownership of money anonymously and provide banking services within a bank account across a number of individuals, without being reflected in traditional banking transactions. Usually, it is supported with special software that can encrypt traffic, manage transactions between accounts within the same platform, apply fees and assist with interaction with the outside financial system.

Box 14. Alternative Banking Platforms

An alternative banking platform (ABP) was used to assist organised crime groups (OCGs) in the UK to launder funds from VAT fraud. The ABP had a registered office in one jurisdiction with a holding company in a second jurisdiction and a bank account in a third jurisdiction. It was operated by a PMLN based in a fourth jurisdiction all outside of the UK. The ABP was used for a year with over EUR 400 million moved through it. The ABP was shut down and the creator of the financial software was arrested by international partners, with assistance from Her Majesty's Revenue and Customs (HMRC). The data gathered from the ABP servers was used to identify other ABPs and develop additional cases.

Source: United Kingdom

In some cases, PMLs use specialised software to create an ML scheme to move funds randomly through numerous accounts. This software is generally based on a random data generator principle.

SECTION VI: COMPLICIT/CRIMINAL FINANCIAL SERVICE PROVIDERS AND OTHER PROFESSIONALS

As mentioned in **Section II**, PMLs may occupy positions within the financial services industry (e.g. bankers and MVTS agents) and DNFBP sectors (e.g. lawyers, accountants and real estate professionals), and use their occupation, business infrastructure and knowledge to facilitate ML for criminal clients. The use of occupational professionals can provide a veneer of legitimacy to criminals and OCGs. As such, OCGs actively seek out insiders as potential accomplices to help launder illicit proceeds. In rare instances, complicit actors who facilitate PML schemes come from within a government institution (i.e. a corrupt official).

Box 15. Corrupt Official Joining Criminal Enterprise to Launder Funds

Ukraine's law enforcement and prosecution services conducted an investigation of a high-ranking official who abused his power and official position for approximately three years. The official agreed to participate in the

creation of a criminal organisation and implemented an illegal scheme for minimising tax liabilities, which led to the illegal use of a tax credit. The public official received a cash fee for his services, which were performed with the participation of other public officials and other members of the criminal organisation.

The public official conducted a number of functions to make illicit proceeds appear legitimate, including creating, registering and owning a number of shell companies on behalf of members of the criminal organisation and purchasing property on their behalf. The official also established offshore companies in Cyprus and the BVI using his relatives as nominees. The high-ranking official also acquired entities registered in Ukraine, which were controlled by his offshore companies, by transferring funds from a bank in Liechtenstein. Funds transferred into Ukraine were used to purchase property. Fictitious contacts or agreements (e.g. for consultation services) were also established using a network of fictitious entities for services that were never rendered.

Source: Ukraine

PMLs often ignore or circumvent AML/CFT requirements or actively conceal AML/CFT failures within a particular institution or business. They may also ignore professional obligations, such as restrictions associated with their licenses or professional ethics rules. While the exact definition of complicity is a matter of domestic law, it is widely understood as intentional acts carried out with knowledge or wilful blindness of the illicit nature of the funds with which the person is dealing. The ability of a criminal to purchase or gain ownership or control of a financial business is the ultimate measure of success.

Criminals will actively seek to recruit complicit insiders within existing institutions or businesses, since these individuals have insider access and may be able to falsify records or initiate transactions in a manner, which bypasses AML/CFT regulations or institutional practices. In rare circumstances, criminals may be able to compromise entire institutions or businesses, including by acquiring ownership or control of the institution and appointing their own criminal management. The complicit activity described above (insider compromise and institutional compromise) should not be confused with instances of lax compliance, weak internal controls or inadequate corporate governance structures, which can result in compliance deficiencies with AML/CFT requirements. A reputation for weak compliance, however, may make the institution more attractive for an OCG seeking out a corrupt insider.

Money Value Transfer Services (MVTS) Providers

Case studies and insight provided by delegations show that MVTS providers have knowingly facilitated PML activities, including currency conversions (i.e. foreign exchange), cash-based transactions, and/or electronic funds transfers. Complicit MVTS providers can play an important role in the placement stage of the ML process. The most common ML transactions facilitated by MVTS providers are:

- cash purchases of funds transfers at the physical location of MVTS providers;

- large cash deposits made in the accounts of individuals and businesses followed by a domestic transfer to the account of an MVTS provider, or the purchase of bank drafts (e.g. cashier's check) payable to an MVTS provider; and
- the purchase of bank drafts for the benefit of individuals and businesses, which are negotiated by MVTS providers to fund the purchase of funds transfers.

Box 16. Use of Foreign Exchange Broker and "Quick Drop" Facilities

A mechanic in the UK acted as a professional launderer for an unknown PMLN. The mechanic opened bank accounts in the UK, which were used to deposit GBP 5.3 million in cash between October 2013 and December 2014. Multiple deposits of GBP 25 000 were paid into the bank accounts per day using bank 'quick-drop' facilities. Once paid into the bank accounts, money was transferred to third-party bank accounts held in the UK and six other jurisdictions using bank and foreign exchange broker transfers. The mechanic was paid GBP 20 000 for moving the cash abroad. The launderer pleaded guilty to three charges of ML and, in April 2018, was sentenced to six years in jail and banned from being a company director for nine years.

Quick drop is a facility to deposit, cash either at the bank directly or at a third-party facility, where the money is counted and then transferred to the bank to be deposited[4]. Quick drop facilities allow cash to be deposited quicker, at more locations and often without coming into contact with staff.

Source: United Kingdom

Analysis conducted by some competent authorities indicates that complicit MVTS providers may continue to file suspicious transaction reports (STRs). For example, STRs may be filed so as not to arouse suspicion or give the perception that the MVTS provider is otherwise compliant. In jurisdictions that require other forms of transaction reporting, such as threshold cash transactions, complicit MVTS may operate two sets of account records (i.e. shadow accountancy), one of which is used exclusively for criminal clients and for which no reports are filed. Alternatively, these complicit MVTS providers may report the transactions using fictitious transaction details.

Box 17. Complicit MVTS Agents to Facilitate Third-Party ML

The Italian FIU identified a significant reduction in remittances sent to Country "A" within a three year period (from EUR 2.7 billion in 2012 to EUR 560 million in 2015). This data highlighted the specific exposure of this 'corridor' to the risk of channelling illegal funds.

Further analysis of STRs led to the detection of alternative channels, used by

[4] UK National Risk Assessment of Money Laundering and Terrorist Financing, October 2015

PMLNs, to transfer significant amounts to Country A. A significant portion of the reduction of remittances towards Country A was related to the migration of many Italian MVTS agents towards foreign ones that do not produce statistical reports under national legislations, and are not subject to Italian AML and fiscal requirements.

The FIU received many STRs concerning suspicious activity traced back to Italian money transfer agents. Financial flows were mainly characterised by significant cash deposits and wire transfers in favour of the Italian bank accounts of the foreign MVTS. Such financial flows allegedly referred to money remittances performed by MVTS agents. However, suspicion was triggered given that the agents sometimes deposited cash into their accounts through a branch of the bank located far away from their business. The FIU extended its studies to gain a better understanding of financial flows performed by the MVTS and agents, which revealed that in some cases:

- the MVTS legal representatives were involved;
- the MVTS had been recently incorporated;
- the MVTS had links to subjects originating from Country A;
- the MVTS had opened a branch in an Italian city that is well known for its growing economic and business links with Country A;
- many agents of the same foreign MVTS – all originating from Country A – had already been reported to the Italian FIU or had been prohibited from performing agent activities by the competent financial supervisory authority of Country A, for anomalous transactions and use of false ID documents for CDD purposes;
- the MVTS agents allowed their customers to structure transactions by splitting up remittances with several accomplices; and
- certain MVTS agents revealed tangible links to a common customer base.

In view of analysis carried out, the MVTS provider and agents were found to have disregarded AML obligations, exploiting asymmetries in the regulatory framework among different countries. A well-organised, skilled and complicit network of agents and foreign MVTS had been used to collect funds in Italy, and to transfer significant amounts abroad, splitting up remittances with several accomplices.

Source: Italy

Financial Institutions

The use of the international financial system has been instrumental in facilitating large-scale PML schemes. All of the complex layering schemes described in **Section IV** involve moving significant volumes of funds through various bank accounts in different jurisdictions opened on behalf of shell companies. These well-structured schemes often go undetected by banks, even in situations where there is an insider involved.

Investigative authorities have been able to detect patterns in how PMLs choose certain jurisdictions and banks that are used to move illicit proceeds. For example,

some criminals seek to use banks that operate in lax regulatory environments or have reputations for non-compliance with AML/CFT regulations.

It is challenging for competent authorities to establish factual evidence, which demonstrates that financial institutions are actively complicit in facilitating ML. Bank insiders generally do not communicate openly about their criminal conduct and may be able to leverage their insider status to conceal misdeeds. This can make it difficult to detect and prosecute wilful misconduct by complicit financial services professionals. A range of employees within financial institutions (from lower-level tellers to higher-level management) pose a significant vulnerability that can be exploited by money launderers, but also senior insiders who knowingly assist in ML may cause more damage.

Complicit bank employees may perform functions such as:

- Creating counterfeit checks;
- Monitoring (or not appropriately monitoring) money flows between accounts controlled by the co-conspirators;
- Co-ordinating financial transactions to avoid STR reporting;
- Accepting fictitious documents provided by clients as a basis for transactions, without asking any additional questions; and
- Performing 'virtual transactions' on the accounts of their clients – numerous transactions conducted, without an essential change of the net balance at the beginning and end of a working day.

Box 18. General Manager and Chairman of a Foreign Bank

An investigation by Italian authorities uncovered various ML operations that were carried out by senior foreign bank officials (general manager and chairman), together with a complicit accountant and a lawyer. The illicit proceeds were derived from an international cocaine trafficking organisation.

The criminals were put in contact with the general manager and the chairman of the foreign bank, which was experiencing a serious liquidity crisis at the time. The criminals and the bank executives agreed that one of the drug traffickers would deposit, in his own name, about EUR 15 million at the bank in crisis. This bank committed to provide the two professionals (the lawyer and accountant, noted above, who were also brothers) with a given amount of money in compensation for the intermediation work they performed, to be credited to accounts specifically opened in their names at the bank.

The accountant was also in charge of performing accounting tasks for several companies belonging to the drug trafficker. Following the intermediation activity, the bank's general manager received EUR 1.3 million, in two instalments, from a deposit made in the name of the drug trafficker. Subsequently, the bank's general manager, with the approval of the bank's chairman, started complex financial operations aimed at concealing the unlawful origin of the money deposited.

Authorities were able to ascertain the role played by the lawyer, leaving no

doubt as to his function as an intermediary between his client (custodian) and the bank, and the lawyer's knowledge of the actual illicit source of the money involved.

Source: Italy

The case below demonstrates a combination of different elements and tools, including the sale of shell companies, facilitation of transactions by complicit bank employees and the execution of deals on securities markets.

Box 19. Complicit Bank Employees, Securities Market Deals and the Sale of Shell Companies

An investigation by Russian authorities, conducted in co-operation with foreign FIUs, uncovered an ML and tax evasion scheme that was arranged by complicit bank employees and brokers.

Funds accumulated in bank accounts of shell companies were transferred abroad under the pretext of securities purchases by order of broker "R." At the same time, two broker companies operating on the London Stock Exchange sold shares for the same price, thus facilitating the transfer of money via mirror trading.

All limited liability companies used in this scheme were established by a legal service firm, specialising in the sale of "off-the-shelf" companies. Criminal proceedings were opened. The licenses of one of the banks that facilitated cross-border transfers, and of the securities company, were withdrawn for violations of the AML legislation.

Source: The Russian Federation

1. The cases analysed and information received also demonstrated that private banking advisors may act as PMLs and provide services to conceal the nature, source, ownership and control of the funds in order to avoid scrutiny, by employing various techniques, including:

- Opening and transferring money to and from bank accounts held in the names of individuals or offshore entities, other than the true beneficial owners of the accounts;
- Making false statements on bank documents required by the bank to identify customers and disclose the true beneficial owners of the accounts;
- Using "consulting services" agreements and other similar types of contracts to create an appearance of legitimacy for illicit wire transfers;
- Maintaining and using multiple accounts at the same bank so that funds transfers between those accounts can be managed internally, without reliance on international clearing mechanisms that are more visible to law enforcement authorities; and

- Opening multiple bank accounts in the names of similarly-named companies at the same, or different, institutions so wires do not appear to be coming from third parties.

Legal and Professional Services

In order to place greater distance between their criminal activity and the movement of funds, some OCGs use the services of third-party money launderers, including professional gatekeepers, such as attorneys, accountants and trust and company service providers (TCSPs). One delegation noted that OCGs tend to use professional service providers to set up corporate structures, and that accountants are favoured due to the range of skills and services that they may provide. There are case examples demonstrating that these types of professionals have been recruited to work as PMLs on behalf of larger criminal enterprises, such as DTOs. FATF's 2013 Report on *ML and TF Vulnerabilities of Legal Professionals* mentions that criminals often seek out the involvement of legal professionals in their ML/TF activities because they may be required to complete certain transactions or provide access to specialised legal and notarial skills and services, both of which can assist the laundering of the proceeds of crime

Box 20. A Complicit Lawyer and Bank Employee

A lawyer in Texas was convicted for laundering money for an OCG and engaging in a variety of fraud schemes. The OCG operated in the US, Canada, Africa, Asia and Europe. A complicit bank employee was also convicted for her role in creating counterfeit checks and monitoring money flows between the numerous accounts controlled by the OCG.

All of the victims of these various fraud schemes were instructed to wire money into funnel accounts held by other co-conspirators (money mules), who then quickly transferred the money to other US accounts as well as accounts around the world before victims could discover the fraud. Several millions of dollars were laundered in this manner. The numerous bank accounts opened by the mules served as the initial "layer" in the laundering process, which allowed co-conspirators to distance or conceal the source and nature of the illicit proceeds. For example, during a one-year period, a key money mule opened 38 fraudulent bank accounts.

The fraud schemes took several forms. Many victims were law firms that were solicited online provided counterfeit cashier's checks for deposit into the firms' trust accounts. The law firms were then directed to wire money to third-party shell businesses controlled by the co-conspirators. The fraud conspiracy also employed hackers who compromised both individual and corporate e-mail accounts, ordering wire transfers from brokerage and business accounts to shell accounts controlled by co-conspirators. The shell companies were incorporated in Florida with fictitious names and then used to open bank accounts at banks in Florida in those names.

The licensed attorney in Texas worked for the co-conspirators by laundering victim money through an interest on lawyers trust account (IOLTA). He also

met with individual money mules to retrieve cash from their funnel accounts. The lawyer recruited his paralegal and others to open accounts used in the laundering scheme.

Source: United States

One case involves a licensed attorney who was considered a full member of an OGC. As in the case above, the attorney facilitated ML services by using his interest on lawyers trust account, or ILOTA[5], to transfer the proceeds of drug trafficking and fraud.

Box 21. Operation CICERO

This case was initiated by a special currency police unit within the Guardia di Finanza as a follow-up investigation to a judicially authorised search conducted on the boss of a major organised crime group (La Cosa Nostra or LCN) in Palermo, Italy. This investigation was aimed at identifying those individuals acting as nominees, as well as individuals who facilitated the movement of criminal proceeds on behalf of LCN. The investigation identified that a well-known lawyer was the beneficial owner of the companies used to launder funds via a Palermo-based construction company, which was linked to family members of the organised crime boss.

The lawyer performed a "money box" function for the LCN, which consisted of managing the financial resources of the crime group with the purpose of concealing the origins of the illicit proceeds and avoiding detection by authorities of any assets purchased from these proceeds. Through his professional relationships, the lawyer developed and tapped into an elite social network, which he also made available to the organised crime group.

The lawyer, who was operating as a PML, conducted a number of services, such as: (a) obtaining a mortgage to purchase an apartment with EUR 450 000 in criminal proceeds on behalf of an organised crime family member; (b) using a fictitious contract to purchase an apartment with EUR 110 000 on behalf of the organised crime group; and (c) layering and integrating legal funds with criminal assets derived from construction work carried out on land purchased with criminal proceeds.

This investigation led to confiscation proceedings against nine individuals totalling EUR 550 000 as well as seven properties owned by the lawyer.

Source: Italy

[5] An IOLTA is an account opened by an attorney with the intention of holding client funds for future services. It is opened at a bank with a presumed higher level of confidentiality accorded to attorney-client relationships and related transactions.

PMLs also often use shell companies to facilitate complex ML schemes. Professional services may be used, such as the services of a TCSP or a lawyer, when setting up a shell company. Such professionals can supply a full range of services, including the incorporation of the company, the provision of resident or nominee directors, and the facilitation of new bank accounts.

Box 22. Use of Shell Companies and Accountant Providing Corporate Secretarial Services

Person G was a chartered accountant in the business of providing corporate secretarial services to small and medium-sized enterprises. As part of these services, he incorporated companies on behalf of his clients and acted as the resident director of companies whose directors were not ordinarily residents in Singapore.

Persons N and S, members of a foreign syndicate, approached Person G to set up three companies, Company K, Company W and Company M, and to apply for their corporate bank accounts in Singapore. Once the accounts were set up, Persons N and S left Singapore and never returned. Person G was appointed the co-director of the three companies; although, he was neither a shareholder, nor the authorised bank signatory of these companies.

These companies received criminal proceeds in their bank accounts derived from various frauds amounting to over SGD 650 000. The funds were quickly transferred by Person S to overseas bank accounts.

The companies had committed the offence of transferring benefits of criminal conduct, attributable to Person G's neglect. There was a lack of supervision by Person G over the companies' affairs, which allowed the foreign syndicate to have unfettered control over the companies and partake in their ML activities unimpeded. In January 2016, G was convicted of ML offences and for failing to exercise reasonable diligence in discharging his duties as a director. He was sentenced to a total jail term of 12 months, fined SGD 50 000 and disqualified from acting as a company director for the five years following his sentence.

Source: Singapore

After opening bank accounts in the name of shell companies, professional launderers may operate these accounts from overseas, receiving criminal proceeds from different individuals and companies to layer funds. The funds received in the shell companies' accounts are usually transferred out of the jurisdiction within a few days.

TCSPs are often blind to what their clients actually use the companies for, and therefore do not consider themselves complicit in ML schemes. However, a number of case studies have demonstrated that some TCSPs market themselves as 'no questions asked,' or being immune from official inquires. Moreover, if the TCSP also acts as the director of the company, the TCSP has to perform these duties as a director and could be held liable for the offences committed by the company, as illustrated in the above case study.

Law enforcement agencies worldwide have noted that corporate structures are often used in PML schemes and that professional service providers are used in setting up structures. Law enforcement agencies have identified the use of complex corporate structures and offshore vehicles to conceal the ownership and facilitate the movement of criminal proceeds and that PMLNs exploit some TSCP services in the creation of structures. A handful of current investigations across the globe have indicated that TCSPs act as nominee directors of corporate structures with similar behaviours, observed whether large corporates or smaller TCSPs, including:

- using a 'tick the box' approach for compliance activity;
- distancing themselves from risk (i.e. downplay their responsibility);
- utilising chains of formation agents in multiple jurisdictions;
- engaging in deliberately negligent behaviour; and
- forging signatures and fraudulently notarising documents.

Box 23. Money Laundering through Real Estate Investments, Gastronomic Services and Show Production Services Linked With Drug Trafficking

An investigation was triggered by information received from OFAC, which revealed that an illicit network was conducting business activities in Argentina. This network was linked to an individual, J.B.P.C., who was suspected of being a member of a criminal organisation.

J.B.P.C., his family and business partners were also shareholders in a number of companies around the globe. More specifically, three Argentine companies (two operating companies and a management company) were suspected of developing ambitious real estate projects across the country. The president and main shareholder of those companies was Mr. B, a lawyer and friend of J.B.P.C. This person provided knowledge and experience on how to develop the businesses. Additional analysis revealed that J.B.P.C. was the shareholder of two other companies, which appeared as owners of the land where major real estate developments were to be undertaken.

Tax information that was collected by authorities revealed that these companies received accounting advice from Mr. C, who was a chartered accountant. He was also a shareholder and member of the Board of Directors of the concerned companies. Other transactions from J.B.P.C. were also detected during the same period. They were linked to two additional Argentine companies that provided bar services, coffee services and show production services. For one of the OFAC listed companies, it was discovered that the stock of the company was owned in its entirety by J.B.P.C.'s closest relatives. Likewise, management positions were occupied by his partners and close relatives. Another company, also with ties to J.B.P.C., opened an office in Argentina with the help of another lawyer, Mr. D.

The investigation into this case was conducted by FIU-Argentina in co-ordination with other domestic LEAs, as well as foreign counterparts in

Colombia (FIU-Colombia) and the United States (OFAC and DEA). Strong international co-operation was crucial to the success of this investigation, and joint efforts led to a significant number of simultaneous searches in Argentina, as well as in the other foreign jurisdiction where J.B.P.C. ran a majority of his illegal business. As a result, J.B.P.C., Mr. B and his spouse, Mr. C and Mr. D were arrested. Their property was also seized. Currently, they are facing prosecution in Argentina.

Payment Processing Companies

Payment processing companies provide payment services to merchants and other business entities, such as credit card processing or payroll processing services. Typically, bank accounts held by payment processors are used to facilitate payments on behalf of their clients. In certain circumstances, payment processing companies essentially act as "flow-through" accounts – there is no requirement for them to divulge the identities of their individual clients to financial institutions. Traditionally, payment processing companies were established to process credit card transactions for conventional retail outlets. However, over time, payment processing companies have evolved to serve a variety of domestic and international merchants, including Internet-based and conventional retail merchants, Internet gaming enterprises and telemarketing companies.

Payment processing companies can be used by criminal organisations to mask transactions and launder the proceeds of crime. For example, payment processing companies have been used to place illicit proceeds that originated from foreign sources directly into financial institutions[6].

A number of countries have observed the use of payment processing companies by suspected ML networks. In other instances, telemarketing companies have also been suspected of providing payment processing services, where illicit proceeds are co-mingled with payments suspected of being related to mass marketing fraud. Authorities suspect that these types of payment processors may be used by members and associates of multiple transnational OCGs.

Box 24. International Payment Processor Providing ML Services

PacNet, an international payment processor and MVTS provider based in Vancouver, Canada, helped dozens of fraudsters gain access to US banks. PacNet has a 20-year history of engaging in ML and mail fraud, by knowingly processing payments on behalf of a wide range of mail fraud schemes that target victims throughout the world. When it was shut down, PacNet consisted of 12 individuals and 24 entities across 18 countries. The network collectively has defrauded millions of vulnerable victims across the US out of hundreds of

[6] FINCEN, 2012 and FFIEC, nd.

millions of dollars.

With operations in Canada, Ireland and the UK, and subsidiaries or affiliates in 15 other countries, PacNet was the third-party payment processor of choice for perpetrators of a wide range of mail fraud schemes. US consumers receive tens of thousands of fraudulent lottery and other mail fraud solicitations nearly every day that contain misrepresentations designed to victimise the elderly or otherwise vulnerable individuals.

PacNet's processing operations helped to obscure the nature of the illicit funds and prevented the detection of fraudulent schemes. In a typical scenario, scammers mailed fraudulent solicitations to victims and then arranged to have victims' payments (both checks and cash) sent directly, or through a partner company, to PacNet's processing operations. Victims' money, minus PacNet's fees and commission, were made available to the scammers through wire transfers from the PacNet holding account, as well as by PacNet making payments on behalf of the scammers, thereby obscuring the link to the scammers. This process aimed to minimise the chance that financial institutions would detect the scammers and determine their activity to be suspicious.

The mail schemes involved a complicated web of actors located across the world and each scheme followed a similar pattern. These schemes involve a consortium of entities, including direct mailers, list brokers, printer/distributors, mailing houses, "caging" services[7], and payment processors. These six diverse groups worked together to (i) mail millions of solicitation packets each year, (ii) collect and distribute tens of millions of dollars in annual victim payments, and (iii) attempt to obscure their true identities from victims and law enforcement agencies worldwide.

Source: United States

Virtual Currency Payment Products and Services (VCPPS)

As noted in **Section IV**, PMLs offer a variety of services including the use of virtual currency in an attempt to anonymise those committing crimes and their illicit transactions. The use of complex, computer-based fraud schemes has led cyber criminals to create large-scale mechanisms to move the proceeds earned from these schemes. More specifically, virtual currency exchangers have been used as unlicensed or unregistered MVTS providers to exchange criminal proceeds in the form of virtual currency to fiat currency. In 2015, FATF issued guidance to demonstrate how specific FATF Recommendations should apply to convertible virtual currency exchangers in the context of VCPPS, and identify AML/CFT

[7] The processing of responses to direct mail is often conducted by a third party hired to perform various services, which may include processing payments, compiling product orders, correcting recipient addresses, processing returned mail, providing lockbox services, and depositing funds and the associated data processing for each of these services. Caging is a shorthand term for the service bundle.

measures that could be required[8]. Case studies have nonetheless shown that complicit virtual currency exchangers, which have been intentionally created, structured, and openly promoted as criminal business ventures, are being used.

Digital payment systems can also facilitate other crimes, including computer hacking and ransomware, fraud, identity theft, tax refund fraud schemes, public corruption and drug trafficking. Complicit virtual currency providers also utilise shell companies and affiliate entities that cater to an online, worldwide customer base to electronically transfer fiat currency into, and out of, these exchangers (effectively serving as electronic money mules). Users of these complicit services have openly and explicitly discussed criminal activity on these providers' chat functions, and their customer service representatives have offered advice on how to process and access money obtained from illegal drug sales on Dark Web markets.

Box 25. Complicit Virtual Currency Exchanger

On July 26, 2017, a grand jury in the Northern District of California indicted a Russian national and an organisation that he allegedly operated, BTC-e, for operating an unlicensed money services business, ML and related crimes. The indictment alleges that BTC-e was an international ML scheme that allegedly catered to criminals, particularly cyber criminals, and evolved into one of the principal means by which criminals around the world laundered the proceeds of their illicit activity. The indictment alleges that one of the operators of BTC-e who directed and supervised BTC-e's operations and finances, along with others, intentionally created, structured, operated and openly promoted BTC-e as a criminal business venture, developing a customer base for BTC-e that was heavily reliant on criminals. BTC-e was also one of the world's largest and most widely used digital currency exchangers. The investigation has revealed that BTC-e received more than USD 4 billion worth of virtual currency over the course of its operations. In addition to the indictment charging BTC-e and one of its operators with the violations noted above, FinCEN – in close co-ordination with the Justice Department – assessed a USD 110 million civil money penalty against BTC-e for wilfully violating US. anti-money-laundering laws.

SECTION VII: CONCLUDING REMARKS

This threat report addresses criminal actors, including organised crime groups that specialise in the provision of professional money laundering services and complicit actors who are knowingly involved, or are deliberately negligent, in the laundering process. A number of characteristics have been identified, based on an extensive case review (including, the role and functions of PMLs; the business models used; and relevant typologies and schemes). A non-public version of the report is available to Members of the FATF and the FATF Global Network upon request. This non-

[8] FATF, 2015.

public version includes further information, such as practical recommendations for the detection, investigation, prosecution and prevention of ML.

Professional Money Laundering

Professional money launderers (PMLs) provide services to criminals and organised criminal groups by laundering the proceeds of their illegal activities. They may provide the entire infrastructure for complex ML schemes (e.g. a 'full service') or construct a unique scheme tailored to the specific needs of a client that wishes to launder the proceeds of crime. This report identifies the specialist skill sets that PMLs offer their clients in order to hide or move their proceeds, and provides a detailed explanation of the roles performed by PMLs to enable authorities to identify and understand how they operate. This report also provides recent examples of financial enterprises that have been acquired by criminal enterprises or co-opted to facilitate ML.

This report aims to assist authorities to target PMLs, as well as the structures that they utilise to launder funds, in order to disrupt and dismantle the groups that are involved in proceeds-generating illicit activity so that crime does not pay.

FATF REPORT

Money Laundering and Terrorist Financing Vulnerabilities of Legal Professionals

June 2013

FINANCIAL ACTION TASK FORCE

The Financial Action Task Force (FATF) is an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction. The FATF Recommendations are recognised as the global anti-money laundering (AML) and counter-terrorist financing (CFT) standard.

For more information about the FATF, please visit the website:

EXECUTIVE SUMMARY

In June 2012, the Financial Action Task Force (FATF) Plenary met in Rome and agreed to conduct typology research into the money laundering and terrorist financing (ML/TF) vulnerabilities of the legal profession.

Since the inclusion of legal professionals in the scope of professionals in the FATF Recommendations in 2003, there has been extensive debate as to whether there is evidence that legal professionals have been involved in ML/TF and whether the application of the Recommendations is consistent with fundamental human rights and the ethical obligations of legal professionals.

The purpose of this typology is to determine the degree to which legal professionals globally are vulnerable for ML/TF risks in light of the specific legal services they provide, and to describe red flag indicators of ML/TF which may be useful to legal professionals, self-regulatory bodies (SRBs), competent authorities and law enforcement agencies.

This typology report does not offer guidance or policy recommendations, nor can it serve as a "one-size-fits-all" educational tool for individual legal professionals practicing in different settings, across countries with varying supervisory regimes and secrecy, privilege and confidentiality rules.

The report concludes that criminals seek out the involvement of legal professionals in their ML/TF activities, sometimes because a legal professional is required to complete certain transactions, and sometimes to access specialised legal and notarial skills and services which could assist the laundering of the proceeds of crime and the funding of terrorism.

The report identifies a number of ML/TF methods that commonly employ or, in some countries, require the services of a legal professional. Inherently these activities pose ML/TF risk and when clients seek to misuse the legal professional's services in these areas, even law abiding legal professionals may be vulnerable. The methods are:

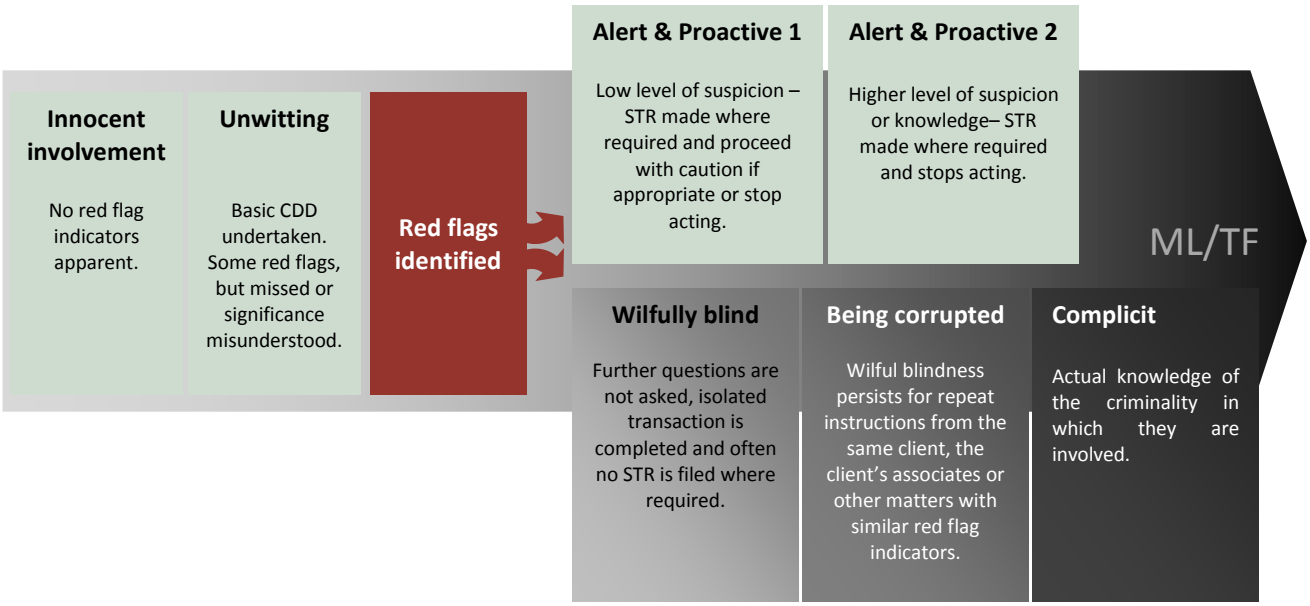
- misuse of client accounts;
- purchase of real property;
- creation of trusts and companies;
- management of trusts and companies;
- managing client affairs and making introductions;
- undertaking certain litigation; and
- setting up and managing charities.

In this report, over 100 case studies referring to these and other ML/TF methods were taken into account. While the majority of case studies in this report relate to ML activity, similar methodologies are capable of being used for TF activity.

While some cases show instances where the legal professional has made a suspicious transaction report (STR), a significant number involve a prosecution or disciplinary action, so a higher standard

of intent had to be proven, meaning those cases were more likely to involve a legal professional who was or became complicit. From reviewing the case studies and literature as a whole, the involvement of legal professionals in the money laundering of their clients is not as stark as complicit or unwitting, but can best be described as a continuum.

Involvement of Legal Professionals in money laundering and terrorist financing (ML/TF)



Red flag indicators relating to the client, the source of funds, the type of legal professional and the nature of the retainer, were developed with reference to these cases and educational material provided by SRBs and competent authorities. Whatever the involvement of the legal professional, the red flag indicators are often consistent and may be useful for legal professionals, SRBs, competent authorities and law enforcement agencies. Red flag indicators should be considered in context and prompt legal professionals to undertake risk-based client due diligence. If the legal professional remains unsatisfied with the client's explanation of the red flags, the next step taken will depend on the unique and complex ethical codes, law governing his or her professional conduct and any national AML/CFT obligations.

Combating ML/TF relies on legal professionals:

- being alert to red flags indicating that the client is seeking to involve them in criminal activity
- choosing to abide by the law, their ethical obligations and applicable professional rules; and
- discerning legitimate client wishes from transactions and structures intended to conceal or promote criminal activity or thwart law enforcement.

While some SRBs and professional bodies are quite active in educating their members on the ML/TF vulnerabilities they face and the red flag indicators which could alert them to a suspicious

transaction, this level of understanding or access to information on vulnerabilities was not consistent across all countries which replied to the questionnaire. A lack of awareness and attendant lack of education increases the vulnerability of legal professionals to clients seeking to misuse otherwise legitimate legal services to further ML/TF activities.

Case studies show that not all legal professionals are undertaking client due diligence (CDD) when required. Even where due diligence is obtained, if the legal professional lacks understanding of the ML/TF vulnerabilities and red flag indicators, they are less able to use that information to prevent the misuse of their services. Greater education on vulnerabilities and awareness of red flag indictors at a national level may assist to reduce the incidence of criminals successfully misusing the services of legal professionals for ML/TF purposes.

Finally, the report challenges the perception sometimes held by criminals, and at times supported by claims from legal professionals themselves, that legal professional privilege or professional secrecy would lawfully enable a legal professional to continue to act for a client who was engaging in criminal activity and/or prevent law enforcement from accessing information to enable the client to be prosecuted. However, it is apparent that there is significant diversity between countries in the scope of legal professional privilege or professional secrecy. Practically, this diversity and differing interpretations by legal professionals and law enforcement has at times provided a disincentive for law enforcement to take action against legal professionals suspected of being complicit in or wilfully blind to ML/TF activity.

CHAPTER 1

INTRODUCTION

BACKGROUND

As financial institutions have put anti-money laundering (AML) measures into place, the risk of detection has become greater for those seeking to use the global banking system to launder criminal proceeds. Increasingly, law enforcement see money launderers seeking the advice or services of specialised professionals to help them with their illicit financial operations.[1]

In 2004, Stephen Schneider[2] published a detailed analysis of legal sector involvement in money laundering cases investigated by the Royal Canadian Mounted Police. This is the only academic study to date which has had access to law enforcement cases and contains a section focussed solely on the legal sector, both in terms of vulnerabilities and laundering methods. His research identified a range of services provided by legal professionals which were attractive to criminals wanting to launder the proceeds of their crime. Some of the services identified include: the purchasing of real estate, the establishment of companies and trusts (whether domestically, in foreign countries or off-shore financial centres), and passing funds through the legal professional's client account.

Financial Action Task Force (FATF) typologies have confirmed that criminals in many countries are making use of mechanisms which involve services frequently provided by legal professionals, for the purpose of laundering money.[3]

A particular challenge for researching money laundering / terrorist financing methods that may involve legal professionals is that many of the services sought by criminals for the purposes of money laundering are services used every day by clients with legitimate means.[4]

There is evidence that some criminals seek to co-opt and knowingly involve legal professionals in their money laundering schemes. Often however the involvement of the legal professional is sought because the services they offer are essential to the specific transaction being undertaken and because legal professionals add respectability to the transaction.[5]

Schneider's study noted that in some cases the legal professional was innocently involved in the act of money laundering. In those cases, there were no overt signs that would alert a legal professional

1 FATF (2004)

2 Schneider, S. (2004)

3 FATF (2006) and FATF (2007)

4 Schneider, S. (2004)

5 Schneider, S. (2004)

that he/she was being used to launder the proceeds of crime. However, Schneider identified other cases where legal professionals continued with a retainer in the face of clear warning signs. He questioned whether it might be the case that legal professionals lacked awareness of the warning signs that they were dealing with a suspicious transaction or were simply wilfully blind to the suspicious circumstances. [6]

Subsequent FATF typologies research mentions the involvement of legal professionals in money laundering/terrorist financing (ML/TF). This research has generally tended to focus more on how the transactions were structured, rather than on the role of the legal professional or his/her awareness of the client's criminal intentions.

Organisations representing legal professionals and some academics have sometimes criticised claims that legal professionals are unwittingly involved in money laundering.[7] They have questioned whether it is even possible to identify key warning signs which might justify imposing anti-money laundering/counter financing of terrorism (AML/CFT) requirements on legal professionals and even whether this might be an effective addition to the fight against money laundering and terrorist financing.[8]

Further, certain sources suggest that legal professionals are required to adhere to strict ethical or professional rules and this fact should therefore be a sufficient deterrent to money laundering or terrorist financing occurring in or through the legal sector. Following this same line of thinking, these sources of existing criminal law may sufficiently deter legal professionals from wilfully engaging in money laundering[9].

Since Schneider's 2004 study, a number of countries have implemented the FATF Recommendations for legal professionals.[10] This extension of AML/CFT requirements to the legal professions has created the need for legal professionals, their supervisory bodies and financial intelligence units (FIUs) to better understand how legal services may be misused by criminals for money laundering and terrorist financing.

This typology study was undertaken to synthesise current knowledge, to systematically assess the vulnerabilities of the legal profession to involvement in money laundering and terrorist financing, and to explore whether red flag indicators can be identified so as to enable legal professionals to distinguish potentially illegal transactions from legitimate ones.

10 FATF Recommendations 22(d), 23(a) and Interpretative Note to Recommendations 23 and 28 (b).

OBJECTIVES

The key objectives of this report:

1. Identify the different functions and activities within the legal profession on a world-wide basis, the different types of AML/CFT supervision for the legal profession and the key issues raised by stakeholders on why applying an AML/CFT regime to the legal profession has been challenging.

2. Identify examples where legal professionals have been complicit in money laundering, with a view to identifying red flag indicators and why their services were of assistance to criminals.

3. Identify specific types of transactions in which legal professionals may have been unknowingly involved in money laundering, with a view to identifying red flag indicators and why their services are of assistance to criminals.

4. Obtain information on the level of reporting from the legal profession and the types of matters reported, with a view to identifying red flag indicators.

5. Consider how the supervisory structure and legal professional privilege, professional secrecy, and confidentiality influences reporting approaches across the legal profession, along with the role ethical obligations did play or should have played in the case studies obtained.

6. Identify good practice in terms of awareness raising and education of the legal profession, positive interaction between law enforcement and professional bodies, and the role of effective sanctioning by either professional bodies for ethical breaches and law enforcement for criminal conduct.

There is extensive literature and litigation on the question of the appropriateness of the inclusion of legal professionals in the AML/CFT regime in the light of their ethical obligations and a client's fundamental rights.[11] There has also been extensive debate as to whether legal professionals are complying with legal obligations to undertake CDD and make suspicious transaction reports (STRs) when this requirement applies to the profession.[12]

Analysing these issues from a policy perspective is not within the scope of a typology study. This report discusses some of the ethical obligations of legal professionals and considers the remit of legal professional privilege/professional secrecy; however, it does so to describe the context in which legal professionals operate. The report also examines the context in which legal professionals covered by the FATF Recommendations undertake their activities and how those Recommendations have been applied in a range of countries. This in turn, will assist in assessing the ML/TF vulnerabilities facing the legal profession. Likewise, the report looks at suspicious transaction reporting by legal professionals with the aim of identifying areas of potential vulnerability, which legal professionals are themselves recognising.

12 European Commission(2006); Deloitte (2011)

METHODOLOGY USED IN THIS STUDY

Led by the Netherlands and the United Kingdom, the project team was made up of experts from: the Asia Pacific Group on Money Laundering (APG), Australia, Austria, Canada, China, Denmark, France, the Group of International Finance Centre Supervisors (GIFCS), Italy, the MONEYVAL Committee of the Council of Europe, Switzerland, the United States and the World Bank. In addition, to government and law enforcement representatives, the project team included members from the private sector having supervisory responsibilities for AML/CFT compliance.

In preparing this report, the project team has used literature and initiatives from the sources listed below (a detailed list of these sources is included in Annex 1). The research relies on literature and studies from 2003 onwards to ensure a focus on more current case examples and determine whether vulnerabilities persisted following the inclusion of legal professionals in the FATF Recommendations.

- Typologies studies previously undertaken by FATF.
- Other studies produced by international organisations such as the World Bank and the Organisation for Economic Co-operation and Development (OECD).
- Research initiatives carried out by academics and consultants either within individual countries or on a regional basis.
- Research initiatives carried out by government authorities.
- Research initiatives undertaken by AML/CFT supervisors, non-government organisations and the private sector.

To supplement information from these sources, the project team also developed two questionnaires: one for FATF members and associate members and one for self-regulatory bodies (SRBs) and professional bodies (a list of countries who responded to the questionnaire is available in Annex 2).

The project team received 76 responses to the questionnaire were received from October 2012 to January 2013 from 38 countries. Responses were from both civil and common law countries and included members of FATF, the Caribbean Financial Action Task Force (CFATF), GIFCS, the Middle East and North Africa Financial Action Task Force (MENAFATF) and Moneyval. SRBs and professional bodies also provided responses.

A workshop on money laundering and terrorist financing in the legal sector was held during the joint FATF/GIABA (Intergovernmental Action Group against Money Laundering in West Africa) experts' meeting on typologies held in Dakar, Senegal, in November 2012. Presentations were made by participating representatives from government departments, FIUs and law enforcement agencies (Netherlands, Canada, Nigeria, the United Kingdom) as well as from AML/CFT supervisors (Spain, Gibraltar and the Netherlands) and from the International Bar Association.

The workshop considered:

- Ethical challenges for the legal profession;

- Good practice in supervision;
- The usefulness of STRs filed by legal professionals; and
- Money laundering case studies demonstrating different types of involvement by legal professionals, in order to identify vulnerabilities and red flag indicators.

Informal workshops were also held in February 2013 with the American Bar Association and the Council of European Bars to consider a number of the case studies identified from the literature review and the FATF questionnaire responses. The purpose of these workshops was to consider case studies from the perspective of the private sector to understand the professional, ethical and legal obligations of the range of legal professions in different countries, as well as identify warning signs of money laundering for either the legal professionals themselves or the SRBs representing them.

The literature review, workshops and questionnaire responses painted a consistent picture of the vulnerabilities of legal professionals, as well as a consistent view of the red flag indicators, which may be of use for legal professionals, supervisors and law enforcement.

These sources also provided an extensive collection of cases demonstrating different types of involvement of legal professionals in money laundering and a few cases involving possible terrorist financing. While the majority of case studies in this report relate to ML activity, similar methodologies are capable of being used for TF activity.

In May 2013, a consultation on the draft report took place in London with representatives from the legal sector, who had previously contributed to the typology project. This consultation aimed to ensure that nuances specific to different legal systems and countries where sufficiently recognised and that the responses provided to the questionnaire by SRBs and professional bodies where accurately reflected in the report.

CHAPTER 2

SCOPE OF THE LEGAL SECTOR

The FATF Recommendations, including in the most recent revision of 2012, apply to legal professionals only when they undertake specified financial transactional activities in the course of business. The Recommendations do not apply where a person provides legal services 'in-house' as an employee of an organisation.[13]

This section examines the context in which legal professionals covered by the FATF Recommendations undertake their activities and how those Recommendations have been applied in a range of countries[14].

TYPES OF LEGAL PROFESSIONALS AND THEIR ROLES

Legal professionals are not a homogenous group, from one country to another or even within an individual country.

There are approximately 2.5 million legal professionals practicing in the countries covered by the questionnaire responses.. The size of the sector within each country ranged from 66 legal professionals to over 1.2 million. Titles given to different legal professionals varied between countries, with the same title not always having the same meaning or area of responsibility from one country to another. While some generalisations can be made depending on whether the country has a common law or civil law tradition, even these will not always hold true in all countries. See Annex 4 for a discussion of the types of activities undertaken by legal professional identified through the questionnaire responses.

The range of activities carried out by legal professions is diverse and varies from one country to another. It is therefore important that competent authorities understand the specific roles undertaken by different legal professionals within their respective country when assessing the vulnerabilities and risks that concern their legal sector.

13 Annex 3 contains the relevant definitions for the range of legal professions considered in this report.

14 Jurisdictions that responded to the questionnaire.

APPLICATION OF AML/CFT OBLIGATIONS

In 2003, FATF issued updated Recommendations, which for the first time specifically included legal professionals.

The FATF Recommendations have explicitly required legal professionals to undertake CDD[15] and to submit STRs since the revision of the Recommendations in 2003. From that time, competent authorities have also been required to ensure that legal professionals are supervised for AML/CFT purposes.

As evidenced by mutual evaluation reports[16], full implementation of these specific Recommendations has not been universal. As a consequence, a major part of the legal profession is not covered.

In order to assess the current vulnerabilities, the project team felt it was important to understand in what situations legal professionals were covered by the AML/CFT obligations within their countries and how these obligations applied to them. The application of the CDD and reporting obligations are discussed below, while the approach to the supervisory obligations is covered in Chapter 3.

From the questionnaire responses, while countries have continued to transpose the requirements almost every year since 2001, the majority of countries did so between 2002 and 2004 and between 2007 and 2008.

CLIENT DUE DILIGENCE

Box 1: **Recommendation 22**

The customer due diligence and record-keeping requirements set out in Recommendations 1, 11, 12, 15, and 17, apply to designated non-financial businesses and professions (DNFBPs) in the following situations:

(d) Lawyers, notaries, other independent legal professionals and accountants – where they prepare for or carry out transactions for their client concerning the following activities:

- buying and selling of real estate;
- managing of client money, securities or other assets;
- organisation of contributions for the creation, operation or management of companies;
- creation, operation or management of legal persons or arrangements, and buying and selling of business entities.

15 CDD includes identifying and verifying the identity of the client, beneficial owners where relevant, understanding the nature and purpose of the business relationship (including the source of funds). Records of the CDD material must be maintained.

16 The third round of mutual evaluations was based on the 40+9 Recommendations. The FATF Recommendations were revised in 2012, for the fourth round of mutual evaluations, due to begin after the publication of this report.

The majority of countries that apply CDD obligations to legal professionals have done so through national law. A few countries also have SRB-issued guidance to reinforce the legal requirements or provide specific details of the requirements.

In three of the four responses to the questionnaire, where legal professionals are not currently subject to CDD provisions as set out in the FATF Recommendations[17], a number of professional bodies have applied some CDD requirements to their members.

To ensure compliance with international obligations imposed by the United Nations and the FATF regarding targeted financial sanctions, many countries require legal professionals to have regard to whether a client is on a sanctions list. In the United States this list also includes known terrorists, narcotics traffickers and organised crime figures. While this is a separate requirement, apart from the AML/CFT CDD obligations, it does require legal professionals to have some understanding of the identity of their client.

REPORTING OBLIGATIONS

Box 2: **Recommendation 23**

The requirements set out in Recommendation 18 to 21 apply to all DNFBPs, subject to the following qualifications:

a) Lawyers, notaries, other independent legal professionals and accountants should be required to report suspicious transaction when, on behalf of or for a client, they engage in a financial transaction in relation to the activities described in paragraph (d) of Recommendation 22. Countries are strongly encouraged to extend the reporting requirement to the rest of the professional activities of accountants, including auditing.

Interpretive Note to Recommendation 23

1. Lawyers, notaries, other independent legal professionals and accountants acting as independent legal professionals, are not required to report suspicious transactions if the relevant information was obtained in circumstances where they are subject to professional secrecy or legal professional privilege.
2. It is for each country to determine the matters that would fall under legal professional privilege or professional secrecy. This would normally cover information lawyers, notaries or other independent legal professionals receive from or obtain through one of their clients: a) in the course of ascertaining the legal position of their client, or b) in performing their task of defending or representing the client in, or concerning judicial, administrative, arbitration or mediation proceedings.
3. Countries may allow lawyers, notaries, other independent legal professionals and

17 Australia, Canada (although notaries in British Columbia are covered in law), and the United States. In Turkey the law applying the obligations has been suspended awaiting the outcome of legal action, but no specific due diligence requirements have been applied by the relevant professional body. In Canada, the Proceeds of Crime (Money Laundering) and Terrorist Financing Act (PCMLTFA) and associated regulations provide that lawyers must undertake client identification and due diligence, record-keeping and internal compliance measures when undertaking designated financial transactions. These provisions are in force but are inoperative as a result of a court ruling and related injunctions.

accountants to send their STR to their appropriate self-regulatory organisations, provided that there are appropriate forms of cooperation between these organisations and the FIU.

4. Where lawyers, notaries, other independent legal professionals and accountants acting as independent legal professionals seek to dissuade a client from engaging in illegal activity, this does not amount to tipping-off.

The reporting obligations in the countries which responded to the questionnaire can be characterised as follows:

- Where the obligation to file an STR is applied to legal professionals the obligation is always contained in law rather than guidance.
- In the majority of countries, the STR is submitted directly to the FIU. In seven[18] of the countries, the STR is filed with the SRB. These are civil law countries in Europe.
- In the two of the four countries where AML/CFT obligations for filing an STR have not been extended to legal professionals[19], there is a requirement to comply with threshold reporting, which applies to cash payments above a certain amount. In such cases, the legal professional reports with the knowledge of the client.
- A few[20] countries combine the requirement to make an STR with threshold reporting.

UNIQUE FEATURES OF THE SECTOR

ETHICAL OBLIGATIONS

Ethical obligations apply to legal professionals and the work they undertake.

During the joint FATF/GIABA experts' meeting in November 2012 the International Bar Association (IBA) presented its *International Principles on Conduct for the Legal Profession*[21] and outlined some of the competing ethical requirements that legal professionals (other than notaries) must consider when complying with AML/CFT requirements.

The IBA principles were adopted in 2011 and are not binding for member bar associations and law societies. Each professional association and legal sector regulator or supervisor has its own ethical or professional rules or code of conduct[22]. Many – but not all -- are able to enforce compliance with those rules and have the power to remove legal professionals from practice.

18 Belgium, Czech Republic, Denmark, France, Germany, Luxembourg, and Portugal.

19 Australia and the United States.

20 Curacao requires all cash transactions over 20 000 to be reported, while in Montenegro all contracts for sale of real property must be filed in addition to STRs being made.

21 International Bar Association (2011)

22 Note – in countries which have a federal system, this can differ from state to state as well.

While differences may apply in individual countries, the relevant principles from the IBA are outlined below to give an indication of the types of professional obligations which apply to legal professionals other than notaries.

Box 3: **The IBA principles on conduct for the legal profession**

1. **Independence**

   A legal professional shall maintain independence and be afforded the protection such independence offers in giving clients unbiased advice and representation. A legal professional shall exercise independent, unbiased professional judgment in advising a client, including as to the likelihood of success of the client's case.

2. **Honesty, integrity and fairness**

   A legal professional shall at all times maintain the highest standards of honesty, integrity and fairness towards the lawyer's clients, the court, colleagues and all those with whom the lawyer comes into contact.

3. **Conflicts of interest**

   A lawyer shall not assume a position in which a client's interest conflict with those of the lawyer, another lawyer in the same firm, or another client, unless otherwise permitted by law, applicable rule of professional conduct, or, if permitted, by client's authorisation.

4. **Confidentiality/professional secrecy**

   A legal professional shall at all times maintain and be afforded protection of confidentiality regarding the affairs of present or former clients, unless otherwise allowed or required by law and/or applicable rules of professional conduct.

   Commentary on the principle: However a legal professional cannot invoke confidentiality/professional secrecy in circumstances where the legal professional acts as an accomplice to a crime.

5. **Clients' interests**

   A legal professional shall treat client interests as paramount, subject always to there being no conflict with the legal professional's duties to the court and the interests of justice, to observe the law, and to maintain ethical standards.

   Commentary on the principle: Legal professionals must not engage in, or assist their client with, conduct that is intended to mislead or adversely affect the interests of justice, or wilfully breach the law.

The role of a notary varies significantly depending on whether the professional is a civil-law notary or public law notary, and accordingly the professional and public obligations of a notary vary from country to country. However, the relevant principles from the International Union of Notaries code of ethics[23] provides an indication of the general principles:

[23] International Union of Notaries (2004)

Box 4: **International Union of Notaries Code of Ethics**

Notaries must carry out their professional duties competently and with adequate preparation, performing their essential functions of advising, interpreting and applying the law, acquiring specific knowledge of notarial matters and conforming to professional standards.

Notaries must always verify the identities of parties and the capacity in which they are acting. They must also give expression to their wishes.

Notaries must comply with their professional duty of confidentiality both in the course of their professional services and thereafter. They are also obliged to ensure that this requirement is similarly satisfied by their employees and agents.

Notaries are not bound by their professional duty of confidentiality purely as a result of their obligation to act in concert with any public authorities with which they become involved because of a specific regulation or an order of a judicial or administrative body, including in particular the authority responsible for monitoring the propriety of commercial transactions.

Notaries must conduct themselves in the course of their professional duties with impartiality and independence, avoiding all personal influence over their activities and any form of discrimination against clients.

When acting in their official capacity notaries must balance the respective interests of the parties concerned and seek a solution with the sole objective of safeguarding both parties.

Notaries must act suitably and constructively in the discharge of their duties; they must inform and advise the parties as to the possible consequences of their instructions, having regard to all aspects of normal legal procedure for which they are responsible; they must select the judicial form most appropriate to their intentions and ensure its legality and relevance; they must provide the parties with any clarification requested or necessary to ensure conformity with decisions taken and awareness of the legal force of the deed.

Many SRBs consider that these codes of conduct and professional rules prevent legal professionals from being knowingly involved in money laundering or terrorist financing. Furthermore, if a member had doubts about a transaction or client, that the member would either stop acting or refuse to act, as he or she could not, according to the code of ethics, engage in criminal activity with the client.

The case studies show that many areas of the legal professional's work are open to exploitation by criminals and may attract misuse for money laundering or terrorist financing, as criminals identify weaknesses in processes, legislation and understanding of red flag indicators.

Under professional obligations, the duties to the court (and in the case of the notaries - to the public), take precedence over duties to the client, with the result that the legal professional must not engage in criminal conduct and must not act in a way which facilitates their client engaging in criminal conduct.

Participants at the Dakar meeting acknowledged that the FATF Recommendations specifically recognise the challenges posed by legal professional privilege and professional secrecy. The

Recommendations seek to ease that conflict for legal professionals by specifying that there is no requirement to submit an STR when privilege or secrecy applies.

Further, where legal professionals fail to act with integrity by becoming involved in money laundering or terrorist financing, then professional disciplinary action can be considered. Depending on the specific involvement of the legal professional, this can be in addition to, or instead of, taking criminal action against the professional.

However, there are a number of other ethical or professional challenges highlighted in responses to questionnaires and in meetings, particularly with regard to the manner in which the AML/CFT regime applied to legal professionals other than notaries:

- Where there was a requirement in national law to obtain due diligence information and provide it to law enforcement or other competent authorities, especially without the requirement for a court order, many legal professionals considered this to impinge upon their ability to act with appropriate independence.
- Where following the filing of an STR, legal professionals were required to continue with a transaction or expected to do so to avoid tipping off, but were unable to discuss the STR with the client, then some legal professionals felt they were being required by law to continue to act in the face of a conflict of interest. Many expressed the view that if an STR was warranted, it was a sign that the trust at the heart of the client/legal professional relationship had been broken and it was no longer appropriate to act on behalf of the client.

As this is a typology project, it is not appropriate for this report to comment on the merits of these views or to recommend a policy response. However, further consideration of these challenges by others at a future date may assist in more effectively addressing the vulnerabilities identified later in this report.

CLIENT FUNDS

Most legal professionals are permitted to hold client funds.

From the questionnaire responses, the professional body holds the client funds in a few civil law countries[24]. The professional body requires an explanation of who the funds are held for and why, and will monitor the accounts for any unusual transactions which would suggest money laundering.

In almost all other countries however, legal professionals are required to hold client funds in a separate account[25] with a recognised financial institution, and use it only in accordance with their client's instructions and in relation to the provision of legal services.

---

24 Belgium, France, the Netherlands , In Austria the legal professional holds the money but must notify the Bar of any payment over EUR 40 000, while all deposits with a notary in Italy must be recorded in a public register.

25 These accounts have various names, including client accounts and trust accounts.

In many countries there is a requirement to provide an annual report to the professional body that could also inspect the accounts. In a few[26] countries, rules prohibit the acceptance of cash over set limits, although these limits varied significantly. Within some countries, cash is an acceptable form of payment for legal professionals' services, but its receipt is subject to threshold reporting requirements.

These obligations are often outlined in law or professional rules and could be enforced by disciplinary sanctions.

Box 5: **Example of professional body holding client funds: CARPA (France)**

The system in France known as CARPA is outlined below[1]:

This system was introduced by an Act of 25 July 1985 and requires that all income be credited to a special account. There is one CARPA for each Bar, one account for each legal professional member of the Bar and one sub-account for each case.

Any withdrawal of money must be authorised by the CARPA. Any receipt of fees cannot be done without a written authorisation by the client. Any movement of capital from one sub-account to another is forbidden unless authorised by the President of the CARPA.

The sums of money only pass in transit through the CARPA and the CARPA immediately controls the suspicious lack of movement on a sub-account. No sub-account is allowed to be overdrawn.

The CARPA is controlled by an internal committee but also by the bankers and an independent accountant: they check the nature of the case handled by the legal professional, the origin of the money and the identity of the beneficiary of a payment.

1. Chervrier, E. (2004) pp. 194-196.

The use of client accounts has been identified previously[27] as a potential vulnerability, as it may enable criminals to either place money within the financial system and / or use the money as part of their layering activity, with fewer questions being asked by financial institutions because of the perceived respectability and legitimacy added by the involvement of the legal professional.

CONFIDENTIALITY, PRIVILEGE AND PROFESSIONAL SECRECY

The right of a client to obtain legal representation and advice, to be candid with his legal adviser and not fear later disclosure of those discussions to his prejudice, is recognised as an aspect of the fundamental right of access to justice laid down in the Universal Declaration of Human Rights.

26 Canada, Italy, the Netherlands and Spain.

27 Schneider (2004); FATF (2004).

As outlined above, the FATF Recommendations recognise this right by excluding information covered by legal professional privilege or professional secrecy from the obligation to file an STR and provides that it is a matter for each country as to what those terms cover.[28]

The terms **confidentiality**, **legal professional privilege** and **professional secrecy** are often used interchangeably to describe the protection provided for this right, but legally each term has a different application, meaning and consequence, depending on the country under consideration.

The area of legal professional privilege and professional secrecy is complex, with subtle differences in application from country to country. The summary below is taken from questionnaire responses and provides a high-level overview.

The concept of **confidentiality** seems to apply to all types of legal professionals and to all information obtained in the course of the legal professional's interaction with clients and potential clients. In most countries, it appears that confidentiality can be waived by the client or overridden by express provisions in law.

Legal **professional privilege** and **professional secrecy** appear to offer a higher level of protection to information than does confidentiality. The remit of legal professional privilege and professional secrecy is often contained in constitutional law or is recognised by common law, and is tied to fundamental rights laid down in treaty or other international obligations.

Often, the protection offered to information subject to legal professional privilege and professional secrecy is also contained in criminal law, either in a statute or a rule of evidence. In many countries, the protection will be given to information received or given either for the purpose of current or contemplated litigation, or for the seeking of advice where the legal professional is exercising their skill and judgement as a legal professional. However, some of the questionnaire responses suggested that the protection applies to all information obtained by or provided to the legal professional

In many countries:

- The client can waive his or her right to legal professional privilege or professional secrecy, but in some countries, the legal professional is obliged to ignore the client's waiver if the professional decides that a waiver is not in the client's best interests.
- Legal professional privilege or professional secrecy will be lost if the legal professional is being used for the purpose of committing a crime or a fraud. However the extent of information needed to invoke the crime/fraud exemption varies from country to country, but is usually higher than the basis on which an STR is required to be filed.
- Legal professional privilege or professional secrecy can be removed by express words contained in a statute but only for limited purposes.

The consequences of a breach of legal professional privilege and professional secrecy also vary from one country to another.

---

28 FATF (2012).

In some countries, such a breach will constitute a criminal offence and the legal professional could be subject to imprisonment. In other countries a breach is sanctioned by disciplinary action and/or the client can sue the legal professional. Therefore, any uncertainty over the extent to which legal professional privilege or professional secrecy is exempt from the STR obligations within a country may expose the legal professional to significant personal liability.

In most countries, if evidence is obtained in breach of legal professional privilege or professional secrecy, that evidence cannot be used in court, and in some cases any other evidence obtained as a result of the inappropriately obtained evidence is also inadmissible. This may cause the prosecution to collapse.

A number of respondents indicated that legal professional privilege and/or professional secrecy did not apply to notaries in their country.

A number of countries also reported there were significant restrictions on their ability to obtain search warrants for a legal professional's office or other orders for the production of papers from a legal professional.

Essentially the remit of confidentiality, legal professional privilege and professional secrecy depends on the legal framework in place in the country under consideration and the specific type of legal professional involved.

There have been four completed legal challenges[29] to the application of AML/CFT obligations to legal professionals in Europe. Each of these cases related to the national implementation of the FATF Recommendations in the specific country and considered the rights of access to justice and to privacy enshrined in the European Convention on Human Rights (ECHR).

In each of those cases, the infringement of the broader rights under consideration by the application of the AML/CFT regime to legal professionals was considered proportionate and appropriate, on the basis that legal professional privilege/ professional secrecy was sufficiently protected. For two of the countries[30], this protection required that STRs be submitted via the SRB rather than directly to the FIU.

Box 6: **Summary of decision in the Michaud case**

In its final decision, given on 6 March 2013, in the case of Michaud v France (request no 12323/11), the European Court of Human Rights unanimously held that there was no violation of Article 8 (right to respect for private life) of the ECHR.

The case concerned the application of the AML/CFT requirements on legal professionals, with respect to the requirement to file STRs. The applicant claimed this obligation contradicted Article 8 of the Convention which protects the confidentiality of the exchanges between a legal professional and his client.

29 Bowman v Fels (2005) EWCA Civ 226; ECJ C-305/05, *Ordre des barreaux francophones et germanophone et al. v. Conseil des Ministres*, 2007; ECHR *André et autres v. France*, 2008 and Michaud v. France ECtHR (Application no. 12323/11).

30 Belgium and France.

The Court underlined the importance of the confidentiality of the exchanges between legal professionals and their clients, as well as the professional secrecy of legal professionals. However the Court considered that the obligation to report suspicious transactions was necessary to achieve the justifiable purpose of the defence of order and the prevention of criminal offences, since it is aimed at fighting against money laundering and associated offences. The Court decided that the implementation of the obligation to report suspicious transactions in France was not a disproportionate infringement on the professional secrecy of legal professionals for two reasons.

Firstly, because they were not required to make a report when they are defending a citizen; and secondly, because French law allows legal professionals to make the report to the president of their bar rather than directly to the authorities.

The questionnaire responses indicate that further litigation on similar issues is currently underway in Monaco and Turkey. In Canada, the Court of Appeal for British Columbia[31] has recently upheld an earlier decision that the application of CDD obligations to legal professionals was constitutionally invalid. The requirement to retain the CDD material was found to constitute an unacceptable infringement of the indepence of legal professionals because of the court's concern that law enforcement might obtain an use this material to investigate clients. The Canadian government is seeking to appeal the decision.

31 Federation of Law Societies of Canada v Canada (Attorney General) 2013 BCCA 147.

CHAPTER 3

VULNERABILITIES

VULNERABILITIES IDENTIFIED IN LITERATURE

The literature reviewed for this typology suggested that criminals would seek out the involvement of legal professionals in their money laundering schemes, sometimes because a legal professional is required to complete certain transactions, but also, to access specialised legal and notarial skills and services which could assist in laundering the proceeds of crime and in the financing of terrorism.

Key ML/TF methods that commonly employ or, in some countries, require the services of a legal professional were identified in the literature as follows:

- use of client accounts
- purchase of real property
- creation of trusts and companies
- management of trusts and companies
- setting up and managing charities

While not all legal professionals are actively involved in providing these legitimate legal services which may be abused by criminals, the use of legal professionals to provide a veneer of respectability to the client's activity, and access to the legal professional's client account, is attractive to criminals.

There is also a perception among criminals that legal professional privilege/professional secrecy will delay, obstruct or prevent investigation or prosecution by authorities if they utilise the services of a legal professional.

In terms of TF, while few case studies specifically mention the involvement of legal professionals, they do mention the use of companies, charities and the sale of property. As such it is clear that similar methods and techniques could be used to facilitate either ML or TF, although the sums in relation to the later may be smaller, and therefore the vulnerability of legal professionals to involvement in TF cannot be dismissed.[32]

[32] FATF (2008)

VULNERABILITIES IDENTIFIED THROUGH STRS AND ASSET RECOVERY

STRs and confiscated assets are two data sets that can provide information for competent authorities to assess the extent of AML/CFT risk and vulnerability within their country. The observations below are taken from responses to the FATF questionnaire.

CONFISCATION OF ASSETS

The types of assets acquired by criminals with the proceeds of their crime are evidence of the laundering methods utilised and highlight areas of potential vulnerability. Real estate accounted for up to 30% of criminal assets confiscated in the last two years, demonstrating this as a clear area of vulnerability.

REPORTS ABOUT LEGAL PROFESSIONALS

Analysis of the STRs information provided in the FATF questionnaire responses reveals that financial institutions and other designated non-financial businesses and professions (DNFBPs) were reporting suspicious transactions involving legal professionals, whether they were complicitly or unknowingly involved in their client's criminality. These STRs mentioning potential involvement of legal professionals in money laundering amounted to between .035% and 3% of all STRs reported[33].

REPORTING BY LEGAL PROFESSIONALS

The table below shows the number of reports as identified via the FATF questionnaire[34].

The wide range of activities undertaken by different types of legal professionals in different countries complicates comparisons. In certain countries, notaries and/or solicitors undertake the majority of transactional activities and advocates, barristers or legal professionals have a predominantly advocacy-based role. In these situations, there are naturally more reports originated by the former group than the latter.

The level of reporting by the legal sector is unlikely to be at the same level as that of the financial institutions. There is a significant difference in the volume of transactions undertaken by legal professionals in comparison to financial institutions. Also, the level of involvement in each transaction, which affects the basis on which a suspicion may arise and be assessed, is significantly different.

A more relevant comparison may be to other DFNBPs, especially those providing professional services. From the figures below, the reports by legal professionals averaged 10% of those of DFNBPs, ranging from less than 1% to 20%. Understanding the proportion of the legal sector to the rest of the DFNBPS in a country makes such a comparison more informative.

---

33 These figures were calculated by comparing the number of STRs identified by the FIU in the questionnaire response as having a legal professional as a subject, with the total number of STRs in that jurisdiction for the relevant year.

34 Not all of the thirty-eight jurisdictions which responded to the questionnaire provided STR figures.

However, given the number of legal professionals in each of the countries responding to the FATF questionnaire and the range of transactions they are involved in, reporting levels of zero or even single figures year after year, raises the question as to the underlying reasons relevant to that country. Chapter 6 of this report considers a number of possible contributing factors to the current reporting levels.

Table 1: **Sampling of Suspicious Transaction Reports Filed in 2010 from those countries responding to the questionnaire**

	Legal professionals			DNFBPs	Total
Country	Advocate/ Barrister/ Lawyer	Notary/Other	Solicitor		
Austria	23			-	2 211
Belgium	0	163		1 179	18 673
Curacao	0	0		69	757
Denmark	4			26	2 315
Finland	7			4 040	21 454
France		881		1 303	19 208
Hong Kong/China	99			157	19 690
Ireland			19	82	13 416
Italy	12	66		223	37 047
Jordan	0			0	208
Liechtenstein [1]	5			113	324
Montenegro	0			-	68
Netherlands [2]	27	356		-	198 877
Norway	7			82	6 660
Portugal	5			-	1 459
St Vincent and Grenadines	0			1	502
Spain	39	345		580	2 991
Sweden	1			321	12 218
Switzerland	13			322	1 146
Trinidad and Tobago	0			25	111
United Kingdom	11	141	4 913	13 729	228 834

Table Notes:

1. Legal professionals in Liechtenstein only report when acting as a financial intermediary, rather than when performing activities set forth in the list contained in FATF Recommendation 22(d).

2. The Netherlands requires reports of unusual transactions rather than suspicious transactions.

Table 2: **Sampling of Suspicious Transaction Reports Filed in 2011 from those countries responding to the questionnaire**

Country	Legal Professionals			DNFBPs	Total
	Advocate/ Barrister/ Lawyer	Notary/Other	Solicitor

Table Notes:

1. Legal professionals in Liechtenstein only report when acting as a financial intermediary, rather than when performing activities set forth in the list contained in FATF Recommendation 22(d).

2. The Netherlands requires reports of unusual transactions rather than suspicious transactions.

Most countries who responded to the survey indicated that they did not separate record STRs relating to TF from those relating to ML. A handful of jurisdictions reported receiving TF specific STRs from DNFBPs and one jurisdiction reported receiving STRs in double figures for 2010 and 2011 from legal professionals which related specifically to TF.

In light of the approach to recording statistics and the similarities of the methodologies for ML and TF, while the STRs do not provide a clear picture of the vulnerabilities of the legal profession to TF, again they certainly do not provide a case for dismissing that vulnerability.

REPORTING ON CLIENTS

Respondents to the FATF questionnaire advised that almost all the STRs submitted by the legal profession are on their own clients. The FATF Recommendations state that STRs should relate to all funds, irrespective of whether they are held by the client or third parties. Only the United Kingdom and Norway identified STRs being made by legal professionals in this broader context.

VULNERABILITIES IDENTIFIED BY LEGAL PROFESSIONALS

Respondents to the FATF questionnaire identified that, among the STRs submitted by legal professionals, the top four areas reported are:

- Purchase and sale of real property,
- Formation, merger, acquisition of companies,
- Formation of trusts and
- Providing company or trust services.

A number of countries' legal professionals also identify probate (administering estates of deceased individuals), tax advice and working for charities as areas giving rise to circumstances requiring them to file an STR.

The top five predicate offences featuring in STRs from legal professionals among the respondent countries were:

- corruption and bribery
- fraud
- tax crimes
- trafficking in narcotic drugs and psychotropic substances
- unclear offences, but unexplained levels of cash or private funding

STRs from legal professionals in a few countries also identified a range of other offences such as terrorism, trafficking in human beings and migrant smuggling, insider trading, and forgery. .

USEFULNESS OF STRS BY LEGAL PROFESSIONALS

It is difficult to assess the direct usefulness of individual STRs, as the collection of feedback in many countries is sporadic. However, from the level of case studies and questionnaire responses, it appears that STRs submitted by legal professionals are often of high quality and lead to further action.

For example, Switzerland reported that 93.5% of STRs from legal professionals were passed to law enforcement, with 62% resulting in proceedings being instituted. In addition, Belgium, Italy, Liechtenstein, Ireland and the United Kingdom commented positively on the general quality of the STRs provided by legal professionals. While the United Kingdom and the Netherlands noted that STRs from legal professionals contributed to both law enforcement activity and prosecutions, as well as assisting in identifying and locating the proceeds of crime for confiscation activity.

A number of case studies contained in Chapter 4 and Annex 6 of this report demonstrate successful prosecutions, where a legal professional has filed an STR.

SUPERVISION OF LEGAL PROFESSIONALS

Box 7: **Recommendation 28**

Countries should ensure that other categories of DNFBPS are subject to effective systems for monitoring and ensuring compliance with AML/CFT requirements. This should be performed on a risk-sensitive basis. This may be performed by a) a supervisor or b) by an appropriate SRB, provided that such a body can ensure that its members comply with their obligations to combat money laundering and terrorist financing.

The supervisor or SRB should also a) take the necessary measures to prevent criminals or their associates from being professionally accredited, or holding or being the beneficial owner of a significant or controlling interest or holding a management function, e.g. through evaluating persons on the basis of a 'fit and proper' test; and (b) have effective, proportionate, and dissuasive sanctions in line with Recommendation 35 available to deal with failure to comply with AML.CFT requirements.

APPROACH TO SUPERVISION

Supervisors generally have the opportunity to monitor the conduct of all of their members, irrespective of whether there has been a complaint of potentially criminal conduct or professional misconduct. Therefore, they are a potential source of information on vulnerabilities of a sector, even where the existence or exploitation of the vulnerability has not yet come to the attention of law enforcement agencies. An absence of supervision may aggravate pre-existing vulnerabilities.

The questionnaire responses show a number of different supervisory frameworks which have been implemented for legal professionals:

- Twenty-three countries have allocated supervisory responsibility to SRBs. In many cases there is interaction with either the FIU or a relevant government ministry on the overall approach to supervision.
- Five countries have allocated supervisory responsibility to the FIU. In all cases, the professional bodies are involved in providing advice on compliance to their members.
- Three countries have allocated supervisory responsibility to other external supervisors. In each of those cases the professional bodies liaised with the external supervisor on compliance and education.
- In two countries it was unclear from responses who had supervisory responsibility, and another two countries were in the process of establishing supervisors for the legal profession.

- In three of the four countries that responded to the questionnaire where AML/CFT obligations have not been extended to legal professionals[35], the FIU, relevant government departments and/or professional bodies provide some advice on ML/TF risks. They either have a role in monitoring compliance with professional rules or in monitoring compliance with threshold reporting obligations.

The SRBs generally indicated that they had the ability to refuse membership admission to those persons who either did not meet a fit and proper test or who had relevant criminal convictions.

The SRBs also indicated they had the power to monitor compliance and take disciplinary action, although some mentioned they had very limited resources with which to undertake this role.

A few of the external supervisors/FIUs mentioned that due to constitutional requirements regarding access to the offices of legal professionals, they either undertook their supervisory functions with the consent of the legal professionals or they had delegated the onsite inspections to the professional body.

EDUCATION AND RAISING AWARENESS

Almost all countries that responded to the questionnaire provide education, advice and guidance to legal professionals on AML/CFT compliance, and a number provided links to a large range of detailed educational material.

However, debate is ongoing within some countries about the type of red flag indicators that legal professionals should be educated about:

- Twenty-two countries either did not answer the question or said that there were no specific risks or red flag indicators for legal professionals;
- Two countries have only recently applied the AML/CFT obligations to legal professionals and are in the processes of developing red flag indicator relevant to their country;
- Of the remaining respondents in some cases both the FIU and the SRB or professional body were able to articulate risks to the legal sector and red flag indicators relevant to the activities of legal professionals. In other cases it was only the FIU or the SRB which provided that information.

In one country, the two SRBs who responded, had actively co-operated with the FIU in compiling a very detailed list of red flag indicators for legal professionals, although in their responses they stated that they were not aware of specific risks to their members.

Only one SRB said that the lack of information about warning signs and lack of disciplinary action suggested to them that the potential for misuse of their members was high. On the other hand a number of SRBs who did not provide information on red flag indicators thought that the fact that they did not need to take disciplinary action against their members was an indication that the

35 Australia, Canada and the United States – although the Canadian FIU is the AML/CFT supervisor for the Notaries in British Columbia.

ML/TF risks to their members must be low or that their members were able to deal with the risks adequately.

The questionnaire specifically asked about the interaction between SRBs and professional bodies, and FIUs. Five of the private sector respondents mentioned that they did not have any interaction with the FIU in their country, and four of those were SRBs. A further three SRBs did not respond to the questions about interaction with the FIU. Generally these respondents indicated that they would have welcomed dialogue with the FIU and thought that this would assist them in helping to improve compliance by their members.

DISCIPLINARY AND CRIMINAL SANCTIONS IMPOSED ON LEGAL PROFESSIONALS

Disciplinary and criminal action taken against legal professionals helps to identify areas of vulnerability and provides case studies of both witting and unwitting involvement. The FATF questionnaire specifically looked at disciplinary and criminal action within the preceding five years.

SRBs from ten countries provided advice about disciplinary action taken, however the number of disciplinary cases reported exceeded double figures only in the Netherlands, the United Kingdom and the United States.

Criminal prosecutions were started in sixteen countries, with Austria, Spain, Italy, and Poland joining the Netherlands, the United Kingdom and the United States reaching double figures of prosecutions in the last five years.

For both disciplinary and criminal actions only a small number were substantiated to the relevant standard of proof and resulted in sanctions. The United Kingdom and the United States provided the most examples of successful disciplinary and criminal prosecutions.

The individual case studies provided have been included in both Chapter 4 and Annex 6 of this report and the red flag indicators and other lessons to be learnt from those cases are considered in more detail in those sections. Some also contain details on sanctions imposed, which range from fines to removal from practice to imprisonment.

The case studies clearly demonstrate that criminals still seeking to exploit the vulnerabilities that caused the FATF to call for extending AML/CFT obligations to legal professionals. However, the case studies also show that, at least in some instances, it is now the legal professional who becomes aware of the attempted misuse of their services and submits an STR that then prompts an investigation.

TAKING ENFORCEMENT ACTION AGAINST LEGAL PROFESSIONALS

Within the literature and other typology research, law enforcement often cites “challenges” in successfully prosecuting legal professionals for money laundering as a basis for legal professionals posing a greater risk of ML/TF.

While the actual ML/TF offences are the same for legal professionals as they are for ordinary citizens, a number of potential hurdles to prosecuting legal professionals have been identified.

EVIDENCE GATHERING

Most of the practical issues concerning the investigation of ML/TF by or through legal professionals relate to legal professional privilege or professional secrecy and the process of gathering evidence. FATF Recommendation 31 is relevant as it stipulates that the powers of law enforcement agencies and investigative authorities should include evidence-gathering methods and compulsory measures for the production of records held by DNFBPs. Whether any evidence gathered or created in the course of an investigation is subject to legal professional privilege or professional secrecy is a legal issue that cannot be predicted with certainty. Some of the practical challenges identified in investigating ML/TF by or through legal professionals include: uncertainty about the scope of privilege, the difficult and time-consuming processes for seizing legal professional's documents, and the lack of access to client account information.

DIFFERENCES IN SCOPE OF PRIVILEGE

As outlined in Chapter 2 of this report, legal professional privilege and professional secrecy are considered fundamental human rights and the legal professional is obliged to take steps to protect that privilege. However, the remit of confidentiality, legal professional privilege and professional secrecy varies from one country to another, and the practical basis on which this protection can be overridden is not always clear or easily understood. In some countries, the FIU may have greater powers to access underlying information on which an STR is based, while in other countries it is also possible for law enforcement to have access to such material.

In some countries financial and banking records may be accessed just as easily for legal professionals as for any other individual, while tax information may be accessed easily by some law enforcement agencies. But in other countries this kind of information is also subject to privilege. In some countries, both law enforcement agencies and the private sector have said that they find the lack of clarity on the extent of the reporting duty under the AML/CFT legislation challenging.

DOCUMENTS

Regulatory officials, police, and prosecutors must be careful to respect solicitor-client privilege during the course of their work. This can result in an increase in time and resources required to build a case against a legal professional when compared to other persons or professionals. A number of the questionnaire responses highlighted this point, especially in relation to the seizure of documents from a legal professional's office – whether provided by the client or created by the legal professional.

Claims of legal professional privilege or professional secrecy could impede and delay the criminal investigation. Once a claim of privilege is made over a document obtained pursuant to a search warrant, for example, the document is essentially removed from consideration in the investigation until the claim for legal professional privilege is resolved.

This delay may still occur were the claim is made correctly and in accordance with the law, or if made with the genuine but mistaken belief by the legal professional that privilege or secrecy applies. This may be particularly relevant if there is misunderstanding of the extent of privilege or secrecy in particular circumstances by either the legal professional or law enforcement, or if there is a dispute

as to whether any of the grounds for removing the privilege or secrecy (such as the crime fraud exemption) apply. However, some of the case studies do evidence extremely wide claims of privilege or secrecy being occasionally made which exceed the generally understood provisions of the protections within the relevant country, an experience which was reflected in some of the responses to the questionnaire.

Law enforcement agencies are required by law to have strong evidence from the outset to demonstrate that privilege or secrecy should be removed. In many instances this means that the claim of legal professional privilege or professional secrecy will need to be resolved by a court, which can delay the investigation process for a substantial period of time. As time is a critical factor in pursuing the proceeds of crime, this may influence the decision of investigators of whether to investigate the possible involvement of the legal professional or to seek evidence of their client's activities from alternative sources. .

CLIENT ACCOUNTS

Several countries stated that tax authorities, police and prosecutors do not have the right to investigate transactions that touch legal professionals' client accounts, as these are covered by confidentiality requirements. Sight of such accounts can of course be given voluntarily by those under investigation, but this is a practical solution only where the investigating agency is willing to reveal the fact that they are conducting the investigation.

OTHER CHALLENGES

The use of certain investigative techniques such as intercepting the telephone or electronic communications may be virtually forbidden when those communications involve legal professionals. In some countries, prior consent to the recording by a party to the communication or the subsequent removal of sections of the recorded conversations covered by legal professional privilege or professional secrecy may permit some limited use of this technique.

Some countries noted the special position of the legal professional within a legal community as presenting a challenge in being permitted to investigate legal professionals. Legal professionals and judges will often be well-known to each other and the question has been raised of whether a court is obliged to find a judge who is not known by a defendant or suspect legal professional, and who is therefore demonstrably impartial.

PROSECUTING LEGAL PROFESSIONALS

Legal professionals have professional training, and even if they do not "know" the AML laws, they will generally be sufficiently aware to avoid crossing the line between questionable behaviour and criminality, making it more difficult to prove the relevant mental element in a money laundering prosecution. More importantly, if they do cross that line knowingly and willingly, legal professionals, especially in law firms, have access to employees who can establish companies or accounts (thus, further insulating the legal professional). Legal professionals who cross the line may also have access to other professionals (in both the legal and financial sectors) who can help them layer and conceal the proceeds of crime involved in money laundering transactions. Lastly, being a member of

the bar, affords a certain standing and prestige in society. This may cause others with whom the legal professional interacts, to favour or trust him/her, merely due to his/her status, when they would otherwise look suspiciously upon certain behaviour.

Responses to the questionnaire showed that in some cases, legal professionals were not charged with the criminal offence of money laundering although it was clear to the investigating officers that they were involved in the ML/TF activity. Two main reasons were provided as to why this may be the case:

- Firstly, because of the inability to secure sufficient evidence to prove their complicit involvement in the money laundering schemes. Domestically, access to evidence may have been refused because claims to legal professional privilege or professional secrecy were upheld; or investigators decided not to pursue that evidence because of the more complicated processes involved in seeking access to such evidence and demonstrating that it is appropriate to be released. In the case of an international investigation, the evidence-gathering process can be hindered by the fact that privilege and secrecy varies across the countries that are trying to co-operate.
- Secondly, because they are likely to make useful co-operators, informants, and/or cooperating witnesses. A legal professional has every incentive to co-operate with law enforcement once his/her illegal activity is discovered to avoid reputational harm, loss of license (livelihood), and censure by the bar.

CHAPTER 4

MONEY LAUNDERING TYPOLOGIES

This section of the report looks at case studies which illustrate the ML/TF methods and techniques which involve the services of a legal professional.

FATF recognises that the vast majority of legal professionals seek to comply with the law and their ethical obligations, and will not deliberately seek to assist clients with money laundering or terrorist financing. This report has identified case studies where legal professionals have stopped acting for clients and/or made an STR; although comprehensive information about the extent to which this occurs is not available, especially in the absence of a reporting obligation being imposed at a country level. [36]

However, as identified in Chapter 3, there are a range of legal services which are of interest to criminals because they assist in laundering money and may assist in terrorist financing.

The criminal may seek out the use of a legal professional, because they need expert advice to devise complicated schemes to launder vast amounts of money, and they will either corrupt the legal professional or find one who is already willing to wilfully assist them.

However in many other cases, the criminal will use the legal professional because:

- either by virtue of a legal requirement or custom, a legal professional is used to undertake the otherwise legitimate transaction, which in that instance involves the proceeds of crime;
- the involvement of a legal professional provides an impression of respectability sought in order to dissuade questioning or suspicion from professionals and/or financial institutions; or
- the involvement of a legal professional provides a further step in the chain to frustrate investigation by law enforcement.

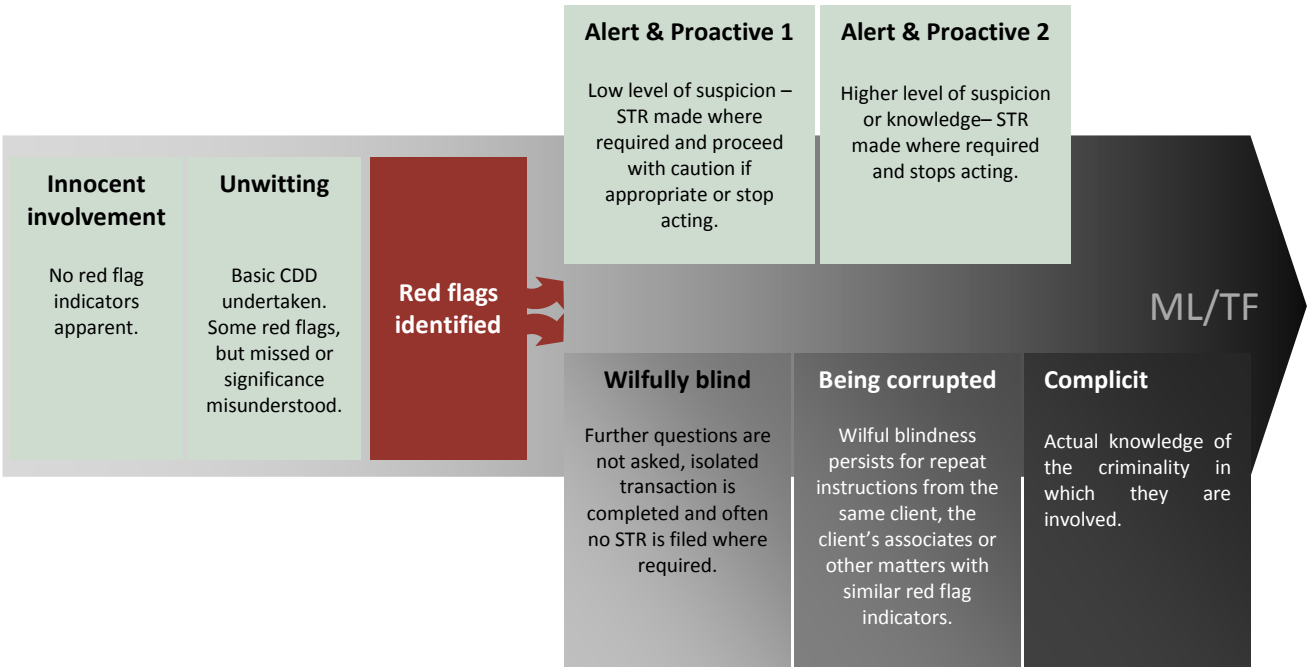
At the outset of this typology exercise, the objective was to identify examples of complicit involvement by legal professionals on the one hand and unknowing involvement on the other. A more detailed review of the case studies has indicated that such a stark distinction is not really appropriate.

The involvement of a legal professional in money laundering may more appropriately be described as a continuum:

[36] It should be noted that legal professionals may cease to act but not make an STR when legal professional privilege or professional secrecy applies.

- Depending on the extent to which the proceeds of crime have already been laundered previously, there may realistically be no red flag indicators apparent to the legal professional during the transaction or the client is able to provide convincing explanations to any generic red flag indicators identified.
- In other cases, red flag indicators may be present, but due to lack of awareness or proper systems, the legal professional genuinely does not see the red flag indicators or appreciate their significance.
- Where the red flag indicators are present and identified by the legal profession, two separate approaches may be taken.
    - In some cases the legal professional, for a variety of reasons may turn a blind eye to the red flag indicators, become more deeply involved in the criminal activity and may in a minority of cases become a future willing accomplice for one or more criminals. Law enforcement has reported that in some cases they may still receive an STR from such a legal professional after the police investigation has commenced.
    - Alternatively, the legal professional may make a STR (where required) and depending on the level of information they have causing the suspicion and their professional obligations in the given circumstances, either proceed with the transaction with caution, or cease acting for the client.

Figure 1. **Involvement of Legal Professionals in money laundering and terrorist financing (ML/TF)**



APPROACH TO CASE STUDIES IN THIS REPORT

For each method and technique identified, this report considers the attractiveness of the method for criminals and a relevant ethical or professional obligation of the legal professional.

Case studies are identified which demonstrate each technique and where possible, case studies have been sourced from both civil and common law countries and show different types of involvement from the legal professionals.

Under each case study, attention is drawn to the red flag indicators which *may* have been apparent to the legal professional and/or to the SRB or law enforcement investigating the transaction. These red flag indicators are drawn from a comprehensive list contained in Chapter 5.

Red flag indicators should always be considered in the context of the specific case. Individual red flag indicators may not be a basis on their own for having a suspicion of money laundering, but they will be a basis to ask questions of a client.[37] The answers to these questions may remove concerns about the source of funds being used in the transaction. Alternatively, the answers or lack of answers may cause a legal professional to be suspicious that his/her services are being misused, especially where there is more than one red flag indicator present.

A table of all case studies, with key methods and techniques is in Annex 5, as individual cases may demonstrate more than one method.

Additional case studies are contained in Annex 6.

[37] This is consistent with the FATF requirements to identify the client, the beneficial owners, understand the source of funds and the nature and the purpose of the business relationship.

METHOD 1: MISUSE OF CLIENT ACCOUNT

While the use of the client account is part of many legitimate transactions undertaken by legal professionals, it may be attractive to criminals as it can:

- be used as part of the first step in converting the cash proceeds of crime into other less suspicious assets;
- permit access to the financial system when the criminal may be otherwise suspicious or undesirable to a financial institution as a customer;
- serve to help hide ownership of criminally derived funds or other assets; and
- be used as an essential link between different money laundering techniques, such as purchasing real estate, setting up shell companies and transferring the proceeds of crime.[38]

[38] Australia, Canada and the United States – although the Canadian FIU is the AML/CFT supervisor for the Notaries in British Columbia.

TECHNIQUE: TRANSFERRING FUNDS WITHOUT PROVIDING LEGAL SERVICES

The majority of legal professionals are required to meet strict obligations when handling client money, including the requirement that they deal with client money only in connection with the provision of legal services and do not simply act as a bank or deposit-taking institution. Failure to comply with these obligations will generally be grounds for disciplinary action.

However, law enforcement and SRBs are still finding cases where legal professionals are simply transferring funds through their client account without providing an underlying legal service. In some cases this could raise questions as to whether a law firm had appropriate procedures or was supervising staff members or junior lawyers appropriately. In discussion with SRBs during the workshops, it was suggested that if legal services are not provided, there may not be a lawyer-client relationship and privilege or secrecy may not apply.

Case 1: **Use of client account without underlying legal services provided – common law country**

An employee working in a very small law firm in Australia received an email from a web-based account referring to a previous telephone conversation confirming that the law firm would act on the person's behalf.

The 'client' asked the employee to accept a deposit of AUD 260 000 for the purchase of machinery in London. The 'client' requested details of the firm's account, provided the surname of two customers of a bank in London, and confirmed the costs could be deducted from the deposit amount.

The details were provided, the funds arrived and the 'client' asked that the money be transferred as soon as possible to the London bank account (details provided) after costs and transfer fees were deducted. The funds were transferred, but no actual legal work was undertaken in relation to the purchase of the machinery. The transfer of the funds to the law firm was an unauthorised withdrawal from a third party's account.

This specific case was brought to the attention of the Office of the Legal Services Commissioner (OLSC) in Australia, which took the view that the law firm had failed to ensure that the identity and contact details of the individual were adequately established. This was particularly important given the individual was not a previous client of the law firm. The employee – proceeding on the basis of instructions received solely via email and telephone without this further verification of identity – was criticised. The OLSC also found that the law firm failed to take reasonable steps to establish the purpose of the transaction and failed to enquire into the basis for the use of the client account. The law firm was reprimanded for their conduct in this case.

Source: Australia (2012) questionnaire response.

Case 1 **Red flag indicators:**	• The client is actively avoiding personal contact without good reason. • Client is willing to pay fees without the requirement for legal work to be undertaken. • Client asks for unexplained speed.

Case 2: **Deliberate misuse of client account without underlying legal transaction – hybrid civil and common law country**

A Quebec lawyer received approximately USD 3 million in American currency from a Montreal businessman, which he deposited into the bank account of his law practice.

The lawyer then had the bank transfer the funds to accounts in Switzerland, the United States, and Panama.

In Switzerland, another lawyer, who was used as part of the laundering process, transferred on one occasion USD 1 760 000 to an account in Panama on the same day he received it from the Canadian lawyer.

When depositing the funds in Canada, the Quebec lawyer completed the large transaction reports as required by the bank, fraudulently indicating that that the funds came from the sale of real estate.

A police investigation into the Quebec lawyer established that these funds were transferred to a reputed Colombian drug trafficker linked to the Cali Cartel. In their attempts to gather further information about the suspicious transactions, bank officials contacted the lawyer about the funds. The lawyer refused to provide any further information, claiming solicitor-client confidentiality.

The bank subsequently informed the lawyer that it could no longer accept his business.

Source: Schneider, S. (2004)

Case 2 **Red flag indicators:**	• Use of a disproportionate amount of cash • Use of client account with no underlying legal work • Funds sent to one or more countries with high levels of secrecy • Client known to have connections with criminals

Case 3: **Disciplinary action taken for use of client account without underlying transaction – common law country**

The Kentucky Supreme Court ordered Attorney Charley Green Dixon be publicly reprimanded for misconduct relating to Dixon's attorney escrow account. Although the trial commissioner of the state bar disciplinary committee found Dixon not guilty on charges of violating two ethics rules, the court elected to review the case despite the fact that no appeal was filed by the committee.

The court found Dixon in violation of: an ethics rule relating to the safekeeping of client property; for his failure to notify corporations that he received funds in which corporations had an interest; and for distributing those funds to a third party. At the time of the misconduct, Dixon was the elected Knox County Attorney. Dixon represented his family friend, a Knox County judge, on and off for 15 years, and the judge asked him to cash cheques, leaving them on Dixon's desk each time and following up with phone calls.

In total, Dixon deposited 11 cheques payable to one of two construction companies into his attorney escrow account and subsequently wrote cheques in corresponding amounts to the judge's brother or sister-in-law. The court noted: "*An FBI investigation uncovered a money laundering scheme perpetrated by [Judge] Raymond Smith and [his brother] Matt Smith. Raymond Smith used his position as Knox County Judge–Executive to create false bids and invoices for county construction projects. He laundered the money through various accounts, including Dixon's attorney escrow account. Raymond*

and Matt Smith pled guilty to federal charges. Evidence before the trial commissioner included an affidavit from the FBI agent on the case, stating that Dixon was not charged with a crime because prosecution of Dixon required Raymond Smith's assistance, which was unlikely."

Despite the absence of a current attorney-client relationship between Dixon and the judge, the Court found that the relevant ethics rule prohibited an attorney from engaging in any conduct involving dishonesty, fraud, deceit, or misrepresentation, even outside of an attorney-client relationship. The Court ordered Dixon to be publicly reprimanded for his violation of the spirit of the ethics rules, the "global appearance of impropriety by Dixon," and his conduct which was deemed serious enough to "bring the Bar into disrepute." The Court held that even though he was not prosecuted for a money laundering offence, Dixon should have known better than to use his "escrow account for 'banking services' for individuals."

Source: United States (2012) questionnaire response Kentucky Bar Ass'n v. Dixon, 373 S.W.3d 444 (Ky. 2012)

Case 3 **Red flag indicators:**	• Use of client account without an underlying legal transaction. • Requests for payments to third parties without substantiating reason or corresponding transaction.

TECHNIQUE: STRUCTURING PAYMENTS

For countries where there are threshold reporting obligations, criminals may seek the advice and assistance of a legal practitioner to structure the payments to avoid those reporting obligations. Such involvement by a legal practitioner would be complicit. Even where threshold reporting is not required, criminals may still seek to structure payments in such a way as to avoid raising the suspicion of the financial institution.

Some of the case studies below show that advice on structuring may also include putting transactions in the names of third parties and getting involved in other financial transactions.

Under professional requirements, a legal professional would need to establish clearly who their client was, ensure they were acting in that person's best interest and that the person providing instructions had clear authority to do so. The failure to establish those factors would at least suggest a breach of professional obligations which warrant disciplinary action. It may also show that the legal professional knew or suspected that he or she was assisting with inappropriate conduct and so deliberately chose not to ask more questions.

Where the legal professional is involved in providing advice on share purchases and handling the funds to facilitate the purchase or is involved in other sorts financial transactions, consideration would need to be given as to whether the legal professional was acting as a financial advisor and/or investment broker rather than as a legal professional. Depending on the country, such conduct may be outside the scope of the legal professional's role and may require separate licensing. This may also mean that privilege/secrecy would not cover that transaction.

Case 4: **Legal professional deliberately structures transactions to avoid reporting threshold in property case – common law country**

An investigation into an individual revealed that an Australian solicitor acting on his behalf was heavily involved in money laundering through property and other transactions. The solicitor

organised conveyancing for the purchase of residential property and carried out structured transactions in an attempt to avoid detection. The solicitor established trust accounts for the individual under investigation and ensured that structured payments were used to purchase properties and pay off mortgages. Some properties were ostensibly purchased for the individual relatives, though the solicitor had no dealings with them. The solicitor also advised the individual on shares he should buy and received structured payments into his trust account for payment

Source: FATF (2007)

Case 4 **Red flag indicators:**	• Purchase of properties for family members where there is a lack of personal contact without good reason gives raises doubts as to the real nature of the transaction. • Third party funding warranting further consideration. • Significant private funding and the transfers are structured so as to avoid the threshold reporting requirements.

Case 5: **Legal professional convicted following structuring and purported stock purchases – common law country**

Criminal defence attorney Jerry Jarrett was convicted for money laundering and illegally structuring financial transactions to avoid reporting requirements. In one instance, Jarrett laundered USD 67 000 in drug proceeds by depositing money through small transactions into the bank account of a dormant business he controlled. He then prepared a backdated stock purchase agreement representing that the drug dealer had invested USD 15 000 in the company. He then wrote a series of cheques to the client for "return on investment." Jarrett organised a series of similar transactions with another drug dealer to launder USD 25 000 in drug proceeds. Both clients testified at trial that Jarrett knew that the cash was drug proceeds. See 447 F.3d 520 (7th Cir. 2006) (reversing district court's post-verdict dismissal of indictment).

Source: United States (2012) questionnaire response United States v. Jarrett, No. 03-cr-87 (N.D. Ind.)

Case 5 **Red flag indicators:**	• Significant private funding and the transfers are structured so as to avoid the threshold reporting requirements. • Client was known to have convictions for acquisitive crime.[1] • Unusual level of investment in a dormant company.

1. Acquisitive crime is any crime which produces proceeds of crime.

Case 6: **Legal professional files STR after noticing structuring and back to back sales by client – civil law country**

Person A purchases two real estate properties in 2007, for a combined price of EUR 150 000. The same properties are sold again in 2010 for a combined price of EUR 413 600 to Person B. The notary asked to see details of the payments between the vendor and the purchaser, before notarising the sale. They were provided with evidence that the funds had been deposited over the previous two months with all of the deposits under the reporting threshold amount of EUR 100 000. There was public information that Person B was associated with frauds in the automobile sector. The notary filed a STR.

Source: Spain (2012) questionnaire response

Case 6 **Red flag indicators:**	• The transaction was unusual in that the price increase was significant by comparison to the normal market changes over the same period. • One of the parties is known to be currently under investigation for acquisitive crime or to have known connections with criminals.

In this case, direct payment between the parties was not a red flag indicator, as this is quite common in Spain.

TECHNIQUE: ABORTED TRANSACTIONS

Some criminals will be aware of the restrictions on the ability of legal professionals to handle client funds without an underlying transaction. Therefore, they will appear to be conducting a legitimate transaction which, for one reason or another, collapses before completion. The client then asks for the money to be returned or paid to multiple recipients, sometimes according to the direction of a third party. [39]

During an economic downturn, the aborting of transactions is not an infrequent occurrence and legal practitioners may find it more difficult to distinguish between legitimate situations and those which were always intended to launder the proceeds of crime.

Third party funding is not unusual in aborted transactions. Under professional obligations, a legal professional must act in the best interests of the client. This means that they need to know who the client is and to understand if the funds they were using were being given to them as a gift or a loan, so that the arrangement and any subsequent ownership interests were properly documented. The failure to do so may suggest a breach of professional requirements or possibly complicity in the scheme.

Case 7: **Legal professional disciplined for sending funds to a third party after an aborted transaction – common law country**

In 2010 a solicitor was fined GBP 3 000 for their involvement in a purported company acquisition which was in fact an investment fraud. In 2005, the solicitor had accepted unsolicited funds directly from investors, but then the purchase of the company did not occur. A third party to the transaction asked for the funds to be paid into an account in Eastern Europe. The solicitor made an STR and received permission to send the funds back to the original source. For reasons which are unclear, the funds were instead transferred to another account controlled by a third party, allowing the proceeds of the fraud to be laundered. The Solicitors Disciplinary Tribunal found that the solicitor was naive rather than reckless.

Source: United Kingdom (2012) questionnaire response

Case 7 **Red flag indicators:**	• The person actually directing the operation is not one of the formal parties to the transaction or their representative • Transaction is aborted after receipt of funds and there is a request to send the funds on to a third party.

[39] This technique was specifically noted in the Australian questionnaire response to this project.

Case 8: **Legal professional removed from practice after ignoring red flag indicators on an aborted transaction – common law country**

In 2011 a solicitor was struck off the roll for acting in a number of property purchases which had all the hallmarks of money laundering. In 2008 the solicitor received instructions from an individual to purchase property on behalf of other clients, who provided funds for the purchase prior to the solicitor indicating the need for the funds to be deposited. The solicitor did not meet the clients, undertake due diligence checks or obtain instructions in writing. The funds came into the client account, the transaction was cancelled and there was a request to provide the funds to a third party – all on the same day.

Source: United Kingdom (2012) questionnaire response

Case 8 **Red flag indicators:**	• Transaction is aborted after receipt of funds and there is a request to send the funds to a third party • The client is acting through an intermediary and avoiding personal contact without good reason • Unusual speed requested.

METHOD 2: PROPERTY PURCHASES

Criminals, like those with legitimate incomes, require a place to live and premises from which to conduct their business activities. Irrespective of economic conditions, real estate investment often remains attractive for criminals and non-criminals alike. Consequently, the purchase of real estate is a common outlet for criminal proceeds. Real estate is generally an appreciating asset and the subsequent sale of the asset can provide a legitimate reason for the appearance of the funds

In many countries a legal professional is either required by law to undertake the transfer of property or their involvement is a matter of custom and practice.

However the specific role of the legal professional in real estate transactions varies significantly from country to country, or even within countries. In some countries, the legal professional will customarily hold and transfer the relevant funds for the purchase. In other countries this will be done by other parties, such as a title insurance agent.

Even if the legal professional is not handling the money, they will be aware of the financial details and in many cases will be in a position to ask further questions about the purchase or sale.

Therefore, real estate transactions are a key area of potential ML/TF vulnerability for legal professionals.

TECHNIQUE: INVESTMENT OF PROCEEDS OF CRIME IN PROPERTY

From the cases obtained, it is clear that some criminals will seek to invest the proceeds of their crime in real estate without attempting to obscure their ownership.

Despite many countries introducing reporting requirements on cash payments, and many professional bodies restricting the amount of cash which legal professionals may receive, some criminals will still seek to use the purchase of real property as a means of placing cash obtained from criminal activity. Increasingly, this is seen as part of the layering process, where the funds have been accumulated in one or more bank accounts and the property purchase is wholly or predominantly funded through private means rather than a mortgage or loan.

There has been extensive publicity about the money laundering risks posed by large amounts of cash or unexplained levels of private funding in relation to property purchases. Where legal professionals are involved and an STR is not made, it is more likely that the legal professional is either complicit in the money laundering, or is being wilfully blind by failing to ask more questions when warning signs are present.

Case 9: **Legal professional files STR after noticing red flag indicators on property transaction – civil law country**

The CTIF-CFI (the Belgium FIU) received a notification from a notary on a person from Eastern Europe, who resided in Belgium and had bought a property there.

The purchase happened by depositing the total purchase price in cash before the document authenticating the purchase was signed. The person claimed that he could not open a bank account

and so had to pay cash for the property.

After the notification of the notary, the FIU learned that the person did have an account at a Belgian bank and that the size of the transaction was not in proportion with his financial situation as he was receiving state benefits. Police sources revealed the person was known for illicit trafficking in goods and merchandise

Source: Cellule de traitement des informations Financières, (2005)

Case 9 **Red flag indicators:**	• Transaction involves a disproportionate amount of private funding/cash, which is inconsistent with the socio-economic profile of the individual • Transaction is unusual because of the manner of execution – in this case it was the depositing of the total purchase price so early in the transaction which was different to normal custom.

Case 10: **Legal professional acts as prosecution witness after failing to notice warning signs relating to a property purchase – common law country**

In 2009 a client approached a United Kingdom solicitor to purchase land for the client's family.

The client deposited GBP 35 000 with the solicitor which they said was from family members as the family were pooling the money together to buy land on which all the family could live.

Further cash amounts were deposited with the solicitor from numerous third parties to fund the rest of the purchase.

The solicitor only spoke with the client, who said they were the only literate member of the family and so was conducting business on the family's behalf.

While the solicitor did not submit an STR, the solicitor was not prosecuted but acted as a witness for the police.

Source: United Kingdom (2012) questionnaire response

Case 10 **Red flag indicators:**	• Significant levels of private funding/cash which is inconsistent with the socio-economic profile of the individual • Funding from third parties requiring further consideration • Request to act for multiple parties without meeting them

Case 11: **Legal professional convicted of money laundering through property purchase involving cash and significant funding from multiple parties – common law country**

Shadab Kahn, a solicitor, assisted in the purchase of a number of properties for a client using the proceeds of crime. The client owned a luxury car business, but was also involved in drug dealing.

The funds for the property purchases were generally provided in cash from the client or from third parties. Almost GBP 600 000 was provided by the client, which was a significant level of private funding despite the client's apparent legitimate business activities.

Mr Khan was convicted in 2009 of money laundering and failing to make an STR, jailed for four years, and struck off the roll by the Solicitors Disciplinary Tribunal in 2011. The court criticised Mr Khan for accepting explanations about the source of funds at face value and not looking behind the claimed cultural customs about the funding arrangements.

Source: United Kingdom (2012) questionnaire response

Case 11 **Red flag indicators:**	• Significant amount of private funding/cash from an individual who was running a cash intensive business. • Involvement of third parties funding without apparent connection or legitimate explanation.

TECHNIQUE: TRANSFERRING VALUE – BACK TO BACK OR ABC SALES

The frequent movement of investments in immovable assets such as property is not common. Quick successive sales of property, either with or without a mortgage, enable criminals to inflate the value of the property, thereby justifying the injection of further criminal funds into the purchase chain and enabling value to be either transferred to other parts of an organised crime group or reinvested within the group. While the frequent changes in ownership may also make it more difficult for law enforcement to follow the funds and link the assets back to the predicate offence.

Case 12: **Legal professional facilitates multiple back to back sales of properties within a group of mortgage fraudsters – civil law country**

An individual in his early 20's who worked as a gardener approached a notary to purchase several real estate properties. The client advised that he was funding the purchases from previous sales of other properties and provided a bank cheque to pay the purchase price.

The client then instructed a different set of notaries to re-sell the properties at a higher price very quickly after the first purchase. The properties were sold to other people that the client knew who were also in their early 20's and had similar low paying jobs.

The client had in fact obtained mortgages using false documents for these properties, generating the proceeds of crime. The multiple sales helped to launder those funds.

Source: France (2012) questionnaire response

Case 12 **Red flag indicators:**	• Disproportionate amount of private funding which is inconsistent with the socio-economic profile of the individual • Transactions are unusual because they are inconsistent with the age and profile of the parties • Multiple appearances of the same parties in transactions over a short period of time. • Back to back (or ABC) property transaction, with rapidly increasing value • Client changes legal advisor a number of times in a short space of time without legitimate reason. • Client provides false documentation.

TECHNIQUE: TRANSFERRING VALUE – SALES WITHIN AN ORGANISED CRIME GROUP

Case 13: **Legal professional facilitates multiple back to back property sales within an organised crime group – civil law country**

The attention of Tracfin was drawn to atypical financial flows relating to real estate purchases undertaken in the regions of Midi-Pyrénées, Languedoc-Roussillon and Provence-Alpes-Côte d'Azur.

The analysis brought to light a possible network of organised criminality involving people who were either current or former members of the Foreign Legion. The individuals were mostly of the same foreign nationality and involved a real estate civil society (property investment scheme).

Between April 2009 and March 2011 the office of a notary public registered 28 deeds of real estate transfer for this group. All the sales, bar one, were officialised by the same notary in the office.

Twelve individuals and six different real estate civil societies (non-trading companies) were listed as the purchaser, while seven individuals and five societies were sellers of the properties.

Of these 28 deeds, 16 were paid in full for EUR 1.925 million; six were financed through loans of EUR 841 149 in total, and the source of financing was not able to be determined for five properties which had a value of EUR 308 200.

Nine of the transactions were paid in full by individuals in the amount of EUR 1.152 million, which was a significant amount given the profession of the clients.

The properties were also resold within relatively short timeframes. For example, one of the properties in Castres was resold every year since 2009 with occasionally significant increases in the sale price. All these sales were registered by the same notary. The real estate civil society thereby multiplied by six the purchase price of this property.

In some instances the sellers claimed the property had increased in value because they had done work on those properties (they hadn't).

The notary registered two further transactions in 2011 which were paid for in cash and were at a significant distance from the notary's office.

Source: France (2012) questionnaire response

Case 13 **Red flag indicators:**	• Disproportionate amount of private funding/cash which is inconsistent with the socio-economic profile of the individual. • Significant increases in value / sale price sometimes realised within a relatively short timescale. • Parties to the transaction are connected without an apparent business reason. • Multiple appearances of the same parties in transactions over a short period of time.

TECHNIQUE: OBSCURING OWNERSHIP – PURCHASE WITH A FALSE NAME

Criminals who seek to retain the benefit of the proceeds of their crime may seek to obscure the ownership of real property by using false identities. Legal professionals may be complicit in these transactions, but are more likely to be involved unwittingly, especially if the criminal has forged identity documentation of a high quality or if the legal professional is not required in their country to undertake CDD.

The use of false or counterfeited documents should always be a red flag to the legitimacy of the individual and the action they wish to take. While legal professionals are not expected to be forgery experts, with the increased ability of criminals to access such materials through the internet, having some familiarity with identity documents at least within their country, may help them avoid being taken in by obvious forgeries.

Case 14: **Legal Professional facilitates property purchase in a false name – common law country**

Law enforcement investigated a matter involving a drug offender actively growing a large crop of cannabis on a property. When the person of interest (POI) was arrested for this offence, it was established that the person had purchased the block of land under a false name.

Under provisions of Chapter 3 of the Criminal Proceeds Confiscation Act 2002, if the POI had effective control of the land, and used that land to produce dangerous drugs, then the property was liable for forfeiture. Initial inquiries revealed the property was registered as being owned by a different person. Further enquiries made with another government department revealed the person had the same first names as the POI, but a different surname. The date of birth recorded at this department was very similar to the POI with the year and month identical, but the day slightly different.

It was alleged the POI had purchased the property under a false name, as no identification was required by the real estate agent to sign the contract. It is further suspected the POI took the contract to a solicitor for conveyance and had the solicitor sign the transfer documents on the POI's behalf. The sale was executed in 2002, but the final payment (made via a solicitor) was not made until 2004. This payment method was written into the contract.

Source: Australia (2012) questionnaire response

Case 14 **Red flag indicators:**	• Client provides false or counterfeited documentation • There are attempts to disguise the real owner or parties to the transaction • Transaction is unusual because of the manner of execution in terms of the delay in payment well after the contact was executed.

TECHNIQUE: OBSCURING OWNERSHIP – PURCHASE THROUGH INTERMEDIARIES

The creation of convincing false identities involves time and expenditure by criminals and there is a risk that the fake identity will be discovered. Another option for obscuring ownership while retaining control is placing the property in the names of family, friends or business associates.

While the purchase of real property for family members may be quite legitimate and a regular occurrence in many cultures, such transactions will usually require detailed documentation to ensure that ownership, inheritance and taxation matters are properly dealt with.

Legal professionals also need to carefully consider who they are acting for, especially where there are a number of parties involved in a purchase. They will need to ensure that they are not in a conflict situation and that they are able to act in the best interests of their client. Failure to ask such questions may be indicative that the legal professional is either complicit or wilfully blind to the money laundering risks.

Case 15: **Family members used as a front for purchasing property – common law country**

A Canadian career criminal, with a record including drug trafficking, fraud, auto theft, and telecommunications theft, deposited cash into a bank account in his parents' name.

The accused purchased a home with the assistance of a lawyer, the title of which was registered to his parents. He financed the home through a mortgage, also registered to his parents. The CAD 320 000 mortgage was paid off in less than six months.

Source: Schneider (2004)

Case 15 **Red flag indicators:**	• Disproportionate amount of private funding/cash which is inconsistent with the known legitimate income of the individual • Client is known to have convictions for acquisitive crime • There are attempts to disguise the real owner or parties to the transaction. • Mortgages repaid significantly prior to the initial agreed maturity date with no logical explanation.

TECHNIQUE: OBSCURING OWNERSHIP – PURCHASE THROUGH A COMPANY OR TRUST

The purchasing of real estate through a company or a trust has been identified previously[40] as a technique used to both obscure ownership and frustrate law enforcement activity to pursue the proceeds of crime.

Case 16: **PEP involved in financial wrongdoing purchases expensive properties in foreign country through a corporate vehicle – civil law country**

A foreign client approached a legal professional to buy two properties, one in Alpes-Maritimes (South of France), and the other in Paris, for EUR 11 million.

The purchase price was completely funded by the purchaser (there was no mortgage) and the funds were sent through a bank in an off-shore jurisdiction.

As the contract was about to be signed, there was a change in instructions, and a property investment company was replaced as the purchaser. The two minor children of the client were the shareholders of the company.

The foreign client held an important political function in his country and there was publicly available information about his involvement in financial wrongdoing.

Source: France (2012) questionnaire response

Case 16 **Red flag indicators:**	• The legal professional was located at a distance from the client / transaction, and there was no legitimate or economic reason for using this legal professional over one who was located closer. [1] • Disproportionate amount of private funding which is inconsistent with the socio-economic profile of the individual • Client is using bank accounts from a high risk country

40 FATF (2007) and Schneider (2004).

	• Unexplained changes in instructions, especially last minute • The transaction is unusual in the manner of its execution – in France it is quite unusual for residential property to be purchased via a corporate vehicle or for minors to be shareholders. It should be noted that this approach would be considered normal and prudent estate planning in other countries. • Use of a complicated structure without legitimate reason • Shareholders of the executing party are under legal age • Client holds a public position and is engaged in unusual private business given the characteristics involved.

1. In some jurisdictions it is becoming more frequent for legal services relating to property purchases to be sourced online which may mean that the legal professional is located at a distance from the client or the transaction. However in many civil law countries, where notaries are required to be involved with the purchase, notaries are appointed to a specific location. While non-face to face transactions are no longer listed as automatically requiring enhanced due diligence under the FATF Recommendations, the desire to avoid personal contact without good reason is still an indicator of money laundering or terrorist financing risk

Case 17: **Legal professionals assist with opening bank accounts and investing in property via complex corporate structures – civil law country**

A foreigner residing in Belgium was introduced to a bank by a law firm with a view to him opening an account. This account was credited with large sums by foreign transfers ordered by an unknown counterpart. A civil-law notary wrote bank order cheques from the account, which was then invested in real estate projects in Belgium. In one of these projects the person under suspicion was assisted by other foreign investors in setting up a particularly complex scheme.

The FIU learned from questioning the civil law notary, that he had been engaged by four foreign companies to help set up two holding companies. These two companies had in their turn set up two other Belgian real estate companies. The latter two had then invested in real estate.

The people representing these companies – a lawyer and diamond merchant – acted as intermediaries for the person under suspicion. It turned out the lawyer who had introduced this person to the bank was also involved in other schemes of a similar nature. The address of the registered office of the Belgian companies was also the address of his lawyer's office.

This information showed the important role played by the lawyer in setting up a financial and corporate structure designed to enable funds from unknown foreign principals to be invested in real estate projects in Belgium. On the basis of all these elements the FIU decided to report the file for laundering of the proceeds of organised crime.

Source: Belgium (2012) questionnaire response

Case 17 **Red flag indicators:**	• Creation of complicated ownership structures where there is no legitimate or economic reason. • Client is using an agent or intermediary without good reason. • Involvement of structures with multiple countries where there is no apparent link to the client or transaction, or no other legitimate or economic reason. • The source of funds is unusual as there is third party funding with no apparent connection or legitimate explanation and the funds are received from a foreign country where there is no apparent connection between the country and the client.

Case 18: **Legal professional files STR when companies are used to purchase properties to facilitate laundering of drug proceeds and/or terrorist financing – civil law country**

A Spanish married couple of Moroccan origins, who own three properties, incorporate a limited company. They own 100% of the shares between them, the value of which is EUR 12 000 euro.

Within the first five months, the company has undertaken investments of over EUR 260 000, without apparent recourse to external financing. This includes purchasing five properties for over EUR 193 000 in cash. One of the property purchases is from an Islamic community in the south of Spain, the vice-president of which was arrested in 2009 within the context of a Civil Guard anti-drugs trafficking operation.

The couple are found to be associated with other companies which do not file accounts as required under law or receive official gazette notifications. The notary involved in some of the property purchases makes an STR.

According to subsequent information obtained by the Spanish Executive Service of the Commission for Monitoring Exchange Control Offences (SEPBLAC), the transactions could be connected with people possibly related to drug trafficking or terrorist financing.

Source: Spain (2012) questionnaire response

Case 18 **Red flag indicators:**	• The size of the client company was inconsistent with the volume or value of the investments made by the company • The professional profiles of a company's shareholders make it unlikely that the company possessed a lawful source of funds for the scope of investments made • The sum paid out in cash for the properties acquired by the company seems unusual and the company had no corresponding business or operations to justify such a cash outlay • Morocco is geographically located on a route used to introduce drugs into Europe, and this, in connection with the considerable sums of cash being moved from the country to Spain, suggests that the territory should receive particular attention. • One of the persons associated with the operation had been arrested within the context of an anti-drugs trafficking operation.

TECHNIQUE: MORTGAGE FRAUD WITH ANTECEDENT LAUNDERING

While this is a typology on money laundering and terrorist financing – not a report on the involvement of legal professionals in predicate offences – it is relevant to highlight a few cases involving mortgage fraud.

Many of the red flag indicators which would demonstrate money laundering are also present in mortgage frauds, and depending on the specific elements of the money laundering offence, possession of the mortgage funds in the legal professional's client account and subsequent transfer will amount to money laundering.

Case 19: **Legal professional disciplined for failing to notice warning signs of mortgage fraud and handling the proceeds of crime – common law country**

In 2008 a law firm employee was approached by three individuals who were accompanied by a friend to seek a quote to purchase three separate properties. They returned later that day with passports and utility bills and instructed the law firm to act for them in the purchases.

The clients asked for the purchases to be processed quickly and did not want the normal searches undertaken. They did not provide any money to the solicitors for expenses (such funds would normally be provided) but said the seller's solicitors would be covering all fees and expenses. The clients said they had paid the deposit directly to the seller. The mortgages were paid to the law firm, which retained their fees and then sent the funds to a bank account which the law firm employee thought belonged to solicitors acting for the sellers. No due diligence was undertaken.

In fact the actual owners of the property were not selling the properties and had no knowledge of the transaction or the mortgages taken out over their properties. The mortgage funds were paid away to the fraudsters, not to another solicitors firm.

In 2010, the supervising solicitor was fined GBP 10 000 for not properly supervising the employee who allowed the fraud to take place and the proceeds of the funds to be laundered. The solicitor's advanced age was taken into account as a mitigating factor in deciding the penalty.

Source: United Kingdom (2012) questionnaire response

Case 19 **Red flag indicators:**	• Transaction was unusual in terms of all three purchasers attending together with an intermediary to undertake separate transactions; failure to provide any funds for expense in accordance with normal processes; and part of the funds being sent directly between the parties. • Client showed an unusual familiarity with respect to the ordinary standards provided for by the law in the matter of satisfactory client identification. • Clients asked for short-cuts and unexplained speed in completing a transaction.

Case 20: **Legal professional removed from practice after facilitating multiple mortgage frauds for a number of property developers – common law country**

In 2006 a solicitor was approached by three developers wanting him to act in a number of property transactions. The developers were selling the properties to various companies and investment networks, who were then quickly selling the properties on at significantly inflated prices to other individuals. The solicitor was acting for these individuals, and was introduced to the clients by the other parties to the transaction with the 'deal' already completed.

In 2011 the solicitor was struck off the roll by the Solicitors Disciplinary Tribunal because they had failed to provide full information to the lender (enabling mortgage fraud), had not checked the source of funds for the original transactions or deposits (enabling money laundering) and had not taken notes of their instructions at the time of the transactions, fabricating them during the investigation.

Source: United Kingdom (2012) questionnaire response

Case 20 **Red flag indicators:**	• Back to back (or ABC) property transaction with rapidly increasing purchase price • Transaction is unusual in that there is limited legal work to be undertaken by the legal professional • Unnecessary complexity in the structures and parties involved in the transaction.

METHOD 3: CREATION OF COMPANIES AND TRUSTS

Criminals will often seek the opportunity to retain control over criminally derived assets while frustrating the ability of law enforcement to trace the origin and ownership of the assets. Companies and trusts are seen by criminals as potentially useful vehicles to achieve this outcome.

TECHNIQUE: CREATION OF TRUSTS TO OBSCURE OWNERSHIP AND RETAIN CONTROL

Disguising the real owners and parties to the transaction is a necessary requirement for money laundering to be successful and therefore, although there may be legitimate reasons for obscuring ownership it should be considered as a red flag.

Case 21: **Trust established to receive proceeds of tax crime and invest in criminal property**

Two trusts were established in an offshore centre by a law firm. The law firm requested the trustee to accept two payment orders in favour of a bank in order to buy real estate. It appeared that the trust had been used to conceal the identity of the beneficial owners.

Information obtained by the Belgian FIU revealed that the beneficiaries of the trusts were individuals A and B, who were managers of two companies, established in Belgium that were the subject of a judicial investigation regarding serious tax fraud. Part of the funds in these trusts could have originated from criminal activity of the companies.

Source: FATF (2010)

Case 21 **Red flag indicators:**	• Use of an intermediary without good reason. • Attempts to disguise the real owner or parties to the transaction. • Involvement of structures in multiple countries where there is no apparent link to the client or transaction, or no other legitimate or economic reason. • Client is known to be currently under investigation for acquisitive crimes.

Case 22: **Trust established to enable a criminal to act as a trustee and retain control of property obtained with criminal proceeds – common law country**

A criminal involved in smuggling into the United Kingdom set up a Trust in order to launder the proceeds of his crime, with the assistance of a collusive Independent Financial Adviser (IFA) and a Solicitor, who also appeared to be acting in the knowledge that the individual was a criminal. The Trust was discretionary and therefore power over the management of the fund was vested in the Trustees, namely the criminal, his wife and the IFA.

The criminal purchased a garage, which he transferred directly to his daughter (who also happened to be a beneficiary of the Trust). She in turn leased the garage to a company. The garage was eventually sold to this company, with the purchase funded by a loan provided by the Trust. The company subsequently made repayments of several thousand pounds a month, ostensibly to the Trust, but in practice to the criminal.

Thus the criminal who had originally owned the garage probably maintained control despite his

daughter's ownership. Through controlling the Trust he was able to funnel funds back to himself through loaning funds from the Trust and receive payments on that loan.

Source: FATF (2010)

Case 22 **Red flag indicators:**	• Creation of a complicated ownership structure when there is no legitimate or economic reason. • The ties between the parties of a family nature generate doubt as to the real nature or reason for the transaction. • Client is known to be currently under investigation for acquisitive crimes.

TECHNIQUE: CREATION OF SHELL COMPANIES TO PLACE OR LAYER

In some countries, a legal professional (usually a notary) must be involved in the creation of a company, so there is an increased risk of unintentional involvement in this laundering method. However, in a number of countries, members of the public are able to register a company themselves directly with the company register. In those countries, if a client simply wants a legal professional to undertake the mechanical aspects of setting up the company, without seeking legal advice on the appropriateness of the company structure and related matters, it may be an indication that the client is seeking to add respectability to the creation of a shell company.

A shell company is a business or corporate entity that does not have any business activities or recognisable assets itself. Shell companies may be used of legitimate purposes such as serving as a transaction vehicle (*e.g.*, an acquiring company sets up a shell company subsidiary that is then merged with a target company, thus making the target company the subsidiary of the acquiring company) or protecting the corporate name from being used by a third party because the incorporation of the shell company under that name blocks any other company from being incorporated with the same name. But criminals often seek to set up shell companies to help obscure beneficial ownership.

Shell companies should be distinguished from shelf companies that are often set up by legal professionals for the purpose of facilitating legitimate transactions. Such companies will be used when it becomes apparent during a transaction that there is a need for a corporate vehicle to be used and there is a legitimate need for speed in the transaction. They will usually be created with the legal professional or their employees as the directors and/or shareholders and are held "on the shelf" until they are needed in the course of a transaction. The legal firm will only have a few of these companies at any one time; in many cases they will only be in existence for a short amount of time and they are sold to the clients in full, with the legal professionals having no further involvement in the management of the company after it is taken down off the shelf. Criminals may seek to misuse shelf companies by seeking access to companies which have been 'sitting on the shelf' for a long time in an attempt to create the impression that the company is reputable and trading well because it has been in existence for many years.

In terms of professional obligations, if a client fails to provide adequate information about the purpose for which the company was set up, this may give rise to concerns as to whether the legal professional would be able to adequately provide advice in the best interests of the client. The

failure to ask such questions may be an indicator that the legal professional is complicit in the scheme.

Case 23: **Legal professional approached over internet to set up multiple companies without information on identity, source of funds or purpose – hybrid common law / civil law country**

A legal professional was approached over the internet to set up companies with limited or no details about the future uses of the company.

Over three years they were asked to set up at least 1 000 such companies in this way.

The people they were asked to list as directors included individuals known to be involved with high level organised crime in that country.

They never met the clients and did not undertake any due diligence.

The companies were used to facilitate money laundering from loan sharking.

Source: Japan (2012) questionnaire response

Case 23 **Red flag indicators:**	• Client is actively avoiding personal contact without good reason. • Transactions are unusual in terms of volume. • Client is overly secretive about the purpose of the transaction. • Parties involved in the transaction have known connections with criminals.

Case 24: **Legal professional sets up multiple international company structures for existing clients – civil law country**

A legal professional in Spain was asked to set up a series of companies for clients for the purpose of purchasing real estate.

Some companies were incorporated in Spain but they were owned by companies which the legal professional also incorporated in an American State.

The legal professional and others in the law firm would constitute the board of directors of the companies incorporated in America. They would later sell these companies to their clients.

The legal professional set up over 300 such companies for clients of the law firm, and continued to administer those companies for the clients.

Many of the clients were known to be involved in international criminal organisations.

Source: FATF (2010)

Case 24 **Red flag indicators:**	• Involvement of structures with multiple countries where there is no apparent link to the client or transaction or no other legitimate or economic reason. • Involvement of high risk countries. • Client is known to have convictions for acquisitive crime, to be currently under investigation for acquisitive crime or have known connections with criminals.

TECHNIQUE: USE OF BEARER SHARES TO OBSCURE OWNERSHIP

Bearer shares are an equity security that is wholly-owned by whoever holds the physical stock certificate. The issuing firm neither registers the owner of the stock, nor does it track transfers of ownership.

Quite a number of countries have banned the use of bearer shares by legal entities, while in other countries; these types of securities are quite common, even for companies acting legally.

Case 25: **Creation of company with bearer shares to obscure ownership in a property transaction – civil law country**

A Spanish lawyer created several companies for a client on the same day (with ownership through bearer shares, thus hiding the identity of the true owners). One of these companies acquired a property that was an area of undeveloped land. A few weeks later, the area was re-classified by the local authorities where it was located so it could be urbanised.

The lawyer came to the Property Registry and in successive operations, transferred the ownership of the property by means of the transfer of mortgage loans constituted in entities located in offshore jurisdictions. With each succeeding transfer of the property the price of the land was increased.

The participants in the individual transfers were shell companies controlled by the lawyer. Finally the mortgage was cancelled with a cheque issued by a correspondent account. The cheque was received by a company different from the one that appeared as the acquirer on the deed (cheque endorsement). Since the company used a correspondent account exclusively, it can be inferred that this company was a front set up merely for the purpose of carrying out the property transactions.

After investigation it was learned that the purchaser and seller were the same person: the leader of a criminal organisation. Money used in the transaction was of illegal origin (drug trafficking). Additionally, in the process of reclassification, administrative anomalies and bribes were detected.

Source: FATF (2007)

Case 25 **Red flag indicators:**	• There are attempts to disguise the real owner or parties to the transaction • Client is known to have convictions for acquisitive crime, known to be currently under investigation for acquisitive crime, or have known connections with criminals. • Back to back (or ABC) property transactions, with rapidly increasing value / purchase price. • Mortgages are repeatedly repaid significantly prior to the initially agreed maturity date, with no logical explanation.

Case 26: **Creation of complex company structures in multiple countries to launder proceeds of drug trafficking**

A legal professional in Country A was approached to assist in setting up companies for a client.

The legal professional approached a management company in Country B, who in turn approached a trust and company service provider in Country C to incorporate a number of bearer share companies.

Only the details of the trust and company service provider were included in the incorporation

documents as nominee directors and administrators.

The articles of incorporation and the bearer shares were forwarded to the lawyer, via the management company, who provided them to the client.

The client was involved in drug importation. Approximately USD 1.73 million was restrained in combined assets from residential property and bank accounts in relation to those companies

Source: FATF 2010

Case 26 **Red flag indicators:**	• There are attempts to disguise the real owner or parties to the transaction • Involvement of structures with multiple countries where there is no apparent link to the client or transaction, or no other legitimate or economic reason. • Disproportionate private funding which is inconsistent with the socio-economic profile of the individual.

METHOD 4: MANAGEMENT OF COMPANIES AND TRUSTS

While the creation of companies and trusts is a key area of vulnerability for legal professionals, criminals will also often seek to have legal professionals involved in the management of those companies and trusts in order to provide greater respectability and legitimacy to the entity and its activities.

In some countries professional rules preclude a legal professional from acting as a trustee or as a company director. In countries where this is permitted, there are differing rules as to whether that legal professional can also provide external legal advice or otherwise act for the company or trust. This will affect whether any funds relating to activities by the company or trust can go through the client account.

TECHNIQUE: ACTING AS TRUSTEE – RECEIVING THE PROCEEDS OF CRIME

Where a settlor creates a trust using the proceeds of crime or deposits further assets into the trust which are the proceeds of crime, a legal professional acting as trustee will be facilitating the laundering of those proceeds by managing the trust. Under common law there is an obligation on the trustee to acquaint themselves with all trust property and the FATF standards require that those providing trust services in a business capacity undertake CDD, including ascertaining the source of funds. Such enquiries would assist in minimising the risks of legal professionals who are acting as trustees inadvertently becoming involved in money laundering.

Case 27: **Legal professional uses client account to transfer proceeds of crime into a trust he managed – common law country**

Defendant Paul Monea was convicted of various money laundering counts in connection with his attempt to accept payment for the sale of a large diamond by requiring the purchasers to wire funds, which he knew to be drug proceeds, to his attorney's IOLTA (attorney trust) account and onward to his family trust account, which was managed by the same attorney. It does not appear as if the attorney was prosecuted. *See* 376 F. App'x 531 (6th Cir. 2010), *cert. denied* 131 S. Ct. 356 (2010).

Monea's Family Trust was in possession of a 43-carat flawless yellow diamond that Monea was looking to sell for a profit. Monea was introduced to an undercover federal agent who used the name "Rizzo," and Rizzo volunteered that he knew someone (a drug dealer) who would be interested in purchasing the diamond. Monea explained that he did not want to conduct the sale in cash because of apprehension that he was being "watched" by the government. The court noted that the pair discussed at a meeting: "the best way to conduct the transaction, the problem of receiving cash, Monea's conversations with his attorney about his responsibilities concerning knowledge of the money's source, and whether Monea could use the [Attorney Trust Account] of the attorney representing the Monea Family Trust." On meeting with another undercover agent posing as the buyer's representative, Monea told the man (who he believed to be the associate of the drug dealer-purchaser) that USD19.5 million should be wired into his Attorney's Trust Account. Funds were wired in the amount of USD 100 000 in three instalments when the deal was supposed to close at the attorney's office with a gemmologist present to certify the authenticity of the stone. Rizzo pretended to make a call to have the remainder of the purchase price wired into the Attorney Trust

Account, but instead, he called other law enforcement agents and the scheme was disrupted.

The court held that Monea's "intent to conceal" the nature of the drug dealer's proceeds used to buy the diamond was shown by his desire to use the Attorney Trust Account to funnel the funds to the Monea Family Trust account, which the attorney also managed. Routing the transaction through the Attorney Trust Account was an extra and unnecessary step, not integral to the sale, which should have raised red flags with the attorney.

Furthermore, according to recorded conversations, Monea discussed with the attorney that he did not want the wire transfers "looked at." The attorney allegedly stated that he represented his Attorney Trust Account and Monea's trust, so there was no problem as long as the diamond was sold for fair market value. Monea paraphrased the attorney speaking to him, in a recorded conversation: "you [Monea] don't really have the responsibility or obligation to interview people to find out how they got the money [for the diamond] . . . it's not your responsibility." Monea later stated: "I'll tell you why I want [the money] going into my [Attorney's Trust Account]. Because my attorney represents the [Monea Family Trust]. And my attorney can legitimately represent the [Monea Family Trust] . . . and we're conducting the sale on behalf of the trust. And it keeps me clean." Monea used his attorney and his trust account as intermediaries, and then further used his trust account that was managed by the attorney to conceal drug proceeds and insulate himself by virtue of the attorney-client relationship. *See* 376 F. App'x 531 (6th Cir. 2010), *cert. denied* 131 S. Ct. 356 (2010).

Source: United States (2012) questionnaire response United States v. Monea, No. 07-cr-30 (N.D. Ohio)

Case 27 **Red flag indicators:**	• There are attempts to disguise the real owner or parties to the transaction • The retainer involves using the client account were this is not required for the provision of legal services

TECHNIQUE: MANAGEMENT OF A COMPANY OR TRUST –APPEARANCE OF LEGITIMACY AND PROVISION OF LEGAL SERVICES

Case 28: **Legal practitioner incorporates companies and acts as front man to launder proceeds of embezzlement**

A money laundering operation involved a massive purchase of derivatives by companies which paid hefty fees to fake intermediaries, then surreptitiously transferred to the bank directors either in cash or on foreign banks accounts.

In this scheme the notary participated by incorporating some of the fake intermediaries, whilst the lawyer appeared as the beneficial owner of such companies and actively participated in a complex scheme of bank transactions put in place to embezzle the funds illicitly obtained. Several bank accounts at different institutions were used, with the involvement of figureheads and shell companies, so as to transfer funds from one account to another by mainly making use of cheques and cash.

Source: Italy (2012) questionnaire response

Case 28 **Red flag indicators:**	• There are attempts to disguise the real owner or parties to the transaction • Creation of complicated ownership structures when there is no legitimate or economic reason.

Case 29: **Legal professional manages trusts used to perpetrate an advanced fraud scheme and launder the proceeds – common law country**

An entity, Euro-American Money Fund Trust, was used to perpetrate an advance-fee scheme. John Voigt created a genealogy for the Trust, claiming it was a long-standing European trust associated with the Catholic Church. He then solicited investments for phony loans. Ralph Anderskow was a partner at a large Chicago firm who managed the Trust and whose credentials were publicised as legitimising the Trust. Although he may not have known that the Trust was fraudulent at first, it was apparent shortly thereafter. Anderskow provided guarantees to borrowers, maintained a client escrow account into which advance fees were deposited, and distributed the deposited fees to Voigt and his associates, which violated the terms of the contracts entered into with the loan applicants and investors. *See* 88 F.3d 245 (3d Cir. 1996) (affirming conviction and 78-month sentence).

Source: United States (2012) questionnaire response United States v. Anderskow, No. 3:93-cr-300 (D.N.J.)

Case 29 **Red flag indicators:**	• Client is using false or fraudulent identity documents for the business entity • Requests to make payments to third parties contrary to contractual obligations

TECHNIQUE: HOLDING SHARES AS AN UNDISCLOSED NOMINEE

Individuals may sometimes have legal professionals or others hold their shares as a nominee, where there is legitimate privacy, safety or commercial concerns. Criminals may also use nominee shareholders to further obscure their ownership of assets. In some countries legal professionals are not permitted to hold shares in entities for whom they provide advice, while in other countries legal

professionals regularly act as nominees. Where a legal professional is asked to act as a nominee, they should understand the reason for this request.

Case 30: **Legal professionals acting as undisclosed nominees in companies suspected as vehicles for organised crime – civil law country**

A lawyer was reported by an Italian banking institution in connection with some banking transactions performed on behalf of companies operating in the wind power sector in which he held a stake. The reporting entities suspected the stake was in fact held on behalf of some clients of his rather than for himself.

The report concerned a company owned by the lawyer who sold his minority stake (acquired two years earlier for a much lower price) to another company authorised to build a wind farm. The majority stake belonged to a firm owned by another lawyer specialising in the renewable energy sector and involved in several law enforcement investigations concerning the infiltration of organised criminal organisations in the sector.

The whole company was purchased by a major corporation operating in the energy sector. Financial flows showed that the parent firm of the company being sold received €59million from the corporation. Although most of the funds were either used in instalments to repay lines of financing previously obtained both from Italian and foreign lenders or transferred to other companies belonging to the same financial group, some funds were credited to the account held in the name of the law firm of which the reported lawyer was a partner. Transfers to other legal professional were also observed.

Source: Italy (2012) questionnaire response

Case 30 **Red flag indicators:**	• There are attempts to disguise the real owner or parties to the transaction • Client is known to have connections with criminals • There is an excessively high price attached to the securities transferred, with regards to circumstances indicating such an excess or with regard to the sum declared in another operation.

METHOD 5: MANAGING CLIENT AFFAIRS AND MAKING INTRODUCTIONS

Because of their ethical and professional obligations, the involvement of legal professionals in a transaction or their referral of a client to other professionals or businesses often provides the activities of the criminal with a veneer of legitimacy.

TECHNIQUE: OPENING BANK ACCOUNTS ON BEHALF OF CLIENTS

Financial institutions who are complying with their AML/CFT obligations may choose not to provide bank accounts to certain individuals who pose a high risk of money laundering or terrorist financing. In the questionnaire responses and literature reviewed, there were cases where legal professionals have either encouraged financial institutions to open accounts (despite being aware of the money laundering risks) or have opened accounts specifically for the use of clients, in such a way as to avoid disclosing to the financial institution the true beneficial owner of the account.

The lack of alleged access to a bank account may be a red flag indicator that the individual is subject to sanctions or a court freezing or restraint order.

Case 31: **Legal professional assisting client to obtain banking services despite warning signs of money laundering by a politically exposed person – common law country**

From 2000 to 2008, Jennifer Douglas, a U.S. citizen and the fourth wife of Atiku Abubakar, former Vice President and former candidate for President of Nigeria, helped her husband bring over USD 40 million in suspect funds into the United States through wire transfers sent by offshore corporations to U.S. bank accounts. In a 2008 civil complaint, the U.S. Securities and Exchange Commission alleged that Ms. Douglas received over USD 2 million in bribe payments in 2001 and 2002 from Siemens AG, a major German corporation.

While Ms. Douglas denies wrongdoing, Siemens has already pled guilty to U.S. criminal charges and settled civil charges related to bribery. Siemens told the Senate Permanent Subcommittee on Investigations that it sent the payments to one of Ms. Douglas' U.S. accounts. In 2007, Mr. Abubakar was the subject of corruption allegations in Nigeria related to the Petroleum Technology Development Fund.

Of the USD 40 million in suspect funds, USD 25 million was wire transferred by offshore corporations into more than 30 U.S. bank accounts opened by Ms. Douglas, primarily by Guernsey Trust Company Nigeria Ltd., LetsGo Ltd. Inc. and Sima Holding Ltd.

The U.S. banks maintaining those accounts were, at times, unaware of her Politically Exposed Person (PEP) status, and they allowed multiple, large offshore wire transfers into her accounts. As each bank began to question the offshore wire transfers, Ms. Douglas indicated that all of the funds came from her husband and professed little familiarity with the offshore corporations actually sending her money. When one bank closed her account due to the offshore wire transfers, her lawyer helped convince other banks to provide a new account.

Source: United States Senate Permanente Subcommittee on Investigations (2010)

Case 31 **Red flag indicators:**	• Client requires introduction to financial institutions to help secure banking facilities • Client has family ties to an individual who held a public position and is engaged in unusual private business given the frequency or

	characteristics involved. • Involvement of structures with multiple countries where there is no apparent link to the client or transaction or no other legitimate or economic reason. • Private expenditure is being funded by a company, business or government.

Case 32: **Legal professionals create shell companies and permit transfers through their client account without underlying transactions to help a PEP suspected of corruption to access financial services – common law country**

Teodoro Nguema Obiang Mangue is the son of the President of Equatorial Guinea and the current Minister of Agriculture of that country. He used two attorneys in the U.S. to form shell corporations and launder millions of dollars through accounts held by those corporations to fund real property, living expenses, and other purchases in the U.S.

The shell corporations hid the identity of Obiang as a PEP, and, particularly, a PEP whose family had a reputation for corruption and contributed to the dismemberment and sale of an entire U.S. financial institution, Riggs Bank. Obiang's further use of his attorney's trust accounts to receive wire transfers from Equatorial Guinea, helped to provide an apparently legitimate reason for transfers from a high-risk country

As banks became aware of Obiang's connection to the shell companies and shut down their accounts, the attorneys would open new accounts and new institutions, concealing Obiang's beneficial ownership once again.

The Department of Justice has filed civil forfeiture actions in two district courts in Los Angeles and Washington to forfeit the proceeds of foreign corruption and other domestic offenses laundered through the U.S. *See* U.S. Senate Permanent Subcommittee on Investigations, Committee on Homeland Security and Governmental Affairs, *Keeping Foreign Corruption out of the United States: Four Case Histories* (Feb. 4, 2010).

Source: United States questionnaire response 2012: United States v. One White Crystal Covered Bad Tour Glove No.11-cv-3582 (C.D. Cal.), and United States v. One Gulfstream G-V Jet Aircraft, No. 11-cv-1874 (D.D.C.)

Case 32 **Red flag indicators:**	• Client required introduction to financial institutions to help secure banking facilities. • Client is a public official and has family ties to a head of state and is engaged in unusual private business given the frequency or characteristics involved • Involvement of structures with multiple countries where there is no apparent link to the client or transaction or no other legitimate or economic reason. • Private expenditure is being funded by a company, business or government. • There is an attempt to disguise the real owner or parties to the transaction.

Case 33: **Legal professional coordinates banking activities and sets up companies to assist with laundering – civil law country**

An individual in the Netherlands set up three companies. For one of the companies he held bearer shares. To hide his involvement in the companies he used a front man and a trust and company service provider as legal representatives.

For each of the companies, the legal representatives opened bank accounts with three different banks in different countries. The individual used the three companies to set up a loan-back scheme in order to transfer, layer and integrate his criminal money. He then co-mingled the criminal funds with the funds that originated from the legal activities of one of his companies. Next the front man bought real estate. To finance that transaction he arranged for a loan between the two companies.

Source: FATF (2007)

Case 33 **Red flag indicators:**	• There is an attempt to disguise the real owner or parties to the transaction. • Client required introduction to financial institutions to help secure banking facilities. • The transactions are unusual in that there is unexplained complexity in the structures and the funding arrangements. • Finance is being provided by a lender, other than a credit institution with no logical explanation or economic justification.

TECHNIQUE: INTRODUCTION TO OTHER PROFESSIONALS FOR PARTS OF A TRANSACTION

Other professionals, including other legal professionals, may not ask detailed CDD questions, where a client is referred to them by a legal professional. While making referrals or seeking additional expertise in another field to ensure the client obtains full advice is normal, receiving payment for such referrals may or may not be legal depending on the country.

Case 34: **Legal professional provides cover story for client when providing funds to a notary for a property purchase – civil law country**

Upon executing a deed of sale of a property, a notary received a cheque from the buyer‘s lawyer, Mr. M.

The lawyer pointed out to the notary that the money originated from the sale of a property that belonged to Mr. M‘s family. The cheque was first endorsed in favour of Mr. M‘s family before being endorsed to the notary. The cheque was issued from the lawyer‘s personal account rather than his client account.

Mr M’s bank account was credited by cash deposits, and thereafter, was mainly debited by mortgage repayments. Mr. M was known to the police for organised crime and armed robbery, for which he had already been convicted.

Source: Deloitte (2011)

Case 34 **Red flag indicators:**	• Client is known to have convictions for acquisitive crime • The transaction is unusual as while there is a requirement in law for

	the notary to be involved in the transaction, there was no legitimate reason for the funds to be passed through the lawyer, and it would be against client account rules for the lawyer to put client's money into his personal account.

Case 35: **Criminal defence legal professional introduces clients to other professionals to assist with laundering the proceeds of their crime – common law country**

A prominent criminal defence attorney in Boston, Robert A. George helped a former client launder USD 200 000 in proceeds from various crimes, including wire fraud and cocaine distribution. George connected his former client to "his guy" who owned a mortgage company in Massachusetts and who accepted currency in duffel bags from the former client. George's associate then cut cheques to the former client to make the illicit funds appear to be a loan.

George was paid a fee for his part in the laundering scheme and also arranged a fee-splitting agreement with the former client to refer other criminals to him so that George could represent them in federal cases and launder their drug proceeds. Furthermore, George structured a USD 25 000 cash "retainer fee" from an undercover agent posing as a drug dealer into a bank account held in the name of his law firm, and issued a cheque to the apparent drug dealer with a memorandum note meant to conceal the purpose of the transaction. A notice of appeal has been filed in this case.

George was sentenced on October 31, 2012, to three and a half years for money laundering and related crimes following his jury trial in June 2012. George was convicted of money laundering conspiracy, aiding and abetting money laundering, money laundering, and structuring transactions to avoid reporting requirements.

Source: United States (2012) questionnaire response - United States v. George, No. 11-cr-10201-NMG (D. Mass.)

Case 35 **Red flag indicators:**	• Client is known to have convictions for acquisitive crime. • Disproportionate amounts of cash and private funding in terms of the client's known legitimate income. • Legal professional's referral to non-legal professional constitutes professional ethics rule violations

TECHNIQUE: MANAGEMENT OF A CLIENT'S GENERAL AFFAIRS

Another feature of the highlighted cases involves the legal professional undertaking a range of 'management' activities for clients. In some jurisdictions this is referred to as 'man of affairs work' which is permitted in limited circumstances by some professional rules.

Situations where a legal professional may be undertaking these activities legitimately may involve a client who has limited capacity to manage their own affairs, or in other circumstances where the client has limited other options or a clear legitimate rational for seeking the continuing assistance from his/her legal professional. The legal professional, whether acting pursuant to a court order or a power of attorney, may use his/her client account to undertake transactions, but would more typically use accounts held by the client for whom the legal professional is acting.

In reported cases where illicit proceeds were involved, clients have had full capacity to manage their affairs and there is limited justification requiring specialist skills of the legal professional or use of their client account.

From the cases considered during this typology, it is apparent that the legal professional is more likely to be either complicit or wilfully blind to the red flag indicators of money laundering when this technique is employed In order to act in the client's best interests in such situations it is imperative they fully understand the financial and business affairs they are being asked to manage.

Other management activities may raise the question as to whether the legal professional is really acting as a financial advisor and mortgage broker. Such conduct especially when provided without connection to other legal services, may not be within the scope of the activities of a legal professional; may require separate licensing depending on the country; and may not attract professional secrecy/ legal professional privilege.

Case 36: **Criminal defence legal professional introduces clients to other professionals to assist with laundering the proceeds of their crime – common law country**

A lawyer was instructed by his client, a drug trafficker, to deposit cash into the lawyer's trust account and then make routine payments to mortgages on properties beneficially owned by the drug trafficker.

The lawyer received commissions from the sale of these properties and brokering the mortgages.

While he later admitted to receiving the cash from the trafficker, depositing it into his trust account and administering payments to the trafficker's mortgages, the lawyer denied knowledge of the source of funds.

Source: FATF (2004)

Case 36 **Red flag indicators:**	• Client is known to have convictions for acquisitive crime • Disproportionate amounts of cash and private funding in terms of the client's known legitimate income. • Client is using an agent or intermediary without good reason.

Case 37: **Legal professional undertakes financial transaction unrelated to the provision of legal services to hide funds from a bankruptcy**

A trading company, operated by the client's spouse, was declared bankrupt.

Shortly afterwards the client deposited cash (from the bankrupt company) in an account opened in the name of a family member.

The money was immediately paid by cheque to the account of a legal professional.

The legal professional deposited part of the funds back into the family member's account and used the rest to purchase a life assurance policy, via a bank transfer. The policy was immediately cashed in by the family member.

Source: Belgium (2012) questionnaire response

Case 37 **Red flag indicators:**	• Private expenditure is being funded by a company • The transaction is unusual in terms of funding arrangements, who the client is, and the reason for the involvement of the legal professional. • The use of "U-turn" transactions where money is transferred to a legal professional or other entity and then sent back to the originating account in a short timeframe • Insurance policies cashed in shortly after purchase or loans and mortgages paid quickly, in full

METHOD 6: LITIGATION

Litigation is not an activity covered by the FATF Recommendations and, as outlined above, the courts to date have held that its exclusion is important for the protection of the fundamental human right of access to justice. However, in the case of Bowman v Fels[41] – the only case to specifically consider the question in the context of a real case involving clients[42] – the English Court of Appeal held that while genuine litigation should be exempt from the reporting requirements, sham litigation would not as such litigation is an abuse of the court's processes.

Litigation could constitute *sham litigation* if the subject of the dispute was fabricated (for example if there is no actual debt and the funds being transferred are simply the proceeds of crime being passed from one entity to another) or if the subject of the litigation was a contract relating to criminal activity which a court would not enforce.[43]

Case 38: **Legal professionals pursue debts relating to criminal activity – civil law country**

In 2005, two lawyers unsuccessfully defended two clients who were prosecuted for criminal offences. They then assisted those clients to recover debts of over 5 million NOK from other known criminals. Both lawyers were convicted of money laundering.

Source: Norway (2012) questionnaire response

Case 38 **Red flag indicators:**	• Client with known convictions for acquisitive crime • Debts relate to contract based on criminal activity

Case 39: **Legal professional files STR on debt recovery transaction without economic rationale – civil law country**

In 2011, a notary submitted an STR on the unusual movement of funds between companies as a purported debt recovery action. A lawyer acting for Company A created two further limited liability companies in Spain – Company B and Company C.

Within a month, four significant transactions take place on the same day which all required involvement of notary:

1. Mr X (an Italian national, whom the press reported was linked to the Mafia) acknowledges to a notary, a debt of around EUR 440 000 they owned to Company B, but it is not clear on what basis this debt exists.
2. Mr X sells a number of real estate properties to Company B for approximately EUR 460 000, which is paid through an electronic transfer, a bankers draft and a credit agreement.
3. Company A sells the shares for Company B to Company C.
4. The shares in Company C are bought by a Swiss company.

41 [2005] EWCA Civ 226.

42 All of the other cases were constitutional challenges on the legitimacy of legislation in principle.

43 Corbin A.L 1962 Corbin on Contracts West Publishing Co.

Later that year, Company B acknowledges to a notary a debt of around EUR 600 000 to the Swiss Company, who bought Company C. The agreement the notary is asked to confirm involves quarterly payments of EUR 7 500 with the Swiss company obtaining stock options for Company C. The basis of this debt was also unclear.

Source: Spain (2012) questionnaire response

Case 39 **Red flag indicators:**	• There are multiple appearances of the same parties in transactions over a short period of time. • Large financial transactions requested by recently set up companies, not justified by the activity of the client. • Creation of complicated ownership structures where there is no legitimate or economic reason There was no legitimate economic reason to create two companies, where the intention was to sell one to the other in such a short space of time, especially when control over both was passed to a company domiciled in another country at the same time. The creation of the purported debts and significant real estate purchase were designed to give the appearance of commercial business relationships to justify the transfer of value between Italy and Switzerland, via Spain. • A party to the transaction has known links to organised crime.

Case 40: **Legal practitioners receive requests for use of client account to recover debts with little or no legal services to be provided – common law country**

Australian legal practitioners have advised AUSTRAC of receiving unusual requests from prospective clients, particularly targeted at passing funds through solicitors' trust accounts. This included a foreign company requesting legal services involving debt recovery, with the legal firm receiving substantial payments into its trust account from purported debtors (both in Australia and overseas) with little debt recovery work actually being required to be undertaken by the firm.

These types of approaches to legal professionals have been noted by FIUs and SRBs in a number of countries, although no detailed case studies were provided.

Source: AUSTRAC (2011)

Case 40 **Red flag indicators:**	• Client and/or debtor are located at a distance from the legal professional • The type of debt recovery is unusual work for the legal professional • The client has written a pre-action letter to the debtor naming the legal professional and providing the legal professional's client account details • The litigation is settled very quickly, sometimes before the legal professional has actually written to the debtor • Client is unconcerned about the level of fees • There is a request for the funds received from the debtor to be paid out very quickly, sometimes to third parties.

METHOD 7: OTHER METHODS

TECHNIQUE: USE OF SPECIALISED LEGAL SKILLS

Legal professionals possess a range of specialised legal skills which may be of interest to criminals, in order to enable them to transfer value obtained from criminal activity between parties and obscure ownership.

These specialised skills include the creation of financial instruments, advice on and drafting of contractual arrangements, and the creation of powers of attorney.

In other areas of legal specialisation, such as probate (succession) and insolvency or bankruptcy work, the legal professional may simply come across information giving rise to a suspicion that the deceased or insolvent individual previously engaged in criminal activity or that parties may be hiding assets to avoid payment to legitimate creditors. Countries differ on how unexpected sums of cash are treated in relation to probate or insolvency cases, in some a threshold report will be made and the government becomes a super-creditor able to recover the money before any other beneficiary; in other countries this would give rise to a suspicion of money laundering, requiring a STR to be filed and possibly putting the executor or the legal professional at risk of money laundering.

Depending on the complexity of the arrangement, a legal professional could be unwittingly involved in the money laundering, complicit or wilfully blind through failing to ask further questions about suspicious instructions.

Case 41: **Legal professional prepares a power of attorney to dispose of all assets belonging to a client facing drug trafficking charges**

A legal professional was asked to prepare a power of attorney for a client to give control of all of his assets to his girlfriend, including power to dispose of those assets.

The legal professional then prepared a deed of conveyance under which the girlfriend transferred all of the property to the client's brother and sister.

The legal professional had just secured bail for the client in relation to a drug trafficking charge.

The legal professional was acquitted of money laundering.

Source: Trinidad & Tobago (2012) questionnaire response

Case 41 **Red flag indicators:**	• A power of attorney is sought for the disposal of assets under conditions which are unusual and where there is no logical explanation – it would have to be very exceptional circumstances for it to be in the client's best interests to allow them to make themselves impecunious. • Unexplained speed and complexity in the transaction. • Client is known to be under investigation for acquisitive crime.

Case 42: **Legal professional submits STR on commercial arrangement which has not economic rationale – civil law country**

In 2008 a Spanish citizen (Mr A) and a citizen from a Middle East country (Mr B) attended a notary office to formalise a contract which provided:

1. Mr A is the holder of a Gold Import Licence from an African Republic.
2. Mr B will fund the gold importation by making a payment of EUR 8 000, through a promissory note of EUR 6 000 maturing later that year and the remaining EUR 2 000 in cash three days after the promissory note matures.
3. Mr A will make payments of EUR 4 000 per month to Mr B, on the 22nd of each month for an indefinite period to represent the profits of the gold import activity.
4. Either party may terminate the agreement, with Mr A refunding the EUR 8 000 to Mr B and an agreement that the termination will be accepted without question.

These are new clients for the notary, Mr A refuses to provide certain identification information requested by the notary and no records supporting any business activity of any kind by either party are provided. The notary submitted an STR.

Source: Spain (2012) questionnaire response

Case 42 **Red flag indicators:**	• The client is reluctant to provide information usually required in order to enable the execution of the transaction. • There are a number of high risk countries involved in the transaction • The transaction makes no economic sense given the evident imbalance suffered by Mr A. • The transaction was unusual for this notary, given their unfamiliarity with the parties, the gold import business and the international elements of the transaction.

Case 43: **Legal professionals uncover funds tainted by criminal activity during administration of an estate – common law country**

A firm of solicitors was instructed to act in the administration of a deceased person's estate.

When attending the deceased's property a large amount of cash was found.

In addition, the individual had a savings account holding GBP 20 000.

As part of the administration of the estate the solicitor subsequently identified that the individual was receiving state benefits, to which they would not have been entitled if the hidden assets had been known, thus meaning that the entire estate of the client was now tainted by this criminality

The solicitor filed an STR.

Source: United Kingdom (2012) presentation at typologies workshop

Case 43 **Red flag indicators:**	• Disproportionate levels of private funding and cash which is inconsistent with the socio-economic profile of the individual. • Information suggesting involvement in acquisitive criminal activity.

Case 44: **Legal professional's attention drawn to unusual purchases of assets during the administration of a bankruptcy – civil law country**

In a bankruptcy case where A and B were guarantors, a notary was appointed by the court to proceed with the public sale of different goods of the parties concerned. In the context of the public sale. The attention of the notary was drawn to the fact that several of the goods were purchased by X, the daughter of A and B. Additionally, the total amount of the purchases was significant and was not commensurate with the socio-economic status of X, who was unemployed.

The purchased goods were partially funded by a cheque of a mortgage loan that a bank granted to X. The balance came from an account which was opened in the name of a third person, C.

This account had received several deposits in cash and transfers from a company of which both C and B were partners. B had been a partner in different companies that were declared bankrupt and for which he was known to the judicial authorities. Further, the daughter who had purchased the goods was not a director of this company, was not subject to VAT in Belgium and her official income consisted only of unemployment benefits.

With this information the FIU research indicated that the funds that were deposited on the accounts of C in cash may have come from funds that B had taken without permission to help his daughter to buy a part of his own real estate. C and B knew each other as they were partners in the same company.

In this case, the account of C was used as inadvertent account to conceal the illegal origin of the funds. Taking the above elements the various purchases of X can therefore be associated with a crime relating to the bankruptcy. A law enforcement investigation started.

Source: Cellule de traitement des informations Financières (2006)

Case 44 **Red flag indicators:**	• The ties between the parties are of a family nature, which generate doubts as to the real nature or reason for the transaction. • Disproportionate private funding which was inconsistent with the socio-economic profile of the individual. • Third party funding with no apparent connection or legitimate explanation

TECHNIQUE: PAYMENT OF LEGAL FEES AND ASSOCIATED EXPENSES

In some countries there are specific exemptions to enable legal practitioners to be paid with the proceeds of crime for defence purposes, provided that the defence fees are reasonable to the services rendered and that any remaining funds are not returned to the client or to third parties. In other countries this would still constitute money laundering and the fees paid would be amenable to confiscation proceedings.

Case 45: **Legal practitioner uses known criminal funds to pay for expenses of client who was in prison – common law country**

Miguel Rodriguez-Orejuela was a leader of the Cali Cartel who required and enforced a vow of silence from his associates and employees. In return for this vow of silence regarding his association

with drug trafficking, Rodriguez-Orejuela agreed to pay the defence expenses of any of his associates and to compensate their families while they were in prison.

Through his law firm, Michael Abbell facilitated the payments to family and prison commissary accounts on behalf Rodriguez-Orejuela. The funds Abbell accepted to reimburse these payments came from Rodriguez-Orejuela, who had no legitimate form of income (all his businesses were in fact funded by narco-trafficking). Abbell would make the payments, often using money orders paid for by the law firm, and then bill Rodriguez-Orejuela for reimbursement and fees. The transactions were designed to conceal the fact that Rodriguez-Orejuela was funding the payments and was associated with drug activity.

After two trials, a jury convicted Abbell of money laundering and racketeering charges. *See* 271 F.3d 1286 (11th Cir. 2001) (affirming convictions and reversing district court's grant of judgment of acquittal on racketeering-related counts). Abbell was sentenced to 97 months' incarceration.

Source: United States (2012) questionnaire response United States v. Abbell, No. 93-cr-470(17) (S.D. Fla.)

Case 45 **Red flag indicators:**	• Client is known to have convictions for acquisitive crime, known to be currently under investigation for acquisitive crime or have known connections with criminals. • Disproportionate private funding or cash (potentially from a third party) which is inconsistent with known legitimate income. • There is an attempt to disguise the real owner or parties to the transactions.

Case 46: **Legal practitioner accepted large amounts of cash from a known criminal to pay for legal fees – common law country**

Defense attorney Donald Ferguson was indicted on four counts of money laundering, and one count of conspiring to launder money. Ferguson accepted four large sums of cash totalling USD 566 400 from Salvador Magluta. Ferguson deposited the cash payments into his attorney trust accounts, supposedly as payment for the defence of an associate of Magluta. Ferguson ultimately pleaded guilty to one count of money laundering and consented to the forfeiture of the full amount of the payments. He was sentenced to five years' probation. *See* 142 F. Supp. 2d 1350 (S.D. Fla. 2000) (declining to dismiss indictment).

Source: United States (2012) questionnaire response United States v. Ferguson, No. 99-cr-116 (S.D. Fla.)

Case 46 **Red flag indicators:**	• Client is known to have convictions for acquisitive crime, known to be currently under investigation for acquisitive crime or have known connections with criminals. • Disproportionate private funding or cash (potentially from a third party) which is inconsistent with known legitimate income.

Case 47: **Legal practitioner paid 'salary' by organised criminals to be available to represent their needs, irrespective of whether legal services were provided – civil law country**

In July 1999 La Stampa reported a criminal lawyer and accountant arrested by DIA,17 (Anti-mafia Investigation Department), who were charged with facilitating funds from illicit sources on the French Riviera. The arrests were the consequence of investigations and electronic surveillance

(phone and environmental wiretapping), corroborated by the lawyer's confession. The lawyer's office was the operational base for the criminal activities of two high-profile mafia bosses. According to the indictment, the lawyer was paid a monthly salary of about EUR 6 000 to be always available for the needs of the mafia family.

Source: Di Nicola, A. and Zoffi, P. (2004)

Case 47 **Red flag indicators:**	• Client is known to have convictions for acquisitive crime, known to be currently under investigation for acquisitive crime or have known connections with criminals. • Disproportionate private funding or cash (potentially from a third party) which is inconsistent with known legitimate income. • Payment of a general retainer rather than fees for specific services, where professional rules require the provision of itemised bills.

TECHNIQUE: PROVIDING LEGAL SERVICES FOR CHARITIES

Legal professionals may be involved in setting up charities or other non-profit entities, acting as a trustee, and providing advice on legal matters pertaining to the charity, including advising on internal investigations.

Like many other businesses, charities can be victims of fraud from trustees, employees and volunteers or be set up as vehicles for fraud, which will involve the proceeds of crime and subsequent money laundering. FATF typologies have also identified a particular vulnerability for charities in the financing of terrorism. [44]

Case 48: **Legal professional sets up charity to provide funding to individuals convicted of terrorist activities – civil law country**

This case has been brought to the attention of the Dutch Bureau for Supervision. A Foundation was established by a person related to a member of an organization whose purpose is committing terrorist offences. This person was herself not designated on international sanctions. The goal for the foundation was to provide help to persons convicted of terrorist activities. A first notary refused to establish the foundation, while a second notary agreed to do so.

Providing this form of financial assistance to a person convicted of terrorist activities, given the specific circumstances of the case, did not constitute an offence of financing terrorism, so no prosecutions were brought.

Source: Netherlands (2012) questionnaire response

Case 48 **Red flag indicators:**	• Client is related to a person listed as having involvement with a known terrorist organisation • Funding is to be provided to a person convicted of terrorist activities

44 FATF (2008b); FATF typology 2002-2003.

Case 49: **Legal professional sets up charities to undertake criminal activity and deal with the proceeds of that crime – common law country**

Attorney and lobbyist Jack Abramoff pleaded guilty in 2006 to three counts including conspiracy to defraud the United States, tax evasion, and "honest services" fraud (a corruption offense), upon the filing of a criminal information in the U.S. District Court for the District of Columbia. While working for two law and lobbying firms between 1999 and 2004, Abramoff solicited and lobbied for various groups and businesses, including Native American tribal governments operating or interested in operating casinos.

Abramoff conspired with former Congressional staff member Michael Scanlon to: defraud his lobbying clients by pocketing approximately USD 50 million; misuse his charitable organization by using it to finance a lavish golf trip to Scotland for public officials and others; and to provide numerous "things of value" to public officials in exchange for benefits to his clients.

In one set of schemes, Abramoff employed a non-profit that he founded called Capital Athletic Foundation. The Foundation was intended to fundraise for a non-profit school and it was granted tax-exempt status from the Internal Revenue Service, however, Abramoff used it as a personal slush fund. One congressional staffer solicited a contribution from a Russian distilled beverage company and Abramoff client on behalf of the Foundation. Abramoff used the Russian client's donation for personal and professional benefit, namely, to finance a trip to Scotland attended by members of Congress that cost the Foundation approximately USD 166 000.

Another Abramoff client, a wireless company, was solicited to make a contribution of at least USD 50 000 to the Foundation, in exchange for Abramoff securing a license for the company without charging his firm's usual lobbying fee or even informing his firm of the arrangement. According to the criminal information, Abramoff also concealed assets and sources of income from the Internal Revenue Service through the use of nominees, some of which were tax-exempt organizations.

Although not detailed in the court filings in this case, it was widely reported at the time that a congressional staff member's spouse received USD 50 000 from another non-profit affiliated with Abramoff, which in turn, received money from Abramoff clients interested in internet gambling and postal rate issues before Congress. Further, the Capital Athletic Foundation allegedly donated USD 25 000 to Representative and House Majority Leader Tom DeLay's Foundation for Kids. These are just a few examples of Abramoff's misuse of non-profits, some of which were founded by him and some of which existed previously and accepted contributions from Abramoff, Scanlon, or their clients, often due to Abramoff's personal relationships with the heads of such charities.

Abramoff was also indicted in 2005 in the Southern District of Florida in connection with a massive fraud that he conducted involving his purchase of a casino and cruise company. Abramoff pleaded guilty to two more counts of conspiracy and wire fraud in the Florida case, which did not involve the misuse of tax-exempt entities. He was never charged with money laundering.

Source: United States (2012) questionnaire response - United States v. Abramoff, No. 06-cr-00001 (D.D.C.)

Case 49 **Red flag indicators:**	• Non-profit organisation engages in transactions not compatible with those declared and not typical for that body • There are attempts to disguise the real owner or parties to the transactions

CHAPTER 5

RED FLAG INDICATORS

As outlined in Chapter 4 the methods and techniques used by criminals to launder money may also be used by clients with legitimate means for legitimate purposes.

Because of this, red flag indicators should always be considered in context. The mere presence of a red flag indicator is not necessarily a basis for a suspicion of ML or TF, as a client may be able to provide a legitimate explanation.

These red flag indicators should assist legal professionals in applying a risk-based approach to their CDD requirements of knowing who their client and the beneficial owners are, understanding the nature and the purpose of the business relationship, and understanding the source of funds being used in a retainer. Where there are a number of red flag indicators, it is more likely that a legal professional should have a suspicion that ML or TF is occurring.

SRBs and law enforcement may also find these red flag indicators to be useful when monitoring the professional conduct of or investigating legal professionals or their clients. Where a legal professional has information about a red flag indicator and has failed to ask questions of the client, this may be relevant in assessing whether their conduct was complicit or unwitting.

This chapter contains a collection of red flag indicators identified through the case studies, literature reviewed, and existing advice published by FIUs and SRBs which were provided in response to the questionnaire.

RED FLAGS ABOUT THE CLIENT

- Red flag 1: The client is overly secret or evasive about:
  - who the client is
  - who the beneficial owner is
  - where the money is coming from
  - why they are doing this transaction this way
  - what the big picture is.
- Red flag 2: The client:
  - is using an agent or intermediary without good reason.
  - is actively avoiding personal contact without good reason.

- is reluctant to provide or refuses to provide information, data and documents usually required in order to enable the transaction's execution
- holds or has previously held a public position (political or high-level professional appointment) or has professional or family ties to such an individual and is engaged in unusual private business given the frequency or characteristics involved.
- provides false or counterfeited documentation
- is a business entity which cannot be found on the internet and/or uses an email address with an unusual domain part such as Hotmail, Gmail, Yahoo etc., especially if the client is otherwise secretive or avoids direct contact.
- is known to have convictions for acquisitive crime, known to be currently under investigation for acquisitive crime or have known connections with criminals
- is or is related to or is a known associate of a person listed as being involved or suspected of involvement with terrorist or terrorist financing related activities.
- shows an unusual familiarity with respect to the ordinary standards provided for by the law in the matter of satisfactory customer identification, data entries and suspicious transaction reports – that is – asks repeated questions on the procedures for applying the ordinary standards.

- Red flag 3: The parties:
  - The parties or their representatives (and, where applicable, the real owners or intermediary companies in the chain of ownership of legal entities), are native to, resident in or incorporated in a high-risk country
  - The parties to the transaction are connected without an apparent business reason.
  - The ties between the parties of a family, employment, corporate or any other nature generate doubts as to the real nature or reason for the transaction.
  - There are multiple appearances of the same parties in transactions over a short period of time.
  - The age of the executing parties is unusual for the transaction, especially if they are under legal age, or the executing parties

are incapacitated, and there is no logical explanation for their involvement.

- There are attempts to disguise the real owner or parties to the transaction.
- The person actually directing the operation is not one of the formal parties to the transaction or their representative.
- The natural person acting as a director or representative does not appear a suitable representative.

RED FLAGS IN THE SOURCE OF FUNDS

- Red Flag 4: The transaction involves a disproportional amount of private funding, bearer cheques or cash, especially if it is inconsistent with the socio-economic profile of the individual or the company's economic profile.
- Red flag 5: The client or third party is contributing a significant sum in cash as collateral provided by the borrower/debtor rather than simply using those funds directly, without logical explanation.
- Red flag 6: The source of funds is unusual:
  - third party funding either for the transaction or for fees/taxes involved with no apparent connection or legitimate explanation
  - funds received from or sent to a foreign country when there is no apparent connection between the country and the client
  - funds received from or sent to high-risk countries.
- Red flag 7: The client is using multiple bank accounts or foreign accounts without good reason.
- Red flag 8: Private expenditure is funded by a company, business or government.
- Red flag 9: Selecting the method of payment has been deferred to a date very close to the time of notarisation, in a jurisdiction where the method of payment is usually included in the contract, particularly if no guarantee securing the payment is established, without a logical explanation.
- Red flag 10: An unusually short repayment period has been set without logical explanation.
- Red flag 11: Mortgages are repeatedly repaid significantly prior to the initially agreed maturity date, with no logical explanation.
- Red flag 12: The asset is purchased with cash and then rapidly used as collateral for a loan.

- Red flag 13: There is a request to change the payment procedures previously agreed upon without logical explanation, especially when payment instruments are suggested which are not appropriate for the common practice used for the ordered transaction.
- Red Flag 14: Finance is provided by a lender, either a natural or legal person, other than a credit institution, with no logical explanation or economic justification.
- Red Flag 15: The collateral being provided for the transaction is currently located in a high-risk country.
- Red flag 16: There has been a significant increase in capital for a recently incorporated company or successive contributions over a short period of time to the same company, with no logical explanation.
- Red flag 17: There has been an increase in capital from a foreign country, which either has no relationship to the company or is high risk.
- Red flag 18: The company receives an injection of capital or assets in kind which is notably high in comparison with the business, size or market value of the company performing, with no logical explanation.
- Red flag 19: There is an excessively high or low price attached to the securities transferred, with regard to any circumstance indicating such an excess (*e.g.* volume of revenue, trade or business, premises, size, knowledge of declaration of systematic losses or gains) or with regard to the sum declared in another operation.

- Red flag 20: Large financial transactions, especially if requested by recently created companies, where these transactions are not justified by the corporate purpose, the activity of the client or the possible group of companies to which it belongs or other justifiable reasons.

RED FLAGS IN THE CHOICE OF LAWYER

- Red flag 21: Instruction of a legal professional at a distance from the client or transaction without legitimate or economic reason.
- Red flag 22: Instruction of a legal professional without experience in a particular specialty or without experience in providing services in complicated or especially large transactions..
- Red flag 23: The client is prepared to pay substantially higher fees than usual, without legitimate reason.
- Red flag 24: The client has changed advisor a number of times in a short space of time or engaged multiple legal advisers without legitimate reason

- Red flag 25: The required service was refused by another professional or the relationship with another professional was terminated.

RED FLAGS IN THE NATURE OF THE RETAINER

- Red flag 26: The transaction is unusual, *e.g.*:
    - the type of operation being notarised is clearly inconsistent with the size, age, or activity of the legal entity or natural person acting
    - the transactions are unusual because of their size, nature, frequency, or manner of execution
    - there are remarkable and highly significant differences between the declared price and the approximate actual values in accordance with any reference which could give an approximate idea of this value or in the judgement of the legal professional
    - a non-profit organisation requests services for purposes or transactions not compatible with those declared or not typical for that body.
- Red flag 27: The client:
    - is involved in transactions which do not correspond to his normal professional or business activities
    - shows he does not have a suitable knowledge of the nature, object or the purpose of the professional performance requested
    - wishes to establish or take over a legal person or entity with a dubious description of the aim, or a description of the aim which is not related to his normal professional or commercial activities or his other activities, or with a description of the aim for which a license is required, while the customer does not have the intention to obtain such a licence
    - frequently changes legal structures and/or managers of legal persons
    - asks for short-cuts or unexplained speed in completing a transaction
    - appears very disinterested in the outcome of the retainer
    - requires introduction to financial institutions to help secure banking facilities

- Red flag 28: Creation of complicated ownership structures when there is no legitimate or economic reason.
- Red flag 29: Involvement of structures with multiple countries where there is no apparent link to the client or transaction, or no other legitimate or economic reason.
- Red flag 30: Incorporation and/or purchase of stock or securities of several companies, enterprises or legal entities within a short period of time with elements in common (one or several partners or shareholders, director, registered company office, corporate purpose etc.) with no logical explanation.
- Red flag 31: There is an absence of documentation to support the client's story, previous transactions, or company activities.
- Red flag 32: There are several elements in common between a number of transactions in a short period of time without logical explanations.
- Red flag 33: Back to back (or ABC) property transactions, with rapidly increasing value or purchase price.
- Red flag 34: Abandoned transactions with no concern for the fee level or after receipt of funds.
- Red flag 35: There are unexplained changes in instructions, especially at the last minute.
- Red flag 36: The retainer exclusively relates to keeping documents or other goods, holding large deposits of money or otherwise using the client account without the provision of legal services.
- Red flag 37 There is a lack of sensible commercial/financial/tax or legal reason for the transaction.
- Red flag 38 There is increased complexity in the transaction or the structures used for the transaction which results in higher taxes and fees than apparently necessary.
- Red flag 39: A power of attorney is sought for the administration or disposal of assets under conditions which are unusual, where there is no logical explanation.
- Red flag 40: Investment in immovable property, in the absence of any links with the place where the property is located and/ or of any financial advantage from the investment.
- Red flag 41: Litigation is settled too easily or quickly, with little/no involvement by the legal professional retained.
- Red flag 42: Requests for payments to third parties without substantiating reason or corresponding transaction.

CHAPTER 6

CONCLUSIONS

KEY FINDINGS

This typology has found evidence that criminals seek out the involvement of legal professionals in their money laundering schemes, sometimes because the involvement of a legal professional is required to carry out certain types of activities, and sometimes because access to specialised legal and notarial skills and services may assist the laundering of the proceeds of crime and the funding of terrorism.

Case studies, STRs and literature point to the following legal services being vulnerable to misuse for the purpose of ML/TF:

- client accounts (administered by the legal professional)
- purchase of real property
- creation of trusts and companies
- management of trusts and companies
- setting up and managing charities
- administration of deceased estates
- providing insolvency services
- providing tax advice
- preparing powers of attorney
- engaging in litigation – where the underlying dispute is a sham or the debt involves the proceeds of crime.

Not all legal professionals are involved in providing these types of legitimate legal services that criminals may seek to abuse, but in some cases a legal professional may need to be involved. This makes the use of legal professionals carrying out these activities uniquely exposed to criminality, irrespective of the attitude of the legal professional to the criminality.

It is accepted that the vast majority of legal professionals seek to comply with the law and their professional requirements, and they have no desire to be involved in ML/TF activity. The legal profession is highly regulated. Furthermore, ethical obligations, professional rules and guidance on ML/TF provided by SRBs and professional bodies should cause legal professionals to refuse to act for clients who seek to misuse legal services for ML/TF purposes.

To keep legal professionals from becoming involved in ML/TF however, the above factors rely on the legal professionals:

- being alert to red flags indicating that the client is seeking to involve them in criminal activity
- choosing to abide by their ethical obligations and applicable professional rules; and
- discerning legitimate client wishes from transactions and structures intended to conceal or promote criminal activity or thwart law enforcement.

Equally, the application of FATF Recommendations to legal professionals over the last decade should provide the legal sector with tools to better identify situations where criminals are seeking to misuse legal services.

Some SRBs and professional bodies are quite active in educating their members on the ML/TF vulnerabilities they face and the red flag indicators which could alert them to a suspicious transaction. STRs from legal professionals have also assisted law enforcement in detecting and prosecuting criminals engaged in ML/TF activity.

However, not all legal professionals are undertaking the CDD measures required by the FATF Recommendations, and not all SRBs and professional bodies have a clear understanding of information on ML/TF vulnerabilities specific to the legal sector to provide to their members.

A lack of awareness and/or lack of education of ML/TF vulnerabilities and red flag indicators reduces the likelihood that legal professionals would be in a position prevent the misuse of their services and avoid a breach of their professional obligations.

This typology research recognises that investigating a legal professional presents more practical challenges than investigating other professionals, due to the important protections for fundamental human rights which attach to the discharge of a legal professional's activities. However, the research has also confirmed that neither legal professional privilege nor professional secrecy would ever permit a legal professional to continue to act for a client who was engaging in criminal activity.

The scope of legal professional privilege/professional secrecy depends on the constitutional and legal framework of each country, and in some federal systems, in each state within the country. Practically, this diversity and differing interpretations by legal professionals and law enforcement on what information is actually covered by legal professional privilege / professional secrecy has, at times provided a disincentive for law enforcement to take action against legal professionals suspected of being complicit in or wilfully blind to ML/TF activity.

OPPORTUNITIES FOR FUTURE ACTION

This typology study should be used to increase awareness of the red flag indicators for potential misuse of legal professionals for ML/TF purposes and in particular for:

- **Legal professionals –** as this would assist in reducing their unwitting involvement in ML/TF activities undertaken by their clients and promote the filing of STRs where appropriate;
- **Financial institutions and other DFNBPs** – as this may alert them to situations where legal professionals are complicit in their client's ML/TF activity or are not aware of the red flag indicators to promote the filing of STRs where appropriate;
- **SRBs and professional bodies** – as this will assist in developing training programmes and guidance which focus not just on the law but the practical application of the law to everyday legal practice and assist in identifying both witting and unwitting involvement in ML/TF activities as part of their monitoring of professional conduct; and
- **Competent authorities and partner law enforcement agencies –** to assist in their investigation of ML/TF where legal services are a method used and to inform the assessment of whether it is likely that the legal professional is involved wittingly or unwittingly, so that appropriate action can be taken.

Potentially, the increased education of legal professionals on ML/TF vulnerabilities may include a discussion of AML/CFT risks and obligations in the course of the legal education or licensing of legal new professionals. Initially, this education can take place in the context of ethics and professionalism in courses and law schools, and later, through continuing education curricula.

Competent authorities, SRBs and professional bodies should review the case examples in this typology study and fit them to the specific roles and vulnerabilities of their members.

Increased interaction between competent authorities, supervisors and professional bodies in terms of sharing information on trends and vulnerabilities, as well as notifying each other of instances where legal professionals are failing to meet their ethical and legal obligations in an AML/CFT context, may also assist in reducing misuse of legal professionals. SRBs and professional bodies may find the red flag indicators in this report useful when monitoring their members' conduct against professional and client account rules.

There will be many factors taken into consideration when deciding whether to criminally prosecute a legal professional for money laundering of failing to submit an STR where required. In some instances, it will be more appropriate and effective for the SRB or professional body to take disciplinary or remedial action where the legal professional's conduct falls short of professional requirements and permits money laundering to occur, but was not intended to aid in money laundering. This shared approach to enforcement not only helps to combat ML / TF, but also helps to ensure that legal professionals uphold the rule of law and do not bring the wider profession into disrepute.

Competent authorities, SRBs and professional bodies should work to ensure that there is a clear and shared understanding of the remit of confidentiality, legal professional privilege and/or professional secrecy in their own country. A clear understanding of the remit of these principles and the procedures for investigating a legal professional will assist in reducing mistrust from both

parties during this process and may help to dispel the perception that privilege or secrecy is designed to protect criminals. It may also assist in more prompt investigation and prosecution of those who would misuse the services of legal professionals or abuse their role as a legal professional, while reducing the concern of legal professionals that they may be sanctioned for breaching privilege or secrecy when complying with their AML/CFT obligations.

Finally, this typology found that the analysis of STRs made about legal professionals and the types of assets being confiscated provided useful information on the AML/CFT risks posed by the legal sector. Member states may wish to consider using these sources of information when assessing risks for the purpose of completing the national risk assessment in line with FATF Recommendation 1. FATF can also consider this work, in consultation with the legal sector, when updating its RBA Guidance for Legal Professionals and other DNFBPs.
